Source. Any governmental, institutional, commercial, or industrial structure, installation, plant, building, or facility that emits or has the potential to emit any air pollutant. A “source,” including a “source” with multiple units, shall be considered a single “facility.”

State. A U.S. State, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, and American Samoa and includes the Commonwealth of the Northern Mariana Islands.

Submit or Serve. To send or transmit a document, information, or correspondence to the person specified in accordance with the applicable regulation:

- (a) In person;
- (b) By United States Postal Service;
- (c) By other means of dispatch or transmission and delivery; or
- (d) Compliance with any “submission”, “service”, or “mailing” deadline shall be determined by the date of dispatch, transmission, or mailing and not the date of receipt.

Third Adjustment for Banked Allowances. An adjustment applied to the Massachusetts CO₂ Budget Trading Program base budget for allocation years 2021 through 2025 to address allowances held in general and compliance accounts, including compliance accounts established pursuant to the CO₂ Budget Trading Program, but not including accounts opened by participating states, that are in addition to the aggregate quantity of emissions from all CO₂ budget sources in all of the participating states at the end of the fourth control period in 2020 and as reflected in the CO₂ Allowance Tracking System on March 15, 2021.

Ton or Tonnage. Any “short ton”, or 2,000 pounds. For the purpose of compliance with the CO₂ requirements of 310 CMR 7.70(1)(e)3., total tons for a control period and each interim control period shall be calculated as the sum of all recorded hourly emissions (or the tonnage equivalent of the recorded hourly emissions rates) in accordance with 310 CMR 7.70(8), with any remaining fraction of a ton equal to or greater than 0.50 ton deemed to equal one ton and any fraction of a ton less than 0.50 ton deemed to equal zero tons. A short ton is equal to 0.9072 metric tons.

Undistributed CO₂ Allowances. CO₂ allowances originally allocated to an account pursuant to 310 CMR 7.70(5)(c) that were not distributed.

Unit. A fossil fuel-fired stationary boiler, combustion turbine, or combined cycle system.

Unit Operating Day. A calendar day in which a unit combusts any fuel.

Useful Net Thermal Energy. Energy:

- (a) in the form of direct heat, steam, hot water, or other thermal form that is used in production and beneficial measures for heating, cooling, humidity control, process use, or other valid thermal end use energy requirements, excluding thermal energy used in the power production process (*e.g.*, house loads, parasitic loads); and

7.70: continued

- (b) for which fuel or electricity would otherwise be consumed.

Useful Thermal Energy Account. An account established for the purpose of retiring allowances pursuant to 310 CMR 7.70(5)(c)5.b.

Unsold CO₂ Allowances. CO₂ allowances that have been made available for sale in an auction conducted by DOER, but not sold.

Voluntary Renewable Energy Account. An account established for the purpose of retiring allowances pursuant to 310 CMR 7.70(5)(c)1.a.iii.

(c) Measurements, Abbreviations and Acronyms. Measurements, abbreviations, and acronyms used in 310 CMR 7.70 are defined as follows:

1. CO₂ – carbon dioxide;
2. hr – hour;
3. lb – pounds;
4. MMBtu – one million British thermal units;
5. MW – megawatt;
6. MWe – megawatt electrical;
7. Mwh – megawatt hours;
8. scf – standard cubic feet.

(d) Applicability. Any unit that, at any time on or after January 1, 2005, serves an electricity generator with a nameplate capacity equal to or greater than 25 MWe shall be a CO₂ budget unit, and any source that includes one or more such units shall be a CO₂ budget source, subject to the requirements of 310 CMR 7.70.

(e) Standard Requirements.

1. CO₂ Budget Emission Control Plan Requirements.

- a. The CO₂ authorized account representative of each CO₂ budget source shall:
 - i. Submit to the Department a complete CO₂ budget emission control plan under 310 CMR 7.70(3)(c) in accordance with the deadlines specified in 310 CMR 7.70(3)(b); and
 - ii. Submit in a timely manner any supplemental information that the Department determines is necessary in order to review and approve or deny the CO₂ budget emission control plan.
- b. The owners and operators of each CO₂ budget source and each CO₂ budget unit for the source shall have an approved CO₂ budget emission control plan and operate the CO₂ budget source and the CO₂ budget unit at the source in compliance with such approved CO₂ budget emission control plan.

2. Monitoring Requirements.

- a. The owners and operators and, to the extent applicable, the CO₂ authorized account representative of each CO₂ budget source and each CO₂ budget unit at the source shall comply with the monitoring requirements of 310 CMR 7.70(8).
- b. The emissions measurements recorded and reported in accordance with 310 CMR 7.70(8) shall be used to determine compliance by the unit with the CO₂ requirements of 310 CMR 7.70(1)(e)3.

3. CO₂ Requirements.

- a. The owners and operators of each CO₂ budget source and each CO₂ budget unit at the source shall hold CO₂ allowances available for compliance deductions under 310 CMR 7.70(6)(e), as of the CO₂ allowance transfer deadline, in the source's compliance account in an amount not less than the total CO₂ emissions for the control period from all CO₂ budget units at the source, minus the CO₂ allowances deducted to meet the requirements of 310 CMR 7.70(1)(e)3.b., as determined in accordance with 310 CMR 7.70(6) and (8).
- b. The owners and operators of each CO₂ budget source and each CO₂ budget unit at the source shall hold CO₂ allowances available for compliance deductions under 310 CMR 7.70(6)(e), as of the CO₂ allowance transfer deadline, in the CO₂ budget source's compliance account in an amount not less than the total CO₂ emissions for the interim control period from all CO₂ budget units at the CO₂ budget source multiplied by 0.50, as determined in accordance with 310 CMR 7.70(6) and (8).

7.70: continued

- c. Each ton of CO₂ emitted in excess of the CO₂ budget emissions limitation for a control period shall constitute a separate violation of 310 CMR 7.70 and applicable state law.
 - d. Each ton of excess interim emissions shall constitute a separate violation of 310 CMR 7.70 and applicable state law.
 - e. A CO₂ budget unit shall be subject to the requirements under 310 CMR 7.70(1)(e)3.a. on January 1, 2009 or the date on which the unit commences operation, whichever comes later.
 - f. CO₂ allowances shall be held in, deducted from, or transferred among CO₂ Allowance Tracking System accounts in accordance with 310 CMR 7.70(5) through (7).
 - g. A CO₂ allowance shall not be deducted in order to comply with the requirements under 310 CMR 7.70(1)(e)3.a. and b. for a control period or interim control period that ends prior to the year for which the CO₂ allowance was allocated. A CO₂ offset allowance shall not be deducted in order to comply with the requirements under 310 CMR 7.70(1)(e)3.a. beyond the applicable percent limitations set out in 310 CMR 7.70(6)(e)1.c.
 - h. A CO₂ allowance under the CO₂ Budget Trading Program is a limited authorization by the Department or a participating state to emit one ton of CO₂ in accordance with the CO₂ Budget Trading Program. No provision of the CO₂ Budget Trading Program, the application for a CO₂ budget emissions control plan, or the approved CO₂ budget emissions control plan, or any provision of law shall be construed to limit the authority of the State to terminate or limit such authorization.
 - i. A CO₂ allowance under the CO₂ Budget Trading Program does not constitute a property right.
4. Excess Emissions Requirements. The owners and operators of a CO₂ budget source that has excess emissions in any control period or excess interim emissions in any interim control period shall:
- a. Forfeit the CO₂ allowances required for deduction under 310 CMR 7.70(6)(e)4.a., provided CO₂ offset allowances may not be used to cover any part of such excess emissions; and,
 - b. Pay any fine, penalty, or assessment or comply with any other remedy imposed under 310 CMR 7.70(6)(e)4.b.
5. Recordkeeping and Reporting Requirements.
- a. Unless otherwise provided, the owners and operators of the CO₂ budget source and each CO₂ budget unit at the source shall keep on site at the source each of the following documents for a period of ten years from the date the document is created. This period may be extended for cause, at any time prior to the end of ten years, in writing by the Department.
 - i. The account certificate of representation for the CO₂ authorized account representative for the source and each CO₂ budget unit at the source and all documents that demonstrate the truth of the statements in the account certificate of representation, in accordance with 310 CMR 7.70(2)(d), provided that the certificate and documents shall be retained on site at the source beyond such ten-year period until such documents are superseded because of the submission of a new account certificate of representation changing the CO₂ authorized account representative.
 - ii. All emissions monitoring information, in accordance with 310 CMR 7.70(8) and 40 CFR 75.57.
 - iii. Copies of all reports, compliance certifications, and other submissions and all records made or required under the CO₂ Budget Trading Program.
 - iv. Copies of all documents used to complete an application for a CO₂ budget emissions control plan and any other submission under the CO₂ Budget Trading Program or to demonstrate compliance with the requirements of the CO₂ Budget Trading Program.

7.70: continued

- b. The CO₂ authorized account representative of a CO₂ budget source and each CO₂ budget unit at the source shall submit the reports and compliance certifications required under the CO₂ Budget Trading Program, including those under 310 CMR 7.70(4).
6. Liability.
- a. No revision to a CO₂ budget emissions control plan shall excuse any violation of the requirements of the CO₂ Budget Trading Program that occurs prior to the date that the revision takes effect.
- b. Any provision of the CO₂ Budget Trading Program that applies to a CO₂ budget source (including a provision applicable to the CO₂ authorized account representative of a CO₂ budget source) shall also apply to the owners and operators of such source and of the CO₂ budget units at the source.
- c. Any provision of the CO₂ Budget Trading Program that applies to a CO₂ budget unit (including a provision applicable to the CO₂ authorized account representative of a CO₂ budget unit) shall also apply to the owners and operators of such unit.
7. Effect on Other Authorities.
- a. No provision of the CO₂ Budget Trading Program, a CO₂ budget emissions control plan application, or an approved CO₂ budget emissions control plan, shall be construed as exempting or excluding the owners and operators and, to the extent applicable, the CO₂ authorized account representative of a CO₂ budget source or CO₂ budget unit from compliance with any other provisions of applicable State and Federal law and regulations.
8. New CO₂ Budget Unit and CO₂ Budget Sources. The owner or operator of a CO₂ budget unit that commences commercial operation on or after July 1, 2008 shall hold CO₂ allowances available for compliance deductions under 310 CMR 7.70(6)(e), in an amount not less than the total CO₂ emissions from the date of the initial certification of the monitor or the date of the provisional certification of the monitor, as required under 310 CMR 7.70(8)(b), whichever is earlier.
- (f) Computation of Time.
1. Unless otherwise stated, any time period scheduled under the CO₂ Budget Trading Program to begin on the occurrence of an act or event shall begin on the day the act or event occurs.
2. Unless otherwise stated, any time period scheduled under the CO₂ Budget Trading Program to begin before the occurrence of an act or event shall be computed so that the period ends the day before the act or event occurs.
3. Unless otherwise stated, if the final day of any time period under the CO₂ Budget Trading Program falls on a weekend or a Massachusetts or Federal holiday, the time period shall be extended to the next business day.
- (g) Severability. If any provision of 310 CMR 7.70, or its application to any particular person or circumstances, is held invalid, the remainder of 310 CMR 7.70, and the application thereof to other persons or circumstances, shall not be affected thereby.
- (h) Exemption for Any Combined Heat and Power CO₂ Budget Source.
1. Applicability. Notwithstanding 310 CMR 7.70(1)(d), any entity owning, operating, or controlling a combined heat and power CO₂ budget source that sells its useful net thermal energy shall comply with all of the provisions of 310 CMR 7.70, except that it may subtract from its total CO₂ emissions recorded for compliance under 310 CMR 7.70(6) the amount of CO₂ emissions attributable to the production of useful net thermal energy as long as it complies with all of the provisions in 310 CMR 7.70(1)(h).
2. Compliance. Any entity owning, operating, or controlling a combined heat power CO₂ budget source shall comply with the requirements in 310 CMR 7.70(6)(e)2.
3. Monitoring and Reporting. Any entity owning, operating, or controlling a combined heat and power CO₂ budget source shall monitor and report the amount of annual CO₂ mass emissions (expressed in tons) associated with the production of useful net thermal energy pursuant to 310 CMR 7.70(8)(i) for the control period beginning 2015 and each year thereafter.

7.70: continued

4. Change to Previously Reported Emissions. Any entity owning, operating, or controlling a combined heat and power CO₂ budget source that previously reported its annual CO₂ emissions for the interim control periods of 2015 and 2016 pursuant to 310 CMR 7.70(4)(a), but did not deduct its CO₂ emissions associated with the production of useful net thermal energy as allowed for under 310 CMR 7.70(1)(h), may submit revised compliance certification reports to the Department under 310 CMR 7.70(4)(a)3.d. and e., so that the Department may deduct the amount of CO₂ mass emissions attributable to the production of useful net thermal energy for the interim control periods of 2015 and 2016 as quantified under 310 CMR 7.70(8)(i).
- (2) CO₂ Authorized Account Representative for CO₂ Budget Sources.
 - (a) Authorization and Responsibilities of the CO₂ Authorized Account Representative.
 1. Except as provided under 310 CMR 7.70(2)(b), each CO₂ budget source, including all CO₂ budget units at the source, shall have one and only one CO₂ authorized account representative, with regard to all matters under the CO₂ Budget Trading Program concerning the source or any CO₂ budget unit at the source.
 2. The CO₂ authorized account representative of the CO₂ budget source shall be selected by an agreement binding on the owners and operators of the source and all CO₂ budget units at the source and shall act in accordance with the certificate of representation under 310 CMR 7.70(2)(d).
 3. Upon receipt by the Department or its agent of a complete account certificate of representation under 310 CMR 7.70(2)(d), the CO₂ authorized account representative of the source shall represent and, by his or her representations, actions, inactions, or submissions, legally bind each owner and operator of the CO₂ budget source represented and each CO₂ budget unit at the source in all matters pertaining to the CO₂ Budget Trading Program, notwithstanding any agreement between the CO₂ authorized account representative and such owners and operators. The owners and operators shall be bound by any decision or order issued to the CO₂ authorized account representative by the Department or a court regarding the source or unit.
 4. No CO₂ budget emissions control plan shall be issued, and no CO₂ Allowance Tracking System account shall be established for a CO₂ budget source, until the Department or its agent has received a complete account certificate of representation under 310 CMR 7.70(2)(d) for a CO₂ authorized account representative of the source and the CO₂ budget units at the source.
 5. Each submission under the CO₂ Budget Trading Program shall be submitted, signed, and certified by the CO₂ authorized account representative for each CO₂ budget source on behalf of which the submission is made. Each such submission shall include the following certification statement by the CO₂ authorized account representative: "I am authorized to make this submission on behalf of the owners and operators of the CO₂ budget sources or CO₂ budget units for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment."
 6. The Department or its agent shall accept or act on a submission made on behalf of owners or operators of a CO₂ budget source or a CO₂ budget unit only if the submission has been made, signed, and certified in accordance with 310 CMR 7.70(2)(a)5.
 - (b) CO₂ Authorized Alternate Account Representative.
 1. An account certificate of representation may designate one and only one CO₂ authorized alternate account representative who may act on behalf of the CO₂ authorized account representative. The agreement by which the CO₂ authorized alternate account representative is selected shall include a procedure for authorizing the CO₂ authorized alternate account representative to act in *lieu* of the CO₂ authorized account representative.

7.70: continued

2. Upon receipt by the Department or its agent of a complete account certificate of representation under 310 CMR 7.70(2)(d), any representation, action, inaction, or submission by the CO₂ authorized alternate account representative shall be deemed to be a representation, action, inaction, or submission by the CO₂ authorized account representative.

3. Except in 310 CMR 7.70(2)(b) and 310 CMR 7.70(2)(a)1., (c), (d), and (6)(b), whenever the term "CO₂ authorized account representative" is used in 310 CMR 7.70, the term shall be construed to include the CO₂ authorized alternate account representative.

(c) Changing the CO₂ Authorized Account Representative and the CO₂ Authorized Alternate Account Representative; Changes in the Owners and Operators.

1. Changing the CO₂ Authorized Account Representative. The CO₂ authorized account representative may be changed at any time upon receipt by the Department or its agent of a superseding complete account certificate of representation under 310 CMR 7.70(2)(d). Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous CO₂ authorized account representative or alternate CO₂ authorized account representative prior to the time and date when the Department or its agent receives the superseding account certificate of representation shall be binding on the new CO₂ authorized account representative and the owners and operators of the CO₂ budget source and the CO₂ budget units at the source.

2. Changing the CO₂ Authorized Alternate Account Representative. The CO₂ authorized alternate account representative may be changed at any time upon receipt by the Department or its agent of a superseding complete account certificate of representation under 310 CMR 7.70(2)(d). Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous CO₂ authorized account representative or CO₂ authorized alternate account representative prior to the time and date when the Department or its agent receives the superseding account certificate of representation shall be binding on the new CO₂ authorized alternate account representative and the owners and operators of the CO₂ budget source and the CO₂ budget units at the source.

3. Changes in the Owners and Operators.

a. In the event a new owner or operator of a CO₂ budget source or a CO₂ budget unit is not included in the list of owners and operators submitted in the account certificate of representation, such new owner or operator shall be deemed to be subject to and bound by the account certificate of representation, the representations, actions, inactions, and submissions of the CO₂ authorized account representative and any CO₂ authorized alternate account representative of the source or unit, and the decisions, orders, actions, and inactions of the Department, as if the new owner or operator were included in such list.

b. Within 30 days following any change in the owners and operators of a CO₂ budget source or a CO₂ budget unit, including the addition of a new owner or operator, the CO₂ authorized account representative or CO₂ authorized alternate account representative shall submit a revision to the account certificate of representation amending the list of owners and operators to include the change.

(d) Account Certificate of Representation.

1. A complete account certificate of representation for a CO₂ authorized account representative or a CO₂ authorized alternate account representative shall include the following elements in a format prescribed by the Department or its agent:

a. Identification of the CO₂ budget source and each CO₂ budget unit at the source for which the account certificate of representation is submitted;

b. The name, address, email address, telephone number, and facsimile transmission number of the CO₂ authorized account representative and any CO₂ authorized alternate account representative;

c. A list of the owners and operators of the CO₂ budget source and of each CO₂ budget unit at the source;

7.70: continued

d. The following certification statement by the CO₂ authorized account representative and any CO₂ authorized alternate account representative: “I certify that I was selected as the CO₂ authorized account representative or CO₂ authorized alternate account representative, as applicable, by an agreement binding on the owners and operators of the CO₂ budget source and each CO₂ budget unit at the source. I certify that I have all the necessary authority to carry out my duties and responsibilities under the CO₂ Budget Trading Program on behalf of the owners and operators of the CO₂ budget source and of each CO₂ budget unit at the source and that each such owner and operator shall be fully bound by my representations, actions, inactions, or submissions and by any decision or order issued to me by the Department or a court regarding the source or unit.”; and,

e. The signature of the CO₂ authorized account representative and any CO₂ authorized alternate account representative and the dates signed.

2. Unless otherwise required by the Department or its agent, documents of agreement referred to in the account certificate of representation shall not be submitted to the Department or its agent. Neither the Department nor its agent shall be under any obligation to review or evaluate the sufficiency of such documents, whether or not submitted.

(e) Objections Concerning the CO₂ Authorized Account Representative.

1. Once a complete account certificate of representation under 310 CMR 7.70(2)(d) has been submitted and received, the Department and its agent shall rely on the account certificate of representation unless and until the Department or its agent receives a superseding complete account certificate of representation under 310 CMR 7.70(2)(d).

2. Except as provided in 310 CMR 7.70(2)(c)1. or 2., no objection or other communication submitted to the Department or its agent concerning the authorization, or any representation, action, inaction, or submission of the CO₂ authorized account representative shall affect any representation, action, inaction, or submission of the CO₂ authorized account representative or the finality of any decision or order by the Department or its agent under the CO₂ Budget Trading Program.

3. Neither the Department nor its agent shall adjudicate any private legal dispute concerning the authorization or any representation, action, inaction, or submission of any CO₂ authorized account representative, including private legal disputes concerning the proceeds of CO₂ allowance transfers.

(f) Delegation by CO₂ Authorized Account Representative and CO₂ Authorized Alternate Account Representative.

1. A CO₂ authorized account representative may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Department or its agent under 310 CMR 7.70.

2. A CO₂ authorized alternate account representative may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Department or its agent under 310 CMR 7.70.

3. In order to delegate authority to make an electronic submission to the Department or its agent in accordance with 310 CMR 7.70(2)(f)1. and 2., the CO₂ authorized account representative or CO₂ authorized alternate account representative, as appropriate, shall submit to the Department or its agent a notice of delegation, in a format prescribed by the Department that includes the following elements:

a. The name, address, email address, telephone number, and facsimile transmission number of such CO₂ authorized account representative or CO₂ authorized alternate account representative;

b. The name, address, email address, telephone number and facsimile transmission number of each such natural person, herein referred to as the “electronic submission agent”;

c. For each such natural person, a list of the type of electronic submissions under 310 CMR 7.70(2)(f)1. and 2. for which authority is delegated to him or her; and,

d. The following certification statements by such CO₂ authorized account representative or CO₂ authorized alternate account representative:

7.70: continued

- i. "I agree that any electronic submission to the Department or its agent that is by a natural person identified in this notice of delegation and of a type listed for such electronic submission agent in this notice of delegation and that is made when I am a CO₂ authorized account representative or CO₂ authorized alternate account representative, as appropriate, and before this notice of delegation is superseded by another notice of delegation under 310 CMR 7.70(2)(f)4. shall be deemed to be an electronic submission by me."
- ii. "Until this notice of delegation is superseded by another notice of delegation under 310 CMR 7.70(2)(f)4., I agree to maintain an email account and to notify the Department or its agent immediately of any change in my email address unless all delegation authority by me under 310 CMR 7.70(2)(f) is terminated."
4. A notice of delegation submitted under 310 CMR 7.70(2)(f)3. shall be effective, with regard to the CO₂ authorized account representative or CO₂ authorized alternate account representative identified in such notice, upon receipt of such notice by the Department or its agent and until receipt by the Department or its agent of a superseding notice of delegation by such CO₂ authorized account representative or CO₂ authorized alternate account representative as appropriate. The superseding notice of delegation may replace any previously identified electronic submission agent, add a new electronic submission agent, or eliminate entirely any delegation of authority.
5. Any electronic submission covered by the certification in 310 CMR 7.70(2)(f)3.d.i. and made in accordance with a notice of delegation effective under 310 CMR 7.70(2)(f)4. shall be deemed to be an electronic submission by the CO₂ authorized account representative or CO₂ authorized alternate account representative submitting such notice of delegation.
6. A CO₂ authorized account representative may delegate, to one or more natural persons, his or her authority to review information in the CO₂ allowance tracking system under 310 CMR 7.70.
7. A CO₂ authorized alternate account representative may delegate, to one or more natural persons, his or her authority to review information in the CO₂ allowance tracking system under 310 CMR 7.70.
8. In order to delegate authority to review information in the CO₂ allowance tracking system in accordance with 310 CMR 7.70(2)(f) and (g), the CO₂ authorized account representative or CO₂ authorized alternate account representative, as appropriate, must submit to the Department or its agent a notice of delegation, in a format prescribed by the Department that includes the following elements:
 - a. The name, address, e-mail address, telephone number, and facsimile transmission number of such CO₂ authorized account representative or CO₂ authorized alternate account representative;
 - b. The name, address, e-mail address, telephone number and facsimile transmission number of each such natural person, herein referred to as the "reviewer";
 - c. For each such natural person, a list of the type of information under 310 CMR 7.70(2)(f) or (g) for which authority is delegated to him or her; and
 - d. The following certification statements by such CO₂ authorized account representative or CO₂ authorized alternate account representative:
 - (i) "I agree that any information that is reviewed by a natural person identified in this notice of delegation and of a type listed for such information accessible by the reviewer in this notice of delegation and that is made when I am a CO₂ authorized account representative or CO₂ authorized alternate account representative, as appropriate, and before this notice of delegation is superseded by another notice of delegation under 310 CMR 7.70(2)(f)9. shall be deemed to be a reviewer by me."
 - (ii) "Until this notice of delegation is superseded by another notice of delegation under 310 CMR 7.70(2)(f)9., I agree to maintain an email account and to notify the Department or its agent immediately of any change in my e-mail address unless all delegation authority by me under section 310 CMR 7.70(2)(f) is terminated."

7.70: continued

9. A notice of delegation submitted under 310 CMR 7.70(2)(f)8. shall be effective, with regard to the CO₂ authorized account representative or CO₂ authorized alternate account representative identified in such notice, upon receipt of such notice by the Department or its agent and until receipt by the Department or its agent of a superseding notice of delegation by such CO₂ authorized account representative or CO₂ authorized alternate account representative as appropriate. The superseding notice of delegation may replace any previously identified reviewer, add a new reviewer, or eliminate entirely any delegation of authority.

(3) CO₂ Budget Emission Control Plan Requirements.

(a) CO₂ Budget Emission Control Plan Requirements. The owners and operators of CO₂ budget sources shall have an approved CO₂ budget emission control plan issued by the Department pursuant to 310 CMR 7.70(1)(e)1. that contains all applicable CO₂ Budget Trading Program requirements under 310 CMR 7.70(3)(c). Owners and operators of CO₂ budget sources shall comply with the approved CO₂ budget emission control plan.

(b) Submission of CO₂ Budget Emission Control Plan. For any CO₂ budget source, the CO₂ authorized account representative shall submit a complete CO₂ budget emission control plan under 310 CMR 7.70(3)(c) covering such CO₂ budget source to the Department on or before August 1, 2008 or 12 months before the date on which the CO₂ budget source, or a new unit at the source, commences operation, whichever is later.

(c) CO₂ Budget Emission Control Plan Contents. A complete CO₂ budget emission control plan shall include the following elements concerning the CO₂ budget source in a format prescribed by the Department:

1. Identification of the CO₂ budget source, including plant name and the ORIS (Office of Regulatory Information Systems) or facility code assigned to the source by the Energy Information Administration of the United States Department of Energy, if applicable;
2. Identification of each CO₂ budget unit at the CO₂ budget source;
3. A compliance account identification number for each CO₂ budget source;
4. For CO₂ budget sources subject to 40 CFR Part 72, a statement that the CO₂ authorized account representative shall ensure that the CO₂ budget unit will have an EPA approved monitoring plan in place that meets the requirements of 310 CMR 7.70(8) prior to operation. Any modification to a CO₂ budget unit's monitoring methodology approved pursuant to the requirements of 40 CFR Part 72, and meeting the requirements of 310 CMR 7.70(8), are hereby incorporated into the approved emission control plan under 310 CMR 7.70;
5. For CO₂ budget sources not subject to 40 CFR Part 72, a statement that the CO₂ authorized account representative shall ensure that the CO₂ budget unit will have an EPA approved monitoring plan in place that meets the requirements of 310 CMR 7.70(8) prior to operation;
6. For CO₂ budget sources that have an approved output monitoring plan as of March 9, 2018, a statement that the CO₂ budget sources have an output monitoring plan that meets the requirements in 310 CMR 7.70(8);
7. For CO₂ budget sources that do not have an approved output monitoring plan as of March 9, 2018, a detailed output monitoring plan that meets the requirements of 310 CMR 7.70(8);
8. The standard requirements under 310 CMR 7.70(1)(e); and
9. Any other information requested by the Department.

(d) Approval of CO₂ budget emission control plans. After reviewing the proposed CO₂ budget emissions control plan, the Department shall:

1. Issue a proposed disapproval of the CO₂ budget emission control plan, a proposed approval of the CO₂ budget emissions control plan, or a proposed approval of the CO₂ budget emission control plan with conditions, based on whether the CO₂ budget emission control plan as submitted meets the requirements of 310 CMR 7.70;
2. Notify the public of the Department's proposed action by publishing a notice in the *Environmental Monitor*;
3. Make available on its website all related materials;
4. Allow not less than 21 days for public comment;
5. Make all comments available for public inspection; and
6. Notify the applicant and publish on the Department's website the final approval of the CO₂ budget emission control plan, the final approval of the CO₂ budget emission control plan with conditions, or a disapproval of the CO₂ budget emission control plan.

7.70: continued

(e) CO₂ budget emission control plan approvals issued to a CO₂ budget source that changes ownership are binding upon the new owner.

(f) Revisions to CO₂ Budget Emission Control Plans.

1. At any time, the Department may require a CO₂ budget source to submit a revision to its CO₂ budget emission control plan.

2. If the CO₂ budget source required to submit a detailed monitoring plan pursuant to 310 CMR 7.70(3)(c)5. or 7. proposes a change in the monitoring methodology, then that CO₂ budget source shall submit a revised monitoring plan to the Department and obtain approval of the change to the CO₂ budget emission control plan by the Department prior to making the modification. The Department will modify the CO₂ budget emission control plan upon approval of the revised monitoring plan.

3. At any time, a CO₂ budget source may propose a change to its CO₂ budget emissions control plan.

(g) Operating Permits. If the CO₂ budget source is required to have an Operating Permit under 310 CMR 7.00: *Appendix C*, such Operating Permit shall be modified in accordance with the procedures in 310 CMR 7.00: *Appendix C(8)*.

(4) Compliance Certification.

(a) Compliance Certification Report.

1. Applicability and Deadline. For each control period in which a CO₂ budget source is subject to the CO₂ requirements of 310 CMR 7.70(1)(e)3., the CO₂ authorized account representative of the source shall submit to the Department, by the March 1st following the relevant control period, a compliance certification report. A compliance certification report is not required as part of the compliance obligation during an interim control period.

2. Contents of Report. The CO₂ authorized account representative shall include in the compliance certification report under 310 CMR 7.70(4)(a)1. the following elements, in a format prescribed by the Department:

a. Identification of the source and each CO₂ budget unit at the source;

b. At the CO₂ authorized account representative's option, the serial numbers of the CO₂ allowances that are to be deducted from the source's compliance account under 310 CMR 7.70(6)(e) for the control period, including the serial numbers of any CO₂ offset allowances that are to be deducted subject to the limitations of 310 CMR 7.70(6)(e)1.c.; and

c. The compliance certification under 310 CMR 7.70(4)(a)3.

3. Compliance Certification. In the compliance certification report under 310 CMR 7.70(4)(a)1., the CO₂ authorized account representative shall certify, based on reasonable inquiry of those persons with primary responsibility for operating the source and the CO₂ budget units at the source in compliance with the CO₂ Budget Trading Program, whether the source and each CO₂ budget unit at the source for which the compliance certification is submitted was operated during the calendar years covered by the report in compliance with the requirements of the CO₂ Budget Trading Program, including:

a. Whether the source was operated in compliance with the CO₂ requirements of 310 CMR 7.70(1)(e)3.;

b. Whether the monitoring plan applicable to each unit at the source has been maintained to reflect the actual operation and monitoring of the unit, and contains all information necessary to attribute CO₂ emissions to the unit, in accordance with 310 CMR 7.70(8);

c. Whether all the CO₂ emissions from the units at the source were monitored or accounted for through the missing data procedures and reported in the quarterly monitoring reports, including whether conditional data were reported in the quarterly reports in accordance with 310 CMR 7.70(8). If conditional data were reported, the owner or operator shall indicate whether the status of all conditional data has been resolved and all necessary quarterly report resubmissions have been made;

d. Whether the facts that form the basis for certification under 310 CMR 7.70(8) of each monitor at each unit at the source, or for using an excepted monitoring method or alternate monitoring method approved under 310 CMR 7.70(8), if any, have changed; and

7.70: continued

e. If a change is required to be reported under 310 CMR 7.70(4)(a)3.d., specify the nature of the change, the reason for the change, when the change occurred, and how the unit's compliance status was determined subsequent to the change, including what method was used to determine emissions when a change mandated the need for monitor recertification.

(b) Department's Action on Compliance Certifications.

1. The Department or its agent may review and conduct independent audits concerning any compliance certification or any other submission under the CO₂ Budget Trading Program and make appropriate adjustments to the information in the compliance certifications or other submissions.

2. The Department or its agent may deduct CO₂ allowances from or transfer CO₂ allowances to a source's compliance account based on the information in the compliance certifications or other submissions, as adjusted under 310 CMR 7.70(4)(b)1.

(5) CO₂ Allowance Allocations.

(a) Massachusetts CO₂ Budget Trading Program Base Budget.

1. For 2018, the Massachusetts CO₂ Budget Trading Program base budget is 13,083,598 tons.

2. For 2019, the Massachusetts CO₂ Budget Trading Program base budget is 12,756,508 tons.

3. For 2020, the Massachusetts CO₂ Budget Trading Program base budget is 12,437,596 tons.

4. For 2021, the Massachusetts CO₂ Budget Trading Program base budget is 11,944,355 tons.

5. For 2022, the Massachusetts CO₂ Budget Trading Program base budget is 11,582,404 tons.

6. For 2023, the Massachusetts CO₂ Budget Trading Program base budget is 11,220,454 tons.

7. For 2024, the Massachusetts CO₂ Budget Trading Program base budget is 10,858,504 tons.

8. For 2025, the Massachusetts CO₂ Budget Trading Program base budget is 10,496,554 tons.

9. For 2026, the Massachusetts CO₂ Budget Trading Program base budget is 10,134,604 tons.

10. For 2027, the Massachusetts CO₂ Budget Trading Program base budget is 9,772,654 tons.

11. For 2028, the Massachusetts CO₂ Budget Trading Program base budget is 9,410,704 tons.

12. For 2029, the Massachusetts CO₂ Budget Trading Program base budget is 9,048,753 tons.

13. For 2030, the Massachusetts CO₂ Budget Trading Program base budget is 8,686,803 tons.

14. For 2031, and future years, the Massachusetts CO₂ Budget Trading Program base budget will be established through amendments following future program review.

(b) CO₂ Allowance Allocations.

1. General Allocations.

a. Voluntary Renewable Energy (VRE) Account.

i. The Department shall establish a retirement account to address the voluntary purchase of Massachusetts RPS-eligible Renewable Energy Certificates by retail customers in Massachusetts. CO₂ allowances transferred into this account cannot be removed, unless they are transferred in error.

ii. Beginning in 2010, DOER will submit to the Department a report, certified by DOER, documenting:

(i) The number of Massachusetts RPS-eligible Renewable Energy Certificates purchased voluntarily by retail customers in Massachusetts in the preceding year, in Mwh;

7.70: continued

- (ii) The annual average CO₂ emission rate for electricity generation, in lbs. CO₂/MWh as provided in the most recently available version of the *ISO New England Electric Generator Air Emissions Report* published annually by the Independent System Operator of New England;
 - (iii) The total number of CO₂ allowances to be retired for such voluntary purchases in Massachusetts of said Massachusetts RPS-eligible Renewable Energy Certificates; and,
 - (iv) All calculations used to determine the amount referenced in 310 CMR 7.70(5)(c)1.a.ii.(iii).
- iii. After review of the certified report submitted to the Department pursuant to 310 CMR 7.70(5)(c)1.a.ii., the Department will allocate to the VRE Account the number of CO₂ allowances reported pursuant to 310 CMR 7.70(5)(c)1.a.ii.(iii), or 200,000 CO₂ allowances, whichever is fewer.
- iv. The Department will periodically review provisions related to the VRE Account in consultation with DOER.
- b. Massachusetts Auction Account.
- i. The Department shall establish a Massachusetts Auction Account.
 - ii. The Department shall allocate all CO₂ allowances not allocated under 310 CMR 7.70(5)(c)1.a. to the Massachusetts Auction Account.
 - iii. The Department shall allocate into the Massachusetts Auction Account CO₂ CCR Allowances in the quantity specified in 310 CMR 7.70(5)(c)3.
- c. CO₂ Allowances Available for Allocation. For allocation years 2014 through 2020, the Massachusetts CO₂ Budget Trading Program adjusted budget shall be the maximum number of allowances available for allocation in a given allocation year, except for CO₂ CCR allowances.
2. Determination of 2014 through 2020 Adjusted Budgets.
- a. First Control Period Adjustment for Banked Allowances. By January 15, 2014, the Department established the first control period adjustment for banked allowances quantity for allocation years 2014 through 2020. Those adjustment quantities are shown in the following table:

First Control Period Adjustment for Banked Allowances						
2014	2015	2016	2017	2018	2019	2020
1,324,595	1,324,595	1,324,595	1,324,595	1,324,595	1,324,595	1,324,595

- b. Second Control Period Adjustment for Banked Allowances. On March 15, 2014, the Department established the second control period adjustment for banked allowances quantity for allocation years 2015 through 2020. Those adjustment quantities are shown in the following table:

Second Control Period Adjustment for Banked Allowances					
2015	2016	2017	2018	2019	2020
2,208,353	2,208,353	2,208,353	2,208,353	2,208,353	2,208,353

- c. Third Adjustment for Banked Allowances. On March 15, 2021, the Department shall establish the third adjustment for banked allowances quantity for allocation years 2021 through 2025 through the application of the following formula:

$$TABA = ((TA - TAE)/5) \times RS\%$$

Where:

TABA is the third adjustment for banked allowances quantity in tons.

TA, third adjustment, is the total quantity of allowances of vintage years prior to 2021 held in general and compliance accounts, including compliance accounts established pursuant to the CO₂ Budget Trading Program, but not including accounts opened by participating states, as reflected in the CO₂ Allowance Tracking System on March 15, 2021.

7.70: continued

TAE, third adjustment emissions, is the total quantity of 2018, 2019 and 2020 emissions from all CO₂ budget sources in all participating states, reported pursuant to CO₂ Budget Trading Program as reflected in the CO₂ Allowance Tracking System on March 15, 2021.

RS% is the Massachusetts 2021 Base Budget/The total of the 2021 Base Budgets for all the Participating States.

d. CO₂ Budget Trading Program Adjusted Budgets for 2018 through 2020. On April 15, 2014 the Department established the Massachusetts CO₂ Budget Trading Program adjusted budgets for allocation years 2018 through 2020. Those Adjusted Budgets are shown in the following table:

Massachusetts CO ₂ Budget Trading Adjusted Budgets		
2018	2019	2020
9,550,650	9,223,560	8,904,648

e. CO₂ Budget Trading Program Adjusted Budgets for 2021 through 2025. On April 15, 2021 the Department shall establish the Massachusetts CO₂ Budget Trading Program adjusted budgets for the 2021 through 2025 allocation years by the following formula:

$$AB = BB - TABA$$

Where:

AB is the Massachusetts CO₂ Budget Trading Program adjusted budget.

BB is the Massachusetts CO₂ Budget Trading Program base budget.

TABA is the third adjustment for banked allowances quantity in tons.

f. After making the determinations in 310 CMR 7.70(5)(c)2., the Department or its agent will publish on the Department’s website the CO₂ trading program adjusted base budgets for the 2021 through 2025 allocation years.

3. Cost Containment Reserve (CCR) Allocation. Starting in the calendar year 2014 and each calendar year thereafter, the Department shall allocate CO₂ CCR allowances into the Massachusetts Auction Account, separate from and additional to, the CO₂ allowances allocated under the Massachusetts CO₂ Budget Trading Program base budget set forth in 310 CMR 7.70(5)(a). The CCR allocation is for the purpose of containing the cost of CO₂ allowances. The Department shall allocate CO₂ CCR allowances into the Massachusetts Auction Account in the following manner:

a. The Department shall initially allocate 806,984 CO₂ CCR allowances for calendar year 2014.

b. On or before January 1, 2015 and of each calendar year thereafter through 2020, the Department shall allocate CO₂ CCR allowances in an amount equal to 1,613,968, minus the number of CO₂ CCR allowances that remain in the Massachusetts Auction Account at the end of the prior calendar year. CO₂ CCR allowances that remain in the Massachusetts Auction Account at the end of the calendar year will be converted into new, current vintage year CO₂ CCR allowances pursuant to 310 CMR 7.70(5)(c)3.f.

c. On or before January 1, 2021 and each year thereafter, the Department shall allocate current vintage year CO₂ CCR allowances equal to the quantity in the table below, minus the number of CO₂ CCR allowances that remain in the Massachusetts Auction Account at the end of the prior calendar year that are converted into new CO₂ CCR allowances pursuant to 310 CMR 7.70(5)(c)3.f.

7.70: continued

Table 1. Massachusetts CCR Allowances from 2021 Forward									
2021	2022	2023	2024	2025	2026	2027	2028	2029	2030 and each year thereafter
1,194,435	1,158,240	1,122,045	1,085,850	1,049,655	1,013,460	977,265	941,070	904,875	868,680

d. CO₂ CCR allowances shall be offered for sale at an auction in which total demand for allowances, above the CCR trigger price, exceeds the number of CO₂ allowances available for purchase at the auction, not including any CO₂ CCR allowances.

e. After all of the CO₂ CCR allowances in the Massachusetts Auction Account have been sold in a given calendar year, no additional CO₂ CCR allowances will be transferred into the Massachusetts Auction Account that calendar year.

f. At the end of the calendar year, the Department shall calculate the quantity of undistributed CO₂ CCR allowances remaining in the Massachusetts Auction Account. CO₂ CCR allowances equal to or less than the size of the CCR allowances limit in 310 CMR 7.70(5)(c)3.b. or c. for the following calendar year shall be converted into CO₂ CCR allowances for the following year. Any remaining CO₂ CCR allowances in the Massachusetts Auction Account not converted into CO₂ CCR allowances for the following year shall be transferred into the Cost Containment Reserve Retirement Account established pursuant to 310 CMR 7.70(5)(c)7.

4. Emissions Containment Reserve (ECR) Withholding. Starting in calendar year 2021 and each year thereafter, DOER shall withhold CO₂ allowances from sale at an auction for the purpose of additional emission reductions in the event of lower than anticipated emission reduction costs. CO₂ allowances shall be withheld in accordance with the following:

a. CO₂ allowances shall be withheld from an auction if the demand for allowances would result in an auction clearing price that is less than the ECR trigger price shown in 225 CMR 13.03: *Table 2*.

b. If the CO₂ ECR trigger price is met, then the maximum quantity of CO₂ allowances that may be withheld from that auction will be equal to the quantity shown in the following table, minus the total quantity of CO₂ allowances that have been withheld from any prior auction in that calendar year.

Table 2. Massachusetts ECR Allowances 2021 Forward									
2021	2022	2023	2024	2025	2026	2027	2028	2029	2030 and each year thereafter
1,194,436	1,158,240	1,122,045	1,085,850	1,049,655	1,013,460	977,265	941,070	904,875	868,680

c. CO₂ allowances withheld from the auction because the ECR trigger price was met shall not be resold in any future auction.

d. At the end of the calendar year, DOER shall submit to the Department a report documenting the number of CO₂ allowances withheld from the auction in the preceding year because of a trigger of the Emission Containment Reserve and the Department shall transfer any CO₂ allowances withheld from the auction in that year into the Emission Containment Reserve Retirement Account established pursuant to 310 CMR 7.70(5)(c)8.

5. Undistributed and Unsold CO₂ Allowances.

a. The Department or DOER may retire undistributed CO₂ allowances at the end of each control period.

b. The Department or DOER may retire unsold CO₂ allowances at the end of each control period.

7.70: continued

- c. The Department may create one or more retirement accounts in the CO₂ Allowance Tracking System for the purpose of retiring CO₂ allowances. CO₂ allowances transferred into retirement accounts cannot be removed, unless they are transferred in error.
6. Useful Net Thermal Energy Retirement Account.
- a. Pursuant to 310 CMR 7.70(5)(c)4.c., the Department shall create a useful net thermal energy retirement account in the RGGI CO₂ Allowance Tracking System for the purpose of retiring CO₂ allowances equal to the amount of CO₂ emissions attributable to the production of useful net thermal energy from combined heat and power CO₂ budget sources.
- b. Each year, the Department shall retire CO₂ allowances equal to the amount of CO₂ emissions attributed to the production of useful net thermal energy during the prior calendar year, as quantified and reported by the CO₂ authorized account representative pursuant to under 310 CMR 7.70(8)(i).
7. Pursuant to 310 CMR 7.70(5)(c)3.f., the Department shall create a Cost Containment Reserve Retirement Account in the RGGI CO₂ Allowance Tracking System for the purpose of retiring CO₂ CCR allowances not converted into CO₂ CCR allowances for the following year pursuant to 310 CMR 7.70(5)(c)3.f.
8. Pursuant to 310 CMR 7.70(5)(c)4.d., the Department shall create an Emission Containment Reserve Retirement Account in the RGGI CO₂ Allowance Tracking System for the purpose of retiring CO₂ allowances equal to the amount of CO₂ allowances withheld from auction pursuant to 310 CMR 7.70(5)(c)4.d.
- (6) CO₂ Allowance Tracking System.
- (a) CO₂ Allowance Tracking System Accounts.
1. Compliance Accounts. Consistent with 310 CMR 7.70(6)(b)1., the Department or its agent shall establish one compliance account for each CO₂ budget source. Deductions or transfers of CO₂ allowances pursuant to 310 CMR 7.70(4)(b), (6)(e), (6)(g), or (7) shall be recorded in the compliance accounts in accordance with 310 CMR 7.70(6).
2. General Accounts. Consistent with 310 CMR 7.70(6)(b)2., the Department or its agent shall establish, upon request, a general account for any person. Transfers of CO₂ allowances pursuant to 310 CMR 7.70(7) shall be recorded in the general account in accordance with 310 CMR 7.70(6).
- (b) Establishment of Accounts.
1. Compliance Accounts. Upon receipt of a complete account certificate of representation under 310 CMR 7.70(2)(d), the Department or its agent shall establish a compliance account for each CO₂ budget source for which the account certificate of representation was submitted.
2. General Accounts.
- a. Application for General Account. Any person may apply to open a general account for the purpose of holding and transferring CO₂ allowances. An application for a general account may designate one and only one CO₂ authorized account representative and one and only one CO₂ authorized alternate account representative who may act on behalf of the CO₂ authorized account representative. The agreement by which the CO₂ authorized alternate account representative is selected shall include a procedure for authorizing the CO₂ authorized alternate account representative to act in *lieu* of the CO₂ authorized account representative. A complete application for a general account shall be submitted to the Department or its agent and shall include the following elements in a format prescribed by the Department or its agent:
- i. Name, address, email address, telephone number, and facsimile transmission number of the CO₂ authorized account representative and any CO₂ authorized alternate account representative;
 - ii. At the option of the CO₂ authorized account representative, organization name and type of organization;
 - iii. A list of all persons subject to a binding agreement for the CO₂ authorized account representative or any CO₂ authorized alternate account representative to represent their ownership interest with respect to the CO₂ allowances held in the general account;

7.70: continued

- iv. The following certification statement by the CO₂ authorized account representative and any CO₂ authorized alternate account representative: “I certify that I was selected as the CO₂ authorized account representative or the CO₂ alternate authorized account representative, as applicable, by an agreement that is binding on all persons who have an ownership interest with respect to CO₂ allowances held in the general account. I certify that I have all the necessary authority to carry out my duties and responsibilities under the CO₂ Budget Trading Program on behalf of such persons and that each such person shall be fully bound by my representations, actions, inactions, or submissions and by any order or decision issued to me by the Department or its agent or a court regarding the general account.”;
 - v. The signature of the CO₂ authorized account representative and any CO₂ authorized alternate account representative and the dates signed; and
 - vi. Unless otherwise required by the Department or its agent, documents of agreement referred to in the application for a general account shall not be submitted to the Department or its agent. Neither the Department nor its agent shall be under any obligation to review or evaluate the sufficiency of such documents, whether or not submitted.
- b. Authorization of CO₂ Authorized Account Representative.
- i. Upon receipt by the Department or its agent of a complete application for a general account under 310 CMR 7.70(6)(b)2.a.:
 - (i) The Department or its agent shall establish a general account for the person or persons for whom the application is submitted.
 - (ii) The CO₂ authorized account representative and any CO₂ authorized alternate account representative for the general account shall represent and, by his or her representations, actions, inactions, or submissions, legally bind each person who has an ownership interest with respect to CO₂ allowances held in the general account in all matters pertaining to the CO₂ Budget Trading Program, notwithstanding any agreement between the CO₂ authorized account representative or any CO₂ authorized alternate account representative and such person. Any such person shall be bound by any order or decision issued to the CO₂ authorized account representative or any CO₂ authorized alternate account representative by the Department or its agent or a court regarding the general account.
 - (iii) Any representation, action, inaction, or submission by any CO₂ authorized alternate account representative shall be deemed to be a representation, action, inaction, or submission by the CO₂ authorized account representative.
 - ii. Each submission concerning the general account shall be submitted, signed, and certified by the CO₂ authorized account representative or any CO₂ authorized alternate account representative for the persons having an ownership interest with respect to CO₂ allowances held in the general account. Each such submission shall include the following certification statement by the CO₂ authorized account representative or any CO₂ authorized alternate account representative: “I am authorized to make this submission on behalf of the persons having an ownership interest with respect to the CO₂ allowances held in the general account. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment.”
 - iii. The Department or its agent shall accept or act on a submission concerning the general account only if the submission has been made, signed, and certified in accordance with 310 CMR 7.70(6)(b)2.b.ii.

7.70: continued

c. Changing CO₂ Authorized Account Representative and CO₂ Authorized Alternate Account Representative; Changes in Persons with Ownership Interest.

i. The CO₂ authorized account representative for a general account may be changed at any time upon receipt by the Department or its agent of a superseding complete application for a general account under 310 CMR 7.70(6)(b)2.a. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous CO₂ authorized alternate account representative, or the previous CO₂ authorized alternate account representative, prior to the time and date when the Department or its agent receives the superseding application for a general account shall be binding on the new CO₂ authorized account representative and the persons with an ownership interest with respect to the CO₂ allowances in the general account.

ii. The CO₂ authorized alternate account representative for a general account may be changed at any time upon receipt by the Department or its agent of a superseding complete application for a general account under 310 CMR 7.70(6)(b)2.a. Notwithstanding any such change, all representations, actions, inactions, and submissions by the previous CO₂ authorized alternate account representative, or the previous CO₂ authorized alternate account representative, prior to the time and date when the Department or its agent receives the superseding application for a general account shall be binding on the new CO₂ authorized alternate account representative and the persons with an ownership interest with respect to the CO₂ allowances in the general account.

iii. In the event a new person having an ownership interest with respect to CO₂ allowances in the general account is not included in the list of such persons in the application for a general account, such new person shall be deemed to be subject to and bound by the application for a general account, the representations, actions, inactions, and submissions of the CO₂ authorized account representative and any CO₂ authorized alternate account representative, and the decisions, orders, actions, and inactions of the Department or its agent, as if the new person were included in such list.

iv. Within 30 days following any change in the persons having an ownership interest with respect to CO₂ allowances in the general account, including the addition or deletion of persons, the CO₂ authorized account representative or any CO₂ authorized alternate account representative shall submit a revision to the application for a general account amending the list of persons having an ownership interest with respect to the CO₂ allowances in the general account to include the change.

d. Objections Concerning CO₂ Authorized Account Representative.

i. Once a complete application for a general account has been submitted and received under 310 CMR 7.70(6)(b)2.a., the Department or its agent shall rely on the application unless and until a superseding complete application for a general account under 310 CMR 7.70(6)(b)2.a. is received by the Department or its agent.

ii. Except as provided in 310 CMR 7.70(6)(b)2.c.i. and ii., no objection or other communication submitted to the Department or its agent concerning the authorization, or any representation, action, inaction, or submission of the CO₂ authorized account representative or any CO₂ authorized alternate account representative for a general account shall affect any representation, action, inaction, or submission of the CO₂ authorized account representative or any CO₂ authorized alternate account representative or the finality of any decision or order by the Department or its agent under the CO₂ Budget Trading Program.

iii. Neither the Department nor its agent shall adjudicate any private legal dispute concerning the authorization or any representation, action, inaction, or submission of the CO₂ authorized account representative or any CO₂ authorized alternate account representative for a general account, including private legal disputes concerning the proceeds of CO₂ allowance transfers.

e. Delegation by CO₂ Authorized Account Representative and CO₂ Authorized Alternate Account Representative.

i. A CO₂ authorized account representative may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Department or its agent provided for under 310 CMR 7.70(6) and (7).

7.70: continued

ii. A CO₂ authorized alternate account representative may delegate, to one or more natural persons, his or her authority to make an electronic submission to the Department or its agent provided for under 310 CMR 7.70(6) and (7).

iii. In order to delegate authority to make an electronic submission to the Department or its agent in accordance with 310 CMR 7.70(6)(b)2.e.i and ii., the CO₂ authorized account representative or CO₂ authorized alternate account representative, as appropriate, must submit to the Department or its agent a notice of delegation, in a format prescribed by the Department that includes the following elements:

(i) The name, address, e-mail address, telephone number, and facsimile transmission number of such CO₂ authorized account representative or CO₂ authorized alternate account representative;

(ii) The name, address, e-mail address, telephone number and facsimile transmission number of each such natural person, herein referred to as “electronic submission agent”;

(iii) For each such natural person, a list of the type of electronic submissions under 310 CMR 7.70(6)(b)2.e.i. or ii. for which authority is delegated to him or her; and

(iv) The following certification statements by such CO₂ authorized account representative or CO₂ authorized alternate account representative:

-1. “I agree that any electronic submission to the Department or its agent that is by a natural person identified in this notice of delegation and of a type listed for such electronic submission agent in this notice of delegation and that is made when I am a CO₂ authorized account representative or CO₂ authorized alternate account representative, as appropriate, and before this notice of delegation is superseded by another notice of delegation under 310 CMR 7.70(6)(b)2.e.iv. shall be deemed to be an electronic submission by me.”

-2. “Until this notice of delegation is superseded by another notice of delegation under 310 CMR 7.70(6)(b)2.e.iv., I agree to maintain an email account and to notify the Department or its agent immediately of any change in my email address unless all delegation authority by me under 310 CMR 7.70(6)(b)2.e. is terminated.”

iv. A notice of delegation submitted under 310 CMR 7.70(6)(b)2.e.iii. shall be effective, with regard to the CO₂ authorized account representative or CO₂ authorized alternate account representative identified in such notice, upon receipt of such notice by the Department or its agent and until receipt by the Department or its agent of a superseding notice of delegation by such CO₂ authorized account representative or CO₂ authorized alternate account representative as appropriate. The superseding notice of delegation may replace any previously identified electronic submission agent, add a new electronic submission agent, or eliminate entirely any delegation of authority.

v. Any electronic submission covered by the certification in 310 CMR 7.70(6)(b)2.e.iii.(iv)-1. and made in accordance with a notice of delegation effective under 310 CMR 7.70(6)(b)2.e.iv. shall be deemed to be an electronic submission by the CO₂ authorized account representative or CO₂ authorized alternate account representative submitting such notice of delegation.

3. Account Identification. The Department or its agent shall assign a unique identifying number to each account established under 310 CMR 7.70(6)(b)1. or 2.

(c) CO₂ Allowance Tracking System Responsibilities of CO₂ Authorized Account Representative. Following the establishment of a CO₂ Allowance Tracking System account, all submissions to the Department or its agent pertaining to the account including, but not limited to, submissions concerning the deduction or transfer of CO₂ allowances in the account, shall be made only by the CO₂ authorized account representative for the account.

(d) Recordation of CO₂ Allowance Allocations.

1. On or before January 31st of each year, the Department or its agent shall record in the Massachusetts Auction Account the CO₂ allowances for that calendar year.

7.70: continued

2. On or before January 31st of each year, the Department or its agent shall record CO₂ allowances allocated pursuant to 310 CMR 7.70(5)(c)1.a. in the Voluntary Renewable Energy (VRE) Account for the allocation year three years in the future.
 3. Serial Numbers for Allocated CO₂ Allowances. When allocating CO₂ allowances to, and recording them in, an account, the Department or its agent shall assign each CO₂ allowance a unique identification number that includes digits identifying the year for which the CO₂ allowance is allocated.
- (e) Compliance.
1. Allowances Available for Compliance Deduction. CO₂ allowances that meet the following criteria are available to be deducted in order for a CO₂ budget source to comply with the CO₂ requirements of 310 CMR 7.70(1)(e)3. for a control period or an interim control period.
 - a. The CO₂ allowances, other than CO₂ offset allowances, are of allocation years that fall within a prior control period, the same control period, or the same interim control period for which the allowances will be deducted.
 - b. The CO₂ allowances are held in the CO₂ budget source's compliance account as of the CO₂ allowance transfer deadline for that control period or interim control period are transferred into the compliance account by a CO₂ allowance transfer correctly submitted for recordation under 310 CMR 7.70(7)(a) by the CO₂ allowance transfer deadline for that control period or interim control period.
 - c. For CO₂ offset allowances, the number of CO₂ offset allowances that are available to be deducted in order for a CO₂ budget source to comply with the CO₂ requirements of 310 CMR 7.70(1)(e)3. for a control period or interim control period may not exceed 3.3% of the CO₂ budget source's CO₂ emissions for that control period, or 3.3% of 0.50 times the CO₂ budget source's emissions for an interim control period, as determined in accordance with 310 CMR 7.70(6) and (8); and
 - d. CO₂ allowances that are not necessary for deductions for excess emissions for a prior control period under 310 CMR 7.70(6)(e)4.
 2. Deductions for Compliance. Following the recordation, in accordance with 310 CMR 7.70(7)(b), CO₂ allowance transfers submitted for recordation in the CO₂ budget source's compliance account by the CO₂ allowance transfer deadline for a control period or interim control period, the Department or its agent shall deduct CO₂ allowances available under 310 CMR 7.70(6)(e)1. to cover the source's CO₂ emissions (as determined in accordance with 310 CMR 7.70(8)) for the control period or interim control period, as follows:
 - a. Until the amount of CO₂ allowances deducted equals the number of tons of total CO₂ emissions (or 0.50 times the number of tons of total CO₂ emissions for the interim control period), less any CO₂ emissions attributable to the burning of eligible biomass or the production of useful net thermal energy, determined in accordance with 310 CMR 7.70(8), from all CO₂ budget units at the CO₂ budget source for the control period or interim control period; or
 - b. If there are insufficient CO₂ allowances to complete the deductions in 310 CMR 7.70(6)(e)2.a., until no more CO₂ allowances available under 310 CMR 7.70(6)(e)1. remain in the compliance account.
 - c. After making the deductions for compliance, the Department or its agent shall notify the CO₂ authorized account representative if it believes that the CO₂ budget source exceeded its CO₂ budget emissions limitation.
 3. Identification of Available CO₂ Allowances by Serial Number; Default Compliance Deductions.
 - a. The CO₂ authorized account representative for a source's compliance account may request that specific CO₂ allowances, identified by serial number, in the compliance account be deducted for emissions or excess emissions for a control period or interim control period in accordance with 310 CMR 7.70(6)(e)2. or 4. Such identification shall be made in the compliance certification report submitted in accordance with 310 CMR 7.70(4)(a).
 - b. The Department or its agent shall deduct CO₂ allowances for a control period or interim control period from the CO₂ budget source's compliance account, in the absence of an identification or in the case of a partial identification of available CO₂ allowances by serial number under 310 CMR 7.70(6)(e)3.a., in the following descending order:

7.70: continued

- i. First, subject to the relevant compliance deduction limitations under 310 CMR 7.70(6)(e)1.c. and 4.a., CO₂ offset allowances. CO₂ offset allowances shall be deducted in chronological order (*i.e.*, CO₂ offset allowances from earlier allocation years shall be deducted before CO₂ offset allowances from later allocation years). In the event that some, but not all, CO₂ offset allowances from a particular allocation year are to be deducted, CO₂ offset allowances shall be deducted by serial number, with lower serial number allowances deducted before higher serial number allowances.
 - ii. Second, any CO₂ allowances, other than CO₂ offset allowances, that are available for deduction under 310 CMR 7.70(6)(e)1. CO₂ allowances shall be deducted in chronological order (*i.e.*, CO₂ allowances from earlier allocation years shall be deducted before CO₂ allowances from later allocation years). In the event that some, but not all, CO₂ allowances from a particular allocation year are to be deducted, CO₂ allowances shall be deducted by serial number, with lower serial number allowances deducted before higher serial number allowances.
4. Deductions for Excess Emissions.
 - a. After completing the procedures in 310 CMR 7.70(6)(e)2., the Department or its agent shall deduct from the CO₂ budget source's compliance account a number of CO₂ allowances, equal to three times the number of the source's excess emissions. In the event that a source has insufficient CO₂ allowances to cover three times the number of the source's excess emissions, the source shall be required within 14 calendar days of receipt of notice by the Department or its agent to transfer sufficient allowances into its compliance account. No CO₂ offset allowances may be deducted to account for the source's excess emissions.
 - b. Any CO₂ allowance deduction required under 310 CMR 7.70(6)(e)4.a. shall not affect the liability of the owners and operators of the CO₂ budget source or the CO₂ units at the source for any fine, penalty, or assessment, or their obligation to comply with any other remedy, for the same violation, as ordered under applicable State law. In assessing fines, penalties or other obligations, each ton of excess emissions or excess interim emissions is a separate violation.
 - c. The propriety of the Department's determination that a CO₂ budget source had excess emissions and the concomitant deduction of CO₂ allowances from that CO₂ budget source's account may be later challenged in the context of the initial administrative enforcement, or any civil or criminal judicial action, arising from or encompassing that excess emissions violation. The commencement or pendency of any administrative enforcement, or civil or criminal judicial action arising from or encompassing that excess emissions violation, shall not act to prevent the Department or its agent from initially deducting the CO₂ allowances resulting from the Department's original determination that the relevant CO₂ budget source has had excess emissions. Should the Department revise its determination of the existence or extent of the CO₂ budget source's excess emissions either by a settlement or final conclusion of any administrative or judicial action, the Department shall act as follows.
 - i. In any instance where the Department's determination of the extent of excess emissions was too low, the Department shall take further action under 310 CMR 7.70(6)(e)4.a. and b. to address the expanded violation.
 - ii. In any instance where the Department's determination of the extent of excess emissions was too high, the Department shall distribute to the relevant CO₂ budget source a number of CO₂ allowances equaling the number of CO₂ allowances deducted which are attributable to the difference between the original and final quantity of excess emissions. Should such CO₂ budget source's compliance account no longer exist, the CO₂ allowances shall be provided to a general account selected by the owner or operator of the CO₂ budget source.
5. The Department or its agent shall record in the appropriate compliance account all deductions from such an account pursuant to 310 CMR 7.70(6)(e)2. and 4.
6. Action by the Department on Submissions.
 - a. The Department may review and conduct independent audits concerning any submission under the CO₂ Budget Trading Program and make appropriate adjustments of the information in the submissions.

7.70: continued

- b. The Department may deduct CO₂ allowances from or transfer CO₂ allowances to a source's compliance account based on information in the submissions, as adjusted under 310 CMR 7.70(6)(e)6.a.
- (f) Banking. Each CO₂ allowance that is held in a compliance account or a general account shall remain in such account unless and until the CO₂ allowance is deducted or transferred under 310 CMR 7.70(4)(b), (6)(e), (6)(g), or (7).
- (g) Account Error.
1. The Department or its agent may, at its sole discretion and on its own motion, correct any error in any CO₂ Allowance Tracking System account. Within ten business days of making such correction, the Department or its agent shall notify the CO₂ authorized account representative for the account.
 2. At any time the CO₂ authorized account representative may notify the Department if it believes that a mistake has been made.
- (h) Closing of General Accounts.
1. A CO₂ authorized account representative of a general account may instruct the Department or its agent to close the account by submitting a statement requesting deletion of the account from the CO₂ Allowance Tracking System and by correctly submitting for recordation under 310 CMR 7.70(7)(a) a CO₂ allowance transfer of all CO₂ allowances in the account to one or more other CO₂ Allowance Tracking System accounts.
 2. If a general account shows no activity for a period of one year or more and does not contain any CO₂ allowances, the Department or its agent may notify the CO₂ authorized account representative for the account that the account shall be closed in the CO₂ Allowance Tracking System 30 business days after the notice is sent. The account shall be closed after the 30-day period unless before the end of the 30-day period the Department or its agent receives a correctly submitted transfer of CO₂ allowances into the account under 310 CMR 7.70(7)(a) or a statement submitted by the CO₂ authorized account representative demonstrating to the satisfaction of the Department or its agent good cause as to why the account should not be closed. The Department or its agent will have sole discretion to determine if the owner or operator of the unit demonstrated that the account should not be closed.
- (7) CO₂ Allowance Transfers.
- (a) Submission of CO₂ Allowance Transfers. The CO₂ authorized account representative who is the transferor shall submit the transfer to the Department or its agent. To be considered correctly submitted, the CO₂ allowance transfer shall include the following elements in a format specified by the Department or its agent:
1. The numbers identifying both the transferor and transferee accounts;
 2. A specification by serial number of each CO₂ allowance to be transferred;
 3. The printed name and signature of the CO₂ authorized account representative of the transferor account and the date signed;
 4. The date of the completion of the last sale or purchase transaction for the allowance, if any; and
 5. The purchase or sale price of the allowance that is the subject of a sale or purchase transaction under 310 CMR 7.70(7)(a)4.
- (b) Recordation.
1. Within five business days of receiving a CO₂ allowance transfer, except as provided in 310 CMR 7.70(7)(b)2., the Department or its agent shall record a CO₂ allowance transfer by moving each CO₂ allowance from the transferor account to the transferee account as specified by the request, provided that:
 - a. The transfer is correctly submitted under 310 CMR 7.70(7)(a); and
 - b. The transferor account includes each CO₂ allowance identified by serial number in the transfer.
 2. A CO₂ allowance transfer into or out of a compliance account that is submitted for recordation following the CO₂ allowance transfer deadline and that includes any CO₂ allowances that are of allocation years that fall within a control period prior or interim control period or the same as the control period or interim control period to which the CO₂ allowance transfer deadline applies shall not be recorded until after completion of the process pursuant to 310 CMR 7.70(6)(e)2.

7.70: continued

3. Where a CO₂ allowance transfer submitted for recordation fails to meet the requirements of 310 CMR 7.70(7)(b)1., the Department or its agent shall not record such transfer.

(c) Notification.

1. Notification of Recordation. Within five business days of recordation of a CO₂ allowance transfer under 310 CMR 7.70(7)(b), the Department or its agent shall notify each party to the transfer. Notice shall be given to the CO₂ authorized account representatives of both the transferor and transferee accounts.

2. Notification of Non-recordation. Within ten business days of receipt of a CO₂ allowance transfer that fails to meet the requirements of 310 CMR 7.70(7)(b)1., the Department or its agent shall notify the CO₂ authorized account representatives of both accounts subject to the transfer of:

- a. A decision not to record the transfer; and
- b. The reasons for such non-recordation.

3. Nothing in 310 CMR 7.70(7) shall preclude the submission of a CO₂ allowance transfer for recordation following notification of non-recordation.

(8) Monitoring and Reporting.

(a) General Requirements. The owners and operators, and to the extent applicable, the CO₂ authorized account representative of a CO₂ budget unit, shall comply with the monitoring, recordkeeping and reporting requirements as provided in 310 CMR 7.70(8) and all applicable sections of 40 CFR Part 75. Where referenced in 310 CMR 7.70(8), the monitoring requirements of 40 CFR Part 75 shall be adhered to in a manner consistent with the purpose of monitoring and reporting CO₂ mass emissions pursuant to 310 CMR 7.70. For purposes of complying with such requirements, the definitions in 310 CMR 7.70(1)(b) and in 40 CFR 72.2 shall apply, and the terms “affected unit,” “designated representative,” and “continuous emissions monitoring system” (or “CEMS”) in 40 CFR Part 75 shall be replaced by the terms “CO₂ budget unit,” “CO₂ authorized account representative,” and “continuous emissions monitoring system” (or “CEMS”), respectively, as defined in 310 CMR 7.70(1)(b). For units not subject to an acid rain emissions limitation, the term “Administrator” in 40 CFR Part 75 shall be replaced with “the Department or its agent.” Owners or operators of a CO₂ budget unit who monitor a non-CO₂ budget unit pursuant to the common, multiple, or bypass stack procedures in 40 CFR 75.72(b)(2)(ii), or 40 CFR 75.16 (b)(2)(ii)(B) as pursuant to 40 CFR 75.13, for purposes of complying with 310 CMR 7.70, shall monitor and report CO₂ mass emissions from such non-CO₂ budget units according to the procedures for CO₂ budget units established in 310 CMR 7.70(8)(a) through (g).

1. Requirements for Installation, Certification, and Data Accounting. The owner or operator of each CO₂ budget unit shall meet the following requirements:

- a. Install all monitoring systems necessary to monitor CO₂ mass emissions in accordance with 40 CFR Part 75, except for equation G-1. Equation G-1 in Appendix G shall not be used to determine CO₂ emissions under 310 CMR 7.70(8). This may require systems to monitor CO₂ concentration, stack gas flow rate, O₂ concentration, heat input, and fuel flow rate;
- b. Successfully complete all certification tests required under 310 CMR 7.70(8)(b) and meet all other requirements of 310 CMR 7.70(8) and 40 CFR Part 75 applicable to the monitoring systems under 310 CMR 7.70(8)(a)1.a.; and,
- c. Record, report and quality-assure the data from the monitoring systems under 310 CMR 7.70(8)(a)1.a.

2. Compliance Dates. The owner or operator of a CO₂ budget unit shall meet the monitoring system certification and other requirements of 310 CMR 7.70(8)(a)1.a. through 1.c. on or before the following dates. The owner or operator of a CO₂ budget unit shall record, report and quality-assure the data from the monitoring systems under 310 CMR 7.70(8)(a)1.a. on and after the following dates.

- a. The owner or operator of a CO₂ budget unit, except for a CO₂ budget unit under 310 CMR 7.70(8)(a)2.b., that commences commercial operation before July 1, 2008, must comply with the requirements of 310 CMR 7.70(8) by January 1, 2009.
- b. The owner or operator of a CO₂ budget unit that commences commercial operation on or after July 1, 2008 must comply with the requirements of 310 CMR 7.70(8) by the later of the following dates:

7.70: continued

- i. January 1, 2009; or
 - ii. 180 calendar days after the date on which the unit commences commercial operation.
- c. For the owner or operator of a CO₂ budget unit for which construction of a new stack or flue installation is completed after the applicable deadline under 310 CMR 7.70(8)(a)2.a. or 2.b. by the earlier of:
 - i. 90 unit operating days after the date on which emissions first exit to the atmosphere through the new stack or flue; or,
 - ii. 180 calendar days after the date on which emissions first exit to the atmosphere through the new stack or flue.
- 3. Reporting Data.
 - a. Except as provided in 310 CMR 7.70(8)(a)3.b., the owner or operator of a CO₂ budget unit that does not meet the applicable compliance date set forth in 310 CMR 7.70(8)(a)2.a., 2.b., and 2.c. for any monitoring system under 310 CMR 7.70(8)(a)1.a. shall, for each such monitoring system, determine, record, and report maximum potential (or as appropriate minimum potential) values for CO₂ concentration, CO₂ emissions rate, stack gas moisture content, fuel flow rate, heat input, and any other parameter required to determine CO₂ mass emissions in accordance with 40 CFR 75.31(b)(2) or (c)(3), or section 2.4 of Appendix D of 40 CFR Part 75, as applicable.
 - b. The owner or operator of a CO₂ budget unit that does not meet the applicable compliance date set forth in 310 CMR 7.70(8)(a)2.c. for any monitoring system under 310 CMR 7.70(8)(a)1.a. shall, for each such monitoring system, determine, record, and report substitute data using the applicable missing data procedures in Subpart D or Appendix D of 40 CFR Part 75, in lieu of the maximum potential (or as appropriate minimum potential) values for a parameter if the owner or operator demonstrates that there is continuity between the data streams for that parameter
 - c. Low Mass Emissions (LME) Units.
 - i. CO₂ budget units subject to an acid rain emissions limitation that qualify for the optional SO₂, NO_x, and CO₂ emissions calculations for low mass emissions (LME) units under 40 CFR 75.19 and report emissions for such programs using the calculations under 40 CFR 75.19, shall also use the CO₂ emissions calculations for LME units under 40 CFR 75.19 for purposes of compliance with 310 CMR 7.70.
 - ii. CO₂ budget units subject to an acid rain emissions limitation that do not qualify for the optional SO₂, NO_x, and CO₂ emissions calculations for LME units under 40 CFR 75.19, shall not use the CO₂ emissions calculations for LME units under 40 CFR 75.19 for purposes of compliance with 310 CMR 7.70.
 - iii. CO₂ budget units not subject to an acid rain emissions limitation shall qualify for the optional CO₂ emissions calculation for LME units under 40 CFR 75.19, provided that they emit less than 100 tons of NO_x annually and no more than 25 tons of SO₂ annually.
- 4. Prohibitions.
 - a. No owner or operator of a CO₂ budget unit shall use any alternate monitoring system, alternate reference method, or any other alternate for the required continuous emissions monitoring system without having obtained prior written approval in accordance with 310 CMR 7.70(8)(f).
 - b. No owner or operator of a CO₂ budget unit shall operate the unit so as to discharge, or allow to be discharged, CO₂ emissions to the atmosphere without accounting for all such emissions in accordance with the applicable provisions of 310 CMR 7.70(8) and 40 CFR Part 75.
 - c. No owner or operator of a CO₂ budget unit shall disrupt the continuous emissions monitoring system, any portion thereof, or any other approved emissions monitoring method, and thereby avoid monitoring and recording CO₂ mass emissions discharged into the atmosphere, except for periods of recertification or periods when calibration, quality assurance testing, or maintenance is performed in accordance with the applicable provisions of 310 CMR 7.70(8) and 40 CFR Part 75.

7.70: continued

d. No owner or operator of a CO₂ budget unit shall retire or permanently discontinue use of the continuous emissions monitoring system, any component thereof, or any other approved emissions monitoring system under 310 CMR 7.70(8), except under any one of the following circumstances:

- i. The owner or operator is monitoring emissions from the unit with another certified monitoring system approved, in accordance with the applicable provisions of 310 CMR 7.70(8) and 40 CFR Part 75, by the Department for use at that unit that provides emissions data for the same pollutant or parameter as the retired or discontinued monitoring system; or,
- ii. The CO₂ authorized account representative submits notification of the date of certification testing of a replacement monitoring system in accordance with 310 CMR 7.70(8)(b)4.c.i.

(b) Initial Certification and Recertification Procedures.

1. The owner or operator of a CO₂ budget unit shall be exempt from the initial certification requirements of 310 CMR 7.70(8)(b) for a monitoring system under 310 CMR 7.70(8)(a)1.a. if the following conditions are met:

- a. The monitoring system has been previously certified in accordance with 40 CFR Part 75; and,
- b. The applicable quality assurance and quality-control requirements of 40 CFR 75.21 and Appendix B and Appendix D of 40 CFR Part 75 are fully met for the certified monitoring system described in 310 CMR 7.70(8)(b)1.a.

2. The recertification provisions of 310 CMR 7.70(8)(b) shall apply to a monitoring system under 310 CMR 7.70(8)(a)1.a. exempt from initial certification requirements under 310 CMR 7.70(8)(b)1.

3. Notwithstanding 310 CMR 7.70(8)(b)1., if the Administrator has previously approved a petition under 40 CFR 75.72(b)(2)(ii), or 40 CFR 75.16(b)(2)(ii)(B) as pursuant to 40 CFR 75.13 for apportioning the CO₂ emissions rate measured in a common stack or a petition under 40 CFR 75.66 for an alternate requirement in 40 CFR Part 75, the CO₂ authorized account representative shall submit the petition to the Department under 310 CMR 7.70(8)(f)1. to determine whether the approval applies under this program.

4. Except as provided in 310 CMR 7.70(8)(b)1., the owner or operator of a CO₂ budget unit shall comply with the following initial certification and recertification procedures for a continuous emissions monitoring system and an excepted monitoring system under Appendix D of 40 CFR Part 75 and under 310 CMR 7.70(8)(a)1.a. The owner or operator of a unit that qualifies to use the low mass emissions excepted monitoring methodology in 40 CFR 75.19 or that qualifies to use an alternate monitoring system under Subpart E of 40 CFR Part 75 shall comply with the procedures in 310 CMR 7.70(8)(b)5. or 6., respectively.

a. Requirements for Initial Certification. The owner or operator shall ensure that each continuous emissions monitoring system required under 310 CMR 7.70(8)(a)1.a. (which includes the automated data acquisition and handling system) successfully completes all of the initial certification testing required under 40 CFR 75.20 by the applicable deadlines specified in 310 CMR 7.70(8)(a)2. In addition, whenever the owner or operator installs a monitoring system in order to meet the requirements of 310 CMR 7.70(8) in a location where no such monitoring system was previously installed, initial certification in accordance with 40 CFR 75.20 is required.

b. Requirements for Recertification.

- (i) Whenever the owner or operator makes a replacement, modification, or change in a certified continuous emissions monitoring system under 310 CMR 7.70(8)(a)1.a. that the Administrator or the Department determines significantly affects the ability of the system to accurately measure or record CO₂ mass emissions or to meet the quality-assurance and quality-control requirements of 40 CFR 75.21 or Appendix B to 40 CFR Part 75, the owner or operator shall recertify the monitoring system according to 40 CFR 75.20(b).

7.70: continued

(ii) For systems using stack measurements such as stack flow, stack moisture content, or CO₂ or O₂ monitors, whenever the owner or operator makes a replacement, modification, or change to the flue gas handling system or the unit's operation that the Administrator or the Department determines to significantly change the flow or concentration profile, the owner or operator shall recertify the continuous emissions monitoring system according to 40 CFR 75.20(b). Examples of changes which require recertification include: replacement of the analyzer, change in location or orientation of the sampling probe or site, or changing of flow rate monitor polynomial coefficients.

c. Approval Process for Initial Certifications and Recertification. 310 CMR 7.70(8)(b)4.c.i through iv. apply to both initial certification and recertification of a monitoring system under 310 CMR 7.70(8)(a)1.a. For recertifications, replace the words "certification" and "initial certification" with the word "recertification," replace the word "certified" with "recertified," and proceed in the manner prescribed in 40 CFR 75.20(b)(5) and (g)(7) in lieu of 310 CMR 7.70(8)(b)4.c.v.

i. Notification of Certification. The CO₂ authorized account representative shall submit to the Department or its agent, the appropriate EPA Regional Office, and the Administrator a written notice of the dates of certification in accordance with 310 CMR 7.70(8)(d).

ii. Certification Application. The CO₂ authorized account representative shall submit to the Department or its agent a certification application for each monitoring system. A complete certification application shall include the information specified in 40 CFR 75.63.

iii. Provisional Certification Data. The provisional certification date for a monitor shall be determined in accordance with 40 CFR 75.20(a)(3). A provisionally certified monitor may be used under the CO₂ Budget Trading Program for a period not to exceed 120 days after receipt by the Department of the complete certification application for the monitoring system or component thereof under 310 CMR 7.70(8)(b)4.c.ii. Data measured and recorded by the provisionally certified monitoring system or component thereof, in accordance with the requirements of 40 CFR Part 75, shall be considered valid quality-assured data (retroactive to the date and time of provisional certification), provided that the Department does not invalidate the provisional certification by issuing a notice of disapproval within 120 days of receipt of the complete certification application by the Department.

iv. Certification Application Approval Process. The Department shall issue a written notice of approval or disapproval of the certification application to the owner or operator within 120 days of receipt of the complete certification application under 310 CMR 7.70(8)(b)4.c.ii. In the event the Department does not issue such a notice within such 120-day period, each monitoring system that meets the applicable performance requirements of 40 CFR Part 75 and is included in the certification application shall be deemed certified for use under the CO₂ Budget Trading Program.

(i) Approval Notice. If the certification application is complete and shows that each monitoring system meets the applicable performance requirements of 40 CFR Part 75, then the Department shall issue a written notice of approval of the certification application within 120 days of receipt.

(ii) Incomplete Application Notice. If the certification application is not complete, then the Department shall issue a written notice of incompleteness that sets a reasonable date by which the CO₂ authorized account representative must submit the additional information required to complete the certification application. If the CO₂ authorized account representative does not comply with the notice of incompleteness by the specified date, then the Department may issue a notice of disapproval under 310 CMR 7.70(8)(b)4.c.iv.(iii). The 120-day review period shall not begin before receipt of a complete certification application.

7.70: continued

(iii) Disapproval Notice. If the certification application shows that any monitoring system or component thereof does not meet the performance requirements of 40 CFR Part 75, or if the certification application is incomplete and the requirement for disapproval under 310 CMR 7.70(8)(b)4.c.iv.(ii) is met, then the Department shall issue a written notice of disapproval of the certification application. Upon issuance of such notice of disapproval, the provisional certification is invalidated by the Department and the data measured and recorded by each uncertified monitoring system or component thereof shall not be considered valid quality assured data beginning with the date and hour of provisional certification. The owner or operator shall follow the procedures for loss of certification in 310 CMR 7.70(8)(b)4.c.v. for each monitoring system, or component thereof, which is disapproved for initial certification.

(iv) Audit Decertification. The Department may issue a notice of disapproval of the certification status of a monitor in accordance with 310 CMR 7.70(8)(c)2.

v. Procedures for Loss of Certification. If the Department issues a notice of disapproval of a certification application under 310 CMR 7.70(8)(b)4.c.iv.(iii) or a notice of disapproval of certification status under 310 CMR 7.70(8)(b)4.c.iv.(iv), then:

(i) The owner or operator shall substitute the following values for each disapproved monitoring system, for each hour of unit operation during the period of invalid data beginning with the date and hour of provisional certification and continuing until the time, date, and hour specified under 40 CFR 75.20(a)(5)(i) or 40 CFR 75.20(g)(7):

-1. For units monitoring, or intending to monitor, for CO₂ mass emissions using heat input or for units using the low mass emissions excepted methodology under 40 CFR 75.19, the maximum potential hourly heat input of the unit; or

-2. For units monitoring, or intending to monitor, for CO₂ mass emissions using a CO₂ pollutant concentration monitor and a flow monitor, the maximum potential concentration of CO₂ and the maximum potential flow rate of the unit under section 2.1 of Appendix A of 40 CFR Part 75.

(ii) The CO₂ authorized account representative shall submit a notification of certification retest dates and a new certification application in accordance with 310 CMR 7.70(8)(b)4.c.i. and ii.; and

(iii) The owner or operator shall repeat all certification tests or other requirements that were failed by the monitoring system, as indicated in the Department's notice of disapproval, no later than 30 unit operating days after the date of issuance of the notice of disapproval.

5. Initial Certification and Recertification Procedures for Low Mass Emissions Units Using the Excepted Methodologies under 310 CMR 7.70(8)(a)3.c. The owner or operator of a unit qualified to use the low mass emissions excepted methodology under 310 CMR 7.70(8)(a)3.c. shall meet the applicable certification and recertification requirements of 40 CFR 75.19(a)(2), 40 CFR 75.20(h) and 310 CMR 7.70(8)(b). If the owner or operator of such a unit elects to certify a fuel flow meter system for heat input determinations, the owner or operator shall also meet the certification and recertification requirements in 40 CFR 75.20(g).

6. Certification/Recertification Procedures for Alternate Monitoring Systems. The CO₂ authorized account representative for each unit for which the owner or operator intends to use an alternate monitoring system approved by the Administrator and, if applicable, the Department under Subpart E of 40 CFR Part 75 shall comply with the applicable notification and application procedures of 40 CFR 75.20(f).

(c) Out-of-control Periods.

1. Whenever any monitoring system fails to meet the quality assurance and quality control requirements or data validation requirements of 40 CFR Part 75, data shall be substituted using the applicable procedures in Subpart D or Appendix D of 40 CFR Part 75.

7.70: continued

2. Audit Decertification. Whenever both an audit of a monitoring system and a review of the initial certification or recertification application reveal that any monitoring system should not have been certified or recertified because it did not meet a particular performance specification or other requirement under 310 CMR 7.70(8)(b) or the applicable provisions of 40 CFR Part 75, both at the time of the initial certification or recertification application submission and at the time of the audit, the Department or Administrator shall issue a notice of disapproval of the certification status of such monitoring system. For the purposes of this 310 CMR 7.70(8)(c)2., an audit shall be either a field audit or an audit of any information submitted to the Department or the Administrator. By issuing the notice of disapproval, the Department or Administrator revokes prospectively the certification status of the monitoring system. The data measured and recorded by the monitoring system shall not be considered valid quality assured data from the date of issuance of the notification of the revoked certification status until the date and time that the owner or operator completes subsequently approved initial certification or recertification tests for the monitoring system. The owner or operator shall follow the initial certification or recertification procedures in 310 CMR 7.70(8)(b) for each disapproved monitoring system.
- (d) Notifications. The CO₂ authorized account representative for a CO₂ budget unit shall submit written notice to the Department and the Administrator in accordance with 40 CFR 75.61.
- (e) Recordkeeping and Reporting.
1. General Provisions. The CO₂ authorized account representative shall comply with all recordkeeping and reporting requirements in 310 CMR 7.70(8)(e), the applicable record keeping and reporting requirements under 40 CFR 75.73 and with the requirements of 310 CMR 7.70(2)(a)5.
 2. Monitoring Plans. The owner or operator of a CO₂ budget unit required to submit a monitoring plan shall submit such monitoring plan in the manner prescribed in 40 CFR 75.62.
 3. Certification Applications. The CO₂ authorized account representative shall submit an application to the Department within 45 days after completing all CO₂ monitoring system initial certification or recertification tests required under 310 CMR 7.70(8)(b) including the information required under 40 CFR 75.63 and 40 CFR 75.53(e) and (f).
 4. Quarterly Reports. The CO₂ authorized account representative shall submit quarterly reports, as follows:
 - a. The CO₂ authorized account representative shall report the CO₂ mass emissions data for the CO₂ budget unit, in an electronic format prescribed by the Administrator, unless otherwise prescribed by the Department, for each calendar quarter beginning with:
 - i. For a unit that commences commercial operation before July 1, 2008, the calendar quarter covering January 1, 2009 through March 31, 2009; or
 - ii. For a unit commencing commercial operation on or after July 1, 2008, the calendar quarter corresponding to the earlier of the date of provisional certification or the applicable deadline for initial certification under 310 CMR 7.70(8)(a)2.
 - b. The CO₂ authorized account representative shall submit each quarterly report to the Department's agent within 30 days following the end of the calendar quarter covered by the report. Quarterly reports shall be submitted in the manner specified in Subpart H of 40 CFR Part 75 and 40 CFR 75.64. Quarterly reports shall be submitted for each CO₂ budget unit (or group of units using a common stack), and shall include all of the data and information required in Subpart G of 40 CFR Part 75, except for opacity, NO_x and SO₂ provisions.
 - c. Compliance Certification. The CO₂ authorized account representative shall submit to the Department or its agent a compliance certification in support of each quarterly report based on reasonable inquiry of those persons with primary responsibility for ensuring that all of the unit's emissions are correctly and fully monitored. The certification shall state that:

7.70: continued

- i. The monitoring data submitted were recorded in accordance with the applicable requirements of 310 CMR 7.70(8) and 40 CFR Part 75, including the quality assurance procedures and specifications;
 - ii. For a unit with add-on CO₂ emissions controls and for all hours where data are substituted in accordance with 40 CFR 75.34(a)(1), the add-on emissions controls were operating within the range of parameters listed in the quality assurance/quality control program under appendix B of 40 CFR Part 75 and the substitute values do not systematically underestimate CO₂ emissions; and
 - iii. The CO₂ concentration values substituted for missing data under Subpart D of 40 CFR Part 75 do not systematically underestimate CO₂ emissions.
- (f) Petitions.
1. Except as provided in 310 CMR 7.70(8)(f)3., the CO₂ authorized account representative of a CO₂ budget unit that is subject to an Acid Rain emissions limitation may submit a petition to the Administrator under 40 CFR 75.66 and to the Department requesting approval to apply an alternate to any requirement of 310 CMR 7.70(8). Application of an alternate to any requirement of 40 CFR Part 75 is in accordance with 310 CMR 7.70(8) only to the extent that the petition is approved in writing by the Administrator, and subsequently approved in writing by the Department.
 2. Petitions for a CO₂ budget unit that is not subject to an Acid Rain emissions limitation.
 - a. The CO₂ authorized account representative of a CO₂ budget unit that is not subject to an Acid Rain emissions limitation may submit a petition to the Administrator under 40 CFR 75.66 and to the Department requesting approval to apply an alternate to any requirement of 40 CFR Part 75. Application of an alternate to any requirement of 40 CFR Part 75 is in accordance with 310 CMR 7.70(8) only to the extent that the petition is approved in writing by the Administrator, and subsequently approved in writing by the Department.
 - b. In the event that the Administrator declines to review a petition under 310 CMR 7.70(8)(f)2.a., the CO₂ authorized account representative of a CO₂ budget unit that is not subject to an Acid Rain emissions limitation may submit a petition to the Department requesting approval to apply an alternate to any requirement of 310 CMR 7.70(8). That petition shall contain all of the relevant information specified in 40 CFR 75.66. Application of an alternate to any requirement of 310 CMR 7.70(8) is in accordance with 310 CMR 7.70(8) only to the extent that the petition is approved in writing by the Department.
 3. The CO₂ authorized account representative of a CO₂ budget unit that is subject to an Acid Rain emissions limitation may submit a petition to the Administrator under 40 CFR 75.66 and to the Department requesting approval to apply an alternate to a requirement concerning any additional CEMS required under the common stack provisions of 40 CFR 75.72 or a CO₂ concentration CEMS used under 40 CFR 75.71(a)(2). Application of an alternate to any such requirement is in accordance with 310 CMR 7.70(8) only to the extent the petition is approved in writing by the Administrator, and subsequently approved in writing by the Department.
- (g) CO₂ Budget Units That Co-fire Eligible Biomass.
1. The CO₂ authorized account representative of a CO₂ budget unit that co-fires eligible biomass as a compliance mechanism under 310 CMR 7.70 shall report the following information to the Department or its agent for each calendar quarter:
 - a. For each shipment of solid eligible biomass fuel fired at the CO₂ budget unit, the total eligible biomass fuel input, on an as-fired basis, in pounds.
 - b. For each shipment of solid eligible biomass fuel fired at the CO₂ budget unit, the moisture content, on an as-fired basis, as a fraction by weight.
 - c. For each distinct type of gaseous eligible biomass fuel fired at the CO₂ budget unit, the density of the biogas, on an as-fired basis, in pounds per standard cubic foot.
 - d. For each distinct type of gaseous eligible biomass fuel fired at the CO₂ budget unit, the moisture content of the biogas, as a fraction by total weight.
 - e. For each distinct type of gaseous eligible biomass fuel fired at the CO₂ budget unit, the total eligible biomass fuel input, in standard cubic feet.
 - f. For each distinct type of eligible biomass fuel fired at the CO₂ budget unit, the dry basis carbon content of the fuel type, as a fraction by dry weight.

7.70: continued

- g. For each distinct type of eligible biomass fuel fired at the CO₂ budget unit, the dry basis higher heating value, in MMBtu per dry pound.
 - h. For each distinct type of eligible biomass fuel fired at the CO₂ budget unit, the total dry basis eligible biomass fuel input, in pounds, calculated in accordance with 310 CMR 7.70(8)(g)2.
 - i. The total amount of CO₂ emitted from the CO₂ budget unit due to firing eligible biomass fuel, in tons, calculated in accordance with 310 CMR 7.70(8)(g)3.
 - j. For each distinct type of eligible biomass fuel fired at the CO₂ budget unit, the total eligible biomass fuel heat input, in MMBtu, calculated in accordance with 310 CMR 7.71(8)(g)4.a.
 - k. The total amount of heat input to the CO₂ budget unit due to firing eligible biomass fuel, in MMBtu, calculated in accordance with 310 CMR 7.71(8)(g)4.b.
 - l. Description and documentation of monitoring technology employed, and description and documentation of fuel sampling methodology employed, including sampling frequency; and
 - m. For each distinct type of eligible biomass fuel fired at the CO₂ budget unit, chemical analysis, including heating value and carbon content.
2. An owner or operator of a CO₂ budget unit shall calculate and submit to the Department or its agent on a quarterly basis the total dry weight for each distinct type of eligible biomass fired by the CO₂ budget unit during the reporting quarter. The total dry weight shall be determined for each fuel type as follows:

a. For Solid Fuel Types:

$$F_j = \sum_{i=1}^m (1 - M_i) \times F_i$$

where:

F_j = Total eligible biomass dry basis fuel input (lbs) for fuel type j;

F_i = Eligible biomass as-fired fuel input (lbs) for fired shipment i;

M_i = Moisture content (fraction) for fired shipment i;

I = fired fuel shipment;

j = fuel type; and

m = number of shipments.

b. For Gaseous Fuel Types:

$$F_j = D_j \times V_j \times (1 - M_j)$$

where:

F_j = Total eligible biomass dry basis fuel input (lbs) for fuel type j;

D_j = Density of biogas (lbs/scf) for fuel type j;

V_j = Total volume (scf) for fuel type j;

M_j = Moisture content (fraction) for fuel type j,

j = fuel type.

3. CO₂ emissions due to firing of eligible biomass shall be determined as follows:
- a. For any full calendar quarter during which no fuel other than eligible biomass is combusted at the CO₂ budget unit, as measured and recorded in accordance with 310 CMR 7.70(8)(a) through (f); or

7.70: continued

b. For any full calendar quarter during which fuels other than eligible biomass are combusted at the CO₂ budget unit, as determined using the following equation:

$$\text{CO}_2 \text{ tons} = \sum_{j=1}^n F_j \times C_j \times O_j \times 44/12 \times 0.0005$$

where:

- CO₂ tons = CO₂ emissions due to firing of eligible biomass for the reporting quarter;
 F_j = Total eligible biomass dry basis fuel input (lbs) for fuel type j, as calculated in 310 CMR 7.70(8)(g)2.;
 C_j = Carbon fraction (dry basis) for fuel type j;
 O_j = Oxidation factor for eligible biomass fuel type j, derived for solid fuels based on the ash content of the eligible biomass fired and the carbon content of this ash, as determined pursuant to 310 CMR 7.70(8)(g)1.i. for gaseous eligible biomass fuels, a default oxidation factor of 0.995 may be used;
 44/12 = The number of tons of carbon dioxide that are created when one ton of carbon is combusted (44/12);
 0.0005 = The number of short tons which is equal to one pound;
 j = fuel type; and
 n = number of distinct fuel types.

4. Heat input due to firing of eligible biomass for each quarter shall be determined as follows:

a. For Each Distinct Fuel Type:

- H_j = F_j x HHV_j
 where:
 H_j = Heat input (MMBtu) for fuel type j;
 F_j = Total eligible biomass dry basis fuel input (lbs) for fuel type j, as calculated in 310 CMR 7.71(8)(g)2.;
 HHV_j = Higher heating value (MMBtu/lb), dry basis, for fuel type j, as determined through chemical analysis;
 j = fuel type.

b. For All Fuel Types:

$$\text{Heat Input MMBtu} = \sum_{j=1}^n H_j$$

where:

- H_j = Heat input (MMBtu) for fuel type j;
 j = fuel type; and,
 n = number of distinct fuel types.

5. Fuel sampling methods and fuel sampling technology shall be consistent with the *New York State Renewable Portfolio Standard Biomass Guidebook*, May 2006.

(h) Additional Requirements to Provide Output Data.

1. CO₂ budget source shall submit to the Department or its agent net electrical output.
2. CO₂ budget sources selling steam should use billing meters to determine net steam output. A CO₂ budget source whose steam output is not measured by billing meters or whose steam output is combined with output from a non-CO₂ budget unit prior to measurement by the billing meter shall propose to the Department an alternate method for quantification of net steam output. If data for steam output is not available, the CO₂ budget source may report heat input providing useful steam output as a surrogate for steam output.
3. Monitoring. The owner or operator of each CO₂ budget unit required to submit an output monitoring plan pursuant to 310 CMR 7.70(3)(c) shall propose a method for quantification of net energy output in such output monitoring plan, including:

7.70: continued

- a. A diagram that includes the following features where applicable:
 - i. All CO₂ budget units and all generators served by each CO₂ budget unit and the relationship between CO₂ budget units and generators. If a generator served by a CO₂ budget unit is also served by a non-CO₂ budget unit, the non-CO₂ budget unit and its relationship to each generator should be indicated on the diagram as well. The diagram should indicate where the net electric output is measured and should include all electrical inputs and outputs to and from the CO₂ budget source. If net electric output is determined using a billing meter, the diagram should show each billing meter used to determine net sales of electricity and should show that all electricity measured at the point of sale is generated by the CO₂ budget units.
 - ii. If the CO₂ budget unit monitors net thermal output, the diagram should include all steam or hot water coming into the net steam system, including steam from CO₂ budget units and non-CO₂ budget units, and all exit points of steam or hot water from the net steam system. In addition, each input and output stream shall have an estimated temperature, pressure and phase indicator, and an enthalpy in Btu/lb. The diagram of the net steam system should identify all useful loads, house loads, parasitic loads, any other steam loads and all boiler feedwater returns. The diagram shall represent all energy losses in the system as either usable or unusable losses. The diagram shall also indicate all flow meters, temperature or pressure sensors or other equipment used to calculate gross thermal output. If a sales agreement is used to determine net thermal output, the diagram should show the monitoring equipment used to determine the sales of steam.
 - b. A description of each output monitoring system. The description of the output monitoring system shall include a written description of the output system and the equations used to calculate output. For net thermal output systems, descriptions and justifications of each useful load shall be included.
 - c. A detailed description of all quality assurance/quality control activities that will be performed to maintain the output system in accordance with 310 CMR 7.70(8)(h)5.
 - d. Documentation supporting any output value(s) to be used as a missing data value should there be periods of invalid output data. The missing data output value shall be either zero or an output value that is likely to be lower than a measured value and that is approved as part of the monitoring plan required under 310 CMR 7.70(8)(h)3.
4. Initial Certification. A certification statement shall be submitted by the CO₂ authorized account representative stating that either the output monitoring system consists entirely of billing meters or that the output monitoring system meets one of the accuracy requirements for non-billing meters at 310 CMR 7.70(8)(h)4.b. The certification shall be submitted in accordance with the compliance deadlines established in 310 CMR 7.70(3)(b).
- a. Billing Meters. The billing meter shall record the electric or thermal output. Any electric or thermal output values that the facility reports shall be the same as the values used in billing for the output. Any output measurement equipment used as a billing meter in commercial transactions requires no additional certification or testing.
 - b. Non-billing Meters. For non-billing meters and systems that include a mixture of billing meters and non-billing meters, the output monitoring system shall meet either of the accuracy criteria in 310 CMR 7.70(8)(h)4i. and ii.
 - i. System Approach to Accuracy. The system approach to accuracy shall include a determination of how the system accuracy of within less than or equal to 10% of the reference value is achieved using the individual components in the system and should include data loggers and any wattmeters used to calculate the final net electric output data and/or any flowmeters for steam or condensate, temperature measurement devices, absolute pressure measurement devices, and differential pressure devices used for measuring thermal energy.

7.70: continued

- ii. Component Approach to Accuracy. If testing a piece of output measurement equipment shows that the output readings are not accurate to within less than or equal to 3.0% of the full scale value, then the equipment shall be repaired or replaced to meet that requirement. Data shall remain invalid until the output measurement equipment passes an accuracy test or is replaced with another piece of equipment that passes the accuracy test.
- 5. Ongoing QA/QC. The following ongoing quality assurance/quality control activities must be performed in order to maintain the output system:
 - a. Billing Meters. In the case where billing meters are used to determine output, no QA/QC activities beyond what are already performed are required.
 - b. Non-billing Meters. Certain types of equipment such as potential transformers, current transformers, nozzle and venturi type meters, and the primary element of an orifice plate only require an initial certification of calibration and do not require periodic recalibration unless the equipment is physically changed. However, the pressure and temperature transmitters accompanying an orifice plate shall require periodic retesting. For such pressure and temperature transmitters, and other types of equipment, either recalibrate or reverify the meter accuracy at least once every two years (*i.e.*, every eight calendar quarters), unless a consensus standard allows for less frequent calibrations or accuracy tests. The output monitoring system shall either meet an accuracy of within 10% of the reference value, or each component monitor for the output system shall meet an accuracy of within 3.0% of the full scale value, whichever is less stringent. If testing a piece of output measurement equipment shows that the output readings are not accurate to within 3.0% of the full scale value, then the equipment should be repaired or replaced to meet that requirement.
 - c. Out-of-control Periods. If testing a piece of output measurement equipment shows that the output readings are not accurate to the certification value, data remain invalid until the output measurement equipment passes an accuracy test or is replaced with another piece of equipment that passes the accuracy test. All invalid data shall be replaced by either zero or an output value that is likely to be lower than a measured value and that is approved as part of the monitoring plan required under 310 CMR 7.70(8)(h)3.
- 6. Recordkeeping and Reporting.
 - a. General Provisions. The CO₂ authorized account representative shall comply with all recordkeeping and reporting requirements in 310 CMR 7.70(8)(h) and with the requirements of 310 CMR 7.70(1)(e)5. and (2)(a)5.
 - b. Recordkeeping. Facilities shall retain data used to monitor, determine, or calculate net generation for ten years from the date reported.
 - c. Annual Reports. The CO₂ authorized account representative shall submit annual output reports in a spreadsheet, as follows. The data shall be sent both electronically and in hardcopy by March 1st for the immediately preceding calendar year to the Department or its agent. The annual report shall include the annual total unit level MWh, the annual total useful steam output and a certification statement from the CO₂ authorized account representative stating the following, "I am authorized to make this submission on behalf of the owners and operators of the CO₂ budget sources or CO₂ budget units for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false statements and information or omitting required statements and information, including the possibility of fine or imprisonment."
- (i) CO₂ Budget Units That Generate Useful Net Thermal Energy.
 - 1. The CO₂ authorized account representative of a combined heat and power CO₂ budget source that generates useful net thermal energy shall report the following information for the combined heat and power CO₂ budget source to the Department or its agent for each calendar quarter:

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

(PAGES 250.102.53 THROUGH 250.102.74 ARE RESERVED FOR FUTURE USE.)

7.70: continued

- a. The total amount of useful net thermal energy output produced by CO₂ budget units expressed in MMBtu, the total volume of steam output produced by CO₂ budget units expressed in cubic feet, the average pressure of the steam output produced by CO₂ budget units expressed in pounds per square inch, and the average temperature of the steam expressed in degrees Fahrenheit. The amount of useful net thermal energy output shall be determined in a manner as approved by the Department in the CO₂ Budget Emission Control Plan consistent with the requirements of 310 CMR 7.70(3) and (8)(h).
 - b. The total amount of CO₂ emissions from CO₂ budget units attributable to the production of useful net thermal energy, in tons, calculated in accordance with 310 CMR 7.70(8)(i)2.
2. The quantity of CO₂ emissions attributable to the production of useful net thermal energy shall be determined by the following equation (rounded to the nearest whole ton):

$$\text{UNTE}/.80 \times 122 \text{ lb/MMBtu}$$

$$2000 \text{ lb/ton}$$

Where:

UNTE = useful net thermal energy (in MMBtu output) generated by CO₂ budget units at the combined heat and power CO₂ budget source during each calendar quarter.

7.71: Reporting of Greenhouse Gas Emissions

(1) Purpose. The purpose of 310 CMR 7.71 is to implement the reporting and verification requirement for statewide greenhouse gas emissions and to monitor and ensure compliance with the reporting provisions of M.G.L. c. 21N, the Climate Protection and Green Economy Act, St. 2008, c. 298, § 6.

(2) Definitions. The definitions in 310 CMR 7.00: *Definitions* apply to 310 CMR 7.71. The following additional terms have the following meanings when they appear in 310 CMR 7.71. Where a term defined in 310 CMR 7.00: *Definitions* also appears in 310 CMR 7.71, the definition in 310 CMR 7.71 is applicable for the purpose of 310 CMR 7.71.

Carbon Dioxide Equivalent. The amount of carbon dioxide by weight that would produce the same amount of global warming impact as a given weight of another greenhouse gas, based on the best available science, including information from the Intergovernmental Panel on Climate Change. The global warming potentials included in 40 CFR Part 98 shall be used to quantify and report greenhouse gas emissions in carbon dioxide equivalents pursuant to 310 CMR 7.71.

Entity. A person that owns or operates, in whole or in part, a source of greenhouse gas emissions from a generator of electricity or a commercial or industrial site including, but not limited to, a transportation fleet.

Facility. A building, structure or installation located on contiguous or adjacent properties of an entity, or a natural gas facility.

Greenhouse Gas. Any chemical or physical substance that is emitted into the air and that the Department may reasonably anticipate will cause or contribute to climate change including, but not limited to, carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride, and any other gas for which 40 CFR Part 98 includes a method for calculating greenhouse gas emissions from any stationary emissions source.

Method. A way of calculating greenhouse gas emissions provided in 40 CFR Part 98 and any related monitoring, reporting, and recordkeeping requirements included in 40 CFR Part 98, but does not mean a reporting threshold, specific source category exemption, or any other type of requirement.

7.71: continued

Natural Gas Facility. A collection of interconnected natural gas containing equipment (e.g., transmission and distribution pipelines, service lines, customer meters, compressors, tanks, metering stations, regulating stations, and any other interconnected equipment that contains natural gas) that is owned or operated by an entity.

Short Ton. 2000 pounds or 0.9072 metric tons.

Stationary Emission Source. Any individual stationary piece of equipment or other stationary point from which any greenhouse gas is emitted to the ambient air. For the purpose of reporting greenhouse gas emissions pursuant to 310 CMR 7.71, a source of greenhouse gas emissions located within the facility is a stationary emission source if 40 CFR Part 98 includes a method for calculating greenhouse gas emissions that can be used to quantify emissions from the source.

(3) Applicability.

(a) Any entity owning, operating, or controlling a facility is subject to the requirements of 310 CMR 7.71(4) and (5) if:

1. said facility is required to report air emissions data to the Department pursuant to 310 CMR 7.00: *Appendix C* (The Air Operating Permit Program) and had stationary emission sources that emitted greenhouse gases during the previous calendar year;
2. said facility has one or more stationary emission sources that collectively emitted greenhouse gases in excess of 5,000 short tons of greenhouse gases in carbon dioxide equivalents during the previous calendar year. In determining whether a facility has one or more stationary emission sources that collectively emit greenhouse gases in excess of 5,000 short tons, all greenhouse gas emissions from all stationary emission sources at the facility shall be included; or
3. said facility was subject to the requirements of 310 CMR 7.71 (3)(a)1. or 2. in any past year.

(b) Exemption for Facilities with Low or Reduced Emissions.

1. Notwithstanding 310 CMR 7.71(3)(a)3., any entity may petition the Department to be exempted from the requirement to report greenhouse gas emissions from a facility provided the following requirements are met. Said petition shall be submitted using a form provided by the Department.
 - a. The entity is not required to report greenhouse gas emissions from the facility pursuant to 310 CMR 7.71(3)(a)1. or 2.;
 - b. The entity is unlikely to be required to report greenhouse gas emissions from the facility pursuant to 310 CMR 7.71(3)(a)1. or 2. for any future year; and,
 - c. At least one greenhouse gas emission report documenting greenhouse gas emissions from said facility of less than or equal to 5,000 short tons of greenhouse gases in carbon dioxide equivalents has been submitted pursuant to 310 CMR 7.71(4) and (5).
2. The Department may approve a petition submitted pursuant to 310 CMR 7.71 (3)(b) only if the Department determines that all of the requirements set forth in 310 CMR 7.71(3)(b)1. have been met. In determining whether to approve or deny a petition pursuant to 310 CMR 7.71(3)(b), the Department may consider any information contained in said petition, and any other relevant information.
3. If the Department has approved a petition in accordance with 310 CMR 7.71(3)(b)2., the annual reporting requirement in 310 CMR 7.71(3)(a)3. shall not apply to said facility until such time as the reporting of greenhouse gas emissions from said facility is again required pursuant to 310 CMR 7.71(3)(a)1. or 2.

(4) Annual Reporting by Facilities that Emit Greenhouse Gases.

(a) Any entity owning, operating or controlling a facility that is required to report greenhouse gas emissions to the Department pursuant to 310 CMR 7.71, and is not subject to Source Registration at 310 CMR 7.12, shall annually report, certify, and verify greenhouse gas emissions from stationary emission sources for the previous calendar year in accordance with 310 CMR 7.71(4) and (5) by April 15, 2010, and April 15th of each year thereafter.

7.71: continued

(b) Any entity owning, operating or controlling a facility that is required to report greenhouse gas emissions to the Department pursuant to 310 CMR 7.71 and is subject to Source Registration at 310 CMR 7.12 shall annually report, certify and verify greenhouse gas emissions from stationary emission sources for the previous calendar year in accordance with 310 CMR 7.71(4) and (5) and the following schedule:

1. By April 1st, if the facility is required to submit Source Registration every three years in accordance with 310 CMR 7.12(2)(b).
2. By May 1st for a facility subject to 310 CMR 7.00: Appendix C.
3. By June 1st for a facility that:
 - a. Has an RES permit issued by the Department pursuant to 310 CMR 7.02(9);
 - b. Had actual emissions of lead equal to or greater than 0.5 tons in the previous calendar year, or actual emissions of NOx or VOC equal to or greater than 25 tons per year in the previous calendar year;
 - c. Emits an air contaminant subject to a NESHAP or is subject to a MACT standard defined at 40 CFR Part 61 and Part 63, for which the Department has received delegation from EPA; and/or
 - d. Is required, as a condition of a plan approval issued by the Department since January 1, 1990 to submit a Source Registration annually in accordance with 310 CMR 7.12.

(c) Greenhouse gas emissions from stationary emission sources shall be reported in accordance with methods specified in 40 CFR Part 98.

(d) Greenhouse gas emissions shall be reported electronically to the Department in a format specified by the Department.

(e) If required by the Department, the reporting entity shall report emissions in metric tons. One metric ton equals 1.102 short tons.

(f) Once a facility files a report pursuant to 310 CMR 7.71(4) on or after January 1, 2011, it is considered to be a registered reporter unless the Department approves a petition pursuant to 310 CMR 7.71(3)(b)2.

(5) Requirements for Certification and Recordkeeping.

(a) Entities subject to the requirement to report greenhouse gas emissions in accordance with 310 CMR 7.71(4) shall certify and verify the truth, accuracy, and completeness of their greenhouse gas emissions reports using a format specified by the Department. The information shall include, but not be limited to, the following:

1. Any information deemed necessary by the Department to identify the reporting facility.
2. The following certification statement: "I certify that I have personally examined the greenhouse gas emissions report for this facility and am familiar with the information contained in that report and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including possible fines and imprisonment."
3. The authorized signature and contact information of a responsible official of the entity subject to the requirement to report greenhouse gas emissions in accordance with 310 CMR 7.71(4).

(b) Copies of documents and other information supplied to the Department to comply with 310 CMR 7.71(4) shall be retained at the facility for five years from the date of submittal.

(c) All supporting documentation and calculations related to quantifying and reporting greenhouse gas emissions from the facility shall be retained at the facility for five years from the date of submittal and made available to the Department upon request.

(6) Voluntary Reporting by Facilities. Any entity owning, controlling or operating a facility that is not subject to 310 CMR 7.71(4)(a) may voluntarily report greenhouse gas emissions from that facility in accordance with 310 CMR 7.71(4), provided that the facility is located in Massachusetts and that the entity complies with all requirements of 310 CMR 7.71(4) through (6).

7.72: Reducing Sulfur Hexafluoride Emissions from Gas-insulated Switchgear

(1) Purpose, Scope and Authority. The purpose of 310 CMR 7.72 is to assist the Commonwealth in achieving the greenhouse gas emissions reduction goals adopted pursuant to M.G.L. c. 21N, § (3)(b) by reducing sulfur hexafluoride (SF₆) emissions from gas-insulated switchgear through the imposition of declining annual aggregate emission limits and other measures on gas-insulated switchgear. 310 CMR 7.72 is promulgated pursuant to M.G.L. c. 21N, § 3(d) and is also promulgated pursuant to M.G.L. c. 21A, §§ 2, 8 and 16, and M.G.L. c. 111, §§ 2C and 142A through 142E, to prevent and abate conditions of air pollution from greenhouse gas emissions.

(2) Definitions. The terms used in 310 CMR 7.72 are defined in 310 CMR 7.72(2) and 7.00: *Definitions*. Where a term is defined in 310 CMR 7.00: *Definitions* and 7.72, the definition in 310 CMR 7.72 shall apply.

Active GIS Equipment means non-hermetically sealed SF₆ gas-insulated switchgear that is:

- (a) Connected through busbars or cables to the GIS owner's electrical power system; or

7.72: continued

(b) Fully-charged, ready for service, located at the site in which it will be activated, and employs a mechanism to monitor SF₆ emissions.

Active GIS Equipment does not include equipment in storage.

Electrical Power System means the combination of electrical generators (*e.g.*, power plants), transmission and distribution lines, equipment, circuits, and transformers used to generate and transport electricity from the generators to consumption areas or to adjacent electrical power systems.

Federal Reporting GIS Owner means a GIS Owner who has ever been required or who is currently required to report SF₆ emissions to US EPA pursuant to 40 CFR Part 98, Subpart DD (§ 98.300 through 308).

Gas-insulated Switchgear or GIS means all electrical power system equipment insulated with SF₆ gas. Gas-insulated switchgear or GIS includes switches, stand-alone gas-insulated equipment, and any combination of electrical disconnects, fuses, electrical transmission lines, transformers and/or circuit breakers used to isolate gas-insulated electrical power system equipment.

GIS Owner means the person who owns, leases, operates, or controls gas-insulated switchgear used in Massachusetts. GIS owner excludes temporary possession by the following persons:

- (a) the original equipment manufacturer during GIS equipment transport and installation at a customer's site; and
- (b) a qualified person who hauls the GIS for reuse, recycle or destruction.

Hermetically Sealed Gas-insulated Switchgear means switchgear that is designed to be gas-tight and sealed for life. This type of switchgear is pre-charged with SF₆, sealed at the factory, and cannot be refilled by its user.

(3) Applicability.

- (a) Any federal reporting GIS owner is subject to 310 CMR 7.72(1) through (9).
- (b) Any GIS owner that is not a federal reporting GIS owner is subject to 310 CMR 7.72(1) through (4), (8), and (9), and not subject to 310 CMR 7.72(5) through (7).

(4) General Requirements for All GIS Owners.

- (a) Any newly manufactured GIS that is placed under the ownership, lease, operation, or control of any GIS owner on or after January 1, 2015 must be represented by the manufacturer to have a 1.0% maximum annual leak rate.
- (b) Any GIS owner that places GIS under ownership, lease, operation, or control on or after January 1, 2015 shall comply with any manufacturer-recommended maintenance procedures or industry best practices that have the effect of reducing leakage of SF₆.
- (c) If any particular piece of active GIS equipment placed under the ownership, lease, operation, or control of any GIS owner on or after January 1, 2015 does not meet the 1.0% maximum annual leak rate, the GIS owner shall, by April 15th of the year following the calendar year during which the SF₆ was added, provide documentation to the Department demonstrating compliance with 310 CMR 7.72(4)(a) and (b) and describing any additional actions taken or anticipated actions that are expected to reduce the emission rate in the future.
 - 1. GIS owners shall use data recorded pursuant to 310 CMR 7.72(8)(b) to determine whether the 1.0% maximum annual leak rate is met.
 - 2. For the purpose of determining whether GIS meets the 1.0% maximum annual leak rate, GIS owners shall determine an annual average by dividing the amount of SF₆ added to a piece of active GIS equipment by the number of years since the previous addition of SF₆.
 - 3. For the purpose of determining whether GIS meets the 1.0% maximum annual leak rate, GIS owners may disregard the first time SF₆ is added after the GIS becomes active GIS equipment.
 - 4. GIS owners may apply the requirements of 310 CMR 7.72(4)(c) to any group of commonly owned, leased, operated, or controlled pieces of active GIS equipment located in Massachusetts, instead of a single piece of active GIS equipment.
- (d) Upon removal of any GIS containing SF₆ from the ownership, lease, operation, or control of a GIS owner, the GIS owner shall provide for the secure storage, re-use, recycling, or destruction of the SF₆.

7.72: continued

(e) GIS owners are responsible for compliance with 310 CMR 7.72(4) with respect to any GIS that is under their ownership, lease, operation, or control in Massachusetts. Documentation provided to GIS owners by qualified persons, such as manufacturers, suppliers, and maintenance contractors, is sufficient to demonstrate compliance with all provisions of 310 CMR 7.72(4).

(5) Limits to Annual SF₆ Emissions.

(a) Rate Limit. For each calendar year specified below, each federal reporting GIS owner shall ensure that the annual SF₆ emission rate for all of its active GIS equipment, as calculated pursuant to 310 CMR 7.72(6)(b)8., shall not exceed the following:

Maximum Annual SF ₆ Emission Rate	
Calendar Year	Maximum Allowable SF ₆ Emission Rate
2015	3.5%
2016	3.0%
2017	2.5%
2018	2.0%
2019	1.5%
2020, and each calendar year thereafter	1.0%

(b) Mass Limit.

1. For each calendar year specified below, each federal reporting GIS owner shall ensure that the annual SF₆ emissions from all of its active GIS equipment, as calculated pursuant to 310 CMR 7.72(6)(b)6., shall not exceed the following:

Maximum Annual SF ₆ Emissions - National Grid	
Calendar Year	Maximum Allowable SF ₆ Emissions (lbs.)
2018	2,644
2019	2,082
2020	1,457

Maximum Annual SF ₆ Emissions - Eversource	
Calendar Year	Maximum Allowable SF ₆ Emissions (lbs.)
2018	3,115
2019	2,800
2020	2,460

2. The mass emissions limits listed in 310 CMR 7.72(5)(b) are designed such that aggregate annual SF₆ emissions from all active GIS equipment owned or operated by all federal reporting GIS owners subject to 310 CMR 7.72(5), as calculated pursuant to 310 CMR 7.72(6)(b)6., shall not exceed the following:

Maximum Annual SF ₆ Emissions - Aggregate	
Calendar Year	Maximum Allowable SF ₆ Emissions (lbs.)
2018	5,759
2019	4,882
2020	3,917

7.72: continued

(6) Annual Reporting Requirements.

(a) By April 15, 2016 and each year thereafter, each federal reporting GIS owner must submit an annual report to the Department for emissions that occurred during the previous calendar year.

(b) The annual report shall be submitted electronically in a format specified by the Department, and must contain all of the following information:

1. The federal reporting GIS owner's name, physical address, and mailing address;
2. The location of records and documents;
3. The name and contact information including e-mail address and telephone number of the responsible official submitting the report, and the person primarily responsible for preparing the report;
4. The year for which the information is submitted;
5. The authorized signature of a responsible official of the federal reporting GIS owner, and the following certification statement: "I certify that I have personally examined the report for this facility and am familiar with the information contained in that report and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including possible fines and imprisonment."
6. The number of pounds of SF₆ emitted from GIS equipment owned, leased, operated, or controlled by the federal reporting GIS owner and located in Massachusetts during the year, as calculated using the equation specified in 40 CFR § 98.303 and procedures for estimating missing data specified in 40 CFR § 98.305, adjusted to account for any emergency events reported pursuant to 310 CMR 7.72(7);
7. The total nameplate capacity of SF₆-containing active GIS equipment owned, leased, operated, or controlled by the federal reporting GIS owner and located in Massachusetts at the end of the year, as calculated in a manner consistent with the data reporting requirement specified in 40 CFR § 98.306(a)(1);
8. The annual SF₆ emission rate for active GIS equipment owned, leased, operated, or controlled by the federal reporting GIS owner and located in Massachusetts, as calculated by dividing the number of pounds of SF₆ emitted during the year by the nameplate capacity of SF₆-containing active GIS equipment at the end of the year, as calculated pursuant to 310 CMR 7.72(6)(b)6. and 7.;
9. All other related information submitted to US EPA in accordance with 40 CFR § 98.306, except for any information that the Department obtains directly from US EPA; and
10. Any information required to comply with 310 CMR 7.72(7)(b).

(7) Emergency Event Exemption.

(a) If a federal reporting GIS owner wishes to exempt a particular release of SF₆ emissions from its annual calculation of the emissions limit (rate or mass), the federal reporting GIS owner must meet its burden of proof to demonstrate, and the Department must determine, that such release of SF₆ was:

1. Caused by a sudden, unforeseeable emergency event, including, but not limited to: fire, flood, earthquake, or act of vandalism; and could not have been prevented by the exercise of prudence, diligence, and care; and was beyond the control of the federal reporting GIS owner; or
2. Necessary to avoid an immediate electrical system outage.

(b) In order for the Department to determine that an emergency event exemption is warranted, a federal reporting GIS owner must submit the following information in its annual report:

1. A detailed, chronological, narrative description of the sudden, unforeseeable, emergency event or of the specific circumstances necessitating a release of SF₆ in order to avoid an electrical system outage. Such description shall include, but is not limited to, the following:
 - a. The nature of the event (*e.g.*, fire, flood, earthquake);
 - b. The date and time the event occurred;
 - c. The location of the event;
 - d. The equipment that was affected by the event;
 - e. The function of the affected equipment within the facility's system;
 - f. The amount of SF₆ released (in pounds);

7.72: continued

- g. The specific event which resulted in the release of SF₆; and
 - h. The precautions taken to prevent the reported release of SF₆.
2. Information and documentation (including, but not limited to, witness statements, photographs, analysis of damaged equipment, accident reconstruction, or other evidence) that can demonstrate by a preponderance of evidence the requirements for exemption set forth in 310 CMR 7.72(7)(a); and
 3. Any other information specified in the Department's annual reporting form.
- (c) If the Department determines that the federal reporting GIS owner has failed to demonstrate that the event meets the criteria provided at 310 CMR 7.72(7)(a), the Department will notify the federal reporting GIS owner, and the federal reporting GIS owner shall amend the relevant annual emission report to include SF₆ emissions resulting from the event.
- (8) Monitoring, Q/A, and Recordkeeping Requirements.
- (a) All federal reporting GIS owners shall comply with all requirements of 40 CFR § 98.304 and 307 with respect to equipment and containers used in Massachusetts.
 - (b) All GIS owners shall record, no less than annually, the amount of SF₆ added, if any, to each piece of active GIS equipment that was placed under their ownership, lease, operation, or control on or after January 1, 2015.
 - (c) All GIS owners shall retain for five years documentation sufficient to demonstrate compliance with 310 CMR 7.72 and shall provide such documentation to the Department on request. The documentation shall be submitted in a format and within the time limit requested by the Department.
- (9) Compliance Verification and Enforcement.
- (a) If a federal reporting GIS owner exceeds the applicable Maximum Annual SF₆ Emissions limits set forth in 310 CMR 7.72(5)(b)1.: *Table*, any such excess emissions shall be deemed a release into the environment without the authorization or approval of the Department and shall be presumed to constitute a significant impact to public health, welfare, safety, and the environment. A federal reporting GIS owner shall be deemed to be in non-compliance only if such owner exceeds the applicable individual limit provided in 310 CMR 7.72(5)(b)1.
 - (b) The Department shall enforce the requirements of 310 CMR 7.72 in accordance with applicable federal and Massachusetts law, including but not limited to M.G.L. c. 21A, § 16, and 310 CMR 5.00: *Administrative Penalty*; M.G.L. c. 111, § 2C; M.G.L. c. 111, §§ 142A through 142M; and M.G.L. c. 21N, § 7(d).
 - (c) Compliance Verification. The Department may verify compliance with 310 CMR 7.72 by conducting inspections, requesting information and records and requiring the collection of information not previously required; provided that this section does not limit the authority of the Department as otherwise provided by law or in an authorization, determination, modification, permit, or other approval, or by the terms of any order or other enforcement document.
 1. Access to Information. Where necessary to ascertain compliance with 310 CMR 7.72, including actual or potential SF₆ emissions, the Department may request of a GIS Owner information or records. The GIS Owner shall, within ten business days of the request, furnish the requested information or records and shall permit Department personnel or authorized representatives to have access to and to take images of such records.
 2. Requirement to Collect Information. When the Department has reason to believe that a GIS Owner has exceeded its SF₆ emissions limit or violated any other condition in 310 CMR 7.72, the Department may require a GIS Owner to submit the necessary information or records to determine compliance. In doing so, the Department may require a GIS Owner to:
 - a. Perform audits on SF₆ emissions records using standard procedures and methods;
 - b. Quantify SF₆ emissions in accordance with the procedures, and methods as the Department may prescribe;
 - c. Make periodic reports to the Department, as necessary, to assure continuous compliance with 310 CMR 7.72; and
 - d. Maintain other records and provide any other information as the Department might reasonably require.

7.73: Reducing Methane Emissions from Natural Gas Distribution Mains and Services

(1) Purpose, Scope and Authority. The purpose of 310 CMR 7.73 is to assist the Commonwealth in achieving the greenhouse gas emissions reduction goals adopted pursuant to M.G.L. c. 21N, § (3)(b) by reducing methane (CH₄) emissions from natural gas distribution mains and services through the imposition of declining annual aggregate emission limits on certain sources of greenhouse gas emissions in the natural gas distribution pipeline sector in the Commonwealth. 310 CMR 7.73 is promulgated pursuant to M.G.L. c. 21N, § 3(d) and is also promulgated pursuant to M.G.L. c. 21A, §§ 2, 8 and 16, and M.G.L. c. 111, §§ 2C and 142A through 142E, to prevent and abate conditions of air pollution from the greenhouse gas emissions from the area sources specified in 310 CMR 7.73.

(2) Definitions. The terms used in 310 CMR 7.73 are defined in 310 CMR 7.73(2) and in 310 CMR 7.00: *Definitions*. Where a term is defined in 310 CMR 7.00: *Definitions* and 310 CMR 7.73 the definition in 310 CMR 7.73 shall apply.

Calendar Year means January 1st through December 31st.

Designated Representative means the person who has been authorized by the gas operator to represent and legally bind the owner or operator in matters pertaining to the 310 CMR 7.73.

Distribution Line means a pipeline other than a gathering or transmission line.

Gas Operator means every Massachusetts gas operator with a Gas System Enhancement Plan applicable to its mains and services approved by the Massachusetts Department of Public Utilities (DPU) pursuant to M.G.L. c. 164, § 145 as of August 11, 2017, the corporate successor of such gas operator and/or the purchaser of the mains and services that are subject to a DPU-approved Gas System Enhancement Plan.

Main means a distribution line that serves as a common source of supply for more than one service.

Service means a distribution line that transports gas from a common source of supply to an individual customer, to two adjacent or adjoining residential or small commercial customers, or to multiple residential or small commercial customers served through a meter header or manifold. A service ends at the inlet of the customer meter or at the connection to a customer's piping, whichever is further upstream, or at the connection to customer piping if there is no meter.

(3) Applicability. Every Massachusetts gas operator.

(4) Annual CH₄ Emission Limits.

(a) Individual Operator Limits. For each calendar year specified in 310 CMR 7.73(4)(a): *Tables 1 through 6*, each named gas operator shall ensure that the annual CH₄ emissions from all of its active mains and services, as calculated pursuant to 310 CMR 7.73(5)(b)7., shall not exceed the following maximum allowable annual CH₄ emission limits:

Table 1 - Maximum Annual CH ₄ Emission Limits - Boston Gas Company and Colonial Gas Company each d/b/a National Grid	
Calendar Year	Maximum Allowable CH ₄ Emissions (metric tons of carbon dioxide equivalent)
2020	108,647
2021	106,817
2022	102,699
2023	98,561
2024	94,532

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

7.73: continued

2024	139,814

(c) CH₄ Emissions Set-aside, Aggregate Limits and Petition Process for Modifying CH₄ Emission Limit.

1. The Department has set-aside the quantities of CH₄ in 310 CMR 7.73(4)(c): *Table 8* for each calendar year for gas operators that petition to modify their limits in 310 CMR 7.73(4) based on 310 CMR 7.73(4)(c)3. For each calendar year specified in 310 CMR 7.73(4)(c): *Table 8*, the annual CH₄ emission limits from all active mains and services of gas operators named in 310 CMR 7.73(4)(a): *Tables 1* through *6* shall not exceed the maximum allowable annual aggregate CH₄ emission limits in 310 CMR 7.73(4)(c): *Table 8*.

Table 8 - CH ₄ Emissions Set-aside and Maximum Annual Aggregate CH ₄ Emission Limit		
Calendar Year	CH ₄ Emissions Set-aside	Maximum Allowable Annual Aggregate CH ₄ Emission Limit
	(metric tons of carbon dioxide equivalent)	
2020	39,509	208,829
2021	37,990	203,978
2022	37,550	194,733
2023	37,114	185,576
2024	36,682	176,496

7.73: continued

2. Upon written petition from a gas operator, the Department may modify the CH₄ emission limits and allocate additional CH₄ in excess of the limits in 310 CMR 7.73(4)(a) provided that the set-aside amount of CH₄ in each calendar year in 310 CMR 7.73(4)(c): *Table 8* is not exceeded.
 3. The basis for the petition shall be the Annual Report for Calendar Year 20[XX] Gas Distribution System submitted by the gas operator to the United States Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA).
 4. Requirements for the Petition.
 - a. The gas operator shall submit the petition to the Department no later than the April 15th after the end of the calendar year for which the gas operator seeks to have additional CH₄ allocated, and include a copy of the Annual Report submitted to PHMSA.
 - b. The petition shall be signed and certified in accordance with the requirements at 310 CMR 7.73(5)(b)9.
 5. In its sole discretion, the Department will approve or deny the petition in writing within 60 days of receipt of the petition. During the 60-day review period, the Department may request additional information from the gas operator. Depending on when the Department receives the information, and the volume of the information, the Department may extend the 60-day review period.
 - a. If the Department approves the petition, calculates a modified or new limit, and/or allocates additional CH₄, the modified CH₄ emission limit(s) in the approval letter shall be enforceable in *lieu* of the CH₄ emission limit in 310 CMR 7.73(4)(a).
 - b. If the Department denies the petition, the gas operator may request an adjudicatory hearing on the decision, by filing a notice of claim with the Department within 21 days of the date of issuance of the Department's denial of the petition pursuant to 310 CMR 1.01: *Adjudicatory Proceeding Rules for the Department of Environmental Protection*.
- (5) Annual Reporting Requirements.
- (a) By April 15, 2021 and on April 15th of each year thereafter, each gas operator must submit an annual report to the Department for emissions that occurred during the previous calendar year.
 - (b) The annual report shall be submitted electronically in a format specified by the Department, and must contain all of the following information:
 1. The gas operator's name, physical address, and mailing address;
 2. The location of records and documents;
 3. The name and contact information including e-mail address and telephone number of the designated representative submitting the report, and the person(s) primarily responsible for preparing the report;
 4. The year for which the information is submitted;
 5. The miles of mains and number of services owned, leased, operated, or controlled by the gas operator and located in Massachusetts by each material type listed in 310 CMR 7.73(5)(b): *Table 9*, as recorded in the *Annual Report* to PHMSA;
 6. The miles of mains and number of services owned, leased, operated, or controlled by the gas operator and located in Massachusetts by age and each material type listed in 310 CMR 7.73(5)(b): *Table 9*;
 7. The number of metric tons of CH₄, in carbon dioxide equivalents, by each material type listed in 310 CMR 7.73(5)(b)8.: *Table 9*, emitted from mains and services owned, leased, operated, or controlled by the gas operator and located in Massachusetts during the year, as calculated by multiplying the miles of mains and number of services by the appropriate emission factor in 310 CMR 7.73(5)(b)8.: *Table 9*;
 8. Any other information requested by the Department; and
 9. The authorized signature of a designated representative of the gas operator, and the following certification statement: "I certify that I have personally examined the report for this facility and am familiar with the information contained in that report and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including possible fines and imprisonment."

(6) Monitoring, Q/A, and Recordkeeping Requirements. All gas operators shall retain for five years documentation sufficient to demonstrate compliance with 310 CMR 7.73 and shall provide such documentation to the Department on request. The documentation shall be submitted in the format and within the time limit requested by the Department.

(7) Compliance Verification. The Department may verify compliance with 310 CMR 7.73 by conducting inspections, requesting information and records and requiring the collection of information not previously required; provided that 310 CMR 7.73(7) does not limit the authority of the Department as otherwise provided by law or in an authorization, determination, modification, permit, or other approval, or by the terms of any order or other enforcement document.

(a) Access to Information. Where necessary to ascertain compliance with 310 CMR 7.73 including actual or potential CH₄ emission, the Department may request of a gas operator information or records. The gas operator shall, within a reasonable time, furnish the requested information or records and shall permit Department personnel or authorized representatives to have access to and to take images of such records.

(b) Requirement to Collect Information. When the Department has reason to believe that a gas operator has exceeded its CH₄ emission limit or violated any other condition in 310 CMR 7.73, the Department may require the gas operator to submit the necessary information or records to determine compliance. In doing so, the Department may require a gas operator to:

7.73: continued

1. Perform audits on CH₄ emissions records using standard procedures and methods;
2. Quantify CH₄ emissions in accordance with the procedures and methods as the Department may prescribe;
3. Make periodic reports to the Department, as necessary, to assure continuous compliance with 310 CMR 7.73; and
4. Maintain other records and provide any other information as the Department might reasonably require.

(8) Enforcement.

(a) If a gas operator exceeds the Maximum Annual CH₄ Emission limits set forth in the applicable table provided in 310 CMR 7.73(4)(a), as amended by a petition approved under 310 CMR 7.73(4)(c)5.a., any such excess emissions shall be deemed to be a release of air pollutants into the environment without the authorization or approval of the Department, and shall be presumed to constitute a significant impact to public health, welfare, safety, and the environment.

(b) The Department shall enforce the requirements of 310 CMR 7.73 in accordance with applicable federal and Massachusetts law including, but not limited to, M.G.L. c. 21A, § 16, 310 CMR 5.00: *Administrative Penalty*, M.G.L. c. 111, § 2C, §§ 142 A through 142M; and M.G.L. c. 21N, § 7(d).

(9) Program Review. Not later than December 31, 2024, the Department shall complete a review, including an opportunity for public comment on the program review, of the requirements of 310 CMR 7.73 to determine whether the program should be amended or extended. This review shall evaluate whether to require the use of feasible technologies to detect and quantify gas leaks and any other information relevant to review of the program.

7.74: Reducing CO₂ Emissions from Electricity Generating Facilities

(1) Purpose, Authority and Scope. The purpose of 310 CMR 7.74, promulgated in conjunction with 310 CMR 7.75, is to assist the Commonwealth in achieving the greenhouse gas emissions reduction goals adopted pursuant to M.G.L. c. 21N, § 3(b), by establishing declining annual aggregate CO₂ emissions limits that will reduce CO₂ emissions from electricity generating facilities. To achieve those goals, the Executive Office of Energy and Environmental Affairs (EEA) and the Department pursuant to M.G.L. c. 21A, §§ 2 and 8 and M.G.L. c. 21N, §§ 3(c), 4 and 7 hereby jointly promulgate 310 CMR 7.74, following consultation with the Department of Energy Resources and based on the considerations specified in M.G.L. c. 21N, § 3(c). 310 CMR 7.74 is also promulgated pursuant to M.G.L. c. 21A, § 16, M.G.L. c. 21N, § 3(d) and M.G.L. c. 111, §§ 2C and 142A through 142E. In exercising their broad authority and discretion under M.G.L. c. 21N, §§ 3(c) and 3(d), EEA and MassDEP have determined that additional emissions limits on in-state electricity generating facilities' greenhouse gas emissions, along with other climate policies and programs, will ensure achievement of the greenhouse gas emissions limits as established under M.G.L. c. 21N, and that the 310 CMR 7.74 limits are consistent with, and take account of, regional programs such as the Regional Greenhouse Gas Initiative (RGGI) and the Renewable Portfolio Standard (RPS). The CO₂ emissions limits set forth in 310 CMR 7.74(5) are applicable for the years 2021 through 2050 beginning January 1, 2021.

(2) Definitions. The terms used in 310 CMR 7.74 are defined in 310 CMR 7.74(2) and 310 CMR 7.00: *Definitions*. Where a term is defined in 310 CMR 7.00: *Definitions* and 310 CMR 7.74, the definition in 310 CMR 7.74 shall apply.

Allowance means a limited authorization to emit one metric ton of CO₂ in compliance with 310 CMR 7.74.

Allowance Registry means the database that tracks allowances held by electricity generating facilities and used for compliance. The Department shall establish an account in the allowance registry for each electricity generating facility.

7.73: continued

Annual CO₂ Emissions means the total amount of CO₂ emissions measurements recorded and reported for a calendar year in accordance with the Massachusetts CO₂ Budget Trading Program at 310 CMR 7.70(8)(e)4., converted from short tons to metric tons and adjusted, as applicable, for the production of useful net thermal energy pursuant to the Massachusetts CO₂ Budget Trading Program at 310 CMR 7.70(8)(i).

Bidder means a party qualified, pursuant to 310 CMR 7.74(6)(h)4.a., to participate in an auction.

Calendar Year or Year means January 1st through December 31st.

Deduct or Deduction means the permanent removal of allowances from an account in the allowance registry.

Designated Representative means the person who is authorized by the owner and operator of an electricity generating facility to represent and legally bind the owner and operator in matters pertaining to 310 CMR 7.74.

Electricity Generating Facility means a facility that includes one or more electricity generating units for which the owner or operator is required to report CO₂ emissions pursuant to the Massachusetts CO₂ Budget Trading Program at 310 CMR 7.70(8); provided, however, that the following facilities are not electricity generating facilities for purposes of 310 CMR 7.74: MWRA Deer Island and MBTA South Boston Power.

Emergency means a period during when the regional transmission organization has issued an alert that an abnormal condition affecting the reliability of the power system exists or is anticipated in Massachusetts.

NON-TEXT PAGE

7.74: continued

Existing Electricity Generating Facility means an electricity generating facility listed in 310 CMR 7.74(5)(b): *Table B*.

Existing Facility Aggregate CO₂ Emissions Limit means, with respect to calendar year 2018, the sum of all existing facilities' CO₂ emissions limits, as listed in 310 CMR 7.74(5)(a): *Table A*.

Massachusetts CO₂ Budget Trading Program means the program the Department promulgated at 310 CMR 7.70 to reduce greenhouse gas emissions from CO₂ Budget Sources as defined in 310 CMR 7.70.

New Electricity Generating Facility means, with respect to calendar year 2018, 2019 and 2020, an electricity generating facility that is not an existing electricity generating facility.

New Facility Aggregate CO₂ Emissions Limit means, with respect to calendar year 2018, the sum of all new electricity generating facility CO₂ emissions limits, as listed in 310 CMR 7.74(5)(a): *Table A*.

Offset means to use allowances to cover CO₂ emissions from an electricity generating facility pursuant 310 CMR 7.74.

Operator means any person or group of persons who operates, controls, or supervises an electricity generating facility including, but not limited to, any holding company, utility system, plant manager, or operations manager of the electricity generating facility.

Owner means any of the following persons or group of persons:

- (a) Any holder(s) of any portion of the legal or equitable title in an electricity generating facility; or
- (b) Any holder(s) of a leasehold interest in an electricity generating facility.

Reserve Price means the minimum acceptable price for each allowance in a specific auction.

Sealed Bid, Uniform Price Auction means a single or multiple round sealed-bid auction in which bidders may submit multiple bids at different prices; the price paid by all awarded bidders will be uniform.

Serial Number means, when referring to allowances, the unique identification number assigned by the Department to each allowance.

Total Aggregate CO₂ Emissions Limit means, with respect to a particular calendar year, the maximum allowable aggregate limit on CO₂ emissions from all electricity generating facilities subject to 310 CMR 7.74, as listed in 310 CMR 7.74(5)(a): *Table A*.

(3) Applicability. 310 CMR 7.74 applies to all owners and operators of an electricity generating facility.

(4) Compliance with CO₂ Emissions Limits. The owner or operator of an electricity generating facility shall offset annual CO₂ emissions using allowances in its allowance registry account pursuant to 310 CMR 7.74(6) and (7).

(5) CO₂ Emissions Limits.

- (a) Total Aggregate CO₂ Emissions Limits. The total aggregate CO₂ emissions limit for 2018 is 9,149,979 metric tons of CO₂. The total aggregate CO₂ emissions limit for 2019 is 8,731,175. The total aggregate CO₂ emissions limit declines by 223,876 metric tons each year thereafter until it reaches 8,507,299 metric tons of CO₂ in 2020 and 1,791,019 metric tons of CO₂ in 2050. For 2018, the existing facility aggregate CO₂ emissions limit and the new facility aggregate CO₂ emissions limit were calculated from the total aggregate CO₂ emissions limit, such that their sum equals the total aggregate CO₂ emissions limit. The existing facility aggregate CO₂ emissions limit, and new facility aggregate CO₂ emissions limit for calendar year 2018 are shown in 310 CMR 7.74(5)(a): *Table A*.

7.74: continued

(c) Apportionment of New Facility Aggregate CO₂ Emissions Limit for 2018. By February 15, 2019, the Department shall apportion the 2018 new facility aggregate CO₂ emissions limit among electricity generating facilities. The apportionment shall be based on CO₂ emissions reported by new electricity generating facilities pursuant to 310 CMR 7.74(7) by February 1, 2019, and shall be completed pursuant to 310 CMR 7.74(5)(c)1. through 3.

1. New Electricity Generating Facilities' CO₂ Emissions Limits for 2018. The Department shall determine whether the sum of CO₂ emissions from new electricity generating facilities reported pursuant to 310 CMR 7.74(7) is less than, equal to, or greater than the new facility aggregate CO₂ emissions limit for 2018.

7.74: continued

- a. If the sum of new electricity generating facility CO₂ emissions is less than or equal to the new facility aggregate CO₂ emissions limit for 2018, then the Department shall set each new electricity generating facility's 2018 emissions limit equal to its CO₂ emissions for 2018.
 - b. If the sum of new electricity generating facility CO₂ emissions is greater than the new facility aggregate CO₂ emissions limit for 2018, the Department shall ensure that the sum of all new facility CO₂ emissions limits equals the new facility aggregate CO₂ emissions limit for the year by completing the following calculations:
 - i. Calculate a discount factor by dividing the new facility aggregate CO₂ emissions limit by the total amount of CO₂ emitted by all new electricity generating facilities in 2018; and
 - ii. Calculate each new electricity generating facility's 2018 limit as the product of the facility's CO₂ emissions and the discount factor.
2. Distribution of Excess New Facility CO₂ Emissions Limit. If the Department determines pursuant to 310 CMR 7.74(5)(c)1. that the sum of CO₂ emissions from new electricity generating facilities is less than the new facility aggregate CO₂ emissions limit for 2018, then the Department shall:
- a. Calculate the difference between the new facility aggregate CO₂ emissions limit and the sum of CO₂ emissions from new electricity generating facilities;
 - b. Calculate the product of such difference and each existing electricity generating facility's fraction of the existing facility aggregate CO₂ emissions limit for 2018; and
 - c. Deposit allowances equal to the product, minus any allowances distributed pursuant to 310 CMR 7.74(5)(c)3., in the allowance registry account of each existing electricity generating facility.
3. Early Distribution of Excess New Facility CO₂ Emissions Limit. By November 15, 2018, the Department may determine that the sum of CO₂ emissions from new electricity generating facilities will be less than the new facility aggregate CO₂ emissions limit for the year. In making this determination, the Department shall consider CO₂ emissions reported pursuant to the Massachusetts CO₂ Budget Trading Program at 310 CMR 7.70(8)(e)4. for the months of January through September 2018, and any physical or permitted limits on the potential for the facility to emit (*e.g.*, on hourly fuel combustion) during the months of October through December 2018. If the Department determines that the sum of CO₂ emissions from new electricity generating facilities will be less than the new facility aggregate CO₂ emissions limit for 2018, then by December 1, 2018 the Department shall:
- a. Calculate the minimum possible difference between the new facility aggregate CO₂ emissions limit and the sum of CO₂ emissions from new electricity generating facilities for 2018;
 - b. Calculate the product of such minimum possible difference and each existing electricity generating facility's fraction of the existing facility aggregate CO₂ emissions limit for 2018; and
 - c. Deposit allowances equal to the product in the allowance registry account of each existing electricity generating facility.
- (6) Allocation, Transfer, and Use of Allowances.
- (a) Allocation of Allowances.
1. Allocation of Allowances for 2018. For 2018, the Department shall allocate allowances to new and existing electricity generating facilities in accordance with the quantities, processes, and schedule for establishing individual facility CO₂ emissions limits specified in 310 CMR 7.74(5)(b) through (c), and deposit them in the allowance registry accounts of the electricity generating facilities.
 2. Allocation of Allowances for 2019 and 2020.
 - a. For 2019 and 2020, the Department shall allocate allowances equal to 25% and 50%, respectively, of the total aggregate CO₂ emissions limit for the year, subject to adjustment pursuant to 310 CMR 7.74(6)(f), using an auction in accordance with 310 CMR 7.74(6)(h). The exact number of allowances allocated using an auction for each year is specified in 310 CMR 7.74(6)(a)2: *Table C* ("Auction" line).

7.74: continued

b. For 2019 and 2020, allowances not allocated using an auction shall be allocated in accordance with the processes and schedule for establishing 2018 individual facility CO₂ emissions limits specified in 310 CMR 7.74(6)(a)1. and 7.74(5)(b) through (c), except that:

i. The quantities specified in 310 CMR 7.74(6)(a)2.: *Table C* for the facilities listed by name shall be used in place of quantities specified for establishing 2018 CO₂ emissions limits for existing electricity generating facilities in 310 CMR 7.74(5)(a): *Table A* and (b): *Table B*. Allocations to facilities listed by name in 310 CMR 7.74(6)(a)2.: *Table C* shall occur on April 1, 2019 (for 2019), and April 1, 2020 (for 2020).

ii. The quantities specified in 310 CMR 7.74(6)(a)2.: *Table C* ("New Facilities" line) shall be used in place of the quantity specified in 310 CMR 7.74(5)(a): *Table A* for establishing the 2018 the new facility aggregate CO₂ emissions limit. Each process specified for establishing 2018 CO₂ emissions limits for new electricity generating facilities in 310 CMR 7.74(5)(c) shall be repeated one year later than specified in 310 CMR 7.74(5)(c) to complete the 2019 allocation, and two years later to complete the 2020 allocation.

310 CMR 7.74(6)(a)2: *Table C*
Allowance Allocations for 2019 and 2020

	2019 Allocation	2020 Allocation

7.74: continued

3. Allocation of Allowances for 2021 and All Future Years. For 2021 and all future years, the Department shall allocate allowances equal to the total aggregate CO₂ emissions limit for the year, subject to adjustment pursuant to 310 CMR 7.74(6)(f), using an auction in accordance with 310 CMR 7.74(6)(h).
 4. Once allocated, allowances may be used or transferred pursuant to 310 CMR 7.74(6)(b) or (c), regardless of the year or method of allocation.
- (b) Use of Allowances.
1. The owner or operator of an electricity generating facility may use allowances to offset CO₂ emissions for a particular year pursuant to 310 CMR 7.74(6)(e), provided that the allowances used are in the electricity generating facility's allowance registry account on March 1st of the year following the year in which the CO₂ emissions occurred.
 2. Allowances may be used exclusively by the owners or operators of electricity generating facilities to comply with 310 CMR 7.74 and are not property rights.
- (c) Transfer of Allowances.
1. The owner or operator of an electricity generating facility may transfer allowances to the owner or operator of another electricity generating facility by submitting a notice of transfer to the Department at any time except during the month of March.
 2. The notice of transfer shall include the name of the electricity generating facility, the number of allowances to be transferred, the serial numbers of the allowances to be transferred, the name and account number of the electricity generating facility to which the allowances will be transferred, and the certification statement required by 310 CMR 7.74(7)(b) that has been signed by the designated representative of the transferring electricity generating facility, or his or her designee, allowing the transfer of allowances.
 3. The Department may require reporting of a price for transfers of allowances between electricity generating facilities that have different owners or operators through submission of a form as specified by the Department.
 4. If requested by the Department, a notice of transfer may also be used to initiate a deduction pursuant to 310 CMR 7.74(6)(g).
- (d) Emergency Deferred Compliance. If an electricity generating facility emits CO₂ during an emergency that occurs on or after January 1, 2018, the electricity generating facility owner or operator may choose to defer for one year a portion or the entirety of the electricity generating facility's compliance obligation with respect to CO₂ emissions emitted during such emergency, provided that such CO₂ emissions shall be offset in the following year on a two-for-one basis pursuant to 310 CMR 7.74(6)(e)2.
1. If an electricity generating facility owner or operator chooses to defer the electricity generating facility's compliance obligation with respect to any CO₂ emissions emitted during an emergency pursuant to 310 CMR 7.74(6)(e), then the owner or operator shall complete the following steps:
 - a. Identify the quantity of such CO₂ emissions emitted during the emergency, and the hours and dates during which the emergency occurred, in its compliance certification report submitted pursuant to 310 CMR 7.74(7)(a) for the calendar year during which the CO₂ emissions occurred; and
 - b. Offset such CO₂ emissions on a two-for-one basis pursuant to 310 CMR 7.74(6)(e)2. by identifying the necessary number of allowances in its compliance certification report submitted pursuant to 310 CMR 7.74(7)(a) for the following calendar year.
 2. In order to ensure that the use of emergency deferred compliance does not reduce the total number of allowances available for use by facilities to comply with 310 CMR 7.74, the Department shall, during the month of March of any year, determine the total amount of emissions for which compliance has been deferred from the prior year pursuant to 310 CMR 7.74(6)(d), and adjust the number of allowances available for sale by auction for the year upward by that amount.
- (e) Compliance with CO₂ Emissions Limits. On March 1st of each year, each electricity generating facility's allowance registry account shall hold a number of allowances that is equal to or greater than the sum of:
1. The amount of annual CO₂ emissions that the electricity generating facility emitted during the prior calendar year, minus any emissions for which compliance is being deferred pursuant to 310 CMR 7.74(6)(d); and

7.74: continued

2. Twice the amount of CO₂ emissions that the electricity generating facility emitted during the year before the prior calendar year (*e.g.*, on March 1, 2020 for 2018 emissions), but was not offset because compliance was deferred pursuant to 310 CMR 7.74(6)(d).
- (f) Banking of Allowances. Allowances may be retained for use in future years, provided that the total amount of CO₂ emitted by all electricity generating facilities in any year is less than the total aggregate CO₂ emissions limit for the prior year, before accounting for any emergency deferred compliance. In order to enforce this limitation on banking, the Department shall complete the following steps during the month of March of each year:
1. Determine the total quantity of allowances remaining in all allowance registry accounts after deducting allowances pursuant to 310 CMR 7.74(6)(g).
 2. Subtract 223,875 from the quantity determined pursuant to 310 CMR 7.74(6)(f)1. to determine the adjustment required to enforce the limitation on banking.
 3. Adjust the number of allowances available for sale by auction for the year pursuant to 310 CMR 7.74(6)(h) by the amount calculated pursuant to 310 CMR 7.74(6)(f)2.
- (g) Deduction of Allowances for Compliance. During the month of March of each year, the Department shall deduct allowances from each electricity generating facility's allowance registry account in the following order:
1. To address any emergency deferred compliance obligation accrued during the year before the prior calendar year pursuant to 310 CMR 7.74(6)(e); and
 2. To offset annual CO₂ emissions that occurred during the prior calendar year.
- (h) Allowance Auctions. For the years 2019 through 2050, the Department shall conduct a series of auctions pursuant to 310 CMR 7.74(6)(h) to sell allowances to be used by owners or operators of electricity generating facilities to offset annual CO₂ emissions.

7.74: continued

1. Allowance Auction Procedures.

- a. Auctions shall be conducted quarterly, but the Department may adjust the frequency of such auctions as it deems necessary to effectuate the objectives 310 CMR 7.74, provided at least one auction is conducted annually.
- b. The implementation of any auction conducted pursuant to 310 CMR 7.74 may be transferred by the Department to an agent deemed qualified by the Department to conduct such auction, provided that such agent shall perform all such duties under the direction and oversight of the Department.
- c. The auction format shall be a Sealed Bid, Uniform Price Auction.
- d. Prior to the end of each calendar year, allowances in a quantity equal to the number specified in 310 CMR 7.74(6)(a)2. and 3., subject to adjustment pursuant to 310 CMR 7.74(6)(f), will be available for sale by auction. Such allowances will be available for sale by auction for each calendar year. The Department may require that allowances are sold in minimum lot sizes. In such event, such lot sizes shall be published in the auction notice pursuant to 310 CMR 7.74(6)(h)2. No more than 50% of the allowances from a calendar year may be available for sale in advance of the respective calendar year, up to four years in advance of such calendar year.
- e. The Department shall post a calendar of proposed auction dates on its web site. The calendar shall include the auction format and the number and years of allowances to be auctioned at each auction. The Department may periodically modify the contents of the calendar, provided that the information relevant to the next scheduled auction shall be fixed in the auction notice no later than 45 calendar days prior to such auction, consistent with 310 CMR 7.74(6)(h)2.a.
- f. Auctions of allowances may be held with a reserve price. The Department is not obligated to sell allowances if the reserve price is not met.
- g. No bidder, including any affiliate or agent of such bidder, shall purchase more than 50% of the allowances offered for sale in any one auction. Such limitation shall be published in the auction notice pursuant to 310 CMR 7.74(6)(h)2., and may be reduced or set equal to zero by the Department for one or more bidders after consultation with a qualified agent or market monitor employed pursuant to 310 CMR 7.74(6)(h)1.b. or 5.a.
- h. The Department may periodically evaluate the auction program performance and may retire any allowances that were offered for sale by auction but were not sold.
- i. Proceeds of such auctions shall be paid to the Department and deposited in a segregated account and administered by a Trustee appointed by EEA and the Department. The funds shall be expended to further the goals of M.G.L. c. 21N by supporting programs or projects to reduce greenhouse gas emissions in order to mitigate the impacts of climate change including, but not limited to, clean energy and vehicle electrification projects; programs and projects to support adaptation to the impacts of climate change; mitigation or adaptation programs or projects involving communities that are already adversely impacted by air pollution including, but not limited to, environmental justice communities; and for the administration of any such programs or projects. Auction proceeds may also be used for the administration of 310 CMR 7.74. Auction proceeds shall be expended at the direction of the Trustee, in consultation with EEA and the Department. The Trustee, EEA and the Department may consult with and enter into agreements with other agencies within the EEA Secretariat to assist in the administration and expenditure of auction proceeds.

2. Auction Notice.

- a. Notice of each auction shall be published no later than 45 calendar days prior to such auction, and may be transmitted electronically to parties requesting such notification.
- b. Each notice shall include, but not be limited to, the following information:
 - i. Date, time and location of the auction, including the internet address or electronic address for auction location, as applicable;
 - ii. Auction format;
 - iii. Categories of bidders who will be eligible to bid;
 - iv. Quantity and years of allowances to be auctioned;
 - v. Reserve Price;

7.74: continued

- vii. Instructions for submitting the qualification application;
 - viii. Instructions for submitting acceptable financial surety;
 - ix. Procedures for the conduct of the auction;
 - x. Participation limitations; and
 - xi. Other pertinent rules or procedures of the auction as may be required to ensure a transparent, fair and competitive auction.
3. Participant Eligibility. Only owners and operators of electricity generating facilities are eligible to participate in auctions.
4. Bid Submittal Requirements.
- a. Qualification Application.
 - i. Only qualified bidders will be permitted to submit bid(s) or otherwise participate in any auction.
 - ii. Only parties with accounts in the allowance registry may participate in the auction.
 - iii. Potential bidders shall submit a qualification application to the Department at least 30 calendar days prior to the bid submittal date of such auction or by such deadline as the Department shall stipulate in the auction notice. Qualification applications shall contain the information set forth in 310 CMR 7.74(6)(h)4.a. and the auction notice.
 - iv. The applicant shall provide information and documentation relating to its corporate structure, financial ability to participate in the auction and authority to execute bids and honor contractual obligations. Such information may include, but is not limited to the following:
 - (i) Documentation regarding the corporate identity, ownership, and capital structure of the applicant; identification of any agency relationship between the applicant and any third party related to the auction;
 - (ii) Audited annual reports and credit reports of the applicant and/or the entity represented by the applicant;
 - (iii) Corporate background and recent adverse conditions, which may include:
 - 1. Identification of any indictment or felony conviction of the applicant, or any member, director, principle, partner or officer of the applicant or any affiliate or related entity;
 - 2. A statement by the applicant as to prior findings of non-responsibility with regard to any state procurement including findings under state law or regulation;
 - 3. A statement by the applicant as to certification under any state tax registration requirement;
 - 4. Identification of any previous or pending investigation with respect to any alleged violation any rule, regulation, or law associated with any commodity market or exchange;
 - 5. Evidence demonstrating that such applicant has an allowance registry account;
 - 6. Identification of relationships with any other account holder.
 - v. The Department shall review each qualification application and make determinations as to whether the applicant is qualified to submit bids in the auction. Applicants may be denied eligibility based on the information provided or upon information obtained independent of the application process. Failure to provide the required information may result in the qualification application being declared incomplete or otherwise deficient. The Department shall notify applicants in writing or by electronic mail if the qualification application is complete and meets the requirements for participation in the auction. If the qualification application does not meet such requirements, notification shall include the reasons therefore, and applicants will be given a reasonable opportunity to provide additional information to cure such deficiencies.
 - vi. Once an application has been approved, that bidder shall be eligible to participate in all subsequent auctions, provided there has been no material change to the information provided in the qualification application, and provided that the applicant meets the eligibility criteria of 310 CMR 7.74(6)(h)3. If there is any material change to the information submitted in the bidder's qualification application, the qualification expires and a new qualification application is required to be submitted.

7.74: continued

- vii. The Department may suspend or revoke its approval of a qualification application if the bidder fails to comply with 310 CMR 7.74(6)(h)4.
- viii. In order to reduce the administrative burden for the Department and electricity generating facilities, the Department may, on a case-by-case basis, consider applicants that have been approved as bidders by DOER pursuant to 225 CMR 13.09(e) to be qualified bidders pursuant to 310 CMR 7.74(6)(h)4.a.v.
- b. Surety Requirement.
 - i. Bidders shall be required to provide financial surety in the form of a bond, cash, certified funds, or an irrevocable stand-by letter of credit, in a form acceptable to the Department. A bidder's eligibility to bid in any auction shall be limited to the level of financial security provided. Financial surety may be forfeited to and retained by the Department in the event the bidder's offer is accepted in an auction and the bidder fails to tender payment of the full amount when due.
 - ii. Bidders may request return of their surety at any time prior to or following any auction, and the Department shall return said surety provided that the Commonwealth has no current or pending claim to such surety as a result of a failure of the bidder to comply with 310 CMR 7.74(6)(h)4.b. or to pay the full amount of its accepted bid when due. Return of such surety to the bidder voids the bidder's ability to participate in subsequent auctions unless a new surety is submitted to the Department pursuant to the provisions of 310 CMR 7.74(6)(h)4.
 - iii. The surety requirements of 310 CMR 7.74(6)(h)4. may be modified by the Department at any time prior to the applicable auction date, and shall be published no later than 45 calendar days prior to such auction.
 - iv. In the event that the Department modifies the surety requirements, bidders shall meet the new surety requirements before the next auction.
- c. Bid Submittal.
 - i. Once an application has been approved, and provided there has been no material change to the information provided in the application, bidders seeking to bid in any subsequent auction shall complete and submit an intent to bid on or before the deadline specified in the Auction Notice.
 - ii. All bids shall be on a form prescribed by the Department, which shall be made available electronically.
 - iii. All bids submitted shall be considered binding offers for the purchase of allowances under the rules of the auction.
 - iv. All qualified maximum bids shall be limited to the amount of financial surety provided by the qualified bidder pursuant to 310 CMR 7.74(6)(h)4.b.
 - v. Bids shall be submitted on-line and shall conform to the format and protocol of bid submission as set forth in the auction notice pursuant to 310 CMR 7.74(6)(h)2.
 - vi. If the Department determines that a bidder has provided false or misleading information, fails to honor an accepted bid, or has withheld pertinent information in its qualification documentation, or has otherwise failed to comply with any material provision of 310 CMR 7.74(6)(h)4., the surety amount may be forfeited to the Commonwealth, and the bidder may be prohibited from participating in any future auctions.
- 5. Bid Selection.
 - a. The Department may employ a market monitor to observe the conduct and outcome of each auction. As a condition to participation in any auction, bidders shall agree to provide, and shall provide on request, any data to the Department that the Department deems necessary to support this function and the proper monitoring of such auctions.
 - b. The Department will rank all bids. Allowances will be sold in the quantities specified in the accepted bids until there are no remaining allowances available for the specified auction. In the event that there is more than one winning bidder submitting the same price and the total number of allowances requested in all such winning bids exceeds the number of allowances remaining, the Department may award the remaining allowances randomly, or based on the *pro rata* share of the number of allowances bid on by each winning bidder.
 - c. The Department shall approve or disapprove the outcome of the auction following the completion of the auction event.

7.74: continued

6. Transfer of Allowances. Following approval of the outcome of the auction and upon payment in full of the amount owed by the successful bidders, the Department shall transfer allowances into the corresponding bidders' allowance registry account, provided that transfers resulting from auctions that occur before March 1st of a calendar year shall occur during the month of March.

7. Return of Unsuccessful Bids. Subject to 310 CMR 7.74(6)(h)4.b.ii. and 310 CMR 7.74(6)(h)4.c.vi., following each auction the Department will return upon written request all financial securities or payments to unsuccessful bidders and to bidders unwilling to purchase fewer allowances than requested in its bid.

8. Announcement of Results. The Department reserves the right to publish the names of qualified bidders, the closing price, and the total quantity of allowances sold at each auction.

(7) Reporting Requirements.

(a) Compliance Certification Reporting. By March 1, 2019, and March 1st of each year thereafter, the owner or operator of an electricity generating facility subject to 310 CMR 7.74 shall demonstrate compliance with the electricity generating facility's CO₂ emission limit by submitting a compliance certification report covering the CO₂ emissions from the prior calendar year. The compliance certification report shall include, among other information as requested by the Department, the following:

1. The name, address, contact person, and phone number of the electricity generating facility;
2. The electricity generating facility's assigned CO₂ emissions limit for 2018;
3. The electricity generating facility's annual CO₂ emissions for the prior calendar year as reported pursuant to 310 CMR 7.70(8), in short tons and metric tons;
4. The amount, if any, of CO₂ emissions for the prior calendar year for which compliance will be deferred pursuant to 310 CMR 7.74(6)(d), in short and metric tons, and the hours during which such CO₂ emissions occurred during the emergency.
5. The total number of allowances in the electricity generating facility's allowance registry account on March 1st;
6. The number of allowances in the electricity generating facility's allowance registry account that the owner or operator of the facility is using to offset CO₂ emissions that occurred during the prior calendar year;
7. The number of allowances in the electricity generating facility's allowance registry account that the owner or operator of the electricity generating facility is using to offset CO₂ emissions that occurred during an emergency in the year before the prior calendar year, on a two-for-one basis pursuant to 310 CMR 7.74(6)(d);
8. The total number of allowances remaining in the electricity generating facility's allowance registry account after offsetting CO₂ emissions pursuant to 310 CMR 7.74(7)(a)6. and 7.; and
9. The electronic signature of the designated representative submitting the form and certification by the designated representative in accordance with 310 CMR 7.74(7)(b).

(b) Certification of Reports, Documents, and Information. All reports, documents, and information submitted to the Department under 310 CMR 7.74 must be signed and attested to by the designated representative and shall include the following statement: "I certify that I have personally examined the information that I am submitting and I am familiar with the information submitted and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including possible fines and imprisonment."

(c) Submission Format and Process. The Department may specify the format and process for any submission required pursuant to 310 CMR 7.74, including electronic submission requirements.

(d) Compliance Verification. The Department may verify compliance with 310 CMR 7.74 by conducting inspections, requesting information and records, and requiring the collection of information. 310 CMR 7.74(7)(d) does not limit the authority of the Department as otherwise provided by law or in an authorization, determination, modification, permit, or other approval, or by the terms of any order or other enforcement document.

7.74: continued

1. Access to Information. Where necessary to ascertain compliance with 310 CMR 7.74, including actual or potential CO₂ emissions, the Department may request information or records from any owner or operator of an electricity generating facility. The owner or operator shall, within a reasonable time, furnish the requested information or records and shall permit Department personnel or authorized representatives to have access to and to take images of such records.

2. Requirement to Collect Information. When the Department determines that any electricity generating facility has failed to offset its CO₂ emissions limit or violated any other condition in 310 CMR 7.74, the Department may require the owner or operator of said electricity generating facility to submit the necessary information or records. In doing so, the Department may require the electricity generating facility owner or operator to:

- a. Establish and maintain records;
- b. Perform audits on CO₂ emissions records or monitoring equipment using standard procedures and methods;
- c. Quantify CO₂ emissions in accordance with any procedures and methods that the Department may prescribe;
- d. Keep records on control equipment parameters, production variables, and other indirect data when direct monitoring of CO₂ emissions is not practical;
- e. Perform additional CO₂ emissions monitoring, including conducting stack tests in accordance with 310 CMR 7.13 when continuous CO₂ emissions monitoring equipment information is unavailable;
- f. Make periodic reports to the Department, as necessary, to assure continuous compliance with 310 CMR 7.74; and
- g. Maintain other records and provide any other information the Department requires.

(8) Recordkeeping Requirements. The owner or operator of an electricity generating facility shall keep on-site at the electricity generating facility all records, data, reports and other information required by 310 CMR 7.74 for a period of three years from the date the record is created. The Department may extend this period for cause, in writing, at any time before the end of the three years.

(9) Authorized Designated Representative.

(a) Assigning an Authorized Designated Representative. The owner and operator of an electricity generating facility shall authorize one designated representative to act on behalf of the owner and operator with regard to all matters under 310 CMR 7.74.

(b) Responsibilities of Designated Representative. The designated representative shall be responsible for submitting and updating electronically all of the following:

1. The name, address, email address, and telephone number of the designated representative;
2. A list of the owner(s) and operator(s) of the electricity generating facility;
3. A notice of transfer of allowances;
4. A CO₂ emissions report;
5. The Compliance Certification Report;
6. The name, address, email address, and telephone number of any persons authorized to submit notices of transfer of allowances pursuant to 310 CMR 7.74(9)(c); and
7. Any other reports, documents, or information requested by the Department.

(c) Delegation by Designated Representative. A designated representative may delegate his or her authority to submit a notice of transfer of allowances by submitting the information specified in 310 CMR 7.74(9)(b)6. and signing the following certification statement: "I certify any notice of transfer of allowances submitted by any person identified by me as authorized to submit a notice of transfer of allowances under 310 CMR 7.74 shall be deemed a notice of transfer of allowances submitted by me."

(d) Certification of Representation. The owner or operator of an electricity generating facility shall submit to the Department a complete certificate of representation that identifies the designated representative acting on behalf of the owner and operator for the electricity generating facility. The submission shall be on a form prescribed by the Department, and shall include the following information:

1. Identification of the electricity generating facility;

7.74: continued

2. The name of the designated representative;
3. The address, email address, and telephone number of the designated representative at the time of submission of the Certificate of Representation;
4. A list of the owner(s) and operator(s) of the electricity generating facility at the time of submission of the Certificate of Representation;
5. The following certification statements by the designated representative.
 - a. "I certify I was selected as the designated representative, by an agreement binding on the owner and operator of the facility."
 - b. "I certify that I have all the necessary authority to carry out my duties and responsibilities under 310 CMR 7.74 on behalf of the owner and operator of the facility and that the owner and operator shall be fully bound by my representations, action, inactions, or submissions";
6. The signature of the designated representative and the date signed; and
7. If applicable, a list of persons authorized to submit Notices of Transfer of allowances pursuant to 310 CMR 7.74(9)(c) at the time of submission of the Certificate of Representation, and the following:
 - a. The name, address, email address, and telephone number of such persons.
 - b. The following certification statement by the designated representative. "I certify any notice of transfer of allowances submitted by any person identified by me as authorized to submit a notice of transfer of allowances under 310 CMR 7.74 shall be deemed a notice of transfer of allowances submitted by me."

(10) Penalties and Enforcement.

- (a) The failure of an owner or operator to offset its CO₂ emissions limit in compliance with 310 CMR 7.74(6)(e) shall be deemed a release of air pollutants into the environment without the approval or authorization of the Department and shall be presumed to constitute a significant impact to public health, welfare, safety, or the environment.
- (b) If the owner or operator of an electricity generating facility is not holding sufficient allowances in its allowance registry account by March 1st of each year to offset its CO₂ emissions as calculated in accordance with the requirements of 310 CMR 7.74(6)(e), then within 14 calendar days of receipt of notice by the Department, the owner or operator shall transfer into the electricity generating facility's allowance registry account, three additional allowances for every one ton of CO₂ emissions not offset, and then the Department will deduct the allowances from the allowance registry account.
- (c) In addition to the requirements of 310 CMR 7.74(10)(a) and (b), the Department may enforce the requirements of 310 CMR 7.74 in accordance with applicable federal and Massachusetts law including, but not limited to, M.G.L. c. 21A, § 16, and 310 CMR 5.00: *Administrative Penalty*; M.G.L. c. 111, § 2C; M.G.L. c. 111, §§ 142A through 142E and M.G.L. c. 21N, § 7(d).

(11) Program Review. Not later than December 31, 2021 and every ten years thereafter, the Department shall complete a review, including an opportunity for public comment, of the requirements of 310 CMR 7.74 to determine whether the program should be amended. This review shall evaluate CO₂ emissions, costs, consistency with statewide CO₂ emissions limits established pursuant to M.G.L. c. 21N, and any other information relevant to review of the program.

(12) Declining CO₂ Emissions Limits in Existing Plan Approvals. The requirements in 310 CMR 7.74 supersede the declining annual GHG or CO₂ emissions limits in an electricity generating facility's plan approval issued pursuant to 310 CMR 7.02. All other terms and conditions of such plan approval remain in effect unless a modification of such plan approval is issued by the Department in accordance with 310 CMR 7.02.

(13) Compliance with All Applicable Requirements. An owner or operator of an electricity generating facility subject to 310 CMR 7.74 shall comply with all other state and federal applicable statutes and regulations.

(14) Owner and Operator Responsible for Compliance. Whenever any provision in 310 CMR 7.74 requires an action to be taken by an owner or operator, any owner or operator of an electricity generating facility may take the action; provided that all owners and operators of the electricity generating facility are responsible for ensuring that the proper action is taken, and all owners and operators are jointly and severally liable for compliance with 310 CMR 7.74.

7.75: Clean Energy Standard

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

(1) Purpose, Authority and Scope. The purpose of 310 CMR 7.75, promulgated in conjunction with 310 CMR 7.74, is to assist the Commonwealth in achieving the greenhouse gas emissions reduction goals adopted pursuant to M.G.L. c. 21N, § 3(b), by establishing a clean energy standard (CES) that will increase the level of clean electricity that is purchased from the regional electric grid for consumption in Massachusetts. To achieve those goals, the Executive Office of Energy and Environmental Affairs (EEA) and the Department, pursuant to M.G.L. c. 21A, §§ 2 and 8 and M.G.L. c. 21N, §§ 3(c), 4 and 7, hereby jointly promulgate 310 CMR 7.75 following consultation with the Department of Energy Resources (DOER) and based on the considerations specified in M.G.L. c. 21N, § 3(c). In exercising their broad authority and discretion under M.G.L. c. 21N, § 3(c), EEA and the Department have determined that establishing the CES, along with the Commonwealth's other climate programs and policies, will ensure achievement of the greenhouse gas emissions limits as established under M.G.L. c. 21N, and that the 310 CMR 7.75 levels are consistent with, and take account of, regional programs such as the Regional Greenhouse Gas Initiative (RGGI) and the Renewable Portfolio Standard (RPS). The Department is also consolidating in 310 CMR 7.75 a requirement previously codified at 310 CMR 7.71(9) for retail sellers of electricity to report statewide greenhouse gas emissions and to monitor and ensure compliance with the reporting provisions of M.G.L. c. 21N, § 2(a)(5). 310 CMR 7.75 is also promulgated pursuant to M.G.L. c. 21A, § 16 and M.G.L. c. 111, §§ 2C and 142A through 142E.

(2) Definitions. The terms used in 310 CMR 7.75 are defined in 310 CMR 7.75(2) and 310 CMR 7.00: *Definitions*. Where a term is defined in both 310 CMR 7.00: *Definitions* and 310 CMR 7.75, the definition in 310 CMR 7.75 shall apply.

Biogenic Greenhouse Gas Emissions means emissions of carbon dioxide that result from the combustion of biogenic (plant or animal) material, excluding fossil fuels.

Business Day means Monday through Friday, exclusive of state and federal legal holidays.

Carbon Dioxide Equivalent means the amount of carbon dioxide by weight that would produce the same amount of global warming impact as a given weight of another greenhouse gas.

Certificates Obligation means a term defined in the NEPOOL GIS operating rules at Rule 4.1(b).

CES Alternative Compliance Credit means a credit obtained by a retail seller of electricity upon making a CES alternative compliance payment. Such credit is used to document compliance with 310 CMR 7.75(4)(a). One unit of credit shall be equivalent to one clean generation attribute.

CES-E Alternative Compliance Credit means a credit obtained by a retail seller of electricity upon making a CES-E alternative compliance payment. Such credit is used to document compliance with 310 CMR 7.75(4)(b). One unit of credit shall be equivalent to one clean existing generation attribute.

CES Alternative Compliance Payment (CES ACP) means a payment of a certain dollar amount per MWh, resulting in the issuance of CES alternative compliance credits, which a retail seller of electricity may submit to the Department in *lieu* of providing clean generation attributes required under 310 CMR 7.75(4)(a).

CES-E Alternative Compliance Payment (CES-E ACP) means a payment of a certain dollar amount per MWh, resulting in the issuance of CES-E alternative compliance credits, which a retail seller of electricity may submit to the Department in *lieu* of providing clean existing generation attributes required under 310 CMR 7.75(4)(b).

CES Statement of Qualification means a written document from the Department that qualifies a generation unit as a clean generation unit, or that qualifies a portion of the annual electrical energy output of a generation unit as clean generation.

7.75: continued

CES-E Statement of Qualification means a written document from the Department that qualifies a generation unit as a clean existing generation unit, or that qualifies a portion of the annual electrical energy output of a generation unit as clean existing generation.

Clean Existing Generation means the electrical energy output, or that portion of the electrical energy output, excluding any electrical energy utilized for parasitic load of a clean existing generation unit, that qualifies under:

- (a) the special provisions for a generation unit located in a control area adjacent to the ISO-NE control area, pursuant to 310 CMR 7.75(7)(b); or
- (b) the special provisions for clean existing generation units, pursuant to 310 CMR 7.75(7)(c); or
- (c) any other applicable provision of 310 CMR 7.75.

Clean Existing Generation Attribute means a generation attribute of the electrical energy output of a specific clean existing generation unit that derives from the unit's production of clean existing generation.

Clean Existing Generation Unit means a nuclear or hydroelectric generation unit that:

- (a) is located in Massachusetts, or in a jurisdiction that exported at least 4,000,000 MWh of electricity to Massachusetts in at least two years from 2001 through 2016, on a net annual basis, as reflected in the state greenhouse gas emissions inventories published annually by the Department;
- (b) has a nameplate capacity greater than 30 megawatts; and
- (c) commenced commercial operation before January 1, 2011.

Clean Generation means the electrical energy output, or that portion of the electrical energy output, excluding any electrical energy utilized for parasitic load of a clean generation unit, that qualifies under:

- (a) the special provisions for a generation unit located in a control area adjacent to the ISO-NE control area, pursuant to 310 CMR 7.75(7)(b); or
- (b) any other applicable provision of 310 CMR 7.75 or 225 CMR 14.00: *Renewable Energy Portfolio Standard - Class I*.

Clean Generation Attribute means the generation attribute that is either:

- (a) a generation attribute of the electrical energy output of a specific clean generation unit that derives from the unit's production of clean generation; or
- (b) any other generation attribute that is retained pursuant to St. 2008, c. 169, § 83D(h), as inserted by St. 2016, c. 188, § 12. All generation attributes retained pursuant to St. 2008, c. 169, § 83D(h), as inserted by St. 2016, c. 188, § 12, including such generation attributes that derive from generation units that do not satisfy all limitations in 310 CMR 7.75(7), are clean generation attributes.

Clean Generation Unit means a generation unit or aggregation that has received a CES statement of qualification from the Department, or that has received an RPS statement of qualification from DOER.

Commercial Operation Date means the date that a generation unit first produces electrical energy for sale within the ISO-NE control area or within an adjacent control area. In the case of transmission capacity that is used to transmit clean energy, the date on which the transmission capacity first transmitted energy into the ISO-NE control area or an adjacent control area.

Compliance Filing means a document filed annually by a retail seller of electricity in a format determined by the Department documenting compliance with 310 CMR 7.75(4), submitted no later than July 1st, or the first business day thereafter, of the subsequent compliance year.

Compliance Year means a calendar year beginning January 1st and ending December 31st, for which a retail seller of electricity that is not an Municipal Electric Department or Municipal Light Board must demonstrate that it has met the requirements of 310 CMR 7.75(4) and (5).

7.75: continued

Control Area means a geographic region in which a common generation control system is used to maintain scheduled interchange of electrical energy within and without the region.

Dedicated Transmission Line means a transmission line with a commercial operation date after December 31, 2017 that is not electrically connected to any generation unit that is not a clean generation unit.

Emitting Electricity Generators means electricity generators that are powered by any fossil or biogenic fuels.

Emitting Megawatt Hours means megawatt hours that are generated by emitting electricity generators.

End-use Customer means a person or entity in Massachusetts that purchases electrical energy at retail from a retail seller of electricity, except that a generation unit taking station service at wholesale from ISO-NE or self-supplying from its owner's other generating stations, shall not be considered an end-use customer.

Generation Attribute means a non-price characteristic of the electrical energy output of a generation unit including, but not limited to, the generation unit's fuel type, emissions, vintage and eligibility for renewable or clean energy programs.

Generation Unit. A facility that converts a fuel or an energy resource into electrical energy.

GIS Certificate means an electronic record produced by the NEPOOL GIS that identifies generation attributes of each MWh accounted for in the NEPOOL GIS.

Greenhouse Gas means any chemical or physical substance that is emitted into the air and that the Department may reasonably anticipate will cause or contribute to climate change including, but not limited to, carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons and sulfur hexafluoride.

Intermittent Generation Unit means as determined by the Department, a generation unit that utilizes resources regarding which the timing or magnitude is not predictable or controllable.

ISO-NE means ISO New England Inc., the independent system operator for New England, the regional transmission organization for most of New England, which is authorized by the Federal Energy Regulatory Commission (FERC) to exercise for the New England Control Area the functions required pursuant to the FERC's Order No. 2000 and the FERC's corresponding regulations.

ISO-NE Settlement Market System means the ISO-NE's electronic database system into which all real-time load and generation data are entered and from which such data are provided to the NEPOOL GIS.

Lifecycle Greenhouse Gas Emissions means the aggregate quantity of greenhouse gas emissions including, but not limited to, direct emissions and significant indirect emissions such as significant emissions from land use changes, and temporal changes in forest carbon sequestration and emissions resulting from biomass harvests, regrowth, and avoided decomposition as determined by the department, related to the full fuel lifecycle, including all stages of fuel and feedstock production and distribution, from feedstock generation or extraction through the distribution and delivery of the finished fuel to the ultimate consumer, where the mass values for all greenhouse gases are adjusted to account for their relative global warming potential.

Massachusetts Department of Energy Resources or DOER means the Massachusetts agency established pursuant to M.G.L. c. 25A, §§ 1 through 13.

Megawatt-hour (Mwh) means a unit of electrical energy or work equivalent to one million watts of power operating for one hour.

7.75: continued

Municipal Electric Department (MED) means a municipal electric department as defined in M.G.L. c. 164A, § 1.

Municipal Light Board (MLB) means a municipal light board as defined in M.G.L. c. 164A, § 1.

NEPOOL GIS means the NEPOOL Generation Information System, which includes a generation information database and certificate system, operated by the New England Power Pool (NEPOOL), its designee or successor entity, that accounts for generation attributes of electrical energy consumed and generated within, imported into, or exported from the ISO-NE control area.

NERC Tag means a document that identifies an electrical energy interchange transaction and its associated participants, assigned in accordance with rules set forth by the North American Electric Reliability Corporation (NERC), a nonprofit corporation granted by the FERC the legal authority to enforce mandatory reliability standards for the U.S. bulk power system, subject to FERC oversight.

Non-emitting Electricity Generators means electricity generators powered by hydro, nuclear, ocean, solar or wind power.

Non-emitting Megawatt Hours means megawatt hours that are generated by non-emitting electricity generators.

Operator means any person or entity that has charge or control of a generation unit subject to 310 CMR 7.75(7) through (9) including, without limitation, a duly authorized agent or lessee of the owner, or a duly authorized independent contractor.

Owner means any person or entity that, alone or in conjunction with others, has legal ownership, a leasehold interest, or effective control over the real property or property interest upon which a generation unit is located, or the airspace above said real property including, without limitation, a duly authorized agent of the owner. For the purposes of 310 CMR 7.75, owner does not mean a person or entity holding legal title or security interest solely for the purpose of providing financing.

Retail Electricity Product means electrical energy offering that is distinguished by its generation attributes and that is offered for sale by a retail seller of electricity to end-use customers.

Retail Seller of Electricity or Retail Seller means a competitive supplier licensed by the Department of Public Utilities or, as each is defined in M.G.L. c. 164A, § 1, an electric utility, municipal electric department or municipal light board that is connected to the regional electric grid.

RPS Alternative Compliance Credit means a credit obtained by a retail seller of electricity upon making a payment pursuant to 225 CMR 14.08(3): *Alternative Compliance*, and used to comply with 225 CMR 14.07: *Renewable Energy Portfolio Standard - Class I*.

RPS Class I Renewable Generation Unit means a generation unit or aggregation that has received a statement of qualification as an RPS Class I renewable generation unit from DOER pursuant to 225 CMR 14.00: *Renewable Energy Portfolio Standard - Class I*.

RPS Statement of Qualification means a written document issued by DOER pursuant to 225 CMR 14.06: *Qualification Process for RPS Class I, Solar Carve-out Renewable Generation Units, and Solar Carve-out II Renewable Generation Units* that qualifies a generation unit or aggregation as an RPS Class I qualified generation unit, or that qualifies a portion of the annual electrical energy output of a generation unit.

Short Ton means 2000 pounds or 0.9072 metric tons.

7.75: continued

(3) Applicability. Retail sellers are required to comply with 310 CMR 7.75.

(4) Clean Energy Standard and CES-E Standard. The total annual sales of each retail electricity product sold to Massachusetts end-use customers by a retail seller that is not an MED or MLB shall include a minimum percentage of electrical energy sales with clean generation attributes and clean existing generation attributes.

(a) For calendar years 2018 through 2050, percentage requirements for clean generation attributes are listed in 310 CMR 7.75(4): *Table A.*

Table A

Year	Retail Sellers, except Municipal Electric Departments and Municipal Light Boards
2018	16%
2019	18%
2020	20%
2021	22%
2022	24%
2023	26%
2024	28%
2025	30%
2026	32%
2027	34%
2028	36%
2029	38%
2030	40%
2031	42%

2035	50%
2036	52%
2037	54%
2038	56%
2039	58%
2040	60%
2041	62%
2042	64%
2043	66%
2045	70%
2044	68%

7.75: continued

Table A (continued)

Year	Retail Sellers, except Municipal Electric Departments and Municipal Light Boards
2046	72%
2047	74%
2048	76%
2049	78%
2050, and each year thereafter	80%

(b) Clean Energy Standard for Clean Existing Generation Units (CES-E). For calendar year 2021 and 2022, the percentage requirement for clean existing generation attributes shall be 20%. For calendar years 2023 through 2050, percentage requirements for clean existing generation attributes shall be determined by dividing 20% by the percentage provided by the Department pursuant to 310 CMR 7.75(9)(b)4. for the year four years before the calendar year for which the percentage requirement applies, rounded to the nearest percent (*i.e.*, if the percentage provided pursuant to 310 CMR 7.75(9)(b)4. for 2026 is 105%, then the percentage requirement for clean existing generation attributes in 2030 would be $20\% \div 105\% = 19\%$).

(5) Compliance Procedures for Retail Sellers That Are Not MEDs or MLBs.

(a) Standard Compliance. Each retail seller subject to 310 CMR 7.75(4) shall be deemed to be in compliance with 310 CMR 7.75 if the information provided in the compliance filing submitted pursuant to 310 CMR 7.75(5) is true and accurate and demonstrates compliance with 310 CMR 7.75(4). Such retail seller shall demonstrate, using a form provided by the Department or DOER, that clean generation attributes and clean existing generation attributes used for compliance have not otherwise been, nor will be, sold, retired, claimed, used or represented, as part of electrical energy output or sales, or used to satisfy obligations in jurisdictions other than Massachusetts.

(b) Banked Compliance.

1. Beginning in 2021, a retail seller subject to 310 CMR 7.75(4)(a) may use clean generation attributes produced in either or both of the two prior compliance years, subject to the limitations in 310 CMR 7.75(5)(b) and provided that the retail seller is in compliance with 310 CMR 7.75 for all previous compliance years. In addition, the retail seller shall demonstrate, using a form provided by the Department or DOER, that such attributes:

- Were in excess of the clean generation attributes needed for compliance in the compliance year in which they were generated, and that such excess attributes have not previously been used for compliance with 310 CMR 7.75;
- Do not exceed 30% of the clean energy generation attributes needed by the retail seller for compliance with 310 CMR 7.75(4)(a) in the year they were generated, subject to 310 CMR 7.75(5)(b)1.d.;
- Were produced during the compliance year in which they are claimed as excess by the generation of electrical energy sold to end-use customers in the ISO-NE control area; and
- Have not otherwise been, nor will be, sold, retired, claimed or represented as part of electrical energy output or sales, or used to satisfy obligations in jurisdictions other than Massachusetts.

2. Any RPS-eligible renewable generation attributes claimed for compliance with RPS pursuant to 225 CMR 14.08(2): *Banked Compliance* and used to comply with 225 CMR 14.07: *Renewable Energy Portfolio Standard - Class I* in a particular year shall be counted toward compliance with 310 CMR 7.75 in that year.

3. A retail seller subject to 310 CMR 7.75(4)(b) may not use clean existing generation attributes produced in prior compliance years to comply with said provision.

7.75: continued

(c) Alternative Compliance. Any RPS alternative compliance credits claimed pursuant to 225 CMR 14.08(3)(a) and used to comply with 225 CMR 14.07: *Renewable Energy Portfolio Standard - Class I* shall be counted toward compliance with 310 CMR 7.75(4)(a). A retail seller subject to 310 CMR 7.75(4) may discharge its obligations under 310 CMR 7.75(4)(a), in whole or in part, by making a CES ACP to the Department. A retail seller subject to 310 CMR 7.75(4) may discharge its obligations under 310 CMR 7.75(4)(b), in whole or in part, by making a CES-E ACP to the Department. Such funds shall be deposited in a segregated account, which may be the same account established to receive auction proceeds under 310 CMR 7.74(6)(h)1.a.i., administered by a Trustee appointed by EEA and the Department, and used for the purposes set forth in 310 CMR 7.75(5)(c)2.

1. Alternative Compliance Procedures.

a. Procedures for CES ACP. A retail seller subject to 310 CMR 7.75(4) shall receive CES alternative compliance credits from the Department, subject to the following:

i. The quantity of credits, specified in MWh, that can be applied to its obligations under 310 CMR 7.75(4)(a) shall be determined by calculating the ratio of the total of CES ACPs paid for the compliance year to the CES ACP rate for that compliance year.

ii. The CES ACP rate in dollars shall be 0.75 times the rate calculated annually by DOER pursuant to 225 CMR 14.08(3)(a)2 for years 2018 through 2020, and 0.50 times the rate calculated annually by DOER pursuant to 225 CMR 14.08(3)(a)2. for years 2021 through 2050.

b. Procedures for CES-E ACP. A retail seller subject to 310 CMR 7.75(4) shall receive CES-E alternative compliance credits from the Department subject to the following:

i. The quantity of credits, specified in MWh, that can be applied to its obligations under 310 CMR 7.75(4)(b) shall be determined by calculating the ratio of the total of CES-E ACPs paid for the compliance year to the CES-E ACP rate for that compliance year.

ii. The CES-E ACP rate in dollars shall be 0.10 times the rate specified by DOER pursuant to 225 CMR 14.08(3)(a)2. for years 2021 through 2050.

2. Use of Funds. Funds deposited pursuant to 310 CMR 7.75(5)(c) shall be expended to further the goals of M.G.L. c. 21N by supporting programs and projects to reduce greenhouse gas emissions to mitigate the impacts of climate change including, but not limited to, clean energy and vehicle electrification projects; programs or projects to support adaptation to the impacts of climate change; mitigation or adaptation programs or projects involving communities that are already adversely impacted by air pollution including, but not limited to, environmental justice communities; and for the administration of any such programs or projects. Such funds may also be used for the administration of 310 CMR 7.75. Such funds shall be expended at the direction of the Trustee, in consultation with EEA and the Department. The Trustee, EEA and the Department may consult with and enter into agreements with other agencies within the Energy and Environmental Affairs Secretariat to assist in the administration and expenditure of such funds.

(d) Treatment of Existing Contracts Executed as of August 11, 2017. Notwithstanding 310 CMR 7.75(4), in determining the total CES-qualified MWh applied to each retail seller subject to 310 CMR 7.75(4) in 2018 and 2019, the Department shall not include that portion of electrical energy sales that were subject to a contract executed or extended prior to August 11, 2017, provided that the electricity was sold at a price specified in the contract and the retail seller provides the Department with satisfactory documentation of the terms of such contracts. Contracted electrical energy delivered after December 31, 2019 shall be included in the CES, regardless of the contract's date of execution or extension.

1. In order to demonstrate eligibility of contracts for exemption under 310 CMR 7.75(5)(d), retail sellers shall provide the relevant documentation by December 31, 2017 in accordance with a form prescribed by the Department including, but not limited to, the execution and expiration dates of the contracts and the projected annual volume of electric energy supplied at a contract-specified price.

7.75: continued

2. In order to demonstrate eligibility of electrical energy sales for exemption under 310 CMR 7.75(5)(d), retail sellers shall provide the relevant documentation by July 1st of the year after the sales occurred, along with information required in accordance with a form prescribed by the Department including, but not limited to, the execution and expiration dates of the contracts and the actual annual volume of electric energy supplied at a contract-specified price.
- (e) Treatment of Existing Contracts Executed as of October 4, 2019. Notwithstanding 310 CMR 7.75(4), in determining the amount of CES E-qualified MWh applied to each retail seller subject to 310 CMR 7.75(4)(b) in 2021 and 2022, the Department shall not include that portion of electrical energy sales that were subject to a contract executed or extended prior to October 4, 2019, provided that the electricity was sold at a price specified in the contract and the retail seller provides the Department with satisfactory documentation of the terms of such contracts.
1. The adjustment to the retail electricity seller's compliance obligation pursuant to 310 CMR 7.75(4)(b) shall be equal to 20% of the amount of contracted electricity energy sales and shall apply to sales that occur in 2021 and 2022 only.
 2. In order to demonstrate eligibility of electrical energy sales for exemption under 310 CMR 7.75(5)(e), retail sellers shall provide the relevant documentation by July 1st of the year after the year for which the retail seller has exempt electrical energy sales, along with information required in accordance with a form prescribed by the Department including, but not limited to, the execution and expiration dates of the contracts and the actual annual volume of electric energy supplied at a contract-specified price.
- (6) Annual Compliance Filings for Retail Sellers That Are Not MEDs or MLBs.
- (a) Date of Annual Compliance Filing. For each compliance year, each retail seller subject to 310 CMR 7.75(4) shall file an annual compliance filing with the Department no later than the first day of July, or the first business day thereafter, of the subsequent compliance year. Such retail sellers shall complete an annual compliance report for compliance years 2018 through 2050.
- (b) Contents of Annual Compliance Filing. For each retail electricity product, the filing shall document compliance with the provisions of 310 CMR 7.75(4) and (5) using a form provided by the Department and shall include, but not be limited to, the following:
1. Total Electrical Energy Sales to End-use Customers. Documentation of the total MWh of electrical energy allocated by the retail seller to end-use customers in the compliance year. Such allocation is defined as the total quantity of such seller's certificates obligation that the seller correctly allocated or should have allocated to all of the seller's Massachusetts retail subaccounts in the NEPOOL GIS, in compliance with all relevant provisions of Part 4 of the NEPOOL GIS Operating Rules, as specified in the Guideline on the Determination of Sales to End-use Customers.
 2. Electrical Energy Sales to End-use Customers by Product. Documentation of the total MWh of each retail electricity product allocated by the retail seller to end-use Massachusetts customers in the compliance year, verified by an independent third-party satisfactory to the Department. Such allocation is defined as the quantity of the seller's certificates obligation that the seller correctly allocated or should have allocated to each of the seller's Massachusetts retail subaccounts at the NEPOOL GIS, in compliance with all relevant provisions of Part 4 of the NEPOOL GIS Operating Rules, as specified in the Guideline on the Determination of Sales to End-use Customers.
 3. Attributes Allocated from the Compliance Year. Documentation of the total MWh of each retail electricity product allocated by the retail seller to end-use Massachusetts customers that had clean generation attributes and clean existing generation attributes during the compliance year, as follows:
 - a. For electrical energy transactions included in the ISO-NE Settlement Market System, the compliance filings shall include documentation from the NEPOOL GIS administrator of the retail seller's ownership of GIS certificates representing clean generation attributes and clean existing generation attributes during the compliance year.

7.75: continued

- b. For electrical energy transactions not included in the ISO-NE Settlement Market System, but for which the retail seller has secured GIS certificates from the NEPOOL GIS, the compliance filings shall include documentation from the NEPOOL GIS of the retail seller's ownership of GIS Certificates representing clean generation attributes and clean existing generation attributes during the compliance year.
4. Attributes Allocated from Banked Compliance. Allocation by each retail seller, itemized by retail electricity product, of any quantity of clean generation attributes banked from one or both of the two previous years pursuant to 310 CMR 7.75(5)(b) that are used to demonstrate compliance with the clean energy standard in the current compliance year.
5. Alternative Compliance Credits. Allocation by each retail seller, itemized by retail electricity product, of any CES alternative compliance credits claimed pursuant to 310 CMR 7.75(5)(c)1.a., CES-E alternative compliance credits claimed pursuant to 310 CMR 7.75(5)(c)1.b., or RPS alternative compliance credits claimed pursuant to 225 CMR 14.08(3)(a): *RPS Class I Procedures*, along with a copy of any alternative compliance payment receipt(s).
6. Attributes Banked for Future Compliance. Identification of any quantity of clean generation attributes, that the retail seller anticipates claiming for purposes of banked compliance in subsequent years under the banked compliance provisions of 310 CMR 7.75(5)(b).
7. Attributes Retained Pursuant to St. 2008, c. 169, § 83D(h), as Inserted by St. 2016, c. 188, § 12. For the purpose of determining compliance with 310 CMR 7.75(4)(a), clean generation attributes that are retained by an electric utility pursuant to St. 2008, c. 169, § 83D(h), as inserted by St. 2016, c. 188, § 12, and that are not attributed to RPS Class I eligible resources, shall be assigned to all end use customers served by all retail sellers subject to 310 CMR 7.75(4)(a). The number of attributes assigned to each such retail seller's customers shall be based on the retail seller's proportion of the total retail electricity product sold statewide by all such retail sellers.
- (7) Eligibility Criteria for Clean Generation Units and Clean Existing Generation Units.
- (a) Eligibility Criteria for Clean Generation Units. A generation unit may qualify as a clean generation unit subject to the limitations in 310 CMR 7.75(7). The Department shall consider all limitations in 310 CMR 7.75(7), including the emissions criteria in 310 CMR 7.75(7)(a)1.a.ii., when considering whether to provide the owner or operator of such generation unit with a CES statement of qualification pursuant to 310 CMR 7.75(8)(c).
1. Fuels, Energy Resources and Technologies. In order to be considered by the Department for qualification, a generation unit must satisfy at least one of the two eligibility criteria in 310 CMR 7.75(7)(a)1.a. and not be excluded by 310 CMR 7.75(7)(a)1.b.
- a. A generation unit must satisfy at least one of the following two eligibility criteria:
- The generation unit has been issued an RPS statement of qualification as an RPS Class I renewable generation unit pursuant to 225 CMR 14.06(3): *Issuance or Non-issuance of a Statement of Qualification*;
 - The generation unit has net lifecycle GHG emissions, over a 20-year life cycle, that yield at least a 50% reduction of greenhouse gas emissions per unit of useful energy relative to the lifecycle greenhouse gas emissions from the aggregate use of the operation of a new combined cycle natural gas electric generating facility using the most efficient commercially available technology as of the date of the statement of qualification application for the portion of electricity delivered by the generation unit;
- b. A generation unit that does not satisfy applicable fuel, energy resource, or technology-specific provisions or limitations in 225 CMR 14.05(1)(a)5. through 7. shall not qualify under 310 CMR 7.75(7); provided, however, that any generation unit that is a hydroelectric generator that has a nameplate capacity greater than 30 megawatts may qualify under 310 CMR 7.75(7) if it satisfies the emissions criteria in 310 CMR 7.75(7)(a)1.a.ii.
2. Commercial Operation Date. For a generation unit that qualifies as a clean generation unit pursuant to 310 CMR 7.75(7)(a)1.a.ii., the commercial operation date shall be after December 31, 2010.

7.75: continued

3. Metering. For a generation unit that qualifies as a clean generation unit pursuant to 310 CMR 7.75(7)(a)1., the electrical energy output from the generation unit shall be verified by the ISO-NE or by an independent verification system or person participating in the NEPOOL GIS accounting system as an independent Third Party Meter Reader, as defined in Rule 2.5(j) of the NEPOOL GIS Operating Rules, and approved by the Department.

4. Capacity Obligation. For a generation unit that qualifies as a clean generation unit pursuant to 310 CMR 7.75(7)(a)1., the generation unit's generating capacity is subject to the obligations in 310 CMR 7.75(7)(a)4.

a. The amount of the generation capacity of the generation unit whose electrical energy output is claimed as clean generation shall not be committed to any control area other than the ISO-NE control area, unless such generation unit has entered into a capacity obligation in another control area before the start of the first available compliance year for the ISO-NE forward capacity market, in which case 310 CMR 7.75(7)(a)4.a. shall apply upon the expiration of that capacity obligation.

b. The generation unit owner or operator of a generation unit that is not an intermittent generation unit shall commit to the ISO-NE Control Area the amount of the capacity of that generation unit claimed as clean generation by submitting, by the applicable deadline, a show of intent for the ISO-NE forward capacity auction that is the earliest available for the generation unit after the owner or operator has submitted a CES statement of qualification application, unless the owner or operator can provide to the Department documentation of its prior commitment to the ISO-NE control area of such capacity. The owner or operator of any generation unit that cannot demonstrate such prior commitment must also clear the forward capacity auction for which it has qualified, even if it must participate as a price taker.

c. A clean generation unit that was deemed unqualified by the ISO-NE for participation in the ISO-NE forward capacity market for technical reasons may commit capacity to another control area and may receive GIS certificates for the energy sold into the ISO-NE control area, subject to a determination by the Department.

(b) Special Provisions for a Generation Unit Located in a Control Area Adjacent to the ISO-NE Control Area. The portion of the total electrical energy output of a clean generation unit or clean existing generation unit located in a control area adjacent to the ISO-NE control area that qualifies as clean generation or clean existing generation shall meet the relevant requirements in Rule 2.7(c) and all other relevant sections of the NEPOOL GIS Operating Rules, and the requirements in 310 CMR 7.75(7)(b).

1. The generation unit owner or operator shall provide documentation, using a form provided by the Department or DOER, of a contract or other legally enforceable obligation, that is executed between the generation unit owner or operator and an electrical energy purchaser located in the ISO-NE control area for delivery of the generation unit's electrical energy to the ISO-NE control area. For a clean generation unit, such documentation shall include provisions for obtaining associated transmission rights for delivery of the generation unit's electrical energy from the generation unit to the ISO-NE control area using transmission capacity with a commercial operation date after December 31, 2016. For a clean existing generation unit, such documentation shall include provisions for obtaining associated transmission rights for delivery of the generation unit's electrical energy from the generation unit to the ISO-NE control area using transmission capacity that had a commercial operation date before January 1, 2017, and that directly connects the ISO-NE control area with a jurisdiction that exported at least 4,000,000 MWh of electricity to Massachusetts in at least two years from 2001 through 2016, on a net annual basis, as reflected in the state greenhouse gas emissions inventories published annually by the Department. If requested by the Department, the generation unit owner or operator shall pay for evaluation and verification of the provisions of such documentation by an independent party that is engaged or approved by the Department. The Department may rely on information in the NEPOOL GIS to address the requirements of 310 CMR 7.75(7)(b)1. instead of requiring separate documentation.

2. The generation unit owner or operator for a clean generation unit or clean existing generation unit shall provide documentation using a form provided by the Department or DOER, that:

a. The electrical energy delivered pursuant to the legal obligation was settled in the ISO-NE Settlement Market System;

7.75: continued

b. The generation unit produced, during each hour of the applicable month, the amount of MWh claimed, as verified by the NEPOOL GIS administrator; if the originating control area employs a generation information system that is comparable to the NEPOOL GIS, information from that system may be used to support such documentation;

c. The electrical energy delivered under the legal obligation received a NERC tag confirming transmission from the adjacent control area to the ISO-NE control area using transmission capacity that meets the commercial obligation date and transmission path requirements specified in 310 CMR 7.75(7)(b)1.; and

d. The clean generation attributes or clean existing generation attributes have not otherwise been, nor will be, sold, retired, claimed, used or represented as part of electrical energy output or sales, or used to satisfy obligations in jurisdictions other than Massachusetts.

3. The generation unit owner or operator must provide an attestation in a form approved by the Department that it will not itself or through any affiliate or other contracted party, knowingly engage in the process of importing clean generation or clean existing generation into the ISO-NE control area for the creation of clean GIS certificates, and then exporting that energy or a similar quantity of other energy out of the ISO-NE control area during the same hour.

4. The quantity of electrical energy output from a clean generation unit or clean existing generation unit outside the ISO-NE control area that can qualify as clean generation or clean existing generation at the NEPOOL GIS during each hour is limited to the lesser of the clean generation or clean existing generation actually produced by the generation unit or the clean generation or clean existing generation actually scheduled and delivered into the ISO-NE control area.

5. For the purpose of determining compliance with 310 CMR 7.75(7)(b) and all other provisions of 310 CMR 7.75, a clean generation unit that delivers clean energy into the ISO-NE control area or an adjacent control area through a dedicated transmission line shall be considered to be located in the control area to which the clean energy is delivered.

(c) Special Provisions for Clean Existing Generation Units.

1. For any clean existing generation unit, the amount of electrical energy output that is clean existing generation in a given calendar year shall not exceed 2,500,000 MWh.

2. The amount of electrical output of a clean existing generation unit that qualifies as clean existing generation shall be the second lowest annual total amount of MWh that did not have attributes retired, claimed, used or represented, as part of electrical energy output or sales, or used to satisfy obligations in any jurisdiction other than Massachusetts in the years 2016 through 2018, as reflected in the NEPOOL-GIS.

3. Clean existing generation units must satisfy the requirements of 310 CMR 7.75(7)(a)3. and 4.

4. A generation unit that is not located in a jurisdiction that exported at least 4,000,000 MWh of electricity to Massachusetts in at least two years from 2001 through 2016 may qualify as a clean existing generation unit if it is located in a control area that is only electrically interconnected to control areas that are adjacent to the ISO-NE control area and satisfies all other requirements of 310 CMR 7.75.

5. For the purpose of determining compliance with 310 CMR 7.75 a clean existing generation unit located in a control area that is only electrically interconnected to control areas that are adjacent to the ISO-NE control area shall be considered to be located in an adjacent control area.

(8) Qualification Process for Clean Generation Units and Clean Existing Generation Units.

(a) Statement of Qualification Application. For clean generation units that have not received an RPS statement of qualification, a CES statement of qualification application shall be submitted to the Department by the owner or operator of the generation unit. For clean existing generation units, a CES-E statement of qualification application shall be submitted to the Department by the owner or operator of the generation unit. The applicant must use the most current forms and associated instructions provided by the Department, and must include all information, documentation, and assurances required by such forms and instructions.

7.75: continued

(b) Review Procedures.

1. The Department shall notify the applicant when the CES statement of qualification application or CES-E statement of qualification application is administratively complete or if additional information is required pursuant to 310 CMR 7.75(8)(a).

2. The Department may, in its sole discretion, provide an opportunity for public comment on any CES statement of qualification application or CES-E statement of qualification application.

(c) Issuance or Non-issuance of a Statement of Qualification.

1. If the Department finds that all or a portion of the electrical energy output of a generation unit meets the requirements for eligibility as clean generation pursuant to 310 CMR 7.75(7)(a), and the generation unit is not eligible to receive an RPS statement of qualification from DOER, the Department shall provide the owner or operator of such generation unit with a CES statement of qualification.

2. If the Department finds that all or a portion of the electrical energy output of a generation unit is clean existing generation, the Department shall provide the owner or operator of such generation unit with a CES-E statement of qualification.

3. The CES statement of qualification or CES-E statement of qualifications shall include any applicable restrictions and conditions that the Department deems necessary to ensure compliance by a generation unit with the provisions of 310 CMR 7.75.

4. If the generation unit does not meet the requirements for eligibility as a clean generation unit or clean existing generation unit, the Department shall provide written notice to the Owner or Operator, including the Department's reasons for such finding.

(d) Notification Requirements for Change in Eligibility Status. The owner or operator of a clean generation unit or clean existing generation unit shall notify the Department of any changes in the technology, operation, emissions, fuel sources, energy resources, capacity commitment, or other characteristics of the generation unit that may affect the eligibility of the unit as a clean generation unit or clean existing generation unit. The owner or operator shall submit the notification to the Department no later than five days following the end of the month during which such changes were implemented. The notice shall state the date the changes were made to the generation unit and describe the changes in sufficient detail to enable the Department to determine if a change in eligibility is warranted.

(e) Notification Requirements for Change in Ownership, Generation Capacity, or Contact Information. The owner or operator of a clean generation unit or clean existing generation unit shall notify the Department of any changes in the ownership, operating entity, generation capacity, NEPOOL GIS account, independent verification system for the generation unit's electrical energy output, or contact information for the generation unit. The owner or operator shall submit the notification to the Department no later than five days following the end of the month during which such changes were implemented.

(f) Time Limit for Project Implementation. Any CES statement of qualification shall expire 48 months after the issuance date of the CES statement of qualification (the expiration date) unless the commercial operation date of the generation unit is on or before the expiration date. The Department may, at its discretion, grant an extension of the expiration date of the CES statement of qualification upon petition by the owner or operator of the generation unit. If the owner or operator of such generation unit desires an extension, such owner or operator must submit a new CES statement of qualification application, and the decision of the Department on such new application may be made in accordance with the regulations and criteria that are applicable on the date that the Department receives that application.

(g) Suspension or Revocation of Statement of Qualification. The Department may suspend or revoke a CES statement of qualification or CES-E statement of qualification if the owner or operator of a clean generation unit fails to comply with 310 CMR 7.75.

(h) Identification of Clean Generation Units and Clean Existing Generation Units. The Department shall inform the NEPOOL GIS administrator which generation units should be designated clean generation units and clean existing generation units pursuant to 310 CMR 7.75.

(9) Reporting Requirements.

(a) Certification. Any person required by 310 CMR 7.75 to submit documentation to the Department shall provide:

1. The person's name, title and business address;
 2. The person's authority to certify and submit the documentation to the Department;
- and

7.75: continued

3. The following certification: "I hereby certify, under the pains and penalties of perjury, that I have personally examined and am familiar with the information submitted herein and, based upon my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties, both civil and criminal, for submitting false information, including possible fines and imprisonment."
- (b) Annual Clean Energy Resource Report. The Department shall produce and make available to the public an annual report that summarizes information submitted to the Department by retail sellers subject to 310 CMR 7.75(4) in the annual compliance filings submitted to the Department pursuant to 310 CMR 7.75(6)(b). Such report shall include non-confidential data that provides the following:
1. The extent to which the retail sellers complied with the minimum clean energy standard, both separately and combined;
 2. The extent to which the retail sellers used standard compliance, banked compliance, and alternative compliance, in meeting the minimum standards; and
 3. The names, locations, and types of clean generation and clean existing generation from which the retail sellers, as an aggregate, obtained the clean energy attributes used in meeting the minimum standards.
 4. The total amount of electrical energy sales to end-use customers reported or should have reported pursuant to 310 CMR 7.75(6)(b)1., expressed in MWh and, beginning with the report for 2019, as a percentage of the total electrical energy sales to end use customers provided in the report for 2018.
- (c) Greenhouse Gas Emissions Reporting.
1. Each retail seller shall report annually to the Department its MWh sold and associated greenhouse gas emissions. The first required reporting year for retail sellers which are new competitive suppliers is the first year after 2017 in which they sell electricity in Massachusetts. Biogenic and non-biogenic greenhouse gas emissions shall be reported separately. This report shall be on a form provided by the Department.
 2. Deadlines.
 - a. Beginning with 2018 calendar year generation, retail sellers subject to 310 CMR 7.75(4) shall report the MWh required in 310 CMR 7.75(9)(c)4.a. through c. on a form provided by the Department no later than the first day of July after the calendar year in which the MWh were generated.
 - b. Beginning with 2018 calendar year emissions, the annual GHG emissions report shall be submitted no later than the 15th day of the second September following each calendar year. The report shall be submitted using the final annual emission factors provided by the Department for the purpose of calculating greenhouse gas emissions pursuant to 310 CMR 7.75(9)(c)3.
 - c. In order to finalize the annual biogenic and non-biogenic emission factors, the Department shall:
 - i. post draft annual emission factors, including methodologies and data sources, on its website for public comment for 30 days and notify retail sellers of the posting and the deadline for submittal of public comment; and
 - ii. post final annual emission factors, including methodologies and data sources, on its website.
 - d. Beginning with 2018 calendar year generation, MEDs and MLBs choosing to report under 310 CMR 7.75(9)(c)5.b. and c. shall submit those reports on a form provided by the Department no later than the 15th day of November after the calendar year in which the MWh were generated.
 3. For the report required in 310 CMR 7.75(9)(c)2.b., all retail sellers shall use the following formula to calculate greenhouse gas emissions:

$$\text{GHG} = (\text{EF} * \text{MWh} / 2000 \text{ pounds per short ton}) + \text{emissions reported in 310 CMR 7.75(9)(c)6.}$$

Where:

GHG = Short tons of greenhouse gases (in carbon dioxide equivalents) associated with electricity sold in MA in a particular calendar year.

EF = Emission factors supplied by the Department each year for biogenic and non-biogenic greenhouse gas emissions (pounds carbon dioxide equivalents per MWh).

Mwh = Annual electricity consumed by customers in a particular calendar year, increased to account for the portion of electricity lost during transmission and distribution (line losses), as reported pursuant to 310 CMR 7.75(6)(b)1. or

7.75: continued

310 CMR 7.75(9)(c)5.a., less the sum of certificates reported pursuant to 310 CMR 7.75(9)(c)4.b. and c. or MWh reported pursuant to 310 CMR 7.75(9)(c)5.b. and c.

4. Source of Megawatt Hour and Emissions Data for Retail Sellers Subject to 310 CMR 7.75(4).

- a. In calculating biogenic and non-biogenic greenhouse gas emissions, retail sellers shall report the same number of MWh used to calculate any CES certificates obligation under 310 CMR 7.75(6)(b)1., inclusive of line losses.
- b. Retail sellers shall report, by fuel and by state or province, the number of emitting and non-emitting MWh of electricity generated by emitting and non-emitting electricity generators represented by GIS renewable energy certificates or clean energy certificates retired in such seller's NEPOOL GIS Massachusetts Retail Subaccount, as defined in the NEPOOL GIS Operating Rules.
- c. If the number of GIS certificates retired in a retail seller's NEPOOL GIS Massachusetts Retail Subaccount and reported pursuant to 310 CMR 7.75(9)(c)4.b. are greater than the MWh reported pursuant to 310 CMR 7.75(9)(c)4.a., the retail seller shall indicate, on the 310 CMR 7.75(9)(c)4.b. report, which certificates will be excluded from GHG reporting so that the number of certificates does not exceed the MWh reported.

5. Source of Megawatt Hour and Emissions Data for Retail Sellers That Are MEDs or MLBs.

- a. In calculating biogenic and non-biogenic greenhouse gas emissions, MEDs and MLBs shall use the same number of MWh reported in the annual return to the Department of Public Utilities, inclusive of line losses.
- b. Optional MED and MLB Reporting of Non-emitting Electricity. MEDs and MLBs may choose to subtract any MWh of electricity generated by non-emitting electricity generators from the amount of MWh reported in 310 CMR 7.75(9)(c)5.a., if such non-emitting MWh are reported in the annual report due under 310 CMR 7.75(9)(c)1., and provided the following criteria are met:
 - i. for MWh neither owned nor contracted for, a report is provided from NEPOOL GIS showing that such non-emitting 225 CMR 14.00- or 225 CMR 15.00-eligible certificates are retired in the MED's or MLB's NEPOOL GIS Massachusetts Retail Subaccount or are transferred to the Reserved Certificate account, as defined in the NEPOOL GIS Operating Rules, or
 - ii. for MWh owned or contracted for, the MED or MLB:
 - A. reports MWh by fuel and by state or province;
 - B. provides information from the NEPOOL GIS showing that the certificates associated with the non-emitting MWh of electricity were unsettled certificates whose attributes were aggregated in residual mix certificates, or are retired in the MED's or MLB's NEPOOL GIS Massachusetts Retail Subaccount or are transferred to the Reserved Certificate account, as defined in the NEPOOL GIS Operating Rules; and
 - C. for contracted generators, the MED or MLB provides a copy of the contract or contracts establishing that it has purchased electricity from such generators and reports such MWh.
- c. Optional MED and MLB Reporting of Emitting Electricity. MEDs and MLBs may choose to report calculations of biogenic and non-biogenic greenhouse gas emissions, based on the methodology provided in 310 CMR 7.75(9)(c)6., if such emitting MWh are reported in the annual report due under 310 CMR 7.75(9)(c)1., and provided the following criteria are met:
 - i. for MWh neither owned nor contracted for, a report is provided from NEPOOL GIS showing that such emitting 225 CMR 14.00- or 225 CMR 15.00-eligible certificates are retired in the MED's or MLB's NEPOOL GIS Massachusetts Retail Subaccount, as defined in the NEPOOL GIS Operating Rules, or
 - ii. for MWh owned or contracted for, the MED or MLB:
 - A. reports MWh by fuel and by state or province;
 - B. provides information from the NEPOOL GIS showing that the certificates associated with the emitting MWh of electricity were unsettled certificates whose attributes were aggregated in residual mix certificates, or are retired or reserved in the MED's or MLB's NEPOOL GIS Massachusetts Retail Subaccount or are transferred to the Reserved Certificate account, as defined in the NEPOOL GIS Operating Rules; and

7.75: continued

C. for contracted generators, the MED or MLB provides a copy of the contract or contracts establishing that the MED or MLB has purchased electricity from such generators.

d. The total of all optional non-emitting and emitting MWh reported under 310 CMR 7.75(9)(c)5.b. and c. shall not be greater than the MWh reported in 310 CMR 7.75(9)(c)5.a.

6. Carbon dioxide, methane and nitrous oxide emissions from any emitting electricity generator shall be reported as follows:

$$\text{GHGi} = (\text{EFi} * \text{MWhi} / 2000 \text{ pounds per short ton})$$

Where:

GHGi = Short tons of greenhouse gases for each emitting fuel type i (in carbon dioxide equivalents) associated with electricity sold in MA in a particular calendar year.

EFi = Emission factors supplied by the Department each year for biogenic and non-biogenic greenhouse gas emissions for each emitting fuel type i (pounds carbon dioxide equivalents per MWh).

MWhi = as reported for fuel type i pursuant to 310 CMR 7.75(9)(c)4.b.

(d) The Department may specify the format and process by which any submission required pursuant to 310 CMR 7.75 shall occur, including electronic submission requirements. The Department may specify that certain submissions required pursuant to 310 CMR 7.75 be transmitted electronically to DOER, as the Department's agent instead of, or in addition to, the Department.

(10) Not later than December 31, 2017, the Department shall complete a review, including an opportunity for public comment, of options for including generators that meet all requirements of 310 CMR 7.75, except for the commercial operation date requirements in 310 CMR 7.75(7)(a)2. and (b)1., in the clean energy standard. This review shall also examine options for including annual standards for MEDs and MLBs in the clean energy standard.

(11) Not later than December 31, 2021, the Department shall complete a review, including an opportunity for public comment on the program review, of the requirements of 310 CMR 7.75 to determine whether the program should be amended. This review shall evaluate projected clean energy credit supply and costs, and any other information relevant to review of the program.

(12) Inspection and Record Retention.

(a) Document Inspection. The Department may audit the accuracy of all information submitted pursuant to 310 CMR 7.75. The Department may request and obtain from any owner, operator or authorized agent of a clean generation unit or clean existing generation unit, and from any retail seller, information that the Department determines necessary to monitor compliance with and enforcement of 310 CMR 7.75.

(b) Audit and Site Inspection. Upon reasonable notice to a retail seller or to a clean generation unit owner, operator or authorized agent, the Department may conduct audits, which may include inspection and copying of records and/or site visits to a clean energy generation unit or clean existing generation unit, or a retail seller's facilities including, but not limited to, all files and documents that the Department determines are related to compliance with 310 CMR 7.75.

(c) Record Retention. All documentation used to comply with any provision of 310 CMR 7.75 shall be retained for five years and provided to the Department electronically or in hard copy as requested by the Department.

(13) Enforcement.

(a) If a retail seller that is not an MED or MLB does not comply with the requirements of 310 CMR 7.75(4) and (5), then such retail seller shall be deemed to have caused air pollutant emissions releases to the environment without the approval or authorization of the department.

(b) The requirements of 310 CMR 7.75 shall be enforced in accordance with applicable federal and Massachusetts law including, but not limited to, the issuance of an administrative order or civil administrative penalties pursuant to M.G.L. c. 21A, § 16, 310 CMR 5.00: *Administrative Penalty*, M.G.L. c. 111, §§ 2C, 142A through 142E, and M.G.L. c. 21N, § 7(d).

7.76: Prohibitions on Use of Certain Hydrofluorocarbons in Refrigeration, Chillers, Aerosol Propellants, and Foam End-uses

(1) Purpose. The purposes of 310 CMR 7.76 are to prevent and control pollution to the atmosphere, as required by M.G.L. c. 111, §§ 142A and 142B, to support Massachusetts in achieving greenhouse gas emissions reductions goals established pursuant to M.G.L. c. 21N and to reduce hydrofluorocarbon emissions by adopting specific prohibitions for certain substances in refrigeration equipment, chillers, aerosol propellants, and foam end-uses.

(2) Definitions. The definitions in 310 CMR 7.76(2) apply to 310 CMR 7.76. Where a term defined in 310 CMR 7.70 also appears in 310 CMR 7.76, the definition in 310 CMR 7.76 is applicable for the purpose of 310 CMR 7.76.

Aerosol Propellant. A compressed gas or vapor in a container which, upon release of pressure and expansion through a valve, carries another substance from the container as a mist or spray.

Air Conditioning Equipment. Chillers, both centrifugal chillers and positive displacement chillers, intended for comfort cooling of occupied spaces.

Capital Cost. An expense incurred in the production of goods or in rendering services including, but not limited to, the cost of engineering, purchase, and installation of components or systems, and instrumentation, and contractor and construction fees.

Centrifugal Chiller. Air conditioning equipment that utilizes a centrifugal compressor in a vapor-compression refrigeration cycle. Under Centrifugal Chiller, a centrifugal chiller is a chiller intended for comfort cooling and does not include chillers used for industrial process cooling and refrigeration.

Cold Storage Warehouse. A cooled facility designed to store meat, produce, dairy products, and other products that are delivered to other locations for sale to consumers.

Component. A part of a refrigeration system, including but not limited to, a condensing unit, compressor, condenser, evaporator, and receiver; and all of its connections and subassemblies, without which the refrigeration system will not properly function or will be subject to failures.

Cumulative Replacement. All additions or changes in multiple components within a three-year period.

Effective Date of Prohibition. The date on which the prohibitions in 310 CMR 7.76(6) take effect.

End-use. Processes or classes of specific applications within industry sectors including, but not limited to, those listed in 310 CMR 7.76(6).

Flexible Polyurethane. A non-rigid polyurethane foam including, but not limited to, that used in furniture, bedding, and chair cushions.

Foam. A product with a cellular structure formed *via* a foaming process in a variety of materials that undergo hardening *via* a chemical reaction or phase transition.

Foam Blowing Agent. A substance that functions as a source of gas to generate bubbles or cells in the mixture during the formation of foam.

Household Refrigerators and Freezers. Refrigerators, refrigerator-freezers, freezers, and miscellaneous household refrigeration appliances intended for residential use. For the purposes of 310 CMR 7.76, Household Refrigerators and Freezers does not include Household Refrigerators and Freezers – Compact, or Household Refrigerators and Freezers – Built-in.

Household Refrigerators and Freezers – Compact. Any refrigerator, refrigerator-freezer or freezer intended for residential use with a total refrigerated volume of less than 7.75 cubic feet (220 liters).

7.76: continued

Household Refrigerators and Freezers – Built-in. Any refrigerator, refrigerator-freezer or freezer intended for residential use with 7.75 cubic feet or greater total volume and 24 inches or less depth not including doors, handles, and custom front panels; with sides which are not finished and not designed to be visible after installation; and that is designed, intended, and marketed exclusively to be: installed totally encased by cabinetry or panels that are attached during installation; securely fastened to adjacent cabinetry, walls or floor; and equipped with an integral factory-finished face or to accept a custom front panel.

Hydrofluorocarbon or HFC. A class of greenhouse gases that are saturated organic compounds containing hydrogen, fluorine, and carbon.

Integral Skin Polyurethane. A self-skinning polyurethane foam including, but not limited to, that used in car steering wheels and dashboards.

Metered Dose Inhaler, or Medical Dose Inhaler, or MDI. A device that delivers a measured amount of medication as a mist that a patient can inhale, typically used for bronchodilation to treat symptoms of asthma, chronic obstructive pulmonary disease (COPD), chronic bronchitis, emphysema, and other respiratory illnesses. An MDI consists of a pressurized canister of medication in a case with a mouthpiece.

New means:

- (a) products or equipment that are manufactured on or after the effective date of prohibition in 310 CMR 7.76(6): *Table 1*;
- (b) products or equipment first assembled and installed for an intended purpose with new or used components on or after the effective date of prohibition in 310 CMR 7.76(6): *Table 1*;
- (c) products or equipment to which components have been added to increase system capacity on or after the effective date of prohibition in 310 CMR 7.76(6): *Table 1*; or
- (d) products or equipment replaced or cumulatively replaced such that the cumulative capital cost on or after the effective date of prohibition in 310 CMR 7.76(6): *Table 1* of replacement exceeds 50% of the capital cost of replacing the whole system.

Person. Any individual, firm, association, organization, manufacturer, distributor, partnership, trust, corporation, limited liability company, company, state, or local governmental agency or public district.

Phenolic Insulation Board and Bunstock. Phenolic insulation including but not limited to that used for roofing and walls. Bunstock is a large solid box-like structure formed during the production of polystyrene insulation.

Polyolefin. Foam sheets and tubes made of polyolefin, a macromolecule formed by the polymerization of olefin monomer units.

Polystyrene Extruded Boardstock and Billet (XPS). A foam formed from polymers of styrene and produced on extruding machines in the form of continuous foam slabs which can be cut and shaped into panels used for roofing, walls, flooring, and pipes.

Polystyrene Extruded Sheet. Polystyrene foam including, but not limited to, that used for packaging and buoyancy or floatation. It is also made into food-service items including, but not limited to, hinged polystyrene containers (for "take-out" from restaurants); food trays (meat and poultry), plates, bowls, and retail egg containers.

Polyurethane. A polymer formed principally by the reaction of an isocyanate and a polyol.

Positive Displacement Chiller. Vapor compression cycle chillers that use positive displacement compressors, typically used for commercial comfort air conditioning. For the purpose of 310 CMR 7.76, Positive Displacement Chiller is a chiller intended for comfort cooling and does not include cooling for industrial process cooling and refrigeration.

7.76: continued

Refrigerant. Any substance, including blends and mixtures, which is used for heat transfer purposes.

Refrigerated Food Processing and Dispensing Equipment. Retail food refrigeration equipment that is designed to process food and beverages that are intended for immediate or near-immediate consumption including, but not limited to, chilled and frozen beverages, ice cream, and whipped cream. For the purpose of 310 CMR 7.76, Refrigerated Food Processing and Dispensing Equipment does not include water coolers, or units designed solely to cool and dispense water.

Refrigeration Equipment. Any stationary device that is designed to contain and use refrigerant to establish or maintain colder than ambient temperatures in a confined space including, but not limited to, retail or commercial refrigeration equipment, household refrigerators and freezers, and cold storage warehouses.

Remote Condensing Units. Retail refrigeration equipment or units that have a central condensing portion and may consist of compressors, condensers, and receivers assembled into a single unit, which may be located external to the sales area. The condensing portion (and often other parts of the system) is located outside the space or area cooled by the evaporator. For example, Remote Condensing Units are commonly installed in convenience stores, specialty shops (*e.g.*, bakeries, butcher shops), supermarkets, restaurants, and other locations where food or other products are stored, served, or sold.

Residential Use. Use by a private individual of a substance, or a product containing the substance, in or around a permanent or temporary household, including use in both single and multi-unit dwellings, during recreation, or for any personal use or enjoyment. Use within a household for commercial or medical applications is not included in this definition, nor is use in automobiles, watercraft, or aircraft.

Retail Food Refrigeration or Commercial Refrigeration. Equipment designed to store and display chilled or frozen goods for commercial sale including, but not limited to, stand-alone units, refrigerated goods processing and dispensing equipment, remote condensing units, supermarket systems, and vending machines.

Retrofit. To convert an appliance from one refrigerant to another refrigerant. Retrofitting includes the conversion of the appliance to achieve system compatibility with the new refrigerant and may include, but is not limited to, changes in lubricants, gaskets, filters, driers, valves, o-rings or appliance components.

Rigid Polyurethane and Polyisocyanurate Laminated Boardstock. Laminated board insulation made with polyurethane or polyisocyanurate foam including, but not limited to, that used for roofing and walls.

Rigid Polyurethane Appliance Foam. Polyurethane insulation foam in domestic (*e.g.* residential) appliances.

Rigid Polyurethane Commercial Refrigeration and Sandwich Panels. Polyurethane foam, used to provide insulation in walls and doors including, but not limited to, that used for commercial refrigeration equipment and garage doors.

Rigid Polyurethane High-pressure Two-component Spray Foam. A liquid polyurethane foam system sold as two parts (*i.e.*, A-side and B-side) in non-pressurized containers; and is field or factory applied *in situ* using high-pressure proportioning pumps at 800-1600 pounds per square inch (psi) and an application gun to mix and dispense the chemical components.

Rigid Polyurethane Low-pressure Two-component Spray Foam. A liquid polyurethane foam system sold as two parts (*i.e.*, A-side and B-side) in containers that are pressurized to less than 250 psi during manufacture of the system for application without pumps; and are typically applied *in situ* relying upon a liquid blowing agent and/or gaseous foam blowing agent that also serves as a propellant.

7.76: continued

Rigid Polyurethane Marine Flotation Foam. Buoyancy or flotation polyurethane foam used in boat and ship manufacturing for both structural and flotation purposes.

Rigid Polyurethane One-component Foam Sealants. A polyurethane foam generally packaged in aerosol cans that is applied *in situ* using a gaseous foam blowing agent that is also the propellant for the aerosol formulation.

Rigid Polyurethane Slabstock and Other. A rigid closed-cell polyurethane foam formed into slabstock insulation for panels and fabricated shapes for pipes and vessels.

Stand-Alone Unit. Retail refrigerators, freezers, and reach-in coolers (either open or with doors) where all refrigeration components are integrated and the refrigeration circuit is entirely brazed or welded. These systems are fully charged with refrigerant at the factory and typically require only an electricity supply to begin operation.

Stand-alone Low-temperature Unit. A stand-alone unit that maintains goods at temperatures at or below 32°F (0°C).

Stand-alone Medium-temperature Unit. A stand-alone unit that maintains goods at temperatures above 32°F (0 °C).

State (when capitalized). The Commonwealth of Massachusetts for disclosure requirements in 310 CMR 7.76(5).

Substance. Any chemical intended for use in the end-uses listed in 310 CMR 7.76(6).

Supermarket Systems. Multiplex or centralized retail food refrigeration equipment systems designed to cool or refrigerate, which operate with racks of compressors installed in a machinery room and which includes both direct and indirect systems.

Use. Any utilization of any substance including, but not limited to, utilization in a manufacturing process or product in Massachusetts, consumption by the end-user in Massachusetts, or in intermediate applications in Massachusetts, such as formulation or packaging for other subsequent applications. For the purposes of 310 CMR 7.76, Use excludes residential use, but it does not exclude manufacturing for the purpose of residential use.

Vending Machines. A self-contained unit that dispenses goods that must be kept cold or frozen.

(3) Applicability. 310 CMR 7.76 applies to any person who sells, leases, rents, offers for sale, installs, uses, or manufactures, in Massachusetts, any product or equipment that uses or will use a prohibited substance in the end-uses listed in 310 CMR 7.76(6). 310 CMR 7.76 does not apply to any person in Massachusetts who uses for residential use any combination of a Household Refrigerator or Freezer, a Household Refrigerator or Freezer – Compact, or a Household Refrigerator or Freezer – Built-in.

(4) Prohibitions.

(a) No person may sell, lease, rent, offer for sale, install, use or manufacture, in Massachusetts, any product or equipment that uses or will use a prohibited substance in the end-uses listed in 310 CMR 7.76(6), unless an exemption is provided for the end-use in 310 CMR 7.76(7).

(b) Except where existing equipment is retrofitted, nothing in 310 CMR 7.76 requires a person that acquired a product or equipment containing a prohibited substance prior to an effective date of prohibition in 310 CMR 7.76(6): *Table 1* to cease use of that product or equipment.

(c) Products or equipment manufactured prior to the applicable effective date of the prohibitions in 310 CMR 7.76(6): *Table 1*, including foam systems not yet applied on site or new refrigeration equipment for which a facility has received a building permit prior to the effective date of prohibition, may be sold, leased, rented, imported, exported, distributed, installed, and used on or after the effective date of prohibition.

7.76: continued

(5) Disclosure Statement. Except for the exemptions listed in 310 CMR 7.76(7): *Table 1*, as of the effective date of prohibition in 310 CMR 7.76(6): *Table 1*, any person who manufactures for sale in Massachusetts products or equipment in the air conditioning, refrigeration, foam, or aerosol propellant end-uses listed in 310 CMR 7.76(6), must provide a written disclosure or label to the buyer as follows.

(a) For motor-bearing refrigeration and air conditioning equipment that is neither factory-charged nor pre-charged with refrigerant, the required disclosure or label must state "This equipment is prohibited from using any substance on the "List of Prohibited Substances" for that specific end-use, in accordance with State regulations for hydrofluorocarbons."

(b) Except for products and equipment with existing labeling required by State building codes and safety standards which contain the information required in 310 CMR 7.76(5)(b)1. and 2., the disclosure or label for motor-bearing refrigeration and air conditioning equipment that are factory-charged or pre-charged with a hydrofluorocarbon or hydrofluorocarbon blend shall include:

1. The date of manufacture or a date code representing the date. If the manufacturer uses a date code for any product, the manufacturer shall file an explanation of each code with the Department; and

2. The refrigerant and foam blowing agent the product or equipment contains.

(c) Except for foam products with existing labeling required by State building codes and safety standards which contain the information required in 310 CMR 7.76(5)(c)1. and 2., the disclosure or label for foam products shall include one of the two alternatives in 310 CMR 7.76(5)(c)1. and 2.:

1. Alternative 1.

a. The date of manufacture or a date code representing the date. If the manufacturer uses a date code for any product, the manufacturer shall file an explanation of each code with the Department; and

b. The foam blowing agent the product contains, or a reference to a Safety Data Sheet (complying with 29 CFR 1910.1200 requirements), if the latter identifies the foam blowing agent the product contains.

2. Alternative 2. "Where sold, compliant with State HFC regulations."

(d) For aerosol propellants, the disclosure or label shall include one of the two alternatives in 310 CMR 7.76(5)(d)1. and 2.:

1. Alternative 1.

a. The date of manufacture or a date code representing the date, which is indicated on the label, lid, or bottom of the container. If the manufacturer uses a date code for any product, the manufacturer shall file an explanation of each code with the Department; and

b. The aerosol propellant the product contains, or availability of a Safety Data Sheet (complying with 29 CFR 1910.1200 requirements), if the latter identifies the propellant the product contains.

2. Alternative 2. "Where sold, compliant with State HFC regulations."

(6) List of Prohibited Substances by End-use. 310 CMR 7.76(6): *Table 1* lists prohibited substances in specific end-uses and the effective date of prohibition, unless an exemption is provided for the end-use in 310 CMR 7.76(7). The prohibitions do not apply to products and equipment in specific end-uses manufactured prior to an applicable effective date of prohibition.

7.76: continued

Table 1: End-use and Prohibited Substances

End-use	Prohibited Substances	Effective Date of Prohibition
End-use Category: Aerosol Propellants		
Aerosol Propellants	HFC-125, HFC-134a, HFC-227ea and blends of HFC-227ea and HFC 134a	January 1, 2021
End-Use Category: Air Conditioning		
Centrifugal chillers (new)	FOR12A, FOR12B, HFC-134a, HFC-227ea, HFC-236fa, HFC245fa, R-125/ 134a/ 600a (28.1/70/1.9), R-125/ 290/ 134a/ 600a (55.0/1.0/42.5/1.5), R-404A, R-407C, R-410A, R-410B, R-417A, R-421A, R-422B, R-422C, R-422D, R-423A, R-424A, R-434A, R438A, R-507A, RS-44 (2003 composition), THR-03	January 1, 2024
Positive displacement chillers (new)	FOR12A, FOR12B, HFC-134a, HFC-227ea, KDD6, R125/ 134a/ 600a (28.1/70/1.9), R-125/ 290/ 134a/ 600a (55.0/1.0/42.5/1.5), R-404A, R-407C, R-410A, R-410B, R-417A, R-421A, R-422B, R-422C, R-422D, R-424A, R-434A, R-437A, R438A, R-507A, RS-44 (2003 composition), SP34E, THR-03	January 1, 2024
End-use Category: Refrigeration		
Cold storage warehouses (new)	HFC-227ea, R-125/290/134a/600a (55.0/1.0/42.5/1.5), R404A, R-407A, R-407B, R-410A, R-410B, R-417A, R-421A, R421B, R-422A, R-422B, R-422C, R-422D, R-423A, R-424A, R428A, R-434A, R-438A, R-507A, RS-44 (2003 composition)	January 1, 2023
Household refrigerators and freezers (new)	FOR12A, FOR12B, HFC-134a, KDD6, R-125/290/134a/600a (55.0/1.0/42.5/1.5), R-404A, R-407C, R407F, R-410A, R-410B, R-417A, R-421A, R-421B, R-422A, R-422B, R-422C, R-422D, R-424A, R-426A, R-428A, R-434A, R-437A, R-438A, R-507A, RS24 (2002 formulation), RS 44 (2003 formulation), SP34E, THR-03	January 1, 2022

7.76: continued

Table 1: End-use and Prohibited Substances (continued)

End-use	Prohibited Substances	Effective Date of Prohibition
Household refrigerators and freezers-compact (new)	FOR12A, FOR12B, HFC 134a, KDD6, R-125/290/134a/600a (55.0/1.0/42.5/1.5), R-404A, R-407C, R-407F, R-410A, R-410B, R-417A, R-421A, R-421B, R-422A, R-422B, R-422C, R-422D, R424A, R-426A, R-428A, R-434A, R-437A, R-438A, R-507A, RS24 (2002 formulation), RS 44 (2003 formulation), SP34E, THR-03	January 1, 2021
Household refrigerators and freezers-built in appliances (new)	FOR12A, FOR12B, HFC 134a, KDD6, R-125/290/134a/600a (55.0/1.0/42.5/1.5), R-404A, R-407C, R-407F, R-410A, R-410B, R-417A, R-421A, R-421B, R-422A, R-422B, R-422C, R-422D, R424A, R-426A, R-428A, R-434A, R-437A, R-438A, R-507A, RS24 (2002 formulation), RS-44 (2003 formulation), SP34E, THR-03	January 1, 2023
Supermarket Systems (Retrofit)	R-404A, R-407B, R-421B, R-422A, R-422C, R-422D, R428A, R-434A, R-507A	January 1, 2021
Supermarket Systems (New)	HFC-227ea, R-404A, R-407B, R-421B, R-422A, R-422C, R-422D, R-428A, R-434A, R-507A	January 1, 2021
Remote Condensing Units (Retrofit)	R-404A, R-407B, R-421B, R-422A, R-422C, R-422D, R-428A, R-434A, R-507A	January 1, 2021
Remote Condensing Units (New)	HFC-227ea, R-404A, R-407B, R-421B, R-422A, R-422C, R-422D, R-428A, R-434A, R-507A	January 1, 2021
Stand-alone Units (Retrofit)	R-404A, R-507A	January 1, 2021
Stand-alone Medium-temperature Units (New)	FOR12A, FOR12B, HFC-134a, HFC-227ea, KDD6, R-125/290/134a/600a (55.0/1.0/42.5/1.5), R-404A, R407A, R-407B, R-407C, R407F, R-410A, R-410B, R417A, R-421A, R-421B, R-422A, R-422B, R-422C, R422D, R-424A, R-426A, R-428A, R-434A, R-437A, R438A, R-507A, RS-24 (2002 formulation), RS-44 (2003 formulation), SP34E, THR-03	January 1, 2021

(7) Exemptions. 310 CMR 7.76(7): *Table 1* lists exemptions to the prohibited substances and end-uses in 310 CMR 7.76(6).

Table 1: Exemptions

End-use Category	Prohibited Substances	Acceptable Uses
Aerosol Propellants	HFC-134a	Cleaning products for removal of grease, flux and other soils from electrical equipment; refrigerant flushes; products for sensitivity testing of smoke detectors; lubricants and freeze sprays for electrical equipment or electronics; sprays for aircraft maintenance; sprays containing corrosion preventive compounds used in the maintenance of aircraft, electrical equipment or electronics, or military equipment; sprays for aerospace manufacturing and rework operations; pesticides for use near electrical wires, in aircraft, in total release insecticide foggers, or in certified organic use pesticides for which EPA has specifically disallowed all other lower-GWP propellants; mold release agents and mold cleaners; lubricants and cleaners for spinnerettes for synthetic fabrics; duster sprays specifically for removal of dust from photographic negatives, semiconductor chips, specimens under electron microscopes, and energized electrical equipment; adhesives and sealants in large canisters; document preservation sprays; FDA-approved MDIs for medical purposes; wound care sprays; topical coolant sprays for pain relief; and products for removing bandage adhesives from skin.
Aerosol Propellants	HFC-227ea and blends of HFC-227ea and HFC 134a	FDA-approved MDIs for medical purposes.
Air Conditioning	HFC-134a	Military marine vessels where reasonable efforts have been made to ascertain that other alternatives are not technically feasible due to performance or safety requirements.
Air Conditioning	HFC-134a and R-404A	Human-rated spacecraft and related support equipment where reasonable efforts have been made to ascertain that other alternatives are not technically feasible due to performance or safety requirements.
Foams - Except Rigid polyurethane (PU) spray foam	All substances	Military applications where reasonable efforts have been made to ascertain that other alternatives are not technically feasible due to performance or safety requirements until January 1, 2022.
Foams - Except Rigid polyurethane (PU) spray foam	All substances	Space- and aeronautics-related applications where reasonable efforts have been made to ascertain that other alternatives are not technically feasible due to performance or safety requirements until January 1, 2025.

7.76: continued

Table 1: Exemptions

End-use Category	Prohibited Substances	Acceptable Uses
Rigid polyurethane (PU) two-component spray foam	All substances	Military or space- and aeronautics-related applications where reasonable efforts have been made to ascertain that other alternatives are not technically feasible due to performance or safety requirements until January 1, 2025.

(8) Recordkeeping. As of the effective date of prohibition for each end-use listed in 310 CMR 7.76(6): *Table 1*, any person who manufactures any product or equipment in the end-uses listed in 310 CMR 7.76(6), for sale or entry into commerce in Massachusetts must maintain for five years, and make available upon request by the Department, records sufficient to demonstrate that the product or equipment does not contain any substances listed in 310 CMR 7.76(6): *Table 1* as prohibited for that end-use or that the product is exempt in accordance with 310 CMR 7.76(7).

REGULATORY AUTHORITY

310 CMR 7.00: M.G.L. c. 111, § 142A through J.

310 CMR 7.00: APPENDIX A: EMISSION OFFSETS AND NONATTAINMENT REVIEW

(1) Introduction. 310 CMR 7.00: *Appendix A* sets forth the Massachusetts preconstruction review program for stationary sources of air pollution (not including indirect sources) pursuant to sections 172(c)(5) and 173 of the Clean Air Act. A new major source or major modification either that is located in an area designated as nonattainment pursuant to section 107(d) of the Act, published at 40 CFR 81, for any National Ambient Air Quality Standards (NAAQS) for which the source or modification would be major or that is major for volatile organic compounds or oxides of nitrogen must meet the stringent conditions set forth in this appendix prior to receiving approval to construct. These conditions are designed to insure that the increased emissions will be controlled to the greatest degree possible; that more than equivalent offsetting emission reductions (emission offsets) will be obtained from existing sources; and that there will be reasonable further progress toward achievement of the National Ambient Air Quality Standards (NAAQS).

(2) Definitions. The definitions found in 310 CMR 7.00 apply to 310 CMR 7.00: *Appendix A*. The following words and phrases shall have the following meanings as they appear in 310 CMR 7.00: *Appendix A*. Where a term is defined in 310 CMR 7.00 and the definition also appears in 310 CMR 7.00: *Appendix A(2)* the definition in 310 CMR 7.00: *Appendix A* controls.

Actual Emissions means:

- (a) As of a particular date, actual emissions shall equal the average rate, in tons per year, at which the unit actually emitted the pollutant during a two-year period which precedes the particular date and which is representative of normal source operation. The Department shall allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period. For the purposes of calculating a net emissions increase where actual emissions exceed allowable emissions, the actual emissions for the unit will be presumed to be equivalent to the source-specific allowable emissions of the unit.
- (b) For either an electric utility steam generating unit (other than a new unit or the replacement of an existing unit) or an emissions unit(s) complying with 310 CMR 7.08(2), 7.18, 7.19, 7.24, or 7.34, actual emissions of the unit following the physical or operational change shall equal the representative actual annual emissions of the unit, provided the source owner or operator maintains and submits to the Department, on an annual basis for a period of five years from the date the unit resumes regular operation, information demonstrating that the physical or operational change did not result in an emissions increase. A longer period, not to exceed ten years, may be required by the Department if it determines such period to be more representative of normal source post-change operations.
- (c) For any emissions unit (except as provided for in 310 CMR 7.00: *Appendix A* Actual Emissions(b)) which has not begun normal operations on the particular date, actual emissions shall equal the federal potential emissions of the unit on that date.

Allowable Emissions means the emissions rate, in tons per year, of a stationary source calculated by multiplying the maximum rated capacity of the source (unless the source is subject to federally enforceable limits which restrict the operating rate, or hours of operation, or both) times the most stringent of:

- (a) Any applicable standards set forth in 40 CFR part 60 (NSPS) or 61 (NESHAPS);
- (b) Any applicable Massachusetts SIP emissions limitation including a limitation with a future compliance date; or
- (c) Any emissions rate specified as a federally enforceable permit condition, including a limitation with a future compliance date.

Begin Actual Construction means physical on-site construction activities on an emissions unit which is of a permanent nature. Such activities include, but are not limited to, installation of building supports and foundations, laying of underground pipework, and construction of permanent storage structures. With respect to a change in method of operation, this term refers to those on-site activities other than preparatory activities which mark the initiation of the change.

Appendix A: continued

Building, Structure, Facility, or Installation means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control). Any marine vessel is a part of a facility while docked at the facility. Any marine vessel is a part of an Outer Continental Shelf (OCS) source while docked at and within 25 miles en route to and from the OCS source. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same Major Group (*i.e.*, which have the same two-digit code) as described in the *Standard Industrial Classification Manual*, 1987.

Clean Coal Technology (CCT) means any technology at a new or existing emissions unit(s), including technologies applied at the precombustion, combustion, or post combustion stage, which will achieve significant reductions in air emissions of sulfur dioxide or oxides of nitrogen associated with the utilization of coal in the generation of electricity, or process steam which was not in widespread use as of November 15, 1990.

Clean Coal Technology Demonstration Project means a project using funds appropriated under the heading 'Department of Energy-Clean Coal Technology,' up to a total amount of \$2,500,000,000 for commercial demonstration of clean coal technology, or similar projects funded through appropriations for the United States Environmental Protection Agency (EPA). The Federal contribution for a qualifying project shall be at least 20% of the total cost of the demonstration project.

Coastal Waters means tidal waters over permanently or periodically submerged lands lying between the mean high tide line and a line seaward from the coastline to the boundary line of each State. The boundary shall extend no more than three geographical miles into the Atlantic Ocean.

Commence means as applied to construction of a major stationary source or major modification that the owner or operator has all necessary preconstruction approvals or permits and either has:

- (a) Begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or,
- (b) Entered into binding agreements or contractual obligations, which cannot be canceled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time.

Complete means, in reference to an application for a plan approval, that the application contains all of the information necessary for processing the application, as determined by the Department. Designating an application administratively complete for purposes of permit processing does not preclude the Department from requesting or accepting any additional information.

Construction means any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) which would result in an increase in actual emissions.

Corresponding Onshore Area means, for stationary sources located in, or on, navigable rivers and lakes, coastal waters, or the Outer Continental Shelf (OCS), the onshore attainment or nonattainment area which is closest to the source. However, the Department or EPA may determine that another area with more stringent requirements with respect to the control and abatement of air pollution may reasonably be expected to be affected by such emissions. Such determination shall be based on the potential for air pollutants from the offshore source to reach the other onshore area and the potential of such air pollutants to affect the efforts of the other onshore area to attain or maintain any Federal or State ambient air quality standard or to comply with the provisions of 310 CMR 7.00: *Appendix A*.

Appendix A: continued

Electric Utility Steam Generating Unit means any steam electric generating unit that is constructed for the purpose of supplying more than $\frac{1}{3}$ of its potential electric output capacity and more than 25 MW electrical output to any utility power distribution system for sale. Any steam supplied to a steam distribution system for the purpose of providing steam to a steam-electric generator that would produce electrical energy for sale is also considered in determining the electrical energy output capacity of the affected facility.

Emissions Unit means any part of a stationary source, which emits or would have federal potential emissions of any pollutant (including fugitive emissions), subject to regulation under the Act.

Energy Input means the total gross calorific value (where gross calorific value is measured by ASTM Method D2015-66, D240-64, or D1826-64) of all fuels burned. Energy input is calculated in British thermal units (Btu) per hour using the higher heating value of the fuel.

Fossil Fuel-Fired Boiler means a unit (or combination of such units) which combusts fossil fuel (or receives energy from other fossil fuel-fired units) to produce steam by indirect heat transfer and includes such units that produce steam for electric generation. The energy input for such units includes any energy provided to such units from the combustion of fossil fuels in other units. The total energy input from fossil fuel-firing for a combination of such units is the sum of the energy inputs from fossil fuel-firing for each unit.

Fossil Fuel-Fired Electric Plant means one or more units (a plant) that combust fossil fuel to produce electricity. The total energy input for such a plant from fossil fuel-firing is the sum of the energy inputs from fossil fuel-firing for each combustion unit that is part of such plant.

Fugitive Emissions means those emissions which could not reasonably pass through a stack, chimney, vent or other functionally equivalent opening.

Indian Governing Body means the governing body of any tribe, band, or group of Indians subject to the jurisdiction of the United States and recognized by the United States as possessing power of self-government.

Indian Tribe means any Indian tribe, band, nation, or other organized group or community which is Federally recognized as eligible for the special programs and services provided by the United States to Indians because of their status as Indians.

Lowest Achievable Emission Rate (LAER) means, for any source, the more stringent rate of emissions based on the following:

- (a) The most stringent emissions limitation which is contained in any state SIP for such class or category of stationary source, unless the owner or operator of the proposed stationary source demonstrates that such limitations are not achievable; or
- (b) The most stringent emissions limitation which is achieved in practice by such class or category of stationary source. This limitation, when applied to a modification, means the lowest achievable emissions rate for the new or modified emissions units within a stationary source.

In no event shall LAER allow a proposed new or modified stationary source to emit any pollutant in excess of the amount allowable pursuant to applicable new source standards of performance.

Major Modification means any physical change in or change in the method of operation of a major stationary source that would result in a significant net emissions increase of any pollutant, for which the existing source is major, subject to regulation under the Act.

- (a) Any net emissions increase that is considered significant for VOCs shall be considered significant for ozone; and
- (b) For the purpose of applying the requirements of 310 CMR 7.00: *Appendix A* to major stationary sources of NO_x any significant net emissions increase of NO_x is considered significant for ozone, in addition to any separate requirements for NO_x under part C or D of Title I of the Act; and

Appendix A: continued

- (c) A physical change or change in the method of operation shall not include:
1. Routine maintenance, repair and replacement; or
 2. Use of an alternative fuel or raw material by reason of an order under sections 2 (a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any superseding legislation) or by reason of a natural gas curtailment plan pursuant to the Federal Power Act; or
 3. Use of an alternative fuel by reason of an order or rule under sec. 125 [Measures to Prevent Economic Disruption or Unemployment] of the Act; or
 4. Use of an alternative fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste; or
 5. Use of an alternative fuel or raw material by a stationary source where:
 - a. The source is approved to use such fuel or raw material under any plan approval issued under 310 CMR 7.00: *Appendix A*; or
 - b. The source was capable of accommodating such fuel or raw material before December 21, 1976, unless such change would be prohibited under any federally-enforceable permit condition which was established after December 21, 1976 pursuant to 40 CFR part 52.21 (Prevention of significant deterioration of air quality), plan approval requirements under 310 CMR 7.02(1), 7.00: *Appendix A*, *Appendix B*(3), operating permits issued either under 310 CMR 7.00: *Appendix C* or pursuant to 40 CFR part 71 or prohibited under any other federally-enforceable regulatory requirements; or
 6. An increase in the hours of operation or in the production rate, unless such change is prohibited under any federally-enforceable permit condition which was established after December 21, 1976 pursuant to 40 CFR 52.21 (Prevention of significant deterioration of air quality), plan approval requirements under 310 CMR 7.02(2), 310 CMR 7.00: *Appendix A*, 310 CMR 7.00: *Appendix B*(3), operating permits issued either under 310 CMR 7.00: *Appendix C* or pursuant to 40 CFR part 71 or prohibited under any other federally-enforceable regulatory requirements; or
 7. Any change in ownership at a stationary source; or
 8. The addition, replacement or use of a pollution control project at either an existing electric utility steam generating unit or an emissions unit(s) in order to comply with 310 CMR 7.08(2), 7.18, 7.19, 7.24, or 7.34, unless the Department determines that such addition, replacement, or use renders the unit less environmentally beneficial; or unless
 - a. The Department has reason to believe that the pollution control project would result in a significant net increase in representative actual annual emissions of any criteria pollutant over levels used for that source in the most recent air quality impact analysis in the area conducted for the purpose of Title I of the Act, if any; and
 - b. The Department determines that the increase will cause or contribute to a violation of any national ambient air quality standard or PSD increment, or visibility limitation; or
 9. The installation, operation, cessation, or removal of a temporary clean coal technology demonstration project, provided that the project complies with:
 - a. the Massachusetts SIP, and
 - b. other requirements necessary to attain and maintain the national ambient air quality standard during the project and after it is terminated.

Major Stationary Source means any stationary source of air pollutants which emits, or has the federal potential emissions greater than or equal to, 100 tpy or more of any pollutant subject to regulation under the Act, except that lower emissions thresholds shall apply as follows:

- 50 TPY of volatile organic compounds (VOC), or
- 50 TPY of oxides of nitrogen (NO_x).

In addition, any physical change that would occur at a stationary source not previously qualifying as a major stationary source will be considered a major stationary source, if the physical change would result in the following increases either in actual emissions or in the federal potential to emit, greater than or equal to:

Appendix A: continued

50 TPY of volatile organic compounds (VOC), or

50 TPY of oxides of nitrogen (NO_x), or

100 TPY or more of any other pollutant subject to regulation under the Act.

(a) A stationary source that is major for VOC shall be considered major for ozone. VOC emissions, as precursors to the pollutant ozone, are subject to the requirements of 310 CMR 7.00: *Appendix A*; and

(b) For the purpose of applying the requirements of 310 CMR 7.00: *Appendix A* to major stationary sources of NO_x a stationary source that is major for NO_x is considered major for ozone, in addition to any separate requirements for NO_x under part C or D of Title I of the Act; and

(c) The fugitive emissions of a stationary source shall not be included in determining, for any of the purposes of 310 CMR 7.00: *Appendix A*, whether the stationary source is a major stationary source, unless the stationary source belongs to one of the following categories of stationary sources:

Carbon black plants (furnace process); or

Coal cleaning plants (with thermal dryers); or

Coke oven batteries; or

Charcoal production plants; or

Chemical process plants; or

Fuel conversion plants; or

Fossil fuel-fired boilers (or combination thereof)

totaling more than 250 million British thermal units per hour heat input; or

Fossil fuel-fired electric plants of more than 250 million British thermal units per hour heat input; or

Glass fiber manufacturing plants; or

Hydrofluoric acid plants; or

Iron and steel mills; or

Kraft pulp mills; or

Lime plants; or

Municipal incinerators (or combinations thereof) capable of charging more than 50 tons of refuse per day; or

Nitric acid plants; or

Outer continental shelf sources; or

Petroleum refineries; or

Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels; or

Phosphate rock processing plants; or

Portland cement plants; or

Primary aluminum ore reduction plants; or

Primary copper smelters; or

Primary lead smelters; or

Primary zinc smelters; or

Secondary metal production plants; or

Sintering plants; or

Sulfuric acid plants; or

Sulfur recovery plants; or

Taconite ore processing plants; or

Any other stationary source category regulated under sec. 111 (NSPS) or 112 (NESHAPS) of the Act before November 15, 1990.

Navigable Rivers and Lakes means non-tidal bodies of water which were navigable at the time the States in which they are located became members of the United States. This term does not include waters over lands now or heretofore constituting a part of the public lands of the United States, if such lands were not meandered in connection with the public survey of such lands under the laws of the United States and title to such lands was lawfully conveyed from the United States or any State to any person.

Necessary Preconstruction Approvals or Permits means those permits or plan approvals required under Federal air quality control laws and regulations, and those air quality control laws and regulations which are part of the Massachusetts State Implementation Plan.

Appendix A: continued

Net Emissions Increase means

- (a) The amount by which the sum of the following exceeds zero:
 1. Any increase in actual emissions from a particular physical change or change in the method of operation at a stationary source; and
 2. Any other increases and decreases in actual emissions at the source shall be included for netting purposes, that are contemporaneous with the particular change and are otherwise creditable as described in 310 CMR 7.00: *Appendix A Net Emissions Increase*(b), (c), (d), (e) and (f).
- (b) An increase or decrease is contemporaneous with the particular change only if it occurs over any period of five consecutive calendar years which includes the calendar year the increase will occur, but not earlier than January 1, 1990.
- (c) An increase or decrease in actual emissions must have occurred prior to the increase from the particular change in order for the increase or decrease to be considered contemporaneous for purposes of calculating a net emissions increase.
- (d) An increase or decrease in actual emissions is creditable only if the increase or decrease in actual emissions has not been credited in a previous plan approval issued under 310 CMR 7.00: *Appendix A*, unless that approval has been rescinded.
- (e) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.
- (f) A decrease in actual emissions is creditable only to the extent that:
 1. The old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions; and
 2. It is federally-enforceable at and after the time that actual construction on the particular change begins; and
 3. The reduction was not required as a condition of the Massachusetts SIP, in demonstrating attainment or reasonable further progress, in issuing any permit or plan approval under 310 CMR 7.00: *Appendix A*, 310 CMR 7.02(3)(j)6. (BACT requirement), 40 CFR 52.21 (PSD), operating permits issued either under 310 CMR 7.00: *Appendix C* or 40 CFR part 71 or otherwise required under the Act ; and
 4. For VOC emissions, the decreased emissions have approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change; and
 5. The unit was actually operated one or more years and emitted the nonattainment pollutant for which the decrease is being sought. Reductions of permitted emissions for units that were never operated cannot be considered creditable emissions decreases.
- (g) An emissions increase that results from a physical change at a source occurs when the emissions unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.
- (h) Emission reduction credits (ERCs) withdrawn from the Department's Emission Reduction Banking System are creditable if the ERCs meet the criteria in 310 CMR 7.00: *Appendix A Net Emissions Increase*(a) through (g).

Nonattainment Pollutant means an air pollutant (or precursor of the pollutant, as applicable) for which an area is designated nonattainment (as of the date on which a complete application is filed) pursuant to § 107(d) [Nonattainment Designations] of the Act or oxides of nitrogen (NOx) or volatile organic compounds (VOC).

Outer Continental Shelf (OCS) shall have the meaning provided, as of the date of promulgation of 310 CMR 7.00, by section 2 of the Outer Continental Shelf Lands Act (43 U.S.C. 1331 *et seq*).

Outer Continental Shelf Source means any equipment, activity, or facility which:

- (a) Emits or has federal potential emissions of any air pollutant; and
- (b) Is regulated or authorized under the Outer Continental Shelf Lands Act (43 U.S.C. 1331 *et seq*); and
- (c) Is located on the OCS or in or on the waters above the OCS.

Appendix A: continued

Pollution Control Project means any activity or project at either an existing electric utility steam generating unit or at an emissions unit(s) to comply with 310 CMR 7.08(2), 7.18, 7.19, 7.24, or 7.34 for purposes of reducing emissions from such unit. Such activities or projects are limited to:

- (a) The installation of conventional or innovative pollution control technology, including but not limited to advanced flue gas desulfurization, sorbent injection for sulfur dioxide and nitrogen oxides controls and electrostatic precipitators; or
- (b) an activity or project to accommodate switching to a fuel which is less polluting than the fuel used prior to the activity or project, including, but not limited to natural gas or coal re-burning, or the co-firing of natural gas and other fuels for the purpose of controlling emissions; or
- (c) a permanent clean coal technology demonstration project conducted under title II, sec. 101(d) of the Further Continuing Appropriations Act of 1985 (sec. 5903(d) of title 42 of the United States Code), or subsequent appropriations, up to a total amount of \$2,500,000,000 for commercial demonstration of clean coal technology, or similar projects funded through appropriations for the EPA; or
- (d) a permanent clean coal technology demonstration project that constitutes a repowering project ; or
- (e) an activity or project to reduce emissions of VOC or NO_x to comply with 310 CMR 7.08(2), 7.18, 7.19, 7.24, or 7.34.

Reasonable Further Progress means such annual incremental reductions in emissions of the relevant air pollutant as are required by part D (Plan Requirements for Nonattainment Areas) of the Act or may reasonably be required by the Department or EPA for the purpose of ensuring attainment of the applicable national ambient air quality standards in an area by the applicable statutory deadline or resulting from shutdowns that are credited towards attainment.

Repowering means:

- (a) replacement of an existing coal-fired boiler with one of the following clean coal technologies: atmospheric or pressurized fluidized bed combustion, integrated gasification combined cycle, magnetohydrodynamics, direct and indirect coal-fired turbines, integrated gasification fuel cells, or as determined by the EPA, in consultation with the Secretary of Energy, a derivative of one or more of these technologies, and any other technology capable of controlling multiple combustion emissions simultaneously with improved boiler or generation efficiency and with significantly greater waste reduction relative to the performance of technology in widespread commercial use as of November 15, 1990 ; or
- (b) any oil and/or gas-fired unit which has been awarded clean coal technology demonstration funding as of January 1, 1991, by the Department of Energy.

Representative Actual Annual Emissions means the average rate, in tons per year, at which the source is projected to emit a pollutant for the two-year period after a physical change or change in the method of operation of a unit, (or a different consecutive two-year period within ten years after that change, where the Department determines that such period is more representative of normal source operations), considering the effect any such change will have on increasing or decreasing the hourly emissions rate and on projected capacity utilization. In projecting future emissions the Department:

- (a) shall consider all relevant information, including but not limited to historical operational data, the company's own representations, filings with Massachusetts Department of Public Utilities or Federal regulatory authorities, filings with the Department pursuant to 310 CMR 7.12, Department regulations and approvals issued pursuant to those regulations and compliance plans under title IV of the Clean Air Act; and
- (b) shall exclude, in calculating any increase in emissions that results from the particular physical change or change in the method of operation at an electric utility steam generating unit, that portion of the unit's emissions following the change that could have been accommodated during the representative baseline period and is attributable to an increase in projected capacity utilization at the unit that is unrelated to the particular change, including any increased utilization due to the rate of electricity demand growth for the utility system as a whole.

Appendix A: continued

Secondary Emissions means emissions which would occur as a result of the construction or operation of a major stationary source or major modification, which do not come from the major stationary source or major modification itself. For the purpose of 310 CMR 7.00: *Appendix A*, secondary emissions must be specific, well defined, quantifiable, and impact the same general area as the stationary source or modification which causes the secondary emissions. Secondary emissions include emissions from any offsite support facility which would not otherwise be constructed or undergo an increase in emissions except as a result of the construction or operation of the major stationary source or major modification. Secondary emissions do not include tailpipe emissions from any source regulated under title II of the Act or any emissions from in-transit, non-OCS marine vessels.

Significant means

(a) In reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

POLLUTANT EMISSION RATE

Carbon monoxide:	100 tpy
Ozone:	25 tpy of nitrogen oxides (NO _x) where an administratively complete application was received on or after November 15, 1992 for the physical change or change in the method of operation.
Ozone:	40 tpy of VOC 25 tpy of VOC where an administratively complete application was received on or after November 15, 1992 for the physical change or change in the method of operation.
Sulfur dioxide:	40 tpy
Particulate matter:	15 tpy as PM10
Lead:	0.6 tpy

(b) A net increase in emissions of VOCs or NO_x that would result from either any physical change in or change in the method of operation, of a stationary source is significant if such increase exceeds applicable thresholds when aggregated with all, creditable and contemporaneous, increases and decreases, in emissions of the same pollutant.

Stationary Source means any building, structure, facility, or installation which emits or which may emit any air pollutant subject to regulation under the Act.

(a) A stationary source may consist of one or more emissions units and:

1. may be a land-based point or area source; or
2. may be located in, or on, the OCS or other submerged lands beneath navigable waters (lakes, rivers, and coastal waters adjacent to Outer Continental Shelf lands) ; or
3. may be any internal combustion engine, or engine combination, greater than 175 horsepower (hp) used for any stationary application; or
4. may be any internal combustion engine regulated under Sec. 111 (NSPS) of the Act, regardless of size; or
5. may be any internal combustion engine of less than 175 horsepower (hp) not actually controlled to meet a regulation under Sec. 213 (Nonroad Engines and Vehicles) of the Act.

(b) A stationary source does not include:

1. emissions resulting directly from an internal combustion engine for transportation purposes; or
2. tailpipe emissions from any source regulated under title II of the Act or any emissions from in-transit, non-OCS marine vessels.

Appendix A: continued

Temporary Clean Coal Technology Demonstration project means a CCT demonstration project that is operated for a period of five years or less, and which complies with the Massachusetts SIP and other requirements necessary to attain and maintain the national ambient air quality standard during the project and after it is terminated.

(3) Applicability and exemptions. (see also 310 CMR 7.00: *Appendix A*(10) Source Obligation.)

(a) Any major stationary source or major modification to which the requirements of 310 CMR 7.00: *Appendix A* apply shall not receive a plan approval to begin actual construction unless the Department is satisfied that the stationary source or modification will meet the requirements of 310 CMR 7.00: *Appendix A*.

(b) The requirements of 310 CMR 7.00: *Appendix A* shall apply only to any new major stationary source or major modification that is major for either:

1. the pollutant (or precursor of the pollutant, as applicable) for which an area is designated nonattainment (as of the date on which a complete application is filed) pursuant to § 107(d) [Nonattainment Designations] of the Act if the stationary source or modification would be constructed in the designated nonattainment area; or
2. oxides of nitrogen (NO_x) or volatile organic compounds (VOC).

(c) The requirements of 310 CMR 7.00: *Appendix A* shall apply in any Outer Continental Shelf area for which the corresponding onshore area is designated as nonattainment as of the date on which a complete application is filed in accordance with 310 CMR 7.00: *Appendix A*.

(d) If a stationary source is in one of the categories listed in the definition of 310 CMR 7.00: *Appendix A* Major Stationary Source(c), fugitive emissions, to the extent quantifiable, are included when calculating federal potential emissions to determine if the stationary source or modification is subject to the provisions of 310 CMR 7.00: *Appendix A*.

(e) In the case of any major stationary source of volatile organic compounds located in the area (other than a source which emits or has federal potential emissions of 100 tons or more of volatile organic compounds per year), whenever any physical change or change in the method of operation at that source results in any increase (other than a *de minimis* increase) in emissions of volatile organic compounds from any discrete operation, unit or other pollutant emitting activity at the source, such increase shall be considered a modification for purposes of 310 CMR 7.00: *Appendix A*, except that such increase shall not be considered a modification for such purposes if the owner or operator of the source elects to offset the increase by greater reduction in emissions of volatile organic compounds concerned from other operations, units, or activities within the source at an internal offset ratio of at least 1.3 to 1. If the owner or operator does not make such election, such change shall be considered a modification for such purposes, but in applying 310 CMR 7.00: *Appendix A*(4)(c) in the case of any such modification, the best available control technology (BACT), as defined in 310 CMR 7.00: DEFINITIONS, shall be substituted for the lowest achievable emission rate (LAER).

(f) In the case of any major stationary source of volatile organic compounds located in the area which emits or has federal potential emissions 100 tons or more of volatile organic compounds per year, whenever any physical change or change in the method of operation at that source results in any increase (other than a *de minimis* increase) in emissions of volatile organic compounds from any discrete operation, unit or other pollutant emitting activity at the source, such increase shall be considered a modification for purposes of 310 CMR 7.00: *Appendix A*, except that if the owner or operator of the source elects to offset the increase by a greater reduction in emissions of volatile organic compounds from other operations, units or activities within the source at an internal offset ratio of at least 1.3 to 1, the requirements of 310 CMR 7.00: *Appendix A*(4)(c) (concerning the lowest achievable emission rate (LAER) shall not apply.

(g) 310 CMR 7.00: *Appendix A*(3)(e) and (f) apply to modifications at major stationary sources of NO_x in the same way that they apply to sources of volatile organic compounds.

(4) Control technology review.

(a) A new major stationary source or major modification at an existing major stationary source shall meet each applicable emissions limitation under the Massachusetts SIP and each applicable emissions standard of performance under 40 CFR parts 60 (NSPS) and 61 (NESHAPS).

Appendix A: continued

(b) A new major stationary source shall meet the lowest achievable emission rate (LAER) for each pollutant subject to the provisions of 310 CMR 7.00: *Appendix A* that would have federal potential emissions in major amounts. This provision applies to each new emissions unit at which emissions would occur. Major amounts are as follows:

1. VOC - 50 tons or more per year.
2. NO_x - 50 tons or more per year.
3. 100 tons per year or more of any other pollutant subject to regulation under the Act.

(c) A major modification shall meet the lowest achievable emission rate (LAER) for each pollutant subject to the requirements of 310 CMR 7.00: *Appendix A* which would result in a significant net emissions increase at the source. This requirement applies to each proposed emissions unit at which a net emissions increase in the pollutant would occur as a result of the physical change or change in the method of operation in the unit being proposed. LAER will not be required for previous modifications included in the determination of net emissions increase considered in determining major modification status, but which are not to be modified as part of the proposed project.

(d) For phased construction projects, the determination of the lowest achievable emission rate (LAER) shall be reviewed and modified as appropriate at the latest reasonable time, but no later than 18 months prior to commencement of construction of each independent phase of the project. At such time, the owner or operator of the stationary source may be required to demonstrate the adequacy of any previous determination of the lowest achievable emission rate to the next phase of construction.

(5) Reasonable Further Progress.

(a) Sufficient offsetting emissions shall be in effect such that the total emissions from existing sources in the area, from new or modified sources which are not major stationary sources, and from the proposed source will be sufficiently less than the total emissions from existing sources prior to the application for such plan approval to construct or modify so as to represent (when considered together with the SIP provisions required under sec. 172 of the Act) reasonable further progress by the time the proposed source or modification is to commence operation; and

(b) for the purposes of satisfying the requirements of 310 CMR 7.00: *Appendix A(5)(a)*, the determination of total emissions at both the time prior to the application for a plan approval subject to the requirements of 310 CMR 7.00: *Appendix A* and the time such permitted source or modification would commence operation, shall be made in a manner consistent with the Massachusetts SIP approved by the EPA concerning baseline emissions for the demonstration of reasonable further progress and attainment of the national ambient air quality standards for the particular pollutant subject to review pursuant to 310 CMR 7.00: *Appendix A*.

(6) Emissions Offsets.

(a) Prior to the issuance of a plan approval for any emissions unit(s), for which offsets are required pursuant to 310 CMR 7.00: *Appendix A*, emission offsets must be made federally enforceable; and

(b) For a new major stationary source of NO_x or major modification of a major stationary source of NO_x located in an area that is not a nonattainment area, prior to commencing operation of any emission unit(s), for which offsets are required under 310 CMR 7.00: *Appendix A*, NO_x emission offsets must actually occur and be obtained from the same source or other sources within the Ozone Transport Region. For a new major stationary source of VOC or major modification of a VOC source located in an area that is not a nonattainment area, prior to commencing operation of any emission unit(s), for which offsets are required under 310 CMR 7.00: *Appendix A*, VOC emission offsets must actually occur and be obtained from the same source or other sources within the Ozone Transport Region that contributes to a violation of the NAAQS in a nonattainment area that the new source or modification will impact. For a new major stationary source or major modification located in a nonattainment area, prior to commencing operation of any emission unit(s) for which offsets are required under 310 CMR 7.00: *Appendix A*, emission offsets must actually occur and be obtained from the same source or other sources in the same nonattainment area, except that such emissions reductions may be obtained from a source in another nonattainment area if:

1. The other area has an equal or higher nonattainment classification than the area in which the source is located; and

Appendix A: continued

2. Where the proposed new source or modified source is located in a nonattainment area, emissions from such other area contribute to a violation of a national ambient air quality standard in the nonattainment area in which the proposed new or modified source would construct.
- (c) Emission offsets for a land-based stationary source may not be obtained from Outer Continental Shelf (OCS) sources. However, emission offsets for an OCS source may be obtained from land-based stationary sources.
- (d) The increase in emissions of any applicable nonattainment air pollutant allowed from either the proposed new major stationary source or from the proposed changes at the major stationary source that are part of the major modification, shall be offset by an equal or greater reduction, as applicable, in the actual emissions of such air pollutant from the same or other sources.
- (e) In meeting the requirements of 310 CMR 7.00: *Appendix A(6)(d)*, the ratio of total actual emission reductions to the increase in actual emissions shall be as follows:
 1. 1.2:1 of VOC or NO_x; or
 2. 1:1 of any other pollutant subject to regulation under 310 CMR 7.00: *Appendix A*.
- (f) Shutdowns.
 1. Emissions reductions achieved by shutting down an existing source or curtailing production or operating hours below baseline levels may be generally credited if such reductions are real, surplus, permanent, quantifiable and federally enforceable. In addition, the shutdown or curtailment is creditable only if it occurred after December 31, 1990, and the following conditions have been met:
 - a. the Department has submitted a completed emissions inventory as required by The Clean Air Act, § 182(a)(1)(c); and
 - b. the Department has submitted complete revisions to 310 CMR 7.00: *Appendix A* as required by The Clean Air Act, § 182(a)(2)(C); and
 - c. the Department submits the 15% VOC reduction plan required by the Clean Air Act, § 182(b)(1)(A); and
 - d. the Department submits the attainment demonstration required by The Clean Air Act 182(c)(2); or
 2. If any of the submissions in 310 CMR 7.00: *Appendix A(6)(f)1.a.* through d. are delinquent, incomplete or disapproved, emissions reductions from shutdowns or curtailments can not be used, unless the shutdown or curtailment occurred either on or after the date the new source plan approval application is filed or unless the applicant can establish that the proposed new source is a replacement for the shutdown or curtailed source, and the cutoff date provisions of *Appendix A(6)(f)1.* are observed.
- (g) With respect to a proposed increase in VOC emissions, no emissions credit shall be allowed for reductions in any organic compound specifically excluded from the definition of "VOCs" in 310 CMR 7.00.
- (h) Credit for an emissions reduction may not be claimed to the extent that the Department has relied on the reduction as a condition of the Massachusetts SIP, in demonstrating attainment or reasonable further progress, in issuing any permit or plan approval under 310 CMR 7.02(3)(j)6. (BACT requirement), 310 CMR 7.00: *Appendix A*, 40 CFR 52.21 (PSD), operating permits issued either under 310 CMR 7.00: *Appendix C* or pursuant to 40 CFR part 71 or otherwise required under the Act. Incidental emissions reductions which are not otherwise required under the Act may be creditable as emissions reductions for such purposes if such emissions reductions meet the applicable requirements of 310 CMR 7.00: *Appendix A(6)*.
- (i) Emission reduction credits (ERCs) withdrawn from the Massachusetts Emission Reduction Credit Bank (310 CMR 7.00: *Appendix B(3)*) may be used as offsets, providing the ERCs are federally enforceable and meet all of the requirements under 310 CMR 7.00: *Appendix A(6)*.
- (j) Emission reductions generated by the seasonal control of ozone precursors (VOC or NO_x), during the period May 1 through September 30, may be used at any time during the calendar year. Emission reductions generated by the seasonal control of VOC or NO_x, during the period October 1 through April 30, may only be used during the period October 1 through April 30th. Emission reductions generated by the seasonal control of carbon monoxide, during the period November 1st through February 28th, may be used at any time during the calendar year. Emission reductions generated by the seasonal control of carbon monoxide, during the period March 1 through October 31, may only be used during the period March 1st through October 31st.

Appendix A: continued

- (7) Source Impact Analysis. The applicant shall demonstrate to the satisfaction of the Department that;
- (a) the emissions offsets required under 310 CMR 7.00: *Appendix A(6)*, when considered in conjunction with the proposed emissions increase will have a net air quality benefit in the affected area;
 - (b) the emissions from the proposed new major stationary source or major modification will not contribute to nonattainment in, or interfere with maintenance by any other state of any national primary or secondary ambient air quality standard; and
 - (c) the emissions from the proposed new major stationary source or major modification will not interfere with measures required to be included in the applicable implementation plan for any other State under a program for the prevention of significant deterioration or for the protection of visibility.
- (8) Additional Conditions for Approval. In order for the Department to issue an approval under 310 CMR 7.00: *Appendix A*, the following conditions shall be met:
- (a) All major stationary sources in Massachusetts owned or operated by the owner or operator of the proposed source (or by any entity controlling, controlled by, or under common control with such owner or operator) which are subject to federally enforceable emission limitations must be in compliance, or on a federally enforceable schedule for compliance, with all applicable emissions limitations and standards under the Act.
 - (b) By means of an analysis of alternative sites, sizes, production processes, and environmental control techniques for such proposed new or modified stationary source, the owner or operator of the proposed stationary source or modification shall demonstrate to the satisfaction of the Department that the benefits of the proposed source significantly outweigh the environmental and social costs imposed as a result of its location, construction, or modification.
 - (c) The Administrator has not determined that the Massachusetts SIP is not being adequately implemented for the nonattainment area (as applicable) in which the proposed stationary source or modification is to be constructed in accordance with the requirements of part D of the Act.
- (9) Public Participation.
- (a) The Department shall notify all applicants as to any administrative or technical deficiencies in the plan approval application or information submitted.
 - (b) After receipt of a technically complete application the Department shall:
 1. Make a proposed decision as to whether the plan approval application shall be approved, approved with conditions, or disapproved.
 2. Provide a 30-day public comment period for submittal of public comment;
 3. Post on a public website identified by the Department (which may be the Department's own website), for the duration of the public comment period, the following:
 - a. A notice of availability of the Department's proposed decision to approve or deny the plan approval and information on how to submit public comment;
 - b. The Department's proposed decision to approve or deny the plan approval; and
 - c. Information on how to access the administrative record for the Department's proposed decision on whether to approve or deny the plan approval application.
 4. Send a copy of the notice required under 310 CMR 7.00: *Appendix A(9)(b)3.a.* to the applicant, the EPA, and officials and agencies having jurisdiction over the location where the proposed construction would occur as follows: any other State or local air pollution control agencies, the chief executives of the city where the source would be located; any comprehensive regional land use planning agency, and any Federal Land Manager, or Indian Governing body whose lands may be affected by emissions from the source or modification.
 5. Consider all public comments (written and oral) submitted at any public hearing(s) in making a final decision on the approvability of the application. The Department shall make all comments available for public inspection in the same locations where the Department made available preconstruction information relating to the proposed source or modification.
 6. Make a final decision as to whether the plan approval application should be approved, approved with conditions, or disapproved.

Appendix A: continued

7. Notify the applicant in writing of the final decision and make such notification available for public inspection at the same location where the Department made available preconstruction information and public comments relating to the source.

(10) Source Obligation.

- (a) Except as provided for in 310 CMR 7.00: *Appendix A*(10)(b),
1. any owner or operator who constructs or operates either a stationary source or modification not in accordance with the terms of the approval to construct issued under 310 CMR 7.00: *Appendix A*; or
 2. any owner or operator of a stationary source or modification subject to 310 CMR 7.00: *Appendix A*, who commences construction after November 15, 1992 without applying for and receiving approval under 310 CMR 7.00: *Appendix A*,
- shall be considered in noncompliance with 310 CMR 7.00: *Appendix A*, unless a complete application to construct or substantially reconstruct or alter under 310 CMR 7.02(1) was filed by November 15, 1992 and the change was approved by the Department.
- (b) If an owner or operator of a stationary source began construction of a new source or a modification before the applicable date specified in 310 CMR 7.00: *Appendix A* (10)(b)(1. through 4.), then the owner or operator need not comply with 310 CMR 310 CMR 7.00: *Appendix A*.
1. If the source or modification resulted in an increase in actual emissions of VOCs, then the applicable date is January 10, 1980.
 2. If the source or modification resulted in an increase in actual emissions of CO, then the applicable date is January 10, 1980, or the date on which the location in which the construction or modification occurred was declared in the Federal Register to be in nonattainment.
 3. If the source or modification resulted in an increase in actual emissions of NO_x, then the applicable date is November 15, 1990.
 4. If the source or modification resulted in an increase in any other nonattainment pollutant, then the applicable date is the date on which the location in which the construction or modification occurred was declared in the Federal Register to be in nonattainment for that pollutant.
- (c) Approval to construct shall become invalid if construction is not commenced within 18 months after receipt of such approval, if construction is discontinued for a period of 18 months or more, or if construction is not completed within a reasonable time. The Department may extend the 18-month period upon a satisfactory showing that an extension is justified. This provision does not apply to the time period between construction of the approved phases of a phased construction project; each phase must commence construction within 18 months of the projected and approved commencement date.
- (d) Approval to construct shall not relieve any owner or operator of the responsibility to comply fully with applicable provisions of the Massachusetts SIP and any other requirements under local, State or Federal law.
- (e) At such time that a particular source or modification becomes a major stationary source or major modification solely by virtue of a relaxation in any enforceable limitation on the capacity of the source or modification to emit a pollutant, where such enforceable limitation was established after August 7, 1980, then the requirements of 310 CMR 7.00: *Appendix A* shall apply to the source or modification as though no previous approval had been issued on the source or modification.

NON-TEXT PAGE

APPENDIX B: U EMISSION BANKING, TRADING, AND AVERAGING

(1) Introduction. 310 CMR 7.00: *Appendix B*(1) through (6) establishes principles and procedures which can be utilized by facilities to comply with the requirements of 310 CMR 7.18, 310 CMR 7.19 and 310 CMR 7.00: *Appendix A*. 310 CMR 7.00: *Appendix B* contains provisions to allow emission averaging or "bubbles" and provisions to allow for the creation and use of emission reduction credits to be "banked", used or traded among facilities.

(2) Definitions. The definitions found in 310 CMR 7.00 apply to 310 CMR 7.00: *Appendix B*. The following words and phrases shall have the following meanings as they appear in 310 CMR 7.00: *Appendix B*. Where a term is defined in the 310 CMR 7.00 definitions section and the definition also appears in 310 CMR 7.00: *Appendix B*, the definition in 310 CMR 7.00: *Appendix B* controls.

Actual Emissions means, the average rate, in tons per year, at which a unit actually emitted the pollutant during the two-year period which precedes the date of application and which is representative of normal production rates or activity levels. The Department shall allow the use of a different two year consecutive time period, within five years immediately prior to the date of application, upon a determination that the alternative two year period is more representative of normal source operation. Actual emissions shall be calculated using the eligible source's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period.

Allowable Emissions means the emissions rate of a source calculated using either the production or activity rates associated with the maximum rated capacity of the source, and the hours of operation or the permitted hours of operation or capacity provided that such permit is federally enforceable and so as not to exceed the following:

- (a) Any applicable standards set forth in 40 CFR part 60 (NSPS) or 61 (NESHAPS);
- (b) Any applicable Massachusetts SIP emissions limitation including a limitation with a future compliance date; or
- (c) Any emissions rate specified as a federally enforceable permit condition, including a limitation with a future compliance date.

Area Source means stationary and non-road sources of emissions who are too small and/or too numerous to be individually included in a stationary source emission inventory examples being home heating furnaces, aircraft, commercial vessels, gas stations and lawn mowers.

Baseline means the emission level set for an eligible source and calculated in accordance with methods described in 310 CMR 7.00: *Appendix B*(3)(c), which reflects the lower of actual emissions, or allowable emissions and which serves as the level below which emission reductions are considered surplus and can be eligible for approval by the Department as Emission Reduction Credits (ERC). As future allowable emission rates or emission standards become effective, the lowest of future allowable emissions, allowable emissions or actual emissions will be the baseline below which reductions must be made to be considered surplus.

Bubble means an alternative emission control strategy where two or more existing emission points are regarded as being placed under a hypothetical bubble, which is then regarded as a single emission source.

Curtailement means a permanent reduction in hours of operation or process rate, said reduction approved in a permit issued by the Department.

Direct Determination means a calculation or measurement based on source specific information rather than from estimates of emission and control efficiencies.

Eligible Source means any stationary, area or mobile source of VOC, NO_x or CO emissions which is eligible to participate in emissions banking and trading at any point in time.

Appendix B: continued

Emission Estimation means calculation of emissions using estimated emission factors and assumptions of control efficiency not based in whole or in part on actual measurement or detailed records for an emission unit.

Emission Limiting means a program or strategies that directly specify limits on total mass emission, emission related parameters (*e.g.*, emission rates per unit of product) or levels of emission reductions that are required to be met by eligible sources.

Emission Reduction Credit (ERC) means the actual air pollutant reductions from an emitting source that have been certified by the Department as enforceable, permanent, quantifiable, real, and surplus in accordance with the requirements of 310 CMR 7.00: *Appendix B*.

Enforceable means those limitations and conditions which are enforceable by the Department of Environmental Protection and the EPA. Examples of such enforceable mechanisms include, but are not limited to the following:

- (a) Conditions in pre-construction permits issued pursuant to 40 CFR 52.21 (federal delegated PSD programs); or
- (b) Limitations developed pursuant to 40 CFR Parts 60 (NSPS) and 61 (NESHAPS); or
- (c) Requirements contained in the EPA-approved Massachusetts State Implementation Plan (SIP), or source-specific SIP revisions that are approved by EPA; or
- (d) Conditions in pre-construction "plan approvals" issued by the Commonwealth of Massachusetts, provided that those pre-construction "plan approval" regulations have been approved by the EPA in the *Federal Register* as meeting the requirements of 40 CFR 51.160.
- (e) Permits issued pursuant to generic bubble regulations that have been approved by EPA as adhering to the December 4, 1986, Emissions Trading Policy Statement.
- (f) Information contained in a Department-issued Emission Reduction Credit approval for retrospectively approved ERCs, as to by what means the ERCs were created.

Future Allowable means the maximum emission rate, process rate or activity level assumed in the most recent Department adopted State Implementation Plan for Ozone or State Implementation Plan for Carbon Monoxide. An example might be the future allowable (1994) emission rate for Leather Coating operations at 27.4 pounds of VOC per gallon of solid applied [310 CMR 7.18(22)] which when applied to the two year average capacity utilization factor and two year average hours of operation for an eligible source, would result in the estimate of baseline starting on the rule effective date in 1994. Prior to this effective date, credit is calculated using a baseline that includes the lower of actual or allowable emissions at the time of application.

Irreversible Process Change means a process modification or equipment substitution that completely and irreversibly eliminates key emitting properties of the emission unit. For example, elimination of solvent use in a process line.

Mass ERC Bank means the Massachusetts registry for ERCs quantified by mass (*e.g.* tons). ERCs from this bank may be used either for compliance pursuant to 310 CMR 7.00: *Appendix B(3)* or for "discrete" offsets pursuant to 310 CMR 7.00: *Appendix B(3)* and 310 CMR 7.00: *Appendix A*.

NEPOOL Marginal Emission Rate or Successor Organization Rate means the corresponding calendar year NO_x emission rate determined by NEPOOL or a successor organization through accepted modeling or data gathering techniques reviewed and approved by the Department.

Netting means the mechanism used to secure an exemption of modifications at existing stationary sources from preconstruction permit requirements under 310 CMR 7.00 Appendix A (Emission Offsets and Nonattainment Review) and/or 40 CFR 52.21 (Prevention of Significant Deterioration) regulations which apply when there is a significant net emissions increase.

Appendix B: continued

Non-inventoried Emission Source Category means air pollutants emitted into the ambient air from any source category which has not been included in the Department's 1990 emission inventories.

Offset means the use of an Emission Reduction Credit to compensate for emission increases of a nonattainment pollutant from a new major stationary or modified major stationary source subject to the requirements of 310 CMR 7.00: *Appendix A*.

Permanent means that emission reductions implemented for the purpose of generating Emission Reduction Credit must be assured for the life of the corresponding Emission Reduction Credit through a federally enforceable mechanism.

Program Baseline means the level of emissions, or emission related parameters for each eligible source or group of sources from which the program results (*e.g.* quantifiable emission reductions) shall be determined. For purposes of 310 CMR 7.00: *Appendix B*, the program baseline shall be the 1990 Base Year Emission Inventory of Volatile Organic Compound, Oxides of Nitrogen and Carbon Monoxide.

Quantifiable means that the amount, rate, and characteristics of an emission reduction can be measured through a replicable method acceptable to the Department of Environmental Protection and the EPA.

Rate ERC Bank means the Massachusetts registry of ERC that have been certified at a continuous rate (*i.e.* tons per year). ERCs from the Rate ERC Bank may be used for the purposes of offsets pursuant to 310 CMR 7.00: *Appendix B(3)* and 310 CMR 7.00: *Appendix A*.

Real means the reduction in actual emissions released into the air.

Remaining Useful Life means the length of time for which the equipment that is being shut down would have continued to operate had the owner/operator chosen not to shut down the equipment and apply for certification of credits at that time. Remaining useful life shall be ten years except in those cases where the Department determines a shorter period is appropriate, or the applicant demonstrates to the Department's satisfaction that a period of longer than ten years is warranted. The Department will use the following criteria for making the determination including, but not limited to: the age of the equipment; the type of equipment; maintenance history; operating history; and industry norms. In any case, remaining useful life shall not exceed 20 years.

Replicable means methods which are sufficiently clear and unambiguous such that the same or equivalent results would be obtained by the application of the methods by different users.

Shutdown means the earlier of (1) the date that the Department verifies that the source is shutdown or 2) the date that operations and emissions from an emitting unit ceased and the associated emission units have been removed or rendered inoperable.

State Implementation Plan (SIP) means the most recently prepared plan or revision thereof required by the Clean Air Act, 42 USC Section 7410, which has been either adopted by the Department and submitted to the United States Environmental Protection Agency (EPA) for approval or approved by the United States Environmental Protection Agency (EPA), whichever is more stringent.

Surplus means, emission reductions beyond an established source baseline which, as such, are not required by the Department adopted SIP, relied upon in any applicable attainment demonstration, or credited in any RFP or milestone demonstration.

Transfer means the conveyance of ownership of an Emission Reduction Credit from one entity to another.

Appendix B: continued

Use for the purposes of 310 CMR 7.00: *Appendix B*, the term "use" shall mean to employ for emission averaging or emission trading an ERC such that the person who owns or controls the ERC has received a plan approval from the Department which factors the ERC into the emissions from the facility for purposes of compliance with emission limitations or emission offset requirements.

(3) Emission Reduction Credit Banking and Trading.

(a) Introduction and statement of purpose. The goal of the program, defined by 310 CMR 7.00: *Appendix B(3)*, is to encourage the creation and trading of surplus emission reductions as Emission Reduction Credits (ERC) to be used for purposes of offsets, netting and cost effective compliance without interfering with any applicable requirements concerning attainment, reasonable further progress or any other applicable air pollution control requirement.

(b) Applicability.

1. Entry into this program is voluntary.
2. 310 CMR 7.00: *Appendix B(3)* applies to the owner/operator of eligible sources including stationary sources, area sources and mobile sources applying for certification of surplus emission reductions as emission reduction credits (ERC).
3. Nothing in 310 CMR 7.00: *Appendix B* shall require that ERCs be listed in either the Rate ERC Bank or the Mass ERC Bank if the ERCs are being transferred to other facilities operated or owned, in whole or part, by the creator of the ERCs, provided that the requirements of 310 CMR 7.00: *Appendix B(3)(e)* are met prior to use of the ERCs.
4. Nothing in 310 CMR 7.00: *Appendix B* shall require that emission reductions, created for the purpose of offsets, be submitted for approval through the emission banking program if the emission reductions are used by the facility or within facilities owned by the same economic entity which created the emission reductions and provided that the requirements of 310 CMR 7.00: *Appendix A* are met.

(c) Generation of Emission Reduction Credit.

1. General Principles which apply to generation of Emission Reduction Credits (ERC).
 - a. Emission reductions within Massachusetts shall be recognized as ERCs only after the approval of the Department has been obtained in accordance with 310 CMR 7.00: *Appendix B(3)*.
 - b. Emission reductions generated for the purpose of creating ERCs must meet, at minimum, all of the following principles, to receive approval as emission reduction credits.
 - i. The reductions must have occurred after December 31, 1990.
 - ii. The reductions must be real reductions of emissions of: Volatile Organic Compounds (VOC), Oxides of Nitrogen (NOx), or Carbon Monoxide (CO);
 - iii. The reductions must be surplus in that they are reductions in emissions below the baseline established for the eligible source.
 - iv. The reductions must be permanent and the amount and duration of the reduction must be documented; and,
 - v. The reductions must be quantifiable, with a replicable basis for calculating the amount of reduction as well as reliable methods for assessing compliance with the emission rates after the reduction has been made, and the reductions must be enforceable.
 - c. Emission reductions cannot be recognized as ERCs if said reductions are required by Federal or Department permits, plan approvals, agreements, administrative or judicial orders, or other enforcement actions or regulations.
 - d. Emission reductions can only be eligible for certification pursuant to 310 CMR 7.00: *Appendix B(3)* if said reductions occur from emissions sources within the geographical boundaries of Massachusetts. ERCs generated by sources outside of the Commonwealth may be used by facilities within the Commonwealth pursuant to 310 CMR 7.00: *Appendix B(3)(f)*.
 - e. Emission reductions eligible for credit are those emissions reductions below baseline for the eligible source.
 - f. Emission reductions considered eligible for consideration as ERCs include:

Appendix B: continued

- i. Shutdown or curtailment provided that the applicant can demonstrate to the satisfaction of the Department that demand for the services or product will not or cannot shift to other similar sources in the State resulting in no net decrease in emissions from the source category. Where emission reductions from shutdowns of electric generating facilities will be used exclusively as offsets for new facilities pursuant to 310 CMR 7.00: *Appendix A*, the ERC will not be adjusted for shifting demand. If such reductions are to be deposited in the Mass ERC Bank, credit will be available only to the extent that the emission rate from the unit being shut down or curtailed is greater than the applicable NEPOOL marginal emission rate or successor organization rate.
 - ii. Control of an emission unit beyond that required by Massachusetts Air Pollution Regulations or federal law and regulations.
 - iii. Seasonal Controls with the recognition that VOC and NOx emission reductions created by the application of seasonal controls will be subject to use restrictions as defined in 310 CMR 7.00: *Appendix B(3)(e)8*.
 - iv. Early implementation of future emission controls provided that the reductions commence before promulgation of the regulations establishing the new emission controls. These reductions are surplus only up to the effective date for compliance with the program or emission controls. Credit will cease to accrue upon the effective date of the new emission controls.
 - v. Emission reductions which result from application of mobile and area source controls provided that the reductions meet all other requirements of 310 CMR 7.00: *Appendix B* including provisions for establishment of baseline and replicable quantification as well as compliance monitoring methods.
 - g. Emission reductions are not eligible for consideration as an ERCs if said reductions are generated by an un-inventoried area source category (*e.g.*, small bakeries) or if said reductions are generated by biogenic sources (*e.g.*, trees).
2. Calculation of Credit.
- a. Credit shall be calculated by first calculating baseline emissions, second calculating the post reduction emissions, and third multiplying the difference between the baseline emissions and post reduction emissions by the applicable compliance assurance factor. The ERC amount is the result of complete application of these three steps.
 - b. Baseline emissions will be expressed in tons of pollutant emitted per day or per year, whichever is more appropriate and shall be further defined as ozone or non-ozone (October 1 - April 30) season.
- Step 1:
- c. Baseline emissions will be established for each stationary source according to the following formula:

$$\text{baseline} = \text{ER} \times (\text{CU} \times \text{H})$$

Where:

ER equals the lower of the actual or allowable emission rate

ER shall be expressed as mass of emission per unit of production or thruput (*e.g.*, pounds of VOC per gallon of solids applied or pounds of NOx per million Btu)

CU equals the actual average hourly capacity utilization (*e.g.*, expressed in terms of millions of Btu per hour or numbers of gallons of solids applied in an hour).

H equals the actual number of hours of operation per day.

ERC, CU and H are based on average historical values for the factors for two representative years within the five years immediately prior to the date of application.

Appendix B: continued

- d. Baseline emissions will be established for each area source measure according to the following formula:

$$\text{baseline} = \text{ER} \times \text{ACT}$$

Where:

ER equals the emission rate as determined by the Department and EPA in the most recent emission inventory using EPA approved methods and emission factors including AP-42 and Volume IV for Area Source, or the EPA Off-road Study for off-road sources. Assumptions shall be consistent with the most recent adopted periodic emission inventory prepared by the Department.

ER must be the lower of actual, or allowable emission rate and shall be expressed as mass of emission per unit of production or thruput (*e.g.*, pounds per 1000 gallons burned or pounds per capita, as is appropriate)

ACT equals the actual average activity factor expressed in a manner so as to be consistent with the units required by the emission rate such as number of gallons burned, or number of persons affected.

- e. Baseline emissions will be established for each Mobile Source by methods approved or published by EPA or the Department, including but not limited to:
- i. Interim guidelines on the Generation of Mobile Source ERC, 58 FR 11134.
 - ii. Guidance for Implementation of Accelerated Retirement of Vehicle programs, U.S. EPA, February 1993.
 - iii. Program for Generation of Emission Credits by Urban Buses, U.S. EPA, January 1993.
3. Calculation of post-reduction emissions.

Step 2:

- a. Creditable, workable and replicable methods must be used to quantify post-reduction emissions reflecting the real emission reduction below baseline emissions. The post-reduction emissions shall be calculated using methods as or more accurate than those used to calculate baseline emissions.
- b. Post-reduction emissions for DSM shall be determined after implementation of these DSM measure(s) and based on review of historical records covering a period of no less than one year collected since implementation, and shall be calculated in conformance with guidance provided and approved by the Massachusetts DPU.

4. Calculation of the Emission Reduction Credit.

- a. Step 3: The emission reduction is calculated by first subtracting post-reduction emissions from baseline emissions.
- b. The emission reduction will be certified by the Department as an emission reduction credit after application of a compliance assurance multiplier to the resulting difference between baseline emissions and post-reduction emissions. The applicable compliance assurance multiplier will be determined by the Department within the ranges provided in the table below. Actual ERC adjustment will be set for individual circumstances and conditions within these ranges.

<u>Method of Compliance Assurance</u>	<u>Compliance Assurance Multiplier</u>
Irreversible process change	1.0
Compliance Assessment by Direct Determination: Continuous Emission Monitoring System (CEMS) installed pursuant to 40 CFR part 75	1.0
Mass Balance Reconciliation	0.85 - 0.99
CEMS other than 40 CFR part 75	0.80 - 0.95

Appendix B: continued

Compliance Assessment by Testing:	
Periodic Stack Test / Emission Test	0.80 - 0.90
Testing of Capture Efficiency and control	

Emission Determinations using estimates of capture and control and/or emission factors	0.50 - 0.80
--	-------------

- i. The resulting amount of credit will be rounded to the nearest ton.
 - ii. Once the three step calculation has been completed, and the result rounded to the nearest ton, the resulting ERCs shall not be subject to adjustment of value.
 - c. ERCs certified from discrete, retrospective reductions shall be expressed in total tons and will be placed in the Mass ERC Bank. ERCs from the Mass ERC Bank may be used as offsets pursuant to 310 CMR 7.00: *Appendix A* with approval of the Department.
 - d. ERCs certified from either shutdowns or enforceable prospective over-control of emissions shall be expressed in tons per year, and will be placed in the Rate ERC Bank. In the event the owner of ERCs from a shutdown wishes to transfer the ERCs to the Mass ERC Bank, the Department will assign the ERCs from the shutdown a "remaining useful life" in years, which will be used to transfer the ERCs from the Rate ERC Bank to the Mass ERC Bank. If the ERC transferred are from shutdown of an electric generating facility, the Department will also subtract the NEPOOL marginal emission rate or successor organization rate replacement power in effect at the time of original certification of the ERCs.
- (d) Procedure For Certification of Emission Reductions as ERC.
1. An application for certification of ERCs may be submitted in advance of the time when the reduction is actually made (prospective certification) or after the reduction has been made (retrospective certification).
 2. Unapprovable sources of generation and quantities.
 - a. ERCs may not be generated from non-inventoried sources. In other words, only sources accounted for in SIP and RFP planning (inventoried sources) may be used to generate credits.
 - b. ERCs can be approved only where the emission reduction, as calculated under 310 CMR 7.00 *Appendix B(3)(c)4.a.*, is greater than 5 tons per year for deposit in the Rate ERC Bank, or greater than 5 tons for the Mass ERC Bank.
 3. For emission reductions implemented prior to January 1, 1994, an Emission Reduction Credit Application must be submitted to the Department by September 30, 1994.
 4. For emission reductions implemented after January 1, 1994, an Emission Reduction Credit Application must be submitted to the Department within six months of:
 - a. the end date of the period being evaluated for a retrospective discrete emission reductions.
 - b. the approval date of a federally enforceable mechanism for prospective emission reductions other than 310 CMR 7.00 *Appendix B(3)*.
 5. Application Procedures.
 - a. Any person who owns or operates an emission unit at which an eligible emission reduction has occurred or will occur may submit an Emission Reduction Credit (ERC) application in accordance with the requirements of 310 CMR 7.00: *Appendix B*.
 - b. The ERC application shall be submitted on a standard form supplied by the Department with documentation provided by the applicant as to the calculation method for baseline and the post-reduction emissions as required by 310 CMR 7.00: *Appendix B(3)* as well as a proposed method for determining and assuring compliance.
 - c. ERC applications shall express emission reductions in tons, or in tons per year if for offsets, and indicate what portions of the reductions were made during the period May 1 - September 30 (ozone season).
 - d. ERC applications shall contain sufficient information to allow the Department to evaluate each emission reduction consistent with the requirements of 310 CMR 7.00: *Appendix B(3)*.

Appendix B: continued

- e. The ERC application shall be signed by a responsible official.
 - f. The ERC application shall comply with provisions of 310 CMR 4.00 *et seq.* for fees and permit procedures.
6. ERC approvals will be emission-limiting, either prospectively or retrospectively, as applicable. An ERC approval will be issued pursuant to 310 CMR 7.00: *Appendix B(3)*. To be made federally enforceable, it must contain the specific quantifiable emission limits reflecting the change in emission rate, operating conditions and other measures taken to generate the ERCs. All emissions limitations, controls, and other requirements imposed by such approvals must be at least as stringent as all other applicable limitations and requirements contained in the SIP, enforceable under the SIP, or otherwise federally enforceable. All limitations, controls, and other requirements imposed by such approvals must be permanent, quantifiable, and enforceable as a practical matter.
- a. In order to confirm emission reductions claimed in conjunction with an application for a prospective Emission Reduction Credit, the Department will require sources to implement compliance assurance methods such as monitoring, recordkeeping and reporting as part of the ERC certification approval.
 - b. The Department may also require the applicant to conduct source testing utilizing Department or EPA approved test methods, including but not limited to those methods referenced in 40 CFR Part 60 Appendix A, or 310 CMR 7.18(2), or 310 CMR 7.19(13), as appropriate for the source.
 - c. In addition, the Department may require regular submittal of information which the Department determines is necessary to maintain the integrity of the ERC.
7. A person having ownership of ERCs has the exclusive right to possess and dispose of the ERCs subject to the applicable restrictions contained in the certification approval and 310 CMR 7.00: *Appendix B(3)*.
8. ERCs in the Rate ERC Bank shall revert to the state to be retired for the benefit of the environment if they have not been used by midnight of the date ten years from the date of Department approval. ERCs in the Mass ERC Bank shall not expire or cease to exist after a set period of time, even if not traded or used.
- (e) Withdrawal, Transfer, and Use of Emission Reduction Credits.
- 1. The Department must issue a federally enforceable approval to a person seeking to use ERCs prior to the use of any ERCs. This includes approvals to construct or operate issued to stationary sources and a practical equivalent to be issued to persons who have applied to use ERCs in area and mobile source situations.
 - 2. Persons seeking to use ERCs must obtain an amount of credit equal to five percent more than the amount needed for the offset or compliance calculation. This five percent increment shall be held by the applicant and not used or sold until such time that the Department determines whether or not the excess credit can be released for use. Such a determination shall be made by the Department on or about January 1, 1999. If the Department determines it cannot release said ERCs for use, the ERCs will by operation of law be retired for the benefit of the environment.
 - 3. ERCs may not be used to meet the requirements of, or result in violation of federal New Source Performance Standards (NSPS), National Emission Standards for Hazardous Air Pollutants (NESHAPS), the requirements for Lowest Achievable Emission Rate (LAER), the requirements for Best Available Control Technology (BACT), Maximum Achievable Control Technology (MACT), Title IV, section 183(e) and 183(f) of the Clean Air Act, cause a violation of a National Ambient Air Quality Standard for criteria pollutants, cause a violation of a PSD increment or create a nuisance condition. ERCs may not be used to stay below an applicability threshold of the Clean Air Act or 310 CMR 7.00 *et seq.*
 - 4. ERCs may not be used to comply with performance standards established by regulation, such as, operating procedure requirements (*e.g.* covers on degreasers, operating within a specific temperature range) or to comply with requirements for record keeping, reporting or facility testing as may be required by the Department.
 - 5. Where ERCs are used for netting under 310 CMR 7.00: Appendix A, the ERCs must meet the criteria in 310 CMR 7.00: *Appendix A Net Emissions Increase(a)* through (g), as applicable.

Appendix B: continued

6. Certified ERCs can be traded between emission sectors (*e.g.*, from mobile sources to stationary sources) provided that credit generated by stationary source reductions may under no circumstances be used to comply with any mobile source requirement.
 7. ERCs generated through emission reductions of one pollutant can not be used for trading or averaging with another pollutant.
 8. ERCs generated by the control of ozone precursors (VOC and NO_x) during the period May 1st through September 30th, can be used at any time during the calendar year. ERCs generated by control of ozone precursors during the period October 1st through April 30th, can only be used in the same season as generated (October 1st through April 30th).
 9. ERCs generated by the use of seasonal control of carbon monoxide during the period November 1st through February 28th, can be used at any time during the calendar year. ERCs generated through use of seasonal control of carbon monoxide during the period March 1st through October 31st can only be used in the in the same season as generated (March 1st through October 31st).
 10. ERCs approved from shutdown or curtailment of an emission unit where the emitting operations are based on manufacturing activity and the operations, and jobs associated with the emitting activity are shifted outside of Massachusetts, are eligible for use only in Massachusetts. 310 CMR 7.00: *Appendix B(3)(e)*11. does not apply to electric generating facilities.
 11. ERCs generated by shutdowns are presumptively available only for offsets pursuant to 310 CMR 7.00: *Appendix A*. If at any time prior to use of ERCs as offsets an owner of said ERCs wishes to use them for compliance purposes, the Department will assign a "remaining useful life" to said ERCs which will be used to transfer the ERCs from the Rate ERC Bank to the Mass ERC Bank. If the ERCs were generated by an electric generating facility shutdown, the Department will also subtract the NEPOOL marginal emission rate or successor organization rate in effect at the time of original ERC certification. Offset credits generated outside of the Commonwealth of Massachusetts are not eligible for conversion to mass-based credits.
 12. ERCs from the Rate ERC Bank used as offsets pursuant to a 310 CMR 7.00: *Appendix A* approval, must be retired at the approved annual offset rate regardless of the facility's annual actual emissions. In addition, ERCs from the Mass ERC Bank used as offsets pursuant to a 310 CMR 7.00: *Appendix A* approval, must be obtained for the current year of operation plus four subsequent years of operation; and five years of ERCs, available for use in each of those five years, must be held at all times for the approval to remain valid. These ERCs will be retired on December 31st of each year, beginning with the first calendar year or any portion thereof, in which the facility operates.
 13. ERCs utilized as offsets are considered "used" commencing with startup of a facility; ERCs with an expiration date prior to actual startup of a source needing offsets will not be acceptable as offsets for the facility.
 14. Conversions to Allowances. (Reserved)
- (f) Interstate Trading of ERCs.
1. Federally enforceable emission reductions generated by facilities outside the Commonwealth may be used in the Commonwealth, and ERC generated in the Commonwealth may be used in other states or jurisdictions, provided that the State within which the other facility is located has executed a Memorandum of Understanding concerning emission trading with the Commonwealth.
 2. Said Memoranda of Understanding will include at a minimum:
 - a. the requirement that creditable emission reductions be real, surplus, permanent, quantifiable and federally enforceable;
 - b. discounts as appropriate to make ERCs generated outside of the Commonwealth equivalent with ERCs generated in the Commonwealth;
 - c. restrictions on allowable directionality of trades if necessary;
 - d. state-specific notification or other requirements, as necessary;
 - e. ERC lifetimes and expiration dates, if applicable;
 - f. ozone season definition and restrictions;

Appendix B: continued

- g. the requirement that any ERC generated outside of the Commonwealth can be used in the Commonwealth only in compliance with 310 CMR 7.00: *Appendix B(3)(e)*, except where specifically stated otherwise; and
 - h. averments of cooperation on enforcement and reporting.
3. Interstate emission reduction credit trades must comply with the specific requirements of the applicable Memorandum of Understanding.
- (g) Emission Reduction Credit Registry.
- 1. Upon satisfaction of all applicable requirements of 310 CMR 7.00: *Appendix B*, approved emission reduction credits shall be registered in an Emission Reduction Credit Registry operated or overseen by the Department. Such registry shall include:
 - a. Name of generator and contact person;
 - b. Pollutant associated with the ERCs;
 - c. Amount of ERC expressed in tons, or in tons per year if banked in Rate ERC Bank;
 - d. Any seasonal use restrictions on the ERCs;
 - e. Whether the ERCs may be used or are reserved as part of a 5% set aside pursuant to 310 CMR 7.00: *Appendix B(3)(e)2*.
 - 2. ERCs shall be tracked within the Emission Reduction Credit Registry by assigning a serial number to each ton of ERC, or ton per year if banked for use as offsets. The serial number will provide information about the type of pollutant, type of ERC (rate/mass), seasonality and first year available for use.
 - 3. Information related to emission reduction credits maintained in the Emission Reduction Credit Registry shall be available for public review.
- (h) Program review.
- 1. The Department shall maintain records of ERCs and shall account for unused ERCs as "emitted" within the context of RFP and periodic emission inventory reports.
 - 2. The Department shall conduct a review of the emission trading program beginning in 1995 and every three years thereafter. This review shall evaluate the handling of applications for ERC approval and use, and the legitimacy of approved ERCs, and may include review of ERCs creation and use protocols, and compliance assessment of sources using ERCs.
 - 3. The program review shall also include assessment of the impact of the program on Reasonable Further Progress, attainment or maintenance of the National Ambient Air Quality Standards, and ascertain if there is any significant effect from interstate trades pursuant to 310 CMR 7.00: *Appendix B(3)(f)*.
 - 4. Should a review reveal the need to make program revisions, the Department shall, within six months of the review findings, propose the appropriate program revisions.
 - 5. The results of Department reviews and the findings shall be reported in the context of required RFP and periodic inventory reports (every three years).
 - 6. Program Baseline for this program is the most recent revision of the 1990 Base Year Emission Inventory of Volatile Organic Compound, Oxides of Nitrogen and Carbon Monoxide and the State Implementation Strategy Plan submittal of November 15, 1993 which describes programs and strategies to be used by the Commonwealth to attain and maintain NAAQS for ozone and carbon monoxide. Source baseline as described in previous sections is defined within the context of the program baseline (the lower of actual, allowable or future allowable emissions) so as to avoid interference with attainment and maintenance of NAAQS.
- (4) Emission Averaging (Bubble).
- (a) Introduction.
- 1. The purpose of 310 CMR 7.00 *Appendix B(4)* is to specify requirements by which one or more facilities operated or controlled by the same economic entity can comply with either 310 CMR 7.18 or 7.19, respectively, using emissions averaging, herein referred to as a bubble, under either 310 CMR 7.18(2)(b) or 7.19(14).
 - 2. In an emissions bubble, a person who operates or controls one or more facilities with more than one emission unit subject to regulation by 310 CMR 7.00, may apply to the Department to meet the requirements of either 310 CMR 7.18 or 7.19 through a mix of control techniques. The emissions of the various emission units are averaged over a 24 hour period, except as provided for in 310 CMR 7.00 *Appendix B(4)(e)5*.

Appendix B: continued

(b) Applicability.

1. 310 CMR *Appendix B(4)* applies to any person who operates or controls a facility(ies) subject to either 310 CMR 7.18(3) through (6), (10) through (12), (14) through (16), (21) through (26), (30)(c)7., (31) or 310 CMR 7.19(4), (5), (7), (8), (12), that set an emission limitation in either pounds of VOC per gallon of solids applied or pounds of NO_x per million Btu of heat input, respectively, and who chooses to comply by emission averaging.
2. For bubbles to comply with 310 CMR 7.18, emission units subject to emissions standards other than pounds of VOC per gallon of solids applied (*e.g.* such as pounds of VOC per pound of solids applied, pounds of VOC per 1000 square feet covered, metric units, *etc.*) may be averaged with other emission units subject to an emission limitation in the same units of measure.
3. For bubbles under 310 CMR 7.19, 310 CMR 7.19(14)(a), through (c) describe which emissions units can be averaged together to comply with 310 CMR 7.19 and under what replicable and equivalent methods.
4. A bubble can not be used to comply with work practice requirements of either 310 CMR 7.18 or 7.19.
5. For purposes of 310 CMR 7.00 *Appendix B(4)*, emission bubbles are only allowed for the purpose of compliance at a single facility or multiple facilities which are operated by or under the control of the same economic entity.
6. Nothing in 310 CMR 7.00 *Appendix B(4)* relieves a facility from having to comply with other requirements of 310 CMR 7.00 as may be applicable.

NON-TEXT PAGE

Appendix B: continued

7. For facilities that have bubbles that were approved by the Department under 310 CMR 7.18(2)(b) and for which the application was received prior to May 25, 1988, the approved bubble conditions, recordkeeping and reporting requirements shall remain in force and no revision of said bubble approvals is required by 310 CMR 7.00: *Appendix B(4)*, unless and until the facility seeks to have the existing bubble approval modified. At that time, the request to modify the bubble shall be subject to 310 CMR 7.00: *Appendix B(4)*. However, with respect to those bubbles that were approved by the Department under 310 CMR 7.18(2)(b) and for which the application was received prior to May 25, 1988, modification of said bubbles solely to incorporate a more stringent Reasonably Available Control Technology adopted pursuant to 310 CMR 7.18 shall not make the facility subject to 310 CMR 7.00: *Appendix B(4)*.
- (c) General Bubble Requirements.
1. Compliance with emission requirements, through use of a bubble, will be approved by the Department providing that:
 - a. The bubble has been approved by the Department in accordance with 310 CMR 7.00 *Appendix B(4)*.
 - b. At no time may the use of a bubble result in a violation of a National Ambient Air Quality Standard for nitrogen dioxide (NO₂), particulate matter or carbon monoxide (CO) as determined by modelling.
 - c. At no time may the use of a bubble result in total VOC or NO_x emissions at a facility exceeding the applicable emission limitations in 310 CMR 7.18 or 7.19 averaged over a 24 hour period (except as provided for in 310 CMR 7.00 *Appendix B(4)(e)5.*) for emission units in the bubble.
 - d. At no time may use of a bubble result in total VOC emissions exceeding a monthly facility emission baseline as calculated under 310 CMR 7.00: *Appendix B(4)(e)2.* At no time may use of a bubble with an averaging time longer than 24 hours result in NO_x emissions exceeding the daily cap as calculated in 310 CMR 7.00 *Appendix B(4)(e)5.*
 - e. Organic compounds, that are specifically excluded from the definition of VOC in 310 CMR 7.00, shall not be used to emission average.
 - f. At no time may use of a bubble under 310 CMR 7.00 *Appendix B(4)* be used to meet the requirements of, or result in an increase in emissions for any emission unit above a New Source Performance Standard (NSPS), National Emission Standard for Hazardous Air Pollutants (NESHAP), the requirement for Best Available Control Technology (BACT), the requirement for Lowest Achievable Emission Rate (LAER) or Maximum Achievable Control Technology (MACT).
 - g. Emission reductions used in a bubble must be real in that the emission reductions must be from an emission unit which actually operated within the two year time period immediately preceding the application for the bubble.
 - h. Emission reductions used in a bubble must be permanent and the amount and duration of the reduction must be documented.
 - i. Emission reductions used in the bubble must be quantifiable with a replicable method for calculating the amount of reduction, as well as, a replicable method for assessing compliance with the emission rates after the reduction has been made.
 - j. Emission limitations must be federally enforceable and will be documented in the facility's emission control plan approval issued by the Department.
- (d) Application for a Bubble.
1. Application for approval of an emission bubble shall be made as part of the submittal to the Department of an emission control plan pursuant to either 310 CMR 7.18(20) or 310 CMR 7.19(3) and shall include:
 - a. Identification of all emission units to be included in the bubble, and
 - b. Demonstration of how compliance will be met and maintained, and
 - c. Demonstration that all emission units included in the bubble are operated by or under the control of the same economic entity, and
 - d. Demonstration that the bubble will not increase emissions of an emission unit included in the bubble above the following standards as applicable:
 - i. A Best Available Control Technology (BACT) determination pursuant to 310 CMR 7.02(3), or 40 CFR 52.21, or
 - ii. A Lowest Achievable Emission Rate (LAER) determination pursuant to 310 CMR 7.00 *Appendix A*, or
 - iii. A Federal New Source Performance Standard (NSPS [40 CFR Part 60]), or

Appendix B: continued

- iv. A National Emission Standard for Hazardous Air Pollutants (NESHAP [40 CFR Part 61]), or
 - v. A Maximum Achievable Control Technology (MACT) determination pursuant to 40 CFR Part 63.
 - e. For bubbles to comply with 310 CMR 7.19, evidence that the bubble will not cause an exceedance of the National Ambient Air Quality Standard for nitrogen dioxide (NO₂) or carbon monoxide (CO).
 - f. For facilities wishing to bubble either VOC or NO_x emissions, documentation that the bubble will result in total VOC or NO_x emissions, respectively, in compliance with the applicable emission limitation on a 24-hour basis as calculated under 310 CMR 7.00: *Appendix B(4)(e)1*. Exceptions to this averaging period may be granted by the Department as provided for in 310 CMR 7.00 *Appendix B(4)(e)5*. For VOC bubbles, the person must document that the bubble will result in total VOC emissions below the emissions baseline on a monthly basis.
 - g. Documentation that emission reductions used in the bubble are real, quantifiable, permanent and federally enforceable.
2. After approval of 310 CMR 7.00 *Appendix B(4)* by EPA into the Massachusetts SIP, certain applications to bubble will still require EPA approval. Persons wishing to include mobile and area sources in a bubble are required to have the approval of the EPA prior to inclusion of those sources in the bubble.
 3. Sources subject to enforcement action require the approval of EPA prior to use of a bubble to comply with 310 CMR 7.18 or 7.19. If EPA does not object to the use of a bubble by any facility subject to enforcement action during the public comment period, then this will be taken as EPA approval to bubble.

(e) Bubble Calculation.

1. In order to comply with a bubble for VOC or NO_x, the combined actual emissions (AcE) over a daily (or other period as allowed by 310 CMR 7.00 *Appendix B(4)(e)5*.) from all emission units in the bubble must be less than or equal to the allowable emission total (AIE) as determined by the following equations:

$$AcE = (Ac_1 \times B_1) + (Ac_2 \times B_2) + (...) + (Ac_n \times B_n)$$

$$AIE = (A_1 \times B_1) + (A_2 \times B_2) + (...) + (A_n \times B_n) + ERC$$

Where:

AcE = the combined actual emissions from the facility in pounds per day.

AIE = the allowable emissions from the facility in pounds per day.

Ac₁, Ac₂,...Ac_n = the actual emission rate of each emission unit (e.g. for VOC; pounds of VOC per gallon of solids applied; for NO_x, pounds of NO_x per million Btu heat input) included in the bubble. Where a single CEMS is used to determine the emission rate of more than one emission unit, this will be a combined emission rate.

A₁, A₂,...A_n = the most stringent applicable emission limitation for each unit of production (e.g. for VOC; pounds of VOC per gallon of solids applied; and for NO_x, pounds of NO_x per million Btu heat input).

B₁, B₂,...B_n = the actual number of production units processed each day (e.g. for VOC: gallons of solids applied; for NO_x; million Btu heat input per day).

ERC = the daily quantity of federally enforceable emission reduction credits (ERCs) from sources of either VOC or NO_x emissions, certified by the Department under 310 CMR 7.00 *Appendix B(3)*.

2. In addition to 310 CMR 7.00 *Appendix B(4)(e)1*., in order to comply with a bubble for VOC the total combined actual emissions, over a calendar month, from all emission units in the bubble must be less than the baseline emissions determined by the following equation:

Appendix B: continued

$$BE = (ER \times CU \times H) + (ERC \times D)$$

Where:

BE = the baseline emissions from the facility in pounds per month. Baseline emissions for a bubble is the sum of the baseline emissions for all emission units in the bubble.

ER = Emission rate specified in terms of mass emission per unit of production or throughput (e.g. pounds of VOC per gallon of solids applied) representative of the 1990 emission rate, the future allowable emission rate as determined by the SIP, 310 CMR 7.18 or other federally enforceable emission rate, whichever is lowest.

CU = Average hourly capacity utilization (e.g. gallons of solids applied per hour).

H = average number of hours of operation per month.

D = Number of days per month that the ERC generating facility operates.

ERC = the daily quantity of federally enforceable ERCs from emission units emitting VOC certified by the Department under 310 CMR 7.00 Appendix B(3).

3. In order to determine the average hourly Capacity Utilization (CU) and average number of hours of operation per month (H) in 310 CMR 7.00 *Appendix B(4)(e)2.*, the facility shall average the CU rate and monthly H over the two calendar year period immediately preceding the date of the application for a bubble. Documentation in sufficient detail to enable Department staff to replicate the determination of CU and H must be submitted with the application.

4. Should it be determined that the two year historical production information required to determine CU and H is not representative of normal historical production for the facility, the applicant may submit suitable and sufficient documentation to demonstrate to the Department that two alternative consecutive years within the five year period preceding the application should be used to determine CU and H for the facility. The Department shall have final approval of the use of alternative historical production information.

5. Should it be determined for a NO_x bubble that a 24 hour averaging period is insufficient to respond to the production demands at a specific facility, a facility operator or controller may submit suitable and sufficient documentation to demonstrate to the Department that an averaging period of up to and including 30 days for the bubble is more feasible given the production process and product requirements of the specific facility. Applications for a bubble with an averaging period of greater than 24 hours shall include a commitment from the facility to maintain a daily "cap" on maximum total emissions. The cap shall be determined according to the following equation:

$$\text{Cap} = (A_1 \times EI_1 \times H) + (A_2 \times EI_2 \times H) + (\dots) \\ + (A_n \times EI_n \times H) + \text{ERC}$$

Where:

Cap = The emission cap for the facility in pounds per day. The emission cap for a bubble is the sum of the emission caps for all emission units in the bubble.

A₁, A₂,...A_n = The emission rate for each emission unit specified in terms of mass emission per unit of production (e.g. pounds of NO_x per million Btu) representative of the 1990 emission rate, the future allowable emission rate as determined by the SIP, 310 CMR 7.19 or other federally enforceable emission rate, whichever is lowest.

Appendix B: continued

EI_1, EI_2, \dots, EI_n = The maximum energy input capacity for each emission unit in million Btu per hour.

H = 24 hours per day.

ERC = the daily quantity of federally enforceable ERCs from emission units emitting NO_x certified by the Department under 310 CMR 7.00 Appendix B(3).

(f) Department Review of a Request to Bubble. The following conditions apply to bubble applications;

1. The Department shall review each application for a bubble in a complete submittal of an emission control plan pursuant to 310 CMR 7.18(20) and 7.19(3).
2. An approved emissions bubble shall be in effect for a period of no more than five years from the date of Department final approval. However, for facilities subject to 310 CMR 7.00 Appendix C, with five year terms or less, the expiration date of the bubble shall be identical with the expiration date of the operating permit. At least nine months prior to the expiration of the bubble, the facility must reapply for permission to bubble. The Department shall review the bubble for compliance and may either renew the bubble or allow the bubble to expire. Should the bubble expire, the facility that held the bubble shall return to complying with applicable regulations based on continuous compliance for each regulated emission unit which was formerly in the bubble. Bubbles that do not already contain an emissions cap will not be required to take one as part of the renewal. For facilities with existing caps, new caps will not be recalculated.
3. The emission limitations in a bubble approval may be specific for each emission unit or may be expressed as a multi-emission unit average.

(g) Compliance Determination.

1. The Department shall determine compliance with the terms and conditions of the bubble through any means the Department judges to be adequate based upon the criteria listed below:
 - a. The provisions and emission limitations of any approved bubble shall be incorporated in the approval of the emission control plan submitted under 310 CMR 7.18(20) or 7.19(3).
 - b. Said emission control plan approval shall include, but not be limited to source specific emission limitation (*e.g.* pounds of VOC per gallon of solids applied; pounds of NO_x per million Btu heat input) and emission cap (*e.g.* pounds of VOC per month; pounds of NO_x per day) limits where applicable, record keeping requirements and test methods used to determine compliance.
 - c. Compliance with this approval shall be determined utilizing Department and EPA approved test methods and/or continuous emissions monitoring system, including but not limited to those methods referenced in 310 CMR 7.13, 7.14, 7.18(2), 7.19(13) as appropriate for the facility and emissions units.
 - d. In order for a facility to demonstrate compliance with the emission limitations of a bubble it is required that records shall be maintained. Records shall be kept on a daily basis for each emissions unit in the bubble and shall be specific enough to demonstrate compliance with the emission limits of the bubble for the facility as a whole. Record keeping shall include, but not be limited to:
 - i. Process information and identification of equipment;
 - ii. For surface coating operations, coating formulation information including the name of the coating, the color of the coating, the identification number for the coating as it relates to coating consumption information, the density of the coating, the total VOC contained in the coating by weight percent, the solids content of the coating as a volume percent, the percent by weight of exempt solvents as identified in the definition of VOC at 310 CMR 7.00 and the formulation of the diluents used or mixed in the coating (pounds VOC per gallon of diluent);
 - iii. For surface coating, daily coating/diluent consumption rate for each emissions unit in the bubble. Daily total of solvents used in clean-up.

Appendix B: continued

- iv. For bubbles to comply with 310 CMR 7.19, comply with the recordkeeping requirements contained in 310 CMR 7.19(13)(d).
 - v. Daily emissions or emission rates calculated in a manner to be consistent with the compliance averaging period approved for the facility.
 - vi. Any other information determined to be necessary by the Department to demonstrate compliance.
2. Records shall be kept at the facility and maintained for a five-year period. The records must be accessible for review by the Department or EPA.
 3. Persons holding an approved bubble plan must submit to the appropriate regional office of the Department quarterly (January - March, April - June, July - September, October - December) summary calculations based on daily emission calculations of 1) actual emissions, 2) allowable emissions, 3) whether actual emission exceeded allowable emissions over the reporting period, and 4) whether the facility was in compliance with the emission baseline cap for each day/month. Said submittal must be made 30 days after the end of the quarter for which the report is being prepared.
 4. Any exceedance of the bubble emissions limitations must be recorded and reported to include the date of exceedance and quantity of excess emissions and reported to the Department by the 30th of the month following the close of the calendar quarter in which the exceedance occurred.
- (5) Enforcement.
- (a) The Department shall enforce the provisions of 310 CMR 7.00: *Appendix B* under applicable law and regulations.
 - (b) For purposes of 310 CMR 7.00: *Appendix B(3)*, a violation of the emission limitation provisions of any permit issued or modified to reflect the creation of an emission reduction credit shall be enforced at the point of ERC creation.
- (6) Public Participation. The following conditions apply to applications under 310 CMR 7.00: *Appendix B*:
- (a) For persons applying under 310 CMR 7.00: *Appendix B(4)* to comply with either 310 CMR 7.18 or 7.19, the ECP approved by the Department must be approved by EPA as a SIP revision if EPA has not approved 310 CMR 7.00 *Appendix B(4)* as a part of the Massachusetts SIP.
 - (b) For persons applying for Emission Reduction Credit under 310 CMR 7.00: *Appendix B(3)*, the approval issued by the Department must be approved by EPA as a SIP revision if EPA has not approved 310 CMR 7.00: *Appendix B(3)* as a part of the Massachusetts SIP.
 - (c) The Department shall notify all applicants as to any administrative or technical deficiencies in the application or information submitted.
 - (d) For each Emission Reduction Credit (ERC) application submitted pursuant to 310 CMR 7.00: *Appendix B(3)* or (4), the Department shall:
 1. Make a proposed decision as to whether the application should be approved, approved with conditions, or a decision that the application should be disapproved.
 2. Provide a 30-day comment period for submittal of public comment.
 3. Post on a public website identified by the Department (which may be the Department's own website), for the duration of the public comment period, the following:
 - a. A notice of availability of the Department's proposed decision to approve or deny the ERC application and information on how to submit public comment;
 - b. The Department's proposed decision to approve or deny the ERC application; and
 - c. Information on how to access the administrative record for the Department's proposed decision on whether to approve or deny the ERC application.
 4. Send a copy of the notice required under 310 CMR 7.00: *Appendix B(6)(d)3.a.* to EPA.

Appendix B: continued

5. Consider all public comments in making a final decision whether or not to approve the application. The Department shall make all comments available for public inspection in the same location(s) where the Department made available information relating to the proposed approval under 310 CMR 7.00: *Appendix B(3)* or (4).

6. Make a final decision as to whether the plan approval application should be approved, approved with conditions, or disapproved.

7. Notify the applicant and the EPA in writing of the final decision and make such notification available for public inspection at the same location where the Department made available information and public comments relating to the source.

(7) Greenhouse Gas Credit Banking and Trading.

(a) Introduction and Statement of Purpose. The goal of the program set forth in 310 CMR 7.00: *Appendix B(7)* is to reduce, avoid or sequester emissions of greenhouse gas (GHG) in order for affected facilities as defined in 310 CMR 7.29 (“affected facilities”) to use GHG Credits for compliance with the applicable provisions of 310 CMR 7.29(5)(a)5.

(b) Definitions. The definitions in 310 CMR 7.00 apply to 310 CMR 7.00: *Appendix B(7)*. However, the following terms have the following meanings when they appear in 310 CMR 7.00: *Appendix B(7)*. Where a term defined in 310 CMR 7.00 definitions also appears in 310 CMR 7.00: *Appendix B(7)(b)*, the definition in 310 CMR 7.00: *Appendix B(7)(b)* controls.

Additional means GHG emission reductions, avoided emissions, or sequestered emissions that are not required by local, state or federal law or regulation, or as part of a local, state or federal permit, plan, or plan approval, agreement, administrative or judicial order, or as part of an enforcement action (including such laws, regulations, permits, plans, plan approvals, agreements, orders or actions taken to reduce other pollutants) at the time of submittal of a certification application. A requirement to obtain a permit or plan approval under local, state, or federal law solely for the purpose of constructing, installing, or operating a voluntary emission reduction, avoided emission, or sequestered emission project shall not be considered when determining whether or not such project is additional.

Afforestation means the conversion of land that has been in a non-forested state for at least the ten years prior to the filing of an initial application for GHG Credit certification to a forested state.

Avoided Emissions means emissions of a GHG that do not occur and which would have otherwise occurred if not for specific projects undertaken.

Cancel, Cancelled, or Cancellation means transferring an allowance or credit to a cancellation account, or otherwise terminating such allowance or credit in a manner consistent with its program of origin, to prevent subsequent use in a regulatory or voluntary program, or use for any purpose other than compliance with the CO₂ emissions standards of 310 CMR 7.29.

Cancellation Account means the account established in a Kyoto Protocol signatory country for purposes of canceling allowances. Such account will not be established by the Department.

Carbon Dioxide Equivalent or CO₂e means the weight of a quantity of a GHG multiplied by its Global Warming Potential.

Certification means the process of reviewing and conditionally approving a quantity of emission reductions, avoided emissions or sequestered emissions as GHG Credits.

Clean Development Mechanism, or CDM, means a mechanism, created under the Kyoto Protocol, that allows for the creation and use of CDM CERs to demonstrate compliance with emissions targets established by the Kyoto Protocol.

Clean Development Mechanism Certified Emissions Reduction, or CDM CER, means a greenhouse gas emissions offset currency created for projects that reduce, avoid, or sequester emissions of greenhouse gases in developing countries. CDM CERs are issued by the Executive Board of the Clean Development Mechanism, and are usable for meeting country-specific greenhouse gas emissions targets established by the Kyoto Protocol.

Appendix B: continued

Coastal Waters means the waters within the 12-mile limit pursuant to the Tariff Act of 1930 19 USC § 1401.

Energy Conservation Measure means an action that reduces demand for electricity. An Energy Conservation Measure means the installation or implementation of one or more of the following measures:

- (a) the design, acquisition, and installation of projects which result in energy savings, or
- (b) the modification of maintenance and operating procedures in a building or facility which result in energy savings, or
- (c) the installation, replacement, or modification of equipment, fixtures, or materials in a building or facility which reduce energy consumption, and include, but are not limited to, modifications to windows and doors; caulking and weather-stripping, insulation; automatic energy control systems; hot water systems; equipment required to operate steam, hydraulic, and ventilation systems; plant and distribution system modifications including replacement of burners, furnaces or boilers; devices for modifying fuel openings; electrical or mechanical furnace ignition stems; utility plant system conversions; replacement or modification of lighting fixtures; and energy recovery systems.

Energy Conservation Measures do not include reductions in labor, load shifting, or measures that do not reduce energy use directly.

Enforceable means enforceable by the Department.

European Union Emissions Trading Scheme or EU ETS means a multi-country, multi-sector greenhouse gas emission trading scheme implemented in 2005 by the European Commission to control emissions of greenhouse gases.

European Union Emissions Trading Scheme Phase II Allowance or EU ETS Phase II Allowance means an allowance that can be used during the second trading period of the EU ETS, which lasts from 2008-2012, and can be used to demonstrate compliance with emission reduction targets established by the European Commission.

GHG Credit means a credit based on an amount of emission reductions, avoided emissions or sequestered emissions of a GHG. One GHG Credit has an assigned value of one ton of carbon dioxide equivalent. GHG Credits shall be expressed in whole tons. When certifying or verifying GHG Credits, the number of GHG Credits is rounded down for decimals less than 0.5 and rounded up for decimals of 0.5 or greater.

GHG Expendable Trust means the trust established pursuant to 801 CMR 50.00 for the purpose of providing a separate segregated interest-bearing account for the receipt of payments made pursuant to 310 CMR 7.00: *Appendix B(7)(d)5*.

GHG Registry means the database of Massachusetts GHG Credits that have been certified, verified, voided or used.

Global Warming Potential or GWP means the ratio of the global heat trapping effect, direct and indirect, of one mass unit of a gas to that of the same mass unit of carbon dioxide over 100 years. In implementing 310 CMR 7.00: *Appendix B(7)*, the Department shall utilize the GHG GWPs, as published by the Intergovernmental Panel on Climate Change (IPCC), at the time of submittal of a certification application.

Greenhouse Gas or GHG means any of the gases for which a GWP is listed by the Intergovernmental Panel on Climate Change.

Kyoto Protocol means an international commitment, adopted in Kyoto on December 11 1997, to stabilize greenhouse gas emissions.

Appendix B: continued

Leakage means displacement of reduced, avoided, or sequestered GHG emissions to an area or location outside of the boundary of a project which reduced, avoided or sequestered the GHG emissions.

Permanent means that GHG emission reductions, avoided emissions, or sequestered emissions implemented for the purpose of generating GHG Credits must be assured for the life of the corresponding GHG Credits.

Phase II of the EU ETS means the second trading period of the EU ETS, which lasts from 2008-2012.

Real means actual.

Renewable Energy Generation Measure means an energy supply-side measure using sources that are essentially inexhaustible or regenerative. Renewable sources of energy include, but are not limited to, wood, geothermal, wind, photovoltaic and solar thermal energy.

Sequestered Emissions means carbon that has successfully been captured and securely stored that would have otherwise been emitted to or remained in the atmosphere.

Verifiable means that emission reductions, avoided emissions or sequestered emissions can be determined through replicable (as defined in 310 CMR 7.00: *Appendix B(2)*) methods which are acceptable to the Department.

Verification means the process of determining the extent to which certified GHG emission reductions, avoided emissions or sequestered emissions actually occurred.

(c) Applicability.

1. Entry into this GHG Banking and Trading Program is voluntary.
2. 310 CMR 7.00: *Appendix B(7)* applies to affected facilities and any other person applying for certification or verification of GHG Credits.
3. GHG Credits certified or verified under 310 CMR 7.00: *Appendix B(7)* may only be used to satisfy the requirements of 310 CMR 7.29(5)(a)5., except as provided in 310 CMR 7.00: *Appendix B(7)(h)*.
4. Applications for certification or verification of GHG Credits pursuant to 310 CMR 7.00: *Appendix B(7)(e)* may be submitted by any person.
5. Applications to verify and use EU ETS Phase II Allowances and CDM CERs pursuant to 310 CMR 7.00: *Appendix B(7)(i)* may be submitted only by affected facilities.

(d) Creation of GHG Credits.

1. GHG Credits may be created by projects which reduce emissions, avoid emissions, or sequester emissions. Examples include, but are not limited to: landfill gas combustion; sulfur hexafluoride (SF₆) capture; afforestation; natural gas, oil and propane end-use efficiency; methane capture from farming operations; stationary, area and mobile source projects; renewable energy projects; and energy conservation measures.
2. The following are not eligible for certification as GHG Credits: nuclear power generation, under-water and under-ground sequestration, and over-compliance with the cap and rate limitations in 310 CMR 7.29 by affected facilities.
3. Except as allowed pursuant to 310 CMR 7.00: *Appendix B(7)(d)4*, emission reduction, avoided emission or sequestered emission projects shall be located within the geographic limits of:
 - a. Connecticut, Delaware, Maine, Massachusetts, Maryland, New Hampshire, New Jersey, New York, Rhode Island, Vermont, or the coastal waters thereof; or,
 - b. The United States, or the coastal waters thereof, not including those regions specified in 310 CMR 7.00: *Appendix B(7)(d)3.a*.

Appendix B: continued

4. Offset Trigger Price.
 - a. The Department shall establish an offset trigger price for 2006, 2007, and 2008. The offset trigger price for calendar year 2006 shall be \$6.50 per ton of CO_{2e}. For each calendar year after 2006, until such time as the offset trigger price is exceeded, the Department shall publish the new offset trigger price by January 31st, which shall be equal to the previous year's offset trigger price adjusted up or down according to the previous year's Consumer Price Index.
 - b. By February 15, 2007, the Department shall determine whether the offset trigger price for the previous calendar year was exceeded, or whether there are insufficient GHG Credits available for purchase at or below the offset trigger price for the previous calendar year in the geographic region specified in 310 CMR 7.00: *Appendix B(7)(d)3*. In determining whether the offset trigger price for the previous calendar year was exceeded, the Department may consider the average calendar year price of GHG Credits or of applied-for GHG Credits for the previous year, or any other relevant information.
 - c. Notwithstanding 310 CMR 7.00: *Appendix B(7)(d)3*., if the Department determines by February 15, 2007 that the offset trigger price for the previous calendar year was exceeded, or that there are insufficient GHG Credits available for purchase at or below the offset trigger price for the previous calendar year in the geographic region specified in 310 CMR 7.00: *Appendix B(7)(d)3*., then, for all subsequent years, applicants may apply for certification and verification of projects that occur anywhere on Earth, and certification and verification of greenhouse gas allowances and credits from any allowance or credit system.
 - d. By June 1, 2008, the Department shall determine whether there are insufficient GHG Credits available for purchase at or below the offset trigger price in the geographic regions specified in 310 CMR 7.00: *Appendix B(7)(d)3*. In determining whether there are insufficient GHG Credits available for purchase at or below the offset trigger price, the Department may consider the average price of GHG Credits or applied-for GHG Credits, or any other relevant information. Notwithstanding 310 CMR 7.00: *Appendix B(7)(d)3*., if the Department determines by June 1, 2008 that there are insufficient GHG Credits available for purchase at or below the offset trigger price in the geographic regions specified in 310 CMR 7.00: *Appendix B(7)(d)3*., then, pursuant to 310 CMR 7.00: *Appendix B(7)(i)*, affected facilities may apply to verify and use EU ETS Phase II Allowances and CDM CERs that are eligible for use under Phase II of the EU ETS.
5. Trust Trigger Price.
 - a. The Department shall establish a trust trigger price for 2006, 2007, and 2008. The trust trigger price for calendar year 2006 shall be \$10.00 per ton of CO_{2e}. For each calendar year after 2006, the Department shall publish the new trust trigger price by January 31st, which shall be equal to the previous year's trust trigger price adjusted up or down according to the previous year's Consumer Price Index plus 2%.
 - b. By February 15, 2007, the Department shall determine whether the trust trigger price for the previous calendar year was exceeded. In making this determination, the Department may consider the average calendar year price of GHG Credits, of applied-for GHG Credits, or of projects funded or credits or allowances purchased by the GHG Expendable Trust for the previous year, or any other relevant information.
 - c. Notwithstanding 310 CMR 7.00: *Appendix B(7)(d)3*. and 4., if the Department determines by February 15, 2007 that the trust trigger price for the previous calendar year was exceeded, then, to demonstrate compliance with 310 CMR 7.29(5)(a)5., affected facilities may pay into the GHG Expendable Trust at the price established pursuant to 310 CMR 7.00: *Appendix B(7)(d)5.a.* to offset all or a portion of emissions above the historical actual emissions or excess emissions pursuant to 310 CMR 7.29(5)(a)5.c. and d., so that a combination of GHG Credits and payments into the GHG Expendable Trust equals emissions above historical actual emissions plus excess emissions.

Appendix B: continued

6. Notwithstanding 310 CMR 7.00: *Appendix B(7)(d)3.*, 4., and 5., if, at any time prior to September 1, 2009, the Commissioner determines that the price of GHG Credits or of applied-for GHG Credits substantially exceeds either of the price thresholds established in 310 CMR 7.00: *Appendix B(7)(d)4.* or 5., or if insufficient GHG Credits are available, then the Commissioner may, after public notice in the Environmental Monitor, and an opportunity for public comment: expand the geographic scope; allow payments into the GHG Expendable Trust at the rate set forth in 310 CMR 7.00: *Appendix B(7)(d)5.*; or reduce the annual average CO_{2e} tonnage requirements for certification of projects under 310 CMR 7.00: *Appendix B(7)(e)3.* If the geographic scope is expanded pursuant to 310 CMR 7.00: *Appendix B(7)(d)6.*, then applicants for projects that occur outside of the geographic limits of the United States or the coastal waters thereof shall follow the procedures in 310 CMR 7.00: *Appendix B(7)(i).* This provision shall have no effect on and after September 1, 2009.
7. In order to be certified or verified as GHG Credits pursuant to 310 CMR 7.00: *Appendix B(7)*, emission reductions, avoided emissions, or sequestered emissions shall be real, additional, verifiable, permanent, and enforceable and occur on or after January 1, 2006.
8. In the case of sequestered emissions, in order for a GHG Credit to be permanent, the owner shall, at a minimum, place the land within the sequestration project boundary under a legally binding instrument, acceptable to the Department, such that the sequestered emissions remain captured and securely stored in perpetuity.
9. In order to be certified or verified as GHG Credits pursuant to 310 CMR 7.00: *Appendix B(7)*, emission reductions, avoided emissions, or sequestered emissions shall be generated only by projects built and generating energy (in the case of certain avoided emissions), or built and in use, or installed and operational (in the case of emission reductions or sequestered emissions) on or after January 1, 2006.
10. Except as provided in 310 CMR 7.00: *Appendix B(7)(h)*, GHG Credits may be created for emissions reduced, avoided, or sequestered up to and including December 31, 2008, provided administratively complete applications for certification and verification are submitted to the Department no later than March 31, 2009. The Department shall have sole discretion to determine whether applications for certification and verification of GHG Credits are administratively complete.
- (e) Procedure For Certification and Verification of Emission Reductions, Avoided Emissions, or Sequestered Emissions that Occur Within the Geographic Limits of the United States and the Coastal Waters Thereof as GHG Credits.
1. An application for certification of GHG Credits may be submitted to the Department in advance of the time when the emission reduction, avoided emission, or sequestered emission actually occurs (prospective certification) or after the emission reduction, avoided emission, or sequestered emission has actually occurred (retrospective certification).
 2. In order for GHG Credits to be eligible for verification, an application for verification of GHG Credits shall be submitted to the Department within two calendar years after the end of the calendar year in which the emission reduction, avoided emission, or sequestered emission actually occurred. Applicants may apply for verification a maximum of two times per calendar year per approved certification.
 3. For project-based emission reductions, avoided emissions, or sequestered emissions located within the geographic scope set forth in 310 CMR 7.00: *Appendix B(7)(d)3.a.*, only those projects which generate an annual average over the period applied for of 5,000 or more tons CO_{2e}, as calculated under 310 CMR 7.00: *Appendix B(7)(d)*, are eligible to be certified as GHG Credits. For project-based emission reductions, avoided emissions, or sequestered emissions located within the geographic scope set forth in 310 CMR 7.00: *Appendix B(7)(d)3.b.*, only those projects which generate an annual average over the period applied for of 20,000 or more tons CO_{2e}, as calculated under 310 CMR 7.00: *Appendix B(7)(d)*, are eligible to be certified as GHG Credits.
 4. Application Procedures for projects.
 - a. Applications are required for certification and verification of GHG Credits from emissions reduction, avoided emission and sequestration projects.

Appendix B: continued

- b. The GHG Credit application shall be submitted on a form supplied by the Department and shall include but not be limited to: a complete description of the project; a quantification protocol that details the calculation method for the quantification of pre- and post-project emissions for emission reductions, quantity of avoided emissions, or quantity of sequestered emissions; and a proposed method for determining, monitoring and assuring compliance.
 - c. GHG Credit applications shall express emission reductions, avoided emissions, and or sequestered emissions in whole tons of CO_{2e}. When certifying or verifying GHG Credits, the number of GHG Credits is rounded down for decimals less than 0.5 and rounded up for decimals of 0.5 or greater.
 - d. GHG Credit applications shall contain sufficient information to allow the Department to evaluate each emission reduction, avoided emission or sequestered emission consistent with the requirements of 310 CMR 7.00: *Appendix B(7)*. Where applicable, the applicant shall specify the best management practice used to determine an emissions baseline.
 - e. GHG Credit applications shall be submitted by and bear the signature of a responsible official having the legal authority to bind the applicant.
 - f. GHG Credit applications shall comply with provisions of 310 CMR 4.00 *et seq.* for fees and permit procedures as applicable.
 - g. Concurrent participation in other registries and certification programs.
 - i. If an applicant has submitted information relative to the emission reductions, avoided emissions, or sequestered emissions for which the applicant is seeking certification under 310 CMR 7.00: *Appendix B(7)* to any other certification system, registry or inventory, then the applicant shall submit a copy of such information with its application for certification of GHG Credit in Massachusetts. The applicant shall state the status of its submittal to such other certification system, registry or inventory.
 - ii. If an applicant for GHG Credit fails to comply with 310 CMR 7.00: *Appendix B(7)(e)4.g.i.*, then the Department may deny any GHG Credit applied for and void any GHG Credits that may have been approved. GHG Credits shall be voided in cases where the GHG Credit is found to have been used for a purpose other than those specified in 310 CMR 7.00: *Appendix B(7)*.
 - h. GHG Credit certification and verification applications shall contain a description of potential project leakage, and describe how such leakage was or will be monitored and avoided. The Department shall void GHG Credits to the extent of any leakage that has been identified.
 - i. GHG Credit applications shall document the negotiated or anticipated price per ton of GHG Credit applied for.
6. Conditions of GHG Credit Certification and Verification Approvals.
- a. The Department may approve, approve with conditions, or deny GHG Credit applications.
 - b. The Department may require applicants to implement compliance assurance methods such as testing, monitoring, recordkeeping and reporting as part of the GHG Credit certification and verification approval.
 - c. The Department may consider scientific uncertainty and the extent to which a project may be harmful to the environment or public health when certifying or verifying GHG Credits.
- (f) Public participation procedures for certification and verification applications pursuant to 310 CMR 7.00: *Appendix B(7)*.
- 1. The Department shall publish, at the applicant's expense, a notice of public comment on a proposed approval, conditional approval, or disapproval. The Department will allow a 30-day public comment period following publication of the notice, and may hold a public hearing. After the close of the public comment period, the Department will issue a final decision.
 - 2. 310 CMR 7.00: *Appendix B(7)(f)* shall apply to applications for certification and verification pursuant to 310 CMR 7.00: *Appendix B(7)*, instead of the procedures under 310 CMR 7.00: *Appendix B(6)*.
 - 3. The public participation procedures of 310 CMR 7.00: *Appendix B(7)(f)* and 310 CMR 7.00: *Appendix B(6)* shall not apply to applications for use pursuant to 310 CMR 7.00: *Appendix B(7)(I)5*.

Appendix B: continued

(g) Use and Purchase of GHG Credits.

1. To the extent that affected facilities use GHG Credits to comply with 310 CMR 7.29(5)(a)5., only GHG Credits verified under 310 CMR 7.00: *Appendix B(7)* may be used.
2. GHG Credits that have been used to satisfy any GHG liability or requirement other than 310 CMR 7.29, with the exception of requirements to disclose environmental and other attributes of electricity generation, shall not be eligible for use to comply with the requirements of 310 CMR 7.29.
3. Any person who purchases a GHG Credit from any source shall report the price paid per GHG Credit to the Department within 30 days of purchase.
5. Nothing in 310 CMR 7.00: *Appendix B(7)* or 310 CMR 7.29(5)(a)5. shall be construed to limit the authority of the Department to terminate, void, or limit GHG Credits that have been certified or verified.
6. If the Department determines that any emission reductions, avoided emissions, or sequestered emissions used to generate GHG Credits are not real, additional, verifiable, permanent, or enforceable as defined in 310 CMR 7.00: *Appendix B(7)(b)*, such GHG Credits shall become void.
7. Any affected facility using voided GHG Credits shall replace the voided GHG Credits with an equivalent amount of valid GHG Credits and shall demonstrate compliance with this provision within one year of the date that the Department determines that such GHG Credits are void.
8. Violations of the requirements, for purposes of 310 CMR 7.00: *Appendix B(7)*, may be enforced against the affected facility, any person who applied for certification or verification of GHG Credits, or any combination thereof. Nothing in 310 CMR 7.00: *Appendix B(7)* shall limit the ability of the Department to take enforcement action for violations of 310 CMR 7.29 or 310 CMR 7.00: *Appendix B(7)*.

(h) Exchange of GHG Credits for CO₂ Budget Trading Program CO₂ Allowances.

1. Eligibility. GHG Credits shall be eligible for exchange with CO₂ Budget Trading Program CO₂ Allowances provided:
 - a. The project from which the GHG Credits were derived is not an offset project type listed under 310 CMR 7.70(10)(c)1.a.
 - b. The GHG Credits were not created from allowances or credits from another carbon constraining program.
 - c. An administratively complete application for certification of GHG Credits was submitted to the Department no later than January 25, 2008. The Department shall have sole discretion to determine whether an application for certification of GHG Credits is administratively complete.
2. Verification Deadline. GHG Credits may be created for emissions reduced, avoided, or sequestered up to and including December 31, 2012, provided:
 - a. The GHG Credits meet the requirements of 310 CMR 7.00: *Appendix B(7)(h)1.*; and
 - b. An administratively complete application for verification is submitted to the Department no later than March 31, 2013. The Department shall have sole discretion to determine whether an application for verification of GHG Credits is administratively complete.
3. Exchange.
 - a. At any time after January 1, 2009 and prior to December 1, 2013, any person may apply to the Department for CO₂ Budget Trading Program CO₂ Allowances in exchange for GHG Credits that meet the requirements of 310 CMR 7.00: *Appendix B(7)(h)1.* and 2. and which have been verified by the Department pursuant to 310 CMR 7.00: *Appendix B(7)(e)* and (f).
 - b. The Department shall exchange one CO₂ Budget Trading Program CO₂ allowance set aside pursuant to 310 CMR 7.70(5)(c)1.a. for every two GHG Credits provided to the Department pursuant to 310 CMR 7.00: *Appendix B(7)(h)3.a.*
 - c. The Department shall retire all GHG Credits exchanged for CO₂ Budget Trading Program CO₂ Allowances.

(i) Procedures for Verification and Use of EU ETS Phase II Allowances and CDM CERs that are Eligible for Use Under Phase II of the EU ETS.

1. Eligibility. Provided the geographic scope is expanded beyond the United States and its coastal waters pursuant to 310 CMR 7.00: *Appendix B(7)(d)4.* or 6., the following are eligible to be used to demonstrate compliance with the CO₂ emissions standards of 310 CMR 7.29(5)(a)5. provided they have been verified.

Appendix B: continued

- a. EU ETS Phase II allowances; and,
- b. CDM CERs provided that:
 - i. The CDM CERs are acceptable and valid for use in Phase II of the European Union Emissions Trading Scheme at the time of application for verification;
 - ii. The CDM CERs were not created for a project type listed under 310 CMR 7.00: *Appendix B(7)(d)2.*; and
 - iii. The CDM CERs are permanent.
2. For purposes of 310 CMR 7.00: *Appendix B(7)*, EU ETS Phase II Allowances and CDM CERs that are eligible for use under Phase II of the EU ETS are presumed to be certified GHG emission reductions, avoided emissions, or sequestered emissions.
3. Applications for verification shall be submitted in a form determined by the Department and shall include but not be limited to:
 - a. Name of the allowances and credits;
 - b. Name of the regulatory scheme and issuing body of the allowances or credits;
 - c. Where applicable, the type of project for which the CDM CERs were created;
 - d. Serial numbers of the allowances and credits;
 - e. Total tons of CO_{2e} represented by the allowances and credits;
 - f. Demonstration that the CDM CERs are acceptable and valid for use with Phase II of the EU ETS at the time of application for verification;
 - g. Identification of the owner of the allowances and credits;
 - h. Certification by the relevant regulatory body that the allowances and credits have been issued;
 - i. The price paid, or to be paid, for such allowances or credits.
4. Applications for verification shall be for not less than 20,000 tons CO_{2e}, or 18,144 metric tons CO_{2e}.
5. Applications to use verified EU ETS Phase II Allowances and verified eligible CDM CERs for compliance with the CO₂ emission standards in 310 CMR 7.29(5)(a)5., shall be submitted in a form determined by the Department and shall include but not be limited to a demonstration and certification that the allowances or credits were cancelled to prevent their use for any other regulatory or voluntary purposes other than for compliance with 310 CMR 7.29(5)(a)5.
 - a. This demonstration shall include but not be limited to:
 - i. Evidence that the allowance or credit was actually purchased;
 - ii. A legal document or other written statement issued by the relevant regulatory body that the allowances and credits have been cancelled; and,
 - iii. Evidence that the allowance or credit has not and cannot be used for any other regulatory or voluntary program.
 - b. The certification statement shall be signed under the pains and penalties of perjury by a Responsible Official of the affected facility and the entity that cancelled the allowance or credit (if not the affected facility).
6. Application Deadlines.
 - a. Administratively complete applications submitted pursuant to 310 CMR 7.00: *Appendix B(7)(i)3.* shall be submitted to the Department no later than March 31, 2009.
 - b. Administratively complete applications submitted pursuant to 310 CMR 7.00: *Appendix B(7)(i)5.* shall be submitted to the Department no later than June 30, 2009.
 - c. The Department shall have sole discretion to determine whether applications submitted pursuant to 310 CMR 7.00: *Appendix B(7)(i)3.* or 5. are administratively complete.
7. The Department will make a finding regarding the administrative completeness for applications submitted pursuant to 310 CMR 7.00: *Appendix B(7)(i)* within 15 business days of submittal, and will make a consistency determination within 30 days of its finding that an application is administratively complete.
8. The Department may approve, approve with conditions, or deny applications submitted pursuant to 310 CMR 7.00: *Appendix B(7)(i)3.* or 5.
9. Verified cancelled allowances or credits are not GHG Credits under 310 CMR 7.00: *Appendix B(7)* and cannot be transferred, exchanged pursuant to 310 CMR 7.00: *Appendix B(7)(h)*, or used for any purpose other than compliance with the CO₂ emissions standards of 310 CMR 7.29, or by any entity other than the affected facility that submitted an application pursuant to 310 CMR 7.00: *Appendix B(7)(i)3.* and 5.

NON-TEXT PAGE

APPENDIX C: OPERATING PERMIT AND COMPLIANCE PROGRAM

(1) Definitions: Terms used in 310 CMR 7.00: *Appendix C* are defined at 310 CMR 7.00: *Definitions* or in 310 CMR 7.00: *Appendix C*. Where a term is defined in both 310 CMR 7.00: *Definitions* and in 310 CMR 7.00: *Appendix C*, the definition in 310 CMR 7.00: *Appendix C* is applicable.

Affected Source means a source that includes one or more affected units.

Affected State means any state:

- (a) Whose air quality may be affected and is contiguous to Massachusetts; or
- (b) Which is located within 50 miles of a facility subject to the operating permit and compliance program in Massachusetts.

Affected Unit means a fossil fuel fired combustion device subject to the emission reduction requirements or limitations under Title IV (Acid Rain) of 42 U.S.C. 7401.

Allowance means an authorization by the Administrator of the United States Environmental Protection Agency (EPA) under the Acid Rain Program, to emit up to one ton of sulfur dioxide during or after a specified calendar year.

Applicable Requirement means all of the following as they apply to emissions units or control equipment in a facility subject to the requirements of 310 CMR 7.00: *Appendix C*. This includes requirements that have been promulgated or approved by EPA through rule making at the time of issuance but have future-effective compliance dates:

- (a) Any standard or other requirement provided for in the applicable implementation plan, contained at 310 CMR 7.00 approved or promulgated by EPA through rulemaking under 42 U.S.C. 7401, Title I that implements the relevant requirements of 42 U.S.C. 7401, including any revisions to that plan promulgated in 40 CFR Part 52;
- (b) Any term or condition of any approval issued by the Department pursuant to any regulation under 310 CMR 7.00 which has been approved or promulgated through rulemaking under 42 U.S.C. 7401, Title I, including parts C or D (310 CMR 7.00: *Appendix A* or 40 CFR 52.21 PSD approvals), of 42 U.S.C. 7401;
- (c) Any standard or other requirement under 42 U.S.C. 7401, The Clean Air Act, § 111, including § 111(d) (New Source Performance Standards (NSPS));
- (d) Any standard or other requirement under 42 U.S.C. 7401, The Clean Air Act, § 112, including any requirement concerning accident prevention under 42 U.S.C. 7401, The Clean Air Act, § 112(r)(7) (National Emission Standard for Hazardous Air Pollutants (NESHAPS));
- (e) Any standard or other requirement of the acid rain program under Title IV of 42 U.S.C. 7401 or the regulations promulgated thereunder;
- (f) Any requirement(s) established pursuant to 42 U.S.C. 7401, § 504(b) (monitoring and analysis) or § 114(a)(3) (enhanced monitoring 40 CFR Part 64 regulations);
- (g) Any standard or other requirement governing solid waste incineration, under 42 U.S.C. 7401, The Clean Air Act, § 129;
- (h) Any standard or other requirement for consumer and commercial products, under 42 U.S.C. 7401, The Clean Air Act § 183(e);
- (i) Any standard or other requirement for tank vessels under 42 U.S.C. 7401, The Clean Air Act, § 183(f);
- (j) Any standard or other requirement of the program to control air pollution from outer continental shelf sources, under 42 U.S.C. 7401, § 328;
- (k) Any standard or other requirement of the regulations promulgated to protect stratospheric ozone under 42 U.S.C. 7401, Title VI, unless the EPA has determined that such requirements need not be contained in an operating permit;
- (l) Any national ambient air quality standard or increment or visibility requirement under 42 U.S.C. 7401, Title I, part C but only as it would apply to temporary sources permitted pursuant to 42 U.S.C. 7401, § 504(e); and
- (m) Any other standard or requirement contained in 310 CMR 7.00 that has not been approved or promulgated by EPA through rulemaking under 42 U.S.C. 7401, Title I. These applicable requirements would be listed as a "state only" enforceable provision of an operating permit.

Appendix C: continued

Carbon Dioxide Equivalent, or CO_2e , means the amount of GHG emitted by a facility, computed by multiplying the mass amount of emissions in tons per year for each of the six greenhouse gases in the pollutant GHG, by each gas's associated global warming potential set forth in 40 CFR part 98 subpart A Table A-1 - Global Warming Potentials, and summing the resultant value for each to compute tons per year CO_2e .

Complete Application means an application, filed on form(s) specified by the Department, that is completed consistent with the criteria set forth in the instructions for the application form(s). To be deemed complete, an application must provide all information required pursuant to 310 CMR 7.00: *Appendix C(5)b.*, except that applications for permit modifications or amendments need supply such information only if it is related to the proposed change. Information submitted must be sufficient to evaluate the subject source(s) and its application; and to determine all applicable requirements, and shall be submitted over the signature of a responsible official who certifies the submitted information is in accordance with 310 CMR 7.00: *Appendix C(5)(b)9.* and (5)(c). The source(s)' ability to operate without a permit, as set forth in 310 CMR 7.00: *Appendix C(11)* (application shield), shall be in effect from the date the application is determined or deemed to be complete until the final permit is issued, provided that the applicant submits any requested additional information by the deadline specified by the Department.

Designated Representative shall have the meaning given to it in 42 U.S.C. 7401, § 402(26) and the regulations promulgated thereunder.

Draft Permit means the version of an operating permit which is released for an opportunity for comment by the public, EPA or an affected state in compliance with 310 CMR 7.00: *Appendix C(6)(a)* prior to the Department's final decision on an operating permit application.

Emergency means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation would require immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventative maintenance, careless or improper operation, operator error or decision to keep operating despite knowledge of any of these things.

Emissions Unit(s) means any part or activity of a facility that emits or has the potential to emit any regulated air pollutant or any pollutant listed under 42 U.S.C. 7401, the Clean Air Act, § 112(b). This term is not meant to alter or affect the definition of the term "unit" for purposes of 42 U.S.C. 7401, Title IV (the acid rain provisions). Further clarification of the scope of "emission unit(s)" is provided by the Department by policy.

Emissions Allowable Under the Permit means a federally enforceable permit term or condition determined at issuance to be required by an applicable requirement that establishes an emissions limit (including a work practice standard), or a federally enforceable emissions cap.

Facility means any installation or establishment and associated equipment, located on the same, adjacent or contiguous property, capable of emissions and are under control of the same person.

Final Operating Permit means the version of an operating permit issued by the Department that has completed all review procedures required by 310 CMR 7.00: *Appendix C* including EPA review.

Fugitive Emissions are those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally-equivalent opening.

General Operating Permit means a standardized operating permit that the Department may make applicable to numerous similar operation(s) or facilities under 310 CMR 7.00: *Appendix C(15)*.

Appendix C: continued

GHG Mass Basis means the sum of the mass amount of emissions in tons per year of the six greenhouse gases in the pollutant GHG prior to multiplying by each gas's associated global warming potential set forth in 40 CFR part 98 subpart A Table A-1 - *Global Warming Potentials*.

Greenhouse Gas (GHG) means the air pollutant that is the aggregate of the group of six gases: Carbon dioxide (CO₂), Methane (CH₄), Nitrous oxide (N₂O), Hydrofluorocarbons (HFCs), Perfluorocarbons (PFCs), and Sulfur hexafluoride (SF₆).

Hazardous Air Pollutant (HAP) means an air contaminant listed by EPA as a HAP, pursuant to 42 U.S.C. 7401, § 112. That list is incorporated by reference in 310 CMR 7.00: *Appendix C*, together with all amendments and supplements thereto. A copy of the list is available from the Department.

NON-TEXT PAGE

Appendix C: continued

Laboratory Hoods means a boxlike non-production structure intended for placement on a table or bench; the bench and the hood may be one integral structure. The opening(s) is provided with a sash or sashes that move vertically or horizontally to close the opening(s). Provisions are made for exhausting air from the top or back of the hood, and adjustable internal baffles are provided to obtain air flow distribution across the open face(s). Laboratory hoods may include those used for special purposes such as, but not limited to, capturing gases from equipment such as atomic absorption, gas chromatograph, liquid pouring or mixing stations and heat sources. It may additionally include floor mounted hoods with sash and/or doors for closing the open face.

Major Source means any stationary source (or any group of stationary sources that are located on one or more contiguous or adjacent properties, and are under common control of the same person (or persons under common control)) belonging to a single major industrial grouping and that are described in 310 CMR 7.00: Appendix C Major Source. For the purpose of defining "major source," a stationary source or group of stationary sources shall be considered part of a single industrial grouping if all of the pollutant emitting activities at such source or group of sources on contiguous or adjacent properties belong to the same Major Group (*i.e.*, all have the same two-digit code) as described in the Standard Industrial Classification Manual, 1987. Notwithstanding the previous statement, for the purpose of determining major source under 42 U.S.C. 7412, The Clean Air Act, § 112, all hazardous air pollutants as defined under 42 U.S.C. 7412, The Clean Air Act, § 112 shall be summed regardless of the SIC code classification of the process emitting said pollutant(s).

- (a) A major source under 42 U.S.C. 7401, The Clean Air Act § 112 which is defined as:
1. For pollutants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, ten tons per year (tpy) or more of any hazardous air pollutant which has been listed pursuant to 42 U.S.C. 7401, The Clean Air Act, § 112(b), 25 tpy or more of any combination of such hazardous air pollutants, or such lesser quantity as the Administrator may establish by rule. Notwithstanding the preceding sentence, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources; or
 2. For radionuclides, "major source" shall have the meaning specified by the Administrator by rule.

(b) A major stationary source of air pollutants, as defined in 42 U.S.C. 7602, The Clean Air Act, § 302, that directly emits or has the potential to emit, 100 tpy or more of any air pollutant (including any major source of fugitive emissions of any such pollutant, as determined by rule by the Administrator). The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of 42 U.S.C. 7602, The Clean Air Act, § 302(j), unless the source belongs to one of the following categories of stationary source:

1. Coal cleaning plants (with thermal dryers);
2. Kraft pulp mills;
3. Portland cement plants;
4. Primary zinc smelters;
5. Iron and steel mills;
6. Primary aluminum ore reduction plants;
7. Primary copper smelters;
8. Municipal incinerators capable of charging more than 250 tons of refuse per day;
9. Hydrofluoric, sulfuric, or nitric acid plants;
10. Petroleum refineries;
11. Lime plants;
12. Phosphate rock processing plants;
13. Coke oven batteries;
14. Sulfur recovery plants;
15. Carbon black plants (furnace process);
16. Primary lead smelters;
17. Fuel conversion plant;
18. Sintering plants;
19. Secondary metal production plants;

Appendix C: continued

20. Chemical process plants;
 21. Fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;
 22. Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
 23. Taconite ore processing plants;
 24. Glass fiber processing plants;
 25. Charcoal production plants;
 26. Fossil-fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input; or
 27. All other stationary source categories regulated by a standard promulgated under 42 U.S.C. 7411 and 7412, The Clean Air Act, §§ 111 and 112.
- (c) A major stationary source as defined in 42 U.S.C. 7401, Title I, part D, including:
1. For ozone non attainment areas, sources with the potential to emit 100 tpy or more of volatile organic compounds or oxides of nitrogen in areas classified as "marginal" or "moderate," 50 tpy or more in areas classified as "serious," 25 tpy or more in areas classified as "severe," and ten tpy or more in areas classified as "extreme"; except that the references in this paragraph to 100, 50, 25, and ten tpy of nitrogen oxides shall not apply with respect to any source for which the Administrator has made a finding, under 42 U.S.C. 7401, The Clean Air Act, § 182(f)(1) or (2), that requirements under 42 U.S.C. 7401, The Clean Air Act, § 182(f) do not apply;
 2. For ozone transport regions established pursuant to 42 U.S.C. 7401, The Clean Air Act, § 184 sources with the potential to emit 50 tpy or more of volatile organic compounds;
 3. For carbon monoxide non attainment areas:
 - a. that are classified as "serious," and
 - b. in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the Administrator, sources with the potential to emit 50 tpy or more of carbon monoxide; and
 4. For particulate matter (PM-10) non attainment areas classified as "serious," sources with the potential to emit 70 tpy or more of PM-10.

Operating Permit means any permit or group of permits covering emission unit(s) at a facility subject to the permitting requirement of 310 CMR 7.00: *Appendix C* that is issued, renewed, amended or revised pursuant to 310 CMR 7.00: *Appendix C*.

Permit Modification means a revision to any operating permit issued under 310 CMR 7.00: *Appendix C* that does not meet the requirements for an administrative amendment.

Proposed Permit means the version of a permit that the Department proposes to issue and forwards to the EPA for review in compliance with 310 CMR 7.00: *Appendix C(6)* and 40 CFR 70.8.

Regulated Air Pollutant means the following:

- (a) Nitrogen oxides or any volatile organic compound;
- (b) Any pollutant for which a national ambient air quality standard has been promulgated;
- (c) Any pollutant that is subject to any standard promulgated under 42 U.S.C. 7401, The Clean Air Act, § 111, New Source Performance Standard 40 CFR Part 60;
- (d) Any Class I or II substance subject to a standard promulgated under or established by 42 U.S.C. 7401, Title VI; or
- (e) Any pollutant subject to a standard promulgated under 42 U.S.C. 7401, The Clean Air Act, § 112, National Emissions Standards for Hazardous Air Pollutants, 40 CFR Part 61, or other requirements established under 42 U.S.C. 7401, The Clean Air Act, § 112, including §§ 112(g), (j), and (r), including the following:
 1. Any pollutant subject to requirements under 42 U.S.C. 7401, § 112(j). If the EPA fails to promulgate a standard by the date established pursuant to 42 U.S.C. 7401, The Clean Air Act, § 112(e), any pollutant for which a subject source would be major shall be considered to be regulated on the date 18 months after the applicable date established pursuant to 42 U.S.C. 7401, The Clean Air Act, § 112(e); and

Appendix C: continued

2. Any pollutant for which the requirements of 42 U.S.C. 7401, § 112(g)(2) have been met, but only with respect to the individual source subject to 42 U.S.C. 7401, § 112(g)(2) requirement.

Renewal means the process by which a permit can be reissued at the end of its term or earlier should the Department determine a modification meets the requirements of renewal.

Responsible Official means one of the following:

- (a) For a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:
 1. the facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars); or
 2. the delegation of authority to such representative is approved in advance in writing by the Department;
- (b) For a partnership or sole proprietorship: a general partner or the proprietor, respectively;
- (c) For a municipality, State, Federal, or other public agency: either a principal executive officer or ranking elected official. For the purposes of this part, a principal executive officer of a Federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (*e.g.*, a Regional Administrator of EPA); or
- (d) For affected sources:
 1. The designated representative insofar as actions, standards, requirements, or prohibitions under 42 U.S.C. 7401, Title IV or the regulations promulgated thereunder are concerned; and
 2. The designated representative for any other purposes under 310 CMR 7.00: *Appendix C(4)*.

Section 502(b)(10) Changes are changes that contravene an expressed operating permit term but would not violate any applicable requirement(s) or contravene federally enforceable permit term(s) and condition(s) that are monitoring (including test methods), record keeping, reporting, or compliance certification requirements.

Stationary Source means any building, structure, facility, or installation that emits or may emit any regulated air pollutant or any pollutant listed under 42 U.S.C. 7401, § 112(b). "Building, structure, facility, or installation" means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person.

Timely means, with respect to an application for an operating permit or permit revision, in accordance with a time frame as set forth in 310 CMR 4.00: *Timely Action Schedule and Fee Provisions* and 7.00: *Appendix C*.

(2) Applicability.

- (a) 310 CMR 7.00: *Appendix C* applies to any facility which:
 1. emits or has federal potential emissions, in the aggregate, including from exempt and insignificant activities, of any regulated air pollutant in an amount which equals or exceeds any one of the following: 50 tons per year of VOC; 50 tons per year of NO_x; ten tons per year of any hazardous air pollutant (HAP) subject to 42 U.S.C. 7401 § 112, 25 tons per year of any combination of HAPs; or 100 tons per year of any other regulated air pollutant, excluding GHGs; or
 2. is subject to a standard or other requirements under 42 U.S.C. 7401, § 112 (NESHAPS), except that a facility is not required to obtain a permit solely because it is subject to the regulation or requirements under 42 U.S.C. 7401, § 112(r) (accidental release); or
 3. is subject to a New Source Performance Standard (NSPS), including an area source requirement, or other requirements under 42 U.S.C. 7401, § 111; or

Appendix C: continued

4. is an affected source as defined in 42 U.S.C. 7401, Title IV (acid rain provisions); or
 5. is in any other source category designated by the EPA pursuant to 40 CFR, § 70.3(a)(5) or pursuant to a rulemaking under 42 U.S.C. 7401, §§ 111 or 112 where EPA promulgates a standard for a source category and EPA determines not to exempt any or all non-major sources subject to that standard from the requirement to obtain an operating permit.
- (b) Any non-major source for which an operating permit is required under 310 CMR 7.00: *Appendix C(2)(a)2.* through 3., which is not an affected source under 42 U.S.C. 7401, Title IV or a solid waste incineration unit required to obtain a permit pursuant to 42 U.S.C. 7401, § 129(e), is deferred from the obligation to obtain an operating permit until such time as the Department and EPA complete a rulemaking, including a rule making by EPA under 42 U.S.C. 7401, §§ 111 or 112, to determine how the operating permit program should be structured for non-major sources, and the appropriateness of any permanent exemptions. Notwithstanding the previous sentence, any non-major source which becomes subject to a rulemaking promulgated by EPA pursuant to 42 U.S.C. 7401 §§ 111 or 112 ("NSPS, NESHAPs or MACT") on or after July 21, 1992, where the rulemaking explicitly requires the source to obtain an operating permit, shall submit an operating permit application in accordance with the schedule established in that rulemaking. Where the rulemaking defers to the regulating authority, the application is due on the date that is one year after the date on which the source becomes subject to the rulemaking.
- (c) Any source listed in 310 CMR 7.00: *Appendix C(2)(b)* deferred from the requirement to obtain a permit may elect to apply for an operating permit pursuant to 310 CMR 7.00: *Appendix C.*
- (d) Notwithstanding 310 CMR 7.00: *Appendix C(2)(a)*, a facility is not subject to this Appendix if the only applicable requirement which applies to the facility is:
1. A requirement pursuant to 40 CFR Part 60, Subpart AAA - Standards of Performance for New Residential Wood Heaters; or
 2. A requirement pursuant to 40 CFR Part 61, Subpart M - National Emission Standard for Hazardous Air Pollutants for Asbestos, section 61.145, Standard for Demolition and Renovation.
- (e) For the purpose of determining applicability under 310 CMR 7.00: *Appendix C(2)(a)*, an owner or operator may elect to treat any part(s) of a facility used solely for research and development (R&D) operations, co-located with a major source, as a separate facility providing; 1) the SIC code for the R&D part of the facility differs from the rest of the facility; and 2) the relationship between the functions of the R&D part of the facility and the remainder of the facility does not involve support of the latter by the former.
- (f) An owner or operator of a facility subject to 310 CMR 7.00: *Appendix C* may elect to be relieved from the requirement to obtain an operating permit under 310 CMR 7.00: *Appendix C.* To be eligible, one of the following must be complied with:
1. A source specific SIP revision which has been approved by EPA;
 2. Restricted emission status issued pursuant to 310 CMR 7.02(9); or
 3. A construction, substantial reconstruction or modification plan approval issued pursuant to 310 CMR 7.02(1) which limits the potential emissions of the total facility below the applicability thresholds stated at 310 CMR 7.00: *Appendix C(2)(a)*; or
 4. Operating in accordance with the requirements of 310 CMR 7.02(11).
- (3) General Provisions.
- (a) 1. On or before June 30, 1996, person(s) owning or operating a facility subject to the requirements of 310 CMR 7.00: *Appendix C* based upon their operations in calendar years 1990, 1991, 1992 or 1993, and not electing to comply with a federally approved option listed at 310 CMR 7.00: *Appendix C(2)(f)* shall enroll with the Department.

Appendix C: continued

2. On or after July 1, 1996, any owner or operator of a facility shall automatically be enrolled when subject to 310 CMR 7.00: *Appendix C*.
- (b) Any owner or operator of a facility subject to the requirements of 310 CMR 7.00: *Appendix C* shall submit a complete application for a permit according to time frames specified in 310 CMR 7.00: *Appendix C*(4)(a) and 310 CMR 4.00, and shall operate in compliance with the terms and conditions of a permit issued pursuant to 310 CMR 7.00: *Appendix C*.
- (c) Permits shall be for a fixed term of five years in the case of affected sources, and for a term not to exceed five years in the case of all other facilities. Notwithstanding this requirement, permits for solid waste incineration units combusting municipal waste subject to standards under 42 U.S.C. 7401, § 129(e) shall be issued for a period not to exceed 12 years and reviewed by the Department at least every five years.
- (d) No person shall cause, suffer, allow or permit the operation of any facility subject to 310 CMR 7.00: *Appendix C*:
 1. Unless a timely and complete application for an operating permit or renewal has been submitted to the Department;
 2. If the facility's operating permit has expired unless a timely and complete application pursuant to 310 CMR 7.00: *Appendix C*(4) has been submitted to the Department;
 3. If the facility's operating permit has been revoked;
 4. Unless all fees required pursuant to 310 CMR 4.00 have been remitted to the Department or waived by the Department in accordance with 310 CMR 4.00; and
 5. If modified, unless the procedures in 310 CMR 7.00: *Appendix C*(7) and/or (8) as applicable, have been complied with.
- (e) An initial operating permit, permit modification, or renewal may be issued only if all of the following conditions have been met:
 1. A complete application for a permit, general permit, permit modification, or permit renewal has been received and reviewed by the Department;
 2. Except for modifications qualifying for minor permit modification procedures under 310 CMR 7.00: *Appendix C*(8), the requirements for public participation contained in 310 CMR 7.00: *Appendix C*(6) have been complied with;
 3. The requirements for notifying and responding to affected States under 310 CMR 7.00: *Appendix C*(6) has been complied with;
 4. The conditions of the permit provide for compliance with all applicable requirements and the requirements of 310 CMR 7.00: *Appendix C*; and
 5. The EPA has received a copy of the proposed permit and any notices required under 310 CMR 7.00: *Appendix C*(6), and has not objected to issuance of the permit within the time period specified therein.
- (f) Any facility subject to 310 CMR 7.00: *Appendix C* and operating without an operating permit, or failing to comply with any of the terms of its operating permit; or any provision of 310 CMR 7.00: *Appendix C*; or any order issued by the Department pursuant to 310 CMR 7.00: *Appendix C*, shall be subject to enforcement pursuant to the Massachusetts General Laws and regulations promulgated thereunder.
- (g) Each operating permit issued by the Department shall include provisions in accordance with the following:
 1. Each operating permit shall include all applicable requirements, including any emissions limitations and standards and any operational requirements, and shall cite to the legal authority for each requirement. Each operating permit shall also identify any difference in form between the permit condition and the applicable requirement upon which the permit condition is based.

Appendix C: continued

2. The operating permit shall specify the expiration date of the permit in accordance with 310 CMR 7.00: *Appendix C(3)(c)*.
3. The operating permit shall require emissions monitoring and analysis procedures or test methods in accordance with 310 CMR 7.00: *Appendix C(9)*.
4. The operating permit shall require recordkeeping and reporting in accordance with 310 CMR 7.00: *Appendix C(10)*. The operating permit shall specify the format and time frequency for reporting to the Department all monitoring data and related supporting information in accordance with 310 CMR 7.00: *Appendix C(10)*.
5. For a permittee subject to EPA's acid rain deposition control program pursuant to Title IV, 42 U.S.C. § 7651 et seq., the operating permit shall include and be consistent with the regulations in Title IV.
6. The operating permit shall include a severability clause to ensure the continued validity of the various operating permit requirements in the event of a challenge to any portions of the operating permit.
7. The operating permit shall include the following statements:
 - a. The permittee shall comply with all conditions of the operating permit including the approved compliance plan. Any noncompliance with a permit condition constitutes a violation of 310 CMR 7.00: *Appendix C* or 42 U.S.C. 7661 et seq., and is grounds for enforcement action; for permit termination, revocation and reissuance, or revision; or for denial of an operating permit renewal application.
 - b. A permittee in an enforcement action cannot use as a defense that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of the operating permit.
 - c. The operating permit may be modified, revoked, reopened, and reissued, or terminated for cause. The filing of a request by the permittee for an operating permit revision, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any operating permit condition.
 - d. The operating permit does not convey any property rights of any sort, or any exclusive privilege.
 - e. All terms and conditions in an operating permit, including any provisions designed to limit a facility's potential to emit, are enforceable by the EPA and citizens under 42 U.S.C. 7661 et seq. Notwithstanding the preceding sentence, the Department shall specifically designate in the operating permit any terms and conditions that are not federally enforceable because the terms and conditions are not required under 42 U.S.C. 7661 et seq. or under any of its applicable requirements.
8. The operating permit shall require the permittee to pay fees to the Department consistent with the fee schedule pursuant to 310 CMR 4.00.
9. The operating permit shall contain terms and conditions for reasonably anticipated alternative operating scenarios as approved by the Department.
10. The operating permit shall include a provision stating that no operating permit revision shall be required, under any approved economic incentives program, marketable permits program, emissions trading program and other similar programs or processes, for changes that are provided for in the operating permit.
11. If the permittee has authorization for intra-facility emissions trading, the operating permit shall state the terms and conditions for the trading of emissions increases and decreases within the permitted facility in accordance with the requirements of 310 CMR 7.00: *Appendix C(7)(b)* or 310 CMR 7.00: *Appendix B*.
12. The operating permit shall include a statement that upon presentation of credentials and other documents as may be required by law, the permittee shall allow the Department or an authorized representative to perform the following:
 - a. Enter upon the permittee's premises where an operating permit facility is located or emissions-related activity is conducted, or where records must be kept under the conditions of the operating permit;
 - b. Have access to and copy, at reasonable times, any records that must be kept under the conditions of the operating permit;
 - c. Inspect at reasonable times any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the operating permit; and

Appendix C: continued

- d. As authorized by 42 U.S.C.7661 *et seq.*, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the operating permit or applicable requirements.
13. The operating permit shall include requirements for Compliance Certification consistent with 310 CMR 7.00: *Appendix C(5)(b)(9)*.
14. The operating permit shall include a schedule of compliance and a schedule for the submittal of progress reports, both approved by the Department, consistent with 310 CMR 7.00: *Appendix C(5)(b)(8)*.
15. The operating permit shall state whether a permit shield is applicable pursuant to 310 CMR 7.00: *Appendix C(12)*.
16. The operating permit shall contain provisions for emergency conditions in accordance with in 310 CMR 7.00: *Appendix C(16)*.
17. The operating permit may include other provisions as required by the Department.
- (h) An operating permit does not convey any property right of any sort, or any exclusive privilege.
- (i) An operating permit does not relieve any person from the obligation to comply with any other provision of 310 CMR 7.00 or to obtain any other necessary authorizations from other governmental agencies, or to comply with all other applicable Federal, State, or local rules and regulations, not addressed in their operating permit.
- (j) All information submitted to the Department pursuant to the requirements of 310 CMR 7.00: *Appendix C* shall be public information except for that which the Department has designated confidential pursuant to the provisions of M.G.L. c. 111, § 142B and 40 CFR 70.4(b)(3) published in the Federal Register July 21, 1992, incorporated herein by reference. No permit shall in any case be designated confidential.
- (k) The Department may issue a single permit authorizing emissions from similar operations by the same owner or operator at multiple temporary locations provided:
1. The operation is temporary;
 2. The operation involves at least one change of location during the term of the permit;
 3. The temporary source is not an affected source; and
 4. The conditions of approval for operation of the temporary source assure compliance with:
 - a. All applicable requirements at all authorized locations;
 - b. All other provisions of 310 CMR 7.00: *Appendix C*; and
 - c. The requirement that the Department be notified at least ten days in advance of each change in location in writing.
- (l) If an additional applicable requirement becomes applicable to the facility, or an applicable requirement which was previously applicable to the facility changes, the facility shall act to have the new applicable requirement or the change incorporated into the operating permit, in accordance with the procedures set forth in 310 CMR 7.00: *Appendix C(14)(a)*.
- (m) The Department may terminate an operating permit upon request of the responsible official of said facility.
- (n) The Department hereby adopts and incorporates by reference the provisions of the acid rain program 40 CFR part 72, as in effect on January 11, 1993 and as amended March 23, 1993, October 24, 1997, and 40 CFR Part 76 as in effect on September 1, 1998, for purposes of implementing an acid rain program that meets the requirements of 42 U.S.C. 7401, Title IV. The term permitting authority shall mean the Department and the term Administrator shall mean the Administrator of the United States Environmental Protection Agency.
- (o) If the provisions or requirements of 40 CFR part 72 conflict with or are not included in 310 CMR 7.00: *Appendix C*, the part 72 provisions and requirements shall apply and take precedence.
- (4) Application Submittal Time Lines for Operating Permits.
- (a) Schedule to submit an application for an operating permit.
1. On and after April 1, 1994 a complete operating permit application shall be submitted to the Department in accordance with the following schedule:

Appendix C: continued

- a. For Restricted Emission Status (RES) pursuant to 310 CMR 7.02(12) and 310 CMR 7.00: *Appendix C(2)(f)*: a Restricted Emission Status application must be submitted, reviewed, and approved no later than the published timeline for submittal of the original operating permit application, or a renewal application unless otherwise agreed to by the Department in writing.
 - b. For a Group A Source, any facility subject to 310 CMR 7.00: *Appendix C* and not submitting an application under 310 CMR 7.00: *Appendix C(4)(a)1.a.*, with operations classified under the Standard Industrial Classification Codes (major group) 49 or 51: no later than November 15, 1994 nor before October 1, 1994;
 - c. For a Group B Source, any facility subject to 310 CMR 7.00: *Appendix C* and not submitting an application under 310 CMR 7.00: *Appendix C(4)(a)1.a.*, with operations classified under the Standard Industrial Classification Codes (major group) 22, 23, 25, 26, 27, 28, 30, 31, 36, 38, 97 or 99: no later than September 1, 1995 nor before July 1, 1995;
 - d. For a Group C Source, any facility subject to 310 CMR 7.00: *Appendix C* and not submitting an application under 310 CMR 7.00: *Appendix C(4)(a)1.a.*, with operations classified under the Standard Industrial Classification Codes (major group) 01, 14, 20, 24, 29, 32, 33, 34, 35, 37, 39, 45, 50, 56, 63, 65, 70, 72, 80, 82, 86, 95 or other stationary sources not classified in Groups A or B: no later than November 15, 1995 nor before September 15, 1995.
2. For a facility subject to the requirements of 310 CMR 7.00: *Appendix C* and in operation prior to the effective date of 310 CMR 7.00: *Appendix C*, an application for an operating permit pursuant to 310 CMR 7.00: *Appendix C* shall be submitted in accordance with the schedule detailed in 310 CMR 7.00: *Appendix C(4)(a)1.*, or other schedule established in writing by the Department and the facility, but in no case later than one year after approval by EPA of 310 CMR 7.00: *Appendix C*, the operating permit program.
 3. For operating permit applications submitted in accordance with 310 CMR 7.00: *Appendix C(4)(a)1.* or 2., the Department shall take final action on all applications no later than three years after approval by EPA of 310 CMR 7.00: *Appendix C*, the operating permit program.
 4. Applications for initial phase II acid rain permits shall be submitted by January 1, 1996 for sulfur dioxide, and by January 1, 1998 for nitrogen oxides. Operating permit applications for these sources must be submitted in accordance with the schedule detailed in 310 CMR 7.00: *Appendix C(4)(a)1.*
 5. For new construction subject to the requirements of 310 CMR 7.00: *Appendix C*, an application for an operating permit shall be submitted no later than one year after commencement of operation. Where an operating permit issued pursuant to 310 CMR 7.00: *Appendix C* would be modified or amended as a result of this construction, the owner or operator must follow the procedures of 310 CMR 7.00: *Appendix C(8)* and the time lines contained in 310 CMR 7.00: *Appendix C(4)(b)*. (NB: New facilities are encouraged to submit applications pursuant to 310 CMR 7.00: *Appendix C* concurrent with 310 CMR 7.02 applications.)
 6. For construction, substantial reconstruction or alteration of any facility, which results in the facility being subject to the requirements of 310 CMR 7.00: *Appendix C*, the application for an operating permit shall be submitted to the Department no later than one year after the commencement of operation of the portion of the facility which made the facility subject to the program. (NB: Owners and operators are encouraged to submit applications concurrent with 310 CMR 7.02 application)
 7. For a facility operating under 310 CMR 7.02(9) or 310 CMR 7.02(11) status, an operating permit application shall be submitted within six months of becoming subject to 310 CMR 7.00: *Appendix C*.
- (b) Schedule for submittal of applications to amend, modify or renew an operating permit:
1. For a significant modification to an operating permit, a timely application is one that is submitted at least nine months prior to the planned modification. For significant modifications which have been reviewed and approved under 310 CMR 7.00, the construction or modification that has been reviewed and approved may commence, but may not operate, prior to final approval of the modification to the operating permit if the existing operating permit would prohibit such construction or change in operation. If the existing operating permit would not prohibit such construction or change in operation, then operations may commence prior to final approval of the modification to the operating permit.

Appendix C: continued

2. For a minor modification to an operating permit, a timely application is one that is submitted concurrent with the planned modification.
 3. For an administrative amendment to an operating permit, a timely application is one that is submitted concurrent with initiation of the proposed change.
 4. For a renewal of an operating permit, a timely application shall be submitted at least six months prior to the expiration of the operating permit.
- (c) Except for as provided in 310 CMR 7.00: *Appendix C(4)(a)3.*, final action by the Department shall be taken on each operating permit application within:
1. 18 months of receipt of a complete application for an operating permit for new construction submitted after November 15, 1995
 2. nine months of receipt of a complete application for a significant modification to an operating permit.
 3. 90 days of receipt of a minor modification application to an operating permit or 15 days after the end of the EPA's 45 day review period under 310 CMR 7.00: *Appendix C(6)*, whichever is later.
 4. 15 days of receipt of an administrative amendment to an operating permit.
 5. nine months of receipt of a complete application for renewal of an operating permit.
 6. 120 days for group processing of minor modifications or 15 days after the end of EPA's 45-day review period under 310 CMR 7.00: *Appendix C(6)*, whichever is later.
 7. nine months of receipt of a complete application for an early reduction demonstration (40 CFR Part 63) under 42 U.S.C. 7401, § 112(i)(5).
- (d) Completeness Determination.
1. The Department shall notify the applicant within 60 days of its receipt of the application for an initial operating permit, a significant modification or renewal as to whether the application is complete.
 2. To be deemed complete, an application shall include all the information required by 310 CMR 7.00: *Appendix C(5)* and payment of the applicable fee pursuant to 310 CMR 4.10: *Appendix: Schedules for Timely Action and Application Fees*. A completeness determination shall not be required for a minor permit modification or an administrative amendment.
 3. If the Department fails to notify the applicant within 60 days of the Department's receipt of an application that more information is needed, then the application shall be deemed complete and the applicant shall be afforded the application shield described at 310 CMR 7.00: *Appendix C(11)*.
 4. If, after a completeness determination, the Department requires additional information, it shall request such information in writing and set a deadline for its submittal. Departmental requests for additional information made after the application is deemed complete shall not, by themselves, indicate that the application is not complete. If however, the applicant fails to submit the requested information by a reasonable deadline specified or as otherwise agreed in writing by the Department, the application shall be considered incomplete and the applicant shall not have the application shield provided for under 310 CMR 7.00: *Appendix C(11)*.
- (5) General Application Requirements.
- (a) Applications for an operating permit or renewal of an operating permit pursuant to 310 CMR 7.00: *Appendix C*, and any additional information required by the Department shall be submitted to the Department and EPA in a format prescribed by the Department. An applicant may not omit information needed to determine whether the facility is subject to any applicable requirement.
 1. For any subject facility whose emissions exceed the thresholds of 310 CMR 7.00: *Appendix C(2)(a)1.*, the application shall include all applicable requirements for all emissions units.
 2. For any facility that contains an emission unit that causes the facility to be subject to 310 CMR 7.00: *Appendix C(2)(b)*, the application shall include all applicable requirements for the emissions units that cause the facility to be subject to 310 CMR 7.00: *Appendix C*.
 - (b) Except as provided for in 310 CMR 7.00: *Appendix C(5)(a)2.* and (i), the following information must be submitted for each emission unit associated with the facility. Fugitive emissions shall be included in the permit application in the same manner as stack emissions, regardless of whether the source category in question is included in the list of sources contained in the definition of major source. Applications shall contain at a minimum:

Appendix C: continued

1. Identifying information, including company name and address (or plant name and address if different from the company name); owner's name and telephone number; and name(s) and telephone number(s) of facility site manager/contact.
2. A description of the facility's processes and products (by Standard Industrial Classification Code) associated with each alternate scenario proposed in the application.
3. Except for insignificant activities listed in 310 CMR 7.00: *Appendix C(5)* the following emissions-related information:
 - a. All emissions of regulated air pollutants for which the emissions unit has an applicable requirement.
 - b. Identification and description of all points of emissions described in 310 CMR 7.00: *Appendix C(5)(b)3.a.* in sufficient detail to establish said applicable requirements.
 - c. Emissions rates in tons per year and in such terms as are necessary to establish compliance consistent with the applicable EPA standard reference emissions test method.
 - d. The following information to the extent it is needed to determine or regulate emissions: fuels, fuel use, raw materials, production rates, and operating schedules.
 - e. Identification and description of air pollution control equipment and compliance monitoring devices or activities
 - f. Limitations on source operation affecting emissions or any work practice standards, where applicable, for all regulated pollutants at the source.
 - g. Other information required by any applicable requirement (including information related to stack height limitations developed pursuant to 42 U.S.C. 7401, The Clean Air Act, § 123).
 - h. Calculations on which the information in 310 CMR 7.00: *Appendix C(5)(b)3.a.* through g. is based.
4. For activities proposed to be exempt pursuant to 310 CMR 7.00: *Appendix C(5)(h)*, a list describing each activity and its emissions.
5. The following air pollution control requirements:
 - a. Citation and description of all applicable requirements, and
 - b. Description of or reference to any applicable test method for determining compliance with each applicable requirement.
6. Other specific information that may be necessary to implement and enforce 310 CMR 7.00: *Appendix C(5)(b)2, (7)* or other applicable requirements of 42 U.S.C. 7401 or to determine the applicability of such requirements including but not limited to terms and conditions for reasonably anticipated operating scenarios including:
 - a. Establishing and maintaining, contemporaneously with making a change from one operating scenario to another, a record in a log at the facility as to which scenario it is operating under; and
 - b. Documenting that the terms and conditions of each such alternative scenario meet all applicable requirements and the requirements of 310 CMR 7.00: *Appendix C.*
The permit shield described in 310 CMR 7.00: *Appendix C(12)* shall apply to all terms and conditions under each such operating scenario.
7. An explanation of any proposed exemptions from otherwise applicable requirements.
8. A Compliance Plan that contains all the following:
 - a. A description of the compliance status of the facility with respect to all applicable requirements.
 - b. A description as follows:
 - (i) For applicable requirements with which the facility is in compliance, a statement that the source will continue to comply with such requirements.
 - (ii) For applicable requirements that will become effective during the permit term, a statement that the facility will meet such requirements on a timely basis.
 - (iii) For requirements for which the source is not in compliance at the time of permit issuance, a narrative description of how the source will achieve compliance with such requirements.
 - c. A compliance schedule as follows:
 - (i) For applicable requirements with which the source is in compliance, a statement that the source will continue to comply with such requirements.

Appendix C: continued

- (ii) For applicable requirements that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis. A statement that the source will meet in a timely manner applicable requirements that become effective during the permit term shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.
 - (iii) A schedule of compliance for emissions units that are not in compliance with all applicable requirements at the time of permit issuance. Such a schedule shall include a schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with any applicable requirements for which the facility will be in noncompliance at the time of permit issuance. This compliance schedule shall resemble and be at least as stringent as that contained in any judicial consent decree or administrative order to which the facility is subject. Any such schedule of compliance shall be supplemental to, and shall not sanction noncompliance with, the applicable requirements on which it is based.
- d. A schedule for submission of certified progress reports no less frequently than every six months for sources required to have a schedule of compliance to remedy a violation.
 - e. The compliance plan content requirements specified in 310 CMR 7.00: *Appendix C(5)(b)8.e.* shall apply and be included in the acid rain portion of a compliance plan for an affected source, except as specifically superseded by regulations promulgated under 42 U.S.C. 7401, Title IV with regard to the schedule and method(s) the source will use to achieve compliance with the acid rain emissions limitations.
9. Requirements for Compliance Certification, including the following:
- a. A certification of compliance with all applicable requirements by a responsible official consistent with 310 CMR 7.00: *Appendix C(5)(b)9.c.* and 42 U.S.C. 7401, § 114(a)(3);
 - b. A statement of methods used for determining compliance, including a description of monitoring, record keeping, and reporting requirements and test methods;
 - c. A schedule for submission of compliance certifications during the permit term, to be submitted no less frequently than annually, or more frequently if specified by the underlying applicable requirement or by the Department;
 - d. A statement indicating the facility's compliance status with any applicable enhanced monitoring and compliance certification requirements of 42 U.S.C. 7401; and
 - e. A statement accepting the Department's authority to enter the premises of the permitted facility and perform reasonable inspections and sampling, as described in 310 CMR 7.00: *Appendix C(3)(g).*
10. The use of nationally-standardized forms for acid rain portions of permit application(s) and compliance plan(s), as required by regulations promulgated under 42 U.S.C. 7401, Title IV.
- (c) Any application form, report, or compliance certification submitted pursuant to 310 CMR 7.00: *Appendix C* shall contain certification by a responsible official of truth, accuracy, and completeness in accordance with 310 CMR 7.01(2).
 - (d) Any application for an initial, or renewal of an operating permit submitted to the Department pursuant to 310 CMR 7.00: *Appendix C* shall include the following:
 - 1. For initial operating permits, copies of any preconstruction, substantial reconstruction or alteration approvals issued by the Department under 310 CMR 7.02;
 - 2. For renewals of operating permits, the last complete operating permit application supplemented with all new information pertinent to the provisions of 310 CMR 7.00: *Appendix C(5), (6) and (7)*, including any operational changes made pursuant to operational flexibility section, and any other proposed operational scenarios.
 - (e) Any person who fails to submit any relevant facts or who has submitted incorrect information in a permit application shall, upon becoming aware of such failure or incorrect submittal, promptly submit such supplementary facts or corrected information. In addition, an applicant shall provide additional information as necessary to address any requirements that become applicable to the source after the date it filed a complete application but prior to release of a draft permit.

Appendix C: continued

(f) If any person fails to submit information requested by the Department within the deadlines provided, the Department may deny the application, and an application shield pursuant to 310 CMR 7.00: *Appendix C(11)* shall automatically terminate pursuant to 310 CMR 7.00: *Appendix C(11)(f)*. Prior to denying the application, the Department shall provide 30 days written notice to the applicant, including a list of the required information. A person may reapply at any time after the application is denied. The re-application shall meet all requirements of a complete initial permit application, including any application fee.

(g) In the event that a discrepancy exists between the information in an application for an operating permit and the requirements of the permit, the conditions of the permit shall prevail.

(h) Exempt Activities. Except as provided in 310 CMR 7.00: *Appendix C(5)(i)*, any facility subject to the requirements of 310 CMR 7.00: *Appendix C* may propose to exempt certain activities from the requirements of 310 CMR 7.00: *Appendix C(5)(b)*. A list of proposed exemptions must be submitted as part of the application. The Department will exempt the emission unit(s) if it is of a size eligible to comply with 310 CMR 7.02(8)(i) or to be exempt from preconstruction review and approval pursuant to 310 CMR 7.02(2)(b)7., 15., or 29. and not otherwise subject to an applicable requirement.

(i) Insignificant Activities. Notwithstanding 310 CMR 7.00: *Appendix C(5)(h)* any emission unit that is part of the following activities is exempt from the requirements of 310 CMR 7.00: *Appendix C*, except that emissions from these activities shall be included in determining federal potential to emit under 310 CMR 7.00: *Appendix C(2)*:

1. Open burning conducted in accordance with the requirements of 310 CMR 7.07(2), (3)(a) and (3)(e);
2. Office activities and the equipment and implements used therein, such as typewriters, printers, and pens;
3. Interior maintenance activities and the equipment and supplies used therein, such as janitorial cleaning products and air fresheners; this does not include any cleaning of production equipment or activities regulated by 310 CMR 7.18;
4. Bathroom and locker room ventilation and maintenance;
5. Copying and duplication activities for internal use and for support of office activities at the facility;
6. The activities not regulated by 310 CMR 7.18 in maintenance shops, such as welding, gluing, soldering;
7. First aid or emergency medical care provided at the facility, including related activities such as sterilization and medicine preparation;
8. Laundry operations that service uniforms or other clothing used at the facility that are not regulated by 310 CMR 7.18;
9. Architectural maintenance activities conducted to take care of the buildings and structures at the facility, including repainting, reroofing, and sandblasting;
10. Exterior maintenance activities conducted to take care of the grounds of the facility, including parking lots and lawn maintenance;
11. Food preparation to service facility cafeterias and dining rooms;
12. The use of portable space heaters which reasonably can be carried and relocated by an employee;
13. Liquid petroleum gas (LPG) or petroleum fuels used to power the facility's mobile equipment and not otherwise regulated by the Department;
14. Emergency vents not subject to the accidental release regulations.
15. Non-process related surface coating and painting which exclusively use non-refillable aerosol cans;
16. Vacuum cleaning systems used exclusively for commercial or residential house-keeping;
17. Ventilating systems used exclusively for heating and cooling buildings, for the comfort of people living or working within the building serviced by said system, which EPA has determined need not be contained in an operating permit;
18. Ventilating and exhaust systems for laboratories, including hoods, used:
 - a. by academic institutions for academic purposes.
 - b. by hospitals and medical care facilities used for medical care purposes and medical research only.

Appendix C: continued

- c. by laboratories which perform laboratory scale activities as defined by OSHA, excluding commercial laboratories that provide laboratory services for third parties.
- d. by facilities for quality assurance and quality control testing and sampling activities.

19. surface coating and printing processes used exclusively for educational purposes in educational institution excluding those emission units regulated by 310 CMR 7.18; and

20. kilns or ventilating hoods for art or ceramic curricula at colleges, primary or secondary schools.

(6) Permit Review by the Public, EPA and Affected States.

(a) A draft of an operating permit (draft permit) and a statement that sets forth the legal and factual basis for the draft permit conditions (including references to the applicable regulatory provisions), shall be released to the public, EPA, the applicant and affected states by the Department for applications for an operating permit, a significant modification or renewal of an operating permit; and to EPA and affected states for minor permit modifications.

(b) For each draft initial operating permit, significant modification or renewal of an operating permit pursuant to 310 CMR 7.00: *Appendix C(2)*, the Department shall:

1. Post on a public website identified by the Department (which may be the Department's own website), for the duration of the public comment period, the following:
 - a. A notice of availability of the Department's draft initial operating permit, significant modification or renewal of an operating permit and information on how to submit public comment;
 - b. The Department's draft initial operating permit, significant modification or renewal of an operating permit; and
 - c. Information on how to access the administrative record for the Department's draft initial operating permit, significant modification or renewal of an operating permit.
2. Give notice to persons on a mailing list developed by the Department using generally accepted methods (*e.g.*, hyperlink sign-up function or radio button on a Department website, sign-up sheet at a public hearing, *etc.*) that enable interested parties to subscribe to a mailing list. The Department may update the mailing list from time-to-time by requesting written indication of continued interest from those listed. The Department may delete from the list the name of any person who fails to respond to such a request within a reasonable timeframe.

(c) The notice shall identify:

1. The name and address of the facility;
2. The name and address of the permittee;
3. The name and address of the Department's regional office processing the permit;
4. The activity or activities included in the permit action;
5. The emissions change associated with any permit modification;
6. The name, address, and telephone number of a person (or an email or website address) from whom interested persons may obtain additional information, including copies of the draft permit, the application, all relevant supporting materials, and all other materials available that are relevant to the permit decision; and
7. A brief description of the comment procedures required by 310 CMR 7.00: *Appendix C(6)*; and the time and place of any hearing that may be held, including a statement of procedures to request a hearing (unless a hearing has already been scheduled).

(d) The Department, on or before the publication of the public notice of a draft permit, shall also give notice of its intent to issue a draft permit to the head of the environmental program of any affected state.

(e) The Department shall provide a comment period of no less than 30 calendar days and no more than 60 calendar days on draft permits for an initial permit, significant modifications and renewals of operating permits.

(f) The Department based upon material issues or at its own initiative may hold a public hearing on a draft permit. For an initial operating permit issuance, renewal or significant modification to an operating permit, any person may request before the expiration of the public comment period specified pursuant to 310 CMR 7.00: *Appendix C(6)(a)*, that the Department hold a public hearing (if the Department has not already scheduled a public hearing) on a draft permit, by submitting a written request stating the nature of the issues to be raised at a public hearing. Notice of any public hearing shall be given at least 30 days in

Appendix C: continued

advance of the hearing and may be included in the notice issued pursuant to 310 CMR 7.00: *Appendix C(6)(a)* and by the procedures of 310 CMR 7.00: *Appendix C(6)(b)* and (c). (g) Whenever the Department determines to hold a public hearing, the duration of the public comment period shall automatically extend to the close of the public hearing. The hearing officer may further extend the comment period by announcing the extension and its duration at the public hearing.

(h) At a public hearing, the Department may:

1. Establish reasonable limits upon the time allowed for oral statements; and
2. Require the submission of statements in writing.

(i) The Department shall keep records of the comments and also of the issues raised during the public participation process so that EPA may fulfill its obligation under 42 U.S.C. 7401, § 505(b)(2) to determine whether a citizen petition should be granted, and such records shall be available to the public.

(j) After the close of the public comment period, the Department will forward to the EPA a proposed operating permit (proposed permit), together with other required supporting information pertaining to the proposed permit. NOTE: The Department as part of the submittal of the proposed permit to the EPA shall notify the EPA and any affected state in writing of any refusal by the Department to accept any recommendations on the draft permit that the affected state submitted during the draft permit review period. The notice shall include the Department's reason for not accepting any such recommendation; the Department is not required to accept recommendations that are not based on an applicable requirement or the requirements of 310 CMR 7.00: *Appendix C*.

(k) If EPA submits an objection to the proposed permit in writing, during the 45 day period following EPA's receipt of the proposed permit, the Department shall revise, and resubmit a proposed operating permit to the EPA. EPA shall send a copy of its objection to the applicant. The Department will not issue a final permit prior to the expiration of the 45-day period for EPA objection unless EPA notifies DEP of its intention not to object.

(l) If the Department fails, within 90 days after the receipt of an objection under 310 CMR 7.00: *Appendix C(6)(k)*, to revise and submit a proposed permit in response to the objection, the EPA may issue or deny the permit in accordance with the requirements of the Federal Program promulgated under 42 U.S.C. 7401, Title V.

(m) If EPA does not object to the proposed permit, any person may petition the EPA during the 60 days after the expiration of the EPA's 45 day review period, and may request that EPA object.

1. The petition shall be based only on objections that were raised with reasonable specificity during the public comment period, unless the petitioner demonstrates that it was impracticable to raise such objections within such period, or unless the grounds for such objection arose after such period.
2. If the EPA is convinced that such objection meets the criteria established in 310 CMR 7.00: *Appendix C(6)(m)1.*, and objects, the Department shall not issue the operating permit until the EPA's objection is resolved.
3. If the Department has issued an operating permit prior to receipt of an EPA objection, the EPA may modify, terminate, or revoke the permit. The Department may thereafter issue only a revised permit that satisfies EPA's objection. In any case, the stationary source will not be in violation of the requirement to have submitted a timely and complete application.

(n) The Department shall transmit final operating permits to EPA.

(7) Operational Flexibility.

(a) Section 502(b)(10) changes

1. Any facility issued an operating permit may make Section 502(b)(10) changes through the procedures set forth in 310 CMR 7.00: *Appendix C(7)*.
2. The Department shall attach the notice of the change to the operating permit, but shall not revise the operating permit until the next application for renewal.
3. If the requirements of 310 CMR 7.00: *Appendix C(7)* are met, the change may be made 15 days after receipt of the notice of the change by the Department or EPA whichever is later.
4. No change may be made pursuant to 310 CMR 7.00: *Appendix C(7)* if the change would:
 - a. violate an applicable requirement(s);

Appendix C: continued

- b. contravene a federally enforceable permit term(s) and condition(s) that is monitoring (including test methods), recordkeeping, reporting, or compliance certification;
 - c. is a modification under 42 U.S.C. 7401, Title I; or
 - d. is in excess of the emissions allowed under the operating permit (whether expressed therein as a rate of emissions or in terms of total emissions).
5. A responsible official must provide the Department and EPA with written notification at least 15 days in advance of the proposed changes. For each such change, the written notification required above shall include:
- a. A brief description of the change within the permitted facility;
 - b. The date on which the change will occur;
 - c. Any change in emissions; and
 - d. Any permit term or condition that is no longer applicable as a result of the change.
6. The permit shield provided for under 310 CMR 7.00: *Appendix C(12)* shall not apply to changes made under 310 CMR 7.00: *Appendix C(7)*.
- (b) Intra-facility Emissions Trading.
- 1. Pursuant to a request from a responsible official in an operating permit application, the Department shall issue an operating permit that contains terms and conditions that allow for the trading of emissions increases and decreases within the permitted facility. The Department shall not include in these trading provisions any emissions units for which emissions are not quantifiable or for which there are no replicable procedures to enforce the emissions trades.
 - 2. Any requests made under 310 CMR 7.00: *Appendix C(7)* are solely for the purposes of complying with the federally-enforceable emissions cap that is established in the permit independent of otherwise applicable requirement(s).
 - 3. Emission trades may be implemented provided the Department and EPA are notified at least 15 business days in advance of the proposed changes. For each change, the following must be provided:
 - a. A description of the change within the permitted facility;
 - b. The date on which the change will occur;
 - c. Any change in emissions; and
 - d. How these increases and decreases in emissions will comply with the terms and conditions of the permit.
 - 4. The 15 day notice shall commence upon the receipt by the Department or EPA whichever is later.
 - 5. The permit shield provided for under 310 CMR 7.00: *Appendix C(12)* shall apply to the permit terms and conditions that allow such increases and decreases in emissions.
 - 6. Any intra-facility change that does not qualify pursuant to 310 CMR 7.00: *Appendix C(7)(b)2.* is required to be submitted to the Department pursuant to 310 CMR 7.00: *Appendix B.*
- (8) Administrative Amendments, Minor Modifications and Significant Modifications.
- (a) The following changes shall require a revision to an operating permit:
- 1. An Administrative Amendment, if the proposed change is:
 - a. A change in business name, division name, or facility name; mailing address; company stack designation; telephone number; or name of facility contact; or
 - b. A transfer of ownership of the facility for which an operating permit is in effect, where the Department determines that no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the Department; or
 - c. A change to monitoring, reporting, recordkeeping, or testing requirements that is more frequent than previously specified in the operating permit; or
 - d. The Department, EPA or permittee determines that the operating permit contains typographical errors.
 - 2. A Minor Modification, if the proposed change:
 - a. Does not violate any applicable requirements;
 - b. Does not involve a significant change to existing monitoring, reporting, or recordkeeping requirements in the permit;

Appendix C: continued

- c. Does not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;
 - d. Does not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement and that the facility has assumed to avoid an applicable requirement to which the facility would otherwise be subject; and
 - e. Is not a modification under any provision of 42 U.S.C. 7401, Title I.
3. A Significant Modification is a permit modification that does not qualify as a minor permit modification or as an administrative amendment, or is a significant change to any monitoring, reporting or recordkeeping requirements as required by any operating permit.
- (b) Processing an Administrative Amendment. For an administrative amendment to an operating permit a timely and complete application is one filed on forms specified by the Department and in accordance with the timelines established at 310 CMR 7.00: *Appendix C(4)*.
- 1. The Department shall take final action within 15 days of receipt of said application and may incorporate such changes without providing notice to the public or affected states. The Department shall submit a copy of the revised permit to EPA.
 - 2. The source may make the change upon receipt by the Department of the proposed administrative amendment.
 - 3. An administrative amendment for purposes of the acid rain portion of the operating permit shall be governed by 40 CFR part 72.
 - 4. The permit shield provisions of 310 CMR 7.00: *Appendix C(12)* shall not apply to changes made under 310 CMR 7.00: *Appendix C(8)*.
- (c) Processing a Significant Modification. For a significant modification to an operating permit an application must be filed on forms specified by the Department and in accordance with the timelines established at 310 CMR 7.00: *Appendix C(4)*, and shall:
- 1. Be subject to all of the same requirements as a new operating permit application including review by EPA, affected states and the public under 310 CMR 7.00: *Appendix C*;
 - 2. Focus on the proposed significant modifications to the issued operating permit only;
 - 3. A significant modification for purposes of the acid rain portion of the operating permit shall be governed by 40 CFR part 72; and
 - 4. For significant modifications which have been reviewed and approved under 310 CMR 7.02(4) or (5), the construction, substantial reconstruction, or alteration may commence, but may not be operated if the existing operating permit would prohibit such construction or change in operation, during the period after receipt of the required significant modification application by the Department, but before the Department revises the operating permit. If the existing operating permit would not prohibit such construction or change in operation, then operations may commence prior to final approval of the modification to the operating permit. The permit shield provided under 310 CMR 7.00: *Appendix C(12)* applies to any changes resulting from such significant modification.
- (d) Processing a Minor Modification. For a minor modification to an operating permit an application must be filed on forms specified by the Department and in accordance with the timelines established at 310 CMR 7.00: *Appendix C(4)*.
- 1. An application requesting the use of minor permit modifications procedures shall include the following:
 - a. A description of the change, the emissions resulting from the change, and any new applicable requirements that will apply if the change occurs;
 - b. The facility's suggested draft permit;
 - c. Certification by a responsible official that the proposed modification meets the criteria for use of minor permit modification procedures and a request that such procedures be used; and
 - d. Completed forms for the Department to use to notify the EPA and affected states. Said notification shall be made within five business days of receipt by the Department of a complete permit modification application.
 - 2. A minor modification for purposes of the acid rain portion of the operating permit shall be governed by 40 CFR part 72.
 - 3. The source may make the change upon receipt by the Department of the proposed modification.

Appendix C: continued

4. The permit shield provisions of 310 CMR 7.00: *Appendix C(12)* shall not apply to changes made under 310 CMR 7.00: *Appendix C(8)*.
- (e) Revisions to Operating Permit Not Required. A revision to an operating permit is not required for increases in emissions that are authorized by allowances acquired pursuant to the Acid Rain program under Title IV, provided that such increases do not require an operating permit revision under any other applicable requirement.
- (9) Testing and Monitoring Requirements.
- (a) Any facility, for which an operating permit specifies testing and monitoring requirements shall do so in a manner and time as specified in the operating permit.
- (b) Each operating permit shall contain the following monitoring requirements:
1. The permittee shall comply with all emissions monitoring and analysis procedures or test methods required under the applicable requirements, including those promulgated pursuant to 42 U.S.C. 7401, The Clean Air Act, §§ 504(a) and 504(b) or 114(a)(3);
 2. If the applicable requirement does not require periodic testing or instrumental or noninstrumental monitoring (which may consist of recordkeeping designed to serve as monitoring), then the permittee shall perform periodic monitoring sufficient to yield reliable data from the relevant time period that is representative of the source's compliance with the permit. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement. Recordkeeping provisions may be sufficient to meet the requirements; and
 3. The permittee shall comply with requirements concerning the use, maintenance and installation of monitoring equipment or methods as the Department deems appropriate.
- (c) Any facility required to install a continuous emissions monitor (CEM) shall install, calibrate, operate, certify and maintain the CEM to continuously measure and continuously record the required emissions and other data as specified in the operating permit.
- (d) Any person required to perform monitoring shall maintain records of and report to the Department in accordance with the requirements established in the facility operating permit and 310 CMR 7.00: *Appendix C(10)*.
- (10) Recordkeeping and Reporting Requirements.
- (a) Upon the Department's request, any record relevant to the operating permit or to the emissions of any air contaminant from the facility shall be submitted to the Department within 30 days of the request by the Department or within a longer time period, if approved in writing by the Department, and shall be transmitted on paper, on computer disk, or electronically at the discretion of the Department.
- (b) The permittee shall maintain records of all monitoring data and supporting information on-site for a period of at least five years from the date of the monitoring sample, measurement, report or initial operating permit application. Supporting information includes, at a minimum, all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the operating permit, and any other information required to interpret the monitoring data. Records required to be maintained shall include, where applicable:
1. The date, place as defined in the permit, and time of sampling or measurements;
 2. The date(s) analyses were performed;
 3. The company or entity that performed the analyses;
 4. The analytical techniques or methods used;
 5. The results of such analyses; and
 6. The operating conditions as existing at the time of sampling or measurement.
- (c) The permittee shall report a summary of all monitoring data and related supporting information to the Department at least every six months in a format and time frequency specified by the Department.

Appendix C: continued

- (d) Upon request, an owner or operator shall also furnish to the Department copies of records required to be kept by the operating permit or, for information claimed to be confidential, said person may furnish such records directly to the Department and EPA, along with a claim of confidentiality.
- (e) The following shall be made readily available for inspection by the Department:
1. The operating permit together with any amendments thereto;
 2. A diagram of the facility indicating the location of all equipment and control apparatus, any stack designation assigned by the Department, and any stack designation assigned by the facility;
 3. Records documenting any and all use of any equipment, control apparatus, or other source operation including, but not limited to, the kind and amount of air contaminant emitted, rate of production and hours of operation, raw material throughput; and
 4. Records documenting any construction, substantial reconstruction or alteration, including the dates thereof, of any equipment or control apparatus.
- (f) The permittee shall promptly report to the Department all instances of deviations from permit requirements. This report shall include the deviation itself, including those attributable to upset conditions as defined in the permit, the probable cause of the deviation, and any corrective actions or preventive measures taken.
- (g) For facilities permitted to operate under alternative operating scenarios, the permittee shall establish and maintain a log at the facility which indicates the scenario under which the facility is operating. The permittee shall record changes from one scenario to another contemporaneously with the change.
- (h) All required reports must be certified by a responsible official consistent with 310 CMR 7.00: *Appendix C(5)(c)*.

(11) Application Shield.

- (a) An application shield provides that an owner or operator of a facility subject to 310 CMR 7.00: *Appendix C* shall not be subject to penalties for operating without an operating permit during the time the application shield is in effect.
- (b) An application shield is in effect for an owner or operator of a facility subject to 310 CMR 7.00: *Appendix C* if:
1. A timely and complete application for an initial application or renewal of an operating permit has been submitted pursuant to 310 CMR 7.00: *Appendix C(3)(a)* (facility may continue to operate until the Department takes final action on the application); and
 2. The applicant submits any information requested in writing by the Department within the timelines established.
- (c) This application shield does not relieve an owner or operator of a facility subject to 310 CMR 7.00: *Appendix C* from complying with the terms and conditions of any operating permit or applicable requirement. For initial permit issuance, the application shield does not relieve an owner or operator of said facility from complying with any applicable state and federal laws and regulations.
- (d) The submittal of a complete application shall not affect the requirement that any source have a preconstruction approval under 310 CMR 7.02 if applicable.
- (e) In the event that the Department has not taken final action on an operating permit renewal application prior to an existing operating permit's expiration date, the permit shall remain in effect until the Department takes final action on the renewal application, provided that a timely and complete renewal application has been submitted in accordance with 310 CMR 7.00: *Appendix C(13)*.
- (f) An application shield terminates automatically upon either of the following:
1. The Department's final action on the application for the initial operating permit or for the renewal; or
 2. Failure of the applicant to submit additional information requested by the Department in writing within the deadline established by the Department pursuant to 310 CMR 7.00: *Appendix C(5)(f)*.
- (g) An application shield terminated pursuant to 310 CMR 7.00: *Appendix C(5)(f)* will be reinstated upon receipt of a submittal meeting all the requirements of a complete initial permit application, including any application fee.

Appendix C: continued

(12) Permit Shield.

(a) An owner or operator of a facility subject to 310 CMR 7.00: *Appendix C* will not be subject to enforcement action for operating not in compliance with all applicable requirements provided said facility is in compliance with its permit terms and the Department expressly included in the facility's operating permit a provision stating that compliance with the conditions of the permit shall be deemed compliance with any applicable requirements as of the date of permit issuance, provided that:

1. Such applicable requirements are included and are specifically identified in the permit; or
2. The Department, in acting on the permit application or revision, determines in writing that other requirements specifically identified are not applicable and the permit includes the determination or a concise summary thereof.

(b) Nothing in 310 CMR 7.00: *Appendix C*(12)(a) or in any operating permit shall alter or affect the following:

1. The provisions of 42 U.S.C. 7401, § 303 (Emergency Orders), including the authority of the EPA under 42 U.S.C. 7401, § 303;
2. The liability of an owner or operator of a facility subject to 310 CMR 7.00: *Appendix C* for any violation of applicable requirements prior to or at the time of permit issuance;
3. The applicable requirements of the acid rain program, consistent with 42 U.S.C. 7401, § 408(a); or
4. The ability of EPA to obtain information from a source pursuant to 42 U.S.C. 7401, § 114.

(c) In the event that the Department has not taken final action on an operating permit renewal application prior to an existing operating permit's expiration date, the permit shall remain in effect until the Department takes final action on the renewal application, provided that a timely and complete renewal application has been submitted in accordance with 310 CMR 7.00: *Appendix C*(13).

(13) Renewals.

(a) The expiration of an operating permit terminates the right of the owners or operators of a facility subject to 310 CMR 7.00: *Appendix C* to operate any emission unit, control equipment or associated equipment covered by the permit unless a timely and complete renewal application is submitted pursuant to 310 CMR 7.00: *Appendix C*(4)(b)4.

(b) Applications for renewal of operating permits are subject to the same requirements for public participation and EPA and affected state(s) oversight that apply to initial permit applications (310 CMR 7.00: *Appendix C*(6)).

(c) An application for renewal of an operating permit shall include the results of such testing as is necessary, at the discretion of the Department, to verify that emissions from the equipment or control apparatus meet the compliance emission limitations established in an approval issued pursuant to 310 CMR 7.00 or an operating permit issued under 310 CMR 7.00: *Appendix C*. If such testing is required, the applicant shall comply with the procedures outlined in 310 CMR 7.00: *Appendix C*(9) testing and monitoring.

(d) Any owner or operator of a facility subject to 310 CMR 7.00: *Appendix C* filing a timely and complete application for renewal of an operating permit shall be provided with an Application shield as prescribed in 310 CMR 7.00: *Appendix C*(11).

(14) Reopenings for Cause.

(a) The Department shall reopen and amend a permit when:

1. Additional federal requirements (including, but not limited to, standards or requirements pursuant to 42 U.S.C. 7401, §§ 112(d), 112(g), 112(h) and 112(j)) become applicable to a facility with a remaining permit term of three or more years. Such a reopening and amendment shall be completed not later than 18 months after promulgation of the applicable federal requirement. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire unless the original permit or any of its terms and conditions has been extended pursuant to 310 CMR 7.00: *Appendix C*(11)(e).
2. Additional requirements (including excess emission requirements) become applicable to an affected source under the acid rain program. Upon approval by the EPA, excess emissions offset plans shall be deemed to be incorporated into the permit.

Appendix C: continued

3. The Department or EPA determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards, limitations, or other terms or conditions of the permit.
 4. The Department or EPA determines that the permit must be revised to assure compliance with the applicable requirements.
- (b) Proceedings to reopen and issue a permit shall follow the same procedures as apply to initial permit issuance and shall affect only those parts of the operating permit for which cause to reopen exists. Such reopenings shall be made as expeditiously as practicable.
 - (c) Reopening under 310 CMR 7.00: *Appendix C(14)(a)* shall not be initiated before a notice of such intent is provided to the facility by the Department at least 30 days in advance of the date that the permit is to be reopened, except that the Department may provide a shorter time period in the case of an emergency.
- (15) General Operating Permits.
- (a) The Department may, after notice and opportunity for public comment provided at 310 CMR 7.00: *Appendix C(6)*, issue a general operating permit applicable to numerous similar operations or facilities. Each general operating permit shall specify criteria by which facilities may qualify for the general operating permits. General operating permits shall contain as applicable, the requirements of 310 CMR 7.00: *Appendix C(3)(g)*.
 - (b) Facilities subject to the requirements of 310 CMR 7.00: *Appendix C(2)* (Applicability) may seek a general operating permit previously issued by the Department, where appropriate, by applying to the Department under the requirements of 310 CMR 7.00: *Appendix C(5)*. An application shield shall apply (310 CMR 7.00: *Appendix C(11)*).
 - (c) Affected units subject to the acid rain requirements of 42 U.S.C. 7401, Title IV are not eligible for general operating permits unless otherwise provided for under regulations promulgated by EPA under 42 U.S.C. 7401, Title IV.
 - (d) The approval of a facility's request for authorization to operate under a general operating permit shall not be a final permit action for the purpose of judicial review.
 - (e) Any permittee in possession of a general operating permit who proposes a modification to the equipment or control device which deviates from any term or condition of the general operating permit, shall apply for an individual operating permit consistent with the rules and procedures under 310 CMR 7.00: *Appendix C*.
 - (f) Notwithstanding the shield provisions of 310 CMR 7.00: *Appendix C(12)* the owner or operator of the facility shall be subject to enforcement action for operation without an operating permit if the facility is later determined not to qualify for the conditions and terms of the general permit.
 - (g) If a facility can no longer be covered under the general permit terms and conditions, the owner or operator of said facility must apply for an individual operating permit.

Appendix C: continued

(16) Emergency Conditions.

(a) The owner or operator of a facility subject to 310 CMR 7.00: *Appendix C* shall be shielded from enforcement action brought for non-compliance with technology-based emission limits specified in the operating permit as a result of an emergency. An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emission limitations if the conditions of 310 CMR 7.00: *Appendix C*(16) are met. The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs, or other relevant evidence that:

1. An emergency occurred and that the cause(s) of the emergency can be identified;
2. The facility was at the time being properly operated;
3. During the period of the emergency all reasonable steps were taken as expeditiously as possible to minimize levels of emissions that exceeded the emission standards, or other requirements in the operating permit; and
4. Notice of the emergency was submitted to the Department within two business days of the time when emission limitations were exceeded due to the emergency. This notice fulfills the requirement of 310 CMR 7.00: *Appendix C*(10). This notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken.

(b) In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.

(c) This provision is in addition to any emergency or upset provision contained in any applicable requirement.

- 8.22: Enforcement Provisions
- 8.30: Severability
- 8.31: Relief

8.01: Introduction

The purpose of 310 CMR 8.00 is to prevent ambient air contaminant concentrations at any location in the Commonwealth from reaching levels which would constitute significant harm, or imminent and substantial endangerment to the health of persons. The levels which would constitute significant harm, or imminent and substantial endangerment, to the health of persons as have been defined by the Administrator of the Environmental Protection Agency are set forth in Table 1.

TABLE 1.
CONTAMINANT CONCENTRATION LEVELS

Prescribed by the EPA Administrator as would cause significant harm, or Imminent and Substantial Endangerment, to Health.

Ambient Air Contaminant Concentration Levels					
Contaminant	Ave. ug/m ³	ppm	COHs	Duration (average)	Product
Sulfur Dioxide (SO ₂)	2,620	1.0		24-hr.	
Particulate Matter					
PM10	600			24-hr.	
Tape Stain (COHs)			8	24-hr.	
Product of: (SO ₂) X (COHs) (SO ₂)			(COHs)	24-hr.	1.5
Carbon Monoxide	144,000	125		1-hr.	
Carbon Monoxide	86,300	75		4-hr.	
Carbon Monoxide	57,500	50		8-hr.	
Photochemical Oxidant	1,200	0.6*		1-hr.	
Nitrogen Dioxide	3,750	2.0		1-hr.	

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

Nitrogen Dioxide	938	0.5	24-hr.
------------------	-----	-----	--------

*expressed as Ozone (O₃)

8.02: Definitions

When used in 310 CMR 8.00 and in communications, notices, or orders relative thereto, the following words and phrases shall have the meanings ascribed below:

Air Contaminant means any substance or man-made physical phenomenon in the ambient air space and includes, but is not limited to dust, flyash, gas, fume, mist, odor, smoke, vapor, pollen, microorganism, radioactive material, ionizing radiation, heat, sound, any combination thereof, or any decay or reaction product thereof.

Air Contaminant Source means any place at or from which any air contaminant is emitted to the ambient air space.

Air Pollution means the presence in the ambient air space of one or more air contaminants or combinations thereof in such concentrations and of such duration as to:

- (a) cause a nuisance;
- (b) be injurious to human or animal life, to vegetation, or to property; or
- (c) unreasonably interfere with the comfortable enjoyment of life and property or the conduct of business.

Air Pollution Episode means a state of the ambient air environment in which the concentrations of air contaminants are elevated to or are in excess of certain defined levels and that certain meteorological conditions are expected to continue.

Air Pollution Episode Alert (APEA) means that degree of Air Pollution Episode which meets the criteria for determination of an Air Pollution Episode Alert as set forth in 310 CMR 8.03.

Air Pollution Episode Emergency (APEE) means that degree of Air Pollution Episode which meets the criteria for determination of an Air Pollution Episode Emergency as set forth in 310 CMR 8.03.

Air Pollution Episode Warning (APEW) means that degree of Air Pollution Episode which meets the criteria for determination of an Air Pollution Episode Warning as set forth in 310 CMR 8.03.

Air Pollution Incident Emergency (APIE) means a condition in the atmosphere in the Commonwealth or any part thereof, which constitutes a present or reasonably imminent danger to health.

Ambient Air Space means unconfined space occupied by the atmosphere above the geographical area of the District.

Atmospheric Stagnation Advisory means an advisory, issued by the National Weather Service, relative to meteorological conditions that are predicted to be manifest for 36 hours or more and to be characterized by poor ventilation and potential increase of ambient air contaminant concentration levels. (The advisories may be prepared for regions of substantial area, or as the need may dictate, for local, relatively small areas.)

COH - Coefficient of Haze means the unit which quantifies the increase in photometric density of a filter tape due to deposition of particles per 1000 linear feet of air through a one inch diameter filter when sampled at the rate of approximately 0.25 cfm.

Commissioner means the Commissioner of the Department of Environmental Protection or his official designees.

Department means the Department of Environmental Protection.

Emission means any discharge or release of an air contaminant to the ambient air space.

8.02: continued

Emission Reduction Plan(s) means the plans for reducing emissions during Air Pollution Episode Alerts, Warning, and/or Emergencies.

ug/m³ means micrograms per cubic meter.

News Media means certain channels of communication by which information is conveyed between persons; it includes, but is not limited to, radio, television, and newspapers.

p.p.m. means parts per million.

Person means any individual, partnership, association, firm, syndicate, company, trust, corporation, department, authority, bureau, agency, political subdivision of the Commonwealth, law enforcement agency, fire fighting agency, or any other entity recognized by law as the subject of rights and duties.

PM10 or Particulate Matter 10 means particulate matter with an aerodynamic diameter less than or equal to a nominal 10 micrometers as measured by a reference method based on Appendix J of Part 50 of CFR and designated in accordance with Part 53 or by an equivalent method designated in part 53.

8.03: Air Pollution Episode Criteria

(1) Episode Criteria. Conditions justifying the proclamation of air pollution alert, air pollution warning, or air pollution emergency shall be deemed to exist whenever the Department determines that the accumulation of air pollutants in any place is attaining or has attained levels which could, if such levels are sustained or exceeded, lead to a substantial threat to the health of persons. In making this determination, the Department will be guided by the following criteria:

(a) Air Pollution Forecast. An internal watch by the Department shall be actuated by a National Weather Service advisory that Atmospheric Stagnation Advisory is in effect.

(b) Alert. The Alert level is that concentration of pollutants at which first stage control actions is to begin. An Alert will be declared when any one of the levels listed in 310 CMR 8.03(2)(a) is reached at any monitoring site and meteorological conditions are such that the Department is of the opinion that, unless appropriate control actions to reduce emissions are taken, ambient air contaminant concentration levels will remain at or in excess of the above levels for 12 or more hours.

(c) Warning. The warning level indicates that air quality is continuing to deteriorate and that additional control actions are necessary. A warning will be declared when any one of the levels listed in 310 CMR 8.03(2)(b) is reached at any monitoring site and meteorological conditions are such that the Department is of the opinion that, unless appropriate control actions to reduce emissions are taken, ambient air contaminant concentration levels will remain at or in excess of the above levels for 12 or more hours.

(d) Emergency. The emergency level indicates that air quality is continuing to deteriorate toward a level of significant harm to the health of persons and that the most stringent control actions are necessary. An emergency will be declared when any one of the levels listed in 310 CMR 8.03(2)(c) is reached at any monitoring site and meteorological conditions are such that the Department is of the opinion that, unless appropriate control actions to reduce emissions are taken, ambient air contaminant concentration levels will remain at or in excess of the above levels for 12 or more hours.

(e) Termination. Once declared, any status reached by application of these criteria will remain in effect until the criteria for that level are no longer met. At such time, the next lower status will be assumed, or the episode will be declared over.

8.03: continued

(2) Criteria to be used to determine an Air Pollution Episode.

8.03(2)(a) Criteria for Determination of Air Pollution Episode Alert (APEA)

CONTAMINANT	Ambient Air Contaminant Concentration Levels				
	Ave. ug/m ³	ppm	COHs	Duration	Product
Sulfur Dioxide (SO ₂)	800	0.3		24-hr.	
Particulate Matter PM10	350			24-hr.	
Tape Stain (COHs)			3	24-hr.	
Product of: (SO ₂) X (COHs)		(SO ₂)	(COHs)	24-hr.	0.2
Carbon Monoxide	17,000	15		8-hr.	
Ozone (O ₃)	400	0.2		1-hr.	
Nitrogen Dioxide	1,130	0.6		1-hr.	
Nitrogen Dioxide	282	0.15		24-hr.	

Meteorological Conditions are such that the Department is of the opinion that, unless appropriate control actions to reduce emissions are taken, ambient air contaminant levels will remain at or in excess of the above levels for 12 or more hours.

8.03(2)(b) Criteria for Determination of Air Pollution Episode Warning (APEW)

CONTAMINANT	Ambient Air Contaminant Concentration Levels				
	Ave. ug/m ³	ppm	COHs	Duration	Product
Sulfur Dioxide (SO ₂)	1,600	0.6		24-hr.	
Particulate Matter PM10	420			24-hr.	
Tape Stain (COHs)			5	24-hr.	
Product of: (SO ₂) X (COHs)		(SO ₂)	(COHs)	24-hr.	0.8
Carbon Monoxide	34,000	30		8-hr.	
Ozone (O ₃)	800	0.4		1-hr.	
Nitrogen Dioxide	2,260	1.2		1-hr.	
Nitrogen Dioxide	565	0.3		24-hr.	

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

Meteorological Conditions are such that the Department is of the opinion that, unless appropriate control actions to reduce emissions are taken, ambient air contaminant levels will remain at or in excess of the above levels for 12 or more hours.

8.03: continued

8.03(2)(c) Criteria for Determination of Air Pollution Episode
Emergency (APEE)

CONTAMINANT	Ambient Air Contaminant Concentration Levels				Product
	Ave. ug/m ³	ppm	COHs	Duration	
Sulfur Dioxide (SO ₂)	2,100	0.8		24-hr.	
Particulate Matter					
PM10	500			24-hr.	
Tape Stain (COHs)			8	24-hr.	
Product of:					
(SO ₂) X (COHs)		(SO ₂)	(COHs)	24-hr.	1.2
Carbon Monoxide	46,000	40		8-hr.	
Ozone (O ₃)	1,000	0.5		1-hr.	
Nitrogen Dioxide	3,000	1.6		1-hr.	
Nitrogen Dioxide	750	0.4		24-hr.	

Meteorological Conditions are such that the Department is of the opinion that ambient air contaminant levels will remain at or in excess of the above levels for 12 or more hours.

8.04: Air Pollution Episode Potential Advisories

- (1) Atmospheric Stagnation Advisories received by the Department shall be evaluated by the Department in light of manifest local meteorological conditions, weather forecast, ambient air contaminant concentration levels observed, and anticipated weather-influenced emissions.
- (2) During periods of suspected poor atmospheric ventilation, Atmospheric Stagnation Advisories, and Air Pollution Episodes, the Department will maintain close liaison with the National Weather Service to exchange information of mutual benefit.

8.05: Declaration of Air Pollution Episodes and Incidents

- (1) The Commissioner, based upon the Department's evaluation of such information relative to ambient air contaminant concentration levels as may be available to the Department, meteorological conditions extant, the Criteria set forth in 310 CMR 8.03 and/or other substantive and germane information, shall declare an
 - (a) Air Pollution Episode Alert,
 - (b) Air Pollution Episode Warning, or
 - (c) Air Pollution Incident Emergency.

(2) The Commissioner, with the approval of the Governor, based upon the Department's evaluation of such information relative to the ambient air contaminant concentration levels as may be available to the Department, meteorological conditions extant, the Criteria set forth in 310 CMR 8.03 and/or other substantive and germane information may declare an Air Pollution Episode Emergency.

8.05: continued

(3) When an Air Pollution episode or Incident Emergency is declared, the Commissioner shall specify the contaminant(s) and portion(s) of the Commonwealth in which said Episodes or Incident Emergencies pertain.

(4) Notice of a declaration of an Air Pollution Episode or Incident Emergency shall be made through the News Media to the extent feasible and such other means of communication as the Commissioner deems appropriate.

8.06: Termination of Air Pollution Episodes and Incident Emergencies

(1) Whenever an Air Pollution Episode is declared, said level (or status) of episode will remain in effect until the criteria for that said level are no longer being met and, at such time, the next lower level (or status) will be assumed.

(2) When the conditions which occasioned the need for declaration of an Air Pollution Episode or Incident Emergency no longer exist, the Commissioner shall declare a termination.

8.07: Emission Reductions Strategies

Upon the declaration of an Air Pollution Episode, any person responsible for or having control over an ambient air contaminant emission source shall implement, to the extent possible, any indicated action strategies as listed below for the episode level and contaminant of concern as declared by the Commissioner.

<u>Action Strategies</u>	<u>Alert</u>	<u>Warning</u>	<u>Emergency</u>	<u>PM SO₂</u>	<u>O₃</u>	<u>CO</u>

8.08: Emission Reduction Plans (ERP)

- (1) Any person responsible for the operation of an emission source as set forth in 310 CMR 8.07 or any other emission source when specified by the Department in writing shall prepare standby Emission Reduction Plans (ERP) to reduce or eliminate emissions of air contaminants.
- (2) Standby Emission Reduction Plans required by 310 CMR 8.08(1) shall be in writing and shall identify the sources of air contaminants, the approximate amount of reduction of contaminants, and a brief description of the manner in which the reduction will be achieved.
- (3) ERPs Submittal and Approval.
 - (a) Standby plans (ERPs) required by 301 CMR 8.08(2) shall be submitted to the Department upon request within 30 days of the receipt of such request.
 - (b) Standby plans (ERPs) shall be subject to review and approval by the Department. If, in the opinion of the Department, any ERP is inadequate, the Department shall disapprove the plan and request the preparation of an amended plan. The Department shall give the reasons for disapproval and shall require resubmittal of the plan with a reasonable period of time as determined by the Department.
- (4) During a declared Air Pollution Episode, standby ERPs as required by 310 CMR 8.08(2) shall be made available on the premises to any person authorized to enforce the provisions of 310 CMR 8.00 and the person responsible for the operation of the emissions source shall be responsible for its implementation.
- (5) Any person responsible for the operation of a stationary emission source having a capability of emitting 100 tons or more per year of sulfur dioxide, nitrogen dioxide, particulate matter (PM), carbon monoxide, or hydrocarbons shall be subject to the provisions of 310 CMR 8.08(1), 8.08(2), 8.08(3) and 8.08(4).
- (6) Any person subject to the provisions of 310 CMR 8.08(5) shall submit an ERP to the Department for the Department's review for approval.

8.15: Air Pollution Incident Emergency (APIE)

- (1) The Commissioner shall declare an Air Pollution Incident Emergency if in his opinion, such is deemed advisable to prevent or abate a condition or impending condition which constitutes a present or reasonably imminent danger to the public health.
- (2) By nature of Air Pollution Incident Emergencies, as defined, APIE's do not lend themselves to specific pre-planned strategies for the specific emission sources as in the case of Air Pollution Episodes.
- (3) Upon declaration of an Air Pollution Incident Emergency the Commissioner or his designee shall assume and exercise such authority and powers as are provided in M.G.L. c. 111, § 2B as amended, and as the Commissioner or his designees may deem necessary to effect a prevention or an abatement of the conditions which occasioned his declaration of the APIE.
- (4) Appropriate agencies of the Commonwealth and political subdivisions thereof shall cooperate with the Commissioner and his designees in efforts to effect the prevention or abatement of the Air Pollution Incident Emergency.
- (5) Steps taken by any person to effect or assist in the prevention or abatement of an Air Pollution Incident Emergency shall not be proof conclusive in any action to establish responsibility for the event or happening that occasioned the APIE and shall not prejudice his rights under the law.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

8.21: Hearings

The Department will grant a hearing, upon application in writing for the purpose of reconsideration to any person to whom an Order has been issued, provided that such application is made within ten days of the receipt of the Order. The Order will remain in full force and must be obeyed during the reconsideration process unless modified by the Department.

8.22: Enforcement Provisions

Any official of any police department or agency, fire department or agency, or health agency of the Commonwealth or political subdivision thereof is hereby authorized to enforce, as provided for in M.G.L. c. 111, § 2B or 142B, 310 CMR 8.07, 8.08(4) and 8.09.

8.30: Severability

Each of section of 310 CMR 8.00 shall be construed as separate to the end that if any regulation or sentence, clause, or phrase thereof shall be held invalid for any reason, the remainder of 310 CMR 8.00 and all other regulations shall continue in full force.

8.31: Relief

M.G.L. c. 111, § 2B provides that any aggrieved person may appeal to the Commissioner or his designee for relief from the continuance of an Order. If the Commissioner or his designee finds that the continuance of any Order in whole or in part is unreasonable or unnecessary in light of the then prevailing conditions of air pollution, he may terminate or modify any such Order.

- 9.56: Standards for Facilities of Limited Accommodation
- 9.57: Approved Municipal Harbor Plans

9.01: Purpose

(1) Authority. 310 CMR 9.00 is adopted by the Commissioner of the Department of Environmental Protection (DEP) under the authority of M.G.L. c. 91, § 18 to establish procedures, criteria, and standards for uniform and coordinated administration of the provisions of M.G.L. c. 91, §§ 1 through 63 and M.G.L. c. 21A, §§ 2, 4, 8 and 14. 310 CMR 9.00 also form part of the Massachusetts Coastal Zone Management (CZM) Program, established by M.G.L. c. 21A, § 4A, and codified at 301 CMR 20.00: Coastal Zone Management Program. The interpretation and application of 310 CMR 9.00 shall be consistent with the policies of the CZM Program, 301 CMR 20.00, to the maximum extent permissible by law.

9.01: continued

(2) Purpose. 310 CMR 9.00 is promulgated by the Department to carry out its statutory obligations and the responsibility of the Commonwealth for effective stewardship of trust lands, as defined in 310 CMR 9.02. The general purposes served by 310 CMR 9.00 are to:

- (a) protect and promote the public's interest in tidelands, Great Ponds, and non-tidal rivers and streams in accordance with the public trust doctrine, as established by common law and codified in the Colonial Ordinances of 1641-47 and subsequent statutes and case law of Massachusetts;
- (b) preserve and protect the rights in tidelands of the inhabitants of the Commonwealth by ensuring that the tidelands are utilized only for water-dependent uses or otherwise serve a proper public purpose;
- (c) protect the public health, safety, and general welfare as it may be affected by any project in tidelands, great ponds, and non-tidal rivers and streams;
- (d) support public and private efforts to revitalize unproductive property along urban waterfronts, in a manner that promotes public use and enjoyment of the water; and
- (e) foster the right of the people to clean air and water, freedom from excessive and unnecessary noise, and the natural, scenic, historic, and esthetic qualities of their environment under Article XCVII of the Massachusetts Constitution.

9.02: Definitions

Abutter means the owner of land which shares, along the water's edge, a common boundary or corner with a project site, as well as the owner of land which lies within 50 feet across a water body from such site. Ownership shall be determined according to the records of the local tax assessors office.

Accessory Use means a use determined to be accessory to a water-dependent use, in accordance with the provisions of 310 CMR 9.12(3).

Aggrieved Person means any person who, because of a decision by the Department to grant a license or permit, may suffer an injury in fact, which is different either in kind or magnitude, from that suffered by the general public and which is within the scope of the public interests protected by M.G.L. c. 91 and c. 21A.

Applicant means any person submitting a license or permit application or other request for action by the Department pursuant to 310 CMR 9.00, and shall include the heirs, assignees, and successors in interest to such person.

Approved Municipal Harbor Plan means any Municipal Harbor Plan listed in 310 CMR 9.57(1).

Area of Critical Environmental Concern (ACEC) means an area which has been so designated by the Secretary pursuant to 301 CMR 12.00: *Areas of Critical Environmental Concern*.

Base Flood Elevation means the maximum elevation of flood water, including wave heights if any, which will theoretically result from the statistical 100-year frequency storm. Said elevation shall be determined by reference to the most recently available flood profile data prepared for the municipality within which the work is proposed under the National Flood Insurance Program, currently administered by FEMA; and in accordance with Wetlands Protection Act regulations at 310 CMR 10.57: *Land Subject to Flooding (Bordering and Isolated Areas)*.

Beach Nourishment means the placement of clean sediment, of a grain size compatible with existing beach sediment, on a beach to increase its width and volume for purposes of storm damage prevention, flood control, or public recreation. The seaward edge of the nourished beach shall not be confined by any structure.

Berth means any space wherein a vessel is confined by wet slip, dry stack, float, mooring, or other type of docking facility.

Boatyard means a facility whose function is the construction, repair, or maintenance of boats, which may include boat storage and docking for boatyard services.

9.02: continued

Boston Waterfront Decision means the decision of the Massachusetts Supreme Judicial Court in *Boston Waterfront Development Corporation vs. Commonwealth*, 378 Mass. 629, 393 N.E.2d 356 (1979).

Channel means a navigable route for the passage of vessels, established by customary use or under the authority of federal, state, or municipal law.

Coastal Atlas means the volume of maps of the coastal zone at a scale of 1:40,000 prepared as part of the CZM Program and available for public review at CZM offices.

Coastal Beach means unconsolidated sediment subject to wave, tidal, and coastal storm action which forms the gently sloping shore of a body of salt water and including tidal flats. Coastal beaches extend from the low water line landward to the dune line, coastal bank line or the seaward edge of existing man-made structures, when these structures replace one of the above lines, whichever is closest to the ocean.

Coastal Dune means any natural hill, mound or ridge of sediment landward of a coastal beach deposited by wind action or storm overwash. Coastal dune also means sediment deposited by artificial means and serving the purpose of storm damage prevention or flood control.

Coastal High Hazard Area means an area subject to high velocity waters, as defined in accordance with FEMA regulations and as designated on a Flood Insurance Rate Map, as issued and as may be revised or amended hereafter by FEMA.

Coastal or Shoreline Engineering Structure means any breakwater, bulkhead, groin, jetty, revetment, seawall, weir, riprap or any other structure which by its design alters wave, tidal, current, ice, or sediment transport processes in order to protect inland or upland structures from the effects of such processes.

Coastal Processes means natural forces which can modify coastal lands and waters through the action of wind, waves, tides, currents, or ice.

Coastal Zone means that area subject to the CZM Program and defined in 301 CMR 20.02: *Definitions*.

Combined Application means an application that may serve as a Notice of Intent pursuant to 310 CMR 10.00: *Wetlands Protection*, an application for a 401 Water Quality Certification pursuant to 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*, and/or an application for a Chapter 91 license, permit or other written approval for a water-dependent use pursuant to 310 CMR 9.00. Notwithstanding the foregoing, a Combined Application may not serve as an application for an annual permit for a mooring, float, raft or small structure accessory to a residence in accordance with 310 CMR 9.07, an application for a Chapter 91 license for a small structure accessory to a residence in accordance with the simplified process set forth in 310 CMR 9.10, or the certification submitted as an application for a General License in accordance with 310 CMR 9.29.

Combined Permit means a decision issued in response to a Combined Application that serves as two or more of the following: a Superseding Order of Conditions issued pursuant to 310 CMR 10.00: *Wetlands Protection*; a 401 Water Quality Certification issued pursuant to 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*; and/or a Chapter 91 permit, license or other written approval issued pursuant to 310 CMR 9.00.

Commonwealth Tidelands means tidelands held by the Commonwealth, or by its political subdivisions or a quasi-public agency or authority, in trust for the benefit of the public; or tidelands held by a private person by license or grant of the Commonwealth subject to an express or implied condition subsequent that it be used for a public purpose. In applying 310 CMR 9.02: *Definitions*: Commonwealth Tidelands, the Department shall act in accordance with the following provisions:

9.02: continued

(a) the Department shall presume that tidelands are Commonwealth tidelands if they lie seaward of the historic low water mark or of a line running 100 rods (1650 feet) seaward of the historic high water mark, whichever is farther landward; such presumption may be overcome only if the Department issues a written determination based upon a final judicial decree concerning the tidelands in question or other conclusive legal documentation establishing that, notwithstanding the *Boston Waterfront* decision of the Supreme Judicial Court, such tidelands are unconditionally free of any proprietary interest in the Commonwealth;

(b) the Department shall presume that tidelands are not Commonwealth tidelands if they lie landward of the historic low water mark or of a line running 100 rods (1650 feet) seaward of the historic high water mark, whichever if farther landward; such presumption may be overcome only upon a showing that such tidelands including, but not limited to, those in certain portions of the Town of Provincetown, are not held by a private person.

Commissioner means the Commissioner of the Department of Environmental Protection (DEP).

CZM means the Massachusetts Coastal Zone Management Office.

CZM Program means the Massachusetts Coastal Zone Management Program established pursuant to M.G.L. c. 21A and codified in 301 CMR 20.00: *Coastal Zone Management Program*.

Date of Receipt means the date of delivery to an office, home or usual place of business by mail or hand delivery. The Department will presume that a document is received three business days after it is mailed, certified mail return receipt requested, to the correct address, unless good cause is shown otherwise.

DCR means the Department of Conservation and Recreation.

Department means the Department of Environmental Protection (DEP).

Designated Port Area (DPA) means an area that has been so designated by CZM in accordance with 301 CMR 25.00: *Designation of Port Areas*.

Development Site means the area owned, controlled, or proposed for development by the applicant in which a project will occur.

DPA Master Plan means the component of an Approved Municipal Harbor Plan pertaining to lands and waters of a DPA within the municipality. Such master plan or portion thereof shall take effect under 310 CMR 9.00 only upon written approval by the Secretary in accordance with 301 CMR 23.00: *Review and Approval of Municipal Harbor Plans* and any associated written guidelines of CZM and approval by the Department through the adoption of the substitute provisions of Approved Municipal Harbor Plans listed in 310 CMR 9.57.

Dredged Material means rocks, bottom sediment, debris, refuse, plant or animal matter, or other materials which are removed by dredging.

Dredged Material Disposal means the discharge of dredged material, the transportation of such material prior to discharge, and the dispersion, deposition, assimilation or biological uptake or accumulation of such material after transportation or discharge.

Dredging means the removal of materials including, but not limited to, rocks, bottom sediments, debris, sand, refuse, plant or animal matter, in any excavating, cleaning, deepening, widening or lengthening, either permanently or temporarily, of any flowed tidelands, rivers, streams, ponds or other waters of the Commonwealth. Dredging shall include: improvement dredging, maintenance dredging, excavating and backfilling or other dredging and subsequent refilling.

Ecological Restoration Project means a project whose primary purpose is to restore or otherwise improve the natural capacity of a Resource Area(s) to protect and sustain the interests identified in M.G.L. c. 131, § 40, when such interests have been degraded or destroyed by anthropogenic influences. Ecological Restoration Project shall not include projects specifically intended to

9.02: continued

provide mitigation for the alteration of a Resource Area authorized by a Final Order or Variance issued pursuant to 310 CMR 10.00: *Wetlands Protection* or a 401 Water Quality Certification issued pursuant to 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*.

EIR means Environmental Impact Report as defined in 301 CMR 11.00: *MEPA Regulations*.

Environmental Monitor means the semi-monthly publication of proposed actions and projects which require MEPA filings with the Secretary pursuant to M.G.L. c. 30, §§ 61 through 62H.

EOEEA means the Executive Office of Energy and Environmental Affairs.

Facility of Limited Accommodation means a facility at which goods or services are made available directly (*e.g.*, in person by customer access to the facility, not exclusively by means of mail order, telecommunications or other electronic transmission) to the public on a regular basis primarily by appointment or enrollment on essentially equal terms to the public at large rather than restricted to a relatively limited group of specified individuals. Facilities of Limited Accommodation may be either water-dependent, accessory to water-dependent, or nonwater-dependent, and shall include but not be limited to:

- (a) Rehabilitation clinics and medical facilities;
- (b) Business or professional offices that serve customers by appointment or enrollment and by customer access to the facility;
- (c) Child care centers and elderly or other social service centers, provided that the facility does not interfere with access to public spaces outside of a building; and
- (d) Artist and photography studios open to the public by appointment.

Facility of Private Tenancy means a facility at which the advantages of use accrue, on either a transient or a permanent basis, to a relatively limited group of specified individuals (*e.g.*, members of a private club, owners of a condominium building) rather than to the public at large (*e.g.*, patrons of a public restaurant, visitors to an aquarium or museum). Such facilities may be water-dependent, accessory to water-dependent, or nonwater-dependent, and may include but are not limited to:

- (a) houses, apartments, condominiums, and other residential units;
- (b) business or professional offices that do not rely upon customer access as a significant element of the business or profession;
- (c) industrial facilities, including but not limited to manufacturing plants and electric power generating stations;
- (d) vehicular ways or parking facilities not open to the public;
- (e) open spaces, pedestrian walkways, or outdoor recreation facilities not open to the public; and
- (f) marina berths for long-term exclusive use.

Facility of Public Accommodation means a facility at which goods or services are made available directly to the transient public on a regular basis, or at which advantages of use are otherwise open on essentially equal terms to the public at large (*e.g.*, patrons of a public restaurant, visitors to an aquarium or museum), rather than restricted to a relatively limited group of specified individuals (*e.g.*, members of a private club, owners of a condominium building). Facilities of public accommodation may be either water-dependent, accessory to water-dependent, or nonwater-dependent, and shall include but are not limited to:

- (a) public restaurants or entertainment facilities;
- (b) theaters, performance halls, art galleries, or other establishments dedicated to public presentation of the fine arts;
- (c) hotels, motels, or other lodging facilities of transient occupancy;
- (d) educational, historical, or other cultural institutions open to the public;
- (e) interior spaces dedicated to the programming of community meetings, informational displays, special recreational events, or other public activities;
- (f) sports or physical fitness facilities open to the public;
- (g) open spaces, pedestrian walkways, or outdoor recreation facilities open to the public;

9.02: continued

- (h) retail sales or service facilities;
- (i) ferry terminals, transit stations, and other public transportation facilities;
- (j) marina berths for transient use; and
- (k) vehicular ways open to the public or parking facilities open to the public, including users of facilities of public accommodation.

FEMA means the Federal Emergency Management Agency.

Fill means any unconsolidated material that is confined or expected to remain in place in a waterway, except for: material placed by natural processes not caused by the owner or any predecessor in interest; material placed on a beach for beach nourishment purposes; and dredged material placed below the low water mark for purposes of subaqueous disposal.

Filled Tidelands means former submerged lands and tidal flats which are no longer subject to tidal action due to the presence of fill.

Final Order means the order of conditions issued pursuant to the Wetlands Protection Act, M.G.L. c. 131, § 40, as the term is defined in 310 CMR 10.04: *Definitions*.

Fish means any animal life inhabiting waterways or the land beneath them that is utilized for recreational or commercial purposes, or that is part of the food chain for such animal life.

Flowed Tidelands means present submerged lands and tidal flats which are subject to tidal action.

Great Pond means any pond which contained more than ten acres in its natural state, as calculated based on the surface area of lands lying below the natural high water mark. The title to land below the natural low water mark is held by the Commonwealth in trust for the public, subject to any rights which the applicant demonstrates have been granted by the Commonwealth. The Department shall presume that any pond presently larger than ten acres is a Great Pond, unless the applicant presents topographic, historic, or other information demonstrating that the original size of the pond was less than ten acres, prior to any alteration by damming or other human activity.

Harbor Line means any line established by the legislature pursuant to M.G.L. c. 91, § 34.

Harbormaster means the individual appointed pursuant to M.G.L. c. 102, § 19, or as otherwise provided by law.

High Water Mark means:

- (a) for tidelands, the present mean high tide line, as established by the present arithmetic mean of the water heights observed at high tide over a specific 19-year Metonic Cycle (the National Tidal Datum Epoch), and shall be determined using hydrographic survey data of the National Ocean Survey of the U.S. Department of Commerce; and
- (b) for Great Ponds, rivers, and streams, the present arithmetic mean of high water heights observed over a one year period using the best available data as determined by the Department.

Historic High Water Mark means the high water mark which existed prior to human alteration of the shoreline by filling, dredging, excavating, impounding, or other means. In areas where there is evidence of such alteration by fill, the Department shall presume the historic high water mark is the farthest landward former shoreline which can be ascertained with reference to topographic or hydrographic surveys, previous license plans, and other historic maps or charts, which may be supplemented as appropriate by soil logs, photographs, and other documents, written records, or information sources of the type on which reasonable persons are accustomed to rely in the conduct of serious business affairs. Such presumption may be overcome by a clear showing that a seaward migration of such shoreline occurred solely as a result of natural accretion not caused by the owner or any predecessor in interest. For Great Ponds, the historic high water mark is synonymous with the natural high water mark.

9.02: continued

Historic Low Water Mark means the low water mark which existed prior to human alteration of the shoreline by filling, dredging, excavating, impounding or other means. In areas where there is evidence of such alteration by fill, the Department shall make its determination of the position of the historic low water mark in the same manner as described in 310 CMR 9.02: *Definitions: Historic High Water Mark*.

Improvement Dredging means any dredging under a license or a permit in an area which has not been previously dredged or which extends the original dredged width, depth, length, or otherwise alters the original boundaries of a previously dredged area.

Infrastructure Crossing Facility means any infrastructure facility which is a bridge, tunnel, pipeline, aqueduct, conduit, cable, or wire, including associated piers, bulkheads, culverts, or other vertical support structures, which is located over or under the water and which connects existing or new infrastructure facilities located on the opposite banks of the waterway. Any structure which is operationally related to such crossing facility and requires an adjacent location shall be considered an ancillary facility thereto. Such ancillary facilities generally include, but are not limited to, power transmission substations, gas meter stations, sewage headworks and pumping facilities, toll booths, tunnel ventilation buildings, drainage structures, and approaches, ramps, and interchanges which connect bridges or tunnels to adjacent highways or railroads.

Infrastructure Facility means a facility which produces, delivers, or otherwise provides electric, gas, water, sewage, transportation, or telecommunication services to the public.

Innovative Technology means technology that has not been commercially deployed or is in limited deployment in Massachusetts, and includes, but is not limited to, energy technology that obtains energy from the ocean, waterway, or conditions associated with the ocean or waterway, other forms of renewable energy technology.

Landlocked Tidelands means any filled tidelands which on January 1, 1984 were entirely separated by a public way or interconnected public ways from any flowed tidelands, except for that portion of such filled tidelands which are presently located:

- (a) within 250 feet of the high water mark, or
- (b) within any Designated Port Area. Said public way or ways shall also be defined as landlocked tidelands, except for any portion thereof which is presently within 250 feet of the high water mark.

Licensee means the person to whom a license is issued and shall include the heirs, assignees, and successors in interest to such person.

Local Economic Development Authority means a municipal planning board, zoning board, or other board or commission so designated by a municipality; community development corporations designated in accordance with M.G.L. c. 40H; municipal economic development and industrial corporations designated in accordance with M.G.L. c. 121C; municipal housing authorities designated in accordance with M.G.L. c. 121B, § 3; municipal redevelopment authorities designated in accordance with M.G.L. c. 121B, § 4; urban development corporations designated in accordance with M.G.L. c. 121A; and 40B district planning commissions established under M.G.L. c. 40B, including, but not limited to, the Cape Cod Commission, the Martha's Vineyard Commission and the Boston Redevelopment Authority.

Low Water Mark means the present mean low tide line, as established by the present arithmetic mean of water heights observed at low tide over a specific 19-year Metonic Cycle (the National Tidal Datum Epoch), and shall be determined using hydrographic survey data of the National Ocean Survey of the U.S. Department of Commerce.

Maintenance Dredging means dredging in accordance with a license or permit in any previously authorized dredged area which does not extend the originally dredged depth, width, or length.

Marina means a berthing area with docking facilities under common ownership or control and with berths for ten or more vessels, including commercial marinas, boat basins, and yacht clubs. A marina may be an independent facility or may be associated with a boatyard.

9.02: continued

Marine Industrial Park means a multi-use complex on tidelands within a DPA, at which:

- (a) the predominant use is for water-dependent industrial purposes; in general, at least $\frac{2}{3}$ of the park site landward of any project shoreline must be used exclusively for such purposes;
- (b) spaces and facilities not dedicated to water-dependent industrial use are available primarily for general industrial purposes; uses that are neither water-dependent nor industrial may occur only in a manner that is incidental to and supportive of the water-dependent industrial uses in the park, and may not include general residential or hotel facilities; and
- (c) any commitment of spaces and facilities to uses other than water-dependent industry is governed by a comprehensive park plan, prepared in accordance with M.G.L. c. 30, §§ 61 through 62H, if applicable, and accepted by the Department in a written determination issued pursuant to 310 CMR 9.14.

MEPA means the Massachusetts Environmental Policy Act, M.G.L. c. 30, §§ 61 through 62H, and 301 CMR 11.00: *MEPA Regulations*.

MOU means a Memorandum of Understanding between the Department and another public agency. The draft text of any such document or other written interagency agreement shall be published in the *Environmental Monitor* for public review and comment, and the final text shall be published therein upon adoption and made available by the Department upon request.

Municipal Harbor Plan (MHP) means a document (in words, maps, illustrations, and other media of communication) setting forth, among other things: a community's objectives, standards, and policies for guiding public and private utilization of land and water bodies within a defined harbor or other waterway planning area; and an implementation program which specifies the legal and institutional arrangements, financial strategies, and other measures that will be taken to achieve the desired sequence, patterns, and characteristics of development and other human activities within the harbor area. Such plan shall take effect under 310 CMR 9.00 only upon approval by the Department through the adoption of the substitute provisions of Approved Municipal Harbor Plans listed in 310 CMR 9.57.

Municipal Official means the mayor of a city, the board of selectmen of a town, or the council of a municipality having a manager-council form of government.

Natural High Water Mark means the historic high water mark of a Great Pond.

Natural Low Water Mark means the historic low water mark of a Great Pond.

Net Operating Income means the rental income from a Facility of Limited Accommodation within the licensed structure minus its operating expenses and property taxes calculated as an amount per square foot for the licensed structure or a comparable value if owner occupied. Operating expenses may include expenses for management, legal and accounting services, insurance, janitorial and security services, maintenance, supplies, and utilities.

Noncommercial Community Docking Facility means a facility for berthing of recreational vessels accessory to residential or nonprofit seasonal camp use (*e.g.*, summer camps).

Nonprofit Organization means an organization exempt from federal income taxation under § 501(c)(3) of the U.S. Internal Revenue Code.

Nonwater-dependent Use means a use as specified in 310 CMR 9.12.

Nonwater-dependent Use Project means a project consisting of one or more nonwater-dependent uses, or a mix of water-dependent and nonwater-dependent uses, as specified in 310 CMR 9.12(1).

Notification Date means a specified date by which a public notice must be published in the newspaper and/or the *Environmental Monitor*, and mailed to municipal officials, and on which the public comment period commences.

9.02: continued

Ocean Sanctuary means an ocean area wherein certain restrictions on activities apply, as defined in M.G.L. c. 132A, § 13 and 302 CMR 5.00: *Ocean Sanctuaries*.

Party means the applicant, any person allowed by the Department to intervene pursuant to M.G.L. c. 30A, § 1, or any ten citizens allowed by the Department to intervene pursuant to M.G.L. c. 30A, § 10A.

Person means any individual, partnership, trust, firm, corporation, association, commission, district, department, board, municipality, public or quasi-public agency or authority.

Present means contemporaneous with the review of an application, request for determination of applicability, or other action by the Department.

Private Recreational Boating Facility means a facility for berthing of recreational vessels at which all berths and accessory uses thereto are not available for patronage by the general public, or where exclusive use of any such berth is available on a long-term basis. Such berths shall not include a berth reserved for the operator of said facility.

Private Tidelands means tidelands held by a private person subject to an easement of the public for the purposes of navigation and free fishing and fowling and of passing freely over and through the water. In accordance with the Colonial Ordinances of 1641-47, the Department shall presume that tidelands are private tidelands if they lie landward of the historic low water mark or of a line running 100 rods (1650 feet) seaward of the historic high water mark, whichever is farther landward; such presumption may be overcome upon a showing that such tidelands, including but not limited to those in certain portions of the Town of Provincetown, are not held by a private person or upon a final judicial decree that such tidelands are not subject to said easement of the public.

Project means any work, action, conduct, alteration, change of use, or other activity subject to the jurisdiction of the Department under M.G.L. c. 91, in accordance with the provisions of 310 CMR 9.03 through 9.05, which is the subject of a license or permit application.

Project Shoreline means the high water mark, or the perimeter of any pier, wharf, or other structure supported by existing piles or to be replaced pursuant to 310 CMR 9.32(1)(a)4., whichever is farther seaward.

Project Site means the area owned, controlled, or proposed for development by the applicant in which a project will occur and which is subject to the geographic jurisdiction of the Department, as specified in 310 CMR 9.04.

Public Agency means any agency, department, board, district, commission, or authority of the Commonwealth or the United States, or any municipality or other political subdivision of the Commonwealth.

Public Recreational Boating Facility means a facility for berthing of recreational vessels at which all berths and accessory uses thereto are available for patronage by the general public on a seasonal or transient basis. Such facility may be either publicly or privately owned, and may include town piers, commercial rental marinas, or community sailing centers or yacht clubs offering open membership to the public. Nothing in 310 CMR 9.00 shall be construed as prohibiting the adoption of minimum eligibility criteria of broad, objective applicability, such as basic knowledge of boating safety or a willingness to make regular work commitments; nor as prohibiting the reservation of a berth for the operator of said facility.

Public Service Project means a project:

- (a) whose entire control, development, and operation is undertaken by a public agency for the provision of facilities or services directly to the public (or to another public agency for such provision to the public) by the public agency or its contractor or agent; or
- (b) which consists entirely of Infrastructure Facilities, as defined at 310 CMR 9.02.

Public Way means a road, street, or highway for vehicular use open to the public at large and for which a public agency is responsible for maintenance and repair.

9.02: continued

Resource Area means any of the areas specified in 310 CMR 10.25 through 10.35 and 310 CMR 10.54 through 10.58. It is used synonymously with Area Subject to Protection under M.G.L. c. 131, § 40, each one of which is enumerated in 310 CMR 10.02(1): *Areas Subject to Protection Under M.G.L. c. 131, § 40*.

Restoration Order of Conditions means the General Order of Conditions issued pursuant to 310 CMR 10.14: *General Ecological Restoration Project Order of Conditions* for a project that meets the eligibility criteria set forth in 310 CMR 10.13: *Eligibility Criteria for General Restoration Order of Conditions*.

Secretary means the Secretary of the Executive Office of Energy and Environmental Affairs.

Shellfish means the following species: Bay Scallop (*Argopecten irradians*); Blue Mussel (*Mytilus edulis*); Ocean Quahog (*Arctica islandica*); Oyster (*Crassostrea virginica*); Quahog (*Mercenaria mercenaria*); Razor Clam (*Ensis directus*); Sea Clam (*Spicula solidissima*); Sea Scallop (*Placopecten megallanicus*); and Soft Clam (*Mya arenaria*).

State Agency means any agency, department, board, district, commission, or authority of the Commonwealth.

Structure means any man-made object which is intended to remain in place in, on, over, or under tidelands, Great Ponds, or other waterways. Structure shall include, but is not limited to, any pier, wharf, dam, seawall, weir, boom, breakwater, bulkhead, riprap, revetment, jetty, piles (including mooring piles), line, groin, road, causeway, culvert, bridge, building, parking lot, cable, pipe, pipeline, conduit, tunnel, wire, or pile-held or other permanently fixed float, barge, vessel or aquaculture gear. Structure does not include any mooring, float, or raft which has been authorized by annual permit of a harbormaster, in accordance with M.G.L. c. 91, § 10A and with 310 CMR 9.07; nor any weir, pound net, or fish trap which has been authorized in tidewater by permit of the municipal official and approved by the Department and the Division of Marine Fisheries, in accordance with M.G.L. c. 130, § 29. Any such mooring, float, raft, weir, pound net, or fish trap, which has not been so authorized shall be considered a structure under 310 CMR 9.00.

Substantial Change in Use means a use for a continuous period of at least one year of 10% or more of the surface area of the authorized or licensed premises or structures for a purpose unrelated to the authorized or licensed use or activity, whether express or implied.

Substantial Structural Alteration means a change in the dimensions of a principal building or structure which increases by more than 10% the height or ground coverage of the building or structure specified in the authorization or license, or an increase by more than 10% of the surface area of the fill specified in the authorization or license.

Superseding Order means an order of conditions issued by the Department pursuant to the Wetlands Protection Act M.G.L. c. 131, § 40, as defined in 310 CMR 10.04: *Definitions*.

Supporting DPA Use means an industrial or commercial use in a Designated Port Area that provides water-dependent industrial use in the DPA with direct economic or operational support, to an extent that adequately compensates for the reduced amount of tidelands on the project site that will be available for water-dependent industrial use during the term of the license. The type, location, scale, duration, operation, and other relevant aspects of the industrial or commercial use must be compatible with activities characteristic of a working waterfront and its backlands, in order to preserve in the long run the predominantly industrial character of the DPA and its viability for maritime development. In determining whether an industrial or commercial use qualifies as a Supporting DPA Use, the Department shall act in accordance with the following provisions as well as all applicable provisions of a DPA Master Plan.

9.02: continued

In the case of commercial uses, any use may be determined to be compatible with the DPA except where the inherent nature of the use gives rise to conflict with port operations or excessive consumption of port space, either directly or indirectly (*e.g.* as a result of collateral development activity). Accordingly, new or expanded uses that shall not be determined to be a Supporting DPA Use include, but are not limited to, transient group quarters such as hotels/motels, nursing homes, and hospitals; recreational boating facilities; amusement parks and other major entertainment or sports complexes; and new buildings devoted predominantly to office use.

Unless otherwise provided in a DPA Master Plan, the amount of tidelands occupied by Supporting DPA Uses and any accessory uses thereto shall not exceed 25% of the area of the project site (excluding tidelands seaward of the project shoreline), so that the remainder of the project site will continue to be available exclusively for water-dependent industrial or temporary use.

Temporary Use means warehousing, trucking, parking, and other industrial and transportation uses which occupy vacant space or facilities in a Designated Port Area, for a maximum term of ten years as specified in 310 CMR 9.15(1)(d), and without significant structural alteration of such space or facilities. Temporary uses may be licensed only if marketing efforts have failed to identify any prospective water-dependent industrial tenant, and if the license is conditioned to require further solicitation of such tenancy upon expiration of the license term.

Test Project means the installation or deployment of water dependent Innovative Technology *in situ* for purposes of evaluating its performance and environmental effects.

Tidelands means present and former submerged lands and tidal flats lying between the present or historic high water mark, whichever is farther landward, and the seaward limit of state jurisdiction. Tidelands include both flowed and filled tidelands, as defined in 310 CMR 9.02.

Trust Lands means present and former waterways in which the fee simple, any easement, or other proprietary interest is held by the Commonwealth in trust for the benefit of the public. All geographic areas subject to the jurisdiction of M.G.L. c. 91, as specified in 310 CMR 9.04, are generally considered to be trust lands.

9.02: continued

Upper Floor Accessory Services means utility and access facilities which must be located on the ground floor of any building to serve any facility of private tenancy located on any other floors, provided that such accessory services do not occupy more than 25% of the building footprint. Examples of such services include utility shafts, elevators, stairways, and entryways.

Water-dependent Use means a use as specified in these regulations at 310 CMR 9.12(2).

Water-dependent Use Project means a project consisting entirely of fill or structures for one or more water-dependent or accessory uses as specified in 310 CMR 9.12(1).

Water-dependent Use Zone means an area within the geographic jurisdiction of the Department and running landward of and parallel to the project shoreline, the width of which is determined in accordance with 310 CMR 9.51(3)(c). For purposes of such determination, the landward lot line of a property shall mean that in existence as of the effective date of 310 CMR 9.00, unless subsequent reconfiguration thereof results in a more landward location at the time of license application; and all baselines and distances shall be specified according to accepted land regulation and survey practices.

Waterway means any area of water and associated submerged land or tidal flat lying below the high water mark of any navigable river or stream, any Great Pond, or any portion of the Atlantic Ocean within the Commonwealth, which is subject to 310 CMR 9.04.

Wetlands Protection Act means M.G.L. c. 131, § 40 and 310 CMR 10.00: *Wetlands Protection*.

9.03: Scope of Jurisdiction

(1) Authorization of Projects by the Department. Written authorization in the form of a license, permit, or amendment thereto must be obtained from the Department before the commencement of one or more activities specified in 310 CMR 9.03(2) and (3) or 310 CMR 9.05 and located in one or more geographic areas specified in 310 CMR 9.04, unless the legislature has specifically exempted any such activity(ies) from Department jurisdiction under M.G.L. c. 91.

(2) Oversight of Certain Work Authorized by the Legislature. In accordance with M.G.L. c. 91, § 20, no person shall undertake any work authorized by the legislature and subject to M.G.L. c. 91 in accordance with 310 CMR 9.03(1), until said person has given written notice thereof to the Department, in the form of a license or permit application, and has submitted plans for such work which conform with the application requirements of 310 CMR 9.00. The Department may alter such plans and impose conditions in the license or permit, which shall be consistent with the legislative authorization and issued in accordance with 310 CMR 9.31(4). All work so authorized shall conform with the plans and conditions contained in said license or permit, and shall not commence until said license or permit has been issued.

In accordance with the *Boston Waterfront* decision of the Supreme Judicial Court, grants by the legislature of tidelands below the historic low water mark are subject to a condition subsequent that such tidelands be used for the public purpose for which they were granted, and the rights of the grantee to those tidelands are ended when that purpose is extinguished. If the present use of such tidelands has changed from the public purpose for which they were granted, authorization shall be obtained from the Department, in the form of a license pursuant to 310 CMR 9.00, in order to establish that such change of use serves a proper public purpose.

(3) Activities of the Massachusetts Port Authority. In accordance with its Enabling Act, St. 1956, c. 465, the Massachusetts Port Authority (Massport) may undertake the following activities within the following geographic areas without written authorization in the form of a license or permit from the Department:

- (a) any project consisting entirely of water-dependent-industrial uses or accessory uses thereto on previously filled or flowed tidelands within the Port of Boston; or
- (b) any project authorized by said Enabling Act on previously filled tidelands within the geographical boundary of Logan Airport, so long as it is operated as an airport.

9.03: continued

Except as provided in 310 CMR 9.03(3)(b), Massport shall obtain a license or permit pursuant to M.G.L. c. 91 for any project consisting entirely of uses other than water-dependent-industrial uses. With regard to all other future Massport projects, Massport and the Department shall develop an MOU, which shall be executed by the effective date of 310 CMR 9.00, in order to further clarify the Department's jurisdiction under M.G.L. c. 91 relative to the purposes, powers, and plans of Massport's Enabling Act, St. 1956, c. 456, as amended.

9.04: Geographic Areas Subject to Jurisdiction

The following geographic areas, generally considered "trust lands", are subject to licensing and permitting by the Department under 310 CMR 9.00:

(1) all waterways, including all flowed tidelands and all submerged lands lying below the high water mark of:

- (a) Great Ponds;
- (b) the Connecticut River;
- (c) the section of the Westfield River in the Towns of West Springfield and Agawam lying between the confluence of said river with the Connecticut River and the bridge across said river at Suffield Street in said Town of Agawam;
- (d) the non-tidal portion of the Merrimack River; and
- (e) any non-tidal river or stream on which public funds have been expended for stream clearance, channel improvement, or any form of flood control or prevention work, either upstream or downstream within the river basin, except for any portion of any such river or stream which is not normally navigable during any season, by any vessel including canoe, kayak, raft, or rowboat; the Department may publish, after opportunity for public review and comment, a list of navigable streams and rivers; and

(2) all filled tidelands, except for landlocked tidelands, and all filled lands lying below the natural high water mark of Great Ponds.

9.05: Activities Subject to Jurisdiction

(1) Activities Requiring a License Application. Except as provided in 310 CMR 9.05(3), an application for license or license amendment shall be submitted to the Department for the following activities involving work on or use of fill or structures:

- (a) any construction, placement, excavation, addition, improvement, maintenance, repair, replacement, reconstruction, demolition or removal of any fill or structures, not previously authorized, or for which a previous grant or license is not presently valid.
- (b) any existing or proposed use of any fill or structures not previously authorized, or for which a previous grant or license is not presently valid;
- (c) any structural alteration of fill or structures from the specifications contained in a valid grant or license, whether such authorization was obtained prior to or after January 1, 1984;
- (d) any change in use of fill or structures from that expressly authorized in a valid grant or license or, if no such use statement was included, from that reasonably determined by the Department to be implicit therein, whether such authorization was obtained prior to or after January 1, 1984.

(2) Activities Requiring a Permit Application. Except as provided in 310 CMR 9.05(3), an application for a permit or permit amendment shall be submitted to the Department for the following activities unless the applicant includes such activities in a license application:

- (a) any beach nourishment;
- (b) any dredging;
- (c) any disposal involving the subaqueous placement of unconsolidated material below the low water mark;
- (d) any burning of rubbish or other material upon the water, in accordance with M.G.L. c. 91, § 52;
- (e) any lowering of the water level of a Great Pond, except a body of water used for agriculture, manufacturing, mercantile, irrigation, insect control purposes, or for flowing cranberry bogs, or for public water supply, in accordance with M.G.L. c. 91, § 19A;

9.05: continued

(f) any structure and associated use with the potential to impair the public's rights in tidelands which is intended to remain in place on a temporary basis not to exceed six months, provided said structure and use otherwise meet the applicable substantive standards found at 310 CMR 9.31 through 9.60; and

(g) any structure and associated use with the potential to impair the public's rights in tidelands for the purpose of conducting a Test Project for Innovative Technology, provided said structure and use meet the applicable substantive standards found at 310 CMR 9.30.

(3) Activities Not Requiring a License or Permit. Notwithstanding the provisions of 310 CMR 9.05(1) through (2), no license or permit is required for:

(a) maintenance, repair, and minor modifications, as described in 310 CMR 9.22, of fill or structures for which a grant or license is presently valid, or which is exempt from licensing pursuant to 310 CMR 9.05(3)(b) through (h);

(b) continuation of any existing, unauthorized use or structure located on private tidelands lawfully filled in accordance with a license or grant, provided that no unauthorized structural alteration or change in use has occurred on such tidelands subsequent to January 1, 1984 or in violation of an express condition of said license or grant;

(c) continuation of any existing, unauthorized public service project, provided that no unauthorized structural alteration or change in use has occurred subsequent to January 1, 1984, unless the Department determines, upon notice and opportunity for public comment, that licensing is essential to prevent significant harm to an overriding water-related public interest;

(d) continuation in use of any unauthorized Massport project existing as of the effective date of 310 CMR 9.00, and for which no unauthorized structural alteration or change of use has occurred since that date, provided said project:

1. includes water-dependent industrial activities; or

2. is any other project for which a final EIR was certified as adequately and properly complying with M.G.L. c. 30, §§ 61 through 62H, prior to January 1, 1984; unless the Department determines, upon written notice and opportunity for public comment, that licensing is essential to prevent significant harm to an overriding water-related public interest;

(e) continuation in the use of existing, unauthorized water-dependent structures that are accessory to a single-family residence, in accordance with the provisions of 310 CMR 9.28;

(f) continuation of any existing, unauthorized use of fill or structures constructed prior to 1939 on any non-tidal river or stream subject to jurisdiction under 310 CMR 9.04(1)(e), provided that no unauthorized structural alteration or change in use has occurred subsequent to January 1, 1984;

(g) placement in a non-tidal river or stream subject to jurisdiction under 310 CMR 9.04(1)(e) of fill or structures for which a final Order of Conditions has been issued under M.G.L. c. 131, § 40 and 310 CMR 10.00: *Wetlands Protection*, and which does not reduce the space available for navigation; such fill or structures are limited to:

1. overhead wires, conduits, or cables to be attached to an existing bridge, without substantial alteration thereof, or constructed and maintained in accordance with the National Electrical Safety Code;

2. fish ladders, fishways, and other devices which allow or assist fish to pass by a dam or other obstruction in the waterway;

3. pipelines, cables, conduits, sewers, and aqueducts entirely embedded in the soil beneath such river or stream; and

4. bulkheads, revetments, headwalls, storm drainage outfalls, and similar structures which do not extend into such river or stream, except as may be necessary for bank stabilization;

(h) reconfiguration of licensed docking facilities in a marina, in accordance with the provisions of 310 CMR 9.39(1)(b);

(i) any change in use of berths for recreational vessels from seasonal or transient occupancy to long-term exclusive occupancy in accordance with a contract or other agreement, provided that the lease agreement, master lease agreement, or notice thereof for such berths was filed at the Registry of Deeds prior to July 6, 1990, in which event no application for a license or license amendment is required for any change in use of any berth subject to such agreement for long-term exclusive occupancy;

9.05: continued

- (j) emergency action, in accordance with the provisions of 310 CMR 9.20;
- (k) removal of fill or structures in accordance with the provisions of 310 CMR 9.08 or 310 CMR 9.27;
- (l) activities subject to annual permit by the harbormaster, other designated local official, or local permitting program, in accordance with the provisions of 310 CMR 9.07;
- (m) demolition or removal of any unauthorized structures or fill in order to facilitate water-dependent use provided prior written approval is obtained from the Department, which, at the discretion of the Department may include prior public notice and comment;

(4) Activities Eligible for General License Coverage. Activities eligible for Certification and subject to coverage under the General License pursuant to the provisions of 310 CMR 9.29.

9.06: Requests for Determination of Applicability

(1) Any person who desires a determination whether 310 CMR 9.00 presently apply to any area of land or water, or any activity thereon, may submit to the Department a request for a determination of applicability. Said request shall:

- (a) use the appropriate determination of applicability forms provided by the Department;
- (b) provide a detailed description of the proposed project, if any, which identifies all existing and proposed fill and structures and uses thereof; and
- (c) include a plan or plans showing:
 - 1. an appropriately-scaled site location map;
 - 2. references to any previous licenses, permits, or other authorizations for existing structures, fill, or dredging at the site, including the license number(s) and the date the license was recorded at the Registry of Deeds or Land Court;
 - 3. appropriately-scaled principal dimensions and elevations of proposed and existing fill, structures, or dredging in waterways;
 - 4. any historic dredging, filling, or impoundment at the site; and
 - 5. a delineation of the present high and low water marks, and the historic high and low water marks, as relevant.

(2) The applicant shall submit a request for a determination of applicability to the Department, and at the same time, to the persons identified in 310 CMR 9.13(1)(a).

(3) A public hearing and newspaper notice published by the applicant may be required by the Department on any request for a determination of applicability.

(4) Any person may submit written comments to the Department on any request for a determination of applicability within 21 days of the date of the request or the newspaper notification date, if applicable.

(5) Unless the Department requests further information, the Department shall issue a determination of applicability in recordable form within 60 days of the receipt of the request or the close of the public comment period, whichever is later.

(6) Any person who would otherwise have the right to an adjudicatory hearing pursuant to 310 CMR 9.17 may appeal the issuance of any determination of applicability within 21 days of the date of its issuance in accordance with the procedures set forth at 310 CMR 9.17.

9.07: Activities Subject to Annual Permit

(1) General. A written application for an annual permit must be submitted to the harbormaster of a city or town or, in a municipality where no harbormaster has been appointed, to the municipal official or other designated local official(s), for the placement on a temporary basis of moorings, floats or rafts held by bottom-anchor, and ramps associated thereto, which are located within the territorial jurisdiction of the municipality. A written application for an annual permit for small structures accessory to residences must be submitted to the harbormaster or other designated local official when a city or town has been approved by the Department to administer a local permitting program under 310 CMR 9.07(3), unless a license or other authorization under 310 CMR 9.00 is obtained from the Department. The harbormaster or other designated local official shall establish a schedule for receipt of applications. Completed applications shall be acted upon within a period of 15 days from receipt, according to the schedule. Any permit may contain such terms, conditions and restrictions as deemed necessary, consistent with the requirements of 310 CMR 9.07. No license shall be required from the Department if an annual permit is issued pursuant to 310 CMR 9.07. A city or town implementing 310 CMR 9.07 shall not discriminate against any citizen of the Commonwealth on the basis of residency, race, religion, sex, age, disability, or other illegal distinction. The provisions of 310 CMR 9.07 shall be enforced by local officials. The Department may enforce the provisions of 310 CMR 9.07 upon the request of a local permitting program or upon a finding that local enforcement is inadequate.

(2) Annual Permits for Moorings, Floats and Rafts.

(a) The harbormaster or other local official shall provide a written procedure for the fair and equitable assignment from a waiting list for use of vacant or new moorings, floats or rafts held by bottom-anchor and ramps associated thereto. Methods for mooring assignment which are appropriate include, but are not limited to, one or more of the following:

1. date of application;
2. physical characteristics of vessels, *e.g.*, size and type;
3. purpose of vessel use, *e.g.*, commercial *vs.* recreational or public *vs.* private.

The harbormaster, however, may allow the previous permit holder of a mooring to renew, on an annual basis, that mooring or another mooring within the control of the harbormaster.

(b) If the placement of floats or rafts for public recreational boating facilities, exclusive of moorings, extends beyond any established state harbor line, encompasses an area greater than 2,000 square feet, or constitutes a marina, additional procedures apply:

1. a public hearing must be held by the harbormaster or other local official in the affected municipality with notice at least seven days in advance published in the local newspaper at the expense of the applicant; and
2. the harbormaster or other local official must set forth the reasons for issuing such permit in a written statement, which must include findings to the effect that the project will serve a public purpose, will not unreasonably interfere with navigation in the harbor, and:
 - a. cannot be located reasonably within the harbor line, if the project extends beyond such line; and/or
 - b. complies with the provisions of 310 CMR 9.39(1), if the project includes a marina.

A copy of the permit and written statement shall be submitted upon issuance to the Department. The Department may review any such permit within 30 days of receipt and may either affirm the permit, set such action aside or amend such action by imposing its own conditions and restrictions as deemed necessary.

(c) A copy of the permit and written statement shall be submitted upon issuance to the Department. The Department may review any such permit within 30 days of receipt and may either affirm the permit, set such action aside or amend such action by imposing its own conditions and restrictions as deemed necessary. No permit for a mooring, float or raft may authorize unreasonable interference with the public rights to use waterways for any lawful purposes including fishing, fowling, and navigation in tidelands and Great Ponds. All permits shall meet the terms and conditions described in 310 CMR 9.07(4).

(d) No permit for a mooring, float or raft shall be transferrable to another person, except to a person within the immediate family of the permittee upon approval of the harbormaster. Nothing in 310 CMR 9.07 shall be construed to prevent moorings for which permits are issued to a recreational boating facility from being assigned to individual patrons or members of such facility.

9.07: continued

(3) Annual Permits for Small Structures Accessory to Residences.

(a) Petition for Local Permitting Program. A city or town may petition the Department for approval to administer a local permitting program for small structures accessory to residences. The Department shall state the basis for approval or denial of any petition in writing. The Department may withdraw its approval of a local permitting program if it determines that the local program exhibits a repeated failure to comply with the provisions of 310 CMR 9.07.

1. A city or town may elect to issue permits for small structures accessory to residences under the provisions of 310 CMR 9.07. The city or town shall provide public notice and an opportunity to comment on the petition for approval prior to its submittal to the Department. The petition shall include:

- a. the designation of a local official or local governmental body to administer the program;
- b. a demonstration that public access has been or will be provided to waterbodies within the town, including at least one formal means of access to the waterway, reasonable in type and scope for the waterway and its anticipated use by any citizen of the Commonwealth, established prior to the date of the petition or scheduled to be available within a reasonable period of time; and
- c. provision that any fees collected be used for support of the local permitting program, the improvement of waterways, or the enhancement of public access to or along waterways.

2. Where the Legislature has created a lake commission (*e.g.*, the Lake Quinsigamond Commission) with authority to issue permits, the commission may petition the Department for approval under 310 CMR 9.07(3), without designation by a city or town.

3. A local permitting program may also be approved by the Department if it provides substantially equivalent procedures and protection of public rights as 310 CMR 9.07. A city or town may petition for approval of a local permitting program pursuant to a local ordinance or bylaw. Where the Legislature has created a lake commission with authority to issue permits, the commission may petition the Department for approval of regulations implementing a local permitting program. Upon request, the Department shall provide advisory opinions on draft petitions for approval.

(b) Eligibility. An application for a local permit under 310 CMR 9.07(3) may be submitted only for a project consisting entirely of a dock, pier, seawall, bulkhead, or other small-scale structure that is accessory to a residential use or serves as a noncommercial community docking facility, provided that:

1. for proposed structures, or for structures built or substantially altered after January 1, 1984:

- a. any structure is water-dependent and pile-supported (*e.g.*, by wooden or metal posts) or bottom-anchored, without any fill;
- b. any structures total no more than 600 square feet below the mean high water shoreline for coastal waters or below the ordinary high water shoreline for inland waters;
- c. the structure is not a marina (*i.e.*, does not serve ten or more vessels);
- d. if within an ACEC, such structures were existing on October 4, 1990 or the effective date of the ACEC designation, whichever is later, and, if a resource management plan for the ACEC has been adopted by the municipality and approved by the Secretary, said structures are consistent with said plan;
- e. if within an ACEC, such structures, if built or substantially altered after October 4, 1990 or the effective date of the ACEC designation, whichever is later, are consistent with a resource management plan adopted by the municipality and approved by the Secretary;

2. for structures or fill constructed prior to January 1, 1984 and not substantially altered since that date:

- a. any structure or fill must be water-dependent;
- b. any structure and fill total no more than 600 square feet below the mean high water shoreline for coastal waters and below the ordinary high water shoreline for inland waters;
- c. the structure is not a marina (*i.e.*, does not serve ten or more vessels).

9.07: continued

(c) Standards. The local permitting program must find that the structure is limited to the minimum size necessary to achieve the intended water-related purposes, will not significantly interfere with any public rights to use waterways for fishing, fowling, navigation and other lawful purposes, mitigates for any interference by providing lateral access or other mitigation according to guidance issued by the Department, and complies with the provisions of 310 CMR 9.07.

(d) Application Requirements. The initial application shall be accompanied by plans or other documentation sufficient to accurately show the location and size of the structure. For proposed structures, the applicant must provide an Order of Conditions, a negative or conditional negative Determination of Applicability, or evidence of written request for action by the Conservation Commission and subsequent failure of the Conservation Commission to respond. For existing structures, no permit shall be issued if the Conservation Commission has determined that the structure or fill is in violation of the Wetlands Protection Act, M.G.L. c. 131, § 40. The applicant shall provide notice to the Selectmen or Mayor, the Conservation Commission, and to abutters for proposed structures and for previously unauthorized structures. The applicant shall also publish a public notice of the project in a newspaper of general circulation, which may serve as joint notice for M.G.L. c. 91 and M.G.L. 131, § 40. Notices must be provided or published at least ten business days prior to the deadline for receipt of applications established by the local permitting program. Notices must include the applicant's name and address, the location and a concise description of the project, the address to which comments may be sent, and the deadline for receipt of comments.

(e) Program Requirements. The local program shall send to the Department a copy of each permit issued for proposed or previously unauthorized structures, but not renewals. The local program shall maintain in the municipality a list of applicants and permittees, and provide the list to any person upon written request. The local permitting program shall annually publish a public notice of its intention to renew permits for small structures in specifically named water bodies at least ten business days prior to the renewal date, identifying the address where information on the renewal applications may be obtained and comments should be sent, and specifying the deadline for receipt of comments. A copy of the annual notice and a list of permittees shall be sent to the Department. Any written comments within the scope of M.G.L. c. 91 submitted to the local permitting program on any permit application shall be considered, and a permit may not be issued prior to the close of the public comment period. A copy of any permit on which public comment was received shall be sent immediately upon issuance or renewal to persons submitting comments and to the Department.

(f) Renewals and Transfer. Projects meeting the provisions of 310 CMR 9.07(3), which previously obtained an annual permit, license, amnesty license or interim approval, may apply for extension of authorization under 310 CMR 9.07 as a renewal. No individual notice is required for renewals, unless specifically requested by the local permitting program. A permit for an eligible small structure attached to land under 310 CMR 9.07(3) is transferrable upon change of ownership of the land to a new owner.

(4) Terms and Conditions Applicable to All Annual Permits.

(a) No permit may be valid for a period longer than to the end of any given calendar year.

(b) No permit may authorize structures other than the placement of moorings, floats, rafts or eligible small structures accessory to residences under 310 CMR 9.07.

(c) No permit shall be construed as authorizing the placement of moorings, floats, rafts, or other structures on private tidelands of anyone other than the applicant if objected to by the owner or owners thereof.

(d) No permit may authorize the placement of moorings, floats, rafts or other structures in any navigation channel or turning basin formally designated by the federal or state government or by a municipality pursuant to an Approved Municipal Harbor Plan, unless the designating authority or other agency with jurisdiction over said area has previously approved such placement.

(e) No permit shall be inconsistent with an Approved Municipal Harbor Plan, if any, or unless permitted under 310 CMR 9.07(2)(b), be issued for a project extending beyond the harbor line.

9.07: continued

(f) No mooring, float, raft, or other small structure may interfere with public rights associated with a common landing, public easement, or other historic legal form of public access that may exist on or adjacent to the project site.

(g) Any person receiving a permit for a small structure accessory to a residence shall post signage as required by the city or town in accordance with guidance issued by the Department.

(5) Review of Local Decision.

(a) Any applicant aggrieved by a refusal to permit a mooring, float, raft, or small structure accessory to a residence or by any condition or restriction imposed relative thereto, may request a review in writing to the Department within 30 days after receiving notice of such refusal or of the imposition of such condition or restriction. The failure of the harbormaster, other local official, or local program to act upon a complete application within a reasonable time shall be deemed by the Department to be a denial of a permit. A copy of the request shall be sent at the same time to the harbormaster, other local official, or local permitting program.

(b) The Department may review any permit within 30 days of receipt, with notification to the applicant, harbormaster or other local official, or local program, and may either affirm the permit, set such action aside or amend such action by imposing its own conditions and restrictions as deemed necessary. The Department may review a permit upon its own initiative or may initiate a review upon written request of any person who submitted written comments on a permit application to a harbormaster, other local official, or local permitting program and who sends the request to the Department within ten days of the postmarked date of the permit or of the decision on a renewal.

(c) The Department shall consider all written comments from the harbormaster, other local official, local permitting program, the applicant, and interested persons that are submitted within 30 days of the date of receipt of the request by the Department pursuant to 310 CMR 9.07(5)(a), or of the date the Department initiates a review pursuant to 310 CMR 9.07(5)(b).

(d) The Department may conduct a site inspection or a public hearing if deemed appropriate.

(e) After reviewing the request and other relevant documents, the Department shall render a written determination either affirming the local action, setting such action aside, or amending such action by imposing its own conditions and restrictions as deemed necessary.

(f) The Department shall affirm the local decision except upon a finding that:

1. it is arbitrary, capricious, or an abuse of discretion;
2. it conflicts with an overriding state, regional, or federal public interest;
3. it fails to meet any requirement contained in 310 CMR 9.07;
4. it was based on plans or other documentation submitted with the application which contained substantially inaccurate or incomplete depictions of the structure and its surroundings; or
5. it allows floats, rafts, or small structures which significantly interfere with public rights to use waterways for fishing, fowling, and navigation or for other lawful purposes.

The Department shall issue its decision within 30 days of the close of the period for comments described in 310 CMR 9.07(5)(c).

(g) The Department's decision shall be the final administrative review under 310 CMR 9.07; there shall be no right to an adjudicatory hearing.

9.08: Enforcement

(1) The Department may seek discontinuation of use, removal, or other remedial action in the case of any fill or structure in waterways that is determined to be a public nuisance, in accordance with M.G.L. c. 91, § 23 or as otherwise provided by law. Such fill or structures include those not previously authorized by the Department or the Legislature, those for which a grant or license is not presently valid pursuant to 310 CMR 9.00, or those not conforming to the terms and conditions of a grant or license.

(2) In accordance with M.G.L. c. 91, § 49B, the Department shall remove or cause to be removed any fill or structure in waterways which, in the opinion of the Department, is dilapidated, unsafe, a menace to navigation, or is a source of floating debris that is, or is liable to become, a menace to navigation.

9.08: continued

(3) Pursuant to M.G.L. c. 30, § 62I and 310 CMR 9.08(4), the Department may enforce any conditions required by the Secretary in a MEPA certificate for projects proposed within landlocked tidelands.

(4) In addition to any remedy specified pursuant to M.G.L. c. 91, to the Civil Administrative Penalties Statute, M.G.L. c. 21A, § 16, or to other laws of the Commonwealth, the Department may issue Enforcement Orders requiring compliance with any regulation or with any condition of any license or permit issued by the Department. The employees of the Department may enter at reasonable hours upon any property subject to a license, permit, grant, or public easement to inspect for compliance either prior to or following completion of construction of the authorized structure.

9.09: Effective Date and Severability

(1) 310 CMR 9.00 shall take effect on October 4, 1990. Revisions to 310 CMR 9.07 and 9.10 shall take effect on April 19, 1996. Revisions to 310 CMR 9.00 shall take effect on July 1, 2000. Revisions to 310 CMR 9.10 shall take effect on February 25, 2005. Certain revisions to 310 CMR 9.00 shall take effect on October 3, 2008. 310 CMR 9.29: *General License Certification*, 310 CMR 9.30: *Permitting Test Projects*, and revisions to 310 CMR 9.02, 9.05(2), 9.05(3), 9.09, 9.10, 9.11(2), 9.11(3), 9.13 and 9.14, 9.16, 9.17(4), and 9.40(1) shall take effect on May 23, 2014.

(2) Except as provided in 310 CMR 9.28, 310 CMR 9.00 shall apply to any application for a license, permit, or amendment thereto, and to all subsequent proceedings related thereto, if:

(a) said application is filed on or after the effective date of 310 CMR 9.00; or

(b) in the case of an application for a nonwater-dependent use project including one or more activities requiring an EIR, except for any such project which the Department determines, with the concurrence of the municipal planning board, provides essential economic support to an associated water-dependent use project of particular statewide or regional significance, a Certificate of the Secretary stating that a Draft EIR adequately and properly complies with M.G.L. c. 30, §§ 61 through 62H had not been issued as of May 23, 2014.

(3) In the case of any application for license, permit, or amendment thereto filed prior to the effective date of 310 CMR 9.00, except for that to which 310 CMR 9.00 apply pursuant to 310 CMR 9.09(2)(b), the prior applicable regulations shall remain in full force and effect for all subsequent proceedings related thereto; such application shall be subject to the content and other requirements of 310 CMR 9.11(2)(a), 9.11(2)(b)1. through 3., and 9.11(5) only.

(4) 310 CMR 9.08, 9.22, 9.23, 9.25, 9.26 and 9.27 shall apply to all projects for which a license or permit was in effect on the effective date of 310 CMR 9.00, or is obtained in accordance with 310 CMR 9.09(3), and for which a new license or permit application is not required pursuant to 310 CMR 9.05(3).

(5) A Certification of the General License affirmed by the Department in accordance with 310 CMR 9.29 shall take effect when the proponent records the Certification in accordance with 9.29(6).

(6) Severability. If any provision of any part of 310 CMR 9.00, or the application thereof, is held to be invalid, such invalidity shall not affect any other provision of 310 CMR 9.00.

9.10: Simplified Procedures for Small Structures Accessory to Residences

(1) Projects Eligible for Simplified Procedures. Notwithstanding other procedural provisions of 310 CMR 9.00 to the contrary, the procedural standards of 310 CMR 9.10 shall apply to the licensing of certain small-scale structures by the Department. An application for a license under 310 CMR 9.10 may be submitted only for a project consisting entirely of a dock, pier, seawall, bulkhead, or other small-scale structure that is accessory to a residential use or serves as a noncommercial community docking facility, provided that:

9.10: continued

(a) for proposed structures, or for structures built or substantially altered after January 1, 1984:

1. any structure is water-dependent and pile-supported (*e.g.*, by wooden or metal posts) or bottom-anchored, without any fill;
2. any structures total no more than 600 square feet below the mean high water shoreline for coastal waters or below the ordinary high water shoreline for inland waters;
3. any structure is not a marina (*i.e.*, does not serve ten or more vessels);
4. if within an ACEC, such structures were existing on October 4, 1990 or the effective date of the ACEC designation, whichever is later, and if a resource management plan for the ACEC has been adopted by the municipality and approved by the Secretary, said structures are consistent with said plan; and
5. if within an ACEC, any structure built or substantially altered after October 4, 1990 or the effective date of the ACEC designation, whichever is later, is consistent with a resource management plan adopted by the municipality and approved by the Secretary; and

(b) for structures or fill constructed prior to January 1, 1984 and not substantially altered since that date:

1. any structure or fill may be water-dependent or nonwater-dependent;
2. any structures and fill total no more than 600 square feet below the mean high water shoreline for coastal waters or below the ordinary high water shoreline for inland waters; and
3. the structure is not a marina (*i.e.*, does not serve ten or more vessels).

The above thresholds are established for determination of eligibility only; structures licensed under 310 CMR 9.10 shall be the minimum size necessary to achieve the intended water-related purposes. Projects meeting the provisions of 310 CMR 9.10(1), which previously obtained a license, amnesty license or interim approval, may apply for renewal under 310 CMR 9.07, 9.10, or 9.25.

(c) projects eligible for general license certification under 310 CMR 9.29 shall comply with the certification procedures of 310 CMR 9.29 to obtain an affirmed certification under 310 CMR 9.29, instead of a simplified license pursuant to 310 CMR 9.10.

(2) Standards. The project shall preserve any rights held by the Commonwealth in trust for the public to use tidelands, Great Ponds and other waterways for lawful purposes. The project shall preserve public rights of access on private tidelands that are associated with fishing, fowling, and navigation, and public rights to use Commonwealth tidelands, Great Ponds, and other waterways for any lawful use. The provisions of 310 CMR 9.33 through 9.38 apply to projects authorized under 310 CMR 9.10 except that, notwithstanding the provisions of 310 CMR 9.37(1)(a), fill and structures need not be certified by a Registered Professional Engineer except as specified in 310 CMR 9.10(3). For eligible nonwater-dependent structures or fill, the Department will generally presume that a proper public purpose is served through the provision of on-foot passage to ensure lateral public access along the shore for any lawful purpose.

(3) Applications Under Simplified Procedures. For purpose of authorizing eligible projects under simplified procedures the following provisions apply:

(a) Application and Plans. An applicant for a license shall submit a written application on forms provided by the Department, signed by the applicant and the landowner if other than the applicant. The application shall be prepared in accordance with all applicable instructions contained in the Department's application package. When plans have been submitted with a Notice of Intent or referenced in an Order of Conditions under the Wetlands Protection Act, M.G.L. c. 131, § 40, a copy of those plans shall accompany the application. Under the Wetlands Protection Act, Conservation Commissions and the Department generally require plans for new structures to be certified by a Registered Professional Engineer or Registered Land Surveyor where there are questions relating to structural integrity (*e.g.*, where a structure is located in a velocity zone or floodway) or to the location of important wetland resource areas (*e.g.*, salt marsh or eelgrass), as well as in other circumstances at the discretion of the issuing authority; see instructions for filing a Notice of Intent pursuant to 310 CMR 10.00: *Wetlands Protection*.

9.10: continued

If plans certified by an engineer or surveyor are not required under M.G.L. c. 131, § 40, the Wetlands Protection Act pursuant to 310 CMR 10.00: *Wetlands Protection*, certification for projects meeting the eligibility requirements of 310 CMR 9.10(1) will generally not be required. However, based on comments submitted during the public comment period or other relevant information, the Department may require plans to be certified by a Registered Professional Engineer or Registered Land Surveyor for a structure when it finds that the preparation of plans by a professional is necessary to ensure:

1. an adequate review of public access;
2. the preservation of public navigational rights;
3. structural integrity;
4. the accuracy of stated distances from property boundaries; or
5. that the plan is sufficiently clear and accurate to allow a licensing decision which otherwise could result in significant interference with public rights or environmental interests in tidelands, Great Ponds, and other waterways. The Department will provide a statement of reasons to support this finding.

When plans have not been prepared under M.G.L. c. 131, § 40, the Wetlands Protection Act, a plot plan or other scaled plan with structures to be licensed measured accurately from lot lines or other structures shall be prepared in accordance with application instructions.

(b) Applications for Projects within Great Ponds. The Department shall publish an inventory of Great Ponds which shall be available upon written request. Prior to the addition of any pond to the inventory, the Department will hold a public hearing in the vicinity of the pond. After a pond is added to the inventory, the Department will provide an opportunity for owners of existing structures that require licenses to come into compliance with M.G.L. c. 91 regulatory requirements by submission of an application within six months from the date of the addition of the pond to the inventory. The Department will take no enforcement action against the owners of a structure on a Great Pond not listed on the inventory, unless and until the Great Pond has been added to the inventory and the opportunity for compliance has been afforded.

(c) Coordination with the Conservation Commission. At least 45 days prior to issuance of a license, the Department and the applicant shall coordinate with the Conservation Commission as follows:

1. The Department will not require Conservation Commission approval for existing structures built before enactment of M.G.L. c. 131, § 40, the Wetlands Protection Act (1963 for coastal wetlands and 1965 for inland wetlands) and not substantially altered subsequently. Applicants should consult their local Conservation Commission regarding application of M.G.L. c. 131, § 40, the Wetlands Protection Act to maintenance or alteration of existing structures.
2. For structures built between 1963 or 1965 (as applicable) and December 31, 1983, and not substantially altered after the latter date, the applicant shall provide notice of the application to the Conservation Commission. The Department shall proceed with licensing, unless the Conservation Commission informs the Department that it has provided written notice to the applicant prior to the close of the public comment period to promote compliance with or to enforce M.G.L. c. 131, § 40, the Wetlands Protection Act.
3. For structures proposed, built, or substantially altered on or after January 1, 1984, applicants shall provide an Order of Conditions, a negative or conditional negative Determination of Applicability, or a Certificate of Compliance. The Department may waive this requirement based upon evidence of a written request for action by an applicant to a Conservation Commission, and subsequent failure of the Conservation Commission to respond.

(d) The applicant shall submit the notice of the application included in the application package to the Board of Selectmen or Mayor, the planning board, zoning authority and the Conservation Commission of the town or city where the work will be performed. The Department shall presume compliance with applicable state and local requirements, unless it receives information to the contrary during the public comment period. Unless the Department receives a contrary determination from the proper zoning authority, signed by the Clerk of the affected municipality, compliance with applicable zoning ordinances and bylaws pursuant to 310 CMR 9.34(1) shall be deemed certified 45 days after notice to that

9.10: continued

zoning authority and clerk. Proposed structures must also conform to plans for waterways developed by agencies or commissions with legal authority, such as Approved Municipal Harbor Plans developed pursuant to 301 CMR 23.00: *Review and Approval of Municipal Harbor Plans* and listed in 310 CMR 9.57, or lake, regional commission, or other formal area-wide policies or plans developed pursuant to 310 CMR 9.38(2)(b).

(e) Public Notice and Notice to Abutters. The applicant shall publish in a newspaper of general circulation in the area where the project is located a public notice including the applicant's name and address, the project location, a description of the project, a statement that written comments will be accepted within 30 days of the Notification Date stated therein, the address where comments may be sent, and a statement that a municipality, ten citizen group or any aggrieved person who has submitted written comments within the public comment period may appeal the Department's decision and that failure to submit written comments within the public comment period will result in the waiver of any right to an adjudicatory hearing. A copy of the notice shall also be sent by the applicant to the landowner if not the applicant, to any person having a record easement interest in the property where the structure is or may be located, and to all abutters to the property where the structure is or may be located, by certified mail, return receipt requested. Joint notice under 310 CMR 10.05(4): *Notices of Interest*, 310 CMR 9.10 and 314 CMR 9.05(3): *Public Notices of an Application* may be published and sent to persons entitled to notification, provided it contains the requisite information and meets the requisite standards pursuant to each statute.

(f) Fees. For structures totaling more than 300 square feet pursuant to 310 CMR 9.10(1)(a), applicants for simplified licenses shall pay an application fee, or the renewal fee, in accordance with the provisions of 310 CMR 4.10(8)(f) and (l) respectively. All other applicants for licenses under simplified procedures shall pay the application fee, or the renewal fee in accordance with the provisions of 310 CMR 4.10(8)(f) and (l) respectively. No tidewater displacement fees shall be assessed. Any person granted a license from the Department in, on or over any land the title to which is in the Commonwealth shall compensate the Commonwealth for the rights granted in such lands through payment of an occupation fee (\$1 per square yard per year for the term of the license), in accordance with the provisions of 310 CMR 9.16. No occupation fee shall be assessed by the Department for structures within the enhanced portion of Great Ponds. An occupation fee shall be assessed for the portion of any structure that the Department determines, after opportunity for public comment, extends below the natural high water mark into the historic portion of the Great Pond. Enhanced Great Ponds are those which contain a surface area greater than their historic natural state, resulting from alteration by damming or other human activity.

(4) Decision on Applications. The Department shall issue a license, draft license, or written determination to deny a license within 90 days of a complete application, commencing no earlier than the close of the public comment period.

(5) Terms and Recordation for Licenses from the Department. The license term shall be 15 years, unless the Department determines that a shorter term is necessary to protect the public interest. In accordance with M.G.L. c. 91, § 18, the license, with the plan as an exhibit, shall be recorded at the Registry of Deeds within the chain of title of the affected property within 60 days of the date of issuance. Failure to record the license and accompanying plan within 60 days will render the license void in accordance with M.G.L. c. 91, § 18.

(6) Renewal and Transfer of Licenses from the Department. A license may be renewed provided the structure remains sound and conforms to plans submitted with the original application. At the time an application for renewal is submitted, the applicant shall send a notice of application for renewal included in the application package to the mayor or board of selectmen, planning board, and conservation commission of the city or town where the project site is located. The Department may require additional public notice based on comments received about the structure or other relevant information. If such additional public notice for renewal is required, the public comment period is 30 days. Applicants for renewal shall pay a renewal fee (*see* 310 CMR 4.10(8)(1)). Any person applying for a renewal under 310 CMR 9.10, including renewals of interim approvals or licenses originally granted under the Amnesty Program, shall compensate the Commonwealth for the rights granted in such lands through

9.10: continued

payment of an occupation fee (\$1 per square yard per year for the term of the license), in accordance with the provisions of 310 CMR 9.16. Unless otherwise provided in the license, a valid license shall run with the land and shall automatically be transferred upon a change of ownership of the affected property within the chain of title of which the license has been recorded. All rights, privileges, obligations, and responsibilities specified in the license shall be transferred to the new landowner upon recording of the changed ownership.

(7) Appeals. The appeal provisions in 310 CMR 9.17 apply to projects licensed under 310 CMR 9.10.

9.11: Application Requirements(1) Pre-application Consultation

(a) Upon request of a prospective applicant for a license for any large or complex project, including those required to file an EIR, the Department shall conduct a pre-application consultation meeting in order to receive a presentation of the project proposal, provide preliminary guidance on the applicability of the substantive standards of 310 CMR 9.00 to the project, explain the necessary licensing procedures, and answer any appropriate inquiries concerning the program or 310 CMR 9.00. When appropriate, the Department may invite representatives of CZM, any other state agency, or representatives of the municipality in which the project is located, including the lead agency responsible for implementation of a Municipal Harbor Plan. The participants in the pre-application consultation meeting may make arrangements for further consultation sessions and for co-ordinated review of the project.

(b) In the case of an unusually large and complex set of activities undertaken by a public agency the Department may establish, in cooperation with the prospective applicant, a special procedure for the review of one or more applications for such activities. Such procedure may include, without limitation, as deemed appropriate by the Department, consolidation procedures, expedited review, and single or multiple licenses, permits, or written determinations. Public notice of any such procedure established under 310 CMR 9.11 shall be published in the *Environmental Monitor*.

(2) Application Review Schedules.

(a) For a water-dependent use project, the Department shall, within 45 days of receipt of the information required under 310 CMR 9.11(3)(a) and (b), assign a file number, make a determination of water-dependency under 310 CMR 9.12, and issue a public notice under 310 CMR 9.13(1). Within 20 days of the notification date, the Department may hold a public hearing under 310 CMR 9.13(2). The public comment period shall begin at the notification date and end no less than 30 days and no more than 60 days from the notification date. Within 60 days of the close of the public comment period and notification by the applicant that the public notice has been published, the Department shall conduct an administrative completeness review under 310 CMR 9.11(3)(c) and either determine the application to be complete or request additional information. Within 90 days of making a determination of administrative completeness, the Department shall complete a technical review and issue either a draft license or a final license as specified in 310 CMR 9.14.

(b) For a nonwater-dependent use project, the applicant may elect one of four application options by submitting the selected category of application under the Timely Action and Fee Schedule at 310 CMR 4.00: *Timely Action Schedule and Fee Provisions*.

1. Partial Application. Within 45 days of receiving an application with all information identified in 310 CMR 9.11(3)(a) and (b), the Department shall assign a file number, make a determination of water-dependency under 310 CMR 9.12, and issue a public notice under 310 CMR 9.13(1). The public comment period shall begin at the notification date and end no less than 30 days and no more than 60 days from the notification date. Within 20 days of the notification date, the Department shall hold the public hearing under 310 CMR 9.13(3). The applicant shall submit the information identified in 310 CMR 9.11(3)(c)2. prior to the close of the public comment period, and the information identified in 310 CMR 9.11(3)(c)1. and 3. prior to the issuance of the written determination. Within 30 days of the close of the public comment period and notification by the applicant that the public notice has been published, the Department

9.11: continued

shall conduct its administrative completeness review and determine the application to be complete or request additional information. Within 60 days of determining the application to be complete, or 90 days from the close of the public comment period, whichever comes later, the Department shall issue the written determination under 310 CMR 9.14(1). The Department shall issue the final license under 310 CMR 9.14(5) within 45 days of the expiration of the appeal period or final decision, or 15 days from the date of the Governor's signature, whichever is later.

2. Full Application. Within 45 days of receiving an application with all information identified in 310 CMR 9.11(3)(a), and 310 CMR 9.11(3)(b)1., 2., 6., and 7., and 310 CMR 9.11(3)(c)1. through 3., the Department shall assign a file number, make a determination of water-dependency under 310 CMR 9.12, conduct an administrative completeness review of the information received, and determine the application to be complete or request additional information. The Department shall issue a public notice under 310 CMR 9.13(1) upon determination that the application is complete. The public comment period shall begin at the notification date and end no less than 30 days and no more than 60 days from the notification date. The Department shall provide upon request the draft license conditions seven days prior to the public hearing. Within 20 days of the notification date, the Department shall hold the public hearing under 310 CMR 9.13(3). Within 60 days from the close of the public comment period and notification by the applicant that the public notice has been published, or the submission of the information identified in 310 CMR 9.11(3)(c)4., and 5., whichever is later, the Department shall issue the written determination under 310 CMR 9.14(1). The Department shall issue the final license under 310 CMR 9.14(5) within 45 days of the expiration of the appeal period or final decision, or 15 days from the date of the Governor's signature, whichever is later.

3. Municipal Harbor Plan Application. For a project within an area governed by and in compliance with an Approved Municipal Harbor Plan approved under 301 CMR 23.00: *Review and Approval of Municipal Harbor Plans* and listed in 310 CMR 9.57, within 45 days of receiving an application containing the information identified in 310 CMR 9.11(3)(a) and (b), the Department shall assign a file number, make a determination of water-dependency under 310 CMR 9.12, and issue a public notice under 310 CMR 9.13(1). The public comment period shall begin at the notification date and end no less than 30 days and no more than 60 days from the notification date. Within 20 days of the notification date, the Department shall hold the public hearing under 310 CMR 9.13(3). Within 30 days of the close of the public comment period and notification by the applicant that the public notice has been published, the Department shall conduct its administrative completeness review and determine an application to be complete or request additional information. Within 45 days of determining an application to be complete, the Department shall issue a written determination under 310 CMR 9.14(1). The Department shall issue the final license under 310 CMR 9.14(5) within 45 days of the expiration of the appeal period or final decision, or 15 days from the date of the Governor's signature, whichever is later.

4. Joint MEPA EIR Application. An applicant may initiate coordinated review under MEPA and 310 CMR 9.00 by specifying in the Environmental Notification Form (ENF) filing under 301 CMR 11.05: *ENF Preparation and Filing* the intent to pursue a joint filing. The Draft EIR submitted under 301 CMR 11.07(3) shall also include information to meet the application requirements of 310 CMR 9.11(3)(a) through (c)2. for pre-application review by the Department. Within 25 days of receipt of a Final EIR meeting the requirements of 310 CMR 9.11(3)(a) through (c)2., the Department shall assign a file number, make a determination of water-dependency under 310 CMR 9.12, conduct an administrative completeness review, and issue the text for the public notice under 310 CMR 9.13(1). The Department shall hold a public hearing within 20 days of the notification date or ten days after the date of the Secretary's Final Certificate, whichever is later. The public comment period shall begin at the notification date and end no less than 30 days and no more than 60 days from the notification date. The Department shall send to the applicant, within ten days of the close of the public comment period and receipt by the Department of notification from the applicant that the public notice has been published, whichever is later, any public comment submitted within the comment period for response and may request additional information or determine the application to be complete in accordance with 310 CMR 9.11(3)(c). Any response to comments provided by the applicant shall also be distributed by the applicant to all persons that

9.11: continued

submitted comments during the public comment period. The Department shall issue the written determination under 310 CMR 9.14(1) within 30 days of receipt of the response to comments, or a determination that the application is complete, whichever is later. The Department shall issue the final license under 310 CMR 9.14(5) within 45 days of the expiration of the appeal period or final decision, or 15 days from the date of the Governor's signature, whichever is later.

(c) For a project requiring a permit under 310 CMR 9.05(2), the Department shall, within 45 days of receiving an application with all information identified in 310 CMR 9.11(3)(a) and (b), assign a file number, make a determination of water dependency, issue a public notice under 310 CMR 9.13(1), conduct an administrative completeness review, and determine the application to be complete or request additional information. The public comment period shall be 15 days from the notification date. Within 45 days from the date the application is complete the Department shall issue a permit decision.

(3) Filing and Completion of Application.

(a) An applicant for a license or permit shall submit a written application on forms provided by the Department, signed by the applicant and the landowner if other than the applicant. In *lieu* of the landowner's signature, the applicant may provide other evidence of legal authority to submit an application for the project site. The application shall be prepared in accordance with all applicable instructions contained in the Department's application package. A partial application under 310 CMR 9.11(2)(b)1. requires only the information identified in 310 CMR 9.11(3)(a) and (b). If the project is a water-dependent use project, the application may be a Combined Application.

(b) The Department shall assign a file number to the project only after receipt of an application which includes the following information:

1. the names and addresses of the applicant, all landowners, any representative thereof and the abutters to the project site;
2. detailed description of the proposed project which identifies:
 - a. the location of the project site, and whether it lies within a DPA, ACEC, or Ocean Sanctuary; and
 - b. the specific use(s) of existing and proposed fill and structures and, if dredging is involved, estimates of the volume of dredged material and a description of the dredged material disposal area;
3. a set of plans containing at least the applicable information specified in 310 CMR 9.11(3)(a) through (c); the Department may accept appropriately-scaled preliminary plans in *lieu* of final plans certified in accordance with 310 CMR 9.11(3)(c)1., provided such preliminary plans are prepared by:
 - a. a Registered Professional Engineer, Land Surveyor, or Architect, as deemed appropriate by the Department; and
 - b. in the case of a nonwater-dependent use project requiring an EIR, a Registered Landscape Architect, unless otherwise deemed appropriate by the Department;
4. a list of state environmental regulatory programs with which the project must comply, in accordance with the applicable provisions of 310 CMR 9.33; a copy of the Notice of Intent if the project is subject to M.G.L. c. 131, § 40, and 310 CMR 10.00: *Wetlands Protection* which may be provided in a Combined Application; and a copy of any state and local approvals which must be obtained and have been obtained by the project as specified in 310 CMR 9.11(3)(c)3.;
5. any other preliminary information specified in the application instruction package;
6. payment of the application fee in accordance with the provisions of 310 CMR 9.16(1); and
7. if the project triggers M.G.L. c. 30, §§ 61 through 62H review, a copy of the Environmental Notification Form (ENF) and a Certificate from the Secretary of the Executive Office of Energy and Environmental Affairs demonstrating compliance with MEPA, with the exception of a joint MEPA Application under 310 CMR 9.11(2)(b)4. For a project subject to MEPA, the Department will not hold a public hearing until the Secretary has issued a Certificate on the Final EIR.

(c) The Department shall determine an application to be complete only if the following information has been submitted:

9.11: continued

1. a set of final plans which are prepared in accordance with the format standards required for recording of licenses in the appropriate Registry of Deeds or Land Court for the district in which the licensed activity is to be performed; and which are certified by a Registered Professional Engineer or Land Surveyor, as deemed appropriate by the Department containing, at a minimum, the following:
 - a. an appropriately-scaled location map of the project site, and of any area where dredged material disposal will occur;
 - b. appropriately-scaled principal dimensions and elevations of proposed and existing fill and structures and, if dredging is involved, the principal dimensions of all relevant footprints, contours and slopes;
 - c. a delineation of the present high and low water marks, as relevant;
 - d. a delineation of the historic high and low water marks, as relevant and in a manner acceptable to the Department in accordance with the definitions thereof at 310 CMR 9.02;
 - e. references to any previous licenses or other authorizations for existing fill, structures, or dredging at the project site, and a delineation thereof as well as a delineation of any historic dredging, filling, or impoundment;
 - f. indication of any base flood elevation of the statistical 100-year storm event, or of any coastal high hazard area, which is located on the project site; and
 - g. indication of the location of any on-site or nearby state harbor lines, federal pier and bulkhead lines, federal channel lines, and public landings or other easements for public access to the water.
2. a statement as to how the project serves a proper public purpose, provides greater benefit than detriment to public rights in tidelands or Great Ponds, and is consistent with the policies of the Coastal Zone Management Program, as applicable, in accordance with the provisions of 310 CMR 9.31(2); and a description of how the project conforms to any applicable provisions of an Approved Municipal Harbor Plan, pursuant to 310 CMR 9.34(2);
3. final documentation relative to other state and local approvals which must be obtained by the project, including:
 - a. if the project is subject to zoning, but will not require any municipal approvals thereunder, a certification to that effect pursuant to 310 CMR 9.34(1);
 - b. a certification that a copy of the license application has been submitted to the planning board of each city or town where the work is to be performed, except in the case of a proposed bridge, dam, or similar structure across a river, cove, or inlet, in which case notice shall be given to the planning board of every municipality into which the tidewater of said river, cove, or inlet extends;
 - c. if an EIR is required, the Certificate of the Secretary stating that it adequately and properly complies with M.G.L. c. 30, §§ 61 through 62H; and, if applicable, any Notice of Project Change and any determination issued thereon in accordance with M.G.L. c. 30, §§ 61 through 62H;
 - d. a final Order of Conditions and a Water Quality Certificate, if applicable pursuant to 310 CMR 9.33, unless the application is a Combined Application, and a certification of compliance with municipal zoning, if applicable pursuant to 310 CMR 9.34(1); or a satisfactory explanation as to why it is appropriate to postpone receipt of such documentation to a later time prior to license or permit issuance; and
 - e. copies of all other state regulatory approvals if applicable pursuant to 310 CMR 9.33; or a satisfactory explanation as to why it is appropriate to postpone receipt of such documentation to a later time prior to license or permit issuance, or to issue the license or permit contingent upon subsequent receipt of such approvals.
4. responses to public comment submitted to the Department within the public comment period, as deemed appropriate by the Department; and adequate proof that the responses were sent to all persons that submitted comments during the public comment period; and
5. any additional plans, documentation, and other information which have been requested by the Department, or a statement by the applicant indicating that no further information will be forthcoming in response to such request.

9.11: continued

(4) Additional Information and Extensions.

(a) The Department shall request additional information as soon as practicable when an application is incomplete or when otherwise allowed under 310 CMR 9.00. Applicants shall provide requested information as soon as practicable but no later than 180 days from the request.

(b) With the consent of the applicant or upon the applicant submitting revised or additional information, the Department may extend the period for actions under 310 CMR 9.11 as provided under 310 CMR 4.04: *Permit Applications Schedules and Fee.*

(5) Expiration of Application

(a) An application shall expire if the applicant has failed to diligently pursue the issuance of said license or permit in proceedings under 310 CMR 9.00.

(b) With the exception of applications filed under 310 CMR 9.28, an application shall be presumed to have expired six months after any request for additional information by the Department unless the applicant submits information showing that:

1. good cause exists for the delay of proceedings under 310 CMR 9.00; and
2. the applicant has continued to pursue the project diligently in other forums in the intervening period; provided, however, that unfavorable financial circumstances shall not constitute good cause for delay.

(c) No application shall be deemed to have expired under 310 CMR 9.11 when a completed application is pending and when the applicant has provided all information necessary for the Department to determine whether to issue a license or permit.

9.12: Determination of Water-dependency

(1) Prior to issuance of the public notice, the Department shall classify the project as a water-dependent use project or as a nonwater-dependent use project. The Department shall classify as a water-dependent use project any project which consists entirely of:

- (a) uses determined to be water-dependent in accordance with 310 CMR 9.12(2); and/or
- (b) uses determined to be accessory to a water-dependent use, in accordance with 310 CMR 9.12(3).

Any other project shall be classified as a nonwater-dependent use project.

(2) The Department shall determine a use to be water-dependent upon a finding that said use requires direct access to or location in tidal or inland waters, and therefore cannot be located away from said waters. In making this determination, the Department shall act in accordance with the following provisions.

(a) The Department shall find to be water-dependent the following uses:

1. any use found to be water-dependent-industrial in accordance with 310 CMR 9.12(2)(b);
2. marinas, boat basins, channels, storage areas, and other commercial or recreational boating facilities;
3. facilities for fishing, swimming, diving, and other water-based recreational activities;
4. parks, esplanades, boardwalks, and other pedestrian facilities that promote use and enjoyment of the water by the general public and are located at or near the water's edge, including but not limited to any park adjacent to a waterway and created by a public agency;
5. aquariums and other education, research, or training facilities dedicated primarily to marine purposes;
6. aquaculture facilities;
7. beach nourishment;
8. waterborne passenger transportation facilities, such as those serving ferries, cruise ships, commuter and excursion boats, and water shuttles and taxis;
9. dredging for navigation channels, boat basins, and other water-dependent purposes, and subaqueous disposal of the dredged materials below the low water mark;
10. navigation aids, marine police and fire stations, and other facilities which promote public safety and law enforcement on the waterways;

9.12: continued

11. shore protection structures, such as seawalls, bulkheads, revetments, dikes, breakwaters, and any associated fill which are necessary either to protect an existing structure from natural erosion or accretion, or to protect, construct, or expand a water-dependent use;
 12. flood, water level, or tidal control facilities;
 13. discharge pipes, outfalls, tunnels, and diffuser systems for conveyance of stormwater, wastewater, or other effluents to a receiving waterway;
 14. facilities and activities undertaken or required by a public agency for purposes of decontamination, capping, or disposal of polluted aquatic sediments; and
 15. wildlife refuges, bird sanctuaries, nesting areas, other wildlife habitats or an Ecological Restoration Project.
- (b) The Department shall find to be water-dependent-industrial the following uses:
1. marine terminals and related facilities for the transfer between ship and shore, and the storage of, bulk materials or other goods transported in waterborne commerce;
 2. facilities associated with commercial passenger vessel operations;
 3. manufacturing facilities relying primarily on the bulk receipt or shipment of goods by waterborne transportation;
 4. commercial fishing, shellfishing, and other seafood and fish processing facilities for fish, shellfish, and other seafood;
 5. boatyards, dry docks, and other facilities related to the construction, serving, maintenance, repair, or storage of vessels or other marine structures;
 6. facilities for tug boats, barges, dredges, or other vessels engaged in port operations or marine construction;
 7. any water-dependent use listed in 310 CMR 9.12(2)(a)9. through 14., provided the Department determines such use to be associated with the operation of a Designated Port Area;
 8. hydroelectric power generating facilities;
 9. Offshore renewable energy infrastructure facilities in the Commonwealth, including ocean wave energy facilities, ocean current energy facilities, tidal energy facilities, any ancillary facility thereto or any similar facility that obtains its energy from the ocean;
 10. infrastructure facilities used to deliver electricity, natural gas or telecommunications services to the public from an offshore facility located outside the Commonwealth; and
 11. facilities for the manufacture, servicing, maintenance, data collection, and other functions related to coastal or offshore structures, buoys, autonomous underwater vehicles or vessels, and for the development of new technologies and systems for these structures, buoys, vehicles or vessels, provided that the facility requires transfer between ship and shore or the withdrawal and/or discharge of large volumes of water;
 12. facilities for research and development or for the manufacture of technologies, *e.g.*, robotics and acoustics, related to the marine environment, provided that the facility requires transfer between ship and shore or the withdrawal and/or discharge of large volumes of water;
 13. facilities for research on, and the treatment of, marine species which require transfer between ship and shore or the withdrawal and/or discharge of large volumes of water;
 14. facilities for the development and testing of offshore renewable energy infrastructure or components, provided that the facility requires transfer between ship and shore or the withdrawal and/or discharge of large volumes of water;
 15. commercial aquaculture facilities that require transfer between ship and shore or the withdrawal and/or discharge of large volumes of water; and
 16. other industrial uses or infrastructure facilities which cannot reasonably be located at an inland site as determined in accordance with 310 CMR 9.12(2)(c) or (d).
- (c) In the case of industrial and infrastructure facilities not listed in 310 CMR 9.12(2)(b), which are dependent on marine transportation or require large volumes of water to be withdrawn from or discharged to a waterway for cooling, process, or treatment purposes, the Department shall act in accordance with the following provisions:
1. the Department shall presume to be water-dependent any alteration or expansion of a facility existing or licensed as of the effective date of 310 CMR 9.00, and any energy facility for which the proposed location has been approved by the Energy Facilities Siting Board; this presumption may be overcome only upon a clear showing that the proposed alteration or expansion or energy facility can reasonably be located or operated away from tidal or inland waters;

9.12: continued

2. except as provided in 310 CMR 9.12(2)(c)1., the Department shall presume that any such industrial or infrastructure facility is not water-dependent; this presumption may be overcome only upon a clear showing that such facility cannot reasonably be located or operated away from tidal or inland waters.

If an EIR is submitted, the findings necessary to overcome the above presumptions shall be based on a comprehensive analysis of alternatives and other information analyzing measures that can be taken to avoid or minimize impacts on the environment, in accordance with M.G.L. c. 30, §§ 61 through 62H. If an EIR is not submitted, such findings shall be based on information presented to the Department in the application and during the public comment period thereon.

(d) In the case of an infrastructure crossing facility, or any ancillary facility thereto, for which an EIR is submitted, the Department shall find such facility to be water-dependent only if the Secretary has determined that such facility cannot reasonably be located or operated away from tidal or inland waters, based on a comprehensive analysis of alternatives and other information analyzing measures that can be taken to avoid or minimize adverse impacts on the environment, in accordance with M.G.L. c. 30, §§ 61 through 62H. If an EIR is not submitted, such finding may be made by the Department based on information presented in the application and during the public comment period thereon.

9.12: continued

(e) In the case of a facility generating electricity from wind power (wind turbine facility), or any ancillary facility thereto, for which an EIR is submitted, the Department shall presume such facility to be water-dependent if the Secretary has determined that such facility requires direct access to or location in tidal waters and cannot reasonably be located or operated away from tidal or inland waters, based on a comprehensive analysis of alternatives and other information analyzing measures that can be taken to avoid or minimize adverse impacts on the environment, in accordance with M.G.L. c. 30, §§ 61 through 62I. If an EIR is not submitted, the Department shall presume such facility to be water-dependent. Whether or not an EIR is filed, this presumption may be overcome only upon a clear showing that the proposed facility can reasonably be located or operated away from tidal or inland waters.

(f) The Department shall not find the following uses to be water-dependent:

1. restaurants and other food/beverage service establishments;
2. retail shops and stores;
3. parking facilities;
4. office facilities;
5. housing units and other residential facilities;
6. hotels, motels, and other facilities for transient lodging;
7. parks, esplanades, boardwalks, and other pedestrian facilities other than those described in 310 CMR 9.12(2)(a)4.;
8. roads, causeways, railways, and other facilities for land-based vehicular movement, other than those found to be water-dependent in accordance with 310 CMR 9.12(2)(c) or (d); and
9. subaqueous disposal, below the low water mark, of material excavated or otherwise originating on land.

(3) Accessory Uses.

(a) The Department may determine a use to be accessory to a water-dependent use upon a finding that said use is customarily associated with and necessary to accommodate a principal water-dependent use. Such a finding shall be made only if the proposed use is:

1. integral in function to the construction or operation of the water-dependent use in question, or provides related goods and services primarily to persons engaged in such use; and
2. commensurate in scale with the operation of the water-dependent use in question.

Examples of uses that may be determined to be accessory to a water-dependent use include, but are not limited to, access and interior roadways, parking facilities, administrative offices and other offices primarily providing services to water-dependent uses on the site, yacht clubhouses, restaurants and retail facilities primarily serving patrons of the water-dependent use on the site, bait shops, chandleries, boat sales, and other marine-oriented retail facilities. Uses that may not be determined to be accessory to a water-dependent use include, but are not limited to, general residential facilities, hotels, general office facilities, and major retail establishments.

(b) The Department may find a use to be accessory to a water-dependent industrial use if, in addition to the criteria listed in 310 CMR 9.12(3)(a)1. and 2., the hours of operation of the use do not extend beyond the hours of operation of the water-dependent industrial use, except for support services which occur outside of the hours of the accessory use, and the use does not require a significant additional investment in infrastructure apart from that necessary for the primary water-dependent industrial use. Examples of water-dependent industrial accessory uses include, but are not limited to, ticketing booths for ferry operations, snack bars, and administrative offices associated with the water-dependent industrial use.

(4) The Department shall find to be nonwater-dependent any use which has not been found to be water-dependent or accessory to a water-dependent use, pursuant to 310 CMR 9.12(2) and (3).

9.13: Public Notice and Participation Requirements(1) Notice Requirements.

(a) Public notice shall be issued by the Department but distributed and published by the applicant. The date of the public notice and, when required, the date of the public hearing, shall be determined by the Department. The applicant shall send a notice of license or permit application as described in 310 CMR 9.13(1)(c), by first class mail, return receipt, and provide proof of such notification to the Department, to:

9.13: continued

1. the municipal official, the planning board, the conservation commission, and the harbormaster, if any, in the city or town where the project is located;
 2. if the application is for a proposed bridge, dam or similar structure across a tidal river, cove or inlet, the municipal official, the planning board, the conservation commission, and the harbormaster of every municipality into which the tidewater of said river, cove, or inlet extends;
 3. the Martha's Vineyard Commission or the Cape Cod Commission, if the project is located within an area subject to the jurisdiction of said Commission;
 4. CZM, if the project is located within the coastal zone; DCR, if the project is located in an Ocean Sanctuary; and the Department of Fish and Game.
 5. the *Environmental Monitor* for all projects exceeding M.G.L. c. 30, §§ 61 through 62H review thresholds for Waterways activities;
 6. all landowners and easement holders of the project site and abutters thereto, as identified pursuant to 310 CMR 9.11(3)(b)1.; and
 7. U.S. Army Corps of Engineers, New England Division.
- (b) At least 45 days prior to issuance of a license, or 21 days prior to issuance of a permit, the applicant shall cause, at his own expense and at the direction of the Department, notice as described in 310 CMR 9.13(1)(c)1. through 9., to be published in one or more newspapers having circulation in the area affected by the project.
- (c) Notice shall contain:
1. the name and address of the applicant and the applicant's representative, if any;
 2. a description of the location of the project, including whether it is located in an ACEC, DPA, or an Ocean Sanctuary;
 3. a description of the project including a listing of uses and the Department's determination of water-dependency;
 4. for nonwater-dependent use projects, and for any water-dependent use project for which the Department decides to hold a hearing, the time, place and location of the public hearing and the date on which the public comment period ends;
 5. for other water-dependent use projects, a statement that within 30 days of the notification date of a license application or within 15 days of the notification date of a permit application, written comments will be accepted, and that a public hearing may be held upon request by the municipal official;
 6. the address where the application may be viewed, where a copy of the draft license conditions may be obtained if applicable, and where public comments regarding the application may be sent;
 7. a statement that a municipality, ten citizen group or any aggrieved person that has submitted written comments before the close of the public comment period may appeal and that failure to submit written comments will result in the waiver of any right to an adjudicatory hearing;
 8. the notification date, as defined in 310 CMR 9.02;
 9. for applications submitted under 310 CMR 9.11(2)(b)2. and 4., the date that copies of the Department's draft license conditions will be available seven days prior to the public hearing; and
 10. an 8½" x 11" copy of the site plan, including a locus insert, of the project site.
- (d) An applicant for a license, permit or other written approval pursuant to 310 CMR 9.00 and whose project is also subject to 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth* and/or 310 CMR 10.00: *Wetlands Protection* may provide joint public notice by appending to the notice required under 310 CMR 10.05(5): *Public Hearings by Conservation Commissions* or 314 CMR 9.05(3): *Public Notice of an Application* a statement that an application for a license, permit or other written approval pursuant to 310 CMR 9.00 is pending before the Department, provided that the joint notice contains the information required by 310 CMR 9.13(1)(c). An applicant may provide a joint public notice even if the application is not a Combined Application.

9.13: continued

(2) Participation by CZM or DCR.

(a) Within the public comment period specified in 310 CMR 9.13(4), CZM may participate in license or permit proceedings for nonwater-dependent projects subject to federal consistency review identified in 301 CMR 21.04: *Activities Subject to Federal Consistency Review*, when the Department requests CZM participation for nonwater-dependent projects in writing, or for other nonwater-dependent projects in the coastal zone that the Secretary has issued a final MEPA Certificate specifying that CZM shall participate in such license or permit proceedings, or when the Secretary otherwise directs CZM to participate. CZM participation is limited to those issues identified in writing to the Department in the public comment period and necessary for making a federal consistency determination, or for those nonwater-dependent projects identified by the Department in writing or by the Secretary in a final MEPA Certificate for CZM participation or when the Secretary otherwise directs CZM to participate, necessary to determine consistency with CZM Program policies. In license or permit proceedings for such projects, CZM shall submit a written statement to the Department as to whether the project is consistent with the policies of the CZM Program prior to issuance of the written determination, license, permit or draft thereof by the Department pursuant to 310 CMR 9.14 for its consideration. The Department shall presume that a project is consistent with CZM Program policies for projects other than those identified in 310 CMR 9.13(2)(a), and for those projects which CZM does not submit written comments during the public comment period. The Department will make a determination regarding the consistency of the project with the Massachusetts coastal zone program when issuing the license determination.

(b) Within the public comment period specified in 310 CMR 9.13(4), DCR, for projects in an Ocean Sanctuary, may notify the Department in writing that it intends to participate in license or permit proceedings. DCR's notice shall identify issues relevant to the Ocean Sanctuaries Act, M.G.L. c. 132A, §§ 13 through 16 and 18, and participation shall be limited to identified issues. A copy of any such notice shall be sent to the applicant. If DCR files such notice, the Department shall give DCR an opportunity to participate in all meetings between the applicant and the Department concerning issues identified in the notice. If DCR has filed a notice of participation regarding a license or permit proceeding, DCR shall prepare a written statement as to whether the project complies with M.G.L. c. 132A, §§ 13 through 16 and 18, the Ocean Sanctuaries Act, prior to issuance of the written determination, license, permit, or draft thereof by the Department pursuant to 310 CMR 9.14. The Department shall presume that a project is consistent with the Ocean Sanctuaries Act unless DCR submits a notice of its intent to participate and written comments during the public comment period.

(3) Public Hearing

(a) For nonwater-dependent use projects, the Department shall hold a public hearing in the city or town in which the project is located.

(b) For water-dependent use projects, the municipal official in the city or town in which the project is located may, within the public comment period specified in 310 CMR 9.13(4), request that the Department conduct a public hearing on the application. If such a request is filed, a hearing shall be conducted in said municipality if reasonable arrangements for such hearing are made by the municipality.

(c) The Department may conduct a public hearing on a project for which a hearing is not otherwise required. Any person requesting that the Department exercise its discretion to conduct such hearing must file a written request, including a statement of reasons, within the public comment period specified in 310 CMR 9.13(4).

(d) In the event that the project requires a federal action which is subject to CZM federal consistency review under 301 CMR 21.00: *Coastal Zone Management Program Federal Consistency Review Procedures* and CZM determines a public hearing related to consistency certification is appropriate pursuant to 301 CMR 20.04: *Consistency Review of Federal Actions with Coastal Effects*, CZM and the Department may conduct a joint hearing. The Department may also conduct joint hearings on the project with the US Army Corps of Engineers.

(e) The public hearing shall be noticed in accordance with 310 CMR 9.13(1), and shall be scheduled no later than 20 days after the notification date. For projects requiring an EIR, such public hearing generally will occur after issuance by the Secretary of a Certificate stating that the final EIR adequately and properly complies with M.G.L. c. 30, §§ 61 through 62H, unless otherwise deemed appropriate by the Department.

9.13: continued

- (f) In the event that a project is located in more than one municipality, the Department may conduct a single public hearing in one of such municipalities.
 - (g) For projects identified pursuant to 310 CMR 9.13(2) for participation by CZM or DCR the Department shall give CZM or DCR the opportunity to co-chair said hearing.
- (4) Public Comment Period and Intervention
- (a) If a public hearing is held, any person may submit written comments to the Department on the license or permit application within 20 days of the close of the public hearing or within any additional public comment period granted by the Department.
 - (b) If no public hearing is held, any person may submit written comments to the Department on a license application within 30 days, or on a permit application within 15 days of the notification date or within any additional public comment period granted by the Department.
 - (c) A municipality, ten citizen group, or any aggrieved person that has submitted written comments before the close of the public comment period specified above may appeal in accordance with 310 CMR 9.17. Failure to submit written comments will result in the waiver of any right to an adjudicatory hearing.
- (5) Planning Board Recommendation
- (a) Within 30 days of receipt of a license application for a project on tidelands and Great Ponds, the planning board of the municipality where the project is located may hold a public hearing.
 - (b) Within 15 days of conducting said public hearing, or within 45 days of receipt of the license application if no public hearing has been conducted, the planning board shall submit a written recommendation to the Department stating whether and why said planning board believes the project:
 - 1. would not be detrimental to the public rights in tidelands and Great Ponds; and
 - 2. serves a proper public purpose, except in the case of water-dependent use projects entirely on private tidelands.
 - (c) If the planning board provides a written recommendation as provided above, the Department shall take into consideration the recommendation in making its decision whether to grant a license. If the planning board fails to conduct a public hearing or submit a written recommendation as provided in 310 CMR 9.13(5)(a) and (b), the Department may proceed to make a determination whether to issue a license without the benefit of the planning board's recommendation.

9.14: Decision on License and Permit Applications

- (1) For all nonwater-dependent use projects the Department shall issue a written determination in accordance with the provisions of 310 CMR 9.31 through 9.60, including proposed license conditions, for public review prior to issuance of a license.
- (2) For water-dependent use projects the Department may issue a license or permit without issuing a written determination, in accordance with the provisions of 310 CMR 9.31 through 9.50, unless:
 - (a) the Department has conducted a public hearing, in which case the Department shall issue a written determination including proposed license or permit conditions, for public review prior to issuance of the license or permit;
 - (b) written comments have been submitted pursuant to 310 CMR 9.13(4)(c), in which case the Department may issue a draft license or draft permit, including proposed license or permit conditions, for public review prior to issuance of the license or permit; or
 - (c) the Department has decided to deny the license or permit application, in which case the Department shall issue a written determination setting forth the reasons for such decision.
- (3) A written determination shall include a description of the project and a statement of whether the project serves a proper public purpose which provides greater benefits than detriments to the public rights in tidelands. Unless the Department has decided to deny the license or permit application, the written determination will be issued with the draft license or permit conditions.

9.14: continued

(4) If the project includes a set of activities including, without limitation, those to which 310 CMR 9.11(1)(b) applies, which cannot reasonably be incorporated into a single license, the Department may upon request of the applicant issue a consolidated written determination which allows for multiple licenses to be issued independently for phases of said project, provided the Department finds that the licenses can be sequenced or conditioned in a manner which ensures that overall public benefits will exceed public detriments as each portion of the project is completed. Notwithstanding 310 CMR 9.14(3), licenses may be issued pursuant to a consolidated written determination issued under this provision for up to five years, with opportunity for extensions as deemed appropriate by the Department.

(5) The Department shall issue a license, permit, draft license, draft permit, or written determination, as appropriate after the application is determined to be complete by the Department, in accordance with the provisions of 310 CMR 9.11(3)(c). The Department may extend such deadline upon request by the applicant. Where a draft license, draft permit, or written determination is issued, the final license or permit shall not be issued prior to receipt of the state and local approvals specified in 310 CMR 9.11(3)(c)3. Notwithstanding the foregoing, the Department may issue a license, permit, draft license, draft permit or written determination as part of a Combined Permit or as a separate license, permit, draft license, draft permit or written determination issued at the same time as the issuance of or after the issuance of the final Order of Conditions and/or Water Quality Certification.

(6) Upon issuance, the Department shall send a copy of the license, permit, or written determination to:

- (a) the applicant;
- (b) any intervenor and any person who has requested a copy of said license, permit, or written determination;
- (c) CZM or DCR, for projects identified for participation pursuant to 310 CMR 9.13(2); and
- (d) the municipal official, conservation commission, planning board, and harbormaster, if any, of the city or town where the project is located.

In the case of a draft license or draft permit, the Department shall send copies to all parties listed in 310 CMR 9.14(6)(a) through (c) and to any party listed in 310 CMR 9.14(6)(d) who has commented on the application within the public comment period.

(7) The Department shall issue a license or permit after the completion of any appeal period established pursuant to 310 CMR 9.17(2) or the receipt of any plans, documentation, or other information requested by the Department in a written determination, whichever is later, unless a notice of claim for adjudicatory hearing has been filed pursuant to 310 CMR 9.17.

9.15: Terms

(1) Term of License

(a) All licenses issued by the Department shall contain a condition stating the term for which license is in effect, if any. All licenses shall be in effect for a fixed term not to exceed 30 years, unless otherwise deemed appropriate by the Department in accordance with 310 CMR 9.15(1)(b) through (d).

(b) Notwithstanding 310 CMR 9.15(1)(a), the Department may issue a license that establishes an extended fixed term, in accordance with the following provisions:

- 1. said term shall not exceed 65 years for any project or portion thereof which, upon completion, will be located on flowed tidelands or other waterways, and shall not exceed 99 years for any project or portion thereof which will be located on filled tidelands or Great Ponds; in the event the project site includes both flowed and filled tidelands, the Department may upon request of the applicant establish a single weighted average term for the entire project, or for a portion thereof as deemed appropriate by the Department, based on the relative amounts of the surface area of the flowed and filled tidelands associated therewith;
- 2. the applicant shall provide justification that an extended term is warranted given the expected life of the structure, typical financing requirements, consistency with an Approved Municipal Harbor Plan, if any, appropriateness of long-term dedication of tidelands to the proposed use(s) in the particular location, and any other relevant factors;

9.15: continued

3. for projects on Commonwealth tidelands or Great Ponds, the Department shall conduct a public hearing and issue written findings concerning the extended term, in accordance with the provisions of 310 CMR 9.13(3) and 9.14;
 4. for projects on Commonwealth tidelands or Great Ponds held by the Commonwealth, the licensee shall pay an occupation fee based on an appraisal, in accordance with the provisions of 310 CMR 9.16(3)(b) through (c); and
 5. the Department shall require the licensee to submit periodic license compliance inspection reports as a condition of the license for nonwater-dependent use projects, and for other projects as deemed appropriate by the Department.
- (c) The Department shall issue a license for an unlimited term for any project whose entire control, development, and operation is undertaken by a public agency for the provision of services directly to the public (or to another public agency for such provision to the public) by the public agency, its contractor or agent, unless an unlimited term is not deemed appropriate by the Department.
- (d) Notwithstanding the terms of license specified in 310 CMR 9.15(1)(b) and (c):
1. in Designated Port Areas, the term of license for any nonwater-dependent use in a marine industrial park shall not exceed 65 years; the term of license for any supporting DPA use shall not exceed 30 years; and the term of license for any temporary use shall not exceed ten years; and
 2. outside of Designated Port Areas, the term of license for any stationary vessel for uses as described in 310 CMR 9.32(1)(a)6. shall not exceed 30 years.
- (e) The term of a license may be renewed in accordance with the provisions of 310 CMR 9.25(2).
- (2) Term of Permit. Any permit shall be valid for a fixed term not to exceed five years; provided, however, that maintenance dredging may be performed for up to ten years after the permit has been issued, if such terms are so stated in the permit.

9.16: Fees

- (1) Application Fee. An application fee shall be charged in accordance with the accompanying fee schedule (Table 1) per application for a determination of applicability, license, permit, amendment, interim approval, General License Certification or certificate of compliance. An application fee is non-refundable and shall be paid at the time of submission of the original application or Certification, by check or money order made payable to the Commonwealth of Massachusetts, DEP.
- (2) Tidewater Displacement Fee. Except as provided in 310 CMR 9.16(4), prior to issuance of a license or General License Certification for any fill or structure that will displace tidewaters below the high water mark, the applicant, or his or her heirs or assignees responsible for such displacement, shall, at the direction of the Department:
- (a) pay to the Commonwealth a tidewater displacement fee, based on the net amount of tidewater displaced between the elevations of the high and the low water marks, at the rate set forth in the accompanying fee schedule (Table 1); or
 - (b) excavate, in some part of the same harbor, previously filled tidelands between the high and low water marks, subject to the requirements of 310 CMR 9.00 and the approval of the Department, in order to form a basin for a quantity of water equal to that displaced; or
 - (c) improve public harbor facilities in tidelands in any other manner satisfactory to the Department, provided that the cost of such improvement is comparable to the amount otherwise due for displacement; any improvements identified under 310 CMR 9.16 shall be in addition to any actions required under 310 CMR 9.31 through 9.40 and 310 CMR 9.51 through 9.55; the Department may consider the following improvements:
 1. a harbor cleanup activity which is part of a plan approved by a public agency;
 2. a shellfish reseeding program;
 3. a beach nourishment program on beaches open to the public;
 4. a contribution to a special fund or other program managed by a public agency or non-profit organization in order to directly provide public harbor improvements.

9.16: continued

An applicant for a license for any existing, previously unlicensed fill or structure shall be liable for any unpaid tidewater displacement fee, unless the applicant was not responsible for the construction of the structure or the placement of the fill, and the applicant acquired the real estate upon which the structure was constructed or the fill placed before January 4, 1974.

(3) Occupation Fee. Except as provided in 310 CMR 9.16(4), any person granted a license or Certification for any activity in 310 CMR 9.05 in, on, or over any land the title to which is in the Commonwealth shall compensate the Commonwealth for the rights granted in such lands, in accordance with the following provisions:

- (a) except as provided in 310 CMR 9.16(3)(b), the licensee shall pay a fee which shall be:
 1. fixed for the term of the license;
 2. calculated by the Department in accordance with the accompanying fee schedule (Table 1); and
 3. assessed on either a lump sum or annual basis, in accordance with the provisions of 310 CMR 9.16(3)(d).
- (b) the licensee shall pay an annual fee based on the full fair market rental value over the term of the license, as determined in accordance with 310 CMR 9.16(3)(c), in the event that the license is issued for:
 1. an extended term, in accordance with the provisions of 310 CMR 9.15(1)(b); or
 2. long term exclusive assignment of berths in a private recreational boating facility, in accordance with the provisions of 310 CMR 9.38(2)(a)2.

The Department shall presume that land the title to which is in the Commonwealth includes all Commonwealth tidelands and Great Ponds unless the applicant presents evidence of a chain of title indicating that the Commonwealth is not the fee owner of the land in question.

(c) Appraisal Procedure.

1. The determination of fair market value and fair market rental value shall be based on an appraisal of the value of the rights granted in land the title to which is in the Commonwealth and which is occupied in accordance with the license. Such determination shall include an index or other method by which periodic fee adjustments shall be made over the term of the license. The appraisal report shall be prepared at the expense of the applicant by a state-certified appraiser. The appraisal report shall be submitted to the Department after issuance of the Department's written determination to issue a license.
2. Within 45 days of receipt of the appraisal report, the Department shall conduct a review of the appraisal report. Said review appraisal shall be prepared by a state-certified appraiser. If the Department determines that the appraisal report is complete and accurate, the annual license fee shall be established based on the fair market rental value determined by the Department, based on said report. If the Department determines that the appraisal report is incomplete or inaccurate, the Department shall inform the applicant in writing of the deficiencies in the appraisal report. Upon review of the Department's evaluation, the applicant may:
 - a. submit a new or revised appraisal report to the Department for its review and approval; or
 - b. notify the Department of disagreement with the Department's review appraisal and provide the reasons therefor. If the Department and the applicant cannot agree within 30 days of said notification, both the Department and the applicant shall within 30 days designate a third, impartial state-certified appraiser. The cost of the third appraiser shall be born equally by the Department and the applicant. The third appraiser shall prepare an appraisal report after reviewing the initial report, the review appraisal and any other information deemed appropriate and shall make a recommendation to the Department as to the fair market value and fair market rental value. The Department shall presume that the values determined in that report are accurate and shall establish the annual license fee based on the fair market rental value determined therein. This presumption may be overcome only if the Commissioner issues written findings based on evidence presented in the appraisal reports before the Department explaining the reasons for disagreement with the recommendations of the third appraisal report.

9.16: continued

- (d) Payment of fees. Any fee the total amount of which during the term of the license is less than \$10,000 shall be assessed as a lump sum payable in full prior to license issuance. Any fee the total amount of which during the term of the license is more than \$10,000 may be assessed at the discretion of the applicant as a lump sum payable in full prior to license issuance or as a series of fixed annual payments which shall be required as a condition of the license. The initial payment of such annual fee shall be paid in full prior to the issuance of the license. All such fees shall be paid by certified check or money order made payable to the Commonwealth of Massachusetts, DEP.
- (e) Payment of occupation fee for existing fill or structures
1. Any person who is granted a license for existing fill or structures, the fee for which has not been paid, shall pay the fee, if any, in effect at the time the license is granted.
 2. Any person who is granted a license or license amendment for a water-dependent use project involving a change in use or structural alteration to existing fill or structures shall pay the occupation fee in effect at the time the license is granted for any portion of the project site for which a lump sum occupation fee has not been previously paid.
 3. Any person who is granted a license or license amendment for a nonwater-dependent use project involving a change in use or structural alteration to existing fill or structures shall pay the occupation fee in effect at the time the license is granted for the entire project site; but shall be given credit for any lump sum occupation fee previously paid for the portion of tidelands previously occupied, pro-rated for the remaining term of the license. For purpose of calculating the credit pursuant to 310 CMR 9.16(3)(e), the lump sum occupation fee for any license with an unlimited term shall be pro-rated over a 30-year period from the date said license was issued.
 4. Notwithstanding 310 CMR 9.16(3)(e)2., any person who is granted a license or license amendment for a private recreational boating facility with long-term exclusive assignment of berths pursuant to 310 CMR 9.38(2)(a)2. shall pay the fee in accordance with 310 CMR 9.16(3)(e)3.
- (4) Exemption from Fees for Certain Projects.
- (a) Public Agencies. The fees described in 310 CMR 9.16(2) and 9.16(3) shall not be applicable to a municipality or other public agency undertaking a public service project, provided that said project does not deny access to its services and facilities to any citizen of the Commonwealth in a discriminatory manner.
 - (b) Non-profit Organizations. The fees described in 310 CMR 9.16(2) and 9.16(3) shall not be applicable to a non-profit organization as defined in 310 CMR 9.02, if:
 1. the project is a facility of public accommodation which does not deny access to its services and facilities to any citizen of the Commonwealth in a discriminatory manner;
 2. the project is not intended to generate revenues in excess of that needed for construction, operation and maintenance of the uses specified in the license; and
 3. said organization has not been created for the purpose of avoiding said fees while sheltering profits in another entity.
 - (c) Projects Authorized by Permits. The fees described in 310 CMR 9.16(2) and 9.16(3) shall not be applicable to any project authorized by permit.
 - (d) Recreational boating facilities authorized by the Metropolitan District Commission (MDC). For any recreational boating facility authorized by the MDC, the occupation fees described in 310 CMR 9.16(3) shall be reduced by the amount of any fee paid to the MDC for occupation of a waterway.
 - (e) Projects licensed under the Simplified Procedures for Small Structures Accessory to Residences pursuant to 310 CMR 9.10 shall be exempted from payment of Tidewater Displacement Fees.

Tidewater Displacement Fee (per cubic yard)		
Rate		
Water-dependent Projects	\$2.00	
Non Water-dependent Projects	\$10.00	
Licenses with Extended Terms	\$10.00	
Any Small Scale Project under 310 CMR 9.10	N/A	
Occupation Fee² (per square yard of land held by the Commonwealth)		
Rate		
Water-dependent Projects	\$1.00 x term of license	
Non Water-dependent Projects	\$2.00 x term of license	
Licenses with Extended Terms	Appraisal	
Simplified License per 310 CMR 9.10	\$1.00 x term of license	

² The fee is calculated by multiplying the dollar rate shown by the length of the license term, in years, and by the area of occupied land held by the Commonwealth. This is a fixed fee for the term of the license and is assessed on a lump sum basis, except as provided in 310 CMR 9.16(3)(d)

9.17: Appeals

- (1) The following persons shall have the right to an adjudicatory hearing concerning a decision by the Department to grant or deny a license or permit:
 - (a) an applicant who has demonstrated property rights in the lands in question, or which is a public agency;
 - (b) any person aggrieved by the decision of the Department to grant a license or permit who has submitted written comments within the public comment period;
 - (c) ten residents of the Commonwealth, pursuant to M.G.L. c. 30A, § 10A, who have submitted comments within the public comment period; at least five of the ten residents shall reside in the municipality(s) in which the license or permitted activity is located. The appeal shall clearly and specifically state the facts and grounds for the appeal and the relief sought, and each appealing resident shall file an affidavit stating the intent to be part of the group and to be represented by its authorized representative.
 - (d) the municipal official in the affected municipality(s) who has submitted written comments within the public comment period;
 - (e) CZM, for any project identified in 310 CMR 9.13(2)(a) for CZM participation; and
 - (f) DCR, for any project in an Ocean Sanctuary, if it has filed a notice of participation within the public comment period.

- (2) Any notice of claim for an adjudicatory hearing must be sent by certified mail or hand delivery to the Department within 21 days of the date of the written determination, draft license or draft permit, or if no such determination or draft is required, within 21 days of the date of issuance of the license or permit, as appropriate under 310 CMR 9.14(1) and (2). A copy must be sent at the same time by certified mail or hand delivery to the applicant and to the municipal official of the city or town where the project is located.

- (3) Any notice of claim for an adjudicatory hearing must include the following information:
 - (a) the DEP Waterways Application File Number, name of the applicant and address of the project;
 - (b) the complete name, address, and telephone number of the party filing the request and, if represented by counsel, the name, address and telephone number of the attorney and, if claiming to be a person aggrieved, the specific facts that demonstrate that the party satisfies the definition of "aggrieved person" found in 310 CMR 9.02;
 - (c) a clear statement that a formal adjudicatory hearing is being requested;
 - (d) a clear and concise statement of the facts which are grounds for the proceeding, the specific objections to the Department's written determination, draft license, draft permit, license or permit, and the relief sought through the adjudicatory hearing, including specifically the changes desired in the final written determination, license, or permit; and
 - (e) a statement that a copy of the request has been sent to:
 1. the applicant; and
 2. the municipal official of the city or town where the project is located.

- (4) The Department may coordinate adjudicatory hearings under 310 CMR 9.17 and under M.G.L. c. 131, § 40, 310 CMR 10.00: *Wetlands Protection* and 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth* as follows:
 - (a) if a final order has been issued pursuant to the Wetlands Protection Act, M.G.L. c. 131, § 40, the Department shall exclude issues solely within the jurisdiction of that statute at an adjudicatory hearing held under 310 CMR 9.17, except as provided in 310 CMR 9.33(3);
 - (b) if a Water Quality Certification has been issued pursuant to 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*, the Department shall exclude issues solely within the jurisdiction of 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*;
 - (c) if an adjudicatory hearing has been requested under 310 CMR 9.17, 314 CMR 9.10: *Appeals* and 310 CMR 10.05(7)(j), the Department may consolidate these proceedings; and

9.17: continued

(d) notwithstanding 310 CMR 9.17(4)(a) and (b), in the event that the Department has issued a Combined Permit that serves as the license, permit or other written approval for a water-dependent use project issued pursuant to 310 CMR 9.00, the appeal may include issues solely within the jurisdiction of 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth* and 310 CMR 10.00: *Wetlands Protection* only as follows: The appeal may include issues solely within the jurisdiction of 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth* only if the appeal has been requested in accordance with the requirements of 314 CMR 9.10: *Appeals*. The appeal may include issues solely within the jurisdiction of 310 CMR 10.00: *Wetlands Protection* only if the appeal has been requested in accordance with the requirements of 310 CMR 10.05(7)(j).

9.18: Recording

(1) The license and accompanying plan shall be recorded at the Registry of Deeds within the chain of title of the affected property within 60 days of the date of issuance. In the case of recorded land, the license shall also be noted in the Registry's Grantor Index under the name of the owner of the land upon which the project is located. In the case of registered land, the license shall also be noted on the Land Court Certificate of Title of the owner of the land upon which the project is located. When a license involves more than one parcel of land the license shall be recorded in the chain of title for all relevant deeds.

(2) Written notice of said recording shall be given to the Department within 30 days of recording, including an identification of the Registry of Deeds or Land Court in which the license is recorded, the date of recording and the instrument or document number, prior to commencement of the project authorized under the license.

(3) Failure to record the license and accompanying plan within 60 days will render said license void in accordance with 310 CMR 9.26(2)(b)1.

9.19: Certificate of Compliance

(1) Within 60 days of the completion of any licensed project, but in no event later than five years from the date of license issuance, or any extension thereof, the applicant shall request in writing that the Department issue a certificate of compliance. The request shall be accompanied by a certification by a registered professional engineer licensed to do business in the Commonwealth that the project was completed according to the plans, specifications, and conditions of the license. The Department may conduct a site inspection at any time to determine compliance prior or subsequent to issuing a certificate. The Department may issue a partial certificate of compliance for a portion of a project if all public benefits associated with such portion have also been provided.

(2) The license for any project for which such a request is not filed and certificate issued may be revoked pursuant to 310 CMR 9.26(1).

9.20: Authorization of Emergency Actions

In an emergency situation where swift and immediate action is essential to avoid or eliminate a serious and immediate threat to health, safety, or the environment, the Department may approve a project or portion thereof, without a license or permit, in accordance with the following procedures.

(1) A written request shall be submitted to DEP which describes the location, and work to be performed and specifies why the project is necessary for the protection of the health or safety of the public or the environment. Accompanying this request shall be a written statement from a federal, state or municipal agency certifying that there is an emergency and specifying why said project is necessary to avoid or eliminate a serious and immediate threat to public health, safety, or the environment.

9.20: continued

- (2) Emergency approval shall be issued in writing and shall specify the limits of activities necessary to abate the emergency.
- (3) When the necessity for undertaking the emergency action no longer exists, any emergency action taken under 310 CMR 9.20 shall cease until the provisions of 310 CMR 9.00 have been complied with. In any event, the time limit for performance of emergency work shall not exceed 30 days, unless a written extension is approved by the Commissioner or appropriate Regional Director.
- (4) In all cases under 310 CMR 9.20, the person performing any emergency work is required to submit a license or permit application in accordance with 310 CMR 9.11 within 30 days of the date of emergency approval unless a written extension is approved by the Commissioner. Following the review of the application, the Department may require any modification to the emergency work that it deems necessary.
- (5) In emergency situations where written notice is not feasible, verbal notice to and approval by the Commissioner or appropriate Regional Director may be substituted until written notice can be feasibly submitted.
- (6) No work authorized under an emergency approval pursuant to 310 CMR 9.00 may be undertaken without emergency authorization under M.G.L. c. 131, § 40 and 310 CMR 10.00: *Wetlands Protection* and M.G.L. c. 30, §§ 61 through 62H, where applicable.

9.21: Variances

- (1) Required Findings. The Commissioner may waive the application of any other section of 310 CMR 9.00 by making a written finding following a public hearing that:
 - (a) there are no reasonable conditions or alternatives that would allow the project to proceed in compliance with 310 CMR 9.00;
 - (b) the project includes mitigation measures to minimize interference with the public interests in waterways and that the project incorporates measures designed to compensate the public for any remaining detriment to such interests; and
 - (c) the variance is necessary:
 1. to accommodate an overriding municipal, regional, state or federal interest; or
 2. to avoid such restriction on the use of private property as to constitute an unconstitutional taking without compensation; or
 3. to avoid substantial hardship for the continuation of any use or structure existing as of October 4, 1990, and for which no substantial change in use or substantial structural alteration has occurred since that date.
- (2) Procedure
 - (a) A request for a variance shall be filed by the applicant prior to publication of the notice of public hearing pursuant to 310 CMR 9.13(1). The request shall be in writing and shall include, at a minimum, the following information:
 1. an identification of the regulation(s) from which the variance is sought;
 2. a description of alternative designs, locations, or construction methods which would achieve the purpose of the project without the need for the variance;
 3. an explanation of why each of the alternatives is unreasonable;
 4. an analysis of any detriments to interests of the public in waterways due to the proposed project and an explanation of how the detriments have been minimized;
 5. a description of the measures that will be provided to compensate for any remaining detriment to public interests in waterways; and
 6. a description and supporting documentation of the overriding public interest served by the project, if applicable; or
 7. documentation that the project is a continuation of a use or structure existing as of October 4, 1990; that there has not been a substantial change in use or substantial structural alteration since that date; and that application of 310 CMR 9.00 would cause substantial hardship to the applicant, if applicable; or

9.21: continued

8. a legal analysis, with supporting documentation, explaining why application of 310 CMR 9.00 would so restrict the use of private property as to constitute an unconstitutional taking without compensation, if applicable.

(b) Notice of the variance request shall be published in accordance with 310 CMR 9.13(1) and shall explicitly indicate that a variance is being requested. The Department shall hold a public hearing in accordance with 310 CMR 9.13(3) upon which the Commissioner's findings shall be based. Upon issuance of a variance an adjudicatory hearing is available in accordance with 310 CMR 9.17.

(c) For projects for which an EIR will be prepared in accordance with M.G.L. c. 30, §§ 61 through 62H, the information required pursuant to the provisions of 310 CMR 9.21(2)(a)1. through 7., should be included in the EIR if the need for a variance is reasonably foreseeable. If the variance issue was addressed in the final EIR, the Commissioner shall presume that the description of alternatives contained therein satisfies the requirements of 310 CMR 9.21(2)(a)2. Notwithstanding this presumption, the Commissioner may require any modification of the project reasonably within the scope of an alternative within the final EIR.

(3) Commentary. The variance process is intended to apply in the rare and unusual circumstance where a proposed project satisfies a public interest which overrides the public interest in waterways but cannot be implemented in a manner which is fully consistent with the provisions of 310 CMR 9.00; where application of 310 CMR 9.00 would so restrict the use of private property as to constitute an unconstitutional taking of property; or where application of 310 CMR 9.00 would cause substantial hardship for the continuation of a use or structure existing as of October 4, 1990. The variance process is designed to ensure that a full investigation is made to determine whether the proposed project serves an overriding public interest which outweighs harm to the public resulting from lack of adherence to 310 CMR 9.21 and whether all measures are taken which ensure that detriments to the public interests in waterways are minimized.

9.22: Maintenance, Repair, and Minor Project Modifications

(1) Maintenance and Repair of Fill and Structures. During the term for which the license is in effect, the licensee shall maintain and repair all authorized fill and structures in good working order for the uses authorized in the license, and in accordance with the conditions specified therein. No application for license or license amendment shall be required for such activity. Maintenance and repair include, among other things, the following activities:

(a) replacement of old pilings, decking, or rip-rap, all with material of the same dimensions and quality and in the same locations and elevations as that authorized in the license;

(b) repaving of road surfaces, installation of road curbs and lighting, replacement of railroad track, stabilization of road or rail beds, reconstruction of culverts and catch basins, and other maintenance or repair of existing public transportation facilities and associated drainage systems, as necessary to preserve or restore the serviceability of such facilities for the original use, provided that maintenance and repair shall not include the substantial enlargement of such facilities, such as roadway widening, adding shoulders, or upgrading substandard intersections;

(c) restoration to the original license specifications of licensed fill or structures that have been damaged by catastrophic events, provided that no change in use occurs and that:

1. such restoration is completed within two years of the damage-causing event;

2. in the case of flood-related damage, the cost of such restoration does not exceed 50% of the cost of total replacement according to the original license specifications;

3. the licensee provides the Department with written notice of the restoration at least ten days prior to commencement of such work; in the case of flood-related damage, said notice shall include written estimates of restoration and replacement costs; and

4. the licensee provides the Department with written notice that the repair work has been completed in accordance with the license specifications, as certified by a Registered Professional Engineer, within 60 days of such completion; and

(d) demolition and removal of unused structures that are obsolete or otherwise no longer suitable for the uses authorized in the license, provided that written approval by the Department is obtained prior to the commencement of such work.

9.22: continued

(2) Maintenance Dredging. Maintenance dredging may occur for five years from the date of issuance of the license or permit or for such other term, not exceeding ten years, specified therein, provided that the written notice required pursuant to the Wetlands Protection Act (M.G.L. c. 131, § 40 and 310 CMR 10.00: *Wetlands Protection*) has been filed with the Conservation Commission and a copy has been sent to the Department.

(3) Minor Project Modifications. The licensee may undertake minor modifications to a licensed project, or a project exempt from licensing pursuant to 310 CMR 9.05(3)(b) through (h), without filing an application for license or license amendment. Such modifications are limited to:

(a) structural alterations which are confined to the existing footprint of the fill or structures being altered and which represent an insignificant deviation from the original specifications of the license, in terms of size, configuration, materials, or other relevant design or fabrication parameters;

(b) changes of use which maintain or enhance public benefits provided by the project and which represent an insignificant deviation from the original use statement of the license, in terms of function, character, duration, patronage, or other relevant parameters; or

(c) replacement of subsurface utilities, or installation of additional utility lines in an existing right of way within previously authorized filled tidelands connecting to existing structures, provided the work will not restrict or impair access to water-dependent uses.

No such modifications shall be undertaken until the licensee has submitted written notice to the Department describing the proposed work in sufficient detail, with reference to any relevant license plans, for the Department to determine compliance with the above conditions. If the Department does not object within 30 days, the licensee may proceed with the described work without further approval by the Department.

(4) Nothing in 310 CMR 9.22(1) through (3) provisions shall be construed to exempt the work in question from obtaining other applicable approvals, including but not limited to an order of conditions under M.G.L. c. 131, § 40 and 310 CMR 10.00: *Wetlands Protection*.

9.23: Transfer of License Upon Change of Ownership

(1) Unless otherwise provided in the license, a valid license shall run with the land and shall automatically be transferred upon a change of ownership of the affected property within the chain of title of which the license has been recorded. All rights, privileges, obligations, and responsibilities specified in the license shall be transferred to the new landowner upon recording of the changed ownership.

(2) For transferability of permits issued by the harbormaster for the temporary placement of moorings, floats, and rafts, see 310 CMR 9.07(2)(d).

9.24: Amendments

(1) Upon written request by the licensee accompanied by appropriate plans, the Department may amend a license and associated written determination to authorize a structural alteration or change in use not defined as substantial in accordance with 310 CMR 9.02, or to delineate a reconfiguration zone within a marina in accordance with 310 CMR 9.39(1)(b), or to renew a term of license in accordance with 310 CMR 9.25(2). A written request may also be made to amend a permit. No license or permit shall be amended unless the project, as modified, complies with the applicable provisions of 310 CMR 9.00 wherever feasible.

(2) The Department shall review the request for amendment and determine whether the proposed changes are so significant as to require a new license or permit application or are appropriate for consideration of an amendment to the existing license or permit.

(3) If the Department determines that the proposed changes are appropriate to allow consideration of an amendment, notice shall be provided in accordance with the requirements of 310 CMR 9.13(1), and to any intervenor on the original license application to the maximum reasonable extent.

9.24: continued

- (4) The Department may, at its discretion, conduct a public hearing on the request for amendment. Any such hearing shall be conducted in accordance with the requirements of 310 CMR 9.13(3).
- (5) Any person who would otherwise have the right to an adjudicatory hearing pursuant to 310 CMR 9.17 may appeal the issuance of any amendment within 21 days of the date of its issuance, in accordance with the procedures set forth at 310 CMR 9.17.
- (6) The amended license and accompanying plan shall be recorded within 60 days of the date of issuance in accordance with the procedures set forth in 310 CMR 9.18.
- (7) Notwithstanding the procedures for amendment described above, the Department may issue in writing, at the request of the licensee, clarification and corrections regarding any license or permit previously issued.

9.25: Expiration and Renewal

- (1) Expiration.
 - (a) Any license, permit, or legislative authorization shall expire as to all work licensed, permitted, or authorized which is not completed within five years of the date thereof, or such other period of time specified therein; provided, however, that for good cause shown the Department may extend, without public hearing or notice, the construction period of the license, permit, or legislative authorization for one or more one year periods upon written request of the licensee or permittee.
 - (b) All licenses or permits shall expire upon reaching the term, if any, stated in the license or permit or any extension thereof.
 - (c) Any license shall expire if the fill or structures are abandoned and not used for the purpose for which they were licensed for a period of five consecutive years or more.
- (2) Renewal of Licenses and Permits. A renewal may be granted for a term of years not to exceed that authorized in the original license or permit, in accordance with 310 CMR 9.15, upon written application by the licensee or permittee and in accordance with the procedures for amendments set forth at 310 CMR 9.24.

9.26: Revocation and Nullification

- (1) Revocation.
 - (a) Unless otherwise specifically provided by law, the Department may revoke a license or permit for non-compliance with the terms and conditions set forth therein, including any change of use from that expressly authorized in said license or permit or, if no such statement was included, from that reasonably determined by the Department to be implicit therein. Such revocation may not occur until after the Department has given notice of the alleged non-compliance to the licensee or permittee and any person who has filed a written request for such notice with the Department, and after it has afforded them an opportunity for a hearing and a reasonable opportunity to correct said non-compliance.
 - (b) In accordance with the procedures established in 310 CMR 9.26(1)(a), the Department may revoke any license or permit upon a finding that the licensee denies access to project services and facilities in a discriminatory manner, as determined in accordance with the constitution of the Commonwealth of Massachusetts, of the United States of America, or with any statute, regulation, or executive order governing the prevention of discrimination. Such a finding shall be made upon a final determination of discrimination, issued by any federal, state or local court or agency with jurisdiction to investigate discrimination issues.
 - (c) Notice of revocation of a license shall be recorded at the Registry of Deeds or Land Court by the Department, in accordance with 310 CMR 9.18.
- (2) Nullification.
 - (a) All licenses issued prior to January 1, 1984 are void if:
 1. the license and the accompanying plan were not recorded within one year of date of issuance at the Registry of Deeds for the county or district where the work was to be performed;

9.26: continued

2. there has been an unauthorized substantial change in use; or
3. there has been an unauthorized substantial structural alteration.

Notwithstanding the foregoing, no license for filled private tidelands shall be void for unauthorized substantial changes in use or unauthorized substantial structural alterations which occurred prior to January 1, 1984.

(b) All licenses issued after January 1, 1984 are void if:

1. the license and accompanying plan were not recorded within 60 days of date of issuance at the Registry of Deeds for the county or district where the work was to be performed;
2. there has been an unauthorized substantial change in use; or
3. there has been an unauthorized substantial structural alteration.

9.27: Removal of Previously Licensed Structures

Upon the nullification, expiration, or revocation of a license, the licensee shall remove all structures authorized in such previous license which are located:

- (1) below the high water mark, unless the Department determines that continued existence of said structures will promote the public interests served by M.G.L. c. 91;
- (2) above the high water mark, if the Department determines that continued existence of said structures will have a significant adverse effect on the public interests served by M.G.L. c. 91. Such removal shall take place upon written notice to and at the direction of the Department.

9.28: Amnesty

(1) General. Notwithstanding the provisions of 310 CMR 9.09(2), certain substantive and procedural standards of 310 CMR 9.11 through 9.55 shall not apply to the licensing of existing unauthorized fill or structures provided the Department received an application by October 4, 1996. Furthermore, during the amnesty period the Department may postpone the requirement to obtain a license for certain small-scale water-dependent structures on residential property by issuing an interim approval for said structures. The Department will initiate enforcement action to require the removal or licensing of any such structure pursuant to 310 CMR 9.00 only upon the expiration or revocation of the interim approval or the violation of the terms and conditions thereof. After the close of the amnesty period, the Department will require strict compliance with all provisions of 310 CMR 9.00 and will take enforcement action, including the assessment of penalties if appropriate, to ensure that all unauthorized fill and structures are either licensed or removed.

(2) Projects Which May Be Authorized under the Amnesty Program.

(a) An application for a license under the amnesty program may be submitted only for a project consisting entirely of the continuation in use of existing fill or structures not previously authorized, or for which a grant or license is not presently valid pursuant to 310 CMR 9.00, provided that:

1. said fill or structures have been in use since January 1, 1984, and no unauthorized substantial change in use or substantial structural alteration has occurred since that date; and
2. an application has been filed with the Department by October 4, 1996.

(b) An application for an interim approval under the amnesty program may be submitted only for a project meeting the criteria of 310 CMR 9.28(2)(a), and which consists entirely of an existing dock, pier, seawall, bulkhead, or other small-scale water dependent structure that is accessory to a single family residence.

(3) Standards for Applications under Amnesty Program. For purposes of authorizing any project under the amnesty program, the applicable substantive standards found at 310 CMR 9.07 and 9.20 through 9.27, effective September 15, 1978, shall remain in full force and effect in *lieu* of the substantive standards found at 310 CMR 9.31 through 9.60.

9.28: continued

(4) Procedures for Applications under Amnesty Program. For purposes of authorizing projects under the amnesty program, the applicable procedural rules found at 310 CMR 9.11 through 9.30 shall be in effect, except for any time schedule for Department action specified therein, and except as modified in accordance with the following provisions.

(a) Plans, 310 CMR 9.11(2) and (3): In the case of an application for an interim approval, the plan need not be certified by a Registered Professional Engineer or Registered Land Surveyor if the fill or structure is accurately drawn on a scaled plan in accordance with application instructions issued by the Department.

(b) Other State and Local Approvals, 310 CMR 9.11(4): In the case of an application for an interim approval, except for any project located in an ACEC, the application need not provide evidence of compliance with the applicable state and local requirements, and the Department shall presume compliance with these requirements unless the Department receives information to the contrary during the public comment period.

(c) Terms, 310 CMR 9.15: In the case of an application for an amnesty license for a water-dependent use project on Commonwealth tidelands, the license term shall be 99 years unless the Department determines that a shorter term is necessary to protect the public interest in said lands. In the case of an application for an interim approval, said approval shall expire in 30 years unless the affected property is transferred to a new owner for valuable consideration, in which case said approval shall expire one year from the date of recording of the transfer at the Registry of Deeds. An interim approval shall not be renewed upon expiration; further authorization from the Department must be obtained in the form of a license.

(d) Fees, 310 CMR 9.16(2) through (4): In the case of an application for an amnesty license for a water-dependent use project, the applicable regulations governing tidewater displacement and occupation fees found at 310 CMR 9.08, effective September 15, 1978, shall remain in full force and effect in lieu of the fee regulations found at 310 CMR 9.16(2) through (4). In the case of an application for an interim approval no such fees shall apply. All applications under the amnesty program shall pay the appropriate application fee in accordance with 310 CMR 9.16(1).

(e) Recording, 310 CMR 9.18: In the case of an application for an interim approval, said approval shall be recorded, without the accompanying plan, at the Registry of Deeds in accordance with 310 CMR 9.18.

(f) Transfer, 310 CMR 9.23: In the case of an application for an interim approval, said approval shall not run with the land, but shall automatically expire one year from the date of recording of the transfer of the affected property to a new owner for valuable consideration.

9.29: General License Certification

(1) The General License. In accordance with M.G.L. c. 91, § 18C, the Department will issue a General License for noncommercial, small-scale, water-dependent structures accessory to a residential use. The General License shall be a final license signed by the Governor and may authorize eligible small-scale, water-dependent structures accessory to a residential use in lieu of an individual license. The General License shall be issued under the following procedures:

(a) The draft General License will be posted on the Department website and published in the Environmental Monitor for a 30-day public comment period. After the close of the public comment period, the Department will issue the final General License and notify the public of its availability on the Department website.

(b) The General License shall be in effect for a fixed term not to exceed 30 years for structures in coastal waters, and 15 years for structures in fresh waters, unless a shorter effective term is specified by the Department in the General License.

(c) The General License shall be recorded at every Registry of Deeds in the Commonwealth, indexed under "Commonwealth of Massachusetts" as the Grantor.

(d) The Department may amend or modify the General License in accordance with the procedures of 310 CMR 9.29(1)(a) through (c).

(2) Projects Eligible for General License Certification. A Certification to the General License issued under 310 CMR 9.29(1) must be submitted for all proposed structures, previously unauthorized structures, and previously licensed structures applying for renewal, that meet the following eligibility criteria:

(a) Are for a water-dependent, noncommercial use accessory to residential property;

9.29: continued

- (b) Are for pile-supported (*e.g.*, by wooden or metal posts) small-scale dock, pier, and similar structures with associated ramp(s) and float(s) that require no fill or dredging;
- (c) Are not located within an Area of Critical Environmental Concern (ACEC);
- (d) Are not located within a Designated Port Area (DPA); and
- (e) Otherwise meet the General License standards and procedures described in 310 CMR 9.29(3) and (4).

The above thresholds are established for determination of eligibility only; structures licensed under 310 CMR 9.29 shall be the minimum size necessary to achieve the intended water-related purposes.

(3) Standards. The General License contains specific conditions that will ensure that projects certified under 310 CMR 9.29 will meet the following performance standards which shall supersede the standards listed in 310 CMR 9.35 and 9.37.

(a) An eligible project shall not:

1. Exceed the minimum size necessary to achieve the intended water-dependent use;
2. Extend beyond the length required to achieve safe berthing;
3. Impair the lines of sight necessary for navigation;
4. Interfere with access to adjoining areas by extending substantially beyond the projection of existing structures adjacent to the site;
5. Interfere with access or public rights associated with a public landing, easement, or other public access to water;
6. Generate water-borne traffic that would substantially interfere with other vessels; and
7. Impair in any other substantial manner the ability of the public to swim or float freely upon the waterways.

(b) An eligible project shall:

1. Preserve all rights held by the Commonwealth in trust for the public to use tidelands, Great Ponds and other waterways for lawful purposes;
2. Preserve public rights of access on private tidelands for fishing, fowling, and navigation;
3. be structurally sound; and
4. meet all other standards and conditions stated in the General License, including but not limited to the dimensional criteria for flowed tidelands or fresh waters.

(c) The Department may consider the cumulative impact of docks, piers and similar structures in a geographic area in determining whether a project is appropriate for coverage under a General License.

(4) Certification Procedures. Unless otherwise specified in 310 CMR 9.29, the procedural requirements of 310 CMR 9.10 through 9.19, 9.21, 9.23 through 25, 9.34, 9.37, shall not apply to Certifications submitted under the General License issued pursuant to 310 CMR 9.29 and M.G.L. c. 91, § 18C. A Certification shall assert under the pains and penalties of perjury that the proposed project meets all eligibility requirements set forth in 310 CMR 9.29(2), and that the project proponent will comply with all standards and conditions of the General License. For purpose of authorizing eligible projects under the General License, the following certification procedure shall apply.

(a) Application and Plans. A project proponent shall submit a completed Certification form provided by the Department, which shall be signed by the project proponent and landowner, if other than the project proponent. The Certification shall be prepared in accordance with the instructions contained in the Department's Certification package and include a copy of any legislative grant. The Certification shall include a plan that clearly demonstrates that the project meets the General License eligibility criteria of 310 CMR 9.29(2), will comply with all standards and conditions of the General License; and is drawn in accordance with the formatting and information requirements described in the Department's Certification package. When plans have been submitted with a Notice of Intent or referenced in an Order of Conditions under the Wetlands Protection Act, a copy of those plans shall accompany the application. When plans have not been prepared under the Wetlands Protection Act, a plot plan or other scaled plan with structures to be licensed measured accurately from lot lines or other fixed structures shall be prepared in accordance with the application instructions.

9.29: continued

(b) Coordination with Municipal Officials. The project proponent shall coordinate with the following municipal officials on the proposed project and provide an opportunity to comment prior to submitting the completed Certification package to the Department.

1. Planning Board. The project proponent shall submit to the planning board a statement and plan that includes the proposed use, location, dimensions and limits and mode of work to be performed, and describes the proposed project with sufficient detail for the planning board to determine if the proposed project complies with the eligibility criteria and applicable standards and conditions of the General License. The planning board may solicit the opinions of other municipal officials such as the board of selectmen, harbormaster or conservation commission. Within 45 days of receipt of an adequate statement from the project proponent, the planning board may submit a written opinion to the Department on whether the project meets the eligibility criteria listed in 310 CMR 9.29(2) and will comply with the standards and conditions of the General License and 310 CMR 9.29(3). The Department may affirm a Certification after the expiration of 45 days without local planning board comment or upon receiving notification from the local planning board that it does not oppose the project's eligibility for a Certification.

2. Conservation Commission. The project proponent shall provide to the Department adequate documentation with the Certification package that the project complies with the Wetlands Protection Act, in the form of an Order of Conditions, negative or conditionally negative Determination of Applicability, or Certificate of Compliance.

3. Zoning Compliance. The project proponent shall include on the Certification form a certification from the local Zoning Enforcement Officer that the project complies with applicable zoning ordinances and bylaws.

(c) Public Notice. The project proponent shall publish in a newspaper of general circulation in the area where the project is located, a public notice including the proponent's name and address, the project location, a description of the project, and a statement that written comments will be accepted by the planning board within 30 days of the submittal of the statement to the planning board. At the same time the proponent submits its statement to the planning board, a copy of the public notice shall be distributed to the Municipal Official, harbormaster, if any, and the conservation commission. The notice shall indicate that the proposed project is under review by the planning board. No public hearing will be required by the Department for a General License Certification. The public notice of the project shall be published before or at the same time as the statement is provided to the planning board and other municipal officials and may be included in a public notice for the proposed project required by other applicable statutes or regulations, such as the Wetlands Protection Act.

(d) Fees. Any Certification submitted to the Department shall include the applicable Certification form and payment of the applicable tidewater displacement or occupation fee described at 310 CMR 9.16. Notwithstanding the provisions of 310 CMR 9.16(3)(d) and (e) to the contrary, all such fees shall be paid in full by certified check or money order made payable to the Commonwealth of Massachusetts at the same time as the Certification is submitted to the Department.

(e) Any change in use or structural alteration of a previously licensed structure that is eligible for the General License, regardless of when the structure was first licensed or certified, on or after the effective date of this section, shall require a new Certification. The new Certification shall be submitted to the Department for a shortened local review that includes only the planning board in accordance with 310 CMR 9.29(4)(b)1. and M.G.L. c. 18(C). The new Certification shall be submitted to the Department and Planning Board at least 60 days prior to the start of construction.

(5) Decision on Certifications. The Department shall acknowledge receipt of a complete Certification package, or request additional information, within 60 days of the date of receipt by the Department. The submission of the Certification to the Department shall not occur until the latter of the completion of the public comment period or the expiration of the planning board's 45 day review period. The Department shall affirm the Certification if the project meets the eligibility criteria of 310 CMR 9.29(2), will comply with all standards and conditions of the General License, and the applicant has met all the requirements of 310 CMR 9.29(3) and (4), except that the Department shall not affirm a Certification if the planning board recommends that the project be subject to individual licensing. If an existing, previously unauthorized structure is found ineligible for Certification, an application shall be submitted for an annual local permit, a simplified license, or an individual license in accordance with 310 CMR 9.07, 9.10, or 9.11.

9.29: continued

(6) Terms of Certifications and Recording.

(a) The term of the affirmed Certification shall expire on the same date as the General License, unless the Department specifies in its affirmation that a shorter term is necessary to protect the public interest.

(b) The affirmed Certification, with the plan as an exhibit, shall be recorded at the Registry of Deeds within the chain of title of the affected property within 60 days of the date of the Department's affirmation. The Certification becomes valid on the date the affirmed Certification is recorded. Failure to record the Certification and accompanying plan within 60 days will render the Certification void in accordance with M.G.L. c. 91, § 18C. The applicant shall provide notification to the Department within 30 days of the recording in accordance with 310 CMR 9.18(2).

(c) Work or change in use shall not commence until the affirmed Certification is recorded and the Department has received notification of the recordation.

(d) All work authorized by an affirmed Certification under this General License shall be completed within five years of the date of the Department's affirmation. Said construction period may be extended by the Department for one or more one year periods without public notice, provided that the Applicant submits to the Department, 30 days prior to the expiration of said construction period, a written request to extend the period and provides an adequate justification for said extension.

(7) Recertification and Transfer of Certifications from the Department. The Department may reissue a General License under the procedures of 310 CMR 9.29(1) twelve months prior to the expiration of the General License term. At least 90 days prior to the expiration of the General License, or the date of reissuance of the General License whichever is later, a person responsible for a structure with an affirmed Certification under the General License shall file a request for continued coverage with the Department. The Department may require planning board review in accordance with 310 CMR 9.29(4)(b)1. based on comments received about the structure or other relevant information. The Certification procedures of 310 CMR 9.29(4) shall apply to requests to recertify.

(a) Projects meeting the eligibility provisions of 310 CMR 9.29(2), which previously obtained a license, simplified license, amnesty license or interim approval, shall request Certification under 310 CMR 9.29 instead of renewal, before the expiration of the previously issued license or interim approval.

(b) Any person applying for a recertification under 310 CMR 9.29 shall compensate the Commonwealth for the rights granted in such lands through payment of an occupation fee, in accordance with the provisions of 310 CMR 9.16.

(c) Unless otherwise provided in the Certificate, a valid affirmed Certificate shall run with the land and shall automatically be transferred upon a change of ownership of the affected property within the chain of title of which the license has been recorded. All rights, privileges, obligations, and responsibilities specified in the General License shall be transferred to the new landowner upon recording the changed ownership in the Registry of Deeds.

(8) Appeals. The appeal provisions of 310 CMR 9.17 shall apply to the issuance of a General License. Copies of a Notice of Claim filed concerning the issuance of a General License pursuant to 310 CMR 9.29 shall be provided as required by 310 CMR 9.17(2) and (3) to the extent applicable. The appeal provisions of 310 CMR 9.17 shall not apply to the Certification of a project under the General License issued in accordance with 310 CMR 9.29.

(9) Enforcement, Suspension or Revocation of a Certification under a General License. The enforcement provisions of 310 CMR 9.08 shall apply to any structure eligible for certification or Certified under the General License pursuant to 310 CMR 9.29. The Department shall perform annual audits to monitor compliance with the General License standards and conditions in accordance with M.G.L. c. 91, § 18C. Consistent with the provisions of 310 CMR 9.26, the Department may revoke a Certification for non-compliance with the standards and conditions set forth in the General License or the individual Certification.

9.30: Permitting of Test Projects

(1) General. The Department may, at its discretion, issue a permit authorizing a Test Project that the Department determines has minimal impacts. The Department may require that an applicant document the readiness of the device or technology for *in situ* testing with the results of laboratory testing, modeling, technical evaluations, or similar forms of supporting material.

(2) Standards. Except as otherwise provided, the procedural requirements of 310 CMR 9.11 through 9.27 shall not apply to Test Projects. The procedural requirements of 310 CMR 9.12, 9.16, 9.17, 9.22, and 9.26 shall apply to the permitting of Test Projects. The application shall include sufficient documentation to demonstrate that the Test Project complies with 310 CMR 9.35(2). During the operation of the Test Project, the Permittee shall comply with all applicable performance standards set forth in 310 CMR 9.32 through 9.55 except as otherwise provided in 310 CMR 9.30(2). During the operation of the Test Project, the Permittee shall also comply with the following standards:

(a) In the event that the project does not comply with one or more of the applicable performance standards, the Permittee shall notify the Department in writing within 72 hours of the discovery of such noncompliance. The written notice shall include a plan and schedule for bringing the Test Project into compliance as soon as is practicable. Upon receipt of said written notice, the Department may require the Permittee: to modify the Project to comply with all applicable performance standards or to remove the Test Project immediately and restore the area to pre-project conditions.

(b) The Permittee shall remove all structures authorized by the permit and restore the Project Site to pre-project conditions prior to expiration of the permit.

(c) A certification by a Registered Professional Engineer pursuant to 310 CMR 9.37(1)(a) is not required for a Test Project.

(3) Application Requirements. For the purpose of authorizing eligible Test Projects under 310 CMR 9.30, the following provisions shall apply:

(a) Application. An applicant for a Test Project permit shall submit a written application on forms provided by the Department, signed by the applicant and landowner if other than the applicant. The information required below in 310 CMR 9.30(3)(b) and (c) may be provided in a separate application for a Chapter 91 permit or as part of a Combined Application for a permit pursuant to Chapter 91 and an Order of Conditions pursuant to the Wetlands Protection Act, M.G.L. c. 131, § 40.

(b) The application shall be prepared in accordance with all applicable instructions contained in the Department's application package. Plans submitted with a Notice of Intent or referenced in an Order of Conditions under the Wetlands Protection Act, M.G.L. c. 131, § 40, shall accompany the application. In *lieu* of plans prepared by a Registered Professional Engineer or Registered Land Surveyor, the applicant shall show the proposed Project Site on a plan designating all project components by coordinates referenced to the Massachusetts State Plane Coordinate System.

(c) The following documentation shall be submitted with the application:

1. a description of the Test Project; and
2. a plan for installing, testing, and removing project components;

(4) Public Notice and Notice to Abutters. At least 21 days prior to issuance of a permit, the applicant shall cause, at his or her own expense, notice to be published in a newspaper of general circulation in the area where the project is located. Such notice shall contain:

(a) the applicant's name and address;

(b) a description of the project location;

(c) a description of the project;

(d) a statement that within 15 days of the date of publication written comments will be accepted, the address where comments regarding the application may be sent, the address where the application may be viewed, a statement that a public hearing may be held upon request by the municipal official, and a statement that a municipality, ten citizen group or any aggrieved person who has submitted written comments before the close of the public comment period may appeal and that failure to submit written comments will result in the waiver of any right to an adjudicatory hearing.

9.30: continued

The applicant shall also send a copy of the notice to the persons identified in 310 CMR 9.13(1)(a) by certified mail, return receipt, and provide proof of such notice to the Department. With the agreement of the conservation commission, joint notice under M.G.L. c. 131, § 40, and M.G.L. c. 91 may be published and sent to abutters, provided it contains the requisite information and meets the requisite standards pursuant to each statute and its implementing regulations. Joint notice may be provided even if the applicant does not submit a Combined Application.

(5) Fees. All applicants for a permit under these procedures shall pay the application fee, or the renewal fee, in accordance with the provisions of 310 CMR 9.16. No tidewater displacement fees or occupation fees shall be assessed.

(6) Decision on Applications. The Department shall issue a permit or permit denial within 30 days of the close of the public comment period or receipt of the Order of Conditions, whichever is later.

(7) Term. A permit issued under 310 CMR 9.30 shall be valid for no more than one year.

(8) Extension of Permit. Upon request of the Permittee, the Department may extend the term of the permit for one additional one year period, without the filing of a new application. Notice of the extension request shall be published by the Permittee and distributed to the persons identified in 310 CMR 9.30(4) above at least 30 days prior to the expiration of the permit.

(9) Appeals. The appeal provisions in 310 CMR 9.17 shall apply to proceedings under 310 CMR 9.30; provided, however, that if the Department determines that an application submitted for a permit under 310 CMR 9.30 is not eligible for permitting as a Test Project pursuant to 310 CMR 9.30, the applicant shall seek authorization for the proposed project in accordance with the applicable permit or licensing procedures set forth in 310 CMR 9.11 through 9.27 and the performance standards set forth in 310 CMR 9.32 through 9.55 in lieu of requesting an adjudicatory hearing.

9.31: Summary of License and Permit Requirements

(1) Basic Requirements. No license or permit shall be issued by the Department for any project subject to 310 CMR 9.03 through 9.05 and 9.09, unless said project:

- (a) includes only fill and structures for uses that have been categorically determined to be eligible for a license, according to the provisions of 310 CMR 9.32;
- (b) complies with applicable environmental regulatory programs of the Commonwealth, according to the provisions of 310 CMR 9.33;
- (c) conforms to applicable provisions of an Approved Municipal Harbor Plan, if any, and local zoning law, according to the provisions of 310 CMR 9.34;
- (d) complies with applicable standards governing the preservation of water-related public rights, according to the provisions of 310 CMR 9.35;
- (e) complies with applicable standards governing the protection of water-dependent uses, according to the provisions of 310 CMR 9.36;
- (f) complies with applicable standards governing engineering and construction of structures, according to the provisions of 310 CMR 9.37;
- (g) complies with applicable standards governing use and design of boating facilities for recreational or commercial vessels, according to the provisions of 310 CMR 9.38 and 9.39;
- (h) complies with applicable standards governing dredging and disposal of dredge materials, according to the provisions of 310 CMR 9.40; and
- (i) does not deny access to its services and facilities to any person in a discriminatory manner, as determined in accordance with the constitution of the Commonwealth of Massachusetts, of the United States of America, or with any statute, regulation, or executive order governing the prevention of discrimination.

(2) Proper Public Purpose Requirement. No license or permit shall be issued by the Department for any project on tidelands or Great Ponds, except for water-dependent use projects located entirely on private tidelands, unless said project serves a proper public purpose which provides greater benefit than detriment to the rights of the public in said lands. In applying 310 CMR 9.31(2), the Department shall act in accordance with the following provisions:

9.31: continued

- (a) Water-dependent Use Projects - The Department shall presume 310 CMR 9.31(2) is met if the project is a water-dependent use project.
- (b) Nonwater-dependent Use Projects - The Department shall presume 310 CMR 9.31(2) is met if the project is a nonwater-dependent use project which:
1. complies with the standards for conserving and utilizing the capacity of the project site to accommodate water-dependent use, according to the applicable provisions of 310 CMR 9.51 through 9.52; and complies with the additional standard for activating Commonwealth tidelands for public use, according to the applicable provisions of 310 CMR 9.53;
 2. if located in the coastal zone, complies with the standard governing consistency with the policies of the Massachusetts Coastal Zone Management Program, according to 310 CMR 9.54; and
 3. if consisting entirely of infrastructure facilities, to which 310 CMR 9.31(2)(b)1. does not apply, complies with the special mitigation and public access standards governing such facilities, according to 310 CMR 9.55.
- (3) Rebuttal of Presumptions. The presumptions of 310 CMR 9.31(2) may be overcome only if:
- (a) the basic requirements specified in 310 CMR 9.31(1) have not been met; or
 - (b) a clear showing is made by a municipal, state, regional, or federal agency that requirements beyond those contained in 310 CMR 9.00 are necessary to prevent overriding detriment to a public interest which said agency is responsible for protecting; in the case of a project for which a final EIR has been prepared, the presumption may be overcome only if such detriment has been identified during the M.G.L. c. 30, §§ 61 through 62H review process.
- (4) Requirements for Projects with Special Legislative Authorization. Notwithstanding the provisions of 310 CMR 9.31(1) through (3), the Department shall issue a license or permit where the project comprises fill or structures that have been specifically authorized in a grant or other enactment of the legislature, provided that the Department may prescribe such alterations and conditions as it deems necessary to ensure the project conforms with:
- (a) any requirements contained in the legislative authorization; and
 - (b) the standards of 310 CMR 9.31 through 9.60, to the extent consistent with the legislative authorization.

9.32: Categorical Restrictions on Fill and Structures

- (1) The Department has determined that in certain situations fill or structures categorically do not meet the statutory tests for approval under M.G.L. c. 91 or are otherwise not in keeping with the purposes of 310 CMR 9.00. Accordingly, a project shall be eligible for a license only if it is restricted to fill or structures which accommodate the uses specified below, within the geographic areas specified in 310 CMR 9.32(1)(a) through (e).
- (a) Tidelands (Outside of ACECs and DPAs).
1. fill or structures for any use on previously filled tidelands;
 2. fill or structures for water-dependent use located below the high water mark, provided that, in the case of proposed fill, reasonable measures are taken to minimize the amount of fill, including substitution of pile-supported or floating structures and relocation of the use to a position above the high water mark;
 3. structures to accommodate public pedestrian access on flowed tidelands, provided that it is not reasonable to locate such structures above the high water mark or within the footprint of existing pile-supported structures or pile fields;
 4. pile-supported structures located below the high water mark for nonwater-dependent uses which replace or modify existing, previously authorized wharves, piers, pile fields, or other filled or pile-supported structures, in accordance with the provisions of 310 CMR 9.51(3)(a) and (b);
 5. new fill located below the high water mark for accessory or nonwater-dependent use provided that:
 - a. the purpose of such fill is to eliminate irregularities in previously altered portions of the project shoreline; and

9.32: continued

- b. such fill will replace previously authorized fill elsewhere along the project shoreline, on a 1:1 square foot basis and without seaward projection beyond the adjacent shoreline;
 - 6. stationary vessels located below the high water mark and proposed for conversion to accessory use or to nonwater-dependent facilities of public accommodation, provided that such vessels:
 - a. do not consist of platform-like floating structures, such as barges, built or modified to serve primarily as support for new buildings; and
 - b. will be licensed for a limited term, in accordance with the provisions of 310 CMR 9.15(1)(d)2.
 - 7. fill or structures located below the high water mark for wind turbine facilities found to be non-water dependent, pursuant to 310 CMR 9.12(2)(e), in accordance with the mitigation and/or compensation measures for non-water dependent infrastructure facilities required by 310 CMR 9.55.
- (b) Tidelands Within Designated Port Areas (DPAs).
- 1. fill or structures for any water dependent industrial use, and accessory uses thereto, provided that:
 - a. in the case of proposed fill, neither pile supported nor floating structures are a reasonable alternative; and
 - b. in the case of parking, where the use cannot reasonably be located above the high water mark, and is not located within a water dependent use zone; and
 - c. when parking is limited to persons employed by or doing business with the water-dependent industrial use over flowed tidelands;
 - 2. fill or structures for recreational boating facilities of nine slips or less under the conditions specified in a DPA Master Plan;
 - 3. Supporting DPA Uses, as defined at 310 CMR 9.02, shall not exceed 25% of the area of the project site, excluding tidelands seaward of the project shoreline.
 - 4. Supporting DPA Uses on pile-supported structures over flowed tidelands may be allowed only through a DPA Master Plan or a Marine Industrial Park Master Plan, provided that said plan is based on a clear showing that the use meets the following requirements and is appropriate for the harbor in question:
 - a. no Supporting Use structure may be allowed in the Water-dependent Use Zone;
 - b. no Supporting Use parking shall be allowed on pile-supported structures over flowed tidelands;
 - c. non Water-dependent Supporting Use structure meet the standards of 310 CMR 9.51(3)(b) through (e); and
 - d. Supporting Use structures shall otherwise be appropriately sized and located, in accordance with 310 CMR 9.36(5)(b).
 - 5. The Department shall waive the numerical standard for Supporting DPA Uses as defined at 310 CMR 9.02, if the project conforms to a DPA Master Plan or Marine Industrial Park Master Plan which specifies alternative site coverage ratios and other requirements which ensure that:
 - a. said Supporting Uses are relatively condensed in footprint and compatible with existing water-dependent industrial uses on said pier;
 - b. said Supporting Use locations shall preserve and maintain the site's utility for existing and prospective water-dependent industrial uses;
 - c. parking associated with a Supporting Use is limited to the footprint of existing licensed fill and is not located within a Water-dependent Use Zone; and
 - d. The use of tidelands for this purpose in a DPA shall also be governed by the provisions of 310 CMR 9.15(1)(d)1. and 310 CMR 9.36(5).
 - 6. maintenance of existing, previously-authorized recreational boating facilities;
 - 7. recreational berths authorized in connection with a Boatyard in accordance with 310 CMR 9.39(2)(b), or as included in an approved Designated Port Area Master Plan pursuant to 301 CMR 23.05(2)(e)5.;
 - 8. structures to accommodate public pedestrian access, provided that such structures are located above the high water mark or within the footprint of existing pile supported structures or pile fields, wherever feasible;
 - 9. structures on filled tidelands to accommodate the following uses on a limited basis:
 - a. a use to be licensed in combination with water dependent industrial uses within a marine industrial park, as defined in 310 CMR 9.02; or

9.32: continued

b. a temporary use, as defined in 310 CMR 9.02.

The use of filled tidelands in a DPA for the above purposes shall also be governed by the provisions of 310 CMR 9.15(1)(d)1. and 9.36(5).

(c) Great Ponds.

1. fill or structures for any use on previously filled lands below the natural high water mark;

2. structures for water-dependent use on submerged lands below the natural high water mark, provided such structures are designed to avoid unnecessary encroachment in the water;

3. fill or structures on submerged lands above the natural high water mark, for uses listed for flowed tidelands in 310 CMR 9.32(1)(a).

(d) Non-tidal Rivers and Streams (Outside ACECs). Fill or structures for uses below the high water mark, as listed for flowed tidelands in 310 CMR 9.32(1)(a).

(e) Areas of Critical Environmental Concern (ACECs).

1. fill or structures for any use on previously filled tidelands;

2. structures to accommodate public pedestrian access on flowed tidelands, provided that it is not feasible to locate such structures above the high water mark or within the footprint of existing pile-supported structures or pile fields;

3. fill or structures to accommodate an Ecological Restoration Project, subject to approval under 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*, 310 CMR 10.00: *Wetlands Protection*, and 310 CMR 40.000: *Massachusetts Contingency Plan* if applicable, provided that any fill or dredged material used in an Ecological Restoration Project may not contain a chemical above the RCS-1 concentration, as defined in 310 CMR 40.000: *Massachusetts Contingency Plan*;

4. publicly-owned structures for other water-dependent use below the high water mark, provided that such structures are designed to minimize encroachment in the water;

5. privately-owned structures for other water-dependent use below the high water mark, provided that:

a. the proposed use is not industrial and is located within the footprint of existing previously authorized pile-supported structures, unless an insignificant deviation from said footprint is authorized by the Department in order to protect public health, safety, or the environment; or

b. such structures are necessary to accommodate infrastructure facilities, provided that such structures are designed to minimize encroachment in the water; or

c. such structures were existing on October 4, 1990 or the effective date of the ACEC designation, whichever is later, and if a resource management plan for the ACEC has been adopted by the municipality and approved by the Secretary said structures are consistent with said plan; or

d. such structures, if built or substantially altered after October 4, 1990 or the effective date of the ACEC designation, whichever is later, are consistent with a resource management plan adopted by the municipality and approved by the Secretary.

(2) Notwithstanding the provisions of 310 CMR 9.32(1), the Department may license fill or structures necessary for the following uses, provided that reasonable measures are taken to avoid, minimize, and mitigate any encroachment in a waterway:

(a) shoreline stabilization or the rehabilitation of an existing shore protection structure, irrespective of the uses proposed landward of such fill or structures;

(b) installation of drainage, ventilation, or utility structures, or placement of minor and incidental fill, necessary to accommodate any replacement, reconstruction or other modification to existing public roadways or existing railroad track and/or rail bed;

(c) improvement or rehabilitation of existing public roadways or existing railroad track and/or rail bed, provided that any net encroachment with respect to public roadways is limited to widening by less than a single lane, adding shoulders, and upgrading substandard intersections; or

(d) except as may be provided in 310 CMR 9.32(1)(b)1., accessory uses, other than parking, which are clearly subordinate and incidental to a water-dependent use, provided that:

9.32: continued

1. the fill or structures in question are not located in an ACEC, and do not result in any encroachment in the waterway beyond the area occupied by the water-dependent use itself; and
2. the accessory use cannot reasonably be located above the high water mark, and is not located within a water-dependent use zone.

9.33: Environmental Protection Standards

- (1) All projects must comply with applicable environmental regulatory programs of the Commonwealth, including but not limited to:
 - (a) Massachusetts Environmental Policy Act, M.G.L. c. 30, §§ 61 through 62H and 301 CMR 11.00: *MEPA Regulations*.
 - (b) Wetlands Protection Act, M.G.L. c. 131, § 40, and 310 CMR 10.00: *Wetlands Protection*.
 - (c) Wetlands Restriction Acts, M.G.L. c. 130, § 105 and c. 131, § 40A, and 310 CMR 12.00: *Adopting Coastal Wetlands Orders* and 310 CMR 13.00: *Adopting Inland Wetlands Orders*. All projects shall comply with wetland restriction orders recorded pursuant to these statutes.
 - (d) Areas of Critical Environmental Concern, M.G.L. c. 21A, § 2(7) and St. 1974, c. 806, § 40(E), and 301 CMR 12.00: *Areas of Critical Environmental Concern*.
 - (e) Massachusetts Clean Waters Act, M.G.L. c. 21, §§ 26 through 53, and 314 CMR 3.00: *Surface Water Discharge Permit Program*, 314 CMR 5.00: *Ground Water Discharge Permit Program*, 314 CMR 7.00: *Sewer System Extension and Connection Permit Program*, 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*, and 310 CMR 15.00: *The State Environmental Code, Title 5: Standard Requirements for the Siting, Construction, Inspection, Upgrade and Expansion of On-site Sewage Treatment and Disposal Systems and for the Transport and Disposal of Septage*.
 - (f) Ocean Sanctuaries Act, M.G.L. c. 132A, §§ 13 through 16 and 18, and 302 CMR 5.00: *Ocean Sanctuaries*. No license or permit shall be issued for any structure or fill that is expressly prohibited in M.G.L. c. 132A, §§ 1 through 16.
 - (g) Marine Fisheries Laws, M.G.L. c. 130, and 322 CMR 1.00: *Enforcement of Rules and Regulations*.
 - (h) Scenic Rivers Act, M.G.L. c. 21, § 17B, and 302 CMR 3.00: *Scenic and Recreational Rivers Orders*.
 - (i) Massachusetts Historical Commission Act, M.G.L. c. 9, §§ 26 through 27C, as amended by St. 1982, c. 152 and St. 1988, c. 254, and 950 CMR 71.00: *Protection of Properties Included in the State Register of Historic Places*. For projects for which a Project Notification Form must be submitted pursuant to 950 CMR 71.07: *Review of Projects* the applicant shall file said form with the Massachusetts Historical Commission.

9.33: continued

- (j) Mineral Resources Act, M.G.L. c. 21, §§ 54 through 58.
- (k) Massachusetts Drinking Water Act, M.G.L. c. 111, §§ 159 through 174A, and 310 CMR 22.00: *Land Application of Sludge and Septage*.
- (l) Underwater Archeological Resources Act, M.G.L. c. 91 and c. 6, §§ 179 and 180, and 312 CMR 2.00: *Massachusetts Underwater Archaeological Resources*.
- (m) Hazardous Waste Management Act, M.G.L. c. 21C, and 310 CMR 30.000: *Hazardous Waste*.
- (n) Solid Waste Disposal Act, M.G.L. c. 16, §§ 18 through 24, and 310 CMR 16.00: *Site Assignment Regulations for Solid Waste Facilities*.
- (o) Air Pollution Act, M.G.L. c. 111, §§ 142A through I, and 310 CMR 7.00: *Air Pollution Control*.
- (p) State Highway Curb Cuts, M.G.L. c. 81, § 21.
- (q) Energy Restructuring Act, M.G.L. c. 164, §§ 69G through S, and 980 CMR 1.00 through 12.00.
- (r) Regional land use control statutes, including the Martha's Vineyard Commission Act, St. 1974, c. 637, c. 831, and the Cape Cod Commission Act, St. 1989, c. 716.

(2) Where a state or regional agency has authority to issue regulatory approval, issuance of such approval shall be conclusive as to compliance with the regulatory program in question.

(3) With respect to M.G.L. c. 131, § 40, and 310 CMR 10.00: *Wetlands Protection*, if the Department has issued a final order of conditions the project shall be presumed to comply with the statute and the final order shall be deemed to be incorporated in the terms of the license or permit, with no additional wetland conditions imposed. If an order of conditions has been issued by the conservation commission and the Department has not taken jurisdiction, the Department shall presume the project complies with state wetland standards, except upon a clear showing of substantial noncompliance with such standards. In that event, the Department shall impose such additional conditions in the license or permit as will make the project substantially comply with state wetlands standards.

(4) Where a state agency has statutory responsibility but no authority to issue regulatory approval, the Department shall act in accordance with any MOU with said agency governing incorporation of its standards and requirements into waterways licenses and permits. In the absence of an MOU, the Department shall presume that the project complies with the statutes and regulations in question, unless the responsible state agency informs the Department otherwise. In that event, the Department shall consult with the responsible state agency and may adopt any formal recommendations received therefrom, provided such recommendations do not conflict with 310 CMR 9.00 or the purposes of M.G.L. c. 91.

9.34: Conformance with Municipal Zoning and Approved Municipal Harbor Plans

(1) Zoning Law. Any project located on private tidelands or filled Commonwealth tidelands must be determined to comply with applicable zoning ordinances and bylaws of the municipality(ies) in which such tidelands are located. The Department shall find this requirement is met upon receipt of written certification issued by the municipal clerk, or by another municipal official responsible for administering said zoning ordinances and bylaws, and signed by the municipal clerk, stating that the activity to be licensed is not in violation of said ordinances and bylaws. Compliance with zoning does not apply to any public service project that is exempted from such requirements by law including, but not limited to, action of the Department of Public Utilities pursuant to M.G.L. c. 40A, § 3.

(2) Approved Municipal Harbor Plan.

- (a) If the project is located within an area covered by an Approved Municipal Harbor Plan, said project must conform to the provisions of said plan to the degree applicable under plan approval at 301 CMR 23.00: *Review and Approval of Municipal Harbor Plans*, including substitute provisions adopted by the Department and listed in 310 CMR 9.57. In making this determination the Department shall take into account all relevant information in the public record, and shall act in accordance with the following provisions:

9.34: continued

1. the Department shall consult with the planning board or other municipal body with lead responsibility for plan implementation, as appropriate and in accordance with the provisions of 310 CMR 9.11(1). In the event a written recommendation as to plan conformance is submitted by such board or other body, the Department shall presume that the requirement is met or not met in accordance with said recommendation, except upon a clear showing to the contrary and except as otherwise provided in 310 CMR 9.34(2)(a)2.;
 2. the Department shall not find the requirement has been met if the project requires a variance or similar form of exemption from the substantive provisions of the Approved Municipal Harbor Plan, unless the Department determines the deviation to be *de minimis* or unrelated to the purposes of M.G.L. c. 91 or 310 CMR 9.00;
- (b) If the project conforms to the Approved Municipal Harbor Plan, the Department shall:
1. apply the use limitations or numerical standards specified in the Approved Municipal Harbor Plan and listed in 310 CMR 9.57 as a substitute for the respective limitations or standards contained in 310 CMR 9.32(1)(b)3., 9.51(3), 9.52(1)(b)1., and 9.53(2)(b) and (c), in accordance with the criteria specified in 310 CMR 9.32(1)(b)3., 9.51(3), 9.52(1)(b)1., and 9.53(2)(b) and (c) and in associated plan approval at 301 CMR 23.00: *Review and Approval of Municipal Harbor Plans* and associated guidelines of CZM;
 2. adhere to the greatest reasonable extent to applicable guidance specified in the Approved Municipal Harbor Plan which amplifies any discretionary requirements of 310 CMR 9.00, in accordance with the criteria specified in 301 CMR 23.00: *Review and Approval of Municipal Harbor Plans* and associated guidelines of CZM; and
 3. determine that the requirement of 310 CMR 9.54, governing consistency with CZM policies, has been met, if applicable, except upon a written showing by CZM for a project identified in 310 CMR 9.13(2)(a) for CZM participation that the project conflicts with CZM policy in effect when the license application was completed, in a manner that was not reasonably foreseeable at the time of plan approval.

9.35: Standards to Preserve Water-related Public Rights

(1) General. The project shall preserve any rights held by the Commonwealth in trust for the public to use tidelands, Great Ponds and other waterways for lawful purposes; and shall preserve any public rights of access that are associated with such use. In applying this standard the Department shall act in accordance with the provisions of 310 CMR 9.35(2) through (6), and shall give particular consideration to applicable guidance specified in an Approved Municipal Harbor Plan, as provided in 310 CMR 9.34(2)(b)2. Further, in assessing the significance of any interference with public rights pursuant to 310 CMR 9.35(2) and(3), the Department shall take into account that the provision of public benefits by certain water-dependent uses may give rise to some unavoidable interference with certain water-related public rights. Such interference may be allowed provided that mitigation is provided to the greatest extent deemed reasonable by the Department, and that the overall public trust in waterways is best served.

(2) Public Rights Applicable to All Waterways.

(a) Navigation. The project shall not significantly interfere with public rights of navigation which exist in all waterways. Such rights include the right to conduct any activity which entails the movement of a boat, vessel, float, or other watercraft; the right to conduct any activity involving the transport or the loading/unloading of persons or objects to or from any such watercraft; and the natural derivatives thereof.

1. The Department shall find that the standard is not met in the event a project will:
 - a. extend seaward of any state harbor line, unless said project is specifically authorized by law or, if not so authorized, is a pipeline, conduit or cable which is entirely embedded in the soil and does not in any part occupy or project into such tidewater beyond the harbor line, provided also that the Department may at any time require any pipeline, conduit or cable to be removed or relocated if channel changes or alterations demand the same, as required by M.G.L. c. 91, § 14;
 - b. extend into or over any existing channel such as to impede free passage;
 - c. impair any line of sight required for navigation;
 - d. require the alteration of an established course of vessels;
 - e. interfere with access to adjoining areas by extending substantially beyond the projection of existing structures adjacent to the site;

9.35: continued

- f. extend beyond the length required to achieve a safe berthing, where there are no adjacent structures;
- g. generate water-borne traffic that would substantially interfere with other water-borne traffic in the area at present, or in the future as may be evidenced by documented projections;
- h. alter, due to the building of a solid fill structure, tidal action or other currents so as to interfere with the ability to handle vessels;
- i. adversely affect the depth or width of an existing channel; or
- j. impair in any other substantial manner the ability of the public to pass freely upon the waterways and to engage in transport or loading/unloading activities.

The Department may require, among other things, warning devices and other navigation aids as it deems appropriate to reduce interference with navigation.

2. In the event that reducing the length of a structure to avoid significant interference with navigation would create adverse effects on the environment due to dredging, the Department may license or permit a longer structure provided its construction will entail less dredging without producing substantial interference with navigation.

3. In the event the project is located within a Designated Port Area, the Department may authorize fill, structures, or dredging that significantly interferes with navigation by recreational vessels or with shellfishing areas, provided that such activities are for water-dependent-industrial use and that all feasible measures will be taken to mitigate such interference.

(b) Free Passage Over and Through Water. The project shall not significantly interfere with public rights of free passage over and through the water, which exist in all waterways. Such rights include the right to float on, swim in, or otherwise move freely within the water column without touching the bottom, and, in Commonwealth Tidelands and Great Ponds, to walk on the bottom.

(c) Access to Town Landings. The project shall not significantly interfere with public rights associated with a common landing, public easement, or other historic legal form of public access from the land to the water that may exist on or adjacent to the project site.

(3) Public Rights Applicable to Tidelands and Great Ponds

(a) Fishing and Fowling. The project shall not significantly interfere with public rights of fishing and fowling which exist in tidelands and Great Ponds. Such rights include the right to seek or take any fish, shellfish, fowl, or floating marine plants, by any legal means, from a vessel or on foot; the right to protect habitat and nutrient source areas in order to have fish, fowl, or marine plants available to be sought and taken; and the natural derivatives thereof. The Department shall find that the standard is not met in the event the project:

- 1. poses a substantial obstacle to the public's ability to fish or fowl in waterway areas adjacent to the project site; or
- 2. results in the elimination of a traditional fishing or fowling location used extensively by the public.

(b) On-foot Passage. The project shall not significantly interfere with public rights to walk or otherwise pass freely on private tidelands for purposes of fishing, fowling, navigation, and the natural derivatives thereof; and on Commonwealth tidelands and Great Ponds for said purposes and all other lawful activities, including swimming, strolling, and other recreational activities. The Department shall find that the standard is not met if the project does not comply with the following conditions governing public pedestrian access:

- 1. if the project site includes flowed private tidelands, the project shall allow continuous, on-foot, lateral passage by the public in the exercise of its rights therein, wherever feasible; any pier, wharf, groin, jetty, or other structure on such tidelands shall be designed to minimize interference with such passage, either by maintaining at least a five-foot clearance above the ground along the high water mark or by providing a stairway for the public to pass laterally over such structures; where obstruction of continuous access below the high water mark is unavoidable, the project shall provide alternate lateral passage to the public above said mark in order to mitigate interference with the public right of passage on flowed private tidelands;
- 2. if the project site includes filled tidelands or Great Ponds, the project shall include reasonable measures to provide on-foot passage on such lands for the public in the exercise of its rights therein, in accordance with the following provisions:

9.35: continued

- a. if the project is a nonwater-dependent use project, said project shall provide public pedestrian access facilities in accordance with the applicable provisions of 310 CMR 9.52 or, for infrastructure facilities, of 310 CMR 9.55;
- b. if the project is a water-dependent use project on filled Commonwealth tidelands, said project shall provide for public passage thereon by such means as are consistent with the need to avoid undue interference with the water-dependent uses in question; measures which may be appropriate in this regard include, but are not limited to, allowing the public to pass laterally along portions of the project shoreline, or transversely across the site to a point on the project shoreline.

(4) Compensation for Interference with Public Rights in Commonwealth Tidelands and Great Ponds. Any water-dependent use project which includes fill or structures for private use of Commonwealth tidelands or Great Ponds shall provide compensation to the public for interfering with its broad rights to use such lands for any lawful purpose. Such compensation shall be commensurate with the extent of interference caused, and shall take the form of measures deemed appropriate by the Department to promote public use and enjoyment of the water, at a location on or near the project site if feasible. If the project includes a private recreational boating facility, the Department shall apply this standard in accordance with the following provisions:

- (a) for any private recreational boating facility, reasonable arrangements shall be made to accommodate public pedestrian access along or to the water's edge; generally, unless other measures are determined to be more appropriate by the Department, such access shall be provided by establishing, as a condition of the license, a lateral accessway at or near the high water mark wherein the public may pass freely across the seaward end of the property from dawn to dusk;
- (b) if the private recreational boating facility is a marina, additional arrangements shall be made to provide water-related benefits to the public commensurate with the scale of such facility; examples of such benefits include construction of a public boat launching ramp, operation of an ongoing program of community sailing or boating instruction, dedication of a substantial number of berths to public transient use, and provision of public pedestrian facilities beyond those required elsewhere in 310 CMR 9.00.

Nothing in the above provision shall be construed to prevent the licensee from restricting public access to slips, floats, ramps, and other docking facilities where security for recreational vessels is required.

(5) Management of Areas Accessible to the Public. Any project that includes tidelands or Great Ponds accessible to the public, in accordance with any of 310 CMR 9.35(1) through (4), shall provide for long-term management of such areas which achieves effective public use and enjoyment while minimizing conflict with other legitimate interests, including the protection of private property and natural resources. In applying this standard, the Department shall act in accordance with the following provisions.

- (a) No limitation on hours of availability or scope of allowed activity, or other substantial restriction, may be placed on said public access except as expressly authorized in the license; reasonable rules and regulations governing public use of such areas may be adopted by the licensee, and may be subject to review and approval by the Department, or its designee, if so provided in the license.
- (b) Any project required to provide public access facilities in accordance with 310 CMR 9.35(3)(b)2. or (4)(b), or any other project as deemed appropriate by the Department, shall encourage public patronage of such facilities by placing and maintaining adequate signage at all entryways and at other appropriate locations on the project site; said signage shall:
 - 1. conform to all local laws and regulations and any design guidelines that may be specified by the Department or its designee; and
 - 2. include at least one sign, in a prominent location, which advises the public of its access rights; discloses whatever access-related rules and regulations are in effect, including restrictions on hours of operation, if any; and discloses the license number of the project and a location on the site where a copy of the license may be inspected by the public.
- (c) No gates, fences, or other structures may be placed on any areas open to public access in a manner that would impede or discourage the free flow of pedestrian movement thereon; and all pedestrian exterior open spaces shall be open to the public 24 hours a day, unless otherwise authorized in writing by the Department.

9.35: continued

(d) The Department may include conditions in a license which restrict public pedestrian access in order to protect public health, safety, or the environment, and shall specify such additional access-related requirements as are deemed appropriate to offset any significant loss of benefits to the public which may be associated with such restrictions.

(6) Limitation on Liability. If a project includes measures to accommodate public pedestrian access in accordance with any provision of 310 CMR 9.35, the licensee shall be considered to be a private landowner who opens land to public recreational use without a fee and who is therefore not liable, pursuant to M.G.L. c. 21, § 17C, for injuries to persons or property due to public use, unless the owner's conduct is willful or reckless.

9.36: Standards to Protect Water-dependent Uses

(1) General. The project shall preserve the availability and suitability of tidelands, Great Ponds, and other waterways that are in use for water-dependent purposes, or which are reserved primarily as locations for maritime industry or other specific types of water-dependent use. In applying this standard the Department shall act in accordance with 310 CMR 9.36(2) through (5), and shall give particular consideration to applicable guidance specified in an Approved Municipal Harbor Plan, as provided in 310 CMR 9.34(2)(b)2.

(2) Private Access to Littoral or Riparian Property. The project shall not significantly interfere with littoral or riparian property owners' right to approach their property from a waterway, and to approach the waterway from said property, as provided in M.G.L. c. 91, § 17. In evaluating whether such interference is caused by a proposed structure, the Department may consider the proximity of the structure to abutting littoral or riparian property and the density of existing structures. In the case of a proposed structure which extends perpendicular to the shore, the Department shall require its placement at least 25 feet away from such abutting property lines, where feasible.

(3) The project shall not significantly disrupt any water-dependent use in operation, as of the date of license application, at an off-site location within the proximate vicinity of the project site. The project shall include such mitigation and/or compensation measures as the Department deems appropriate to avoid such disruption.

(4) The project shall not displace any water-dependent use that has occurred on the site within five years prior to the date of license application, except upon a clear showing by the applicant that said use:

- (a) did not take place on a reasonably continuous basis, for a substantial period of time; or
- (b) has been or will be discontinued at the site by the user, for reasons unrelated to the proposed project or as a result of voluntary arrangements with the applicant.

Absent the above showings, the project shall include arrangements determined to be reasonable by the Department for the water-dependent use to be continued at its existing facility, or at a facility at an alternative location having physical attributes, including proximity to the water, and associated business conditions which equal or surpass those of the original facility and as may be identified in an Approved Municipal Harbor Plan, if any. Permanent relocation to an off-site facility may occur in order to accommodate a public service project for which relocation arrangements are governed by law, or if the Department determines that it is not appropriate for the water-dependent use to continue on the site. Otherwise, only temporary relocation may occur as necessary for project construction.

(5) The project shall not include fill or structures for nonwater-dependent or water-dependent, non-industrial uses which preempt water-dependent-industrial use within a Designated Port Area (DPA). In applying this standard the Department shall act in accordance with the following provisions:

9.36: continued

(a) such fill or structures shall not occupy tidelands which the Department determines are necessary to accommodate a competing party who intends to develop such tidelands for water-dependent industrial use, provided written notice of such party's intention is submitted to the Department prior to the close of the public comment period on the license application; such determination shall be based upon a clear showing, within a period of time deemed reasonable by the Department, that the competing project would promote water-dependent-industrial use of the DPA to a greater degree than the proposed project, and that the competing party:

1. is a state or local government agency, or is a maritime business or other organization with the expertise, experience, and financial ability to implement the competing project;
2. has prepared detailed development plans for the competing project, including appropriate feasibility studies;
3. has tendered an offer to purchase title or other rights to the tidelands in question, at fair market value for water-dependent-industrial use; and
4. has proposed waterways license conditions or other arrangements which will restrict the tidelands in question to the uses contained in the competing projects for a period of time deemed appropriate by the Department;

(b) reasonable arrangements shall be made to prevent commitments of space or facilities that would significantly discourage present or future water-dependent-industrial activity on the project site or elsewhere in the DPA; such arrangements shall include, but are not limited to, the following:

1. in general, no structures shall be built or altered which cannot be subsequently removed or converted to water-dependent-industrial use with relative ease; otherwise, the Department may impose, as a condition of the license, a requirement for removal or restoration of such structures upon expiration of the license;
2. nonwater-dependent uses shall not be located in any spaces or facilities with attributes that are necessary to maintain the utility of the project site for prospective water-dependent-industrial use, especially that for which it is among the most suitable in the harbor in question; at a minimum, such nonwater-dependent uses shall not occur in new structures within the water-dependent use zone;
3. within a marine industrial park, conditions governing the duration of tenancy or other mechanisms must be established to ensure that nonwater-dependent activity occurs in a manner that preserves adequate flexibility over time for the park to accommodate water-dependent-industrial uses; at a minimum, reasonable steps shall be taken to assign a priority for said uses to occupy spaces or facilities as they become available in the future;
4. in the case of supporting DPA use, conditions governing the nature and extent of operational or economic support must be established to ensure that such support will be effectively provided to water-dependent-industrial uses.

9.37: Engineering and Construction Standards

(1) All fill and structures shall be designed and constructed in a manner that:

- (a) is structurally sound, as certified by a Registered Professional Engineer;
- (b) complies with applicable state requirements for construction in flood plains, in accordance with the State Building Code, 780 CMR and as hereafter may be amended, and will not pose an unreasonable threat to navigation, public health or safety, or adjacent buildings or structures, if damaged or destroyed in a storm; and
- (c) does not unreasonably restrict the ability to dredge any channels.

(2) In the case of a project within a flood zone, the project shall comply with the following requirements:

- (a) In coastal high hazard areas as defined in 310 CMR 9.02, new or expanded buildings for residential use shall not be located seaward of the high water mark.
- (b) New buildings for nonwater-dependent use intended for human occupancy shall be designed and constructed to:
 1. withstand the wind and wave forces associated with the statistical 100-year frequency storm event; and

9.37: continued

2. incorporate projected sea level rise during the design life of the buildings; at a minimum, such projections shall be based on historical rates of increase in sea level in New England coastal areas.
- (3) Projects with coastal or shoreline engineering structures shall comply with the following:
 - (a) any seawall, bulkhead, or revetment shall be located landward of the high water mark unless it must lie below the high water mark to permit proper tieback placement, to obtain a stable slope on bank areas, or to be compatible with abutting seawalls, bulkheads, or revetments in terms of design, size, function, and materials, or unless it is associated with new fill permitted according to the provisions of 310 CMR 9.32;
 - (b) any breakwater or similar structure designed to dissipate or otherwise reduce wave energy or to interfere with current flow shall not:
 1. cause or contribute to water stagnancy;
 2. reduce the ability of adjacent water bodies to flush adequately; or
 3. cause or contribute to sedimentation problems in adjacent or nearby navigation channels, anchorages, or wetland resource areas, or cause increased erosion to inland or coastal beaches, banks, or other wetland resource areas;
 - (c) in evaluating coastal or shoreline engineering structures, the Department shall require non-structural alternatives where feasible;
 - (d) the Department shall evaluate coastal or shoreline engineering structures for compatibility with abutting coastal or shoreline engineering structures in terms of design, size, function, and materials;
 - (e) if the Department finds significant adverse effects on the project site or adjacent or downcoast and downstream areas after construction of any coastal or shoreline engineering structure, the Department may, after an opportunity for a hearing, require modification of said structure the cost of which may not exceed 25% of the replacement cost of said structure, or may require the removal of said structure; 310 CMR 9.37(3)(e) shall be specifically stated in the license.
 - (4) Pipelines and conduits and their valves and protrusions shall be buried so that they will not present a hazard to navigation; will be adequately protected from scouring; will not be uncovered by sediment transport; and will not present a hazard or obstruction to fishing gear. Bottom contours shall be restored after burial. Pipelines carrying hazardous substances (*e.g.*, oil) shall also be protected from anchor dragging and fish trawls. When the burial of pipelines, conduits, valves, and protrusions is not feasible, equivalent protection shall be provided by shrouding or other means.

9.38: Use Standards for Recreational Boating Facilities

- (1) Public Recreational Boating Facilities. Any project that includes a public recreational boating facility, any portion of which is located on Commonwealth tidelands or Great Ponds, shall include measures to ensure patronage of such facility by the general public. In applying this standard the Department shall act in accordance with the following provisions:
 - (a) all vacant berths shall be assigned in a fair and equitable manner to the public patrons of said facility, by means of a waiting list or other comparably unbiased method; nothing in this provision shall be construed to prevent berthing assignments based on vessel characteristics, or the offer of first refusal rights to existing patrons of the facility who wish to relocate to a vacant berth;
 - (b) any contract or other agreement for exclusive use of berths at said facility shall have a maximum term of one year, and may be renewable upon each expiration for an additional period of up to one year;
 - (c) reasonable arrangements shall be made to accommodate transient boaters, including, at a minimum, a procedure for making any berth available for transient use during periods of vacancy in excess of 24 hours;
 - (d) all exterior pedestrian facilities on the project site shall be open to the general public, except where access restrictions are necessary in order to avoid significant interference with the operation of the facility or to maintain security at slips, ramps, floats, and other docking facilities; any such access restrictions shall be stated in the license.

9.38: continued

(2) Private Recreational Boating Facilities.

(a) Any project that includes a private recreational boating facility, any portion of which is located on Commonwealth tidelands or Great Ponds, shall include measures to avoid undue privatization in the patronage of said facility. In applying this standard, the Department shall act in accordance with the following provisions:

1. no berth in a marina shall be assigned pursuant to any contract or other agreement that makes use of the berth contingent upon ownership or occupancy of a residence or other nonwater-dependent facility of private tenancy;
2. no berth in a marina shall be assigned pursuant to a contract or other agreement for exclusive use with a maximum term that exceeds one year, unless:
 - a. for existing marinas, the lease agreement, master lease agreement or notice thereof for such berths was recorded at the Registry of Deeds prior to July 6, 1990 in which event all berths subject to such agreement shall be exempt from the provisions of 310 CMR 9.38(2)(b); or
 - b. for new marinas or berths in an existing marina not grandfathered pursuant to 310 CMR 9.38(2)(a), the following conditions are met:
 - i. said marina is located on tidelands outside of Designated Port Area;
 - ii. the Department expressly authorizes the assignment of long-term exclusive use of such berths in the license, and the license includes a condition requiring written notification to any assignee that said license does not convey ownership of Commonwealth tidelands;
 - iii. the number of berths authorized in the license does not exceed 50% of the total berths in said marina; and
 - iv. said marina provides water-related public benefits commensurate with the degree of privatization, as deemed appropriate by the Department.

(b) No project shall include a private recreational boating facility with fewer than ten berths on Commonwealth tidelands or Great Ponds, if the Department receives written certification from the municipal official or planning board of the municipality in which the project is located that such facility does not conform to a formal, areawide policy or plan which establishes municipal priorities among competing uses of the waterway, unless the Department determines that such certification:

1. is arbitrary, capricious, or an abuse of discretion; or
2. conflicts with an overriding state, regional, or federal interest.

9.39: Standards for Marinas, Boatyards, and Boat Ramps(1) Marinas.

(a) Design Standards for Marinas. Any project that includes a new marina, or any expansion thereof to ten or more berths greater than the number of berths existing on the effective date of 310 CMR 9.00, shall comply with the following design requirements:

1. all docking facilities, including passageways, shall be certified to be structurally sound by a registered professional engineer;
2. safe and unobstructed navigational ingress and egress to docking facilities shall be provided;
3. sanitary facilities shall be provided, including:
 - a. an adequate number of restrooms and refuse receptacles appropriate for the number of berths at the marina; in general, there should be one toilet fixture per sex for every 50 berths, and refuse receptacles at every gangway and restroom area; and
 - b. sewage pumpout facilities shall be provided as appropriate based on the number of berths and type of vessels at the marina, the availability of such facilities nearby, and environmental considerations including the water circulation patterns of the waterway and the proximity of shellfish resources; in general, there should be a sewage pumpout facility for marinas with more than 50 berths, or as otherwise specified in an Approved Municipal Harbor Plan; documentation shall be provided showing compliance with local, state, and federal requirements for said facilities;
4. any utility services provided at the marina shall be constructed and maintained in compliance with all applicable local and state requirements;
5. all lighting at the marina shall be designed to minimize interference with navigation by reflection, glare, or interference with aids to navigation;

9.39: continued

6. if the applicant proposes to provide facilities for storage, pumping or conveyance of petroleum fuels, the following information shall also be provided:
 - a. a detailed description and site location plan for marine related facilities necessary for the pumping, conveyance and storage of any petroleum products;
 - b. a list of methods and equipment to be used for containment and clean-up of any petroleum fuels accidentally discharged into the water, including minor spills during routine operations; and a detailed contingency plan for major spills;
 - c. documentation showing compliance with applicable local, state and federal requirements for said facilities.

(b) Reconfiguration of Docking Facilities in a Marina. In a license or license amendment, the Department may delineate a zone within a marina for purposes of future reconfiguration of existing, licensed docking facilities, including pile-held or bottom-anchored floating walkways and finger piers, floats, and mooring piles. Such reconfiguration may proceed upon written approval by the Department, but without further licensing action if:

1. the licensee submits to the Department a written request and plan for reconfiguration which does not extend beyond the delineated zone, and which does not result in an increase in the area of waterway occupied from that which was originally licensed;
2. the licensee submits to the Department a statement affirming that the material submitted to the Department under 310 CMR 9.39(1)(b)1. has, at the time of such submittal, also been sent to the harbormaster of the affected municipality or, if the municipality has no harbormaster, to the municipal official, and that said harbormaster or municipal official has been informed that he has 30 days to register any objections to the proposed reconfiguration plan with the Department;
3. all other applicable permits have been obtained, including any required approval under M.G.L. c. 131, § 40 and 310 CMR 10.00: *Wetlands Protection*.

The Department shall act upon any such request within 60 days of receipt.

(2) Boatyards.

(a) The license application for any boatyard or expansion thereof shall indicate on the license plan that the following facilities and information will be provided:

1. adequate oil, grease, sediment, and paint traps and other appropriate measures used to contain by-products of boat service, repair and construction to prevent them from discharging into the adjacent waterway;
2. boat out-hauling and launching facilities which have been certified as structurally sound by a registered professional engineer; and
3. documentation showing compliance with applicable local, state and federal requirements for the use and storage of hazardous materials.

(b) Recreational berths may be licensed in connection with a Boatyard in Designated Port Area in compliance with a MHP/DPA Master Plan, and in accordance with 310 CMR 9.32(1)(b)2., and the following:

1. the number of berths shall be commensurate in scale with the operation of the boatyard;
2. the berths may be licensed in connection with an active Boatyard only and shall be discontinued in the event that Boatyard operations at the site cease; and
3. the location of the berths and their use shall preserve water-related public rights and protect water-dependent uses.

(3) Boat Launching Ramps. The license application for any boat launching ramp for public use, or any expansion thereof, shall indicate on the license plan that the following facilities will be provided, to a degree deemed appropriate by the Department:

- (a) turning areas to facilitate the launching and retrieval of boats to or from the water;
- (b) parking areas for vehicles and boat trailers;
- (c) permanent or temporary sanitary facilities for boaters using the launching ramp, as necessary in light of anticipated water quality or other environmental concerns and maintenance considerations;
- (d) ramps constructed, where possible, at an angle no greater than 15% from the horizontal; where upland modification is necessary, the slope grade should be created, if possible, by cutting back into the upland; ramps should be approximately even with beach or upland grade elevations; and ramps should extend a sufficient distance inland to prevent washout at the inland edge and where possible should extend a minimum of five feet beyond the low water mark; and

9.39: continued

(e) sufficient access facilities and water depths so as to provide safe navigational ingress and egress; this may include adjacent catwalks, tie-off pilings, or access piers and suitable associated water area for staging of boat launching and retrieval; water depths at the launching area of the ramp should be the minimum depth necessary to accommodate the types of boats which will use the facility.

9.40: Standards for Dredging and Dredged Material Disposal

Any project that includes dredging or dredged material disposal shall comply with the following requirements:

(1) Limitations on Dredging and Disposal Activity

(a) The project shall not include any dredging of channels, mooring basins, or turnaround basins to a mean low water depth greater than 20 feet, unless said project:

1. is located within a Designated Port Area; or
2. serves a commercial navigation purpose of state, regional, or federal significance, and cannot reasonably be located in a Designated Port Area.

(b) If the project is located in an ACEC, the project shall not include any of the following activities:

1. improvement dredging, unless the dredging is: for the sole purpose of fisheries or wildlife enhancement; part of an Ecological Restoration Project; or conducted by a public entity for the sole purpose of the maintenance or restoration of historic, safe navigation channels or turnaround basins of a minimum length, width and depth consistent with a Resource Management Plan adopted by the municipality(ies) and approved by the Secretary.
2. dredged material disposal, except for the sole purpose of beach nourishment, dune construction, reconstruction or stabilization with proper vegetative cover, the enhancement of fishery or wildlife resources, or unless the dredged material disposal is part of an Ecological Restoration Project in accordance with 314 CMR 9.07(1)(c) and 310 CMR 10.11(6)(b) and 310 CMR 40.000: *Massachusetts Contingency Plan*, if applicable, provided that any fill or dredged material used in an Ecological Restoration Project may not contain a chemical above the RCS-1 concentration, as defined in 310 CMR 40.000: *Massachusetts Contingency Plan*.

(2) Resource Protection Requirements.

(a) The design and timing of dredging and dredged material disposal activity shall be such as to avoid interference with anadromous/catadromous fish runs. At a minimum, no such activity shall occur in such areas between March 15th and June 15th of any year, except upon a determination by the Division of Marine Fisheries, pursuant to M.G.L. c. 130, § 19, that such an activity will not obstruct or hinder the passage of fish.

(b) The design and timing of dredging and dredged material disposal activity shall be such as to minimize adverse impacts on shellfish beds, fishery resource areas, and submerged aquatic vegetation. The Department may consult with the Department of Fish and Game or the natural resource officer of the municipality regarding the assessment of such impacts.

(3) Operational Requirements for Dredging.

(a) The extent of dredging shall not exceed that reasonably necessary to accommodate the navigational requirements of the project and provide adequate water circulation.

(b) The shoreward extent of dredging shall be a sufficient distance from the edge of adjacent marshes to avoid slumping. In general, for improvement dredging projects the edge of the dredging footprint, including any side cuts, should be at least 25 feet from any marsh boundary. In areas where significant wake or wash will be generated by vessel traffic, increased setbacks may be incorporated based on appropriate design calculations.

(c) In general, no basin, canal, or channel shall be dredged deeper than the main channel to which it is connected.

(d) To the maximum reasonable extent, basins shall have wide openings and short entrance channels to promote tidal exchange within the basin.

(e) In general, hydraulic dredging shall be favored over mechanical methods, except when open water disposal of fine grained material is proposed.

9.40: continued

(4) Operational Requirements for Dredged Material Disposal.

(a) Where determined to be reasonable by the Department, clean dredged material shall be disposed of in a manner that serves the purpose of beach nourishment, in accordance with the following provisions:

1. in the case of a publicly-funded dredging project, such material shall be placed on publicly-owned eroding beaches; if no appropriate site can be located, private eroding beaches may be nourished if easements for public access below the existing high water mark can be secured by the applicant from the owner of the beach to be nourished; or
2. in the case of a privately-funded dredging project, such material may be placed on any eroding beach.

(b) In the event ocean disposal of dredged material is determined to be appropriate by the Department, the licensee or permittee shall:

1. publish in the *Notice to Mariners* the date, time, and proposed route of all ocean disposal activities and the coordinates of the ocean disposal site, as deemed appropriate by the U.S. Coast Guard;
2. ensure that transport vessels are not loaded beyond capacity; are equipped with sudden, high volume release mechanisms; and are at a complete stop when the material is released; and
3. ensure that disposal occurs within the boundaries of an approved or otherwise formally designated ocean disposal site; and that the discharge location is marked during disposal operations by a buoy equipped with a flashing light and radar reflectors which allow it to be located under variable sea/weather conditions.

(5) Supervision of Dredging and Disposal Activity.

(a) The licensee or permittee shall inform the Department in writing at least three days before commencing any authorized dredging or dredged material disposal.

(b) The licensee or permittee shall provide, at his or her expense, a dredging inspector approved by the Department who shall accompany the dredged material while in transit and during discharges, either upon the scows containing the dredged material or upon the boat towing them, for the following activities:

1. any offshore disposal;
2. any onshore disposal of dredged material greater than 10,000 cubic yards; or
3. the disposal of materials defined by the Department as potentially degrading or hazardous.

(c) The name, address, and qualifications of the dredging inspector shall be submitted to the Department as part of the license or permit application for approval.

(d) Within 30 days after the completion of the dredging, a report shall be submitted to the Department certified by the dredging inspector, including daily logs of the dredging operation indicating volume of dredged material, point of origin, point of destination, and other appropriate information.

9.51: Conservation of Capacity for Water-dependent Use

A nonwater-dependent use project that includes fill or structures on any tidelands shall not unreasonably diminish the capacity of such lands to accommodate water-dependent use. In applying this standard, the Department shall take into account any relevant information concerning the utility or adaptability of the site for present or future water-dependent purposes, especially in the vicinity of a water-dependent use zone; and shall adhere to the greatest reasonable extent to applicable guidance specified in an Approved Municipal Harbor Plan, as provided in 310 CMR 9.34(2)(b)2. At a minimum, the Department shall act in accordance with the following provisions:

(1) If the project includes nonwater-dependent facilities of private tenancy, such facilities must be developed in a manner that prevents significant conflict in operation between their users and those of any water-dependent facility which reasonably can be expected to locate on or near the project site. Characteristics of the respective facilities that may give rise to such user conflict include, but are not limited to:

- (a) presence of noise and odors;
- (b) type of equipment and accessory services;
- (c) hours of operation and spatial patterns of activity;
- (d) traffic flows and parking needs;

9.51: continued

- (e) size and composition of user groups;
- (f) privacy and security requirements; and
- (g) requirements for public infrastructure.

(2) If the project includes new structures or spaces for nonwater-dependent use, such structures or spaces must be developed in a manner that protects the utility and adaptability of the site for water-dependent purposes by preventing significant incompatibility in design with structures and spaces which reasonably can be expected to serve such purposes, either on or adjacent to the project site. Aspects of built form that may give rise to design incompatibility include, but are not limited to:

- (a) the total surface coverage by buildings and other permanent structures, insofar as it may affect the amount of open space where flexibility to serve water-dependent purposes will be retained;
- (b) the layout and configuration of buildings and other permanent structures, insofar as they may affect existing and potential public views of the water, marine-related features along the waterfront, and other objects of scenic, historic or cultural importance to the waterfront, especially along sight lines emanating in any direction from public ways and other areas of concentrated public activity;
- (c) the scale of buildings and other permanent structures, insofar as it may affect wind, shadow, and other conditions of the ground level environment that may affect users of water-dependent facilities; and
- (d) the landscape design of exterior open spaces, insofar as it may affect the attainment of effective pedestrian and vehicular circulation within and to areas of water-dependent activity.

(3) The Department shall find that the standard is not met if the project does not comply with the following minimum conditions which, in the absence of an Approved Municipal Harbor Plan which promotes the policy objectives stated herein with comparable or greater effectiveness, are necessary to prevent undue detriments to the capacity of tidelands to accommodate water-dependent use:

- (a) new pile-supported structures for nonwater-dependent use shall not extend beyond the footprint of existing, previously authorized pile-supported structures or pile fields, except where no further seaward projection occurs and the area of open water lost due to such extension is replaced, on at least a 1:1 square foot basis, through the removal of existing, previously authorized fill or pile-supported structures or pile fields elsewhere on the project site; as provided in 310 CMR 9.34(2)(b)1., the Department shall waive the on-site replacement requirement if the project conforms to an Approved Municipal Harbor Plan which, as determined by the Secretary in the approval of said plan and by the Department through the adoption of substitute provisions in said plan, specifies alternative replacement requirements which ensure that no net loss of open water will occur for nonwater-dependent purposes, in order to maintain or improve the overall capacity of the state's waterways to accommodate public use in the exercise of water-related rights, as appropriate for the harbor in question;
- (b) Facilities of Public Accommodation, but not nonwater-dependent Facilities of Private Tenancy, shall be located on any pile-supported structures on flowed tidelands and at the ground level of any filled tidelands within 100 feet of a project shoreline. The Department may allow any portion of the equivalent area of a Facility of Public Accommodation to be relocated within the building footprint, or in other buildings owned, controlled or proposed for development by the applicant within the Development Site if the Department determines the alternative location would more effectively promote public use and enjoyment of the project site. As provided in 310 CMR 9.34(2)(b)1., the Department shall waive the above use limitations if the project conforms to an Approved Municipal Harbor Plan which, as determined by the Secretary in the approval of said plan and by the Department through the adoption of substitute provisions in said plan, specifies alternative limitations and other requirements which ensure that no significant privatization of waterfront areas immediately adjacent to the water-dependent use zone will occur for nonwater-dependent purposes, in order that such areas will be generally free of uses that conflict with, preempt, or otherwise discourage water-dependent activity or public use and enjoyment of the water-dependent use zone, as appropriate for the harbor in question;

9.51: continued

(c) new or expanded buildings for nonwater-dependent use, and parking facilities at or above grade for any use, shall not be located within a water-dependent use zone; except as provided below, the width of said zone shall be determined as follows:

1. along portions of a project shoreline other than the edges of piers and wharves, the zone extends for the lesser of 100 feet or 25% of the weighted average distance from the present high water mark to the landward lot line of the property, but no less than 25 feet; and
2. along the ends of piers and wharves, the zone extends for the lesser of 100 feet or 25% of the distance from the edges in question to the base of the pier or wharf, but no less than 25 feet; and
3. along all sides of piers and wharves, the zone extends for the lesser of 50 feet or 15% of the distance from the edges in question to the edges immediately opposite, but no less than ten feet.

As provided in 310 CMR 9.34(2)(b)1., the Department shall waive the above numerical standards if the project conforms to an Approved Municipal Harbor Plan which, as determined by the Secretary in the approval of said plan and by the Department through the adoption of substitute provisions in said plan, specifies alternative setback distances and other requirements which ensure that new buildings for nonwater-dependent use are not constructed immediately adjacent to a project shoreline, in order that sufficient space along the water's edge will be devoted exclusively to water-dependent activity and public access associated therewith, as appropriate for the harbor in question;

(d) at least one square foot of the project site at ground level, exclusive of areas lying seaward of a project shoreline, shall be reserved as open space for every square foot of tideland area within the combined footprint of buildings containing nonwater-dependent use on the project site; in the event this requirement cannot be met by a project involving only the renovation or reuse of existing buildings, ground level open space shall be provided to the maximum reasonable extent; as provided in 310 CMR 9.34(2)(b)1., the Department shall waive the above numerical standard if the project conforms to an Approved Municipal Harbor Plan which, as determined by the Secretary in the approval of said plan and by the Department through the adoption of substitute provisions in said plan, specifies alternative site coverage ratios and other requirements which ensure that, in general, buildings for nonwater-dependent use will be relatively condensed in footprint, in order that an amount of open space commensurate with that occupied by such buildings will be available to accommodate water-dependent activity and public access associated therewith, as appropriate for the harbor in question;

(e) new or expanded buildings for nonwater-dependent use shall not exceed 55 feet in height if located over the water or within 100 feet landward of the high water mark; at greater landward distances, the height of such buildings shall not exceed 55 feet plus ½ foot for every additional foot of separation from the high water mark; as provided in 310 CMR 9.34(2)(b)1., the Department shall waive such height limits if the project conforms to an Approved Municipal Harbor Plan which, as determined by the Secretary in the approval of said plan and by the Department through the adoption of substitute provisions in said plan, specifies alternative height limits and other requirements which ensure that, in general, such buildings for nonwater-dependent use will be relatively modest in size, in order that wind, shadow, and other conditions of the ground level environment will be conducive to water-dependent activity and public access associated therewith, as appropriate for the harbor in question;

(4) the requirements of 310 CMR 9.51(1) through (3), shall also apply in the event a nonwater-dependent use project is located on a Great Pond;

(5) the requirements of 310 CMR 9.51(3), shall not apply to projects on filled tidelands in Designated Port Areas involving temporary uses, supporting DPA uses that are industrial, and marine industrial parks.

9.52: Utilization of Shoreline for Water-dependent Purposes

A nonwater-dependent use project that includes fill or structures on any tidelands shall devote a reasonable portion of such lands to water-dependent use, including public access in the exercise of public rights in such lands. In applying this standard, the Department shall take into account any relevant information concerning the capacity of the project site to serve such water-dependent purposes, especially in the vicinity of a water-dependent use zone; and shall give particular consideration to applicable guidance specified in an Approved Municipal Harbor Plan, as provided in 310 CMR 9.34(2)(b)2. Except as necessary to protect public health, safety, or the environment, the Department shall act in accordance with the following provisions.

(1) In the event the project site includes a water-dependent use zone, the project shall include at least the following:

(a) one or more facilities that generate water-dependent activity of a kind and to a degree that is appropriate for the project site, given the nature of the project, conditions of the water body on which it is located, and other relevant circumstances; in making this determination, the Department shall give particular consideration to:

1. facilities that promote active use of the project shoreline, such as boat landing docks and launching ramps, marinas, fishing piers, waterfront boardwalks and esplanades for public recreation, and water-based public facilities as listed in 310 CMR 9.53(2)(a); and
2. facilities for which a demonstrated need exists in the harbor in question and for which other suitable locations are not reasonably available; and

(b) a pedestrian access network of a kind and to a degree that is appropriate for the project site and the facility(ies) provided in 310 CMR 9.52(1)(a); at a minimum, such network shall consist of:

1. walkways and related facilities along the entire length of the water-dependent use zone; wherever feasible, such walkways shall be adjacent to the project shoreline and, except as otherwise provided in an Approved Municipal Harbor Plan, shall be no less than ten feet in width; and
2. appropriate connecting walkways that allow pedestrians to approach the shoreline walkways from public ways or other public access facilities to which any tidelands on the project site are adjacent. Such pedestrian access network shall be available to the public for use in connection with fishing, fowling, navigation, and any other purposes consistent with the extent of public rights at the project site.

(2) In the event the project site does not include a water-dependent use zone, the project shall provide connecting public walkways or other public pedestrian facilities as necessary to ensure that sites containing water-dependent use zones will not be isolated from, or poorly linked with, public ways or other public access facilities to which any tidelands on the project site are adjacent.

(3) The requirements of 310 CMR 9.52(1) and (2), shall also apply in the event a nonwater-dependent use project is located on a Great Pond.

9.53: Activation of Commonwealth Tidelands for Public Use

A nonwater-dependent use project that includes fill or structures on Commonwealth tidelands, except in Designated Port Areas, must promote public use and enjoyment of such lands to a degree that is fully commensurate with the proprietary rights of the Commonwealth therein, and which ensures that private advantages of use are not primary but merely incidental to the achievement of public purposes. In applying this standard, the Department shall take into account any factor affecting the quantity and quality of benefits provided to the public, in comparison with detriments to public rights associated with facilities of private tenancy, especially those which are nonwater-dependent; and shall give particular consideration to applicable guidance specified in an Approved Municipal Harbor Plan, as provided in 310 CMR 9.34(2)(b)2. At a minimum, the Department shall act in accordance with 310 CMR 9.53(1) through (4).

9.53: continued

(1) The project shall not include fill or structures for nonwater-dependent use of Commonwealth tidelands which the Department determines are necessary to accommodate a public agency which intends to pursue a water-dependent use project on such lands, provided written notice of such agency's intention is submitted to the Department prior to the close of the public comment period on the license application. Such determination shall be based upon a clear showing, within a period of time deemed reasonable by the Department, that the agency's project has met the criteria of 310 CMR 9.36(5)(a)2. through 4.

(2) The project shall attract and maintain substantial public activity on the site on a year-round basis, through the provision of water-related public benefits of a kind and to a degree that is appropriate for the site, given the nature of the project, conditions of the waterbody on which it is located, and other relevant circumstances. In making this determination, the Department shall act in accordance with 310 CMR 9.53(2)(a) through (e):

(a) in the event the project site includes a water-dependent use zone, at least one facility utilizing the shoreline in accordance with the provisions of 310 CMR 9.52(1)(a) must also promote water-based public activity; such facilities include, but are not limited to, ferries, cruise ships, water shuttles, public landings and swimming/fishing areas, excursion/charter/rental docks, and community sailing centers;

(b) the project shall include exterior open spaces for active or passive public recreation, examples of which are parks, plazas, and observation areas; such open spaces shall be located at or near the water to the maximum reasonable extent, unless otherwise deemed appropriate by the Department, and shall include related pedestrian amenities such as lighting and seating facilities, restrooms and trash receptacles, children's play areas, and safety ladders along shoreline walkways, as appropriate; such facilities shall be sized in accordance with 310 CMR 9.53(2)(b)1. through 2.:

1. the amount of such space shall be at least equal to the square footage of all Commonwealth tidelands on the project site landward of a project shoreline and not within the footprint of buildings, less any space deemed necessary by the Department to accommodate other water-dependent uses; the Department may also allow a portion of such open space to be devoted to public ways and/or surface parking open to the public, including users of the facility of public accommodation, provided that below grade or structured parking is not a reasonable alternative and that the open space devoted to public vehicular use does not exceed that devoted to public pedestrian use;

2. as provided in 310 CMR 9.34(2)(b)1., the Department shall waive the requirements of 310 CMR 9.53(2)(b)1., if the project conforms to an Approved Municipal Harbor Plan which, as determined by the Secretary in the approval of said plan and by the Department through the adoption of substitute provisions in said plan, specifies alternative requirements for public outdoor recreation facilities that will establish the project site as a year-round locus of public activity in a comparable and highly effective manner;

(c) the project shall devote interior space to facilities of public accommodation, other than public parking, with special consideration given to facilities that enhance the destination value of the waterfront by serving significant community needs, attracting a broad range of people, or providing innovative amenities for public use; such public interior space shall be located at the ground level of all buildings containing nonwater-dependent facilities of private tenancy, unless the Department determines that an alternative location would more effectively promote public use and enjoyment of the project site or is appropriate to make ground level space available for water-dependent use or upper floor accessory services; the extent of such interior space shall be determined in accordance with 310 CMR 9.53(2)(c)1. through 2.:

1. such space shall be at least equal in amount to the square footage of all Commonwealth tidelands on the project site within the footprint of buildings containing nonwater-dependent facilities of private tenancy;

2. as provided in 310 CMR 9.34(2)(b)1., the Department shall waive the requirements of 310 CMR 9.34(2)(c)1., if the project conforms to an Approved Municipal Harbor Plan which, as determined by the Secretary in the approval of said plan, and by the Department through the adoption of substitute provisions in said plan, specifies alternative requirements for interior facilities of public accommodation that will establish the project site as a year-round locus of public activity in a comparable and highly effective manner;

9.53: continued

(d) the project shall include a management plan for all on-site facilities offering water-related benefits to the public, to ensure that the quantity and quality of such benefits will be effectively sustained; management elements which may be covered by the plan include, but are not limited to, signage, maintenance, hours and rules of operation, organizational arrangements and responsibilities, pricing, financing, and procedures for resolving use conflicts; if deemed appropriate, the Department may require the applicant to offer to the public, in the form of an easement, an enforceable right of access to or use of a proposed water-dependent facility of public accommodation; and

(e) in the event that water-related public benefits which can reasonably be provided on-site are not appropriate or sufficient, the Department may consider measures funded or otherwise taken by the applicant to provide such benefits elsewhere in the harbor or otherwise in the vicinity of the project site.

(3) The project shall promote other development policies of the Commonwealth, through the provision of nonwater-related benefits in accordance with applicable governmental plans and programs and in a manner that does not detract from the provision of water-related public benefits. In making this determination, the Department shall act in accordance with 310 CMR 9.53(3)(a) through (d):

(a) the Department shall take into account any guidance forthcoming from a state, federal, regional, or municipal agency as to the extent to which the project will contribute to or detract from the implementation of any specific policy, plan or program relating to, among other things: education; employment; energy; environmental protection; historic or archeological preservation; housing; industry; land use; natural resources; public health and safety; public recreation; and transportation.

(b) the Department shall act in accordance with the written recommendation of the Secretary of any state Executive Office in whose area of agency or program jurisdiction the proposed project falls, provided that said recommendation is made pursuant to an MOU or other written agreement with the Department as to the manner and extent to which the nonwater-related policies, plans, and programs of said Executive Office will be promoted in relation to water-related public interests.

(c) the Department shall give primary consideration to the implementation of policies, plans, or programs that:

1. have been officially adopted by statute, regulation, or other formal instrument of legislative or administrative action; and
2. complement measures taken by the project to serve water-related public purposes; examples of such complementary policies include the improvement of public transportation systems in order to foster ease of public movement to and from waterfront facilities, and the inclusion of affordable housing in residential development in order to make waterfront tenancy and access available to a broader segment of the public than would be the case under prevailing market conditions;

(d) the Department shall consider only those nonwater-related benefits accruing to the public in a manner that is reasonably direct, rather than remote, diffuse, or theoretical. Examples of direct public benefits include meeting a community need for mixed-income residential development, creating a large number of permanent jobs on-site, and reutilizing idle waterfront properties. Corresponding examples of indirect public benefits include increasing the general supply of market-rate housing, improving overall economic conditions, and expanding the property tax base of a municipality.

(4) In the event a nonwater-dependent use project is located on Great Ponds, the Department shall apply the provisions of 310 CMR 9.53(1) through (3), to the portion of the project site lying below the natural low water mark.

9.54: Consistency with Coastal Zone Management Policies

Nonwater-dependent use projects located in the coastal zone shall be consistent with all policies of the Massachusetts Coastal Zone Management Program, pursuant to 301 CMR 20.05(3). In applying this standard for projects identified for CZM participation in license or permit proceedings pursuant to 310 CMR 9.13(2)(a), the Department shall consider any written statement submitted by the Coastal Zone Management Office pursuant to 310 CMR 9.13(2), and shall act in accordance with the following provisions:

9.54: continued

(1) If the Department concurs with the conclusions and recommendations of CZM, said written statement shall be adopted as part of the written determination on license application.

(2) If the Department disagrees with any conclusions or recommendations of CZM and the disagreement cannot be resolved through routine consultation, the assistance and direction of the Secretary shall be sought in accordance with the provisions of M.G.L. c. 21A, § 4, governing mediation of administrative and jurisdictional conflicts within EOEEA. If the disagreement is not eliminated through such mediation, the Department shall include in the written determination an explanation of the specific basis for its final decision on consistency with CZM policies.

If the project site is within an area covered by an Approved Municipal Harbor Plan, the Department shall presume this standard is met, in accordance with the provisions of 310 CMR 9.34(2)(b)3.

9.55: Standards for Nonwater-dependent Infrastructure Facilities

(1) The requirements of 310 CMR 9.51 through 9.53, shall not apply to nonwater-dependent use projects consisting of infrastructure facilities on tidelands or Great Ponds. Such projects shall include mitigation and/or compensation measures as deemed appropriate by the Department to ensure that all feasible measures are taken to avoid or minimize detriments to the water-related interests of the public. Such interests include, but are not limited to:

- (a) the protection of maritime commerce, industry, recreation and associated public access;
- (b) the protection, restoration, and enhancement of living marine resources;
- (c) the attainment of water quality goals;
- (d) the reduction of flood and erosion-related hazards on lands subject to the 100-year storm event or to sea level rise, especially those in damage-prone or natural buffer areas;
- (e) the protection and enhancement of public views and visual quality in the natural and built environment of the shoreline; and
- (f) the preservation of historic sites and districts, archaeological sites, and other significant cultural resources near waterways.

(2) All nonwater-dependent use projects consisting of infrastructure facilities on tidelands or Great Ponds shall take reasonable measures to provide open spaces for active or passive recreation at or near the water's edge, wherever appropriate. Such measures may be provided by any means consistent with the need to avoid undue interference with the infrastructure facilities in question, and to protect public health, safety, or the environment.

9.56: Standards for Facilities of Limited Accommodation

Facilities of Limited Accommodation may be authorized on filled Commonwealth Tidelands or filled Private Tidelands under certain circumstances where a project site cannot support Facilities of Public Accommodation for a period of time. Projects including Facilities of Limited Accommodation as a substitution for Facilities of Public Accommodation described in 310 CMR 9.53(2)(c) and referenced in 310 CMR 9.51(3)(b) must meet any otherwise applicable requirements of 310 CMR 9.00. The substitution of Facilities of Limited Accommodation for Facilities of Public Accommodation fulfills the requirements for licensing under 310 CMR 9.31(2)(b)1., provided otherwise applicable requirements are met. The calculation of the required amount of Facilities of Public Accommodation or the amount of the payment to allow the substitution shall be based on Facilities of Limited Accommodation located on the ground floor of buildings on filled Commonwealth Tidelands or Private Tidelands within 100 feet of the project shoreline. The substitution of Facilities of Limited Accommodation for Facilities of Public Accommodation may not be inconsistent with an Approved Municipal Harbor Plan under 310 CMR 9.34(2).

9.56: continued

(1) An application for a building less than or equal to 75' in height, may substitute Facilities of Limited Accommodation in up to 50% of the interior space required to be devoted to Facilities of Public Accommodation. The remainder of the required ground floor interior space, with the exception of Upper Floor Accessory Services, shall be devoted to Facilities of Public Accommodation. The requirement that no less than 25% of the otherwise required ground floor interior space be devoted to Facilities of Public Accommodation may not be waived by the Department, regardless of foot traffic, density, level of economic development, or the absence of potential revenues generated by the Facility of Public Accommodation. The Applicant shall provide notice of the project to the Local Economic Development Authority and any response it has received from the authority. If the Local Economic Development Authority responds in writing that the project area has a sufficient level of development to support a Facility of Public Accommodation, the Department shall not authorize the substitution of a Facility of Limited Accommodation. If the authority concurs in writing that the project area lacks sufficient development to support a Facility of Public Accommodation or does not respond to the notice and the Department does not request additional information within 60 days of receipt of a license application, the Local Economic Development Authority will be deemed to concur with the request and the substitution of a Facility of Limited Accommodation shall be authorized. The first floor design shall be capable of accommodating a Facility of Public Accommodation. 20% of the net operating income per year generated from the Facilities of Limited Accommodation shall be paid annually by the project to fund specific construction or activities, approved by the Department, to activate the waterfront in geographic proximity to the project site. The activation provided by the specific construction or activities shall extend to evening and/or weekend hours wherever feasible to compensate for any lack of activation that may result in the substitution of Facilities of Limited Accommodation for Facilities of Public Accommodation. The funding of specific construction or activities shall be in addition to applicable requirements at 310 CMR 9.52(1) and 9.53(2). The specific construction or activities to be funded shall be identified by the Applicant and approved by the Department prior to licensing.

A condition of the license shall include, on or before the 15th anniversary of the first certificate of occupancy, a requirement for the Department to review the uses of the Facilities of Limited Accommodation to determine whether the project site could support Facilities of Public Accommodation, typically based upon foot traffic and density, based on information provided by the Licensee. The Licensee shall file any relevant information at least six months prior to the 15th anniversary. If the Department determines that Facilities of Public Accommodation can be supported and the project is unable to obtain a contrary opinion as referenced in 310 CMR 9.56(2)(d), the Department shall provide the Licensee with a schedule for submittals for transition to such uses. If the Department determines that Facilities of Public Accommodation cannot be supported or the Licensee obtains such an opinion as referenced in 310 CMR 9.56(2)(d), the Department shall specify a time period for a subsequent review. The Licensee shall certify annually to the Department the amount of space devoted to Facilities of Limited Accommodation, the use of the space, the net operating income from the Facilities of Limited Accommodation, and a demonstration of payment for the substitution of Facilities of Limited Accommodation for Facilities of Public Accommodation as specified in 310 CMR 9.56(2)(f). The Licensee shall provide an electronic copy of the certifications and notice of any information submitted six months prior to the 15th anniversary review, upon request to any person who filed comments during the public comment period on the written determination for the project.

9.56: continued

(2) An application for a building greater than 75' in height that can demonstrate that its project site is unable to fully support Facilities of Public Accommodation, based on foot traffic and density, may apply for a short-term condition in a license to authorize up to 50% of the interior space required to be devoted to Facilities of Limited Accommodation in accordance with 310 CMR 10.51 and 10.53 for some portion of the ground floor interior space otherwise required to be devoted to Facilities of Public Accommodation, provided that no less than 25% of such required interior space shall be devoted to Facilities of Public Accommodation. The requirement that no less than 25% of the ground floor interior space otherwise required be devoted to Facilities of Public Accommodation may not be waived by the Department, regardless of foot traffic, density, level of economic development, or the absence of potential revenues generated by the Facility of Public Accommodation. The short-term condition in the license may not exceed ten years. At the expiration of the term, the ground floor shall be devoted to Facilities of Public Accommodation, unless the licensee applies for an extension for no more than ten years and proves that the provisions of 310 CMR 9.56(2)(a) through (d) are met. Applications for extensions prior to expiration of the term may be allowed only where necessary to maintain occupancy. For an Applicant seeking a short-term condition in the license to authorize Facilities of Limited Accommodation in the interior space otherwise required to be devoted to Facilities of Public Accommodation, 20% of net operating income per year generated from the Facilities of Limited Accommodation shall be paid by the licensee annually to fund specific construction or activities, approved by the Department, to activate the waterfront. The activation provided by the specific construction or activities shall extend to evening and/or weekend hours wherever feasible to compensate for any lack of activation that may result in the substitution of Facilities of Limited Accommodation for Facilities of Public Accommodation. The specific construction or activities to be funded shall be identified by the Applicant and approved by the Department prior to licensing. The funding of specific construction or activities shall be in addition to applicable requirements at 310 CMR 9.52(1) and 9.53(2). A project seeking a short term condition in a license shall:

- (a) not be inconsistent with any substitutions, offsets or conditions of approval established in an Approved Municipal Harbor Plan as provided in 310 CMR 9.34(2);
- (b) demonstrate that marketing efforts for at least one year have failed to identify any prospective Facility of Public Accommodation, even with the offer of up to 50% below market rents to civic or cultural not-for-profit organizations and a diligent good faith attempt to locate tenants which shall include advertisements in at least two commercial real estate marketing publications and listing with a commercial real estate brokerage;
- (c) comply with the conditions in the license requiring Facilities of Public Accommodation unless or until another use is authorized; this requirement may not be waived by the Department, regardless of foot traffic, density, level of economic development, or the absence of potential revenues generated by the Facility of Public Accommodation;
- (d) obtain the written concurrence of the Local Economic Development Authority that the project area lacks the level of development to support a Facility of Public Accommodation at the time of licensing or amendment. If the Local Economic Development Authority does not respond to the notice and the Department does not request additional information within 60 days of receipt of a license application, the Local Economic Development Authority will be deemed to concur with the request;
- (e) ensure that the first floor design will be capable of accommodating a Facility of Public Accommodation at the end of the term; and
- (f) certify annually the space devoted to Facilities of Limited Accommodation, the use of the space, the net operating income from those facilities, and demonstration of payment.

(3) A licensee may request an amendment of an existing license to authorize Facilities of Limited Accommodation, provided the request meets the requirements for an amendment at 310 CMR 9.24, the requirements identified in 310 CMR 9.56(2)(a) through (d), and other applicable requirements of 310 CMR 9.56(1) or (2). A short-term license condition for Facilities of Limited Accommodation amending an existing license may be for a limited term of ten years or 15 years, depending on the height of the building.

9.57: Approved Municipal Harbor Plans

(1) The following Municipal Harbor Plans are Approved Municipal Harbor Plans:

- (a) East Boston Waterfront District Municipal Harbor Plan (July 15, 2002, as renewed and amended on December 17, 2008, March 4, 2009, and August 2, 2012);
- (b) Fort Point Downtown (Boston) Municipal Harbor Plan Phase I (October 10, 2002, as renewed on February 12, 2013);
- (c) Fort Point Downtown (Boston) Municipal Harbor Plan Phase II (March 8, 2004, as renewed on April 9, 2014);
- (d) Harborpark (Boston) Plan (May 22, 1991, as renewed and amended on July 29, 1999, October 12, 2006, and April 4, 2008);
- (e) South Boston Waterfront District Municipal Harbor Plan (December 6, 2000, as renewed and amended on December 31, 2002, October 22, 2009, and December 21, 2016);
- (f) Cohasset Municipal Harbor Plan (November 25, 2020);
- (g) Central Waterfront (Everett) Municipal Harbor Plan (February 10, 2014);
- (h) Gloucester Municipal Harbor Plan and DPA Master Plan (July 6, 1999, as renewed and amended on December 11, 2009 and December 19, 2014);
- (i) Lynn Municipal Harbor Plan and DPA Master Plan (June 28, 2010, as renewed and amended on November 25, 2020);
- (j) Nantucket and Madaket Municipal Harbor Plan (December 21, 2009);
- (k) New Bedford Fairhaven Municipal Harbor Plan and DPA Master Plan (September 24, 2002, as renewed and amended on June 14, 2010);
- (l) Provincetown Harbor Management Plan (May 4, 1999, as renewed and amended on February 29, 2012 and April 10, 2019);
- (m) Salem Municipal Harbor Plan and DPA Master Plan (June 24, 2008);
- (n) Hull Harbor Plan (February 14, 2000);
- (o) South Coastal Harbor (Chatham) Management Plan (August 19, 1994, as renewed on July 23, 1999, October 21, 2005, and May 12, 2015); and
- (p) Edgartown Municipal Harbor Plan (October 2, 1997, as renewed on April 30, 2003).

(2) Approved Substitute Provisions: Substitute Standards, Offsets, Amplifications, and Other Provisions.

- (a) East Boston Waterfront District Municipal Harbor Plan, (July 15, 2002, as renewed and amended on December 17, 2008, March 4, 2009, and August 2, 2012).

<u>100 Acres (2009) (continued)</u>			
310 CMR 9.51(3)(e): Conservation of Capacity for Water-dependent Use (Building height)	New or expanded buildings for nonwater-dependent use shall not exceed 55 feet in height if located over the water or within 100 feet landward of the high water mark; at greater landward distances, the height of such buildings shall not exceed 55 feet plus ½ foot for every additional foot of separation from the high water mark.	Allow non water-dependent buildings ranging in height from 80 feet to 180 feet.	The substitution results in a required offset for net new shadow. The proposed offset is additional public open space. This offset is permitted on a 1:2 ratio of additional open space to net new shadow.
<u>150 Seaport Boulevard (2016)</u>			
310 CMR 9.51(3)(e): Conservation of Capacity for Water-dependent Use (Building height)	New or expanded buildings for nonwater-dependent use shall not exceed 55 feet in height if located over the water or within 100 feet landward of the high water mark; at greater landward distances, the height of such buildings shall not exceed 55 feet plus ½ foot for every additional foot of separation from the high water mark.	Allow height up to 250 feet Proposed building will create 16,640 sf in net new shadow.	\$1.5 million to improve open space within or adjacent to the South Boston MHP planning area, specifically Martin’s Park at Children’s Wharf. Interior public waiting area and reception space on the ground floor of the proposed development integrated within the general lobby areas, including amenities and programming described above with clear signage on the interior and exterior of the building.
310 CMR 9.51(3)(d): Conservation of Capacity for Water-dependent Use (Lot coverage)	At least one square foot of the project site at ground level (exclusive of areas lying seaward of a project shoreline) shall be preserved as open space for every square foot of tideland area within the combined footprint of buildings containing nonwater-dependent use on the project site.	Up to 75% lot coverage may be permitted.	
310 CMR 9.51(3)(c): Conservation of Capacity for Water-dependent Use (Water-dependent use zone)	“New or expanded buildings for nonwater-dependent use, and parking facilities at or above grade for any use, shall not be located within a water-dependent use zone”. On the Development Site, the required WDUZ would total 5,768 sf.	The required WDUZ dimensions may be reconfigured as long as a minimum width of ten feet is maintained along the project shoreline and as long as the modification results in no net loss of WDUZ area.	The reconfigured WDUZ will include the ten ft. setback from the existing project shoreline (except that area which is under the cantilevered balcony areas) and one of two alternative areas of approximately 2,000 sf described above, with a preference for “Massport Wharf”.

Regulatory Provision	Chapter 91 Standard	Substitution	Offsetting Measures
<p>310 CMR 9.51(3)(d): Conservation of Capacity for Water-dependent Use (Lot coverage)</p>	<p>At least one square foot of the project site at ground level (exclusive of areas lying seaward of a project shoreline) shall be preserved as open space for every square foot of tideland area within the combined footprint of buildings containing nonwater-dependent use on the project site.</p>	<p>Up to 60% lot coverage (resulting in 40% open space) may be permitted.</p>	<p>For Lower Broadway scenario development exceeding 50% lot coverage, one or more of the following open space improvements or public amenities must be provided:</p> <p>As a first priority, and to be pursued before alternative offsets below, unless proven unfeasible due to property ownership or other restrictions, construct and maintain a continuous landscaped pedestrian/bicycle connection between on-site riverfront pathways and DCR open space at Gateway Park, including a minimum of 50,000 square feet of off-site open space located on the MBTA-owned peninsula along and underneath the commuter rail line and/or other portions of the Gateway Center property.</p> <p>For Wynn scenario development, and if the priority offset above is not feasible for the Lower Broadway scenario, one or more of the following should be provided (in prioritized order) to equal at least the amount of lot coverage in excess of the 50% baseline:</p> <ul style="list-style-type: none"> ● For the first 10,000 square feet, provide and maintain a facility to provide river access by boat in Gateway Park (such as a canoe/kayak launch); ● For the next 20,000 square feet, provide and maintain a fishing platform or pier with associated amenities; ● For the next 10,000 square feet, provide and maintain 3,000 linear feet of improved walking and/or bicycle paths in Gateway Park, widened to a minimum of ten feet clear; and ● For every remaining one square foot, provide 25 square feet of ongoing maintenance of DCR facilities and/or property in the planning area which is not already maintained by Gateway Center.

9.57: continued

(h) Gloucester Municipal Harbor Plan and DPA Master Plan (July 6, 1999, as renewed and amended on December 11, 2009 and December 19, 2014).

1. Table 1. Substitute Standards and Offsetting Measures.

Plan-wide (2009, 2014)			
Regulatory Provision	Chapter 91 Standard	Substitution	Offsetting Measures
310 CMR 9.51(3)(c): Conservation of Capacity for Water-dependent Use (Water-dependent use zone)	New or expanded buildings for nonwater-dependent use, and parking facilities at or above grade for any use, shall not be located within a water-dependent use zone; except as provided below, the width of said zone shall be determined as follows: 1. along portions of a project shoreline other than the edges of piers and wharves, the zone extends for the lesser of 100 feet or 25% of the weighted average distance from the present high water mark to the landward lot line of the property, but no less than 25 feet; and 2. along the ends of piers and wharves, the zone extends for the lesser of 100 feet or 25% of the distance from the edges in question to the base of the pier or wharf, but no less than 25 feet; and 3. along all sides of piers and wharves, the zone extends for the lesser of 50 feet or 15% of the distance from the edges in question to the edges immediately opposite, but no less than ten feet.	For project sites that meet the eligibility standard, the required WDUZ dimensions may be modified as long as a minimum width of 25 feet is maintained along the project shoreline and the ends of piers and wharfs and a minimum of 10 feet along the sides of piers and wharves, and as long as the modification results in no net loss of WDUZ area.	Substitution provision can only be applied to those project sites where it is shown that application of the c. 91 standard would result in an inefficient siting of uses in the WDUZ, and where the reconfiguration achieves greater effectiveness in the use of the water's edge for water-dependent industrial use. The reconfigured zone must be adjacent to the waterfront and result in an increase in WDUZ immediately adjacent to the water. In no case will a reconfigured WDUZ that results in an area separated from the waterfront or in a net loss of WDUZ be allowed.

9.57: continued

Table 2. Summary of Amplifications.

Plan-wide (2009, 2014 (continued))		
Regulatory Provision	Chapter 91 Standard	Approved Amplification
310 CMR 9.36(4)(b): Standards to Protect Water-dependent Uses (Displacement of water-dependent uses)	“...the project shall include arrangements determined to be reasonable by the Department for the water-dependent use to be continued at its existing facility, or at a facility at an alternative location having physical attributes, including proximity to the water, and associated business conditions which equal or surpass those of the original facility and as may be identified in a municipal harbor plan...”	No project will displace existing commercial fishing vessel berthing in Gloucester Harbor without providing reasonably equivalent berthing space on site or at a suitable alternative site not already used by commercial fishing vessels.
310 CMR 9.36(5)(b)4.: Standards to Protect Water-dependent Uses (Supporting DPA Use)	“...in the case of supporting DPA use, conditions governing the nature and extent of operational or economic support must be established to ensure that such support will be effectively provided to water-dependent-industrial uses...”	For properties with a water-dependent industrial hub port use, economic support from the supporting use to the hub use will be presumed. If no water-dependent industrial use exists or is proposed on the site, an investment in on-site waterfront infrastructure (piers, wharves, dredging) to improve capacity for water-dependent industrial use will be required. Whenever feasible, maintenance of existing berthing and creation of new berthing for commercial vessels should be required. If, and only if, none of the above can be achieved adequately, a contribution to the Gloucester Port Maintenance and Improvement Fund will be required as mitigation. This fund shall be used only for investment in water dependent industrial infrastructure (piers, wharves, dredging) within the DPA.
310 CMR 9.52(1)(b)1.: Utilization of Shoreline for Water-dependent Purposes (Pedestrian access network)	“...walkways and related facilities along the entire length of the Water-Dependent Use Zone; wherever feasible, such walkways shall be adjacent to the project shoreline and, except as otherwise provided in a municipal harbor plan, shall be no less than ten feet in width...”	To the extent practicable for a site, public access facilities shall be integrated into a project to activate the waterfront as part of the open space required with a non-water dependent supporting DPA use but must be sited to be compatible with and not interfere with water-dependent industrial uses and activities. Open areas used to support working waterfront activities seasonally during the year shall accommodate temporary public access when possible. Within the WDUZ no use shall be licensed, unless it provides access to water-borne vessels wherever possible.

Regulatory Provision	Chapter 91 Standard	Approved Amplification
310 CMR 9.12(2)(b): Determination of Water-dependency (Water-dependent industrial uses)	The Department shall find to be water-dependent industrial the following uses: 1. Marine terminals and related facilities for the transfer between ship and shore, and the storage of bulk materials or other goods transported in waterborne commerce 2. Facilities associated with commercial passenger vessel operations 3. Manufacturing facilities relying primarily on the bulk receipt or shipment of goods by waterborne transportation 4. Commercial fishing and fish processing facilities 5. Boatyards, dry docks, and other facilities related to the construction, serving, maintenance, repair, or storage of vessels or other marine structures 6. Facilities for tugboats, barges, dredges, or other vessels engaged in port operations or marine construction 7. Any water-dependent use listed in 310 CMR 9.12(2)(a)9. through 14., provided the Department determines such use to be associated with the operations of a Designated Port Area 8. Hydroelectric power generating facilities 9. Offshore renewable energy infrastructure facilities in the Commonwealth, including ocean wave energy facilities used to deliver electricity, natural gas or Telecommunications services to the public from an offshore facility located outside the Commonwealth; and 10. Other industrial uses or infrastructure facilities which cannot reasonably be located at an inland site as determined in accordance with 310 CMR 9.12(2)(c) or (d).	In addition to existing allowable water-dependent industrial uses, MassDEP may find that marine research, testing or development activities are water-dependent industrial uses if they include the following characteristics: 1. Access to coastal waters for research, testing or development; and 2. Commercial fishing facilities, including those engaged in research, testing, or development related to commercial fishing safety, conservation, and sustainability; or 3. Boatyards, dry docks, and other fishing facilities related to the construction, serving, maintenance, repair, or storage of vessels or other marine structures engaged in marine science and technology, including research, development, or testing; or 4. Facilities for tugboats, barges, dredges, or other vessels engaged in port operations or marine construction, including those related to marine research, development, or testing.

Table 3: Planning Principles and Priorities.

Planning Principle/Priority	Decision Standard	Implementation Mechanism
Allow up to 50% DPA supporting commercial uses on filled tidelands for most properties within the DPA by transferring the supporting use allowances for certain key parcels that will be 100% water-dependent industrial use.	MassDEP shall not license commercial DPA supporting uses within the Gloucester DPA within filled and flowed tidelands in the following areas: on the State Fish Pier; the U.S. Coast Guard Facility; Cruiseport Gloucester; or within or on any DPA roadway or pile-supported pier. MassDEP may license commercial DPA supporting uses on up to 50% of a project site on filled tidelands on DPA properties not listed above.	Chapter 91 Licensing

2. Table 2. Summary of Amplifications

Regulatory Provision	Chapter 91 Standard	Approved Amplification
310 CMR 9.52: Utilization of Shoreline for Water-dependent Purposes	A nonwater-dependent use project that includes fill or structures on any tidelands shall devote a reasonable portion of such lands to water-dependent use, including public access in the exercise of public rights in such lands. In applying this standard, the Department shall take into account any relevant information concerning the capacity of the project site to serve such water-dependent purposes, especially in the vicinity of a water-dependent use zone; and shall give particular consideration to applicable guidance specified in a municipal harbor plan, as provided in 310 CMR 9.34(2)(b)2.	Applies the tidelands standards at 310 CMR 9.53(2) for public use to any tideland areas within the expanded WDUZ outside of the DPA and within the harbor focus area, with specific guidance from the 2019 Waterfront Open Space Master Plan (2019 WOSMP). This amplification requires that these areas are designed to “maintain substantial public activity on the site on a year-round basis, with public parks, plazas, and observation areas that also have public amenities that shall include seating, lighting, trash receptacles, restrooms, and children’s play areas, as appropriate” and must be consistent with the 2019 WOSMP.
310 CMR 9.52(1)(b)1.: Utilization of Shoreline for Water-dependent Purposes (Pedestrian access network)	A pedestrian access network of a kind and to a degree that is appropriate for the project site and the facility(ies) provided in 310 CMR 9.52(1)(a).	Design, materials, and layout for the waterfront promenade within the WDUZ and outside of the DPA and within the harbor focus area shall be consistent with the guidelines provided in the 2019 WOSMP.
310 CMR 9.52(1)(b)2.: Utilization of Shoreline for Water-dependent Purposes (Pedestrian access network)	A pedestrian access network of a kind and to a degree that is appropriate for the project site and the facility(ies) provided in 310 CMR 9.52(1)(a); at a minimum, such network shall consist of: appropriate connecting walkways that allow pedestrians to approach the shoreline walkways from public ways or other public access facilities to which any tidelands on the project site are adjacent. Such pedestrian access network shall be available to the public for use in connection with fishing, fowling, navigation, and any other purposes consistent with the extent of public rights at the project site.	Specifies locations, with a process for substitute locations, for public access walkways to connect the Lynnway to the project shoreline through the harbor planning area (HPA). Design and amenity requirements for these lateral accessways shall be as shown and described in the 2019 WOSMP.

3. Table 3: Planning Principles and Priorities.

Planning Principle/Priority	Decision Standard	Implementation Mechanism
Continue lateral pedestrian access network with consistent design and amenities to the Lynnway	Lateral accessways shall be in the locations and with design and amenity requirements as shown and described in the 2019 WOSMP for entire length	Required through the Secretary’s discretionary provisions for a public benefits determination under 301 CMR 13.00

9.57: continued

Planning Principle/Priority	Decision Standard	Implementation Mechanism
Require the use of nature-based shorelines and incorporation of increased elevation to address future climate-related impacts.	Where feasible and appropriate, consistent with guidance from the 2019 WOSMP	Chapter 91 licensing

(j) Nantucket and Madaket Municipal Harbor Plan (December 21, 2009)

1. Table 1. Summary of amplifications

Regulatory Provision	Chapter 91 Standard	Amplification
310 CMR 9.51: Conservation of Capacity for Water-dependent Use	A nonwater-dependent use project on any tidelands shall not unreasonably diminish the capacity of such lands to accommodate water-dependent use. Facilities of Private Tenancy must be developed in a manner that prevents significant conflicts in operation with water-dependent uses that can reasonably be expected to locate on or near the water.	The amplification of these requirements prohibits any new non-water dependent use, or extension of an existing non-water dependent use, that would: <ol style="list-style-type: none"> 1. displace or significantly disrupt an existing water dependent use; 2. unreasonably disrupt an existing water-dependent use; 3. unreasonably diminish the capacity of the site to accommodate future water-dependent uses; and 4. impede or infringe upon existing public access
310 CMR 9.51: Conservation of Capacity for Water-dependent Use and 310 CMR 9.35(2)(a): Standards to Preserve Water-related Public Rights (Public Navigation Rights Applicable to All Waterways)	A nonwater-dependent use project on any tidelands shall not unreasonably diminish the capacity of such lands to accommodate water-dependent use. Facilities of Private Tenancy must be developed in a manner that prevents significant conflicts in operation with water-dependent uses that can reasonably be expected to locate on or near the water. The project shall not significantly interfere with public rights of navigation.	The amplification of these requirements prohibits certain water-dependent uses determined in the Plan to conflict with the traditional and historic use and character of the Harbor Overlay District, including: <ul style="list-style-type: none"> ● Cruise ship terminals or support services; ● Personal watercraft rental; and ● New facilities of private tenancy.
310 CMR 9.35(3)(a)1. and 2.: Standards to Preserve Water-related Public Rights (Public Rights of Fishing and Fowling Applicable to Tidelands and Great Ponds) and 310 CMR 9.35(2)(a): Standards to Preserve Water-related Public Rights (Public Navigation Rights Applicable to All Waterways)	The project shall not: <ol style="list-style-type: none"> 1. pose a substantial obstacle to the public's ability to fish or fowl in waterway areas adjacent to the project site; 2. result in the elimination of a traditional fishing or fowling location used extensively by the public; or 3. interfere with public rights of navigation 	The amplification of these requirements prohibits the construction of new private docks or piers, but exempts certain public or commercial water-dependent dock and pier projects within the Harbor Overlay District.

(k) New Bedford Fairhaven Municipal Harbor Plan and DPA Master Plan (September 24, 2002, as renewed and amended on June 14, 2010)

1. Table 1. Substitute Standards and Offsetting Measures

Regulatory Provision	Chapter 91 Standard	Approved Substitution	Approved Offsetting Measures
<u>Shoreline within MHP Planning Area and outside of the DPA</u>			
310 CMR 9.52(1)(b)1.: Utilization of Shoreline for Water-dependent Purposes (Pedestrian access network)	“...walkways and related facilities along the entire length of the Water-Dependent Use Zone; wherever feasible, such walkways shall be adjacent to the project shoreline and, except as otherwise provided in a municipal harbor plan, shall be no less than ten feet in width...”	Plan proposes to establish a dedicated 20-foot wide public access walkway along the portion of New Bedford and Fairhaven shoreline that is located outside the DPA and within that portion of the harbor bounded by the hurricane barrier on the South and the Rt. 195 bridge on the North.	No offsetting measures were necessary as the proposed substitution “will promote, with comparable or greater effectiveness, the state tidelands policy objectives.”

2. Table 2: Planning Principles and Priorities.

Planning Principle/Priority	Decision Standard	Implementation Mechanism	Notes
<u>Area-wide</u>			
2010 MHP and 2020 MHP Clarification approved Potential Navigational Dredge Areas (PNDA) and potential Waterfront Development Shoreline Facility (WDSF) locations. Inclusion in the MHP and Clarification allowed these areas to be eligible for navigational dredging and potential filling of shoreline facilities with clean material through a stream-lined permitting process within the Superfund Regulations known as the State Enhanced Remedy (SER).	EPA makes all final decisions on SER Work Plans for PNDA’s and WDSFs. Approved SER activities are exempt from all state and federal procedural regulatory requirements, but must continue to meet all substantive environmental standards.	MADEP coordinates the SER Work Plan reviews and inputs from state and federal agencies. EPA makes all final decisions on SER Work Plans for PNDA’s and WDSFs.	<i>See 2020 MHP Clarification for potential PNDA and WDSF location.</i>

(m) Salem Municipal Harbor Plan and DPA Master Plan (June 24, 2008)

1. Table 1. Substitute Standards and Offsetting Measures

Regulatory Provision	Chapter 91 Standard	Approved Substitution	Approved Offsetting Measures
310 CMR 9.51(3)(c): Conservation of Capacity for Water-dependent Use (Water-dependent use zone)	New or expanded buildings for nonwater-dependent use, and parking facilities at or above grade for any use, shall not be located within a water-dependent use zone; except as provided below, the width of said zone shall be determined as follows: 1. along portions of a project shoreline other than the edges of piers and wharves, the zone extends for the lesser of 100 feet or 25% of the weighted average distance from the present high water mark to the landward lot line of the property, but no less than 25 feet;	The minimum width of the WDUZ along the waterfront will be no less than 20 feet; the remaining area required by the Chapter 91 WDUZ calculation may be redistributed to create pedestrian/view corridors. Applies only to Sub-area A South Commercial Waterfront District.	There can be no net loss of WDUZ area. Requires the creation of two permanent pedestrian access corridors and one permanent view corridor linking the downtown area of Salem to the waterfront.
310 CMR 9.51(3)(e): Conservation of Capacity for Water-dependent Use (Building height)	New or expanded buildings for nonwater-dependent use shall not exceed 55 feet in height if located over the water or within 100 feet landward of the high water mark; at greater landward distances, the height of such buildings shall not exceed 55 feet plus ½ foot for every additional foot of separation from the high water mark.	Allow non-water dependent buildings to be 70 feet in height, consistent with local zoning. Applies only in Sub-area A in the South Harbor District.	Additional public open space is required on the site calculated by determining the additional shadow cast at the ground level by the additional building mass during full sun conditions on October 23 rd between 9:00 A.M. and 3:00 P.M. No more than half the additional open space may be used for parking.
310 CMR 9.51(3)(e): Conservation of Capacity for Water-dependent Use (Building height)	New or expanded buildings for nonwater-dependent use shall not exceed 55 feet in height if located over the water or within 100 feet landward of the high water mark; at greater landward distances, the height of such buildings shall not exceed 55 feet plus ½ foot for every additional foot of separation from the high water mark.	Allow non-water dependent buildings to be 70 feet in height, consistent with local zoning. Applies only in the Waterfront Complex site at Pickering Wharf.	Require the addition of a ground-level public space in a “turret” portion of the new Harborwalk gateway adjacent to Congress Street. Require additional landscaping and design elements to improve appearance and to screen the gateway from the building’s loading and service areas. Require construction of an observation platform on the southeast corner of Pickering Wharf.

9.57: continued

Regulatory Provision	Chapter 91 Standard	Approved Substitution	Approved Offsetting Measures
310 CMR 9.52(1)(b)1.: Utilization of Shoreline for Water-dependent Purposes (Pedestrian access network).	“...walkways and related facilities along the entire length of the Water-Dependent Use Zone; wherever feasible, such walkways shall be adjacent to the project shoreline and, except as otherwise provided in a municipal harbor plan, shall be no less than ten feet in width...”	Require a dedicated 20-foot wide public walkway around the South River, of which a minimum of ten feet shall be an unobstructed pathway. The inland ten feet will be used for landscaping and accessory amenities to enhance the general public’s waterfront experience. Applies only in the South River Waterfront Sub-area	The substitution directly benefits the public through improved access of 20 feet instead of ten feet. No additional offsetting benefit is required.

2. Table 2. Summary of Amplifications.

Regulatory Provision	Chapter 91 Standard	Approved Amplification
310CMR 9.02: <i>Definitions</i> (Supporting DPA Uses)	The amount of supporting Designated Port Area Uses on filled tidelands within a DPA shall not exceed 25% of the area of the project site.	Only water-dependent industrial uses and temporary uses will be allowed in the Industrial Port District sub-area of the DPA.

(n) Hull Harbor Plan (February 14, 2000)

This Approved Harbor Plan does not include any substitute provisions.

Preface to Wetlands Regulatory Revisions Effective January 1, 1994

10.01: Introduction and Purpose

(1) Introduction. 310 CMR 10.00 is promulgated by the Commissioner of the Massachusetts Department of Environmental Protection pursuant to the authority granted under The Wetlands Protection Act, M.G.L. c. 131, § 40. 310 CMR 10.00 shall complement M.G.L. c. 131, § 40, and shall have the force of law.

310 CMR 10.01 through 10.10 provide definitions and procedures. 310 CMR 10.01 through 10.10 pertains to both inland and coastal areas subject to protection under M.G.L. c. 131, § 40. 310 CMR 10.21 through 10.60 provide standards for work within those areas. 310 CMR 10.21 through 10.37 pertains only to coastal areas and 310 CMR 10.51 through 10.60 pertains only to inland areas. A project may be subject to regulation under 310 CMR 10.00 in which case compliance with all applicable regulations is required.

(2) Purpose. M.G.L. c. 131, § 40 sets forth a public review and decision-making process by which activities affecting Areas Subject to Protection under M.G.L. c. 131, § 40 are to be regulated in order to contribute to the following interests:

- protection of public and private water supply
- protection of ground water supply
- flood control
- storm damage prevention
- prevention of pollution
- protection of land containing shellfish
- protection of fisheries
- protection of wildlife habitat

The purpose of 310 CMR 10.00 is to define and clarify that process by establishing standard definitions and uniform procedures by which conservation commissions and the Department may carry out their responsibilities under M.G.L. c. 131, § 40. Applicants and issuing authorities shall use forms provided by the Department to implement 310 CMR 10.00.

310 CMR 10.00 is intended solely for use in administering M.G.L. c. 131, § 40; nothing contained in 310 CMR 10.00 should be construed as preempting or precluding more stringent protection of wetlands or other natural resource areas by local by-law, ordinance or regulation.

10.02: Statement of Jurisdiction

(1) Areas Subject to Protection under M.G.L. c. 131, § 40. The following areas are subject to protection under M.G.L. c. 131, § 40:

- (a) Any bank, the ocean
- any freshwater wetland, any estuary
- any coastal wetland, any creek
- any beach, bordering any river
- any dune, on any stream
- any flat, any pond
- any marsh, or any lake
- or any swamp
- (b) Land under any of the water bodies listed above
- (c) Land subject to tidal action
- (d) Land subject to coastal storm flowage
- (e) Land subject to flooding
- (f) Riverfront area.

(2) Activities Subject to Regulation under M.G.L. c. 131, § 40.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

(a) Activities Within the Areas Subject to Protection under M.G.L. c. 131, § 40. Any activity proposed or undertaken within an area specified in 310 CMR 10.02(1), which will remove, fill, dredge or alter that area, is subject to Regulation under M.G.L. c. 131, § 40 and requires the filing of a Notice of Intent except:

1. minor activities within the riverfront area meeting the requirement of 310 CMR 10.02(2)(b)1. and 2.; and

10.02: continued

2. activities conducted to maintain, repair or replace, but not substantially change or enlarge an existing and lawfully located structure or facility used in the service of the public and used to provide electric, gas, water, sewer, telephone, telegraph and other communication services, provided said work utilizes the best practical measures to avoid or minimize impacts to wetland resource areas outside the footprint of said structure or facility. A project proponent claiming that work to remove, fill, dredge or alter an area specified in 310 CMR 10.02(1) does not require the filing of a Notice of Intent has the burden of establishing that the work is not subject to Regulation under M.G.L. c. 131, § 40.

(b) Activities Within the Buffer Zone. Any activity other than minor activities identified in 310 CMR 10.02(2)(b)2. proposed or undertaken within 100 feet of an area specified in 310 CMR 10.02(1)(a) (hereinafter called the Buffer Zone) which, in the judgment of the issuing authority, will alter an Area Subject to Protection under M.G.L. c. 131, § 40 is subject to regulation under M.G.L. c. 131, § 40 and requires the filing of a Notice of Intent. (See also 310 CMR 10.05(3)(a)2.). The areas subject to jurisdiction identified in 310 CMR 10.02(1)(b) through (f) do not have a buffer zone.

1. Minor activities, as described in 310 CMR 10.02(2)(b)2., within the buffer zone and outside any areas specified in 310 CMR 10.02(1)(a) through (e) are not otherwise subject to regulation under M.G.L. c. 131, § 40 provided that the work is performed: solely within the buffer zone, as prescribed in 310 CMR 10.02(2)(b)2.a. through q., in a manner so as to reduce the potential for any adverse impacts to the resource area during construction, and with post-construction measures implemented to stabilize any disturbed areas. Factors to consider when measuring the potential for adverse impacts to resource areas include the extent of the work, the proximity to the resource area, the need for erosion controls, and the measures employed to prevent adverse impacts to resource areas during and following the work.

2. The following minor activities, provided that they comply with 310 CMR 10.02(2)(b)1., are not otherwise subject to regulation under M.G.L. c. 131, § 40:

- a. Unpaved pedestrian walkways less than 30 inches wide for private use and less than three feet wide for public access on conservation property;
- b. Fencing, provided it will not constitute a barrier to wildlife movement; stonewalls; stacks of cordwood;
- c. Vista pruning, provided the activity is located more than 50 feet from the mean annual high water line within a Riverfront Area or from Bordering Vegetated Wetland, whichever is farther. (Pruning of landscaped areas is not subject to jurisdiction under 310 CMR 10.00.);
- d. Plantings of native species of trees, shrubs, or groundcover, but excluding turf lawns;
- e. The conversion of lawn to uses accessory to residential structures such as decks, sheds, patios, pools, replacement of a basement bulkhead and the installation of a ramp for compliance with accessibility requirements, provided the activity, including material staging and stockpiling is located more than 50 feet from the mean annual high-water line within the Riverfront Area, Bank or from Bordering Vegetated Wetland, whichever is farther, and erosion and sedimentation controls are implemented during construction. The conversion of such uses accessory to existing single family houses to lawn is also allowed. (Mowing of lawns is not subject to jurisdiction under 310 CMR 10.00);
- f. The conversion of impervious to vegetated surfaces, provided erosion and sedimentation controls are implemented during construction;
- g. Activities that are temporary in nature, have negligible impacts, and are necessary

for planning and design purposes (*e.g.*, installation of monitoring wells, exploratory borings, sediment sampling and surveying and percolation tests for septic systems provided that resource areas are not crossed for site access);

h. Installation of directly embedded utility poles and associated anchors, push braces or grounding mats/rods along existing paved or unpaved roadways and private roadways/driveways, and their existing maintained shoulders, or within existing railroad rights-of-way, provided that all work is conducted within ten feet of the road or driveway shoulder and is a minimum of ten feet from the edge of the Bank or Bordering Vegetated Wetland and as far away from resource areas as practicable, with no additional tree clearing or substantial grading within the buffer zone, and provided that all vehicles and machinery are located within the roadway surface during work;

10.02: continued

- i. Installation of underground utilities (*e.g.*, electric, gas, water) within existing paved or unpaved roadways and private roadways/driveways, provided that all work is conducted within the roadway or driveway and that all trenches are closed at the completion of each workday;
- j. Installation and repair of underground sewer lines within existing paved or unpaved roadways and private roadways/driveways, provided that all work is conducted within the roadway or driveway and that all trenches are closed at the end of completion of each workday;
- k. Installation of new equipment within existing or approved electric or gas facilities when such equipment is contained entirely within the developed/disturbed existing fenced yard;
- l. Installation of access road gates at public or private road entrances to existing utility right-of-way access roads, provided that all vehicles and machinery are located within the roadway surface during work;
- m. Removal of existing utility equipment (poles, anchors, lines) along existing or approved roadways or within existing or approved electric, water or gas facilities, provided that all vehicles and machinery are located within the roadway surface during work;
- n. Vegetation cutting for road safety maintenance, limited to the following:
 - i. Removal of diseased or damaged trees or branches that pose an immediate and substantial threat to driver safety from falling into the roadway;
 - ii. Removal of shrubbery or branches to maintain clear guardrails; such removal shall extend no further than six feet from the rear of the guardrail;
 - iii. Removal of shrubbery or branches to maintain sight distances at existing intersections; such removal shall be no farther than five feet beyond the "sight triangles" established according to practices set forth in *American Association of State Highway and Transportation Officials (AASHTO) A Policy on Geometric Design of Highways and Streets, 2011*, 6th edition, and such removal is a minimum of ten feet from a resource area, other than Riverfront Area; and
 - iv. Removal of shrubbery, branches, or other vegetation required to maintain the visibility of road signs and signals.

Cuttings of shrubs and branches from mature trees will be performed with suitable horticultural equipment and methods that do not further damage the trees. To prevent the possible export of invasive plants, cut vegetation should be chipped and evenly spread on site, provided the chips are spread outside the buffer zone, and raked to a depth not to exceed three inches, clear of all drainage ways. Alternatively, all cuttings and slash shall be removed from the site and properly disposed;
- o. Installation, repair, replacement or removal of signs, signals, sign and signal posts and associated supports, braces, anchors, and foundations along existing paved roadways and their shoulders, provided that work is conducted as far from resource areas as practicable, and is located a minimum of ten feet from a resource area, any excess soil is removed from the project location, and any disturbed soils are stabilized as appropriate;
- p. Pavement repair, resurfacing, and reclamation of existing roadways within the right-of-way configuration provided that the roadway and shoulders are not widened, no staging or stockpiling of materials, all disturbed road shoulders are stabilized within 72 hours of completion of the resurfacing or reclamation, and no work on the drainage system is performed, other than adjustments and/or repairs to respective

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

structures within the roadway;

q. The repair or replacement of an existing and lawfully located driveway servicing not more than two dwelling units provided that all work remains within the existing limits of the driveway and all surfaces are permanently stabilized within 14 days of final grade.

3. Activities within the buffer zone which do not meet the requirements of 310 CMR 10.02(2)(b)1. and 2. are subject to preconstruction review through the filing of a Determination of Applicability to clarify jurisdiction or a Notice of Intent under the provisions of 310 CMR 10.05(4) and 10.53(1).

10.02: continued

(c) Notwithstanding the provisions of 310 CMR 10.02(1) and (2)(a) and (b), stormwater management systems designed, constructed, installed, operated, maintained, and/or improved as defined in 310 CMR 10.04 in accordance with the *Stormwater Management Standards* as provided in the *Stormwater Management Policy (1996)* or 310 CMR 10.05(6)(k) through (q) do not by themselves constitute Areas Subject to Protection under M.G.L. c. 131, § 40 or Buffer Zone provided that:

1. the system was designed, constructed, installed, and/or improved as defined in 310 CMR 10.04 on or after November 18, 1996; and
2. if the system was constructed in an Area Subject to Protection under M.G.L. c. 131, § 40 or Buffer Zone, the system was designed, constructed, and installed in accordance with all applicable provisions in 310 CMR 10.00.

(d) Activities Outside the Areas Subject to Protection under M.G.L. c. 131, § 40 and the Buffer Zone. Any activity proposed or undertaken outside the areas specified in 310 CMR 10.02(1) and outside the Buffer Zone is not subject to regulation under M.G.L. c. 131, § 40 and does not require the filing of a Notice of Intent unless and until that activity actually alters an Area Subject to Protection under M.G.L. c. 131, § 40. In the event that the issuing authority determines that such activity has in fact altered an Area Subject to Protection under M.G.L. c. 131, § 40, it may require the filing of a Notice of Intent and/or issuance of an Enforcement Order and shall impose such conditions on the activity or any portion thereof as it deems necessary to contribute to the protection of the interests identified in M.G.L. c. 131, § 40.

(3) Notwithstanding the provisions of 310 CMR 10.02(1) and (2), the maintenance of a stormwater management system constructed and/or improved as defined in 310 CMR 10.04 from November 18, 1996 through January 1, 2008, in accordance with the *Stormwater Management Standards*, as provided in the *Massachusetts Stormwater Policy*, issued by the Department on November 18, 1996 or on or after January 2, 2008, in accordance with the *Stormwater Management Standards* as provided in 310 CMR 10.05(6)(k) through (q) is not subject to regulation under M.G.L. c. 131, § 40 provided that:

- (a) if the system was constructed in an Area Subject to Protection under M.G.L. c. 131, § 40 or associated Buffer Zone, the system was constructed in accordance with all applicable provisions of 310 CMR 10.00;
- (b) the work to maintain the stormwater management system is limited to maintenance of a stormwater management system as defined in 310 CMR 10.04; and
- (c) said work utilizes best practical measures to avoid and minimize impacts to wetland resource area outside the footprint of the stormwater management system.

Notwithstanding the provisions of 310 CMR 10.02(1) and (2), any bordering vegetated wetland, bank, land under water, land subject to flooding, or riverfront area created solely for the purpose of stormwater management shall not require the filing of a Notice of Intent to maintain the stormwater management system, provided that:

1. the work to maintain the stormwater management system is limited to the maintenance of a stormwater management system as defined in 310 CMR 10.04;
2. the stormwater management system was proposed in a Notice of Intent filed before January 2, 2008, and conforms to an Order of Conditions issued after April 1, 1983;
3. the area is not altered for other purposes; and
4. said work utilizes best practical measures to avoid and minimize impacts to wetland resource areas outside the footprint of the stormwater management system.

(4) Notwithstanding anything to the contrary in 310 CMR 10.00, work other than maintenance that may alter or affect a stormwater management system (including work to repair or replace

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

the stormwater management system, and any change to the site that increases the total or peak volume of stormwater managed by the system, directs additional stormwater to the system, and/or increases the volume of stormwater exposed to land uses with higher potential pollutant loads) that was designed, constructed, installed and/or improved after November 18, 1996, as defined in 310 CMR 10.04, and if constructed in an Area Subject to Protection under M.G.L. c. 131, § 40 or Buffer Zone, as described in 310 CMR 10.02(1) and (2)(a) through (d), the system was constructed in accordance with all applicable provisions of 310 CMR 10.00, solely for the purpose of stormwater management, in accordance with the *Stormwater Management Standards* as provided in the *Stormwater Management Policy (1996)* or 310 CMR 10.05(6)(k) through (q), may be permitted through an Order of Conditions, or Negative Determination of Applicability provided that the work:

10.02: continued

- (a) at a minimum provides the same capacity as the original design to attenuate peak discharge rates, recharge the ground water, and remove total suspended solids;
- (b) complies with the *Stormwater Management Standards* as provided in 310 CMR 10.05(6)(k) through (q); and
- (c) meets all the applicable performance standards for any work that expands the existing stormwater management system into an Area Subject to Protection under M.G.L. c. 131, § 40 or Buffer Zone as described in 310 CMR 10.02(1) and (2)(a) through (d).

(5) For purposes of 310 CMR 10.02(2)(c) and (4), the applicant has the burden of proving that the proposed project involves a stormwater management system designed, constructed, installed, operated, maintained and/or improved as defined at 310 CMR 10.04 in accordance with the Stormwater Management Standards as provided in the *Stormwater Management Policy (1996)* or 310 CMR 10.05(6)(k) through (q) and that the system was designed, constructed, installed and/or improved on or after November 18, 1996. The applicant also has the burden of establishing whether said stormwater management system was installed in an Area Subject to Protection under M.G.L. c. 131, § 40 or associated Buffer Zone, and, if so, that the system was constructed in accordance with all applicable provisions of 310 CMR 10.00. An applicant shall use the best evidence available to meet the burden of proof required. For purposes of 310 CMR 10.02(2)(c) and (4), the best evidence is the Order of Conditions, Order of Resource Area Delineation or Determination of Applicability for the project served by the stormwater management system together with the plans referenced in and accompanying such Order or Determination, and, if applicable, the Certificate of Compliance. If the best evidence is available, the date the system was designed shall be the date the Notice of Intent, Request for Determination or Notice of Resource Area Delineation was filed. If the best evidence is not available, the applicant shall rely on other credible evidence to meet the required burden of proof such as local approval of the stormwater management system along with the plans referenced in and accompanying said approval and any wetland conservancy maps and wetland change maps for the relevant time period published by the Department on MassGIS.

Commentary

The Department has determined that activities within Areas Subject to Protection under M.G.L. c. 131, § 40 are so likely to result in the removing, filling, dredging or altering of those areas that preconstruction review is always justified, and that the issuing authority shall therefore always require the filing of a Notice of Intent for said activities.

The Department has determined that activities within 100 feet of those areas specified in 310 CMR 10.02(1)(a) are sufficiently likely to alter said areas that preconstruction review may be necessary. Therefore, a request for a Determination of Applicability must be filed for some activities within the Buffer Zone. The issuing authority shall then make a determination as to whether the activity so proposed will alter an Area Subject to Protection under M.G.L. c. 131, § 40 and, if so, shall require the filing of a Notice of Intent for said activities. The issuing authority shall not require the filing of a Notice of Intent if it determines that the activity proposed within the Buffer Zone will not alter an Area Subject to Protection under M.G.L. c. 131, § 40.

The Department has determined that activities outside the Areas Subject to Protection under M.G.L. c. 131, § 40 and outside the Buffer Zone are so unlikely to result in the altering of Areas Subject to Protection under M.G.L. c. 131, § 40 that preconstruction review is not required, and therefore the issuing authority shall not regulate said activities unless and until they actually result in the altering of an Area Subject to Protection under M.G.L. c. 131, § 40.

10.03: General Provisions

(1) Burden of Proof.

(a) Any person who files a Notice of Intent to perform any work within an Area Subject to Protection under M.G.L. c. 131, § 40 or within the Buffer Zone has the burden of demonstrating to the issuing authority:

1. that the area is not significant to the protection of any of the interests identified in M.G.L. c. 131, § 40; or
2. that the proposed work within a resource area will contribute to the protection of the interests identified in M.G.L. c. 131, § 40 by complying with the general performance standards established by 310 CMR 10.00 for that area.

10.03: continued

3. that proposed work within the buffer zone will contribute to the protection of the interests identified in M.G.L. c. 131, § 40, except that proposed work which lies both within the riverfront area and within all or a portion of the buffer zone to another resource area shall comply with the performance standards for riverfront areas at 310 CMR 10.58. For minor activities as specified in 310 CMR 10.02(2)b.1. within the riverfront area or the buffer zone to another resource area, the Department has determined that additional conditions are not necessary to contribute to the protection of the interests identified in M.G.L. c. 131, § 40.

(b) Any person who requests the issuing authority to regulate work taking place outside an Area Subject to Protection under M.G.L. c. 131, § 40 and outside the Buffer Zone has the burden of demonstrating to the satisfaction of the issuing authority that the work has in fact altered an Area Subject to Protection under M.G.L. c. 131, § 40.

(2) Burden of Going Forward. The burden of going forward means having to produce at least some credible evidence from a competent source in support of the position taken. This burden shall be upon the person contesting the Department's position when the Department has been requested to hold an adjudicatory hearing. In the event that under the provisions of 310 CMR 10.03 two or more persons have the burden of going forward, said burden may be placed on all or any number of them, in the discretion of the hearing officer.

(3) Presumption Concerning 310 CMR 15.000: *The State Environmental Code, Title 5: Standard Requirements for the Siting, Construction, Inspection, Upgrade and Expansion of On-site Sewage Treatment and Disposal Systems and for the Transport and Disposal of Septage.* A subsurface sewage disposal system that is to be constructed in compliance with the requirements of 310 CMR 15.000: *The State Environmental Code, Title 5: Standard Requirements for the Siting, Construction, Inspection, Upgrade and Expansion of On-site Sewage Treatment and Disposal Systems and for the Transport and Disposal of Septage*, or more stringent local board of health requirements, shall be presumed to protect the eight interests identified in M.G.L. c. 131, § 40, but only if none of the components of said system is located within the following resource areas:

(a) Coastal.

1. coastal bank;
2. coastal beach;
3. coastal dune;
4. salt marsh.

(b) Inland.

- | | | |
|----------------|-----------|---------|
| 1. wet meadows | | creek; |
| 2. marsh | bordering | river; |
| 3. swamp | on any | stream; |
| 4. bog | | pond; |
| | | lake. |

and only if the soil absorption system of said system is set back at least 50 feet horizontally from the boundary of said areas, as required by 310 CMR 15.211: *Minimum Setback Distances*, or a greater distance as may be required by more stringent local ordinance, by-law or regulation. To protect wildlife habitat within riverfront areas, the soil absorption system shall not be located within 100 feet of the mean annual high-water line unless there is no alternative location on the lot which conforms to 310 CMR 15.000: *The State Environmental Code, Title 5: Standard Requirements for the Siting, Construction, Inspection, Upgrade and Expansion of On-site*

Sewage Treatment and Disposal Systems and for the Transport and Disposal of Septage without requiring a variance as determined by the local Board of Health, with less adverse effects on resource areas.

This presumption, however, shall apply only to impacts of the discharge from a sewage disposal system, and not to the impacts from construction of that system, such as erosion and siltation from the excavation, placement of fill, or removal of vegetation. Impacts from construction shall be minimized by the placement of erosion and sedimentation controls during excavation, limiting the placement of fill, confining the removal of vegetation to that necessary for the footprint of the system, and taking other measures deemed necessary by the issuing authority.

10.03: continued

The setback distance specified above shall be determined by measuring from the boundary of the area in question, from the contour at the mean annual flood elevation in inland areas, or from the top of a coastal bank or the contour at the highest spring tide elevation in coastal areas, whichever is further from the water body.

The setback distance specified above shall not be required for the renovation or replacement (but is required for the substantial enlargement) of septic systems constructed prior to the effective date of 310 CMR 10.00, provided no alternative location is available on the lot and such work has been approved by the local board of health or the Department, as required by law.

This presumption may be overcome only by credible evidence from a competent source that compliance with 310 CMR 15.000: *The State Environmental Code, Title 5: Standard Requirements for the Siting, Construction, Inspection, Upgrade and Expansion of On-site Sewage Treatment and Disposal Systems and for the Transport and Disposal of Septage* or more stringent local requirements will not protect the interests identified in M.G.L. c. 131, § 40.

(4) Presumption Concerning Point-source Discharges. If the Department has issued a permit pursuant to M.G.L. c. 21, § 43, in conjunction with a federal NPDES (National Pollutant Discharge Elimination System) permit for any new point-source discharge of pollutants, or will issue such a permit, prior to commencement of the discharge, the effluent limitations established in the permit shall be presumed to protect the eight interests identified in M.G.L. c. 131, § 40 with respect to the effects of the discharge on water quality. The permit and any subsequent amendments thereto shall be referenced in the Order and deemed incorporated therein.

This presumption shall apply only to impacts of the discharge from the source, and not to impacts from construction of the source.

This presumption may be overcome only by credible evidence from a competent source that said effluent limitations will not protect the interests identified in M.G.L. c. 131, § 40.

(5) Presumption of Significance. Each Area Subject to Protection under M.G.L. c. 131, § 40 is presumed to be significant to one or more of the interests identified in M.G.L. c. 131, § 40. These presumptions are rebuttable and are set forth in 310 CMR 10.21 through 10.60.

For riverfront areas, the issuing authority may find that the presumptions of significance are partially rebutted as provided in 310 CMR 10.58(3).

(6) Presumption Concerning Application of Herbicides.

(a) Any application of herbicides within any Area Subject to Protection under M.G.L. c. 131, § 40 or the Buffer Zone associated with a structure or facility which is:

1. existing and lawfully located;
2. used in the service of the public; and
3. used to provide electric, gas, water, sewer, telephone, telegraph and other telecommunication services

shall be presumed to constitute work performed in the course of maintaining such structure or facility, and shall be accorded the exemption of such work under M.G.L. c. 131, § 40, only if the application of herbicides to that structure or facility is performed in accordance with such plans as are required by the Department of Food and Agriculture pursuant to 333 CMR 11.00: *Rights of Way Management*, effective July 10, 1987.

(b) Any application of herbicides within the Buffer Zone, other than as provided in 310 CMR 10.03(6)(a), shall be presumed not to alter an Area Subject to Protection under M.G.L. c. 131, § 40, only if the work is performed in accordance with such plans as are required by the Department of Food and Agriculture pursuant to 333 CMR 11.00: *Rights of Way Management*, effective July 10, 1987. This presumption shall apply only if the

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

person proposing such activity has requested and obtained a determination of the boundaries of the Buffer Zone and Areas Subject to Protection under M.G.L. c. 131, § 40 in accordance with 310 CMR 10.05(3)(a)1. and 2.; and has submitted that determination as part of the Vegetation Management Plan.

(c) Any application of herbicides for management of rights of way within a riverfront area not subject to 310 CMR 10.03(6)(a) or (b), provided the area is outside any other resource area and qualifies under the provisions of 310 CMR 10.58(6)(a), shall be accorded an exemption of such work under M.G.L. c. 131, § 40, provided that the application of herbicides is performed in accordance with such plans as are required by the Department of Food and Agriculture pursuant to 333 CMR 11.00: *Rights of Way Management*.

10.03: continued

(7) Fees.(a) General Fee Provisions.

1. Notices of Intent. All Notices of Intent filed pursuant to 310 CMR 10.00 shall be accompanied by a filing fee, the amount of which shall be determined by 310 CMR 4.00: *Timely Action Schedule and Fee Provisions* and a brief statement indicating how the applicant calculated the fee. 50% of any filing fee in excess of \$25.00 shall be made payable, by check or money order, to the Commonwealth of Massachusetts and shall be sent to the DEP Lock Box accompanied by the Notice of Intent Fee Transmittal Form. The remainder of said fee shall be made payable, by check or money order, to the city or town in which the work is proposed.

2. Requests for Action by the Department. Any person who files a Request for a Superseding Determination of Applicability (310 CMR 10.05(3)(c)), a Request for Superseding Order of Conditions or superseding Order of Resource Area Delineation (310 CMR 10.05(7)(a)), a Request for Adjudicatory Hearing (310 CMR 10.05(7)(j)), a Request to Intervene in any Adjudicatory Hearing (310 CMR 1.01(9)(a)), or a Request for a Variance, (310 CMR 10.05(10)), (*see* also 310 CMR 10.03(7)(e)), shall simultaneously submit a filing fee, in the amount specified by 310 CMR 4.00: *Timely Action Schedule and Fee Provisions*. All such fees shall be paid by check or money order payable to the Commonwealth of Massachusetts and shall be sent to the DEP Lock Box, accompanied by the Request for Departmental Action Fee Transmittal Form. A copy of the Request for Departmental Action Fee Transmittal Form and a copy of the check shall accompany the request for Departmental action.

(b) Specific Provisions for Notice of Intent Fees. In accordance with General Instructions for Completing a Notice of Intent and Abbreviated Notice of Intent, the minimum submittal requirements shall include payment of the filing fee specified in 310 CMR 10.03(7)(c). A conservation commission shall notify, in writing, the appropriate Department Regional Office and the applicant when the correct filing fee has not been paid to the city or town and the filing is therefore incomplete. Said notification shall specify the correct fee amount. The Department shall also notify, in writing, the applicant and the conservation commission when the fee due to the Department has not been paid to the Department and the filing is therefore incomplete. Said notification shall specify the fee due to the Department. The fee will be based on the initial project design as proposed in the Notice of Intent.

1. Disputes over Notice of Intent Filing Fees. Whenever the conservation commission or the Department determines that an inadequate fee has been paid, the time period for the conservation commission or the Department to act shall be stayed until the balance of the fee is paid.

a. Where, in the opinion of the conservation commission or the Department, less than the full filing fee has been included with the Notice of Intent, the Notice shall be deemed complete (assuming all other minimum submittal requirements have been met), and the stay shall be lifted, upon payment of the additional fee specified by the Department or the conservation commission. If the applicant has disputed all or a part of the balance of the fee, after issuance of a Final Order which resolves the fee dispute, in favor of the applicant any disputed funds paid by the applicant in excess of the filing fee as determined in the Final Order shall be paid to the applicant by the Commonwealth and the city or town.

b. In *lieu* of paying any disputed amount of the filing fee, the applicant may file a Request for Determination of Applicability under 310 CMR 10.05(3)(a), with sufficient information to enable the conservation commission to determine the extent of the area, or the type and extent of the activity, subject to protection under

M.G.L. c. 131, § 40.

When a Request for Determination of Applicability is filed by an Applicant to resolve a dispute over the filing fee, all proceedings under the Notice of Intent shall be stayed until all appeal periods for the Determination have elapsed or, if the Determination is appealed until all proceedings before the Department have been completed.

A Final Determination of Applicability as to the area, or the type and extent of the activity, subject to protection under M.G.L. c. 131, § 40 shall be binding on all parties and shall be used in calculating the fee.

10.03: continued

(c) Activities Subject to Notice of Intent Fees. The following activity descriptions are intended to include all activities subject to filing of a Notice of Intent under M.G.L. c. 131, § 40. The fees imposed by 310 CMR 10.03 are applicable only to those activities subject to jurisdiction under M.G.L. c. 131, § 40. The fee for work proposed under a single Notice of Intent that involves more than one activity noted below, shall be determined by adding the fees for each of the proposed activities. When the work involves activities within the riverfront area as well as another resource area or the buffer zone, the fee shall be determined by adding an additional 50% of the fee calculated for activities in another resource area(s) or the buffer zone to another resource area for each of the proposed activities within the riverfront area. When the work involves activities within the riverfront area but no other resource area, the fee shall be determined by adding the fees for each of the proposed activities within the riverfront area.

1. Category 1.

- a. Any work on a single family residential lot including a house addition, deck, garage, garden, pool, shed, or driveway. Activities excluded from Category 1 include driveways reviewable under 310 CMR 10.53(3)(e) (*See Category 2f.*); construction of an unattached single family house; and construction of a dock, pier, or other coastal engineering structure.
- b. Site preparation of each single family house lot, including removal of vegetation, excavation and grading, where actual construction of the house is not proposed under the Notice of Intent.
- c. Control of nuisance vegetation by removal, herbicide treatment or other means, from a resource area, on each single family lot, as allowable under 310 CMR 10.53(4).
- d. Resource improvement allowed under 310 CMR 10.53(4), other than removal of aquatic nuisance vegetation, as allowed under 310 10.53(4).
- e. Construction, repair, replacement or upgrading of a subsurface septic system or any part of such a system.
- f. Activities associated with installation of a monitoring well, other than construction of an access roadway thereto.
- g. New agriculture, including forestry on land in forest use (310 CMR 10.53(3)(r) and (s)), and aquacultural projects.

2. Category 2.

- a. Construction of each single family house (including single family houses in a subdivision), any part of which is in a buffer zone or resource area. Any activities associated with the construction of said house(s), including associated site preparation and construction of retention/detention basins, utilities, septic systems, roadways and driveways other than those roadways or driveways reviewable under 310 CMR 10.53(3)(e) (*See Category 2f.*), shall not be subject to additional fees if all said activities are reviewed under a single Notice of Intent. (For apartment/condominium type buildings *See Category 3.*)
- b. Parking lot of any size.
- c. The placement of sand for purposes of beach nourishment.
- d. Any projects reviewable under 310 CMR 10.24(7)(a) through (c).
- e. Any activities reviewable under 310 CMR 10.53(3)(d) and (f) through (l), except for those subject to 310 CMR 10.03(7)(c)4.b. Where more than one activity is proposed within an identical footprint (*e.g.*, construction of a sewer within the footprint of a new roadway), only one fee shall be payable.
- f. Construction of each crossing for a driveway associated with an unattached single

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

family house, reviewable under 310 CMR 10.53(3)(e).

g. Any point source discharge.

h. Control of nuisance vegetation, other than on a single family lot, by removal, herbicide treatment or other means, reviewable under 310 CMR 10.53(4).

i. Raising or lowering of surface water levels for flood control or any other purpose.

j. Any other activity not described in Categories 1, 3, 4, 5 or 6 (*e.g.*, the determination of whether a stream is perennial or intermittent).

k. The exploration for (but not development, construction, expansion, maintenance, operation or replacement of) public water supply wells or wellfields derived from groundwater, reviewable under 310 CMR 10.53(3)(o).

l. Test projects pursuant to 310 CMR 10.05(11).

10.03: continued

3. Category 3.

- a. Site preparation, for any development other than an unattached single family house(s), including the removal of vegetation, excavation and grading, where actual construction is not proposed in the Notice of Intent.
- b. Construction of each building for any commercial, industrial, institutional, or apartment/condominium/townhouse-type development, any part of which is in a buffer zone or resource area. Any activities associated with the construction of said building, including associated site preparation and construction of retention/detention basins, septic systems, parking lots, utilities, point source discharges, package sewage treatment plants, and roadways and driveways other than those roadways or driveways reviewable under 310 CMR 10.53(3)(e), shall not be subject to additional fees if all said activities are reviewed under a single Notice of Intent.
- c. Construction of each roadway or driveway, not reviewable under 310 CMR 10.53(3)(e), and not associated with construction of an unattached single family house.
- d. Any activity associated with the clean up of hazardous waste, except as otherwise noted in Category 4, including excavation, destruction of vegetation, change in subsurface hydrology, placement of collection wells or other structures for collection and treatment of contaminated soil and/or water.
- e. The development, construction, expansion, maintenance, operation, or replacement of (but not exploration for) public water supply wells or wellfields derived from groundwater, reviewable under 310 CMR 10.53(3)(o).

4. Category 4.

- a. Construction of each crossing for a limited project access roadway or driveway reviewable under 310 CMR 10.53(3)(e) associated with a commercial, industrial, or institutional development or with any residential construction (other than a roadway or driveway associated with construction of an unattached single family house).
- b. Construction, modification, or repair of a flood control structure such as a dam, reservoir, tidegate, sluiceway, or appurtenant works.
- c. Creation, operation, maintenance or expansion of a public or private landfill.
- d. Creation, operation, maintenance or expansion of a public or private sand and/or gravel operation including but not limited to excavation, filling, and stockpiling.
- e. Construction of new railroad lines or extensions of existing lines, including ballast area, placement of track, signals and switches and other related structures.
- f. Construction, reconstruction, expansion, or maintenance of any bridge, except to gain access to a single family house lot.
- g. Any alteration of a resource area(s) to divert water for the clean up of a hazardous waste site, for non-exempt mosquito control projects, or for any other purpose not expressly identified elsewhere in this fee schedule.
- h. Any activities, including the construction of structures, associated with a dredging operation conducted on land under a waterbody, waterway, or the ocean. If the dredging is directly associated with the construction of a new dock, pier or other structure identified in Category 5, only the Category 5 fee shall apply.
- i. Construction of, or the discharge from, a package sewage treatment plant.
- j. Airport vegetation removal projects reviewable under 310 CMR 10.24(7)(c)5. and 10.53(3)(n).
- k. Landfill closure projects reviewable under 310 CMR 10.24(7)(c)4. and 10.53(3)(p).
- l. Any activities, including the construction of structures, associated with the assessment, monitoring, containment, mitigation, and remediation of, or other

response to, a release or threat of release of oil and/or hazardous material reviewable under 310 CMR 10.24(7)(c)6. or 10.53(3)(q).

5. Category 5. Construction, reconstruction, repair or replacement of docks, piers, revetments, dikes, or other engineering structures on coastal or inland resource areas, including the placement of rip rap or other material on coastal or inland resource areas.
6. Category 6. The linear delineation (*e.g.* bordering vegetated wetland, riverfront area, bordering land subject to flooding) of each resource area under an Abbreviated Notice of Resource Area Delineation constitutes a separate activity. The fee associated with each resource area delineation proposed under an Abbreviated Notice of Resource Area Delineation shall be determined by adding the fees for each type of resource area delineation.

10.03: continued

(d) Requests for Action by the Department. Any person's request for action by the Department will not be deemed complete and time periods, if any, shall not commence, unless the person making the request has paid the appropriate filing fee specified in 801 CMR 4.02: *Fees of Licenses, Permits, and Services to Be Charged by State Agencies* (310).

(e) Fees for Requests for Action by Department. The following requests for action by the Department are subject to the fees established in 310 CMR 4.00: *Timely Action Schedule and Fee Provisions*.

1. Request for a Superseding Determination of Applicability.
2. Request for a Superseding Order of Conditions.
3. Request for an Adjudicatory Hearing or for a Variance which is necessary to avoid an unconstitutional taking.
4. Request to Intervene in an Adjudicatory Proceeding.
5. Request for a Variance, except where necessary to avoid an unconstitutional taking.

(f) Waivers and Exemptions. See 310 CMR 4.00: *Timely Action Schedule and Fee Provisions* for provisions concerning waivers or exemptions from the requirements of 310 CMR 10.03(7).

10.04: Definitions

Abutter means the same as owner of land abutting the activity.

Act means the Wetlands Protection Act, M.G.L. c. 131, § 40.

Activity means any form of draining, dumping, dredging, damming, discharging, excavating, filling or grading; the erection, reconstruction or expansion of any buildings or structures; the driving of pilings; the construction or improvement of roads and other ways; the changing of run-off characteristics; the intercepting or diverging of ground or surface water; the installation of drainage, sewage and water systems; the discharging of pollutants; the destruction of plant life; and any other changing of the physical characteristics of land.

Aggrieved means the same as person aggrieved.

Agriculture. For the purposes of 310 CMR 10.04 the following words and phrases have the following meanings:

(a) Land in Agricultural Use means land within resource areas or the Buffer Zone presently and primarily used in producing or raising one or more of the following agricultural commodities for commercial purposes:

1. animals, including but not limited to livestock, poultry, and bees;
2. fruits, vegetables, berries, nuts, maple sap, and other foods for human consumption;
3. feed, seed, forage, tobacco, flowers, sod, nursery or greenhouse products, and ornamental plants or shrubs; and
4. forest products on land maintained in forest use, including but not limited to biomass, sawlogs, and cordwood, but not including the agricultural commodities described in 310 CMR 10.04: Agriculture(a)1. through 3.

Additionally, land in agricultural use means land within resource areas or the Buffer Zone presently and primarily used in a manner related to, and customarily and necessarily used in, producing or raising such commodities, including but not limited to: existing access roads and livestock crossings; windbreaks; hedgerows; field edges; bee yards; sand pits; landings for forest products; fence lines; water management projects such as reservoirs, farm ponds, irrigation

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

systems, field ditches, cross ditches, canals/channels, grass waterways, dikes, sub-surface drainage systems, watering facilities, water transport systems, and water storage systems; agricultural composting sites; agricultural storage and work areas; and land under farm structures.

Land in agricultural use may lie inactive for up to five consecutive years unless it is under a United States Department of Agriculture (USDA) contract for a longer term pursuant to the Conservation Reserves Program (the Food Securities Act of 1985, as amended by the Food, Agriculture, Conservation and Trade Act of 1990; and 7 CFR 1410), or it is used for the forestry purposes described in 310 CMR 10.04: Agriculture(b)14. through 17. The issuing authority may require appropriate documentation, such as a USDA Farm Plan or aerial photography, to demonstrate agricultural use.

10.04: continued

(b) Normal Maintenance of Land in Agricultural Use, which in all cases does not include placing substantial amounts of fill in Bordering Land Subject to Flooding or filling or dredging a Salt Marsh, means the following activities, without enlargement as to geographical extent, that are occurring on land in agricultural use, when directly related to production or raising of the agricultural commodities referenced in 310 CMR 10.04: Agriculture(a), when undertaken in such a manner as to prevent erosion and siltation of adjacent water bodies and wetlands, and when conducted in accordance with federal and state laws:

1. all crop management practices, not to include drainage in a Bordering Vegetated Wetland, customarily employed to enhance existing growing conditions, including but not limited to: tillage, trellising, pruning, mulching, shading, and irrigating; and all customary harvesting practices such as digging, picking, combining, threshing, windrowing, baling, curing, and drying;
2. the use of fertilizers, manures, compost materials, and other soil amendments; pesticides and herbicides; traps; and other such materials;
3. the repair or replacement of existing access roads and livestock crossings;
4. the maintenance of:
 - a. existing forest boundary lines up to five feet wide limited to cutting vegetation within the existing boundary lines;
 - b. windbreaks;
 - c. hedgerows; and
 - d. fire breaks on land maintained in forest use and owned by the Metropolitan District Commission, the Department of Environmental Management, or the Department of Fisheries, Wildlife, and Environmental Law Enforcement;
5. the management of existing field edges, limited to within 100 feet from the land in production, including the following practices:
 - a. mowing;
 - b. burning;
 - c. brush cutting; and
 - d. removing trees.

The management of any field edge that falls within a Bordering Vegetated Wetland is not intended to allow the conversion of Bordering Vegetated Wetland into cropland. Therefore, the field management practices described in 310 CMR 10.04: Agriculture (b)(5)a. through d. may occur in a Bordering Vegetated Wetland provided that:

- i. the cutting or removal of trees and understory vegetation shall not occur within 25 feet of the bank of a water body that is not managed within the land in production (field ditches, cross ditches, grass waterways, irrigation systems, and farm ponds are examples of managed water bodies) unless the trees or understory vegetation are removed to control alternative hosts but no more than 50% of the canopy may be removed, or except to maintain existing dikes;
 - ii. slash, branches, and limbs resulting from the cutting and removal operations shall not be placed within 25 feet of the bank of a water body that is not managed within the land in production; and
 - iii. no tilling, filling, excavation, or other change in the existing topography shall occur within the field edge;
6. the maintenance and repair of existing fences and the management of temporary fence lines;
 7. the cleaning, clearing, grading, repairing, dredging, or restoring of existing man-made or natural water management systems such as reservoirs, farm ponds, irrigation systems,

field ditches, cross ditches, canals/channels, grass waterways, dikes, sub-surface drainage systems, watering facilities, water transport systems, vents, and water storage systems, all in order to provide drainage, prevent erosion, provide more effective use of water, or provide for efficient use of equipment, and all for the purpose of maintaining favorable conditions for ongoing growing or raising of agricultural commodities;

8. the maintenance and repair of ongoing agricultural composting sites, storage areas, and work areas and the storage of fertilizers, pesticides, manures, compost materials, and other soil amendments, provided that such storage occurs only in the Buffer Zone or Bordering Land Subject to Flooding;

9. the repair and maintenance of existing farm structures;

10.04: continued

10. the seeding of eroded or disturbed areas;
11. maintaining the flow of existing natural waterways;
12. the keeping of livestock and poultry and the management of beehives;
13. the cultivation of cranberries, including the following practices:
 - a. the activities described in 310 CMR 10.04: Agriculture(b)1. through 11.;
 - b. the application of sand to existing bogs and the excavation of sand from sand pits;
 - c. the repair and reconstruction of water control structures including flumes, pumps, dikes, and piping above and below the ground;
 - d. the regrading, including modification of drainage, and replanting of existing cranberry bogs;
 - e. the repair and replacement of dikes;
 - f. water harvesting activities; and
 - g. flooding and flood release;
14. the cutting and removal of trees for the purpose of selling the trees or any products derived therefrom, when carried out in accordance with a Forest Cutting Plan approved by the Department of Environmental Management (DEM) under the provisions of M.G.L. c. 132, §§ 40 through 46, and subject to the following:
 - a. the cutting and removal of trees within Bordering Vegetated Wetland shall be limited to no more than 50% of the basal area of the area to be cut and the work shall be conducted when the soil is frozen, dry or otherwise stable to support the equipment used;
 - b. except for the construction or maintenance of access described in 310 CMR 10.04(b)16., there shall be no filling, excavation, or other change in topography or hydrology of resource areas;
 - c. all soils that are exposed during or after any work described in 310 CMR 10.04: Agriculture(b)14. shall be stabilized to prevent the soils from eroding into Bordering Vegetated Wetlands beyond the work area or into open water bodies, in accordance with the Massachusetts Forestry Best Management Practices Manual;
 - d. the person claiming the exemption shall submit by certified mail or hand delivery at the same time to the conservation commission and the appropriate DEM Regional Office not less than ten days prior to the commencement of the activity, a copy of the Forest Cutting Plan that describes the proposed cutting and removal of trees and any activity within resource areas or the Buffer Zone. The conservation commission shall have the opportunity to comment to DEM on the plan;
 - e. landings for forest products shall not be located in Bordering Vegetated Wetland or Bank; and
 - f. any Forest Cutting Plan that is not affirmatively approved by DEM under M.G.L. c. 132, §§ 40 through 46 but instead is deemed approved due to the expiration of some period of time following the submittal of the plan to DEM for approval shall not be considered "approved" by DEM for the purposes of 310 CMR 10.04.
15. notwithstanding the use of the words "for commercial purposes" in the first sentence of 310 CMR 10.04: Agriculture(a), the cutting of trees within resource areas and the Buffer Zone by owners for their own use, not to exceed 5,000 board feet or ten cords of wood during any 12 month period without an approved Forest Cutting Plan or the cutting of trees within resources areas of greater than 5,000 board feet or ten cords but less than 10,000 board feet or 20 cords of wood during any 12 month period with an approved Forest Cutting Plan, provided that:
 - a. after the cutting, the remaining trees in the resource area (and the Buffer Zone,

if the activity is being conducted without an approved Forest Cutting Plan) shall be evenly distributed throughout the area where cutting occurred and the crown cover shall not be less than 50%. Crown cover is determined as the percent of the ground's surface that would be covered by a vertical projection of foliage from trees with a diameter at breast height of five inches or greater, where minor gaps between branches are disregarded and areas of overlapping foliage are counted only once;

b. the cutting and removal of trees shall occur only during those periods when the ground is sufficiently frozen, dry, or otherwise stable to support the equipment used;

10.04: continued

- c. the cutting, removal, or other destruction of trees and understory vegetation without a Forest Cutting Plan shall not occur within 25 feet of the Bank, except for the purpose of providing access for the activities described in 310 CMR 10.04: Agriculture(b)15;
 - d. the placement of slash, branches, and limbs resulting from the cutting and removal operations shall not occur within 25 feet of Bank;
 - e. no filling, excavation, or other change shall occur in the existing topography or hydrology of a resource area;
 - f. landings for forest products shall not be located in Bordering Vegetated Wetland or Bank; and
 - g. any Forest Cutting Plan that is not affirmatively approved by DEM under M.G.L. c. 132, §§ 40 through 46, but instead is deemed approved due to the expiration of some period of time following the submittal of the plan to DEM for approval shall not be considered "approved" by DEM for the purposes of 310 CMR 10.04.
16. the construction of new temporary access or the maintenance of existing legally constructed access for forestry activities described in 310 CMR 10.04: Agriculture(b)14. or 15. provided that:
- a. every practicable effort shall be made to avoid access, including stream crossings, and the construction of landings through and in resource areas;
 - b. where access, including stream crossings, through resource areas cannot be avoided, every practicable effort shall be made to minimize impacts resulting from construction of new access including, but not limited to, maintaining and improving (but not enlarging) existing access. Activities shall be conducted when the soil is frozen, dry, or otherwise stable to support the equipment used;
 - c. where DEM has determined through its review and approval of the Forest Cutting Plan that access is impracticable without constructing new access or stream crossings:
 - i. access shall be designed, constructed, and maintained in accordance with the Massachusetts Forestry Best Management Practices Manual;
 - ii. stream crossings shall be stabilized to prevent erosion using methods described in the Massachusetts Forestry Best Management Practices Manual. When crossings involve fill, culverts or other structures that will obstruct flow, they shall be designed, constructed, and maintained in accordance with the Massachusetts Forestry Best Management Practices Manual to allow the unobstructed passage of existing flows for at least the 25 year storm;
 - iii. access or stream crossings shall be removed within one year of completion of the work described in the approved Forest Cutting Plan;
 - iv. following removal of access, the topography and site conditions shall be substantially restored to allow pre-existing vegetation to be reestablished; and
 - v. activities shall be conducted when the soil is frozen, dry, or otherwise stable to support the equipment used.
17. non-harvest management practices for forest products on land maintained in forest use limited to pruning, pre-commercial thinning or planting of tree seedlings.
- (c) Normal Improvement of Land in Agricultural Use, which in all cases does not include filling or dredging a Salt Marsh, includes but is not limited to:
- 1. the following activities when they occur on land in agricultural use or when they occur within the Buffer Zone or Bordering Land Subject to Flooding that is not land in agricultural use, when they are directly related to production or raising of the agricultural

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

commodities referenced in 310 CMR 10.04: Agriculture(a), and when they are undertaken in such a manner as to prevent erosion and siltation of adjacent water bodies and wetlands and the activity is conducted in accordance with federal and state laws:

- a. the installation of permanent fencing, windbreaks, hedgerows, or the cutting of vegetation to create forest boundaries up to five feet wide;
- b. the installation of dikes within a cranberry bog;
- c. the construction of farm structures, not including habitable dwellings, provided that the footprint of the farm structure does not exceed 4,000 square feet and no filling of Bordering Land Subject to Flooding occurs beyond the footprint of the building;

10.04: continued

- d. the squaring-off of fields and bogs, provided that the activity does not alter a Bordering Vegetated Wetland, there is no increase in the amount of land in production beyond the minimum increase necessarily resulting from making the boundary of any field or bog more regular, and no fill is placed within Bordering Land Subject to Flooding;
- e. the construction of by-pass canals/channels and tail water recovery systems;
- f. a change in commodity other than from maple sap production or forest products to any other commodity, provided that there is no filling of Bordering Vegetated Wetland and drainage ditches or the subsurface drainage system are not increased or enlarged;
- g. the construction of a water management system such as a reservoir, farm pond, irrigation system, field ditch, cross ditch, canal/channel, grass waterway, dike, sub-surface drainage system, watering facility, water transport system, vent, or water storage system, or of a livestock access; and
- h. the construction of composting and storage areas.

For the activities described in 310 CMR 10.04: Agriculture(c)(1)d. through h. there shall be no net loss of flood storage capacity; and

2. the reconstruction of existing dikes, the reconstruction and expansion of existing ponds and reservoirs, and the construction of tailwater recovery ponds and by-pass canals/channels occurring partly or entirely within a Bordering Vegetated Wetland, when directly related to production or raising of the agricultural commodities referenced in 310 CMR 10.04: Agriculture(a), in accordance with the following:

- a. Prior to performing the work, the person claiming the exemption shall submit to the conservation commission for its review at a public meeting that portion of a certified farm Conservation Plan (CP) which relates to the work to be conducted in a Bordering Vegetated Wetland. The CP must be prepared in cooperation with the U.S.D.A. Natural Resource Conservation Service (NRCS), Memorandum of Understanding (MOU) between the Department and NRCS concerning CPs;
- b. The conservation commission may, within 21 days of receiving the CP, provide the person claiming the exemption with written notification containing specific comments detailing the manner in which the CP has not been prepared in compliance with the terms of the MOU;
- c. The person claiming the exemption shall provide SCS with a complete copy of the notification;
- d. All revisions to the CP that relate to the delineation of Bordering Vegetated Wetlands shall be submitted to the conservation commission in accordance with 310 CMR 10.04: Agriculture(c)2.;
- e. All work shall be done in accordance with the CP; and
- f. The maximum amount of Bordering Vegetated Wetland which may be altered by the above activities is:
 - i. 5,000 square feet for reconstruction of an existing dike;
 - ii. 10,000 square feet for expansion of an existing pond or reservoir;
 - iii. 10,000 square feet for construction of a tailwater recovery pond; and
 - iv. 5,000 square feet for construction of a by-pass canal/channel.

Alter means to change the condition of any Area Subject to Protection under M.G.L. c. 131, § 40. Examples of alterations include, but are not limited to, the following:

- (a) the changing of pre-existing drainage characteristics, flushing characteristics, salinity distribution, sedimentation patterns, flow patterns and flood retention areas;

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

- (b) the lowering of the water level or water table;
- (c) the destruction of vegetation;
- (d) the changing of water temperature, biochemical oxygen demand (BOD), and other physical, biological or chemical characteristics of the receiving water.

Provided, that when the provisions of 310 CMR 10.03(6) and 10.05(3) or 333 CMR 11.03(9) have been met, the application of herbicides in the Buffer Zone in accordance with such plans as are required by the Department of Food and Agriculture pursuant to 333 CMR 11.00: *Right of Way Management*, effective July 10, 1987, is not an alteration of any Area Subject to Protection under M.G.L. c. 131, § 40.

10.04: continued

Applicant means any person who files a Notice of Intent, or on whose behalf such a notice is filed.

Aquaculture.

(a) Land in Aquacultural Use means land presently and primarily used in the growing of aquatic organisms under controlled conditions, including one or more of the following uses: raising, breeding or producing a specified type of animal or vegetable life including, but not limited to, municipal shellfish propagation, finfish such as carp, catfish, black bass, flatfishes, herring, salmon, shad, smelt, sturgeon, striped bass, sunfishes, trout, whitefish, eel, tilapia; shellfish such as shrimp, crabs, lobster, crayfish, oysters, clams, periwinkles, scallops, mussels, squid; amphibians such as frogs; reptiles such as turtles; seaweeds such as irish moss and dulse; and edible freshwater plants.

(b) Normal Maintenance or Improvement of land in aquacultural use means the following activities, when done in connection with the production of aquatic organisms as defined above: draining, flooding, heating, cooling, removing, filling, grading, compacting, raking, tilling, fertilizing, seeding, harvesting, filtering, rafting, culverting or applying chemicals in conformance with all state and federal laws; provided, however, that such activities are clearly intended to improve and maintain land in aquacultural use and that best available measures are utilized to ensure that there will be no adverse effect on wetlands outside the area in aquacultural use, and further provided that removing, filling, dredging or altering of a salt marsh is not to be considered normal maintenance or improvement of land in aquacultural use.

Area Subject to Protection under M.G.L. c. 131, § 40 means any area specified in 310 CMR 10.02(1). It is used synonymously with Resource Area, each one of which is defined in greater detail in 310 CMR 10.21 through 10.66.

Bank (Coastal) is defined in 310 CMR 10.30(2).

Bank (Inland) is defined in 310 CMR 10.54(2).

Beach (Barrier) is defined in 310 CMR 10.29(2).

Beach (Coastal) is defined in 310 CMR 10.27(2).

Beach (Inland), a naturally occurring inland beach, means an unvegetated bank as defined in 310 CMR 10.54(2).

Best Available Measures means the most up-to-date technology or the best designs, measures or engineering practices that have been developed and that are commercially available.

Best Practical Measures means technologies, designs, measures or engineering practices that are in general use to protect similar interests.

Bordering means touching. An area listed in 310 CMR 10.02(1)(a) is bordering on a water body listed in 310 CMR 10.02(1)(a) if some portion of the area is touching the water body or if some portion of the area is touching another area listed in 310 CMR 10.02(1)(a) some portion of which is in turn touching the water body.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

Bordering Vegetated Wetland is defined in 310 CMR 10.55(2).

Boundary means the boundary of an Area Subject to Protection under M.G.L. c. 131, § 40. A description of the boundary of each area is found in the appropriate section of 310 CMR 10.00. For coastal areas, *see* 310 CMR 10.21 through 10.37; for inland areas, *see* 310 CMR 10.51 through 10.60.

Breeding Areas mean areas used by wildlife for courtship, mating, nesting or other reproductive activity, and rearing of young.

10.04: continued

Buffer Zone means that area of land extending 100 feet horizontally outward from the boundary of any area specified in 310 CMR 10.02(1)(a).

Certificate of Compliance means a written determination by the issuing authority that work or a portion thereof has been completed in accordance with an Order. It shall be made on Form 8.

Coastal Wetlands are defined in M.G.L. c. 131, § 40, para. 6.

Cold-water Fishery means waters in which the mean of the maximum daily temperature over a seven day period generally does not exceed 68°F (20°C) and, when other ecological factors are favorable (such as habitat) are capable of supporting a year round population of cold-water stenothermal aquatic life such as trout. Waters designated as cold-water fisheries by the Department in 314 CMR 4.00: *Massachusetts Surface Water Quality Standards* and waters designated as cold-water fishery resources by the Division of Fisheries and Wildlife are cold-water fisheries. Waters where there is evidence based on a fish survey that a cold-water fish population and habitat exist are also cold-water fisheries. Cold-water fish include but are not limited to brook trout (*Salvelinus fontinalis*), rainbow trout (*Oncorhynchus mykiss*), brown trout (*Salmo trutta*), creek chubsucker (*Erimyzon oblongus*) and fallfish (*semotilus corporalis*).

Combined Application means an application that may serve as a Notice of Intent pursuant to 310 CMR 10.00, an application for a 401 Water Quality Certification pursuant to 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*, and/or an application for a Chapter 91 license, permit or other written approval for a water-dependent use, pursuant to 310 CMR 9.00: *Waterways*. Notwithstanding the foregoing, a Combined Application may not serve as an application for an annual permit for a mooring, float, raft or small structure accessory to a residence in accordance with 310 CMR 9.07: *Activities Subject to Annual Permit*, an application for a Chapter 91 license for a small structure accessory to a residence in accordance with the simplified process set forth in 310 CMR 9.10: *Simplified Procedures for Small Structures Accessory to Residences* or the certification submitted as an application for a General License in accordance with 310 CMR 9.29: *Permitting of Test Projects*.

Combined Permit means a decision issued in response to a Combined Application that serves as two or more of the following: a Superseding Order of Conditions issued pursuant to 310 CMR 10.00; a 401 Water Quality Certification issued pursuant to 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*; and/or a Chapter 91 permit, license or other written approval issued pursuant to 310 CMR 9.00: *Waterways*.

Commissioner means the Commissioner of the Department of Environmental Protection pursuant to St. 1989, c. 240, § 101.

Conditions means those requirements set forth in a written Order issued by a conservation commission or the Department for the purpose of permitting, regulating or prohibiting any activity that removes, fills, dredges or alters an Area Subject to Protection under M.G.L. c. 131, § 40. (See also 310 CMR 10.05(6).)

Confined Disposal Facility means a facility created in open water or wetlands consisting of

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

confinement walls or berms built up or extending into existing land and is a “confined disposal facility” as defined in 314 CMR 9.02: *Definitions*.

Conservation Commission means that body comprised of members lawfully appointed pursuant to M.G.L. c. 40, § 8C. For the purposes of M.G.L. c. 131, § 40 and 310 CMR 10.00, it shall also mean a mayor or board of selectmen, where no conservation commission has been established under M.G.L. c. 40, § 8C.

Creek means the same as a stream, as defined in 310 CMR 10.04

10.04: continued

Critical Areas mean Outstanding Resource Waters as designated in 314 CMR 4.00, Special Resource Waters as designated in 314 CMR 4.00: *Massachusetts Surface Water Quality Standards* recharge areas for public water supplies as defined in 310 CMR 22.02: *Definitions* (Zone Is, Zone IIs, and Interim Wellhead Protection Areas for ground water sources and Zone As for surface water sources), bathing beaches as defined in 105 CMR 445.000: *Minimum Standards for Bathing Beaches (State Sanitary Code: Chapter VII)*, cold-water fisheries and shellfish growing areas.

Dam means for the purposes of 310 CMR 10.11 through 310 CMR 10.14, 310 CMR 10.24(8), and 10.53(4) any artificial barrier placed across a watercourse that raises or has the potential to raise the level of water or which impounds and/or diverts water.

Date of Issuance means the date an Order is mailed, as evidenced by a postmark, or the date it is hand delivered.

Date of Receipt means the date of delivery to an office, home or usual place of business by mail or hand delivery.

Densely Developed Area means a riverfront area that has been designated by the Secretary of the Executive Office of Energy and Environmental Affairs at the request of a city or town, limited to an area of ten acres or more that is being utilized, or includes existing vacant structures or vacant lots formerly utilized as of January 1, 1944 or sooner, for intensive industrial, commercial, institutional, or residential activities or combinations of such activities, including, but not limited to the following: manufacturing, fabricating, wholesaling, warehousing, or other commercial or industrial activities; retail trade and service activities; medical and educational institutions; residential dwelling structures at a density of three or more per two acres; and mixed or combined patterns of the above. Land which is zoned for intensive use but is not utilized for such use as of January 1, 1997 shall not be designated as a densely developed area. Rivers within the municipalities identified in 310 CMR 10.58(2)(a)3.a. also have 25 foot riverfront areas.

Department means the Department of Environmental Protection, and shall include the Commissioner and any other person employed by said Department, pursuant to St. 1989, c. 240, § 101.

Designated Port is defined in 310 CMR 10.26(2).

Determination.

(a) a Determination of Applicability means a written finding by a conservation commission or the Department as to whether a site or the work proposed thereon is subject to the jurisdiction of M.G.L. c. 131, § 40. It shall be made on Form 2.

(b) a Determination of Significance means a written finding by a conservation commission, after a public hearing, or by the Department, that the area on which the proposed work is to be done, or which the proposed work will alter, is significant to one or more of the interests identified in M.G.L. c. 131, § 40. It shall be made as part of the Order, on Form 5.

(c) a Notification of Non-significance means a written finding by a conservation commission, after a public hearing, or by the Department, that the area on which the proposed work is to be done, or which the proposed work will alter, is not significant to any of the interests of M.G.L. c. 131, § 40. It shall be made on Form 6.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

Direct Case means the evidence that a party seeks to introduce in support of its position, as well as any legal argument the party wishes to provide. The Direct Case may include, but is not limited to, statements under oath by lay witnesses and expert witnesses, technical reports, studies, memoranda, maps, plans, and other information that a party seeks to have the Presiding Officer review as part of the adjudicatory proceeding.

Disposal Site means a structure, well, pit, pond, lagoon, impoundment, ditch, landfill, or other place or area, excluding ambient air or surface water, where uncontrolled oil or hazardous material has come to be located as a result of any spilling, leaking, pouring, ponding, emitting, emptying, discharging, injecting, escaping, leaching, dumping, discarding or otherwise disposing of such oil or hazardous material and is a “disposal site” as defined in M.G.L. c. 21E.

10.04: continued

Dredge means to deepen, widen or excavate, either temporarily or permanently, land below the mean high tide line in coastal waters and below the high water mark for inland waters. The term dredge shall not include activities in Bordering or isolated vegetated wetlands.

Dune means coastal dune, as defined in 310 CMR 10.28(2).

Ecological Restoration Project means a project whose primary purpose is to restore or otherwise improve the natural capacity of a Resource Area(s) to protect and sustain the interests identified in M.G.L. c. 131, § 40, when such interests have been degraded or destroyed by anthropogenic influences. The term Ecological Restoration Project shall not include projects specifically intended to provide mitigation for the alteration of a Resource Area authorized by a Final Order or Variance issued pursuant to 310 CMR 10.00 or a 401 Water Quality Certification issued pursuant to 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth* other than projects implemented pursuant to a US Army Corps of Engineers-approved in-lien fee program.

Ecological Restoration Limited Project means an Ecological Restoration Project that meets the eligibility criteria set forth in 310 CMR 10.24(8) or 10.53(4).

Estimated Habitat Map of State-listed Rare Wetlands Wildlife means the map of the estimated habitats of state-listed rare wetlands wildlife published by the Natural Heritage and Endangered Species Program (the Program or NHESP) in accordance with 321 CMR 10.12: *Delineation of Priority Habitat of State-listed Species*.

Environmentally Sensitive Site Design means design that incorporates low impact development techniques to prevent the generation of stormwater and non-point source pollution by reducing impervious surfaces, disconnecting stormwater sheet flow paths and treating stormwater at its source, maximizing open space, minimizing disturbance, protecting natural features and processes, and/or enhancing wildlife habitat.

Estuary means:

- (a) any area where fresh and salt water mix and tidal effects are evident; or
- (b) any partially enclosed coastal body of water where the tide meets the current of any stream or river.

Extension Permit means a written extension of time within which the authorized work shall be completed. It shall be made on Form 7.

Fill means to deposit any material so as to raise an elevation, either temporarily or permanently.

Final Order means the Order issued by the Commissioner after an adjudicatory hearing or, if no request for hearing has been filed, the Superseding Order or, if no request for a Superseding Order has been filed, the Order of Conditions.

Flat (Tidal) is defined in 310 CMR 10.27(2)(b).

Flood Control means the prevention or reduction of flooding and flood damage.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

Formerly or Presently Owned means owned by the same owner at any time on or after August 1, 1996.

Freshwater Wetlands are defined in M.G.L. c. 131, § 7, para. 7.

General Performance Standards means those requirements established by 310 CMR 10.00 for activities in or affecting each of the Areas Subject to Protection under M.G.L. c. 131, § 40. They are found in 310 CMR 10.25 through 10.35, 10.37, and 10.54 through 10.60.

10.04: continued

Ground Water Supply means water below the earth's surface in the zone of saturation.

Historic Mill Complex means the mill complexes in, but not limited to, Holyoke, Taunton, Fitchburg, Haverhill, Methuen, and Medford in existence prior to 1946 and situated landward of the waterside facade of a retaining wall, building, sluiceway, or other structure existing on August 7, 1996. An historic mill complex also means any historic mill included on the *Massachusetts Register of Historic Places*. An historic mill complex includes only the footprint of the area that is or was occupied by interrelated buildings (manufacturing buildings, housing, utilities, parking areas, and driveways) constructed before and existing after 1946, used for any type of manufacturing or mechanical processing and including associated structures to provide water for processing, to generate water power, or for water transportation.

Illicit Discharge means a discharge that is not entirely comprised of stormwater. Notwithstanding the foregoing, an illicit discharge does not include discharges from the following activities or facilities: firefighting, water line flushing, landscape irrigation, uncontaminated ground water, potable water sources, foundation drains, air conditioning condensation, footing drains, individual resident car washing, flows from riparian habitats and wetlands, dechlorinated water from swimming pools, water used for street washing and water used to clean residential buildings without detergents.

Important Wildlife Habitat Functions mean important food, shelter, migratory or overwintering areas, or breeding areas for wildlife.

Innovative Technology means technology that has not been commercially deployed or is in limited deployment in Massachusetts, and includes, but is not limited to, energy technology that obtains energy from the ocean, waterway, or conditions associated with the ocean or waterway, or other forms of renewable energy technology.

Interests Identified in M.G.L. c. 131, § 40 means public or private water supply, ground water supply, flood control, storm damage prevention, prevention of pollution, protection of land containing shellfish, protection of fisheries, and protection of wildlife habitat.

Issuing Authority means a conservation commission, mayor, the selectmen or the Department, whichever is applicable.

Lake means any open body of fresh water with a surface area of ten acres or more, and shall include great ponds.

Land Containing Shellfish is defined in 310 CMR 10.34(2).

Land Subject to Coastal Storm Flowage means land subject to any inundation caused by coastal storms up to and including that caused by the 100-year storm, surge of record or storm of record, whichever is greater.

Land Subject to Flooding is defined in 310 CMR 10.57(2).

Land Subject to Tidal Action means land subject to the periodic rise and fall of a coastal water body, including spring tides.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

Land under Salt Ponds is defined in 310 CMR 10.33(2).

Land under Water Bodies and Waterways means the bottom of, or land under, the surface of the ocean or any estuary, creek, river, stream, pond, or lake. Land under the ocean and estuaries is further defined in 310 CMR 10.25(2); land under inland water bodies is further defined in 310 CMR 10.56(2).

10.04: continued

Land Uses with Higher Potential Pollutant Loads mean the following land uses: land uses identified in 310 CMR 22.20B(2), 22.20C(2)(a) through (k) and (m), 22.21(2)(a)1. through 8., and (b)1. through 6.; areas within a site that are the location of activities that are subject to an individual National Pollutant Discharge Elimination System (NPDES) permit or the NPDES Multi-sector General Permit; auto fueling facilities (gas stations); exterior fleet storage areas; exterior vehicle service and equipment cleaning areas; marinas and boatyards; parking lots with high intensity use; confined disposal facilities and disposal sites.

Landowner means the owner of record of land or an interest in land that is subject of a Reviewable Decision.

Linear-shaped Project, for purposes of 310 CMR 10.05(4), means a project that is substantially longer than it is wide and is a project for the construction, reconstruction, or substantial enlargement of facilities that will be used in the service of the public to provide electric, gas, sewer, water, telephone, telegraph and other communication services, a project by a public agency or authority for the construction, reconstruction, expansion, repair or maintenance of public roads, bike paths or other paths for pedestrians, or public railways.

Lot means an area of land in one ownership, with definite boundaries.

Low Impact Development Techniques mean innovative stormwater management systems that are modeled after natural hydrologic features. Low impact development techniques manage rainfall at the source using uniformly distributed decentralized micro-scale controls. Low impact development techniques use small cost-effective landscape features located at the lot level.

Maintenance of a Stormwater Management System means the work to keep a stormwater management system functional and in good repair so that it may continue to operate as originally designed. Maintenance of a stormwater management system does not include work that:

- (a) reduces the capacity of the system to treat stormwater, provide recharge or attenuate peak flow;
- (b) increases the total and peak volume of the stormwater managed by the system;
- (c) directs additional stormwater discharges to the system; or
- (d) results in reduced use of above ground stormwater best management practices.

Major or Complex means an appeal of a Reviewable Decision issued for work in a resource area that will be so designated due to the complexity or novelty of the issues, the magnitude of the project, the potential for environmental harm or benefit, significant public interest or public financing or other relevant consideration, as determined by the Commissioner or a Presiding Officer.

Majority means more than half of the members of the conservation commission then in office.

Marsh is defined in M.G.L. c. 131, § 40, para. 10.

Massachusetts Erosion and Sediment Control Guidelines means the *Massachusetts Erosion and Sediment Control Guidelines for Urban and Suburban Areas* originally prepared by the Franklin, Hampden, and Hampshire Conservation Districts in 1997, for the Massachusetts Executive Office of Environmental Affairs State Commission for Conservation of Soil, Water and Related Resources, the Massachusetts Department of Environmental Protection, the U.S. Environmental

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

Protection Agency, Region I, and the Natural Resources Conservation Service, United States Department of Agriculture and reprinted in May 2003.

Massachusetts River and Stream Crossing Standards or the Stream Crossing Standards means the standards developed by the River and Stream Continuity Partnership as corrected on March 8, 2012.

Meadow (or Wet Meadow) is defined in M.G.L. c. 131, § 40, para. 9.

Mean Annual High-water Line is defined at 310 CMR 10.58(2).

10.04: continued

MEPA means the Massachusetts Environmental Policy Act, M.G.L. c. 30, §§ 6 through 62H, and 301 CMR 11.00: *General Application and Administration Environmental Code, Title 1*.

Migratory Areas mean those areas used by wildlife moving from one habitat to another, whether seasonally or otherwise.

Mitigation means rectifying an adverse impact by repairing, rehabilitating or restoring the affected resource area or compensating for an adverse impact by enhancing or providing replacement resource areas.

Notice of Intent means the written notice filed by any person intending to remove, fill, dredge or alter an Area Subject to Protection under M.G.L. c. 131, § 40. It shall be made on Form 3 or 4.

Ocean means the Atlantic Ocean and all contiguous waters subject to tidal action.

Openness Ratio means the cross-sectional area of a structure opening divided by crossing length when measured in consistent units. For a box culvert, the openness ratio equals (height x width)/length. For crossing structures with multiple cells or barrels openness is calculated separately for each cell or barrel. The embedded portion of a culvert is not included in the calculation of the cross-sectional area.

Order means an Order of Conditions, Order of Resource Area Delineation, Superseding, Order or Final Order, whichever is applicable.

Order of Conditions means the document issued by a conservation commission containing conditions which regulate or prohibit an activity. It shall be made on Form 5.

Outstanding Resource Water means a surface water of the Commonwealth so designated in the Massachusetts Surface Water Quality Standards at 314 CMR 4.00: *Massachusetts Surface Water Quality Standards*.

Owner of Land Abutting the Activity means the owner of land sharing a common boundary or corner with the site of the proposed activity in any direction, including land located directly across a street, way, creek, river, stream, brook or canal.

Party to any proceeding before the Department means the applicant, the conservation commission and the Department, and pursuant to 310 CMR 10.05(7)(a) may include the owner of the site, any abutter, any person aggrieved, any ten residents of the city or town where the land is located and any ten persons pursuant to M.G.L. c. 30A, § 10A.

Person Aggrieved means any person who, because of an act or failure to act by the issuing authority, may suffer an injury in fact which is different either in kind or magnitude from that suffered by the general public and which is within the scope of the interests identified in M.G.L. c. 131, § 40. Such person must specify in writing sufficient facts to allow the Department to determine whether or not the person is in fact aggrieved.

Plans means such data, maps, engineering drawings, calculations, specifications, schedules and other materials, if any, deemed necessary by the issuing authority to describe the site and/or the

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

work, to determine the applicability of M.G.L. c. 131, § 40 or to determine the impact of the proposed work upon the interests identified in M.G.L. c. 131, § 40. (*See* also General Instructions for Completing Notice of Intent (Form 3) and Abbreviated Notice of Intent (Form 4).)

Pond (Coastal) means Salt Pond as defined in 310 CMR 10.33(2).

10.04: continued

Pond (Inland) means any open body of fresh water with a surface area observed or recorded within the last ten years of at least 10,000 square feet. Ponds may be either naturally occurring or human-made by impoundment, excavation, or otherwise. Ponds shall contain standing water except for periods of extended drought. Periods of extended drought for purposes of 310 CMR 10.00 shall be those periods, in those specifically identified geographic locations, determined to be at the “Advisory” or more severe drought level by the Massachusetts Drought Management Task Force, as established by the Executive Office of Energy and Environmental Affairs and the Massachusetts Emergency Management Agency in 2001, in accordance with the Massachusetts Drought Management Plan (MDMP).

Notwithstanding the above, the following human-made bodies of open water shall not be considered ponds:

- (a) basins or lagoons which are part of wastewater treatment plants;
- (b) swimming pools or other impervious human-made basins; and
- (c) individual gravel pits or quarries excavated from upland areas unless inactive for five or more consecutive years.

Practicable means available and capable of being done after taking into consideration costs, existing technology, proposed use, logistics and potential adverse consequences (*e.g.*, degradation of Rare Species habitat, increased flood impacts to the built environment) in light of the overall project purposes and is permissible under existing federal and state statutes and regulations.

Prevention of Pollution means the prevention or reduction of contamination of surface or ground water.

Primary Frontal Dune or Primary Dune means a continuous or nearly continuous mound or ridge of sediment with relatively steep seaward and landward slopes immediately landward and adjacent to the beach and subject to erosion and overtopping from high tides and waves during coastal storms. The Primary Frontal Dune is the dune closest to the beach. The inland limit of the Primary Frontal Dune occurs at the point where there is a distinct change from a relatively steep slope to a relatively mild slope.

Private Water Supply means any source or volume of surface or ground water demonstrated to be in any private use or demonstrated to have a potential for private use.

Project Locus means the lot on which an applicant proposes to perform an activity subject to regulation under M.G.L. c. 131, § 40.

Project Purpose means the general, functional description of an activity proposed within the riverfront area (*e.g.*, construction of a single family house, expansion of a commercial development).

Project Site means the area within the Project Locus that comprises the limit of work for activities, including but not limited to, the dredging, excavating, filling, grading, the erection, reconstruction or expansion of a building or structure, the driving of pilings, the construction or improvement of roads or other ways, and the installation of drainage, stormwater treatment, environmentally sensitive site design practices, sewage and water systems.

Protection of Fisheries means protection of the capacity of an Area Subject to Protection under

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

M.G.L. c. 131, § 40:

- (a) to prevent or reduce contamination or damage to fish; and
- (b) to serve as their habitat and nutrient source. Fish includes all species of fresh and salt water finfish and shellfish.

See also the definition of Marine Fisheries contained in 310 CMR 10.23(15).

Protection of Land Containing Shellfish means protection of the capacity of an Area Subject to Protection under M.G.L. c. 131, § 40:

- (a) to prevent or reduce contamination or damage to shellfish; and
- (b) to serve as their habitat and nutrient source.

See also the definitions of Shellfish and Land Containing Shellfish in 310 CMR 10.34(2).

10.04: continued

Public Water Supply means any source or volume of surface or ground water demonstrated to be in public use or approved for water supply pursuant to M.G.L. c. 111, § 160 by the Division of Water Supply of the Department, or demonstrated to have a potential for public use.

Rare Species mean those vertebrate and invertebrate animal species officially listed as endangered, threatened, or of special concern by the Massachusetts Division of Fisheries and Wildlife under 321 CMR 10.60.

Redevelopment means replacement, rehabilitation, or expansion of existing structures, improvement of existing roads or reuse of degraded or previously developed areas for purposes of 310 CMR 10.58, governing work in the riverfront area. For purpose of the Stormwater Management Standards as provided in 310 CMR 10.05(6)(k) through (q), redevelopment is defined to include the following projects:

- (a) maintenance and improvement of existing roadways including widening less than a single lane, adding shoulders, correcting substandard intersections, improving existing drainage systems and repaving;
- (b) development, rehabilitation, expansion and phased projects on previously developed sites provided the redevelopment results in no net increase in impervious area; and
- (c) remedial projects specifically designed to provide improved stormwater management such as projects to separate storm drains and sanitary sewers and stormwater retrofit projects.

Remove means to take away any type of material, thereby changing an elevation, either temporarily or permanently.

Request for Determination of Applicability means a written request made by any person to a conservation commission or the Department for a determination as to whether a site or work thereon is subject to M.G.L. c. 131, § 40. It shall be submitted on Form 1.

Resource Area means any of the areas specified in 310 CMR 10.25 through 10.35 and 10.54 through 10.58. It is used synonymously with Area Subject to Protection under M.G.L. c. 131, § 40, each one of which is enumerated in 310 CMR 10.02(1).

Restoration Order of Conditions means an Order of Conditions issued pursuant to 310 CMR 10.05(6) and 10.14 for a project that meets the eligibility criteria set forth in 310 CMR 10.13.

Reviewable Decision means a MassDEP decision that is a superseding order of condition or superseding denial of an order of conditions, a superseding determination of applicability, and/or a superseding order of resource area delineation, or a variance.

River means any natural flowing body of water that empties to any ocean, lake, pond, or other river and which flows throughout the year. River is defined further at 310 CMR 10.58(2).

Riverfront Area is defined at 310 CMR 10.58(2).

Rocky Intertidal Shore is defined in 310 CMR 10.31(2).

Salt Marsh is defined in 310 CMR 10.32(2).

Severe Weather Emergency Declaration is a declaration issued by the Commissioner, following

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

a destructive weather event, which authorizes widespread emergency recovery, debris cleanup, or roadway or utility repair, necessary for the protection of the health or safety of the residents of the Commonwealth, without filing a Notice of Intent or requesting an emergency certification or authorization pursuant to 310 CMR 10.06(1) through (7).

Sediment, for the purpose of dredging, means all inorganic or organic matter including detritus situated under tidal waters below the mean high water line as defined in 310 CMR 10.23, and for inland waters, below the upper boundary of a bank, as defined in 310 CMR 10.54(2).

10.04: continued

Shellfish Growing Area means land under the ocean, tidal flats, rocky intertidal shores and marshes and land under salt ponds when any such land contains shellfish. Shellfish growing areas include land that has been identified and shown on a map published by the Division of Marine Fisheries as a shellfish growing area including any area identified on such map as an area where shellfishing is prohibited. Shellfish growing areas shall also include land designated by the Department in 314 CMR 4.00: *Massachusetts Surface Water Quality Standards* as suitable for shellfish harvesting with or without depuration. In addition, shellfish growing areas shall include shellfish growing areas designated by the local shellfish constable as suitable for shellfishing based on the density of shellfish, the size of the area and the historical and current importance of the area for recreational and commercial shellfishing.

Shellfish Suitability Area means an area located within land containing shellfish and identified on maps prepared in May 2011 by the Massachusetts Division of Marine Fisheries with input from local Shellfish Constables and commercial fishermen as suitable for shellfish. The areas covered include sites where shellfish have been observed since the mid 1970s but may not currently support shellfish and thus represent both existing and potential shellfish habitat areas.

Shelter means protection from the elements or predators.

Significant means plays a role. A resource area is significant to an interest identified in M.G.L. c. 131, § 40 when it plays a role in the provision or protection, as appropriate, of that interest. Within the context of the protection of the riverfront area, no significant adverse impact means the level of protection of the performance standards provided under 310 CMR 10.58.

Special Flood Hazard Area means the area of land in the flood plain that is subject to a 1% chance of flooding in any given year as determined by the best available information, including, but not limited to, the currently effective or preliminary Federal Emergency Management Agency (FEMA) Flood Insurance Study or Rate Map (except for any portion of a preliminary map that is the subject of an appeal to FEMA) for Land Subject to Coastal Storm Flowage, the Velocity Zone as defined in 310 CMR 10.04, and the Flood Insurance Study for Bordering Land Subject to Flooding as defined in 310 CMR 10.57.

Spring Tides means those tides which occur with the new and full moons, and which are perceptibly higher and lower than other tides.

State-listed Species mean the same as rare species, as defined in 310 CMR 10.04.

Storm Damage Prevention means the prevention of damage caused by water from storms, including, but not limited to, erosion and sedimentation, damage to vegetation, property or buildings, or damage caused by flooding, water-borne debris or water-borne ice.

Stormwater Best Management Practice means a structural or nonstructural technique for managing stormwater to prevent or reduce non-point source pollutants from entering surface waters or ground waters. A structural stormwater best management practice includes a basin, discharge outlet, swale, rain garden, filter or other stormwater treatment practice or measure either alone or in combination including without limitation any overflow pipe, conduit, weir control structure that:

- (a) is not naturally occurring;
- (b) is not designed as a wetland replication area; and

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

(c) has been designed, constructed, and installed for the purpose of conveying, collecting, storing, discharging, recharging or treating stormwater.

Nonstructural stormwater best management practices include source control and pollution prevention measures.

Stormwater Management System means a system for conveying, collecting, storing, discharging, recharging or treating stormwater on-site including stormwater best management practices and any pipes and outlets intended to transport and discharge stormwater to the ground water, a surface water or a municipal separate storm sewer system.

10.04: continued

Stormwater Management System Improvement means:

- (a) expansion of a stormwater management system beyond its existing geographic footprint to provide treatment for additional stormwater volume, provide additional groundwater recharge or enhance groundwater recharge or pollutant removal capability such as the addition of treatment train components; or
- (b) modification to, or addition of, features within the existing geographic footprint of a stormwater management system to enhance groundwater recharge or pollutant removal capability, such as modifying outlet control structures.

Stream means a body of running water, including brooks and creeks, which moves in a definite channel in the ground due to a hydraulic gradient, and which flows within, into or out of an Area Subject to Protection under M.G.L. c. 131, § 40. A portion of a stream may flow through a culvert or beneath a bridge. Such a body of running water which does not flow throughout the year (*i.e.*, which is intermittent) is a stream except for that portion upgradient of all bogs, swamps, wet meadows and marshes.

Superseding Determination means a determination of applicability, of significance or of non-significance, as the case may be, issued by the Department. It shall be made on Form 2.

Superseding Order means a document issued by the Department containing conditions which regulate or prohibit an activity. It shall be made on Form 5.

Surface Waters means all waters other than ground water within the jurisdiction of the Commonwealth including, without limitation, rivers, streams, lakes, ponds, springs, impoundments, estuaries, wetlands, and coastal waters.

Swamp is defined in M.G.L. c. 131, § 40, para. 8.

Test Project means the installation or deployment of water dependent Innovative Technology in situ for purposes of evaluating its performance and environmental effects.

Velocity Zone or V-zone also known as the Coastal High Hazard Area means an area within the Special Flood Hazard Area that is subject to high velocity wave action from storms or seismic sources. The Velocity Zone Boundaries are determined by reference to the currently effective or preliminary Flood Insurance Rate Map (FIRM) prepared by the Federal Emergency Management Agency (FEMA), whichever is more recent (except for any portion of a preliminary map that is the subject of an appeal to FEMA), or at a minimum to the inland limit of the Primary Frontal Dune, whichever is farther landward.

Vernal Pool Habitat means confined basin depressions which, at least in most years, hold water for a minimum of two continuous months during the spring and/or summer, and which are free of adult fish populations, as well as the area within 100 feet of the mean annual boundaries of such depressions, to the extent that such habitat is within an Area Subject to Protection under M.G.L. c. 131, § 40 as specified in 310 CMR 10.02(1). These areas are essential breeding habitat, and provide other extremely important wildlife habitat functions during non breeding season as well, for a variety of amphibian species such as wood frog (*Rana sylvatica*) and the spotted salamander (*Ambystoma maculatum*), and are important habitat for other wildlife species.

Vista Pruning means the selective thinning of tree branches or understory shrubs to establish a

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

specific "window" to improve visibility. Vista pruning does not include the cutting of trees which would reduce the leaf canopy to less than 90% of the existing crown cover and does not include the mowing or removal of understory brush.

Wastewater Residuals Landfill means a facility or part of a facility approved by the Department for the disposal of wastewater residuals into or on land, but not including a site where wastewater residuals are land applied in accordance with 310 CMR 32.00: *Land Application of Sludge and Septage*.

10.04: continued

Water-dependent Uses mean those uses and facilities which require direct access to, or location in, marine, tidal or inland waters and which therefore cannot be located away from said waters, including but not limited to: marinas, public recreational uses, navigational and commercial fishing and boating facilities, water-based recreational uses, navigation aids, basins, and channels, industrial uses dependent upon waterborne transportation or requiring large volumes of cooling or process water which cannot reasonably be located or operated at an upland site, crossings over or under water bodies or waterways (but limited to railroad and public roadway bridges, tunnels, culverts, as well as railroad tracks and public roadways connecting thereto which are generally perpendicular to the water body or waterway), and any other uses and facilities as may further hereafter be defined as water-dependent in 310 CMR 9.00: *Waterways*.

Waters of the Commonwealth means all waters within the jurisdiction of the Commonwealth, including without limitation, rivers, streams, lakes, ponds, springs, impoundments, estuaries, wetlands, coastal waters and ground waters.

Wildlife means all mammals, birds, reptiles and amphibians and, for the purposes of 310 CMR 10.37 and 10.59, all vertebrate and invertebrate animal species which are officially listed in 321 CMR 8.00: *Endangered Wildlife and Wild Plants* as endangered, threatened, or of special concern.

Wildlife Habitat means an Area Subject to Protection under M.G.L. c. 131, § 40, which due to its plant community, composition and structure, hydrologic regime or other characteristics provides important food, shelter, migratory or overwintering areas or breeding areas for wildlife.

Wildlife Specialist means an individual with at least a masters degree in wildlife biology or ecological science from an accredited college or university, or other competent professional with at least two years experience in wildlife habitat evaluation.

Work means the same as activity.

10.05: Procedures

(1) Time Periods. All time periods of ten days or less specified in M.G.L. c. 131, § 40 and 310 CMR 10.00 shall be computed using business days only. In the case of a determination or Order, such period shall commence on the first day after the date of issuance and shall end at the close of business on the tenth business day thereafter. All other time periods specified in M.G.L. c. 131, § 40 and 310 CMR 10.00 shall be computed on the basis of calendar days, unless the last day falls on a Saturday, Sunday or legal holiday, in which case the last day shall be the next business day following.

(2) Actions by Conservation Commission. Where M.G.L. c. 131, § 40 states that a particular action (except receipt of a request or notice) is to be taken by the conservation commission, that action is to be taken by more than half the members present at a meeting of at least a quorum. A quorum is defined as a majority of the members then in office.

Where M.G.L. c. 131, § 40 states that an order or notification shall be signed by a majority of the conservation commission, that action is to be taken by a majority of the members then in office, who need not convene as a body in order to sign, provided they met pursuant to the open meeting law, M.G.L. c. 39, §§ 23A through 23C, when voting on the matter.

Where M.G.L. c. 131, § 40 states that the conservation commission is to receive a request

or notice, conservation commission means a member of the conservation commission or an individual designated by the conservation commission to receive such request or notice.

(3) Determinations of Applicability.

(a) Requests for Determination of Applicability.

1. Any person who desires a determination as to whether M.G.L. c. 131, § 40 applies to land, or to work that may affect an Area Subject to Protection under M.G.L. c. 131, § 40, may submit to the conservation commission by certified mail or hand delivery a Request for a Determination of Applicability, Form 1. To obtain confirmation of a delineated boundary of bordering vegetated wetlands and other resource areas on the site to establish the extent of the buffer zone and resource areas prior to filing a Notice of

10.05: continued

Intent for proposed work, an applicant generally should file an Abbreviated Notice of Resource Area Delineation. Alternatively, the boundary of bordering vegetated wetland (or other resource areas) may be determined through the filing of a Notice of Intent. For work within riverfront areas, an applicant may submit to the conservation commission by certified mail or hand delivery a Request for Determination of Applicability to identify the scope of alternatives to be evaluated under 310 CMR 10.58(4)(c)2., including sufficient information to enable the conservation commission to determine the applicable scope.

2. Any person who proposes to perform work within the Buffer Zone shall submit to the conservation commission either a Notice of Intent for such work or a Request for Determination of Applicability. Said request shall include sufficient information, as required on Form 1, to enable the conservation commission to find and view the area and to determine whether the proposed work will alter an Area Subject to Protection under M.G.L. c. 131, § 40. Applicants may use the Abbreviated Notice of Resource Area Delineation to confirm the boundaries of resource areas and the buffer zone.

Any person who proposes to apply herbicides in the Buffer Zone pursuant to the presumption of 310 CMR 10.03(6)(b) shall be required only to submit a request for determination of the boundaries of the Buffer Zone and the Areas Subject to Protection under M.G.L. c. 131, § 40. Such Request for Determination shall be submitted prior to the filing of the Vegetation Management Plan, as required by 333 CMR 11.00: *Rights of Way Management*, on maps of a scale which will enable the issuing authority to find and delineate those Areas Subject to Protection under M.G.L. c. 131, § 40 identified in 310 CMR 10.02(1)(a) through (c) and the Buffer Zone identified in 310 CMR 10.02(2) within the vicinity of the project area.

3. A request for a Determination of Applicability shall include certification that the Department and the owner of the area subject to the request, if the person making the request is not the owner, have been notified that a determination is being requested under M.G.L. c. 131, § 40.

(b) Determination of Applicability.

1. Within 21 days after the date of receipt of the Request for a Determination of Applicability, the conservation commission shall issue a Determination of Applicability, Form 2. Notice of the time and place of the public meeting at which the determination will be made shall be given by the conservation commission at the expense of the person making the request not less than five days prior to such meeting, by publication in a newspaper of general circulation in the city or town in which the land is located, and by mailing a notice to the person making the request, the owner, the board of health and the planning board of said city or town. Notice shall also be given in accordance with the open meeting law, M.G.L. c. 39, § 23B. Said determination shall be signed by a majority of the conservation commission, and copies thereof shall be sent by the conservation commission to the Department, to the person making the request, and to the owner. Delivery of the copy to the person making the request shall be by hand delivery or certified mail, return receipt requested. Said determination shall be valid for three years from the date of issuance, except that a determination of the boundaries of the Areas Subject to Protection under M.G.L. c. 131, § 40 and the Buffer Zone which are to apply to such plans as are required by the Department of Food and Agriculture pursuant to 333 CMR 11.00: *Rights of Way Management*, effective July 10, 1987, shall be valid throughout the effective duration of the Vegetation Management Plan.

2. The conservation commission shall find that M.G.L. c. 131, § 40 applies to the land, or a portion thereof, if it is an Area Subject to Protection under M.G.L. c. 131, § 40 as

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

defined in 310 CMR 10.02(1). The conservation commission shall find that M.G.L. c. 131, § 40 applies to the work, or portion thereof, if it is an Activity Subject to Regulation under M.G.L. c. 131, § 40 as defined in 310 CMR 10.02(2). The conservation commission shall identify the scope of alternatives to be evaluated, if requested, for work within riverfront areas under 310 CMR 10.58(4)(c)2.

3. A Notice of Intent which is filed as a result of a positive determination, whether such determination is made by the Department or a conservation commission, shall be filed with the conservation commission, and all of the procedures set forth in 310 CMR 10.05(4) shall apply.

10.05: continued

(c) Appeal to the Department. Following a positive or negative Determination of Applicability, the identification of the scope of alternatives for work within the riverfront area, or the failure of a conservation commission to make a determination within 21 days, any person specified in 310 CMR 10.05(7) may, within ten days, request the Department to issue a Superseding Determination of Applicability pursuant to the procedures set forth in 310 CMR 10.05(7). The Department shall issue its determination within 35 days from receipt of such request.

(d) Work Pending Appeal of Determination.

1. Upon a positive Determination of Applicability by a conservation commission, work may not proceed until the Department or the Commissioner issues a negative determination, or until a Notice of Intent has been filed, a final order has been issued and recorded, and all administrative appeal periods have elapsed, except that a Notice of Intent shall not be required for the application of herbicides in accordance with 310 CMR 10.03(6).

2. Upon a positive Determination of Applicability by the Department, work may not proceed until the Commissioner issues a negative determination or until a Notice of Intent has been filed, a final order has been issued and recorded, and all administrative appeal periods have elapsed.

3. Upon a positive Determination of Applicability by the Commissioner, work may not proceed until a judicial determination is made that the proposed work is not subject to M.G.L. c. 131, § 40 or until a Notice of Intent has been filed and a final order has been issued and recorded, and all administrative appeal periods have elapsed.

4. Upon a negative Determination of Applicability by a conservation commission or upon the failure of a conservation commission to act within the 21 day time period, and where the Department has been requested to issue a Superseding Determination of Applicability but has failed to do so within 35 days, work may proceed at the owner's risk upon notice to the Department and to the conservation commission.

5. Upon a negative Determination of Applicability by the Department, work may proceed at the owner's risk even if a request for an adjudicatory hearing has been made.

6. Upon a negative Determination of Applicability by the Commissioner after an adjudicatory hearing, work may proceed at the owner's risk even if a petition for judicial review has been filed.

7. Upon a positive Determination of Applicability by a conservation commission, the Department, or the Commissioner which identifies the scope of alternatives to be evaluated under 310 CMR 10.58(4)(c)2. for work within the riverfront area, work may not proceed until a Notice of Intent has been filed and a final Order has been issued and recorded and all administrative appeal periods have elapsed.

(4) Notices of Intent.

(a) Any person who proposes to do work that will remove, fill, dredge or alter any Area Subject to Protection under M.G.L. c. 131 § 40 shall file a Notice of Intent on Form 3 and other application materials in accordance with the submittal requirements set forth in the *General Instructions for Completing Notice of Intent (Form 3)*. If the applicant is not a landowner of the Project Locus, the applicant shall obtain written permission from a landowner(s) prior to filing a Notice of Intent for proposed work, except for work proposed on Great Ponds or Commonwealth tidelands. Two copies of the completed Notice of Intent with supporting plans and documents shall be sent by certified mail or hand delivery to the conservation commission, and one copy of the same shall be sent concurrently in like manner to the Department. If the project requires a 401 Water Quality Certification pursuant to

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth* and/or is a water-dependent use project that requires a permit, license or written approval pursuant to 310 CMR 9.00: *Waterways* the applicant may file a Notice of Intent that is a Combined Application. In that event, an additional copy of the Combined Application shall be sent to the Department's Boston Office.

10.05: continued

Concurrent with the filing of the Notice of Intent, the applicant shall provide notification to all Abutters. Notwithstanding the foregoing, the requirement to provide Abutter notification is subject to the following limits. An applicant is required to provide notification to an Abutter whose Lot is separated from the Project Locus by a public or private street or body of water only if the Abutter's Lot is within 100 feet from the property line of the Project Locus. An applicant who proposes work solely within Land under Water Bodies or Waterways, or solely within a Lot with an area greater than 50 acres, is required to provide notification only to Abutters whose Lot is within one hundred feet from the Project Site. An applicant proposing a Linear-shaped Project greater than 1,000 feet in length is required to provide notification only to Abutters whose Lot is within 1,000 feet from the Project Site. Abutter notification is not required for projects proposed by the Massachusetts Department of Transportation Highway Division pursuant to St. 1993, c. 472 as approved on January 13, 1994. The applicant shall provide notification at the mailing addresses shown on the most recent applicable tax list from the municipal assessor. Notification shall be at the applicant's expense. The notification shall state where within the municipality copies of the Notice of Intent may be examined or obtained and where information on the date, time, and location of the public hearing may be obtained. To ensure compatibility with local procedures, applicants must comply with any rules of the local conservation commission pertaining to the location for examining or obtaining the Notice of Intent and information about the hearing. The applicant shall provide written notification to all Abutters required to be notified by hand delivery or certified mail, return receipt requested, or by certificates of mailing. Mailing at least seven days prior to the public hearing shall constitute timely notice. The applicant shall present either the certified mail receipts or certificate of mailing receipts for all Abutters at the beginning of the public hearing. The presentation of the receipts for all abutters required to be notified as identified on the tax list shall constitute compliance with Abutter notification requirements. The conservation commission shall determine whether the applicant has complied with Abutter notification requirements. The Department will dismiss Requests for Action based on allegations of failure to comply with Abutter notification requirements, absent a clear showing by an Abutter seeking Department action that the applicant failed to notify the Abutter. An applicant submitting a Notice of Intent for a project that is also subject to 310 CMR 9.00: *Waterways* and/or 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth* may provide joint public notice by appending to the public notice required by 310 CMR 9.13: *Public Notice and Participation Requirements* and/or 314 CMR 9.05: *Submission of an Application*, as applicable, notification that a Notice of Intent is pending before the issuing authority, provided the notification complies with 310 CMR 10.05(4). An applicant may provide a joint public notice, even if the Notice of Intent is not a Combined Application.

(b) For certain purposes, other forms of Notices may be used.

1. For certain projects, applicants may at their option use the Abbreviated Notice of Intent. This latter form may only be used when all three of the following circumstances exist:

- a. the proposed work is within the Buffer Zone, as defined in 310 CMR 10.04, or within Land Subject to Flooding, as defined in 310 CMR 10.57(2) or within the Riverfront Area, as defined in 310 CMR 10.58.
- b. the proposed work will disturb less than 1,000 square feet of surface area within the Buffer Zone and/or Land Subject to Flooding or less than 1000 square feet of riverfront area, provided the work conforms to 310 CMR 10.58(4)(c)2.a.
- c. the proposed work will not require U.S. Army Corps of Engineer Section 10 or

Section 404 permits, or a license from the Division of Waterways pursuant to M.G.L. c. 91.

2. To establish the extent of bordering vegetated wetland and/or other resource areas on land subject to protection under M.G.L. c. 131, § 40, applicants may use the Abbreviated Notice of Resource Area Delineation for the confirmation of a delineated boundary of bordering vegetated wetlands and/or other resource areas on the site, prior to filing a Notice of Intent for proposed work. Alternatively, the boundary of bordering vegetated wetland or other resource areas may be determined through the filing of a Notice of Intent.

10.05: continued

3. To confirm the boundaries of resource areas applicants shall use the Abbreviated Notice of Resource Area Delineation.

(c) Upon receipt of the application materials referred to in 310 CMR 10.05(4)(a), the Department shall issue a file number. The designation of a file number shall not imply that the plans and supporting documents have been judged adequate for the issuance of an Order, but only that copies of the minimum submittal requirements contained in the General Instructions have been filed.

(d) In the event that only a portion of a proposed project or activity lies within an Area Subject to Protection under M.G.L. c. 131, § 40 or within the Buffer Zone, and the remainder of the project or activity lies outside those areas, only that portion within those areas must be described in the detail called for by the General Instructions and Form 3 and 4; provided, however, that in such circumstances the Notice of Intent shall also contain a description and calculation of peak flow and estimated water quality characteristics of discharge from a point source (both closed and open channel) when the point of discharge falls within an Area Subject to Protection under M.G.L. c. 131, § 40 or within the Buffer Zone.

Notwithstanding the foregoing, when the issuing authority has determined that an activity outside the Areas Subject to Protection under M.G.L. c. 131, § 40 and outside the Buffer Zone has in fact altered an Area Subject to Protection under M.G.L. c. 131, § 40, it may require such plans, supporting calculations and other documentation as are necessary to describe the entire activity.

(e) The requirement under M.G.L. c. 131, § 40 to obtain or apply for all obtainable permits, variances and approvals required by local by-law with respect to the proposed activity shall mean only those which are feasible to obtain at the time the Notice of Intent is filed. Permits, variances, and approvals required by local by-law may include, among others, zoning variances, permits from boards of appeals, permits required under floodplain or wetland zoning by-laws and gravel removal permits. They do not include, among others, building permits under the State Building Code, M.G.L. c. 23B, § 16, or subdivision control approvals under the State Subdivision Control Law, M.G.L. c. 41, §§ 81K through 81GG, which are issued by local authorities. When an applicant for a comprehensive permit (under M.G.L. c. 40B, §§ 20 through 23) from a board of appeals has received a determination from the board granting or denying the permit and, in the case of a denial, has appealed to the Housing Appeals Committee (established under M.G.L. c. 23B, § 5A), said applicant shall be deemed to have applied for all permits obtainable at the time of filing.

(f) If the issuing authority rejects a Notice of Intent because of a failure to obtain or apply for all permits, variances and approvals required by local by-law, it shall specify in writing the permit, variance or approval that has not been applied for. A ruling by the municipal agency within whose jurisdiction the issuance of the permit, variance or approval lies, or by the town counsel or city solicitor, concerning the applicability or obtainability of such permit, variance or approval shall be accepted by the issuing authority. In the absence of such a ruling, other evidence may be accepted.

(g) A Notice of Intent shall expire where the applicant has failed to diligently pursue the issuance of a Final Order in proceedings under 310 CMR 10.00. A Notice of Intent shall be presumed to have expired two years after the date of filing unless the applicant submits information showing that (a) good cause exists for the delay of proceedings under 310 CMR 10.00; and (b) the applicant has continued to pursue the project diligently in other forums in the intervening period; provided, however, that unfavorable financial circumstances shall not constitute good cause for delay. No Notice of Intent shall be deemed expired under 310 CMR 10.05 when an adjudicatory hearing is pending and when the applicant has provided all information necessary to continue with the prosecution of the case.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

Notwithstanding the provisions contained in 310 CMR 10.10, 310 CMR 10.05(4)(g) shall apply to any Notice of Intent whenever filed.

10.05: continued

(h) The issuing authority may require that supporting plans and calculations be prepared and stamped by a registered professional engineer (PE) when, in its judgment, the complexity of the proposed work warrants this professional certification. The issuing authority may also require the preparation of supporting materials by other professionals including, but not limited to, registered landscape architect, registered land surveyor, environmental scientist, geologist or hydrologist when in its judgment the complexity of the proposed work warrants the relevant specialized expertise. The issuing authority may require a delineation in an Abbreviated Notice of Resource Area Delineation to be performed by a professional with relevant specialized expertise. If the Notice of Intent is a Combined Application, the supporting plans and calculations shall also conform to the requirements of 310 CMR 9.11(3)(b) and 314 CMR 9.05(1): *Application Requirements* to the extent they are applicable.

(5) Public Hearings by Conservation Commissions.

(a) A public hearing shall be held by the conservation commission within 21 days of receipt of the minimum submittal requirements set forth in the *General Instructions for Completing Notice of Intent (Form 3)*, *Abbreviated Notice of Intent (Form 4)* and Abbreviated Notice of Resource Area Delineation, and shall be advertised in accordance with M.G.L. c. 131, § 40 and the requirements of the open meeting law, M.G.L. c. 39, § 23B.

(b) Public hearings may be continued as follows:

1. without the consent of the applicant to a date, announced at the hearing, within 21 days, of receipt of the Notice of Intent;
2. with the consent of the applicant, to an agreed-upon date, which shall be announced at the hearing; or
3. with the consent of the applicant for a period not to exceed 21 days after the submission of a specified piece of information or the occurrence of a specified action. The date, time and place of said continued hearing shall be publicized in accordance with M.G.L. c. 131, § 40, and notice shall be sent to any person at the hearing who so requests in writing.

(6) Orders of Conditions Regulating Work and Orders of Resource Area Delineation.

(a) Within 21 days of the close of the public hearing, the conservation commission shall either:

1. make a determination that the area on which the work is proposed to be done, or which the proposed work will remove, fill, dredge or alter, is not significant to any of the interests identified in M.G.L. c. 131, § 40, and shall so notify the applicant and the Department on Form 6;
2. make a determination that the area on which the work is proposed to be done, or which the proposed work will remove, fill, dredge or alter, is significant to one or more of the interests identified in M.G.L. c. 131, § 40, and shall issue an Order of Conditions for the protection of said interest(s), on Form 5. If the issuing authority also determines that the project meets the eligibility criteria for issuance of a Restoration Order of Conditions set forth in the applicable provisions of 310 CMR 10.00, the Order of Conditions for the project shall be a Restoration Order of Conditions; or
3. make a determination that bordering vegetated wetland and other resource areas subject to jurisdiction have been identified and delineated according to the definitions in 310 CMR 10.00 and shall issue an Order of Resource Area Delineation to confirm or modify the delineations submitted. The Order of Resource Area Delineation shall be effective for three years.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

The standards and presumptions to be used by the issuing authority in determining whether an area is significant to the interests identified in M.G.L. c. 131, § 40, are found in 310 CMR 10.21 through 10.37 (for coastal wetlands) and 10.51 through 10.60 (for inland wetlands).

(b) The Order of Conditions shall impose such conditions as are necessary to meet the performance standards set forth in 310 CMR 10.21 through 10.60 for the protection of those areas found to be significant to one or more of the interests identified in M.G.L. c. 131, § 40 and the Stormwater Management Standards provided in 310 CMR 10.05(6)(k) through (q). The Order shall prohibit any work or any portion thereof that cannot be conditioned to meet said standards.

10.05: continued

The Order shall impose conditions only upon work or the portion thereof that is to be undertaken within an Area Subject to Protection under M.G.L. c. 131, § 40 or within the Buffer Zone. The Order shall impose conditions to control erosion and sedimentation within resource areas and the Buffer Zone. The Order shall impose conditions setting limits on the quantity and quality of discharge from a point source (both closed and open channel), when said limits are necessary to protect the interests identified in M.G.L. c. 131, § 40; provided, however, that the point of discharge falls within an Area Subject to Protection under M.G.L. c. 131, § 40 or within the Buffer Zone, and further provided that said conditions are consistent with the limitations set forth in 310 CMR 10.03(4).

Notwithstanding the foregoing, when the issuing authority has determined that an Activity outside the Areas Subject to Protection under M.G.L. c. 131, § 40 and outside the Buffer Zone has in fact altered an Area Subject to Protection under M.G.L.c. 131, § 40, it shall impose such conditions on any portion of the activity as are necessary to contribute to the protection of the interests identified in M.G.L.c. 131, § 40.

When the issuing authority determines that a project meets the eligibility criteria for a Restoration Order of Conditions, the issuing authority shall impose only the conditions set forth in the applicable provisions of 310 CMR 10.00 for that Restoration Order of Conditions. A Restoration Order of Conditions may reference the plans and specifications approved by the issuing authority. If the Department issues a Combined Permit, the Department may append to the Restoration Order of Conditions any conditions that the Department has authority to impose pursuant to 310 CMR 9.00: *Waterways* and 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth* to the extent they are applicable. The requirement that an Order shall impose conditions only upon work or the portion thereof that is to be undertaken within an Area Subject to Protection under M.G.L. c. 131, § 40, or within the Buffer Zone does not restrict the authority of the Department to append to a Combined Permit any conditions that the Department has the authority to impose under 310 CMR 9.00: *Waterways* and 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth* to the extent they are applicable.

(c) If the conservation commission finds that the information submitted by the applicant is not sufficient to describe the site, the work or the effect of the work on the interests identified in M.G.L. c. 131, § 40, it may issue an Order prohibiting the work. The Order shall specify the information which is lacking and why it is necessary.

(d) Except as provided in M.G.L. c. 131, § 40 for maintenance dredging, an Order of Conditions, Order of Resource Area Delineation, or Notification of Non-significance shall be valid for three years from the date of its issuance; provided, however, that the issuing authority may issue an Order for up to five years where special circumstances warrant and where those special circumstances are set forth in the Order. An Order of Resource Area Delineation shall be valid for three years, and may be extended by the issuing authority for one or more years up to three years each under 310 CMR 10.05(8) upon written confirmation by a professional with relevant expertise that the resource area delineations remain accurate.

(e) The Order or Notification of Non-significance shall be signed by a majority of the conservation commission and shall be mailed by certified mail (return receipt requested) or hand delivered to the applicant or his or her agent or attorney, and a copy mailed or hand delivered at the same time to the Department. If the Order imposes conditions necessary to meet any performance standard contained in 310 CMR 10.37 or 10.59, a copy shall be mailed or hand delivered at the same time to the Massachusetts Natural Heritage and Endangered

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

Species Program.

(f) A copy of the plans describing the work and the Order shall be kept on file by the conservation commission and by the Department, and shall be available to the public at reasonable hours.

10.05: continued

(g) Prior to the commencement of any work permitted or required by the Final Order, including a Final Order of Resource Area Delineation, or Notification of Non-significance, the Order or Notification shall be recorded in the Registry of Deeds or the Land Court for the district in which the land is located, within the chain of title of the affected property. In the case of recorded land, the final order shall also be noted in the Registry's Grantor Index under the name of the owner of the land upon which the proposed work is to be done. In the case of registered land, the final order shall also be noted on the Land Court Certificate of Title of the owner of the land upon which the proposed work is to be done. Certification of recording shall be sent to the issuing authority on the form at the end of Form 5. If work is undertaken without the applicant first recording the Order, the issuing authority may issue an Enforcement Order (Form 9) or may itself record the Order of Conditions.

(h) Notwithstanding the provisions contained in 310 CMR 10.10(1) and (3), any Order of Conditions not containing an expiration date, issued for work proposed in a Notice of Intent filed under M.G.L. c. 131, § 40 prior to November 18, 1974, shall expire on April 17, 1986.

(i) An Order of Conditions does not grant any property rights or any exclusive privileges; it does not authorize any injury to private property or invasion of property rights.

(j) Failure to comply with conditions stated in the Order and with all related statutes and other regulatory measures shall be deemed cause to revoke or modify the Order of Conditions.

(k) No Area Subject to Protection under M.G.L. c. 131, § 40 other than bordering land subject to flooding, isolated land subject to flooding, land subject to coastal storm flowage, or riverfront area may be altered or filled for the impoundment or detention of stormwater, the control of sedimentation or the attenuation of pollutants in stormwater discharges, and the applicable performance standards shall apply to any such alteration or fill. Except as expressly provided, stormwater runoff from all industrial, commercial, institutional, office, residential and transportation projects that are subject to regulation under M.G.L. c. 131, § 40 including site preparation, construction, and redevelopment and all point source stormwater discharges from said projects within an Area Subject to Protection under M.G.L. c. 131, § 40 or within the Buffer Zone shall be provided with stormwater best management practices to attenuate pollutants and to provide a setback from the receiving waters and wetlands in accordance with the following Stormwater Management Standards as further defined and specified in the Massachusetts Stormwater Handbook:

1. No new stormwater conveyances (*e.g.* outfalls) may discharge untreated stormwater directly to or cause erosion in wetlands or waters of the Commonwealth.

2. Stormwater management systems shall be designed so that post-development peak discharge rates do not exceed pre-development peak discharge rates. This Standard may be waived for discharges to land subject to coastal storm flowage as defined in 310 CMR 10.04.

3. Loss of annual recharge to ground water shall be eliminated or minimized through the use of infiltration measures including environmentally sensitive site design, low impact development techniques, stormwater best management practices and good operation and maintenance. At a minimum, the annual recharge from the post-development site shall approximate the annual recharge from the pre-development conditions based on soil type.

This Standard is met when the stormwater management system is designed to infiltrate the required recharge volume as determined in accordance with the Massachusetts Stormwater Handbook.

4. Stormwater management systems shall be designed to remove 80% of the average annual post-construction load of Total Suspended Solids (TSS). This Standard is met

when:

- a. Suitable practices for source control and pollution prevention are identified in a long-term pollution prevention plan and thereafter are implemented and maintained;
- b. Structural stormwater best management practices are sized to capture the required water quality volume determined in accordance with *Massachusetts Stormwater Handbook*; and
- c. Pretreatment is provided in accordance with the *Massachusetts Stormwater Handbook*.

10.05: continued

5. For land uses with higher potential pollutant loads, source control and pollution prevention shall be implemented in accordance with the Massachusetts Stormwater Handbook to eliminate or reduce the discharge of stormwater runoff from such land uses to the maximum extent practicable. If through source control and/or pollution prevention, all land uses with higher potential pollutant loads cannot be completely protected from exposure to rain, snow, snow melt and stormwater runoff, the proponent shall use the specific structural stormwater BMPs determined by the Department to be suitable for such use as provided in the Massachusetts Stormwater Handbook. Stormwater discharges from land uses with higher potential pollutant loads shall also comply with the requirements of the Massachusetts Clean Waters Act, M.G.L. c. 21, §§ 26 through 53, and the regulations promulgated thereunder at 314 CMR 3.00: *Surface Water Discharge Permit Program*, 314 CMR 4.00: *Massachusetts Surface Water Quality Standards* and 314 CMR 5.00: *Ground Water Discharge Permit Program*.
 6. Stormwater discharges within the Zone II or Interim Wellhead Protection Area of a public water supply and stormwater discharges near or to any other critical area require the use of the specific source control and pollution prevention measures and the specific structural stormwater best management practices determined by the Department to be suitable for managing discharges to such area as provided in the Massachusetts Stormwater Handbook. A discharge is near a critical area, if there is a strong likelihood of a significant impact occurring to said area, taking into account site-specific factors. Stormwater discharges to Outstanding Resource Waters and Special Resource Waters shall be removed and set back from the receiving water or wetland and receive the highest and best practical method of treatment. A “storm water discharge” as defined in 314 CMR 3.04(2)(a) or (b) to an Outstanding Resource Water or Special Resource Water shall comply with 314 CMR 3.00: *Surface Water Discharge Permit Program* and 314 CMR 4.00: *Massachusetts Surface Water Quality Standards*. Stormwater discharges to a Zone I or Zone A are prohibited, unless essential to the operation of the public water supply.
 7. A redevelopment project is required to meet the following Stormwater Management Standards only to the maximum extent practicable: Standard 2, Standard 3, and the pretreatment and structural stormwater best management practice requirements of Standards 4, 5 and 6. Existing stormwater discharges shall comply with Standard 1 only to the maximum extent practicable. A redevelopment project shall also comply with all other requirements of the Stormwater Management Standards and improve existing conditions.
 8. A plan to control construction related impacts including erosion, sedimentation and other pollutant sources during construction and land disturbance activities (construction period erosion, sedimentation and pollution prevention plan) shall be developed and implemented.
 9. A long-term operation and maintenance plan shall be developed and implemented to ensure that the stormwater management system functions as designed.
 10. All illicit discharges to the stormwater management system are prohibited.
- (1) The Stormwater Management Standards shall not apply to:
1. A single-family house;
 2. Housing development and redevelopment projects comprised of detached single-family dwellings on four or fewer lots, provided that there are no stormwater discharges that may potentially affect a critical area;
 3. Multi-family housing development and redevelopment projects, with four or fewer units, including condominiums, cooperatives, apartment buildings and townhouses,

provided that there are no stormwater discharges that may potentially affect a critical area; and

4. Emergency repairs to roads or their drainage systems.

(m) The Stormwater Management Standards shall apply to the maximum extent practicable to the following:

1. Housing development and redevelopment projects comprised of detached single-family dwellings on four or fewer lots that have a stormwater discharge that may potentially affect a critical area;

2. Multi-family housing developments and redevelopment projects with four or fewer units, including condominiums, cooperatives, apartment buildings, and townhouses, that have a stormwater discharge that may potentially affect a critical area;

10.05: continued

3. Housing development and redevelopment projects comprised of detached single-family dwellings, on five to nine lots, provided there is no stormwater discharge that may potentially affect a critical area; and
4. Multi-family housing development and redevelopment projects, with five to nine units, including condominiums, cooperatives, apartment buildings and townhouses, provided there is no stormwater discharge that may potentially affect a critical area.
5. Marinas and boatyards provided that the hull maintenance, painting and service areas are protected from exposure to rain, snow, snowmelt, and stormwater runoff; and
6. Footpaths bikepaths and other paths for pedestrian and/or nonmotorized vehicle access.

(n) For phased projects the determination of whether the *Stormwater Management Standards* apply is made on the entire project as a whole including all phases. When proposing a development or redevelopment project subject to the *Stormwater Management Standards*, proponents shall consider environmentally sensitive site design that incorporates low impact development techniques in addition to stormwater best management practices.

(o) Project proponents seeking to demonstrate compliance with some of all of the Stormwater Management Standards to the maximum extent practicable shall demonstrate that:

1. They have made all reasonable efforts to meet each of the Standards;
2. They have made a complete evaluation of possible stormwater management measures including environmentally sensitive site design and low impact development techniques that minimize land disturbance and impervious surfaces, structural stormwater best management practices, pollution prevention, erosion and sedimentation control and proper operation and maintenance of stormwater best management practices; and
3. If full compliance with the Standards cannot be achieved, they are implementing the highest practicable level of stormwater management.

(p) Notwithstanding anything to the contrary in 310 CMR 10.00, stormwater runoff from all industrial, commercial, institutional, office, residential and transportation projects subject to regulation under M.G.L. c. 131, § 40, including site preparation, construction, and redevelopment, and all point source stormwater discharges from said projects within an Area Subject to Protection under M.G.L. c. 131, § 40, or within the Buffer Zone, for which a Notice of Intent or Notice of Resource Area Delineation has been filed prior to January 2, 2008 shall be managed according to the *Stormwater Management Standards* as set forth in the Stormwater Policy issued by the Department on November 18, 1996.

(q) Compliance with the *Stormwater Management Standards* set forth in 310 CMR 10.05(6)(k) through (q) does not relieve a discharger of the obligation to comply with all applicable Federal, State, and local laws, regulations and permits including without limitation all applicable provisions of 310 CMR 10.00, 314 CMR 3.00: *Surface Water Discharge Permit Program*, 4.00: *Massachusetts Surface Water Quality Standards*, 5.00: *Ground Water Discharge Permit Program*, 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*, local land use controls adopted to comply with 310 CMR 22.21: *Ground Water Supply Protection* or the NPDES General Permit for Small Municipal Separate Storm Sewer Systems, the requirements of the NPDES General Stormwater permits such as the Construction General Permit, and the Multi-sector General Permit.

(7) Requests for Actions by the Department (Appeals).

- (a) The following persons may request the Department to act:
1. the applicant;

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

2. the owner, if not the applicant;
 3. any person aggrieved by a Determination or an Order;
 4. any owner of land abutting the land on which the work is to be done;
 5. any ten residents of the city or town where the land is located; and
 6. the Department.
- (b) Any person(s) permitted to request the Department to act under 310 CMR 10.05(7)(a) may request the Department to issue a Superseding Determination of Applicability or to issue a Superseding Order, whichever is appropriate, whenever a conservation commission has:
1. issued a Determination of Applicability (Form 2);

10.05: continued

2. issued a Notification that an area is not significant to any interest identified in M.G.L. c. 131, § 40 (Form 6);
3. issued an Order of Conditions allowing, conditioning or prohibiting work (Form 5) or an Order of Resource Area Delineation; or
4. failed to hold a public hearing or issue an Order, Notification or Determination within the time period required by M.G.L. c. 131, § 40.

Where the Department is requested to issue a Superseding Determination or Order of Conditions, the conservation commission shall be a party to all agency proceedings and hearings before the Department.

(c) A request for a Superseding Order or Determination shall be made in writing and shall be sent by certified mail or hand delivered within ten days of issuance of the Order, Determination or Notification which is being appealed. When the basis of such request is the conservation commission's failure to act, the request may be made at any time up to 70 days after the expiration of the period within which the conservation commission was to have acted. Said request shall state clearly and concisely the objections to the Order, Determination or Notification which is being appealed and, in the case of a request for a Superseding Order, how the Order of Conditions or Notification of Non-significance issued by the conservation commission is inconsistent with 310 CMR 10.00 and does not contribute to the protection of the interests identified in M.G.L. c. 131, § 40. When the Order is a Restoration Order of Conditions, the basis of the request is limited to claim(s) that the applicant did not comply with one or more of the applicable procedural requirements of 310 CMR 10.05 and/or the conservation commission issued the Restoration Order of Conditions in contravention of one or more of the applicable eligibility criteria. The request for Department action shall specifically identify any procedural requirements and eligibility criteria that the person requesting Department action alleges have not been met.

(d) All requests for the Department to act shall be sent to the appropriate Regional Office of the Department. A copy of the request shall at the same time be sent by certified mail or hand delivered to the conservation commission and the applicant, if he is not the appellant.

(e) Within 35 days from receipt of such a request, the Department shall issue a Superseding Determination of Applicability (Form 2) or a Notification that an area is not significant to any interest identified in M.G.L. c. 131, § 40 (Form 6).

(f) Within 70 days from receipt of such a request, the Department shall issue a Superseding Order unless either of the following apply, or in the event that both apply, whichever is later:

1. compliance with M.G.L. c. 30, §§ 61 through 62H and 301 CMR 11.00 is required, in which case the Department shall issue a Superseding Order within 40 days of the issuance of a statement by the Secretary of the Executive Office of Energy and Environmental Affairs that the applicant has complied with M.G.L. c. 30, §§ 6 through 62H and 301 CMR 11.00: *MEPA Regulations*;
2. the Department has requested additional plans, information or documentation pursuant to 310 CMR 10.05(7)(g), in which case the Department shall issue a Superseding Order within 40 days of receipt of such plans, information, or documentation, or of the failure of the applicant to comply with such request.

(g) The Department shall notify the applicant within 30 days of receipt of a request for the Department to act if additional information or documentation is necessary to make its determination; provided, however, that further information may be requested should the information supplied in response to the original notification so require. When requested to issue a Superseding Order of Resource Area Delineation, the Department shall limit its review to the resource area delineations. The Department shall consider the objections to the resource area delineations stated in the request. The Department may affirm an Order of

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

Resource Area Delineation based upon a conclusion that the Order of Resource Area Delineation substantially conforms to the locations identified by the Department through a site inspection.

(h) When the request for a Superseding Order concerns an Order prohibiting work and issued pursuant to 310 CMR 10.05(6)(c), the Department shall limit its review to the information submitted to the conservation commission. If the Department determines that insufficient information was submitted, it shall affirm the denial and instruct the applicant to refile with the conservation commission and include the appropriate information. If the Department determines that sufficient information was submitted, it shall so inform the applicant and the conservation commission, and shall proceed to issue a Superseding Order as provided in 310 CMR 10.05.

10.05: continued

(i) After receipt of a request for a Superseding Determination or Order, the Department may conduct an informal meeting and may conduct an inspection of the site. In the event an inspection is conducted, all parties shall be invited in order to present any information necessary or useful to a proper and complete review of the proposed activity and its effects upon the interests identified in M.G.L. c. 131, § 40. Any party presenting information as a result of such a meeting shall provide copies to the other parties.

Based upon its review of the Notice of Intent, the Order, any informal meeting or site inspection, and any other additional plans, information, or documentation submitted under 310 CMR 10.05(7)(f) or (g), the Department shall issue a Superseding Order for the protection of the interests identified in M.G.L. c. 131, § 40. The Superseding Order shall impose such conditions as are necessary to meet the performance standards set forth in 310 CMR 10.21 through 10.60 and stormwater standards set forth at 301 CMR 10.05(6)(k) for the protection of those interests. The Superseding Order shall prohibit any work or any portions thereof that cannot be conditioned to protect such interests. The Department may issue a Superseding Order which affirms the Order issued by the conservation commission. The Department shall issue a Restoration Order of Conditions as the Superseding Order of Conditions in the event it determines that the project meets the eligibility criteria for a Restoration Order of Conditions. If the applicant submitted a Combined Application for a project that requires a 401 Water Quality Certification pursuant to 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*, or a water-dependent use project that requires a Chapter 91 license, permit or other written approval pursuant to 310 CMR 9.00: *Waterways*, the Department may issue a Combined Permit that serves as the Superseding Order of Conditions, the 401 Water Quality Certification, and/or the Chapter 91 permit, license or other written approval, whichever is applicable, provided the Department determines that the project meets the requirements for obtaining such Order, Certification, permit, license or other written approval.

(j) Administrative Hearings.

1. Timely Filings. Papers required or permitted to be filed under 310 CMR 10.05 must be filed with the Department, at the address designated in the Reviewable Decision, within the timelines specified in 310 CMR 10.05. Papers shall be considered filed as set forth in 310 CMR 1.01(3): *Time*.

2. Appeal Notice.

a. Any applicant, landowner, aggrieved person if previously a participant in the permit proceedings, conservation commission, or any ten residents of the city or town where the land is located, if at least one resident was previously a participant in the permit proceeding may request review of a Reviewable Decision by filing an Appeal Notice no later than ten business days after the issuance of the Reviewable Decision. Previously participating in the permit proceeding means the submission of written information to the conservation commission prior to close of the public hearing, requesting an action by the Department that would result in a Reviewable Decision, or providing written information to the Department prior to issuance of a Reviewable Decision. The Appeal Notice must be filed with the Department with a copy sent to the appropriate regional Department office by certified mail or hand delivered within ten days after the date of issuance of the Reviewable Decision, and a copy thereof must at the same time be sent by certified mail or hand delivered to the conservation commission (if not filed by the conservation commission) and to the applicant (if not filed by the applicant). The Appeal Notice shall also be served by certified mail or hand delivered on any person that requested the action by the Department that

resulted in the Reviewable Decision. In the event that the entity that requested the action is a ten resident group, the Appeal Notice shall be served on the designated representative of the ten resident group, whose name and contact information shall be included in the Reviewable Decision. Any party listed in 310 CMR 10.05(7)(j)2.a. that fails to timely file an Appeal Notice pursuant to 310 CMR 10.05, shall be deemed to have waived its right to appeal the Reviewable Decision.

- b. The Appeal Notice shall include all of the following:
 - i. the Petitioner's complete name, address, phone number, fax number and email address and, if represented, counsel's name, address, phone number, fax number and email address, and if a ten resident group, the same information for the group's designated representative.

10.05: continued

- ii. the department's wetlands file number, if applicable, the name of applicant and address of the project.
 - iii. if filed by an aggrieved person, demonstration of participation in previous proceedings, in accordance with 310 CMR 10.05(7)(j)3.a. and sufficient written facts to demonstrate status as a person aggrieved;
 - iv. if filed by a ten resident group, demonstration of participation in previous proceedings, in accordance with 310 CMR 10.05(7)(j)(3)(a);
 - v. a clear and concise statement of the alleged errors contained in the Reviewable Decision and how each alleged error is inconsistent with 310 CMR 10.00 and does not contribute to the protection of the interests identified in the Wetlands Protection Act, M.G.L. c. 131, § 40, including reference to the statutory or regulatory provisions the Party alleges has been violated by the Reviewable Decision, and the relief sought, including specific changes desired in the Reviewable Decision. In the event that the Reviewable Decision is a Superseding Order of Conditions that is a Restoration Order of Conditions, the appeal is limited to a claim that the applicant did not comply with one or more of the applicable procedural requirements of 310 CMR 10.05 and/or the Department issued the Reviewable Decision in contravention of one or more of the applicable eligibility criteria. The notice of claim shall specifically identify the procedural requirements and eligibility criteria that the person requesting an adjudicatory hearing alleges have not been met;
 - vi. a copy of the Reviewable Decision appealed and a copy of the underlying Conservation Commission decision if the Reviewable Decision affirms the Conservation Commission decision; and
 - vii. if asserting that a matter is Major or Complex, a statement requesting that the Presiding Officer make a designation of Major or Complex, with specific reasons supporting the request.
- c. An Appeal Notice that does not contain all of the information required in 310 CMR 10.05(7)(j)1.b. may be dismissed.
- d. Within five business days of receipt of a written request by any potential party, the applicant shall make all documents submitted to the department in support of the Reviewable Decision, including but not limited to the notice of intent, plan of record, or other information, available to any person who states that they intend to appeal or intervene. In the case of a ten resident group, or a group intervening pursuant to M.G.L. c. 30A, the applicant need only make one copy available to the group's designated representative.
- e. Within five days of the receipt by the applicant and/or property owner of a written request by any person who has filed an appeal or intervened, and/or such person's consultants, attorneys, or other representatives, shall be allowed to visit the site with the property owner, upon reasonable conditions of the applicant and/or property owner. The purpose of a site visit shall be related solely to the Reviewable Decision under appeal and shall be specifically identified by the requesting party. The person requesting the site visit may request a later date for the site visit, which shall be reasonably accommodated by the applicant and/or property owner.
- f. The Department, the conservation commission, the petitioner, the applicant, and any interveners pursuant to 310 CMR 10.05(7)(j) shall be deemed to be parties to the proceeding and are entitled to service of all documents filed in the proceeding, and shall be included in a certificate of service to accompany all filings in accordance with 310 CMR 1.01(4)(f).

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

g. No work shall be undertaken until all administrative appeal periods from a Reviewable Decision have elapsed, or if such an appeal has been taken, until all procedures before the Department have been completed.

h. The Presiding Officer may rule on the timeliness, standing and compliance with the requirements of 310 CMR 10.05(7)(j)3.b., *sua sponte*, and provide a prompt ruling to the parties; or if in response to a motion, within ten days of the filing of such motion.

3. Petitioner's Direct Case.

a. A Party who has timely filed an Appeal Notice must file with the Department and serve a copy on all parties its Direct Case no later than 45 days after the Prescreening Conference.

10.05: continued

- b. The Petitioner has the burden of going forward pursuant to 310 CMR 10.03(2), and proving its direct case by a preponderance of the evidence.
 - c. In its Direct Case, the Petitioner must establish the legal and factual basis for its position on the issues identified by the Presiding Officer in the pre-screening report. Failure to do so will result in a waiver of Petitioner's Direct Case for that issue. In addition, the Direct Case at a minimum shall include:
 - i. a description of the subject matter of the Reviewable Decision;
 - ii. credible evidence from a competent source in support of each claim of factual error, including any relevant expert report(s), plan(s), or photograph(s).
4. Respondents' Direct Case. A party that seeks to support or defend the Reviewable Decision shall file and serve on all parties a Direct Case within 30 days of the filing of the Petitioner's Direct Case. A responding party shall be deemed to be a "Respondent".
- a. Response Content: The response shall at a minimum include:
 - i. A rebuttal to the Petitioner's Direct Case setting forth the legal and factual basis supporting the Reviewable Decision, including relevant statutory and regulatory citations and evidentiary support consisting of credible evidence from a competent source;
 - ii. any affirmative defenses and evidentiary support for them, including but not limited to the defense of lack of standing; and
 - iii. if asserting that a matter is Major or Complex, a statement requesting that the Presiding Office make designation of Major or Complex, with specific reasons supporting the request.
5. Intervention and Intervenor's Direct Case.
- a. Pursuant to M.G.L. c. 30A, § 10A, a group of ten citizens may intervene in a proceeding by filing and serving on all parties a Motion to Intervene within 21 days of the filing of the Appeal Notice. The Motion to Intervene shall provide the names, addresses, phone and fax numbers and email address of each of the members of the ten citizens group, and a certification under oath by each member that they consent to the Motion to Intervene, and authorize the group representative to act for the member. The Motion shall also designate a representative who shall represent the group and receive documents on its behalf. Upon filing a Motion in conformance with 310 CMR 10.05(7)(j)5.a., the ten citizen group shall be deemed a party, subject to disqualification if the Presiding Officer determines that the group does not consist of at least ten consenting citizens.
 - b. A person who claims that he or she is substantially and specifically affected by the proceeding, may intervene by filing and serving on all parties a Motion to Intervene within 21 days of the filing of the Appeal Notice. The Motion must include a statement demonstrating that the moving party is substantially and specifically affected, in accordance with 310 CMR 1.01(7)(d): *Intervenors*. Upon filing a Motion in conformance with 310 CMR 10.05(7)(j)5., the moving party shall be deemed a party, subject to disqualification if the Presiding Officer determines that the moving party is not substantially and specifically affected.
 - c. An intervenor that contests the Reviewable Decision shall file a Direct Case that conforms to 310 CMR 10.05(7)(j)3. no later than the due date of Petitioner's Direct Case. An intervenor that supports the Reviewable Decision shall file a Direct Case that conforms to 310 CMR 10.05(7)(j)4. no later than the due date of the Respondent's Direct Case.
 - d. The Presiding Officer may rule on the timeliness, standing and compliance with the requirements of 310 CMR 10.05(7)(j)5., *sua sponte*, and provide a prompt ruling

to the parties, or if in response to a motion within ten days of the filing of such motion.

6. Rebuttal. The Petitioner or an Intervenor aligned with the Petitioner may file and serve on all parties rebuttal evidence no later than seven days after the filing of the Direct Case by the Respondent or any Intervenor aligned with the Respondent. The rebuttal evidence shall be limited to countering evidence submitted in a Respondent's or Intervenor's Direct Case in support of the Reviewable Decision.

10.05: continued

7. Pre-screening and Hearing

a. Upon receipt of the Appeal Notice, the Presiding Officer will schedule a prescreening conference to be conducted pursuant to 310 CMR 1.01(5)(a)15., and will send notice to all parties. Such prescreening conference will presumptively occur not more than 30 days after the Appeal Notice is filed. As used in this regulation, “presumptively” means that the time-line is binding, absent extraordinary circumstances in which case the Presiding Officer has authority to extend the time-line.

b. Upon receipt of the Appeal Notice, the Department will schedule a hearing and will send notice to all parties. A hearing will be presumptively held within 120 days after the Appeal Notice is filed.

c. Intervenors who subsequently intervene shall promptly receive the notice, but intervention shall not change the schedule of the pre-screening conference or the hearing.

d. Parties may file motions regarding jurisdictional defects such as standing or timeliness by a date set by the presiding officer before the prescreening. Motions for directed verdict or summary decision may be filed by a date set by the presiding officer at the prescreening. Motions will not change the schedule of the prescreening conference or the hearing.

e. Upon notice to the parties, the Presiding Officer may provide an opportunity for a simplified hearing conducted pursuant to 310 CMR 1.01(8)(a): *Simplified Hearing*.

f. If the Presiding Officer determines an appeal to be Major or Complex, she will adjust the schedule either by extending it up to 30 days, or by taking the matter ahead of other cases.

g. All parties must attend and be prepared to discuss settlement and the narrowing of issues at the pre-screening conference. At the conclusion of the pre-screening conference or shortly thereafter, the Presiding Officer shall prepare and circulate a prescreening conference report, for any appeal not resolved in prescreening. The prescreening conference report shall contain a list of issues that are in dispute and which are legally relevant, and that are to be addressed in the parties’ direct and rebuttal cases.

h. The Presiding Officer shall conduct a hearing. At the hearing, the parties’ Direct Cases shall consist of, and be limited to, the evidence contained in their respective Direct Cases and rebuttal evidence, subject to evidentiary rulings of the Presiding Officer. The primary function of the hearing shall be cross-examination of witnesses and, at the Presiding Officer’s discretion an oral closing argument. The hearing shall be limited to one day, unless the Presiding Officer finds that there is good cause for a longer hearing.

8. Final Action. The Presiding Officer shall issue a written recommended decision, not more than 30 days after the close of hearing, that shall include findings on the contested issues. The Commissioner shall issue a final written decision consistent with 310 CMR 1.01(14)(b), presumptively within six months of the Reviewable Decision, or in the case of an appeal deemed Major or Complex in which the schedule was extended, within seven months of the Reviewable Decision. Should a party request a tentative decision, the request shall be governed by 310 CMR 1.01(14)(a).

9. Relationship to Other Rules of Adjudicatory Proceedings.

a. To the extent there is conflict between the regulations governing wetland appeals set forth in 310 CMR 10.04 and 10.05(7)(j), on the one hand, and the Rules of Adjudicatory Proceedings set forth in 310 CMR 1.01: *Adjudicatory Proceeding*

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

Rules for the Department of Environmental Protection, on the other hand, the former shall prevail.

b. The following regulations shall apply to wetland appeals: 310 CMR 1.01(1) through (5), (6)(c), (f) through (k); (8); (10); (12)(a), (c), (d); (13)(a) through (c), (e) through (h), (j), (l) through (n); (14)(b) through (g) and 1.03: *Miscellaneous Provisions Applicable to All Adjudicatory Proceedings*.

10. Coordination of Appeals. The Department may coordinate adjudicatory hearings under 310 CMR 10.05(7)(j), 310 CMR 9.17: *Appeals*, and 314 CMR 9.10: *Appeals* or other administrative appeals.

10.05: continued

- a. If a 401 Water Quality Certification been issued pursuant to 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth* and/or a permit, license or other written approval has been issued pursuant to 310 CMR 9.00: *Waterways*, the Department may exclude issues solely within the jurisdiction of 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth* and/or 310 CMR 9.00: *Waterways* at an adjudicatory hearing held under 310 CMR 10.05(7)(j).
- b. If an adjudicatory hearing has been requested in accordance with 310 CMR 9.17: *Appeals* and/or 314 CMR 9.10: *Simplified Procedures for Small Structures Accessory to Residences*, or another administrative appeal, the Department may consolidate the proceedings.
- c. In the event that the Department has issued a Combined Permit that serves as a Superseding Order of Conditions and/or a 401 Water Quality Certification issued pursuant to 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth* and/or a permit, license or other written approval issued pursuant to 310 CMR 9.00: *Waterways*, the appeal may include issues solely within the jurisdiction of 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth* and/or 310 CMR 9.00: *Waterways* only as follows: The appeal may include issues solely within the jurisdiction of 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*, only if the appeal has been requested in accordance with the requirements of 314 CMR 9.10: *Simplified Procedures for Small Structures Accessory to Residences*. The appeal may include issues solely within the jurisdiction of 310 CMR 9.00: *Waterways*, only if the appeal has been requested in accordance with the requirements of 310 CMR 9.17: *Appeals*.
- (k) No work shall be undertaken until all administrative appeal periods from an Order or Notification of Non-significance have elapsed or, if such an appeal has been taken, until all proceedings before the Department have been completed.
- (8) Extensions of Orders of Conditions and Orders of Resource Area Delineations.
- (a) The issuing authority may extend an Order for one or more periods of up to three years each, except as otherwise provided in 310 CMR 10.05(11)(f) (extensions for Test Projects). Any extension granted by the issuing authority shall be made on Form 7. The request for an extension shall be made to the issuing authority at least 30 days prior to expiration of the Order.
- (b) The issuing authority may deny the request for an extension and require the filing of a new Notice of Intent for the remaining work or a new Abbreviated Notice of Resource Area Delineation in the following circumstances:
1. where no work has begun on the project, except where such failure is due to an unavoidable delay, such as appeals, in the obtaining of other necessary permits;
 2. where new information, not available at the time the Order was issued, has become available and indicates that the Order is not adequate to protect the interests identified in M.G.L. c. 131, § 40; or
 3. where incomplete work is causing damage to the interests identified in M.G.L. c. 131, § 40;

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

4. where work has been done in violation of the Order or 310 CMR 10.00; or
 5. where a resource area delineation or certification under 310 CMR 10.02 (2)(b)2. in an Order of Resource Delineation is no longer accurate.
- (c) If issued by the conservation commission, the Extension Permit shall be signed by a majority of the commission. A copy of the Extension Permit shall be sent to the conservation commission or the Department, whichever is appropriate, by the issuing authority.
- (d) The Extension Permit shall be recorded in the Land Court or the Registry of Deeds, whichever is appropriate. Certification of recording shall be sent to the issuing authority on the form at the end of Form 7. If work is undertaken without the applicant so recording the Extension Permit, the issuing authority may issue an Enforcement Order (Form 9) or may itself record the Extension Permit.

10.05: continued

(9) Certificates of Compliance.

(a) Upon completion of the work described in a Final Order of Conditions, but not later than the three year term of an Order of Resource Area Delineation or any extension thereunder, the applicant shall request in writing the issuance of a Certificate of Compliance stating that the work has been satisfactorily completed. Upon written request by the applicant, a Certificate of Compliance shall be issued by the issuing authority within 21 days of receipt thereof, and shall certify on Form 8 that the activity or portions thereof described in the Notice of Intent and plans has been completed in compliance with the Order. If issued by the Conservation Commission, the Certificate of Compliance shall be signed by a majority of the commission. A copy of the Certificate of Compliance shall be sent to the conservation commission or the Department, whichever is appropriate, by the issuing authority.

(b) Prior to the issuance of a Certificate of Compliance, a site inspection shall be made by the issuing authority, in the presence of the applicant or the applicant's agent. If the Department is the issuing authority, it shall notify the conservation commission of the request and the date of the site inspection.

(c) If the issuing authority determines, after review and inspection, that the work has not been done in compliance with the Order, it may refuse to issue a Certificate of Compliance. Such refusal shall be issued within 21 days of receipt of a request for a Certificate of Compliance, shall be in writing and shall specify the reasons for denial.

(d) If a project has been completed in accordance with plans stamped by a registered professional engineer, architect, landscape architect or land surveyor, a written statement by such a professional person certifying substantial compliance with the plans and setting forth what deviation, if any, exists from the plans approved in the Order shall accompany the request for a Certificate of Compliance.

(e) If the final order contains conditions which continue past the completion of the work, such as maintenance or monitoring, the Certificate of Compliance shall specify which, if any, of such conditions shall continue. The Certificate shall also specify to what portions of the work it applies, if it does not apply to all the work regulated by the Order.

(f) The Certificate of Compliance shall be recorded in the Land Court or Registry of Deeds, whichever is appropriate. Certification of recording shall be sent to the issuing authority on the form at the end of Form 8. Upon failure of the applicant to so record, the issuing authority may do so.

(10) Variance.

(a) The Commissioner may waive the application of any regulation(s) in 310 CMR 10.21 through 10.60 when he or she finds that:

1. there are no reasonable conditions or alternatives that would allow the project to proceed in compliance with 310 CMR 10.21 through 10.60;
2. that mitigating measures are proposed that will allow the project to be conditioned so as to contribute to the protection of the interests identified in M.G.L. c. 131, § 40; and
3. that the variance is necessary to accommodate an overriding community, regional, state or national public interest; or that it is necessary to avoid an Order that so restricts the use of property as to constitute an unconstitutional taking without compensation.

(b) Procedure. A request for a variance shall be made in writing and shall include, at a minimum, the following information:

1. a description of alternatives explored that would allow the project to proceed in compliance with 310 CMR 10.21 through 10.60 and an explanation of why each is unreasonable;
2. a description of the mitigating measures to be used to contribute to the protection of

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

the interests identified in M.G.L. c. 131, § 40; and

3. evidence that an overriding public interest is associated with the project which justifies waiver of 310 CMR 10.21 through 10.60, or evidence that the Superseding Order so restricts the use of the land that it constitutes an unconstitutional taking without compensation.

The request for a variance shall be sent to the Department by certified mail or hand delivered and a copy thereof shall at the same time be sent by certified mail or hand delivered to the conservation commission and any other parties.

10.05: continued

The Department will place a notice in the *Environmental Monitor* published by the Massachusetts Environmental Policy Act Office of the Executive Office of Energy and Environmental Affairs to solicit public comments on the request. The Department shall conduct a public hearing on a request for a variance. After reviewing the information submitted with the request for a variance and any other information submitted by any party within the public comment period, the Commissioner shall issue a decision as to whether to grant the variance. Within ten days of the date of issuance of the Commissioner's decision on the variance, any person who submitted comments during the public comment period may, according to the procedures specified in 310 CMR 10.05(7)(j), request an adjudicatory hearing on the decision. On a request for a variance based on overriding public interest, the Commissioner may dismiss the request to hold an adjudicatory hearing if the request repeats matters adequately considered in the variance decision, renews claims or arguments previously raised, or attempts to raise new claims or arguments not raised during the public comment period. On a request for a variance to avoid restrictions that would constitute an unconstitutional taking, the Commissioner shall hold an adjudicatory hearing. If an adjudicatory hearing is held, the applicant has the burden of demonstrating that the project meets the criteria necessary for a variance. Other parties to the adjudicatory hearing may introduce evidence either in favor of or opposing the request for a variance.

For projects in which all of the proposed work will be undertaken on land within the boundaries of one city or town, the request for a variance shall not be filed until the applicant first files a Notice of Intent with the Conservation Commission. The Commission shall review the project in accordance with the procedures set forth in 310 CMR 10.01 through 10.10 and issue an Order of Conditions consistent with 310 CMR 10.21 through 10.60. Within ten days of the issuance of the Order of Conditions, the applicant may request the Department to issue a Superseding Order. The Department staff shall review the project in accordance with the procedures set forth in 310 CMR 10.01 through 10.10 and shall issue a Superseding Order consistent with the provisions of 310 CMR 10.21 through 10.60. Within ten days of the issuance of the Superseding Order, the applicant may request an adjudicatory hearing on that order and/or a variance under 310 CMR 10.05(10) according to the procedure previously described.

For projects in which the proposed work will be undertaken on land within the boundaries of more than one city or town, the applicant may file a request for a variance directly with the Commissioner, with a copy to each affected conservation commission. If, after public notice, the Commissioner finds that a project meets the variance criteria, he shall specify which regulation(s) has been waived and what general requirements or conditions must be met to satisfy the variance criteria listed in 310 CMR 10.05(10)(a). The applicant shall then file a Notice of Intent with the appropriate conservation commissions in accordance with the procedures contained in 310 CMR 10.01 through 10.10. The conservation commissions shall issue Orders of Conditions consistent with all provisions of 310 CMR 10.21 through 10.60 except those waived by the Commissioner and containing any additional conditions or requirements imposed by the Commissioner in the variance. The usual procedures contained in 310 CMR 10.01 through 10.10 for requesting Superseding Orders and adjudicatory hearings remain applicable.

Commentary

310 CMR 10.05(10), which provides that the Commissioner may waive the application of one or more of the regulations on the basis of overriding public benefit is intended to be employed only in rare and unusual cases. The provision authorizing a variance request directly

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

to the Commissioner for projects on land within more than one city or town is intended to apply to projects that involve functionally related work in several contiguous towns (*e.g.*, transportation and energy transmission facilities) and to provide for a single uniform determination concerning alternative locations and the other variance criteria.

10.05: continued

(11) Permitting of Test Projects.

(a) General. The purpose of 310 CMR 10.05(11) is to establish procedures for permitting Test Projects to promote the development of potential new renewable energy technologies and other Innovative Technologies. Innovative Technologies must be proven through field testing before any large scale commercial deployment can occur in order to develop the data and information needed to support siting and full-scale deployment in a cost-effective manner. 310 CMR 10.05(11) will facilitate and encourage the development, testing and demonstration of Innovative Technologies, including water dependent renewable energy technologies, through review procedures for Test Projects. Given their limited scope and duration, these projects are expected to have minimal adverse environmental impacts and, therefore, are permissible under 310 CMR 10.05(11), provided that the applicant provides for adequate post-installation monitoring to identify any unanticipated adverse environmental impacts that occur in the course of the project. The issuing authority may require the alteration or removal of the project if the monitoring study or other information indicates that the project has unexpected or more than minimal adverse environmental impacts. Pre-application consultation with the issuing authority is recommended. Proposed Test Projects that do not meet the eligibility criteria in 310 CMR 10.05(11)(b) may be permitted provided they meet all applicable requirements of 310 CMR 10.24 through 10.35 for projects in coastal resource areas and 310 CMR 10.54 through 10.58 and 10.60 for projects in inland resource areas.

(b) Eligibility Criteria. Notwithstanding the provisions of 310 CMR 10.24 through 10.35, 10.53 through 10.58, and 10.60, the issuing authority may issue an Order of Conditions, and impose such conditions as will contribute to the interests identified in M.G.L. c. 131, § 40, to permit Test Projects (although no such project may be permitted which will have any adverse effect on specified habitat sites of Rare Species, as identified by procedures established under 310 CMR 10.37 and 10.59) provided:

1. the applicant documents the readiness of the device or technology for in situ testing with the results of laboratory testing, modeling, technical evaluations, or similar forms of supporting material;
2. the structures associated with the project will not be located in specified habitat sites of Rare Species located within a resource area or Buffer Zone;
3. the structures associated with the project are not located within a salt marsh or seagrass bed; and
4. any structures associated with the project can be easily and quickly removed with minimal disruption to resource areas.

(c) Application Requirements. For the purpose of authorizing eligible Test Projects pursuant to 310 CMR 10.05(11), the following provisions shall apply:

1. In lieu of plans prepared by a Registered Professional Engineer or Registered Land Surveyor a Notice of Intent for a Test Project may include documentation that appropriate laboratory testing and/or modeling has occurred and show the proposed location of the project on a plan designating all project components by coordinates referenced to the Massachusetts State Plane Coordinate System.
2. In addition to the documentation provided in 310 CMR 10.11(c)1., a Notice of Intent for a Test Project shall include the following:
 - a. a description of the device or technology to be tested and the purpose of the project;
 - b. a description of the installation process and schedule for installation, testing, and removal of the devices, technologies and associated equipment;
 - c. a demonstration that the project complies with the eligibility requirements of

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

310 CMR 10.05(11)(b)1. through 4.;

- d. a plan for the restoration of all disturbed resource areas to pre-existing conditions and a schedule for completing the restoration before the Order of Conditions expires;
- e. an environmental monitoring plan sufficiently broad to ensure the project meets all applicable regulatory standards; and
- f. a plan for prompt removal of the components of the project if the Department or conservation commission determines that the project threatens public health, safety or the environment.

10.05: continued

(d) Order of Conditions. At a minimum, the Order of Conditions authorizing a Test Project pursuant to 310 CMR 10.05(11) shall require the applicant to implement the monitoring plan and the restoration plan submitted with the Notice of Intent as approved by the issuing authority. The Order of Conditions shall also provide that if the Department or the conservation commission determines that the Test Project threatens the public health, safety or the environment, the applicant shall implement the removal plan submitted with the Notice of Intent as approved by the issuing authority, or modify the project as directed by the conservation commission or the Department.

(e) Term. Notwithstanding the provisions of 310 CMR 10.05(6)(b), an Order of Conditions for a Test Project issued under 310 CMR 10.05(11) shall be valid for no more than one year.

(f) Extension Permits. An Order of Conditions for a Test Project issued in accordance with 310 CMR 10.05(11) may be extended for one additional year upon written application by the applicant in accordance with 310 CMR 10.05(8)(a). The issuing authority may deny a request for an extension, if it determines that: the project objectives have not been advanced during the initial term; the continuation of the project would not adequately protect public health, safety, or the environment; or the extension should be denied based on the one or more of the circumstances identified in 310 CMR 10.05(8)(c). An extension permit issued for a Test Project in accordance with 310 CMR 10.05(11) is subject to the provisions of 310 CMR 10.05(8)(d) and (e).

(g) Appeals. The provisions governing Department action and adjudicatory hearings set forth in 310 CMR 10.05(7) shall apply to decisions authorizing Test Projects pursuant to 310 CMR 10.05(11). In the event that the Department issues a Superseding Order of Conditions denying a Test Project on the ground that it does not meet the eligibility criteria set forth in 310 CMR 10.05(11)(b), the applicant may file a Notice of Intent seeking authorization for the Test Project under the applicable provisions of 310 CMR 10.24 through 10.37, 10.53 through 10.58 and 10.60 in lieu of requesting an adjudicatory hearing.

10.06: Emergencies

(1) Unless authorized by a Severe Weather Emergency Declaration issued by the Commissioner pursuant to 310 CMR 10.06(8), any person requesting permission to do an emergency project shall specify why the project is necessary for the protection of the health or safety of the citizens of the Commonwealth and what agency of the Commonwealth or subdivision thereof is to perform the project or has ordered the project to be performed. If the project is certified to be an emergency by the conservation commission or the Commissioner, the certification shall include a description of the work which is to be allowed and shall not include work beyond that necessary to abate the emergency. A site inspection shall be made prior to certification.

(2) An emergency certification shall be issued only for the protection of public health or safety.

(3) The time limitation for performance of emergency work shall not exceed 30 days, or 60 days for Immediate Response Actions approved by the Bureau of Waste Site Cleanup (BWSC) of the Department of Environmental Protection in accordance with the provisions of 310 CMR 40.0410: *Immediate Response Actions*, unless written approval of the Commissioner is obtained.

(4) A copy of an emergency certification shall be sent to the Department when it is issued by a conservation commission, and to the conservation commission when it is issued by the Department.

(5) The Department may, on its own motion or at the request of any person, review: an emergency certification issued by a conservation commission and any work permitted thereunder; a denial by a conservation commission of a request for emergency certification; or

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

the failure by a conservation commission to act within 24 hours of a request for emergency certification. Such review shall not operate to stay the work permitted by the emergency certification unless the Department specifically so orders. The Department's review shall be conducted within seven days of: issuance by a conservation commission of the emergency certification; denial by a conservation commission of the emergency certification; or failure by a conservation commission to act within 24 hours of a request for emergency certification. If certification was improperly granted, or the work allowed thereunder is excessive or not required to protect the health and safety of citizens of the Commonwealth, the Department may revoke the emergency certification, condition the work permitted thereunder, or take such other action as it deems appropriate.

10.06: continued

(6) Agricultural Emergencies

(a) Notwithstanding the provisions of 310 CMR 10.06(1) through (4), any person may undertake work for the emergency agricultural activities described in 310 CMR 10.06(6)(g) when necessary to:

1. eliminate an imminent threat to land in agricultural use;
2. restore land in agricultural use that has been damaged due to a storm or other sudden, unforeseen event; or
3. provide an emergency agricultural water source when the existing agricultural water source suddenly and unforeseeably has been rendered unusable or unavailable.
4. eradicate an infestation of Asian longhorned beetles (*Anoplophora glabripennis*) in response to an order or regulation issued by the United States Department of Agriculture (USDA) pursuant to 7 USC §§ 7701 *et seq.* (the Plant Protection Act), or the Department of Conservation and Recreation (DCR) pursuant to M.G.L. c. 132, § 11.

(b) Written notice of any work undertaken as an emergency activity under 310 CMR 10.06(6) must be received by the conservation commission and mailed to the Department within three days after the work has commenced or within three days after the end of the emergency event, whichever is sooner. Such notice shall state the name of the person performing the work, the name of the property owner (if different), the property and the location on the property where the work is to be performed, the exact nature of the emergency and of the work which is to be performed, and when the work was begun and when it is expected to be completed. The commission may, at its discretion, conduct a site visit to view the work being performed under such notice and to confirm that the information in the notice is correct.

(c) When an emergency is caused by a storm, any work undertaken as an emergency activity under 310 CMR 10.06(6) must commence within 30 days following the storm event which caused the agricultural emergency.

(d) Any work undertaken as an emergency activity under 310 CMR 10.06(6) shall be completed within 30 days from the commencement of such work unless written approval for a later completion date is given by the Commissioner.

(e) No work under 310 CMR 10.06(6) shall be allowed within estimated habitat which is indicated on the most recent Estimated Habitat Maps of State-listed Rare Wetlands Wildlife published by the Natural Heritage and Endangered Species Program of the Massachusetts Division of Fisheries and Wildlife.

(f) Work under 310 CMR 10.06(6) shall not fill or dredge a Salt Marsh.

(g) Only the following emergency activities are allowed under 310 CMR 10.06(6)(a):

1. The installation of stream bank stabilization measures, provided that:
 - a. such activity is carried out in accordance with Soil Conservation Service best management practices;
 - b. no more than 100 linear feet of bank are altered per storm event, and no more than 200 linear feet of new rip rap or gabions are placed on the bank of a stream under 310 CMR 10.06(6) cumulatively; and
 - c. after the 200 foot threshold has been reached the placement of additional rip rap or gabions following future storm events shall require the filing of a Notice of Intent.
2. The removal of storm debris, including trees, brush, branches, and cobbles, that were deposited in a stream channel during the storm event, provided that:
 - a. after the material is removed it is not placed on a bank or in a Bordering Vegetated Wetland;
 - b. Soil Conservation Service best management practices are followed; and
 - c. removal of material from a stream is limited to 100 linear feet per storm event.

3. The development of an emergency agricultural water source where the existing agricultural water source suddenly has been rendered unusable because of contamination, sudden diversion, or other unforeseen circumstances. Where an emergency agricultural water supply is required:

- a. the work shall be conducted so that impacts to Bordering Vegetated Wetland are minimized and all impacts, including excavation, access, and any other alterations to Bordering Vegetated Wetland, shall not exceed 2,000 square feet;
- b. the size of the water supply shall be limited to that necessary to provide the amount of water required to abate the emergency, but not to exceed 2,000 square feet;

10.06: continued

- c. a Notice of Intent shall be filed if the agricultural water supply is to be used for more than 60 days, in which case the agricultural water supply shall comply with existing performance standards under 310 CMR 10.53(3)(a), (b), and (g); and
 - d. all work shall comply with the Water Management Act, M.G.L. c. 21G.
4. The removal of trees, including stumps, and the application of pesticides to trees and soil within an area defined by USDA or DCR in an order or regulation to eradicate an infestation of Asian longhorned beetles, notwithstanding the provisions of 310 CMR 10.06(6)(d) or (e), provided that the work is conducted as follows:
 - a. The provisions of 310 CMR 10.06(6)(g)4. shall apply to USDA or DCR, if those agencies are performing eradication work, or to other persons if authorized or ordered by DCR to undertake eradication activity, in areas subject to regulation under M.G.L. c. 131, § 40. For the purposes of 310 CMR 10.06(6)(g)4., these agencies or persons shall be defined as authorized persons. At least 14 days prior to beginning work in any municipality, an authorized person shall submit to the conservation commission and MassDEP's regional office a GIS orthographic photo or map showing all resource areas in which work is to be conducted within the municipal boundaries, including wetland or stream crossings to gain access to work areas or Estimated Habitats for State-listed Rare Wetlands Wildlife, along with a proposed schedule or phasing plan for the eradication activities. If work is proposed within an Estimated Habitat, an authorized person shall provide the above described photo or map to the Natural Heritage and Endangered Species Program (NHESP) at the same time it is submitted to the conservation commission and MassDEP.
 - b. At least three days before beginning work at a specific site, an authorized person shall submit to the conservation commission and MassDEP's regional office a plan on a USGS or other map of at least 1=5:000 scale showing the work in the designated area as well as skid roads, stream and wetland crossings, landings and the general location of erosion control measures. An authorized person shall provide the name and contact information of an on-site supervisor responsible for compliance with the wetland related requirements of the harvest, including maintenance of the erosion control measures. MassDEP, a designated representative of the conservation commission and the authorized person shall conduct a site inspection at least 48 hours before beginning the work, to explore access options, proposed activity in resource areas, erosion controls, and final stabilization with the intent to minimize wetland impacts, unless MassDEP and the designated representative of the conservation commission determine, after a review of the plan, that a site visit is not necessary. If work is proposed within an Estimated Habitat, USDA, DCR or any person authorized or ordered by DCR to undertake eradication activity shall provide the above described map to the NHESP and the contact information for an on-site supervisor at the same time the information is provided to the conservation commission and MassDEP and shall also provide the NHESP with reasonable advance notice of any site inspection of the proposed work area.
 - c. Storage of materials and equipment shall be on paved surface or otherwise stable surface, outside resource areas, buffer zones, vernal pools, and the Zone I and Zone A of public water supply sources. Fuels, lubricants or hazardous materials shall not be stored, transferred between containers or mixed, and machinery shall not be refueled, in or within 100 feet of a resource area, vernal pool or the Zone I or Zone A of a public water supply.
 - d. Landings, access roads, and skid roads shall be located carefully to avoid steep slopes, resource areas, vernal pools, and stream crossings whenever possible. Access roads shall be stable and minimize site disturbance including impacts to vegetation,

soil, topography, hydrology and soils.

e. Stream crossings shall be avoided whenever possible. If temporary crossings are unavoidable, the crossing structures shall be removed at the end of the operation, and the site, banks, and approaches shall be stabilized. All crossings shall be made at right angles to the channel, and the approaches to a stream crossing shall be stabilized continuously both during the logging operation and after completion. At least one water bar shall be installed directly uphill from a crossing to prevent water moving down a skid road from reaching a stream. The water bar shall be reinforced as needed during the course of the work. The approaches may be corduroyed with poles to prevent rutting and the churning of soil. Erosion controls shall be placed in the skid road at the approach to a stream crossing at the end of the day.

10.06: continued

- f. When operating in a resource area, harvesters shall concentrate skidding in a few well-defined corridors, use cable and winch as much as possible, and fell trees away from resource areas to facilitate winching them out. Harvesters shall use best efforts to avoid damaging non-targeted trees during eradication efforts. Harvesters shall use brush or corduroy to minimize ground pressure and rutting, shall reduce hitch volumes to minimize rutting, and shall use Best Management Practices (BMPs) to minimize sediment transport. Machinery shall not operate in a resource area unless the ground is dry, frozen, or otherwise stable enough to support it. In some limited situations where work is proposed in less than stable conditions and where, subject to approval by the conservation commission or the Department, tree removal requires heavy equipment operation in wetlands, the equipment shall either have low ground pressure (<3 psi), or shall not be located directly on wetland soils and vegetation. Equipment shall be placed on swamp mats that are adequate to support the equipment in such a way as to minimize disturbance of wetland soil and vegetation.
- g. Vehicles and heavy equipment shall not be operated on the banks of waterbodies. For all work along a stream bank, minimize disturbance and discharge of soil to the waterway. Stabilization measures shall be implemented including placement of rock, mulch, seed, erosion control fabric, re-plantings, and/or other measures as appropriate based upon the area of disturbance. Rip-rap shall not be used unless MassDEP and the conservation commission determine that other means of stabilization are not practicable. If stump removal results in bank destabilization, then a means to stabilize the bank shall be performed.
- h. Effective erosion controls (BMPs) shall be utilized to prevent discharge of sediments to resource areas, including silt fencing, temporary berms, stone dikes, and rip-rap. Brush or slash shall be placed on skid roads and seed where vulnerable to erosion. Landings shall be smoothed and graded. Exposed soils shall be seeded or mulched to prevent erosion. Tire tracks and ruts shall be smoothed along the access path.
- i. Upon completion of harvesting, temporary skidder bridges shall be removed, and the authorized person shall ensure that fords and other stream crossings are left in a stable and free-flowing condition. All temporary structures (*e.g.*, culverts, bridges) shall be removed from resource areas. All unnatural debris generated by the eradication activity such as cans, papers, discarded tires and metal parts shall be removed. An authorized person shall not be responsible for the removal of any solid waste or trash that was on the site prior to the eradication effort. Incidental, remaining wood debris shall be left in place to promote rapid decay. Restore original grade of disturbed areas.
- j. Bare soil in buffer zones shall be reseeded with a fast-growing non-invasive grass and disturbed wetland soils shall be reseeded with a wetland native seed mix and wetland species saplings to prevent establishment of invasive species. Reseeding shall take place within ten days of grading in spring, summer and fall months, or if grading activity takes place in winter, at the beginning of the following spring. Erosion control barriers shall be removed as soon as possible once the site is stabilized, but stabilization and removal shall occur no later than after the first growing season following completion of the work.
- k. MassDEP and a designated representative of the conservation commission may inspect sites to ensure the effectiveness of erosion control and revegetation and reseeded efforts. Within one year of eradication efforts, individual sites shall be inspected by the authorized person, MassDEP and the conservation commission to

determine the adequacy of erosion control and revegetation and reseeded efforts if a conservation commission and/or MassDEP have reason to believe that erosion control, reseeded and revegetation efforts at that site have been unsuccessful.

1. Pesticides shall be handled and applied in accordance with the provisions of 333 CMR 12.00: *Protection of Groundwater Sources of Public Drinking Water Supplies from Non-point Source Pesticide Contamination* and 13.00: *Standards for Application*.

10.06: continued

(7) Notwithstanding any other requirement of 310 CMR 10.06, Immediate Response Actions receiving oral approval from the Bureau of Waste Site Cleanup (BWSC) of the Department of Environmental Protection pursuant to 310 CMR 40.0420(2), or initiated up to 24 hours prior to notification to and oral approval by BWSC pursuant to 310 CMR 40.0420(7) and (8), may commence before requesting the conservation commission to issue an emergency certification under 310 CMR 10.06, so long as such request is made within 24 hours after BWSC has orally approved commencement of the Immediate Response Action. Once a request for emergency certification has been made pursuant to 310 CMR 10.06(7), work that commenced before such filing may continue pending a decision on the request by the conservation commission. Such work may also continue pending a decision on a request for Departmental review unless the request has not been filed with the Department within one business day of: issuance by the conservation commission of the emergency certification; denial by a conservation commission of the emergency certification; or failure by a conservation commission to act within 24 hours of a request for emergency certification.

(8) In the event of a destructive weather event requiring widespread recovery efforts, debris cleanup or roadway or utility repair, the Commissioner may issue a Severe Weather Emergency Declaration that allows emergency-related work necessary for the protection of the health or safety of the residents of the Commonwealth to occur without filing a Notice of Intent or a request for an emergency certification or authorization pursuant to 310 CMR 10.06(1) through (7). The Severe Weather Emergency Declaration shall describe:

- (a) the types of work allowed without filing a notice of intent;
- (b) any general mitigating measures to condition the work that may be required in performing such work;
- (c) any notification or reporting requirements;
- (d) the geographic area of the Declaration's effect; and
- (e) the period of time the Declaration shall be in effect which shall not be longer than 90 days, unless extended by the Commissioner.

The Declaration may include other conditions or limitations as deemed appropriate by the Commissioner. The Commissioner may revise or revoke the Severe Weather Emergency Declaration as he or she deems appropriate to further recovery efforts and protect public health and safety. If the Commissioner deems it necessary for the completion of recovery efforts, he or she may extend the duration of a Severe Weather Emergency Declaration for a period not to exceed 90 days. An extension may include a revision of the elements listed in 310 CMR 10.06(8)(a) through (d) as deemed appropriate to further recovery efforts. A Severe Weather Emergency Declaration and any extension, revision, or revocation thereof, shall be sent electronically to all conservation commissions in the geographic area of the Declaration's effect, shall be posted on the Department's website at <http://www.mass.gov/eea/agencies/massdep> and shall be made widely available to the general public through appropriate channels for emergency communications. A Declaration shall not affect the Department's ability to enforce any general or special law or regulation that is not altered by a Severe Weather Emergency Declaration, or enforce the terms of such a Declaration.

10.07: Compliance with M.G.L. c. 30, §§ 61 through 62H

(1) The Massachusetts Environmental Policy Act, M.G.L. c. 30, §§ 61 through 62H, may require an applicant to file an Environmental Notification Form (ENF) and possibly an Environmental Impact Report (EIR) for the proposed work, prior to the Department's issuance of a Superseding Order. See 301 CMR 11.00: *MEPA Regulations*.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

(2) If said filing is required, the Department shall so notify the applicant upon receipt of the request for the Department to act. If within 70 days of the request for the Department to act the applicant has not filed an ENF, the Department may issue a Superseding Order prohibiting the project; provided, however, that such an order shall not issue if the Executive Office of Energy and Environmental Affairs determines that the filing of an ENF is not required.

(3) In determining total surface area for purposes of M.G.L. c. 30, §§ 6 through 62H wetlands threshold set forth in 301 CMR 11.25(2) and 11.26(7)(a), only those portions of the Areas Subject to Protection under M.G.L. c. 131, § 40 specified in 310 CMR 10.02(1), not including the Buffer Zone, which will be removed, filled, dredged or altered shall be considered.

10.08: Enforcement Orders

(1) When the conservation commission, the Department or the Office of Law Enforcement of the Executive Office of Energy and Environmental Affairs determines that an activity is in violation of M.G.L. c. 131, § 40, 310 CMR 10.00 or a Final Order, the conservation commission, Department or the Office of Law Enforcement may issue an Enforcement Order. Violations include:

- (a) failure to comply with a Final Order, Final Determination, Emergency Declaration, or Emergency Certification, such as failure to observe a particular condition or time period specified in the Order, Declaration, or Certification;
- (b) failure to complete work described in a Final Order or Final Determination, Emergency Declaration, or Emergency Certification when such failure causes damage to the interests identified in M.G.L. c. 131, § 40;
- (c) failure to obtain a valid Final Order or Extension Permit prior to conducting an Activity Subject to Regulation under M.G.L. c. 131, § 40 as defined in 310 CMR 10.02(2);
- (d) making any false, inaccurate, or misleading statements in any certification filed under 310 CMR 10.00, including any certification that the requirements of 310 CMR 10.02(2)(b)2. will be met.
- (e) failure to comply with any certification on project plans or eligibility under 310 CMR 10.02(2)(b)2.
- (f) leaving in place unauthorized fill or otherwise fail to restore illegally altered land to its original condition, or the continuation of any other activity in violation of M.G.L. c. 131, § 40.

The conservation commission, its members and agents, and Department employees may enter upon privately owned land for the purpose of performing their duties under M.G.L. c. 131, § 40, subject to constitutional limitations.

(2) A Final Order, Emergency Declaration, or Emergency Certification may be enforced by either the conservation commission or the Department regardless of which is the issuing authority. The members, officers, employees and agents of the conservation commission and the Department may enter upon privately owned land for the purpose of performing their duties under M.G.L. c. 131, § 40, and 310 CMR 10.00.

(3) An Enforcement Order issued by a conservation commission shall be signed by a majority of the commission. In a situation requiring immediate action, an Enforcement Order may be signed by a single member or agent of the commission, if said Order is ratified by a majority of the members at the next scheduled meeting of the commission.

10.09: Severability

If any provision of any part of 310 CMR 10.00 or the application thereof, is held to be invalid, such invalidity shall not affect any other provision of 310 CMR 10.00.

10.10: Effective Date

(1) 310 CMR 10.01 through 10.10 and 10.51 through 10.60 shall take effect on April 1, 1983 and shall apply to all Notices of Intent filed on or after that date and any subsequent procedures related to such filings made on or after that date. 310 CMR 10.01 through 10.10 and 10.51 through 10.60 shall not apply to any Notice of Intent filed prior to the effective date of 310 CMR 10.00, or to any extensions of any Order of Conditions the Notice of Intent for which was filed prior to said effective date, except as otherwise provided in 310 CMR 10.05(4)(g) and (h).

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

(2) The effective date of 310 CMR 10.21 through 10.37 is August 10, 1978. 310 CMR 10.21 through 10.37 shall not apply to any Notice of Intent filed prior to August 10, 1978, or to any extensions to an Order of Conditions when the Notice of Intent upon which such Order was based was filed prior to August 10, 1978.

(3) All proceedings and actions commenced under M.G.L. c. 131, § 40 prior to the effective date of 310 CMR 10.00 shall remain in full force and effect under the prior applicable regulations, except as otherwise provided in 310 CMR 10.05(4)(g) and (6)(h).

10.10: continued

(4) The amendments to 310 CMR 10.00 concerning application of herbicides to rights of way contained in 310 CMR 10.03(6), 10.04: Alter, 10.05(3)(a)2., (b)1. and (d)1. shall be effective on July 10, 1987.

(5) The amendments to 310 CMR 10.00 published in the Massachusetts Register on October 16, 1987, concerning primarily the protection of wildlife habitat, shall take effect on November 1, 1987, and shall apply to all Notices of Intent filed on or after that date and any subsequent procedures related to such filing made on or after that date. The amendments to 310 CMR 10.00, concerning primarily the protection of wildlife habitat, shall not apply to any Notice of Intent filed prior to November 1, 1987, or to any extensions of any Order of Conditions the Notice of Intent for which was filed prior to November 1, 1987, except as otherwise provided in 310 CMR 10.05(4)(g) and (6)(h). All proceedings and actions commenced under M.G.L. c. 131, § 40 prior to November 1, 1987, and shall remain in full force and effect under the prior applicable regulations, except as otherwise provided in 310 CMR 10.05(4)(g) and (6)(h).

(6) The amendment to 310 CMR 10.55 concerning work in Bordering Vegetated Wetlands that are within an Area of Critical Environmental Concern contained in 310 CMR 10.55(4)(e) shall be effective on April 23, 1993, and shall not apply to any Notice of Intent filed prior to the effective date.

(7) The amendments to 310 CMR 10.00 concerning normal maintenance and improvement of land in agricultural use contained in 310 CMR 10.04: Agriculture10.06(6), and 10.53(5) shall be effective on May 21, 1993, and shall not apply to any Notice of Intent filed prior to the effective date.

(8) The provisions of 310 CMR 10.03(7)(c)2.k., 3.e., and 4.j. through l., 10.06(7), 10.24(7)(c)4. through 6., 10.53(3)(m) through (q), and the revisions to 310 CMR 10.03(7)(c)2.e., and 4.b., 10.06(3) and (5), and 10.53(3)(i) promulgated on December 3, 1993, shall take effect on January 1, 1994. They shall not apply to any Notice of Intent filed before January 1, 1994, nor to any extensions to an Order of Conditions when the Notice of Intent upon which such Order was based was filed prior to that date.

(9) The effective date of 310 CMR 10.55(1) and (2) is June 30, 1995.

(10) The revisions to 310 CMR 10.02 through 10.05, 10.21, 10.53, 10.58, and 10.60 to incorporate St. 1996, c. 258 amendments to M.G.L. c. 131, § 40, and the deletion of 310 CMR 10.99, shall be effective on October 6, 1997 and shall apply to Requests for Determination of Applicability and Notices of Intent filed after that date. Applicants who have received an Order of Conditions before August 7, 1996 or filed a Notice of Intent before August 7, 1996 and received a Final Order of Conditions before August 7, 1997, or later pending resolution of an adjudicatory hearing, shall not be subject to the requirements of 310 CMR 10.58 for the work permitted by the Order. A Determination of Applicability issued before August 7, 1996 is valid only for the resource areas specified in the Determination and not for the riverfront area.

(11) The amendments to 310 CMR 10.00 concerning drought (found at 310 CMR 10.04: Pond; 310 CMR 10.58(2)(a)1.f.) and perennial and intermittent streams (found at 310 CMR 10.58(2)(a)) shall take effect on December 20, 2002 and shall not apply to any Request for Determination of Applicability, Abbreviated Notice of Resource Area Delineation, Abbreviated

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

Notice of Intent, or Notice of Intent filed prior to the effective date.

(12) The provisions of 310 CMR 10.00 promulgated in 2005 shall take effect on March 1, 2005. They shall not apply to any Notice of Intent or and Notice of Resource Area Delineation filed prior to March 1, 2005.

(13) The revised procedures for wetland appeals set forth 310 CMR 10.05(7)(j) take effect on October 31, 2007 and shall apply to all wetland appeals for which a notice of claim is filed on or after October 31, 2007.

10.10: continued

(14) The amendments to 310 CMR 10.00 concerning Combined Applications, Combined Permits, Restoration Order of Conditions, Ecological Restoration Limited Projects and procedures for filing a Notice of Intent shall apply to Notices of Intent filed on or after October 24, 2014.

10.11: Actions Required Before Submitting a Notice of Intent for an Ecological Restoration Project

An applicant shall take the following actions before filing a Notice of Intent for an Ecological Restoration Project that meets the eligibility criteria for a Restoration Order of Conditions set forth in 310 CMR 10.13 or for approval as an Ecological Restoration Limited Project pursuant to 310 CMR 10.24(8) or 10.53(4).

(1) At least 14 days prior to the filing a Notice of Intent for an Ecological Restoration Project, the applicant shall submit written notification of the proposed filing for publication in the Environmental Monitor. At a minimum, the written notification shall contain a brief description of the proposed project, the anticipated date of submission of the Notice of Intent, the name and address of the conservation commission that will review the Notice of Intent and shall state where copies of the Notice of Intent may be examined or obtained and where information on the date, time, and location of the public hearing may be obtained.

(2) If the project will impact an area located within estimated habitat which is indicated on the most recent *Estimated Habitat Map of State-listed Rare Wetlands Wildlife* published by the Natural Heritage and Endangered Species Program (the Program), the applicant shall obtain a written preliminary determination from the Program as to whether the Rare Species identified on the aforementioned map are likely to continue to be located on or near the project and, if so, whether the Resource Area to be altered by the proposed project is in fact part of the habitat of the Rare Species. If the Program issues a preliminary determination that the Resource Area that would be altered by the proposed project is in fact within the habitat of a Rare Species, the preliminary determination shall identify the Rare Species whose habitat would be altered and recommend any changes or conditions that are necessary to ensure that the project will have no short or long term adverse effect on the habitat of the local population of the Rare Species or the project will be carried out in accordance with a habitat management plan that has been approved in writing by the Natural Heritage and Endangered Species Program and submitted with the Notice of Intent.

(3) If the project will occur within a coastal waterbody with a restricted Time of Year, as identified in Appendix B of the Division of Marine Fisheries Technical Report TR 47 *Marine Fisheries Time of Year Restrictions (TOYs) for Coastal Alteration Projects* dated April 2011, the applicant shall obtain a written determination from the Division of Marine Fisheries as to whether the proposed work requires a TOY restriction, and if so, the written determination shall specify the recommended TOY restriction and any other recommended conditions on the proposed work.

(4) If the project may affect a diadromous fish run as identified in the Division of Marine Fisheries Technical Reports TR 15 through 18, dated 2004, the applicant shall obtain a written determination from the Division of Marine Fisheries as to whether the design specifications and operational plan for the project are compatible with the passage requirements of the fish run.

(5) If the project involves silt-generating, in-water work that will impact a non-tidal perennial

river or stream, the in-water work shall either occur between May 1st and August 30th or the applicant shall obtain a determination from the Division of Fisheries and Wildlife as to whether the proposed work requires a TOY restriction, and if so, the written determination shall specify the recommended TOY restriction and any other recommended conditions on the proposed work.

(6) If the Ecological Restoration Project involves dredging of 100 cubic yards or more in a Resource Area or dredging of any amount in an Outstanding Resource Water, the applicant shall obtain a Water Quality Certification pursuant to 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth* prior to submitting a Notice of Intent.

10.12: Notice of Intent for an Ecological Restoration Project

A Notice of Intent for an Ecological Restoration Project that meets the eligibility criteria for a Restoration Order of Conditions set forth in 310 CMR 10.13, or for approval as an Ecological Restoration Limited Project in accordance with 310 CMR 10.24(8) or 10.53(4), shall comply with the requirements of 310 CMR 10.12(1) and (2).

(1) At a minimum, a Notice of Intent for an Ecological Restoration Project shall include the following:

- (a) the project's ecological restoration goals;
- (b) the location of the Ecological Restoration Project;
- (c) the construction sequence for completing the project;
- (d) a map of the Areas Subject to Protection under M.G.L. c. 131, § 40, that will be temporarily or permanently altered by the project or include habitat for Rare Species, Habitat of Potential Regional and Statewide Importance, eel grass beds, or Shellfish Suitability Areas;
- (e) an evaluation of any flood impacts that may affect the built environment, including without limitation, buildings, wells, septic systems, roads or other man-made structures or infrastructure as well as any proposed flood impact mitigation measures;
- (f) a plan for invasive species prevention and control;
- (g) any preliminary written determinations obtained from the Natural Heritage and Endangered Species Program in accordance with 310 CMR 10.11(2);
- (h) any Time of Year restrictions and/or other conditions recommended by the Division of Marine Fisheries or the Division of Fisheries and Wildlife in accordance with 310 CMR 10.11(3) through (5);
- (i) proof that notice was published in the Environmental Monitor as required by 310 CMR 10.11(1);
- (j) a certification by the applicant under the penalties of perjury that the project meets the eligibility criteria set forth in 310 CMR 10.13, 10.24(8) or 10.53(4), whichever is applicable;
- (k) if the Ecological Restoration Project involves the construction, repair, replacement or expansion of infrastructure, an operation and maintenance plan to ensure that the infrastructure will continue to function as designed;
- (l) If the project involves dredging of 100 cubic yards or more or dredging of any amount in an Outstanding Resource Water, a Water Quality Certification issued by the Department pursuant to 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*;
- (m) if the Ecological Restoration Project involves work on a stream crossing, information sufficient to make the showing required by 310 CMR 10.24(10) for work in a coastal resource area and 310 CMR 10.53(8) for work in an inland resource area; and
- (n) if the Ecological Restoration Project involves work on a stream crossing, baseline photo-points that capture longitudinal views of the crossing inlet, the crossing outlet and the upstream and downstream channel beds during low flow conditions. The latitude and longitude coordinates of the photo-points shall be included in the baseline data.

(2) If the Notice of Intent for an Ecological Restoration Project is a Combined Application that serves as the application for a license, permit or other written approval for a water-dependent use project pursuant to 310 CMR 9.00: *Waterways*, the Notice of Intent shall also state:

- (a) whether the project has the potential to impact any docks, piers or boat ramps and, if so, describe the nature of those impacts and any necessary mitigation;
- (b) whether the project involves any structures that have been authorized under Chapter 91;

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

and

(c) whether the project has the potential to impact private water supply wells including agricultural or aquacultural wells or surface water withdrawal points.

(3) Notwithstanding the provisions of 310 CMR 10.54(4)(a)5., 10.56(4)(a)4., and 10.60, a person submitting a Notice of Intent for an Ecological Restoration Project that meets the requirements of 310 CMR 10.12(1) and (2) is exempt from the requirement to perform a wildlife habitat evaluation in accordance with 310 CMR 10.60.

10.13: Eligibility Criteria for Restoration Order of Conditions

Notwithstanding the provisions of 310 CMR 10.25 through 10.35, 10.54 through 10.58, and 10.60, an Ecological Restoration Project shall be permitted by a Restoration Order of Conditions provided that the project meets all applicable eligibility criteria in 310 CMR 10.13. Ecological Restoration Projects permitted by a Restoration Order of Conditions may result in the temporary or permanent loss of Resource Areas and/or the conversion of one Resource Area to another when such loss and/or conversion is necessary to the achievement of the project's ecological restoration goals.

(1) An Ecological Restoration Project shall be permitted by a Restoration Order of Conditions if it meets all of the following eligibility criteria:

- (a) The project is an Ecological Restoration Project as defined in 310 CMR 10.04, is a project type listed in 310 CMR 10.13(2) through (7), and the applicant has submitted a Notice of Intent that meets all applicable requirements of 310 CMR 10.12.
- (b) The project will further at least one of the interests identified in M.G.L. c. 131, § 40.
- (c) The project will not have any short-term or long-term adverse effect, as identified by the procedures established by 310 CMR 10.11, on specified habitat sites of Rare Species located within the Resource Areas that may be affected by the project or will be carried out in accordance with a habitat management plan that has been approved in writing by the Natural Heritage and Endangered Species Program and submitted with the Notice of Intent.
- (d) To the maximum extent practicable, the project will:
 1. avoid adverse impacts to Resource Areas and the interests identified in M.G.L. c. 131, § 40, that can be avoided without impeding the achievement of the project's ecological restoration goals;
 2. minimize adverse impacts to Resource Areas and the interests identified in M.G.L. c. 131, § 40, that are necessary to the achievement of the project's ecological restoration goals; and
 3. utilize best management practices such as erosion and siltation controls and proper construction sequencing to prevent and minimize adverse construction impacts to Resource Areas and the interests identified in M.G.L. c. 131, § 40
- (e) The project will not have significant adverse effects on the interests of flood control and storm damage prevention in relation to the built environment (*i.e.*, the project will not result in a significant increase in flooding or storm damage affecting buildings, wells, septic systems, roads or other human-made structures or infrastructure).
- (f) If the project will involve the dredging of 100 cubic yards of sediment or more or dredging of any amount in an Outstanding Resource Water, the Notice of Intent includes a Water Quality Certification issued by the Department in accordance with 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth.*
- (g) The project will not substantially reduce the capacity of a Resource Area to serve the habitat functions identified in 310 CMR 10.60(2). A project will be presumed to meet this eligibility criteria if the project as proposed in the Notice of Intent will be carried out in accordance with any time of year restrictions or other conditions recommended by the Division of Marine Fisheries for coastal waters, and by the Division of Fisheries and Wildlife for inland waters in accordance with 310 CMR 10.11(3) through (5). As set forth in 310 CMR 10.12(3), a person submitting a Notice of Intent for an Ecological Restoration Project that meets the requirements of 310 CMR 10.12(1) and (2) is exempt from the requirement to perform a wildlife habitat evaluation in accordance with 310 CMR 10.60.
- (h) If the Ecological Restoration Project involves work on a stream crossing, the stream crossing has been designed in accordance with 310 CMR 10.24(10) for work in coastal

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

resource areas and 310 CMR 10.53(8) for work in inland resource areas, as applicable.

(i) The Ecological Restoration Project will not result in a discharge of dredged or fill material within 400 feet of the high water mark of a Class A surface water (exclusive of its tributaries) unless the project is conducted by a public water system under 310 CMR 22.00: *Drinking Water* or a public agency or authority for the maintenance or repair of existing public roads or railways in accordance with 314 CMR 4.06(1)(d)1.

(j) The Ecological Restoration Project will not result in a discharge of dredged or fill material to a vernal pool certified by the Division of Fisheries and Wildlife.

(k) The Ecological Restoration Project will not result in a point source discharge to an Outstanding Resource Water.

10.13: continued

(1) The Ecological Restoration Project will not involve the armoring of a Coastal Dune or Barrier Beach.

(2) Additional Eligibility Criteria for Dam Removal Projects. If the Ecological Restoration Project is a dam removal project, the project shall be presumed to meet the eligibility criteria set forth in 310 CMR 10.13(1)(d), if the project is consistent with the Department's guidance entitled *Dam Removal and the Wetlands Regulations*, dated December 2007. If the Ecological Restoration Project is a dam removal project, the Ecological Restoration Project shall be approved by a Restoration Order of Conditions, provided that in addition to the eligibility criteria set forth in 310 CMR 10.13(1), the project meets all of the following eligibility criteria:

(a) The project will not involve the removal of a dam that was constructed or is managed for flood control by a municipal, state or federal agency

(b) The project will not adversely impact public water supply wells or water withdrawals permitted or registered under the Water Management Act, M.G.L. c. 21G, and 310 CMR 36.00: *Massachusetts Water Resources Management Program* within the reach of the stream impacted by the impoundment.

(c) The project will not adversely impact private water supply wells including agricultural or aquacultural wells or surface water withdrawal points.

(d) The project provides for the removal of the full vertical extent of the dam such that no remnant of the dam will remain at or below the streambed as determined prior to commencement of the dam removal project, or if such determination cannot be made at that time, as determined during construction of the project.

(e) The project provides for the removal of enough of the horizontal extent of the dam such that after removal no water will be impounded during the 500 year flood event.

(f) The project will not involve a hydroelectric facility requiring a Federal Energy Regulatory Commission (FERC) license or an amendment to a FERC license.

(g) The applicant has obtained from the Department of Conservation and Recreation Office of Dam Safety a written determination that the dam is not subject to the jurisdiction of the Office under 302 CMR 10.00: *Dam Safety*, a written determination that the dam removal does not require a permit under 302 CMR 10.00: *Dam Safety* or a permit authorizing the dam removal in accordance with 302 CMR 10.00: *Dam Safety* has been issued.

(h) If the project is exempt from the requirement to obtain a license or permit under 310 CMR 9.05(3)(n), the project will not have an adverse effect on navigation or on any docks, piers or boat ramps authorized under 310 CMR 9.00: *Waterways*.

(3) Additional Eligibility Criteria for Freshwater Stream Crossing Repair and Replacement Projects. If the Ecological Restoration Project is a freshwater stream crossing repair or replacement project, the Ecological Restoration Project shall be approved by a Restoration Order of Conditions, provided that in addition to the eligibility criteria set forth in 310 CMR 10.13(1), the project meets all of the following eligibility criteria:

(a) The width of the structure will be at least 1.2 times bankfull width to facilitate the movement of fish and other aquatic organisms and wildlife species that may utilize riparian corridors.

(b) The structure will be an open-bottom span where practicable or if an open-bottom span is not practicable, the structure bottom will be embedded in a substrate that matches the substrate of the stream channel and that shall be designed to maintain continuity of aquatic and benthic elements of the stream including appropriate substrates and hydraulic characteristics within the culvert (water depths, turbulence, velocities, and flow patterns).

(c) The structure will have an Openness Ratio of at least 0.82 feet, or as close to 0.82 feet

as is practicable.

(4) Additional Eligibility Criteria for Stream Daylighting Projects. If the Ecological Restoration Project is a stream daylighting project, the Ecological Restoration Project shall be approved by a Restoration Order of Conditions, provided that in addition to the eligibility criteria set forth in 310 CMR 10.13(1), the project meets all of the following eligibility criteria:

10.13: continued

(a) The project will meet the applicable performance standards for Bank, 310 CMR 10.54, and Land under Water Bodies and Waterways, 310 CMR 10.56. As set forth in 310 CMR 10.12(3), a person submitting a Notice of Intent that meets the requirements of 310 CMR 10.12 (1) and (2) for a stream daylighting project is exempt from the requirement to perform a wildlife habitat evaluation in accordance with 310 CMR 10.60, notwithstanding the provisions of 310 CMR 10.54(4)(a)5., 10.56(4)(a)4., and 10.60.

(b) To the maximum extent practicable, the project is designed to include the revegetation of all disturbed areas with noninvasive indigenous species appropriate to the site.

(5) Additional Eligibility Criteria for Tidal Restoration Projects. If the Ecological Restoration Project is a Tidal Restoration Project designed to restore tidal flow that has been restricted or blocked by a man-made structure, the Ecological Restoration Project shall be approved by a Restoration Order of Conditions, provided that in addition to the eligibility criteria set forth in 310 CMR 10.13(1), the project meets all of the following eligibility criteria:

(a) If the project will involve work in a Coastal Dune and/or a Coastal Beach, the project meets the applicable performance standard(s) at 310 CMR 10.27 and/or 10.28.

(b) The project will not include a new or relocated tidal inlet/breach through a Barrier Beach or additional armoring of a Barrier Beach, but may include the modification, replacement or enlargement of an existing culvert or inlet through a Barrier Beach.

(c) The project will not involve installation of new water control devices (*i.e.*, tide gates, flash boards and adjustable weirs) or a change in the management of existing water control devices, when the existing or proposed function of said devices is to prevent flooding or storm damage impacts to the built environment, including without limitation, buildings, wells, septic systems, roads or other human-made structures or infrastructure.

(d) The project's physical specifications are compatible with passage requirements for diadromous fish runs identified at the project location by the Division of Marine Fisheries.

(6) Additional Eligibility Criteria for Rare Species Habitat Restoration. If the Ecological Restoration Project is a Rare Species habitat restoration project, the Ecological Restoration Project shall be approved by a Restoration Order of Conditions, provided that in addition to the eligibility criteria set forth in 310 CMR 10.13(1), the project meets all of the following eligibility criteria:

(a) The project is exempt from review under 321 CMR 10.00: *Massachusetts Endangered Species Act Regulations* as a project that involves the active management of Rare Species habitat for the purpose of maintaining or enhancing the habitat for the benefit of Rare Species. A project that involves the active management of Rare Species habitat and is exempt from review under 321 CMR 10.00: *Massachusetts Endangered Species Act Regulations* may include without limitation the mowing, cutting, burning or pruning of vegetation or the removal of exotic or invasive species.

(b) The project is carried out in accordance with a Habitat Management Plan that has been approved in writing by the Natural Heritage and Endangered Species Program and submitted with the Notice of Intent.

(7) Additional Eligibility Criteria for Restoring Fish Passageways. If the Ecological Restoration Project involves the restoration or repair of a fish passageway as identified by the Division of Marine Fisheries in its Marine Fisheries Technical Reports, TR 15 through 18, dated 2004, the Ecological Restoration Project shall be approved by a Restoration Order of Conditions, provided that in addition to the eligibility criteria set forth in 310 CMR 10.13(1), the applicant has submitted a Fishway Permit Application to the Division of Marine Fisheries, pursuant to M.G.L.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

c. 130, §§ 1 and 19, and 322 CMR 7.01(4)(f) and (14)(m), and the fish passageway will be operated and maintained in accordance with an Operation and Maintenance Plan approved by the Division of Marine Fisheries.

10.14: Restoration Order of Conditions

If after reviewing a Notice of Intent for an Ecological Restoration Project, the issuing authority determines that the Ecological Restoration Project meets the eligibility criteria in 310 CMR 10.13(1) and the applicable provisions of 310 CMR 10.13(2) through (7), the issuing authority shall issue a Restoration Order of Conditions that contains the general conditions set forth in 310 CMR 10.14(1), and all applicable special conditions set forth in 310 CMR 10.14(2) through (7). The Restoration Order of Conditions may reference the plans and specifications for the Ecological Restoration Project approved by the issuing authority. If the Restoration Order of Conditions is issued in response to a Combined Application for an Order of Conditions pursuant to 310 CMR 10.00, a 401 Water Quality Certification pursuant to 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*, and/or a Chapter 91 license, permit or other written approval pursuant to 310 CMR 9.00: *Waterways*, the Department may append to the Restoration Order of Conditions any conditions that the Department has authority to impose pursuant to 310 CMR 9.00: *Waterways* and/or 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*. A Restoration Project Order of Conditions is subject to the provisions of 310 CMR 10.05 that apply to any Order of Conditions except as expressly provided otherwise in 310 CMR 10.00.

(1) General Conditions Applicable to all Ecological Restoration Projects. The Restoration Order of Conditions shall contain the following general conditions:

- (a) Failure to comply with all conditions stated herein and with all related statutes and other regulatory measures shall be deemed cause to revoke or modify this Restoration Order of Conditions.
- (b) This Restoration Order of Conditions does not grant any property rights or any exclusive privileges; it does not authorize any injury to private property or invasion of private rights.
- (c) This Restoration Order of Conditions does not relieve the permittee or any other person of the necessity of complying with all applicable federal, state or local statutes, ordinances, bylaws or regulations.
- (d) The work authorized under this Restoration Order of Conditions shall be completed within three years from the date of issuance of this General Order unless the General Order is extended in accordance with 310 CMR 10.05(6)(d) or by operation of law.
- (e) This Restoration Order of Conditions may be extended by the issuing authority for one or more periods of up to three years upon application to the issuing authority at least 30 days prior to the expiration date of this Restoration Order.
- (f) Any fill used in connection with this project shall be clean fill. Any fill shall contain no trash, refuse, rubbish or debris, including but not limited to lumber, bricks, plaster, wire, lath, paper, cardboard, pipe, trees, ashes, refrigerators, motor vehicles or parts of any of the foregoing.
- (g) This Restoration Order of Conditions is not final until all administrative appeal periods from this Restoration Order have elapsed or if such an appeal has been taken, until all proceedings before the Department have been completed.
- (h) No work shall be undertaken until the Restoration Order of Conditions has become final and has been recorded in the Registry of Deeds or the Land Court for the district in which the land is located within the chain of title to the affected property. In the case of recorded land, the Final Restoration Order of Conditions shall also be noted in the Registry's Grantor index under the name of the owner of the land upon which the proposed work is done. The recording information shall be submitted to the Issuing Authority prior to commencement of the work.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

- (i) A sign that is not less than two square feet or more than three square feet shall be displayed at the site. The sign shall bear the words "Massachusetts Department of Environmental Protection" and include the File Number.
- (j) Where the Department is requested to issue a Superseding Order, the Conservation Commission shall be a party to all agency proceedings and hearings before the Department.
- (k) Upon completion of the work described herein, the applicant shall submit a Request for a Certificate of Compliance to the issuing authority.
- (l) The work shall conform to the plans and special conditions referenced in this Restoration Order of Conditions.

10.14: continued

(m) Any change to the plans approved in this Restoration Order of Conditions shall require the applicant to inquire of the Issuing Authority in writing whether the change is significant enough to require the filing of a new Notice of Intent.

(n) Representatives of the Conservation Commission and the Department of Environmental Protection shall have the right to enter and inspect the area subject to this Restoration Order of Conditions at reasonable hours to evaluate compliance with the conditions set forth in this Restoration Order of Conditions and may require the submittal of any data deemed necessary by the Conservation Commission or the Department for that evaluation.

(o) This Restoration Order of Conditions shall apply to any successor in interest or successor in control of the property subject to this Restoration Order of Conditions and to any contractor or other person performing work conditioned by this Order.

(p) Prior to the start of work, and if the project involves work adjacent to a Bordering Vegetated Wetland or Salt Marsh, the boundary of the wetland in the vicinity of the proposed work area shall be marked by wooden stakes or flagging. Once in place, the wetland boundary markers shall be maintained until a Certificate of Compliance has been issued by the issuing authority.

(q) All sedimentation barriers shall be maintained in good repair, until all disturbed areas have been fully stabilized with vegetation or other means. During construction, the applicant or his or her designee shall inspect the erosion controls on a daily basis and shall remove accumulated sediments as needed. The applicant shall immediately control any erosion problems that occur at the site and shall also immediately notify the issuing authority. The Issuing Authority reserves the right to require any additional erosion and/or damage prevention controls it deems necessary. Sedimentation barriers shall serve as the limit of work unless another limit of work line has been approved by this Order.

(r) The project shall be conducted in accordance with any preliminary written determination obtained from the Natural Heritage and Endangered Species Program as set forth in 310 CMR 10.11(2) and any time of year restrictions or other conditions recommended in writing by the Division of Marine Fisheries (for projects in coastal Resource Areas) and the Division of Fisheries and Wildlife (for projects in inland Resource Areas) as set forth in 310 CMR 10.11(3) through (5).

(s) The applicant shall implement the plan submitted with the Notice of Intent as approved by the Issuing Authority to prevent and control invasive species.

(t) If the project involves the dredging of 100 cubic yards or more in a Resource Area or dredging of any amount in an Outstanding Resource Water, the dredging and Dredged Material management shall be performed in accordance with the Water Quality Certification submitted with the Notice of Intent.

(u) If the project involves infrastructure, the owner shall operate and maintain the infrastructure in accordance with the operation and maintenance plan submitted with the Notice of Intent as approved by the Issuing Authority. Implementation of the operation and maintenance plan as approved by the Issuing Authority shall be a continuing condition that shall be set forth in the Certificate of Compliance.

(2) Special Conditions for Dam Removal Projects. If the Ecological Restoration Project involves dam removal, the Restoration Order of Conditions shall contain the following special conditions in addition to the general conditions set forth in 310 CMR 10.14(1):

(a) An as-built plan and a written statement from a registered professional engineer or other environmental professional expert in ecological restoration certifying substantial compliance with the design plan and construction specifications approved in the Restoration Order of Conditions shall be submitted to the Issuing Authority within 90 days of completion of the dam removal.

(b) The applicant shall monitor the dam removal site during the first two years following completion of the dam removal. Said monitoring shall include a topographic survey of the longitudinal profile and stream cross-sections from downstream of the former dam through the upstream end of the former impoundment. The survey reference point shall comprise a permanent marker or recoverable survey point with known coordinates, such as a fixed point shown on the as-built plan, an existing bench mark, or a new benchmark. That marker should be identified or referenced on the plans and on the as-built plans. The applicant shall establish at least two photo-points for pre- and post-restoration monitoring at the dam removal site. At least one photo-point location shall be chosen to document a view of the dam pre-restoration and to document the same site after the dam is removed. A second location shall be chosen to document a view of the impoundment pre- and post-restoration. Photos shall be taken for two years after the dam removal is completed.

10.14: continued

(c) The applicant shall submit a report detailing the results of this monitoring within six months of the completion of the two year post-construction monitoring period, or within 30 months after the dam removal is complete whichever is sooner. The report shall include a comparison of post-restoration survey data with pre-restoration survey data as illustrated by the photos taken during the monitoring period.

(3) Special Conditions for Freshwater Stream Crossing Repair and Replacement Projects. If the Ecological Restoration Project involves freshwater crossing repair or replacement, the Restoration Order of Conditions shall contain the following special conditions in addition to the general conditions set forth in 310 CMR 10.14(1):

(a) An as-built plan and/or a written statement from a registered professional engineer or other environmental professional expert in ecological restoration certifying substantial compliance with the design plans and construction specifications approved in the Restoration Order of Conditions shall be completed within 90 days of completion of construction. The as-built plan shall include the dimensions of the structure, the invert elevation of the upstream and downstream ends of the structure and the road or other surface elevation above the structure.

(b) The applicant shall monitor the site by collecting sufficient data within 12 months after construction is complete to evaluate the effect of the structure. At a minimum, when a Certificate of Compliance is requested, the applicant shall provide post-construction photo-points that capture longitudinal views of the crossing inlet, the crossing outlet and the upstream and downstream channel beds during low flow conditions. The photo-points shall be located at the same geographic photo-point latitude and longitude coordinates as required in the Notice of Intent per 310 CMR 10.12(1)(n). The applicant shall submit a report to the Issuing Authority detailing the results of this monitoring within 18 months after construction is complete. The report shall include a comparison of the post-restoration data with pre-restoration data.

(4) Special Conditions for Stream Daylighting Projects. If the Ecological Restoration Project involves stream daylighting, the Restoration Order of Conditions shall include the following special conditions in addition to the general conditions set forth in 310 CMR 10.14(1):

(a) An as-built plan and a written statement from a registered professional engineer or other environmental professional expert in ecological restoration certifying substantial compliance with the design plan and construction specifications approved in the Restoration Order of Conditions shall be submitted to the Issuing Authority within 90 days of completion of the project. At a minimum, when a Certificate of Compliance is requested, the applicant shall provide post-construction photo-points that capture longitudinal views of the upstream and downstream channel beds of the daylighted reach during low flow conditions.

(b) The applicant shall conduct photo-point monitoring by establishing at least three photo-points for pre- and post-restoration monitoring at the stream daylighting site. One photo-point location shall be chosen to document the upstream end of the site and one photo-point location shall be chosen to document the downstream end of the site. A third photo-point shall be chosen to document conditions in the restored channel. Photos shall be taken during high flow and low (summer) flow of each year during the two years following completion of the project.

(c) Within 30 months after the completion of the project, the applicant shall submit a report describing the ecological changes observed at the project site during the two years following completion of the project, as illustrated by the photos.

(5) Special Conditions for Tidal Restoration Projects. If the Ecological Restoration Project involves restoration of tidal influence, the Restoration Order of Conditions shall contain the following special conditions in addition to the general conditions set forth in 310 CMR 10.14(1):

(a) If the project is a culvert or bridge replacement or repair project, an as-built plan and a written statement from a registered professional engineer or other environmental professional expert in ecological restoration certifying substantial compliance with the design plans and construction specifications approved in the Restoration Order of Conditions shall be submitted to the Issuing Authority within 90 days of completion of construction. The as-built plan shall include the dimensions of the structure, the invert elevation of the upstream and downstream ends of the structure and the road or other surface elevation above the structure.

10.14: continued

(b) The applicant shall monitor pre- and post-construction tidal conditions upstream and downstream of the tidal restriction with water level readings measured at an interval no greater than every ten minutes over a minimum of a one-week period that includes a spring tide. Pre- and post-construction water level readings shall be taken at approximately the same locations and shall be referenced to the same vertical elevation datum. The applicant shall prepare a report detailing the results of this monitoring within 12 months after construction is complete. The report shall include and compare pre- and post-construction tidal elevation monitoring data to assess attainment of the project's predicted post-restoration tidal conditions.

(6) Special Conditions for Rare Species Habitat Restoration. If the Ecological Restoration Project is a Rare Species Habitat Restoration Project, the Restoration Order of Conditions shall in addition to the general conditions set forth in 310 CMR 10.14(1) include the following special conditions:

(a) An as-built plan and a written statement from a registered professional engineer or other environmental professional expert in ecological restoration certifying substantial compliance with the design plan, construction specifications, and the Habitat Management Plan submitted with the Notice of Intent as approved in the Restoration Order of Conditions shall be submitted to the Issuing Authority within 90 days of completion of the project.

(b) The applicant shall establish at least two photo-points for pre- and post-restoration monitoring at the project site. Photos shall be taken for two years after construction is complete. Within 30 months of completion of the project, the applicant shall submit to the Issuing Authority a report describing the ecological changes observed at the project site as illustrated by the photos.

(7) Special Conditions for Fish Passageway Restoration Projects. If the Ecological Restoration Project involves the repair or replacement of a fish passageway, the Restoration Order of Conditions shall in addition to the general conditions set forth in 310 CMR 10.14(1) contain the following special conditions:

(a) The property owner is responsible for maintaining and repairing the fishway in good condition so that it will support safe and efficient fish passage in accordance with an operation and maintenance plan approved by the Division of Marine Fisheries. This requirement is a continuing condition that shall be set forth in the Certificate of Compliance.

(b) A post-construction project summary using surveys, a narrative and photographs as needed, that confirm the fishway slope and entrance and exit elevations shall be submitted to and approved by the Division of Marine Fisheries, prior to submittal of a request for a Certificate of Compliance.

10.21: Introduction

310 CMR 10.21 through 10.37 apply to all work subject to M.G.L. c. 131, § 40, M.G.L. c. 131, § 40, which will alter, dredge, fill, or remove any coastal beach, coastal dune, tidal flat, coastal wetland, land subject to coastal storm flowage, coastal bank, land subject to tidal action, or land under an estuary, under a salt pond, under the ocean or under certain streams, ponds, rivers, lakes or creeks within the coastal zone that are anadromous/catadromous fish runs. This Part is in addition to and does not change the provisions set forth in 310 CMR 10.01 through 10.10. 310 CMR 10.21 through 10.37 are intended to ensure that development along the coastline is located, designed, built and maintained in a manner that protects the public interests in the coastal resources listed in M.G.L. c. 131, § 40. The proponent of the work must

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

submit sufficient information to enable the issuing authority to determine whether the proposed work will comply with 310 CMR 10.21 through 10.37. Any proposed work may be subject to the requirements of sections concerning coastal beaches, coastal dunes and land containing shellfish. Thus, in order to determine which provisions apply to a proposed project, 310 CMR 10.00 must be read in its entirety. 310 CMR 10.21 through 10.37 are divided into 16 sections, 44 of which deal with specific coastal resources. Each coastal resource section begins with a preamble. In addition, the requirements for protection of the riverfront area in 310 CMR 10.58 apply within the coastal resource areas. The riverfront area may overlap other coastal resource areas and the performance standards for each resource area must be met. 310 CMR 10.24(7) applies to riverfront areas within coastal resource areas. The Preamble identifies the interests

10.21: continued

of M.G.L. c. 131, § 40 to which that resource is or is likely to be significant and describes the characteristics or factors of the resource which are critical to the protection of the interest to which the resource is significant. 310 CMR 10.21 through 10.37 are in the form of performance standards and shall be interpreted to protect those characteristics and resources to the maximum extent permissible under M.G.L. c. 131, § 40.

The performance standards are intended to identify the level of protection the issuing authority must impose in order to contribute to the protection of the interests of M.G.L. c. 131, § 40. It is the responsibility of the issuing authority to order specific measures and requirements for each proposed project which will ensure that the project is designed and carried out consistent with the required level of protection. Such authority must then issue an Order of Conditions which is understandable and enforceable.

10.22: Purpose

310 CMR 10.21 through 10.37 are promulgated pursuant to M.G.L. c. 131, § 40 and are intended to implement it. They are further intended to establish criteria and standards for the uniform and coordinated administration of the provisions of M.G.L. c. 131, § 40; to ensure coordination between the Department and other Executive Office of Energy and Environmental Affairs agencies; and to ensure consideration by the Department of relevant policies, laws or programs of other Executive Office of Energy and Environmental Affairs agencies. 310 CMR 10.21 through 10.37 is, in addition, intended to be consistent with and form a part of the Commonwealth's Coastal Zone Management Program as it has been promulgated and defined by 301 CMR 21.00: *Coastal Zone Management Program Federal Consistency Review Procedures*. 310 CMR 10.21 through 10.37, however, are adopted independently under M.G.L. c. 131, § 40 and would remain in full force and effect in the absence of 301 CMR 20.00: *Coastal Zone Management Program*.

The interpretation and application of 310 CMR 10.21 through 10.37 shall be consistent with the policies of 301 CMR 20.00: *Coastal Zone Management Program* to the maximum extent permissible under M.G.L. c. 131, § 40. M.G.L. c. 21A, § 2 establishes the CZM policies as part of 301 CMR 20.00, and the Department recognizes these policies as state environmental policy, which it will carry out in accordance with M.G.L. c. 21A, § 2. Specifically, 301 CMR 20.99: *Severability*, Coastal Hazards Policy #1, and #2, Energy Policy #1, Habitat Policy #1, Ocean Resources Policy #1, Ports and Harbors Policy #1, #2 and #3, Protected Areas Policy #1 and Water Quality Policy #1 and #2 are applicable to the administration of M.G.L. c. 21A, § 2, but the provisions of the more specific regulations contained in the following sections shall govern, unless the Secretary, pursuant to the conflict resolution procedures of M.G.L. c. 21A, 301 CMR 20.00 of the CZM Regulations, has resolved any conflict and has determined that the CZM policies should or should not apply.

10.23: Additional Definitions for 310 CMR 10.21 through 10.37

The definitions contained in 310 CMR 10.23 apply to and are valid for 310 CMR 10.21 through 10.37. The following definitions are for terms used throughout 310 CMR 10.21 through 10.37. Other terms that are used only in specific sections of 310 CMR 10.21 through 10.37 are defined in those sections.

Act means the Wetlands Protection Act, M.G.L. c. 131, § 40.

Adverse Effect means a greater than negligible change in the resource area or one of its

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

characteristics or factors that diminishes the value of the resource area to one or more of the specific interests of M.G.L. c. 131, § 40, as determined by the issuing authority. Negligible means small enough to be disregarded.

Applicant means any person giving notice of intention to remove, fill, dredge or alter under M.G.L. c. 131, § 40.

Area of Critical Environmental Concern (ACEC) means an area which has been so designated by the Secretary in accordance with 301 CMR 12.00: *Areas of Critical Environmental Concern*. The term Area for Preservation or Restoration (APR) shall be synonymous with ACEC, as provided in the CZM Regulations.

10.23: continued

Building means any residential, commercial, industrial, recreational or other similar structure. For the purposes of 310 CMR 10.00, building may be interpreted to include a large, substantial structure such as a utility tower.

Coastal Engineering Structure means, but is not limited to, any breakwater, bulkhead, groin, jetty, revetment, seawall, weir, riprap or any other structure that is designed to alter wave, tidal or sediment transport processes in order to protect inland or upland structures from the effects of such processes.

Coastal Zone means that area defined in 301 CMR 20.02: *Definitions*.

DMF means the Division of Marine Fisheries.

Grain Size means a measure of the size of a material or rock particle that makes up sediment.

Improvement Dredging means any dredging under a license in an area which has not previously been dredged or which extends the original dredged width, depth, length or otherwise alters the original boundaries of a previously dredged area.

Interests of the Act means the following eight interests specified in M.G.L. c. 131, § 40: public or private water supply, ground water supply, flood control, storm damage prevention, prevention of pollution, protection of land containing shellfish and protection of fisheries and wildlife habitat.

Issuing Authority means either a conservation commission or the Department, as appropriate.

Littoral Processes means the movement of sediment, including gravel, sand or cobbles, along the coast caused by waves or currents.

Maintenance Dredging means dredging under a license in any previously dredged area which does not extend the originally-dredged depth, width, or length but does not mean improvement dredging or backfilling.

Marine Fisheries means any animal life inhabiting the ocean or its adjacent tidal waters or the land thereunder that is utilized by man in a recreational and/or commercial manner or that is part of the food chain for such animal life.

Mean High Water Line means the line where the arithmetic mean of the high water heights observed over a specific 19-year metonic cycle (the National Tidal Datum Epoch) meets the shore and shall be determined using hydrographic survey data of the National Ocean Survey of the U.S. Department of Commerce.

Mean Low Water Line means the line where the arithmetic mean of the low water heights observed over a specific 19-year metonic cycle (the National Tidal Datum Epoch) meets the shore and shall be determined using hydrographic survey data of the National Ocean Survey of the U.S. Department of Commerce.

Minimize means to achieve the least amount of adverse effect that can be attained using best available measures or best practical measures, whichever is referred to in the pertinent section.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

"Best available measures" means the most up-to-date technology or the best designs, measures or engineering practices that have been developed and that are commercially available. "Best Practical Measures" means technologies, designs, measures or engineering practices that are in general use to protect similar interests.

NPDES (National Pollutant Discharge Elimination System) Permit means the permit issued jointly by the federal and state governments, in accordance with 33 U.S.C. 1342 and M.G.L. c. 21, § 43, regulating liquid discharges from a point source.

Productivity means the rate of biomass production over a period of time.

10.23: continued

Resource Area means any coastal bank; coastal wetland; coastal beach; coastal dune; tidal flat; or any land under the ocean or under an estuary or under a salt pond; land subject to tidal action or coastal 100 year storm flowage; or land under certain streams, ponds, rivers, lakes, or creeks within the coastal zone that are anadromous/catadromous fish runs.

Secretary means the Secretary of Energy and Environmental Affairs.

Significant. A resource area shall be found to be significant to an interest of M.G.L. c. 131, § 40 when such resource area plays a role in the provision or protection, as appropriate, of public or private water supply, ground water supply, flood control, storm damage prevention, prevention of pollution, land containing shellfish, fisheries, and/or wildlife habitat.

Turbidity means the amount of particulate matter suspended in water.

Water Circulation means the pattern of water movement in coastal waters.

10.24: General Provisions

(1) If the issuing authority determines that a resource area is significant to an interest identified in M.G.L. c. 131, § 40 for which no presumption is stated in the Preamble to the applicable section, the issuing authority shall impose such conditions as are necessary to contribute to the protection of such interests. For work in the buffer zone subject to review under 310 CMR 10.02(2)(b)3., the issuing authority shall impose conditions to protect the interests of the Act identified for the adjacent resource area. The potential for adverse impacts to resource areas from work in the buffer zone may increase with the extent of the work and the proximity to the resource area. The issuing authority may consider the characteristics of the buffer zone, such as the presence of steep slopes, that may increase the potential for adverse impacts on resource areas. Conditions may include limitations on the scope and location of work in the buffer zone as necessary to avoid alteration of resource areas. The issuing authority may require erosion and sedimentation controls during construction, a clear limit of work, and the preservation of natural vegetation adjacent to the resource area and/or other measures commensurate with the scope and location of the work within the buffer zone to protect the interests of M.G.L. c. 131, § 40. Where a buffer zone has already been developed, the issuing authority may consider the extent of existing development in its review of subsequent proposed work and, where prior development is extensive, may consider measures such as the restoration of natural vegetation adjacent to the resource area to protect the interests of M.G.L. c. 131, § 40. The purpose of preconstruction review of work in the buffer zone is to ensure that adjacent resource areas are not adversely affected during or after completion of the work.

(2) When the issuing authority determines that a project in one resource area would adversely affect another resource area, the issuing authority shall impose such conditions as will protect the interest to which each resource area is significant to the same degree as required in 310 CMR 10.00 concerning each resource area.

(3) A determination which finds that a resource area is not significant to an interest to which it is presumed in 310 CMR 10.21 through 10.37 to be significant, or is significant to an interest to which it is presumed to be not significant, shall be made on Form 7. No such determination shall be effective unless a copy of this form and the accompanying written explanation for the determination required by 310 CMR 10.00 is sent on the day of issuance to the appropriate regional office of the Department.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

- (4) (a) 310 CMR 10.21 through 10.37 do not change the requirement of any other Massachusetts statute or by-law. A proposed project must comply with all applicable requirements of other federal, state and local statutes and by-laws, in addition to meeting the requirements of 310 CMR 10.00. Examples of such laws which may be applicable are the Coastal Restrictions Act (M.G.L. c. 130, § 105), the Ocean Sanctuaries Act (M.G.L. c. 132A, §§ 13 through 16 and 18), the Mineral Resources Act (M.G.L. c. 21, §§ 54 through 58), the Massachusetts Clean Water Act (M.G.L. c. 21, §§ 26 through 53), the Waterways laws (M.G.L. c. 91), the Massachusetts Environmental Policy Act (M.G.L. c. 30, §§ 61 through 62H), the act establishing the Martha's Vineyard Commission (St. 1974, c. 637) and the Scenic Rivers Act (M.G.L. c. 21, § 2. 17B).

10.24: continued

(b) When the site of a proposed project is subject to a Restriction Order which has been duly recorded under the provisions of M.G.L. c. 130, § 105, such a project shall conform to 310 CMR 10.21 through 10.37.

(c) If an NPDES permit for any new point-source discharge has or will be obtained prior to the commencement of the discharge, the effluent limitations established in such permit shall be deemed to satisfy the water quality standards established in any section of 310 CMR 10.21 through 10.37 relative to the effects of the new point-source discharge on water quality. Such effluent limitations shall be incorporated or shall be deemed to be incorporated into the Order of Conditions.

(5) (a) When any area subject to 310 CMR 10.21 through 10.37 has been designated an Area of Critical Environmental Concern by the Secretary of Energy and Environmental Affairs pursuant to 301 CMR 20.00: *Coastal Zone Management Program*, and when the Secretary has made a finding of the significance of the area to one or more interests of M.G.L. c. 131, § 40, the issuing authority shall presume that such area is significant to those interests.

(b) When any portion of a designated Area of Critical Environmental Concern is determined by the Issuing Authority to be significant to any of the interests of M.G.L. c. 131, § 40, any proposed project in or impacting that portion of the Area of Critical Environmental Concern shall have no adverse effect upon those interests, except as provided under 310 CMR 10.25(4) for maintenance dredging, under 310 CMR 10.11 through 10.14, 10.24(8) and 10.53(4) for Ecological Restoration Projects, and under 310 CMR 10.25(3) for improvement dredging conducted by a public entity for the sole purpose of the maintenance or restoration of historic, safe navigation channels or turnaround basins of a minimum length, width, and depth consistent with a Resource Management Plan adopted by the municipality(ies) and approved by the Secretary of the Executive Office of Energy and Environmental Affairs.

(6) Where any section of 310 CMR 10.00 provides that a proposed project "may be permitted" in certain circumstances, no such project shall be undertaken until all of the usual procedures required by M.G.L. c. 131, § 40 and 310 CMR 10.21 through 10.37 have been followed and a Final Order has been issued approving the work. The Issuing Authority shall impose such conditions on such projects as may be necessary to contribute to the protection of the interests of M.G.L. c. 131, § 40. Notwithstanding the foregoing, when the Issuing Authority determines that a project meets the eligibility criteria for a Restoration Order of Conditions, the Issuing Authority shall impose only the conditions set forth in the applicable provisions of 310 CMR 10.00. As set forth in 310 CMR 10.05(6)(b)., a Restoration Order of Conditions may reference the plans and specifications approved by the Issuing Authority. If the Department is the Issuing Authority for a project that is the subject of a Combined Application, the Department may attach to the Restoration Order of Conditions any conditions that the Department has authority to impose pursuant to 310 CMR 9.00: *Waterways* and 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth* to the extent they are applicable.

(7) Notwithstanding the provisions of 310 CMR 10.25 through 10.35, the Issuing Authority may issue an Order of Conditions and impose such conditions as will contribute to the interests identified in M.G.L. c. 131, § 40, permitting the limited projects listed in 310 CMR 10.24(7)(a) through (c), although no such project may be permitted which will have any adverse effect on specified habitat sites of Rare Species, as identified by procedures established under 310 CMR 10.37. In determining whether to exercise its discretion to approve the limited projects listed in 310 CMR 10.24(7)(a) through (c), the Issuing Authority shall consider the following factors: the

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

magnitude of the alteration and the significance of the project to the interests identified in M.G.L. c. 131, § 40, the availability of reasonable alternatives to the proposed activity, and the extent to which adverse impacts are minimized and the extent to which mitigation measures including replication or restoration are provided to contribute to the protection of the interests identified in M.G.L. c. 131, § 40. Adverse effects to be minimized include without limitation any adverse impacts on the relevant interests of M.G.L. c. 131, § 40, due to changes in wave action or sediment transport or adjacent coastal banks, coastal beaches, coastal dunes, salt marshes or barrier beaches. The provisions of 310 CMR 10.24(7)(a) through (c) are not intended to prohibit the Issuing Authority from imposing such additional conditions as are necessary to contribute to the interests of M.G.L. c. 131, § 40 where the indicated minimizing measures are not sufficient.

10.24: continued

- (a) The construction, reconstruction, operation and maintenance of the following structures associated with and essential to an electric generating facility may be permitted as a limited project pursuant to 310 CMR 10.24(7) provided the project is proposed to be constructed and operated in accordance with all applicable provisions of 310 CMR 10.24(1) through (6), (7)(a)1. through 6., and (9) and (10):
1. Conduits for cooling water intake or discharge, which may be emplaced by trenching with a minimum depth of four feet of cover below original grade, except where they traverse salt ponds, salt marshes and barrier beaches, in which cases they may be emplaced only by tunneling;
 2. Headwalls and other essential structures appurtenant to 310 CMR 10.24(7)(a)1., except that these structures may not be constructed in salt marshes, salt ponds or barrier beaches;
 3. Pipelines or other conduits for the transmission of utilities essential to the facility (water, fuel, sewage, and power), which may be emplaced by trenching with a minimum depth of four feet of cover below original grade, or which may be carried above grade on pilings or similar supports, but only if the applicant demonstrates that there will be no adverse effect on the resource area by the construction, operation, and maintenance of such pipelines or other conduits. If such pipelines or conduits are emplaced through a resource area which adverse effects are required to be minimized by 310 CMR 10.25 through 10.35, then that standard shall be applied, except that in no case shall fuel or sewage lines be operated or be designed to be operated so that they will have an adverse effect on the resource area.
 4. Structures necessary for navigation, berthing and protection of such vessels and vessel movements as may be necessary to the operation of the facility, but only on coastal banks, coastal beaches, rocky intertidal shores or land under the ocean;
 5. Structures for maritime dependent accessory activities essential to the facility, but only on coastal banks, coastal beaches, rocky intertidal shores or land under the ocean;
 6. Coastal engineering structures necessary to the protection of such other structures as may be permitted under 310 CMR 10.24, but only on coastal banks, coastal beaches, rocky intertidal shores, or land under the ocean;
- (b) The construction, reconstruction, operation and maintenance of underground and overhead public utilities, limited to electrical distribution or transmission lines, or communication, sewer, water and natural gas lines, may be permitted as a limited project pursuant to 310 CMR 10.24(7) provided that the project complies with all applicable provisions of 310 CMR 10.24(1) through (6), (9) and (10), and (7)(b)1. through 9.:
1. For local distribution or connecting lines not reviewed by the Energy Facilities Siting Council, the Issuing Authority determines that alternative routes with fewer adverse effects are not physically or legally feasible;
 2. Adverse effects during construction are minimized using the best available measures, which may include such equipment as Bailey bridges and helicopters;
 3. The surface vegetation and contours of the area are substantially restored;
 4. When a trench is made in a Salt Marsh, all spoil is removed from the Salt Marsh upon excavation. Clean sand or other appropriate material shall be used to restore the level of the trench to that of the surrounding undisturbed Salt Marsh. The surface vegetation shall be restored substantially to its original condition by immediately transplanting appropriate marsh plant nursery stock once construction is completed. Baffles of concrete, clay or other non porous material shall be placed in the trench, if necessary, to prevent groundwater excursion. During the first growing season, periodic maintenance of the marsh restoration area shall be required and shall include at least the replacement of non surviving transplants and the removal of all deposits of debris and organic litter.

During construction, equipment such as Bailey bridges and helicopters shall be used to minimize, using best available measures, the adverse effects of construction on the Salt Marsh. All vehicles shall be used only on swamp mats or in such a way as to prevent tire marks, trenches, or ruts;

5. No utility shall traverse a Salt Marsh unless the applicant has shown that any thermal influence on the Salt Marsh of such line subsequent to the project being completed will not alter the natural freezing and thawing patterns of the top 24 inches of the Salt Marsh surface. Thermal sand, concrete or other suitable material may be used to backfill the trench to a point no less than 24 inches below grade. Above this level, clean sand shall be used to restore the level of the trench to that of the surrounding undisturbed Salt Marsh;

10.24: continued

6. No permanent access roads shall be permitted except in Designated Port Areas; and
 7. All sewer lines shall be constructed so as to be watertight so as to prevent inflow and leakage.
 8. All fuel lines shall be double cased and watertight so as to prevent inflow and leakage.
 9. The conduits or structures shall be designed to minimize, using the best available measures, adverse effects on the relevant interests of M.G.L. c. 131, § 40 due to changes in wave action or sediment transport or adjacent coastal banks, coastal beaches, coastal dunes, salt marshes or barrier beaches.
- (c) The following projects may be permitted as a limited project pursuant to 310 CMR 10.24(7) provided the project complies with all applicable provisions of 310 CMR 10.24(1) through (6) and (9) and (10):
1. Maintenance and improvement of existing public roadways, but limited to widening less than a single lane, adding shoulders, correcting substandard intersections, and improving drainage systems.
 2. The maintenance, repair and improvement (but not substantial enlargement except when necessary to reduce or eliminate a tidal restriction) of structures, including buildings, piers, towers, headwalls, bridges and culverts which existed on November 1, 1987.
 3. The routine maintenance and repair of road drainage structures including culverts and catch basins, drainage easements, ditches, watercourses and artificial water conveyances to insure flow capacities which existed on November 1, 1987.
 4. The closure of landfills when undertaken to comply with the requirements of 310 CMR 19.000: *Solid Waste Management*; provided, however, that:
 - a. a project design alternative analysis shall be prepared in accordance with 310 CMR 19.150: *Landfill Assessment Requirements*; and
 - b. such projects shall be designed, constructed, implemented, operated, and maintained to avoid or, where avoidance is not practicable, to minimize impacts to resource areas, and to meet the following standards to the maximum extent practicable:
 - i. hydrological changes to resource areas shall be minimized;
 - ii. best management practices shall be used to minimize adverse impacts during construction, including prevention of erosion and siltation of adjacent water bodies and wetlands in accordance with standard U.S.D.A. Soil Conservation Service methods;
 - iii. mitigating measures shall be implemented that contribute to the protection of the interests identified in M.G.L. c. 131, § 40;
 - iv. no access road, assessment or monitoring device, or other structure or activity shall restrict flows so as to cause an increase in flood stage or velocity;
 - v. temporary structures and work areas in resource areas, such as access roads and assessment and monitoring devices, shall be removed within 30 days of the Department's written determination that the closure of the facility has been completed in accordance with the closure permit. Temporary alterations to resource areas shall be substantially restored to preexisting hydrology and topography. At least 75% of the surface of any area of disturbed vegetation shall be reestablished with indigenous wetland plant species within two growing seasons and prior to said vegetative reestablishment any exposed soil in the area of disturbed vegetation shall be temporarily stabilized to prevent erosion in accordance with standard U.S.D.A. Soil Conservation Service methods.

Temporary structures, work areas, and alterations to resource areas are those that no longer are necessary to fulfill the requirements of 310 CMR 19.000: *Solid Waste Management*;

vi. except for direct impacts to resource areas caused by the final cap and cover on the landfill, no changes in the existing topography or the existing soil and surface water levels shall be permitted, except for those resulting from temporary access roads;

vii. work in resource areas shall occur only when the ground is sufficiently frozen, dry, or otherwise stable to support the equipment used; and

viii. such projects shall not include the construction of new landfills or the expansion or modification of existing landfills.

10.24: continued

5. Airport vegetation removal projects; provided, however, that:
 - a. such projects must be undertaken in order to comply with Federal Aviation Administration (FAA) Regulation Part 77 (14 CFR Part 77), FAA Advisory Circular 150/5300-13 (Navigational Aids and Approach Light Systems), and FAA Order 6480.4 (Air Traffic Control Tower Siting Criteria), all as amended, or to comply with the airport approach regulations set forth in M.G.L. c. 90, §§ 40A through 40I;
 - b. such projects must be undertaken at airports that are managed by the Massachusetts Port Authority (Massport) or that are subject to certification by the Massachusetts Aeronautics Commission (MAC);
 - c. the requirement outlined in 310 CMR 10.24(7)(c)5.a. must be certified in writing by the FAA or by the MAC;
 - d. such projects shall not include the construction of new airport facilities or the expansion or relocation of existing airport uses;
 - e. notices of Intent filed for such projects shall:
 - i. delineate the vegetation requiring removal;
 - ii. delineate the affected resource areas;
 - iii. identify the proposed method for removal of vegetation and analyze alternatives. At a minimum, the alternatives analysis shall include: an alternative (based on a Federal Aviation Administration waiver or airport operation changes) that does not alter resource areas, which will provide baseline data for evaluating other alternatives; an assessment of impacts to resource areas resulting from mechanical methods of vegetation removal, including the use of both large and small equipment; and an assessment of impacts to resource areas resulting from chemical methods of vegetation removal;
 - iv. quantify the likely impacts to wildlife habitat and water quality;
 - v. evaluate possible mitigation measures, including but not limited to an assessment of erosion and sedimentation controls, wetland restoration, wetland replication, on-site and off-site wetland enhancement, herbicide application guidelines, spill containment plans, development restrictions and monitoring; and
 - vi. propose a five-year airport vegetation management plan. The vegetation management plan shall, at minimum, contain a purpose and goals statement, identify all airport protective zones, identify proposed vegetation management areas within the protective zones, and identify and prioritize future vegetation removal projects. Updated vegetation management plans shall be provided for each Notice of Intent filed after the expiration of the most recent five-year vegetation management plan period;
 - f. where such projects require the filing of a Notice of Intent in more than one municipality, the Notice of Intent filed in each municipality shall describe the total impacts to resource areas proposed for the entire project;
 - g. in addition to existing notice requirements contained in 310 CMR 10.00, for projects pursuant to 310 CMR 10.24(7)(c)5. copies of each Notice of Intent shall be filed simultaneously with the Massachusetts Department of Food and Agriculture, the Massachusetts Historical Commission, the Massachusetts Department of Environmental Management (Areas of Critical Environmental Concern Program), and the Division of Water Supply in the Department of Environmental Protection; and
 - h. such projects shall be designed, constructed, implemented, operated, and maintained to avoid or, where avoidance is not practicable, to minimize impacts to resource areas, and to meet the following standards to the maximum extent

practicable:

- i. hydrological changes to resource areas shall be minimized;
- ii. best management practices shall be used to minimize adverse impacts during construction, including prevention of erosion and siltation of adjacent water bodies and wetlands in accordance with standard U.S.D.A. Soil Conservation Service methods;
- iii. mitigating measures shall be implemented that contribute to the protection of the interests identified in M.G.L. c. 131, § 40;
- iv. no access road or other structure or activity shall restrict flows so as to cause an increase in flood stage or velocity;

10.24: continued

- v. no change in the existing surface topography or the existing soil and surface water levels shall occur except for temporary access roads;
 - vi. temporary structures and work areas in resource areas, such as access roads, shall be removed within 30 days of completion of the work. Temporary alterations to resource areas shall be substantially restored to preexisting hydrology and topography. At least 75% of the surface of any area of disturbed vegetation shall be reestablished with indigenous wetland plant species within two growing seasons and prior to said vegetative reestablishment any exposed soil in the area of disturbed vegetation shall be temporarily stabilized to prevent erosion in accordance with standard U.S.D.A. Soil Conservation Service methods;
 - vii. work in resource areas shall occur only during those periods when the ground is sufficiently frozen, dry, or otherwise stable to support the equipment being used; and
 - viii. slash, branches, and limbs resulting from cutting and removal operations shall not be placed within 25 feet of the bank of any water body.
6. Assessment, monitoring, containment, mitigation, and remediation of, or other response to, a release or threat of release of oil and/or hazardous material in accordance with the provisions of 310 CMR 40.0000: *Massachusetts Contingency Plan* and the following general conditions (although no such measure may be permitted which is designed in accordance with the provisions of 310 CMR 40.1020: *Background Levels of Oil and Hazardous Material* solely to reduce contamination to a level lower than that which is needed to achieve "No Significant Risk" as defined in 310 CMR 40.0006(12)):
- a. There are no practicable alternatives to the response action being proposed that are consistent with the provisions of 310 CMR 40.0000: *Massachusetts Contingency Plan* and that would be less damaging to resource areas. The alternatives analysis shall include the following:
 - i. an alternative that does not alter resource areas, which will provide baseline data for evaluating other alternatives; and
 - ii. an assessment of alternatives to both temporary and permanent impacts to resource areas.
- A "Comprehensive Remedial Action Alternative" that is selected in accordance with the provisions of 310 CMR 40.0851 through 40.0869 shall be deemed to have met the requirements of 310 CMR 10.24(7)(c)6.a.; and
- b. Such projects shall be designed, constructed, implemented, operated, and maintained to avoid or, where avoidance is not practicable, to minimize impacts to resource areas, and to meet the following standards to the maximum extent practicable:
 - i. hydrological changes to resource areas shall be minimized;
 - ii. best management practices shall be used to minimize adverse impacts during construction, including prevention of erosion and siltation of resource areas in accordance with standard U.S.D.A. Soil Conservation Service methods;
 - iii. mitigating measures shall be implemented that contribute to the protection of the interests identified in M.G.L. c. 131, §40;
 - iv. no access road, assessment or monitoring device, or other structure or activity shall restrict flows so as to cause an increase in flood stage or velocity;
 - v. temporary structures and work areas in resource areas, such as access roads and assessment and monitoring devices, shall be removed within 30 days of completion of the work. Temporary alterations to resource areas shall be

substantially restored to preexisting hydrology and topography. At least 75% of the surface of any area of disturbed vegetation shall be reestablished with indigenous wetland plant species within two growing seasons and prior to said vegetative reestablishment any exposed soil in the area of disturbed vegetation shall be temporarily stabilized to prevent erosion in accordance with standard U.S.D.A. Soil Conservation Service methods. Temporary structures, work areas, and alterations to resource areas are those that no longer are necessary to fulfill the requirements of 310 CMR 40.0000: *Massachusetts Contingency Plan*; and vi. work in resource areas shall occur only when the ground is sufficiently frozen, dry, or otherwise stable to support the equipment being used.

10.24: continued

7. The construction of a new access roadway, or the improvement, repair and/or replacement of an existing access roadway, needed to transport equipment to a renewable energy project site, provided that it is carried out in accordance with the following general conditions and any additional conditions deemed necessary by the issuing authority. Such projects shall be designed, constructed, implemented, operated, and maintained to meet all of the following standards to the maximum extent practicable:

- a. The work is limited to the following coastal resource areas or portions thereof: the portion of Land Subject to Coastal Storm Flowage that is outside the Velocity Zone, Designated Port Areas, and Banks of or Land under the Ocean, Ponds, Streams, Rivers, Lakes or Creeks that Underlie an Anadromous/Catadromous Fish Run.
- b. Hydrological changes to resource areas shall be minimized.
- c. Best management practices shall be used to minimize adverse impacts during construction. An applicant shall be presumed to use best management practices to minimize adverse impacts during construction if he or she implements erosion and sediment controls in accordance with the *Massachusetts Erosion and Sediment Control Guidelines*. This presumption may be rebutted by credible evidence from a competent source.
- d. No access road or other structure or activity shall restrict flows so as to cause an increase in flood stage or velocity.
- e. No change in the existing surface topography or the existing soil and surface water levels shall occur except for temporary access roads.
- f. Temporary structures and work areas in resource areas shall be removed within 30 days of completion of the work. Temporary alterations to resource areas shall be substantially restored to preexisting hydrology and topography. At least 75% of the surface of any area of disturbed vegetation shall be reestablished with indigenous wetland plant species within two growing seasons and prior to said vegetative reestablishment any exposed soil in the area of disturbed vegetation shall be temporarily stabilized to prevent erosion. Surface areas shall be presumed to be stabilized to prevent erosion if the applicant implements the procedures set forth in the *Massachusetts Erosion and Sediment Control Guidelines*. This presumption may be rebutted by credible evidence from a competent source.
- g. Work in resource areas shall occur only during those periods when the ground is sufficiently frozen, dry, or otherwise stable to support the equipment being used.
- h. Slash, branches, and limbs resulting from cutting and removal operations shall not be placed within 25 feet of the bank of any water body.

(8) Ecological Restoration Limited Project.

(a) Notwithstanding the requirements of 310 CMR 10.25 through 10.35, 10.54 through 10.58, and 10.60, the Issuing Authority may issue an Order of Conditions permitting an Ecological Restoration Project listed in 310 CMR 10.24(8)(e) as an Ecological Restoration Limited Project and impose such conditions as will contribute to the interests identified in M.G.L. c. 131, § 40, provided that:

1. The Issuing Authority determines that the project is an Ecological Restoration Project as defined in 310 CMR 10.04;
2. If the project will impact an area located within estimated habitat which is indicated on the most recent Estimated Habitat Map of State-listed Rare Wetlands Wildlife published by the Natural Heritage and Endangered Species Program (Program), the applicant has obtained a preliminary written determination from the Program in

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

accordance with 310 CMR 10.11(2) that the project will not have any adverse long-term and short-term effects on specified habitat sites of Rare Species or the project will be carried out in accordance with a habitat management plan that has been approved in writing by the Natural Heritage and Endangered Species Program and submitted with the Notice of Intent;

3. The applicant demonstrates that the project will be carried out in accordance with any time of year restrictions or other conditions recommended by the Division of Marine Fisheries for coastal waters and the Division of Fisheries and Wildlife in accordance with 310 CMR 10.11(3);

10.24: continued

4. If the project is located in a Coastal Dune or Barrier Beach, the applicant has demonstrated that s/he has avoided and minimized armoring of the Coastal Dune or Barrier Beach to the maximum extent practicable; and
 5. The applicant demonstrates that the project complies with all applicable provisions of 310 CMR 10.24(1) through (6) and (9) and (10).
- (b) An Ecological Restoration Project permitted as an Ecological Restoration Limited Project in accordance with 310 CMR 10.24(8) may result in the temporary or permanent loss of Resource Areas and/or the conversion of one Resource Area to another when such loss is necessary to the achievement of the project's ecological restoration goals.
- (c) As set forth in 310 CMR 10.12(3), a person submitting a Notice of Intent for an Ecological Restoration Limited Project in accordance with 310 CMR 10.12(1) and (2) is exempt from the requirement to perform a wildlife habitat evaluation in accordance with the requirements of 310 CMR 10.60, notwithstanding the provisions of 310 CMR 10.54(4)(a)5., 10.56(4)(a)4., and 10.60.
- (d) In determining whether to approve a project as an Ecological Restoration Limited Project, the issuing authority shall consider the following:
1. the condition of existing and historic Resource Areas proposed for restoration including evidence of the extent and severity of the impairment(s) that reduce the capacity of said Resource Areas to protect and sustain the interests identified in M.G.L. c. 131, § 40;
 2. the magnitude and significance of the benefits of the Ecological Restoration Project in improving the capacity of the affected Resource Areas to protect and sustain the other interests identified in M.G.L. c. 131, § 40; and
 3. the magnitude and significance of the impacts of the Ecological Restoration Project on existing Resource Areas that may be modified, converted and/or lost and the interests for which said Resource Areas are presumed significant in 310 CMR 10.00, and the extent to which the applicant will:
 - a. avoid adverse impacts to Resource Areas and the interests identified in M.G.L. c. 131, § 40, that can be avoided without impeding the achievement of the project's ecological restoration goals;
 - b. minimize adverse impacts to Resource Areas and the interests identified in M.G.L. c. 131, § 40, that are necessary to the achievement of the project's ecological restoration goals; and
 - c. utilize best management practices such as erosion and siltation controls and proper construction sequencing to avoid and minimize adverse construction impacts to resource areas and the interests identified in M.G.L. c. 131, § 40.
- (e) Types of Ecological Restoration Limited Projects. The following projects may be permitted as Ecological Restoration Limited Projects in accordance with 310 CMR 10.24(8)(a) through (d):
1. Tidal Restoration Project. A project that will restore tidal flow and that does not meet all the eligibility criteria set forth in 310 CMR 10.13 may be permitted as an Ecological Restoration Limited Project provided that in addition to the criteria set forth in 310 CMR 10.24(8)(a) through (d), the project including any proposed flood mitigation measures will not significantly increase flooding or storm damage impacts to the built environment, including without limitation, buildings, wells, septic systems, roads or other human-made structures or infrastructure.
 2. Shellfish Habitat Restoration Project. A project to emplace cultch or other substrate for the purpose of restoring shellfish habitat may be permitted as an Ecological Restoration Limited Project provided that in addition to the criteria set forth in 310 CMR

10.24(8)(a) through (d) the following criteria are met:

- a. The applicant has received a Special Projects Permit from the Division of Marine Fisheries or, if a municipality, has received a shellfish propagation permit; and
- b. The project is made of cultch (*e.g.*, shellfish shells from oyster, surf or ocean clam) or is a structure manufactured specifically for shellfish enhancement (*e.g.*, reef blocks, reef balls, racks, floats, rafts, suspended gear).

10.24: continued

3. Other Ecological Restoration Projects. An Ecological Restoration Project that is not listed in 310 CMR 10.24(8)(e)1. and 2. may be permitted as an Ecological Restoration Limited Project provided the project meets the criteria set forth in 310 CMR 10.24(8)(a) through (d). Such projects include but are not limited to the restoration, enhancement, or management of Rare Species habitat, the restoration of hydrologic and habitat connectivity, the removal of aquatic nuisance vegetation to impede eutrophication, the thinning or planting of vegetation to improve habitat value, fill removal and regrading, riparian corridor re-naturalization, river floodplain re-connection, in-stream habitat enhancement, remediation of historic tidal wetland ditching, eel grass restoration, invasive species management, and the installation of fish passage structures.

(9) The Notice of Intent for any projects involving the construction, repair, replacement or expansion of public or private infrastructure shall include an operation and maintenance plan to ensure that the infrastructure will continue to function as designed. Implementation of the operation and maintenance plan as approved by the issuing authority shall be a continuing condition that shall be set forth in the Order of Conditions and the Certificate of Compliance.

(10) Any person proposing replacement of an existing stream crossing shall demonstrate to the issuing authority that the impacts of the crossing have been avoided where possible, and when not possible, have been minimized and that mitigation measures have been provided to contribute to the protection of the interests identified in M.G.L. c. 131, § 40. An applicant will be presumed to have made this showing if the project is designed as follows:

(a) If the project includes replacement of an existing non-tidal crossing that is part of an Anadromous/Catadromous Fish Run, pursuant to 310 CMR 10.35, the applicant demonstrates to the satisfaction of the issuing authority that the crossing complies with the Massachusetts Stream Crossing Standards to the maximum extent practicable.

(b) If the project includes replacement of an existing tidal crossing that restricts tidal flow, the applicant demonstrates to the satisfaction of the issuing authority that tidal restriction will be eliminated to the maximum extent practicable.

This presumption may be rebutted by credible evidence from a competent source that the impacts of the project have not been avoided, minimized or mitigated to the maximum extent practicable.

At a minimum, in evaluating the potential to comply with the standards to the maximum extent practicable the applicant shall consider site constraints in meeting the standard, undesirable effects or risk in meeting the standard, and the environmental benefit of meeting the standard compared to the cost, by evaluating the following:

- The potential for downstream flooding;
- Upstream and downstream habitat (in-stream habitat, wetlands);
- Potential for erosion and head-cutting;
- Stream stability;
- Habitat fragmentation caused by the crossing;
- The amount of stream mileage made accessible by the improvements;
- Storm flow conveyance;
- Engineering design constraints specific to the crossing;
- Hydrologic constraints specific to the crossing;
- Impacts to wetlands that would occur by improving the crossing;
- Potential to affect property and infrastructure; and
- Cost of replacement.

10.25: Land under the Ocean

(1) Preamble. Land under the ocean is likely to be significant to the protection of marine fisheries and, where there are shellfish, to protection of land containing shellfish.¹ Nearshore areas of land under the ocean are likely to be significant to storm damage prevention, flood control, and protection of wildlife habitat.

Land under the ocean provides feeding areas, spawning and nursery grounds and shelter for many coastal organisms related to marine fisheries. Nearshore areas of land under the ocean help reduce storm damage and flooding by diminishing and buffering the high energy effects of storms. Submerged bars dissipate storm wave energy. Such areas provide a source of sediment for seasonal rebuilding of coastal beaches and dunes. Nearshore areas of land under the ocean also provide important food for birds. For example, waterfowl feed heavily on vegetation (such as eel grass, widgeon grass, and macrophytic algae) and invertebrates (such as polychaetes and mollusks) found in estuaries and other shallow submerged land under the ocean.

When a proposed project involves the dredging, removing, filling or altering of a nearshore area of land under the ocean, the issuing authority shall presume that the area is significant to the interests specified above.

When a proposed project involves the dredging, removing, filling or altering of land under the ocean beyond the nearshore area, the issuing authority shall presume that such land is significant to the protection of marine fisheries and, where there are shellfish, to the protection of land containing shellfish and that it is not significant to storm damage prevention, flood control or protection of wildlife habitat.

These presumptions may be overcome only upon a clear showing that the area or land does not play a role in the protection of marine fisheries or wildlife habitat, land containing shellfish, storm damage prevention or flood control, as appropriate, and if the issuing authority makes a written determination to such effect.

When land under the ocean underlies an anadromous/catadromous fish run, 310 CMR 10.35(1) through (4) shall apply. When land under the ocean is in a designated port area, 310 CMR 10.26(1) through (4) shall apply. When land under the ocean is land containing shellfish, 310 CMR 10.34(1) through (7) shall apply.

When nearshore areas of land under the ocean are significant to storm damage prevention or flood control, the bottom topography of such land is critical to the protection of those interests.

When nearshore areas or other land under the ocean is significant to the protection of marine fisheries or wildlife habitat, the following factors are critical to the protection of such interests:

- (a) water circulation;
- (b) distribution of sediment grain size;
- (c) water quality;
- (d) finfish habitat; and
- (e) important food for wildlife.

(2) Definitions.

Land under the Ocean means land extending from the mean low water line seaward to the boundary of the municipality's jurisdiction and includes land under estuaries.

Nearshore Areas of land under the ocean means that land extending from the mean low water line to the seaward limit of a municipality's jurisdiction, but in no case beyond the point where the land is 80 feet below the level of the ocean at mean low water. However, the nearshore area

¹ For regulations concerning land containing shellfish, see 310 CMR 10.34.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

shall extend seaward only to that point where the land is 30 feet below the level of the ocean at mean low water for municipalities bordering Buzzard's Bay and Vineyard Sound (west of a line between West Chop, Martha's Vineyard and Nobska Point, Falmouth), 40 feet below the level of the ocean at mean low water for Provincetown's land in Cape Cod Bay, and 50 feet below the level of the ocean at mean low water for Truro's and Wellfleet's land in Cape Cod Bay.

WHEN LAND UNDER THE OCEAN OR NEARSHORE AREAS OF LAND UNDER THE OCEAN ARE FOUND TO BE SIGNIFICANT TO THE PROTECTION OF MARINE FISHERIES, PROTECTION OF WILDLIFE HABITAT, STORM DAMAGE PREVENTION OR FLOOD CONTROL, 310 CMR 10.25(3) THROUGH (7) SHALL APPLY:

10.25: continued

(3) Improvement dredging for navigational purposes affecting land under the ocean shall be designed and carried out using the best available measures so as to minimize adverse effects on such interests caused by changes in:

- (a) bottom topography which will result in increased flooding or erosion caused by an increase in the height or velocity of waves impacting the shore;
- (b) sediment transport processes which will increase flood or erosion hazards by affecting the natural replenishment of beaches;
- (c) water circulation which will result in an adverse change in flushing rate, temperature, or turbidity levels; or
- (d) marine productivity which will result from the suspension or transport of pollutants, the smothering of bottom organisms, the accumulation of pollutants by organisms, or the destruction of marine fisheries habitat or wildlife habitat.

(4) Maintenance dredging for navigational purposes affecting land under the ocean shall be designed and carried out using the best available measures so as to minimize adverse effects on such interests caused by changes in marine productivity which will result from the suspension or transport of pollutants, increases in turbidity, the smothering of bottom organisms, the accumulation of pollutants by organisms, or the destruction of marine fisheries habitat or wildlife habitat.

(5) Projects not included in 310 CMR 10.25(3) or (4) which affect nearshore areas of land under the ocean shall not cause adverse effects by altering the bottom topography so as to increase storm damage or erosion of coastal beaches, coastal banks, coastal dunes, or salt marshes.

(6) Projects not included in 310 CMR 10.25(3) which affect land under the ocean shall if water-dependent be designed and constructed, using best available measures, so as to minimize adverse effects, and if non-water-dependent, have no adverse effects, on marine fisheries habitat or wildlife habitat caused by:

- (a) alterations in water circulation;
- (b) destruction of eelgrass (*Zostera marina*) or widgeon grass (*Ruppia maritima*) beds;
- (c) alterations in the distribution of sediment grain size;
- (d) changes in water quality, including, but not limited to, other than natural fluctuations in the level of dissolved oxygen, temperature or turbidity, or the addition of pollutants; or
- (e) alterations of shallow submerged lands with high densities of polychaetes, mollusks or macrophytic algae.

(7) Notwithstanding the provisions of 310 CMR 10.25(3) through (6), no project may be permitted which will have any adverse effect on specified habitat sites of rare vertebrate or invertebrate species, as identified by procedures established under 310 CMR 10.37.

10.26: Designated Port Areas

(1) Preamble. Land under the ocean in designated port areas is likely to be significant to marine fisheries, storm damage prevention and flood control. In designated port areas, salt marshes, coastal dunes, land under salt ponds, coastal beaches, tidal flats, barrier beaches, rocky intertidal shores and land containing shellfish are not likely to be significant to marine fisheries, storm damage prevention or flood control.

Many species of marine fisheries, including anadromous fish, may inhabit port areas. Anadromous fish may need to be able to pass through port areas to inland spawning areas or to

the sea. Other species frequently feed in designated port areas due to high nutrient concentrations in the waters and the tidelands.

Designated port areas, which are portions of developed harbors, are usually located in estuaries. Relatively high concentrations of contaminants, from vessel discharges and point and non-point source discharges, are likely to occur in port areas. Water circulation patterns tend to distribute pollution throughout the estuary, and to other areas which are likely to be significant to other interests of M.G.L. c. 131, § 40. Land forms in designated port areas have been greatly altered from their natural shape, and coastal engineering structures often have replaced natural protection for upland areas from storm damage and flooding.

10.26: continued

Land under the ocean often provides support for such structures. Some proposed activities may alter wave and current patterns so as to affect the stability of such structures or the depths or configurations of navigation channels.

Where a proposed project involves dredging, filling, removing, or altering land under the ocean in designated port areas, the issuing authority shall presume that the area is significant to marine fisheries, storm damage prevention and flood control. These presumptions may be overcome only upon a clear showing that land under the ocean in designated port areas does not play a role in the protection of marine fisheries, storm damage prevention or flood control, or that a salt marsh, coastal dune, land under a salt pond, coastal beach, tidal flat, barrier beach, rocky intertidal shore or land containing shellfish, in designated port areas, does play a role in marine fisheries, storm damage prevention or flood control, and if the issuing authority makes a written determination to such effect.

When a proposed project in a designated port area is on land under the ocean which is determined to be significant to marine fisheries, the following factors are critical to the protection of such interests:

- (a) water circulation; and
- (b) water quality.

When a proposed project in a designated port area is on land under the ocean which is determined to be significant to storm damage prevention or flood control, the ability of such land to provide support for adjacent coastal or human-made structures is critical to the protection of such interests.

(2) Definition.

Designation of Port Areas means those areas designated in 301 CMR 25.00: *Designation of Port Areas*.

WHEN LAND UNDER THE OCEAN IN DESIGNATED PORT AREAS IS FOUND TO BE SIGNIFICANT TO THE PROTECTION OF MARINE FISHERIES, STORM DAMAGE PREVENTION OR FLOOD CONTROL, 310 CMR 10.26(3) AND (4) SHALL APPLY:

(3) Projects shall be designed and constructed, using best practical measures, so as to minimize adverse effects on marine fisheries caused by changes in:

- (a) water circulation;
- (b) water quality, including, but not limited to, other than natural fluctuations in the level of dissolved oxygen, temperature or turbidity, or the addition of pollutants.

(4) Projects shall be designed and constructed, using the best practical measures, so as to minimize, adverse effects on storm damage prevention or flood control caused by changes in such land's ability to provide support for adjacent coastal banks or adjacent coastal engineering structures.

10.27: Coastal Beaches

(1) Preamble. Coastal beaches, which are defined to include tidal flats, are significant to storm damage prevention, flood control and the protection of wildlife habitat. In addition, tidal flats are likely to be significant to the protection of marine fisheries and where there are shellfish, to

land containing shellfish.²

Coastal beaches dissipate wave energy by their gentle slope, their permeability and their granular nature, which permit changes in beach form in response to changes in wave conditions.

Coastal beaches serve as a sediment source for dunes and subtidal areas. Steep storm waves cause beach sediment to move offshore, resulting in a gentler beach slope and greater energy dissipation. Less steep waves cause an onshore return of beach sediment, where it will be available to provide protection against future storm waves.

A coastal beach at any point serves as a sediment source for coastal areas downdrift from that point. The oblique approach of waves moves beach sediment alongshore in the general direction of wave action. Thus, the coastal beach is a body of sediment which is moving along the shore.

² For regulations concerning land containing shellfish *see* 310 CMR 10.34.

10.27: continued

Coastal beaches serve the purposes of storm damage prevention and flood control by dissipating wave energy, by reducing the height of storm waves, and by providing sediment to supply other coastal features, including coastal dunes, land under the ocean and other coastal beaches. Interruptions of these natural processes by human-made structures reduce the ability of the coastal beach to perform these functions.

A number of birds also nest in the coastal berm, between the toe of a dune and the high tide line. In addition, isolated coastal beaches on small islands are important as haul out areas for harbor seals.

Tidal flats are likely to be significant to the protection of marine fisheries and wildlife habitat because they provide habitats for marine organisms such as polychaete worms and mollusks, which in turn are food sources for fisheries and migratory and wintering birds. Coastal beaches are extremely important in recycling of nutrients derived from storm drift and tidal action. Vegetative debris along the drift line is vital for resident and migratory shorebirds, which feed largely on invertebrates which eat the vegetation. Below the drift line in the lower intertidal zone are infauna (invertebrates such as mollusks and crustacea) which are also eaten by shore birds.

Tidal flats are also sites where organic and inorganic materials may become entrapped and then returned to the photosynthetic zone of the water column to support algae and other primary producers of the marine food web.

When a proposed project involves the dredging, filling, removing, or altering of a coastal beach, the issuing authority shall presume that the coastal beach is significant to the interests specified above. This presumption may be overcome only upon a clear showing that a coastal beach does not play a role in storm damage prevention, flood control, or protection of wildlife habitat, or that tidal flats do not play a role in the protection of marine fisheries or land containing shellfish, and if the issuing authority makes a written determination to such effect.

When coastal beaches are determined to be significant to storm damage prevention or flood control, the following characteristics are critical to the protection of those interests:

- (a) volume (quantity of sediments) and form; and
- (b) the ability to respond to wave action.

When coastal beaches are significant to the protection of marine fisheries or wildlife habitat, the following characteristics are critical to the protection of those interests:

- (a) distribution of sediment grain size;
- (b) water circulation;
- (c) water quality; and
- (d) relief and elevation.

When tidal flats are in a designated port area, 310 CMR 10.26(1) through (4) shall apply. When tidal flats are significant to land containing shellfish, 310 CMR 10.34(1) through (8) shall apply.

(2) Definitions.

Coastal Beach means unconsolidated sediment subject to wave, tidal and coastal storm action which forms the gently sloping shore of a body of salt water and includes tidal flats. Coastal beaches extend from the mean low water line landward to the dune line, coastal bankline or the seaward edge of existing human-made structures, when these structures replace one of the above lines, whichever is closest to the ocean.

Tidal Flat means any nearly level part of a coastal beach which usually extends from the mean low water line landward to the more steeply sloping face of the coastal beach or which may be separated from the beach by land under the ocean.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

WHEN A COASTAL BEACH IS DETERMINED TO BE SIGNIFICANT TO STORM DAMAGE PREVENTION, FLOOD CONTROL, OR PROTECTION OF WILDLIFE HABITAT, 310 CMR 10.27(3) THROUGH (7) SHALL APPLY:

(3) Any project on a coastal beach, except any project permitted under 310 CMR 10.30(3)(a), shall not have an adverse effect by increasing erosion, decreasing the volume or changing the form of any such coastal beach or an adjacent or downdrift coastal beach.

10.27: continued

- (4) Any groin, jetty, solid pier, or other such solid fill structure which will interfere with littoral drift, in addition to complying with 310 CMR 10.27(3), shall be constructed as follows:
- (a) It shall be the minimum length and height demonstrated to be necessary to maintain beach form and volume. In evaluating necessity, coastal engineering, physical oceanographic and/or coastal geologic information shall be considered.
 - (b) Immediately after construction any groin shall be filled to entrapment capacity in height and length with sediment of grain size compatible with that of the adjacent beach.
 - (c) Jetties trapping littoral drift material shall contain a sand by-pass system to transfer sediments to the downdrift side of the inlet or shall be periodically redredged to provide beach nourishment to ensure that downdrift or adjacent beaches are not starved of sediments.
- (5) Notwithstanding 310 CMR 10.27(3), beach nourishment with clean sediment of a grain size compatible with that on the existing beach may be permitted.

WHEN A TIDAL FLAT IS DETERMINED TO BE SIGNIFICANT TO MARINE FISHERIES OR THE PROTECTION OF WILDLIFE HABITAT, 310 CMR 10.27(6) SHALL APPLY:

- (6) In addition to complying with the requirements of 310 CMR 10.27(3) and (4), a project on a tidal flat shall if water-dependent be designed and constructed, using best available measures, so as to minimize adverse effects, and if non-water-dependent, have no adverse effects, on marine fisheries and wildlife habitat caused by:
- (a) alterations in water circulation;
 - (b) alterations in the distribution of sediment grain size; and
 - (c) changes in water quality, including, but not limited to, other than natural fluctuations in the levels of dissolved oxygen, temperature or turbidity, or the addition of pollutants.
- (7) Notwithstanding the provisions of 310 CMR 10.27(3) through (6), no project may be permitted which will have any adverse effect on specified habitat sites or rare vertebrate or invertebrate species, as identified by procedures established under 310 CMR 10.37.

10.28: Coastal Dunes

(1) Preamble. All coastal dunes are likely to be significant to storm damage prevention and flood control, and all coastal dunes on barrier beaches and the coastal dune closest to the coastal beach, also known as the Primary Frontal Dune as defined in 310 CMR 10.04, in any area are per se significant to storm damage prevention and flood control. The Coastal High Hazard Area or Velocity Zone extends at a minimum to the inland limit of the Primary Frontal Dune along the open coast. Coastal dunes are also often significant to the protection of wildlife habitat.

Coastal dunes aid in storm damage prevention and flood control by supplying sand to coastal beaches. Coastal dunes protect inland coastal areas from storm damage and flooding by storm waves and storm elevated sea levels because such dunes are higher than the coastal beaches which they border. In order to protect this function, coastal dune volume must be maintained while allowing the coastal dune shape to conform to natural wind and water flow patterns.

Vegetation cover contributes to the growth and stability of coastal dunes by providing conditions favorable to sand deposition.

On retreating shorelines, the ability of the coastal dunes bordering the coastal beach to move landward at the rate of shoreline retreat allows these dunes to maintain their form and volume, which in turn promotes their function of protecting against storm damage or flooding.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

A number of birds, most commonly terns and gulls, nest at the base or sides of dunes. In some dune systems other birds also nest in the interdunal area, the species being determined by the plant community structure, topography, and hydrologic regime of the area. In a few dune systems, wet meadows or vernal pool habitats occur, which serve as important feeding areas for a wide variety of bird species.

When a proposed project involves the dredging, filling, removal or alteration of a coastal dune, the issuing authority shall presume that the area is significant to the interests of storm damage prevention, flood control and the protection of wildlife habitat. This presumption may be overcome only upon a clear showing that a coastal dune does not play a role in storm damage prevention, flood control or the protection of wildlife habitat, and if the issuing authority makes a written determination to that effect.

10.28: continued

When a coastal dune is significant to storm damage prevention, flood control or the protection of wildlife habitat, the following characteristics are critical to the protection of those interest(s):

- (a) the ability of the dune to erode in response to coastal beach conditions;
- (b) dune volume;
- (c) dune form, which must be allowed to be changed by wind and natural water flow;
- (d) vegetative cover;
- (e) the ability of the dune to move landward or laterally; or
- (f) the ability of the dune to continue serving as bird nesting habitat.

(2) Definition.

Coastal Dune means any natural hill, mound or ridge of sediment landward of a coastal beach deposited by wind action or storm overwash. Coastal dune also means sediment deposited by artificial means and serving the purpose of storm damage prevention or flood control.

WHEN A COASTAL DUNE IS DETERMINED TO BE SIGNIFICANT TO STORM DAMAGE PREVENTION, FLOOD CONTROL OR THE PROTECTION OF WILDLIFE HABITAT, 310 10.28(3) THROUGH (6) SHALL APPLY:

(3) Any alteration of, or structure on, a coastal dune or within 100 feet of a coastal dune shall not have an adverse effect on the coastal dune by:

- (a) affecting the ability of waves to remove sand from the dune;
- (b) disturbing the vegetative cover so as to destabilize the dune;
- (c) causing any modification of the dune form that would increase the potential for storm or flood damage;
- (d) interfering with the landward or lateral movement of the dune;
- (e) causing removal of sand from the dune artificially; or
- (f) interfering with mapped or otherwise identified bird nesting habitat.

(4) Notwithstanding the provisions of 310 CMR 10.28(3), when a building already exists upon a coastal dune, a project accessory to the existing building may be permitted, provided that such work, using the best commercially available measures, minimizes the adverse effect on the coastal dune caused by the impacts listed in 310 CMR 10.28(3)(b) through (e). Such an accessory project may include, but is not limited to, a small shed or a small parking area for residences. It shall not include coastal engineering structures.

(5) The following projects may be permitted, provided that they adhere to the provisions of 310 CMR 10.28(3):

- (a) pedestrian walkways, designed to minimize the disturbance to the vegetative cover and traditional bird nesting habitat;
- (b) fencing and other devices designed to increase dune development; and
- (c) plantings compatible with the natural vegetative cover.

(6) Notwithstanding the provisions of 310 CMR 10.28(3) through (5), no project may be permitted which will have any adverse effect on specified habitat sites of Rare Species, as identified by procedures established under 310 CMR 10.37.

10.29: Barrier Beaches

(1) Preamble. Barrier beaches are significant to storm damage prevention and flood control and are likely to be significant to the protection of marine fisheries and wildlife habitat and, where there are shellfish, the protection of land containing shellfish.³

³ For regulations concerning land containing shellfish *see* 310 CMR 10.34.

10.28: continued

Barrier beaches protect landward areas because they provide a buffer to storm waves and to sea levels elevated by storms. Barrier beaches protect from wave action such highly productive wetlands as salt marshes, estuaries, lagoons, salt ponds and fresh water marshes and ponds, which are in turn important to marine fisheries and protection of wildlife habitat. Barrier beaches and the dunes thereon are also important to the protection of wildlife habitat in the ways described in 310 CMR 10.27(1) (Coastal Beaches) and 10.28(1) (Coastal Dunes).

Barrier beaches are maintained by the alongshore movement of beach sediment caused by wave action. The coastal dunes and tidal flats on a barrier beach consist of sediment supplied by wind action, storm wave overwash and tidal inlet deposition. Barrier beaches in Massachusetts undergo a landward migration caused by the landward movement of sediment by wind, storm wave overwash and tidal current processes. The continuation of these processes maintains the volume of the landform which is necessary to carry out the storm and flood buffer function.

When a proposed project involves removal, filling, dredging or altering of a barrier beach, the issuing authority shall presume that the barrier beach, including all of its coastal dunes, is significant to the interest(s) specified above. This presumption may be overcome only upon a clear showing that a barrier beach, including all of its coastal dunes, does not play a role in storm damage prevention, flood control, or the protection of marine fisheries, wildlife habitat, or land containing shellfish, and if the issuing authority makes a written determination to such effect.

When a barrier beach is significant to storm damage prevention and flood control, the characteristics of coastal beaches, tidal flats and coastal dunes listed in 310 CMR 10.27(1) and 10.28(1) and their ability to respond to wave action, including storm overwash sediment transport, are critical to the protection of the interests specified in 310 CMR 10.29.

(2) Definition.

Barrier Beach means a narrow low-lying strip of land generally consisting of coastal beaches and coastal dunes extending roughly parallel to the trend of the coast. It is separated from the mainland by a narrow body of fresh, brackish or saline water or a marsh system. A barrier beach may be joined to the mainland at one or both ends.

(3) When a Barrier Beach Is Determined to Be Significant to Storm Damage Prevention, Flood Control, Marine Fisheries or Protection of Wildlife Habitat. 310 CMR 10.27(3) through (6) (coastal beaches) and 10.28(3) through (5) (coastal dunes) shall apply to the coastal beaches and to all coastal dunes which make up a barrier beach.

(4) Notwithstanding the provisions of 310 CMR 10.29(3), no project may be permitted which will have any adverse effect on specified habitat sites of rare vertebrate or invertebrate species, as identified by procedures established under 310 CMR 10.37.

10.30: Coastal Banks

(1) Preamble. Coastal banks are likely to be significant to storm damage prevention and flood control. Coastal banks that supply sediment to coastal beaches, coastal dunes and barrier beaches are per se significant to storm damage prevention and flood control. Coastal banks that, because of their height, provide a buffer to upland areas from storm waters are significant to storm damage prevention and flood control.

Coastal banks composed of unconsolidated sediment and exposed to vigorous wave action serve as a major continuous source of sediment for beaches, dunes, and barrier beaches (as well as other land forms caused by coastal processes). The supply of sediment is removed from banks

by wave action, and this removal takes place in response to beach and sea conditions. It is a naturally occurring process necessary to the continued existence of coastal beaches, coastal dunes and barrier beaches which, in turn, dissipate storm wave energy, thus protecting structures of coastal wetlands landward of them from storm damage and flooding.

Coastal banks, because of their height and stability, may act as a buffer or natural wall, which protects upland areas from storm damage and flooding. While erosion caused by wave action is an integral part of shoreline processes and furnishes important sediment to downdrift landforms, erosion of a coastal bank by wind and rain runoff, which plays only a minor role in beach nourishment, should not be increased unnecessarily. Therefore, disturbances to a coastal bank which reduce its natural resistance to wind and rain erosion cause cuts and gullies in the bank, increase the risk of its collapse, increase the danger to structures at the top of the bank and decrease its value as a buffer.

10.30: continued

Bank vegetation tends to stabilize the bank and reduce the rate of erosion due to wind and rain runoff. Pedestrian and vehicular traffic damages the protective vegetation and frequently leads to gully erosion or deep "blowouts" on unconsolidated banks. Therefore, any project permitted by 310 CMR 10.30 should incorporate, when appropriate, elevated walkways.

A particular coastal bank may serve both as a sediment source and as a buffer, or it may serve only one role.

When a proposed project involves dredging, removing, filling, or altering a coastal bank, the issuing authority shall presume that the area is significant to storm damage prevention and flood control. This presumption may be overcome only upon a clear showing that a coastal bank does not play a role in storm damage prevention or flood control, and if the issuing authority makes a written determination to that effect.

When issuing authority determines that a coastal bank is significant to storm damage prevention or flood control because it supplies sediment to coastal beaches, coastal dunes or barrier beaches, the ability of the coastal bank to erode in response to wave action is critical to the protection of that interest(s).

When the issuing authority determines that a coastal bank is significant to storm damage prevention or flood control because it is a vertical buffer to storm waters, the stability of the bank, *i.e.*, the natural resistance of the bank to erosion caused by wind and rain runoff, is critical to the protection of that interest(s).

(2) Definition.

Coastal Bank means the seaward face or side of any elevated landform, other than a coastal dune, which lies at the landward edge of a coastal beach, land subject to tidal action, or other wetland.

WHEN A COASTAL BANK IS DETERMINED TO BE SIGNIFICANT TO STORM DAMAGE PREVENTION OR FLOOD CONTROL BECAUSE IT SUPPLIES SEDIMENT TO COASTAL BEACHES, COASTAL DUNES OR BARRIER BEACHES, 310 CMR 10.30(3) THROUGH (5) SHALL APPLY:

(3) No new bulkhead, revetment, seawall, groin or other coastal engineering structure shall be permitted on such a coastal bank except that such a coastal engineering structure shall be permitted when required to prevent storm damage to buildings constructed prior to the effective date of 310 CMR 10.21 through 10.37 or constructed pursuant to a Notice of Intent filed prior to the effective date of 310 CMR 10.21 through 10.37 (August 10, 1978), including reconstructions of such buildings subsequent to the effective date of 310 CMR 10.21 through 10.37, provided that the following requirements are met:

- (a) a coastal engineering structure or a modification thereto shall be designed and constructed so as to minimize, using best available measures, adverse effects on adjacent or nearby coastal beaches due to changes in wave action, and
- (b) the applicant demonstrates that no method of protecting the building other than the proposed coastal engineering structure is feasible.
- (c) protective planting designed to reduce erosion may be permitted.

(4) Any project on a coastal bank or within 100 feet landward of the top of a coastal bank, other than a structure permitted by 310 CMR 10.30(3), shall not have an adverse effect due to wave action on the movement of sediment from the coastal bank to coastal beaches or land subject to tidal action.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

(5) The Order of Conditions and the Certificate of Compliance for any new building within 100 feet landward of the top of a coastal bank permitted by the issuing authority under M.G.L. c. 131, § 40 shall contain the specific condition: 310 CMR 10.30(3), promulgated under M.G.L. c. 131, § 40, requires that no coastal engineering structure, such as a bulkhead, revetment, or seawall shall be permitted on an eroding bank at any time in the future to protect the project allowed by this Order of Conditions.

WHEN A COASTAL BANK IS DETERMINED TO BE SIGNIFICANT TO STORM DAMAGE PREVENTION OR FLOOD CONTROL BECAUSE IT IS A VERTICAL BUFFER TO STORM WATERS, 310 CMR 10.30(6) THROUGH (8) SHALL APPLY:

10.30: continued

- (6) Any project on such a coastal bank or within 100 feet landward of the top of such coastal bank shall have no adverse effects on the stability of the coastal bank.
- (7) Bulkheads, revetments, seawalls, groins or other coastal engineering structures may be permitted on such a coastal bank except when such bank is significant to storm damage prevention or flood control because it supplies sediment to coastal beaches, coastal dunes, and barrier beaches.
- (8) Notwithstanding the provisions of 310 CMR 10.30(3) through (7), no project may be permitted which will have any adverse effect on specified habitat sites of rare vertebrate or invertebrate species, as identified by procedures established under 310 CMR 10.37.

10.31: Rocky Intertidal Shores

(1) Preamble. Rocky intertidal shores are likely to be significant to storm damage prevention, flood control, protection of marine fisheries and wildlife habitat and where there are shellfish, protection of land containing shellfish.⁴

Rocky shore environments are habitats for macroalgae and marine invertebrates and provide protection to and food for, larger marine organisms such as crabs, lobsters, and such fish species as winter flounder, as well as a number of birds. Most marine plants and animals found in rocky shore environments are uniquely adapted to survive there and cannot survive elsewhere. Harbor seals also use rocky intertidal shores, such as rock outcroppings or isolated shores of small islands, as haul out areas.

When a proposed project involves the filling, removing or altering of a rocky intertidal shore, the issuing authority shall presume that such shore is significant to the interests specified above. This presumption may be overcome only upon a clear showing that a rocky intertidal shore does not play a role in storm damage prevention, flood control, protection of marine fisheries or wildlife habitat, and where there are shellfish, protection of land containing shellfish and if the issuing authority makes a written determination to such effect.⁴

When a rocky intertidal shore is determined to be significant to storm damage prevention, flood control, or protection of wildlife habitat the form and volume of exposed intertidal bedrock and boulders are critical to the protection of those interests.

When a rocky intertidal shore is significant to the protection of marine fisheries or wildlife habitat, water circulation and water quality are critical to the protection of those interests.

(2) Definition.

Rocky Intertidal Shores means naturally occurring rocky areas, such as bedrock or boulder-strewn areas between the mean high water line and the mean low water line.

(3) When a Rocky Intertidal Shore Is Determined to Be Significant to Storm Damage Prevention, Flood Control, or Protection of Wildlife Habitat, any proposed project shall be designed and constructed, using the best practical measures, so as to minimize adverse effects on the form and volume of exposed intertidal bedrock and boulders.

⁴ For regulations concerning land containing shellfish, *see* 310 CMR 10.34.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

(4) When a Rocky Intertidal Shore is Determined to Be Significant to the Protection of Marine Fisheries or Wildlife Habitat, any proposed project shall if water-dependent be designed and constructed, using best available measures, so as to minimize adverse effects, and if non-water-dependent, have no adverse effects, on water circulation and water quality. Water quality impacts include, but are not limited to, other than natural fluctuations in the levels of dissolved oxygen, temperature or turbidity, or the addition of pollutants.

(5) Notwithstanding the provisions of 310 CMR 10.31(3) and (4), no project may be permitted which will have any adverse effect on specified habitat sites of rare vertebrate or invertebrate species, as identified by procedures established under 310 CMR 10.37.

10.32: Salt Marshes

(1) Preamble. Salt marshes are significant to protection of marine fisheries, wildlife habitat, and where there are shellfish, to protection of land containing shellfish, and prevention of pollution and are likely to be significant to storm damage prevention and ground water supply.

A salt marsh produces large amounts of organic matter. A significant portion of this material is exported as detritus and dissolved organics to estuarine and coastal waters, where it provides the basis for a large food web that supports many marine organisms, including finfish and shellfish as well as many bird species. Salt marshes also provide a spawning and nursery habitat for several important estuarine forage finfish as well as important food, shelter, breeding areas, and migratory and overwintering areas for many wildlife species.

Salt marsh plants and substrate remove pollutants from surrounding waters. The network of salt marsh vegetation roots and rhizomes binds sediments together.

The sediments absorb chlorinated hydrocarbons and heavy metals such as lead, copper, and iron. The marsh also retains nitrogen and phosphorous compounds, which in large amounts can lead to algal blooms in coastal waters.

The underlying peat also serves as a barrier between fresh ground water landward of the salt marsh and the ocean, thus helping to maintain the level of such ground water.

Salt marsh cord grass and underlying peat are resistant to erosion and dissipate wave energy, thereby providing a buffer that reduces wave damage.

When a proposed project involves the dredging, filling, removing or altering of a salt marsh, the issuing authority shall presume that such area is significant to the interests specified above. This presumption may be overcome only upon a clear showing that a salt marsh does not play a role in the protection of marine fisheries or wildlife habitat, prevention of pollution, ground water supply, or storm damage prevention, and if the issuing authority makes a written determination to such effect.

When a salt marsh is significant to one or more of the interests specified above, the following characteristics are critical to the protection of such interest(s):

- (a) the growth, composition and distribution of salt marsh vegetation, (protection of marine fisheries and wildlife habitat, prevention of pollution, storm damage prevention);
- (b) the flow and level of tidal and fresh water (protection of marine fisheries and wildlife habitat, prevention of pollution); and
- (c) the presence and depth of peat (ground water supply, prevention of pollution, storm damage prevention).

(2) Definitions.

Salt Marsh means a coastal wetland that extends landward up to the highest high tide line, that is, the highest spring tide of the year, and is characterized by plants that are well adapted to or prefer living in, saline soils. Dominant plants within salt marshes typically include salt meadow cord grass (*Spartina patens*) and/or salt marsh cord grass (*Spartina alterniflora*), but may also include, without limitation, spike grass (*Distichlis spicata*), high-tide bush (*Iva frutescens*), black grass (*Juncus gerardii*), and common reedgrass (*Phragmites*). A salt marsh may contain tidal creeks, ditches and pools.

Spring Tide means the tide of the greatest amplitude during the approximately 14-day tidal cycle. It occurs at or near the time when the gravitational forces of the sun and the moon are in phase (new and full moons).

WHEN A SALT MARSH IS DETERMINED TO BE SIGNIFICANT TO THE PROTECTION OF MARINE FISHERIES, THE PREVENTION OF POLLUTION, STORM

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

DAMAGE PREVENTION OR GROUND WATER SUPPLY, 310 CMR 10.32(3) THROUGH (6) SHALL APPLY:

(3) A proposed project in a salt marsh, on lands within 100 feet of a salt marsh, or in a body of water adjacent to a salt marsh shall not destroy any portion of the salt marsh and shall not have an adverse effect on the productivity of the salt marsh. Alterations in growth, distribution and composition of salt marsh vegetation shall be considered in evaluating adverse effects on productivity. 310 CMR 10.32(3) shall not be construed to prohibit the harvesting of salt hay.

10.32: continued

(4) Notwithstanding the provisions of 310 CMR 10.32(3), a small project within a salt marsh, such as an elevated walkway or other structure which has no adverse effects other than blocking sunlight from the underlying vegetation for a portion of each day, may be permitted if such a project complies with all other applicable requirements of 310 CMR 10.21 through 10.37.

(5) Notwithstanding the provisions of 310 CMR 10.32(3), a project which will restore or rehabilitate a salt marsh, or create a salt marsh, may be permitted in accordance with 310 CMR 10.11 through 10.14, 10.24(8), and/or 10.53(4).

(6) Notwithstanding the provisions of 310 CMR 10.32(3) through (5), no project may be permitted which will have any adverse effect on specified habitat sites of Rare Species, as identified by procedures established under 310 CMR 10.37.

10.33: Land under Salt Ponds

(1) Preamble. Land under salt ponds is significant to the protection of marine fisheries and wildlife habitat and, where there are shellfish, to the protection of land containing shellfish.⁵

Land under salt ponds provides an excellent habitat for marine fisheries. The high productivity of plants in salt ponds provides food for shellfish, crustaceans and larval and juvenile fish. Salt ponds also provide spawning areas for shellfish and are nursery areas for crabs and fish. In addition to the many birds which feed on fish found in salt ponds, waterfowl also eat invertebrates such as mollusks and crustaceans, which in turn depend on bottom sediment and vegetation. Some bird species also eat *rupia* and eel grass which may be rooted in land under salt ponds.

When a proposed project involves the dredging, filling, removing or altering of land under a salt pond, the issuing authority shall presume that such land is significant to the protection of marine fisheries and wildlife habitat and, where there are shellfish, to the protection of land containing shellfish. This presumption may be overcome only upon a clear showing that land under a salt pond does not play a role in the protection of marine fisheries or wildlife habitat or land containing shellfish, and if the issuing authority makes a written determination to such effect.

When land under a salt pond is significant to the protection of marine fisheries or wildlife habitat, the following factors are critical to the protection of that interest:

- (a) water circulation;
- (b) distribution of sediment grain size;
- (c) freshwater inflow;
- (d) productivity of plants; and
- (e) water quality.

(2) Definition.

Salt Pond means a shallow enclosed or semi-enclosed body of saline water that may be partially or totally restricted by barrier beach formation. Salt ponds may receive freshwater from small streams emptying into their upper reaches and/or springs in the salt pond itself.

WHEN LAND UNDER A SALT POND IS DETERMINED TO BE SIGNIFICANT TO THE

⁵ For regulations concerning land containing shellfish, see 310 CMR 10.34.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

PROTECTION OF MARINE FISHERIES OR WILDLIFE HABITAT, 310 CMR 10.33(3) THROUGH (5) SHALL APPLY:

(3) Any project on land under a salt pond, on lands within 100 feet of the mean high water line of a salt pond, or on land under a body of water adjacent to a salt pond shall not have an adverse effect on the marine fisheries or wildlife habitat of such a salt pond caused by:

- (a) alterations of water circulation;
- (b) alterations in the distribution of sediment grain size and the relief or elevation of the bottom topography;
- (c) modifications in the flow of fresh and/or salt water;
- (d) alterations in the productivity of plants, or

10.33: continued

(e) alterations in water quality, including, but not limited to, other than normal fluctuations in the level of dissolved oxygen, nutrients, temperature or turbidity, or the addition of pollutants.

(4) Notwithstanding the provisions of 310 CMR 10.33(3), activities specifically required and intended to maintain the depth and the opening of the salt pond to the ocean in order to maintain or enhance the marine fisheries or for the specific purpose of fisheries management, may be permitted.

(5) Notwithstanding the provisions of 310 CMR 10.33(3) and (4), no project may be permitted which will have any adverse effect on specified habitat sites of rare vertebrate or invertebrate species, as identified by procedures established under 310 CMR 10.37.

10.34: Land Containing Shellfish

(1) Preamble. Land containing shellfish is found within certain of the resource areas under the jurisdiction of M.G.L. c. 131, § 40. "Land containing shellfish" is also specifically one of the interests of M.G.L. c. 131, § 40. The purpose of 310 CMR 10.34 is to identify those resource areas likely to contain shellfish, to provide criteria for determining the significance of land containing shellfish, and to establish regulations for projects which will affect such land.

Land containing shellfish is, under 310 CMR 10.34(3), significant to the protection of marine fisheries as well as to the protection of the interest of land containing shellfish.

Shellfish are a valuable renewable resource. The maintenance of productive shellfish beds not only assures the continuance of shellfish themselves, but also plays a direct role in supporting fish stocks by providing a major food source. The young shellfish in the planktonic larval stage that are produced in large quantities during spring and summer are an important source of food for the young stages of marine fishes and many crustaceans.

When a resource area is found to be significant to the protection of land containing shellfish under 310 CMR 10.34(3), and is, therefore, also significant to marine fisheries the following factors are critical to the protection of those interests:

- (a) shellfish;
- (b) water quality;
- (c) water circulation; and
- (d) the natural relief, evaluation or distribution of sediment grain size of such land.

(2) Definitions.

Land Containing Shellfish means land under the ocean, tidal flats, rocky intertidal shores, salt marshes and land under salt ponds when any such land contains shellfish.

Shellfish means the following species: Bay scallop (*Argopecten irradians*); Blue mussel (*Mytilus edulis*); Ocean quahog (*Arctica islandica*); Oyster (*Crassostrea virginica*); Quahog (*Mercenaria merceneria*); Razor clam (*Ensis directus*); Sea clam (*Spisula solidissima*); Sea scallop (*Placopecten magellanicus*); Soft shell clam (*Mya arenaria*).

Shellfish Constable means the official in a city or town, whether designated a constable, warden, natural resources officer, or by some other name, in charge of enforcing the laws regulating the harvest of shellfish.

(3) Significance. Land containing shellfish shall be found significant to the protection of land containing shellfish and to the protection of marine fisheries when it has been identified and mapped as follows:

(a) by the conservation commission or the Department in consultation with the Division of Marine Fisheries and based upon maps and designations of the Division of Marine Fisheries;
or

(b) by the conservation commission or the Department, based upon maps and written documentation of the shellfish constable or the Department. In making such identification and maps the following factors shall be taken into account and documented: the density of shellfish, the size of the area and the historical and current importance of the area to recreational or commercial shellfishing.

10.34: continued

WHEN A RESOURCE AREA, INCLUDING LAND UNDER THE OCEAN, TIDAL FLATS, ROCKY INTERTIDAL SHORES, SALT MARSHES, OR LAND UNDER SALT PONDS IS DETERMINED TO BE SIGNIFICANT TO THE PROTECTION OF LAND CONTAINING SHELLFISH AND THEREFORE TO THE PROTECTION OF MARINE FISHERIES, 310 CMR 10.34(4) THROUGH (8) SHALL APPLY:

(4) Except as provided in 310 CMR 10.34(5), any project on land containing shellfish shall not adversely affect such land or marine fisheries by a change in the productivity of such land caused by:

- (a) alterations of water circulation;
- (b) alterations in relief elevation;
- (c) the compacting of sediment by vehicular traffic;
- (d) alterations in the distribution of sediment grain size;
- (e) alterations in natural drainage from adjacent land; or
- (f) changes in water quality, including, but not limited to, other than natural fluctuations in the levels of salinity, dissolved oxygen, nutrients, temperature or turbidity, or the addition of pollutants.

(5) Notwithstanding the provisions of 310 CMR 10.34(4), projects which temporarily have an adverse effect on shellfish productivity but which do not permanently destroy the habitat may be permitted if the land containing shellfish can and will be returned substantially to its former productivity in less than one year from the commencement of work, unless an extension of the Order of Conditions is granted, in which case such restoration shall be completed within one year of such extension.

(6) In the case of land containing shellfish defined as significant in 310 CMR 10.34(3)(b) (*i.e.*, those areas identified on the basis of maps and designations of the Shellfish Constable), except in Areas of Critical Environmental Concern, the issuing authority may, after consultation with the Shellfish Constable, permit the shellfish to be moved from such area under the guidelines of, and to a suitable location approved by, the Division of Marine Fisheries, in order to permit a proposed project on such land. Any such project shall not be commenced until after the moving and replanting of the shellfish have been commenced.

(7) Notwithstanding 310 CMR 10.34(4) through (6), projects approved by the Division of Marine Fisheries that are specifically intended to increase the productivity of land containing shellfish may be permitted. Aquaculture projects approved by the appropriate local and state authority may also be permitted.

(8) Notwithstanding the provisions of 310 CMR 10.34(4) through (7), no project may be permitted which will have any adverse effect on specified habitat of rare vertebrate or invertebrate species, as identified by procedures established under 310 CMR 10.37.

10.35: Banks of or Land under the Ocean, Ponds, Streams, Rivers, Lakes, or Creeks that Underlie an Anadromous/Catadromous Fish Run ("Fish Run")

(1) Preamble. The banks of and land under the ocean, ponds, streams, rivers, lakes or creeks that underlie an anadromous/catadromous fish run are significant to protection of marine fisheries.

Anadromous and catadromous fish ("the fish") are renewable protein resources that provide

recreational, aesthetic and commercial benefits. In addition, throughout their life cycle such fish are important components of freshwater, estuarine, and marine environments and are food sources for other organisms.

The spawning migrations of such fish also provide a direct link between marine and freshwater ecosystems. This link plays a role in maintaining the productivity of fisheries.

When a proposed project involves the dredging, filling, removing or altering of a bank of a fish run, or land under the ocean, or under a pond, stream, river, lake or creek which is a fish run, the issuing authority shall presume that such bank or land is significant to the protection of marine fisheries. This presumption is rebuttable and may be overcome only upon a clear showing that such bank or land does not play a role in the protection of marine fisheries, and if the issuing authority makes a written determination to that effect.

10.35: continued

When such a bank of a fish run, or land under the ocean or under a pond, stream, river, lake or creek which is a fish run is significant to the protection of marine fisheries, the following factors are critical to the protection of such interest:

- (a) the fish;
- (b) accessibility of spawning areas;
- (c) the volume or rate of the flow of water within spawning areas and migratory routes; and
- (d) spawning and nursery grounds.

(2) Definitions.

Anadromous Fish means fish that enter fresh water from the ocean to spawn, such as alewives, shad and salmon.

Anadromous/Catadromous Fish Run means that area within estuaries, ponds, streams, creeks, rivers, lakes or coastal waters, which is a spawning or feeding ground or passageway for anadromous or catadromous fish and which is identified by the Division of Marine Fisheries or has been mapped on the Coastal Atlas of the Coastal Zone Management Program. Such fish runs shall include those areas which have historically served as fish runs and are either being restored or are planned to be restored at the time the Notice of Intent is filed. For the purposes of 310 CMR 10.21 through 10.37, such fish runs shall extend inland no further than the inland boundary of the coastal zone.

Catadromous Fish means fish that enter salt water from fresh water to spawn, such as eels.

WHEN SUCH LAND OR BANK IS DETERMINED TO BE SIGNIFICANT TO THE PROTECTION OF MARINE FISHERIES, 310 CMR 10.35(3) THROUGH (5) SHALL APPLY:

(3) Any project on such land or bank shall not have an adverse effect on the anadromous or catadromous fish run by:

- (a) impeding or obstructing the migration of the fish, unless DMF has determined that such impeding or obstructing is acceptable, pursuant to its authority under M.G.L. c. 130, § 19;
- (b) changing the volume or rate of flow of water within the fish run; or
- (c) impairing the capacity of spawning or nursery habitats necessary to sustain the various life stages of the fish.

(4) Unless otherwise allowed by DMF pursuant to M.G.L. c. 130, § 19, dredging, disposal of Dredged Material or filling in a fish run shall be prohibited between March 15th and June 15th in any year.

(5) Notwithstanding the provisions of 310 CMR 10.35(3), no project may be permitted which will have any adverse effect on specified habitat sites of rare vertebrate or invertebrate species, as identified by procedures established under 310 CMR 10.37.

(6) Any person proposing a new stream crossing of a Fish Run shall demonstrate to the issuing authority that there are no practicable alternatives to the crossing, that the impacts of the crossing have been minimized and that mitigation measures have been provided to contribute to the protection of the interests identified in M.G.L. c. 131, § 40. An applicant will be presumed to have made this showing if the project is designed as follows:

- (a) If the project includes the construction of a new non-tidal crossing, the applicant

demonstrates to the satisfaction of the issuing authority that the crossing complies with the Massachusetts Stream Crossing Standards by consisting of a span or embedded culvert in which, at a minimum, the top of the structure is above the elevation of the top of the bank and the structure spans the channel width by a minimum of 1.2 times the bankfull width.

(b) If the project includes the construction of a new tidal crossing, the applicant demonstrates to the satisfaction of the issuing authority that the project is designed in a manner that does not restrict tidal flow over the full natural tidal range by consisting of a span or embedded culvert in which, at a minimum, the top of the structure is above the elevation of the top of the bank and the structure spans the channel width by a minimum of 1.2 times the bankfull width.

10.35: continued

This presumption that the impacts of the crossing have been avoided, minimized and that mitigation measures have been provided to contribute to the protection of the interests identified in M.G.L. c. 131, § 40 may be rebutted by credible evidence from a competent source.

(10.36: Reserved. Variance Provision is Found at 310 CMR 10.05(10))

10.37: Estimated Habitats of Rare Wildlife (for Coastal Wetlands)

If a project is within estimated habitat which is indicated on the most recent Estimated Habitat Map of State-listed Rare Wetlands Wildlife (if any) published by the Natural Heritage and Endangered Species Program (hereinafter referred to as the Program), a fully completed copy of the Notice of Intent (including all plans, reports, and other materials required under 310 CMR 10.05(4)(a) and (b)) for such project shall be sent to the Program via the U.S. Postal Service by express or priority mail (or otherwise sent in a manner that guarantees delivery within two days). Such copy shall be sent no later than the date of the filing of the Notice of Intent with the issuing authority. Proof of timely mailing or other delivery to the Program of the copy of such Notice of Intent shall be included in the Notice of Intent which is submitted to the issuing authority and sent to the Department's regional office.

Estimated Habitat Maps shall be based on the estimated geographical extent of the habitats of all state-listed vertebrate and invertebrate animal species for which a reported occurrence within the last 25 years has been accepted by the Program and incorporated into its official data base.

Within 30 days of the filing of such a Notice of Intent with the issuing authority, the Program shall determine whether any state-listed species identified on the aforementioned map are likely to continue to be located on or near the site of the original occurrence and, if so, whether the area to be altered by the proposed project is in fact part of such species' habitat. Such determination shall be presumed by the issuing authority to be correct. Any proposed project which would alter a resource area that is not located on the most recent Estimated Habitat Map (if any) provided to the conservation commission, shall be presumed not to be within a rare species' habitat. Both of these presumptions are rebuttable and may be overcome upon a clear showing to the contrary. If the issuing authority fails to receive a response from the Program within 30 days of the filing of such a Notice of Intent, a copy of which was received by the Program in a timely manner, it shall issue its Order of Conditions based on available information; however, the fact that a proposed project would alter a resource area that is located on an Estimated Habitat Map shall not be considered sufficient evidence in itself that such project is in fact within the habitat of a rare species.

If the Program determines that a resource area which would be altered by a proposed project is in fact within the habitat of a state-listed species, it shall provide in writing to the applicant and to the Conservation Commission and the Department, the identification of the species whose habitat would be altered by the proposed project, and all other relevant information which the Program has regarding the species' location and habitat requirements, insofar as such information may assist the applicant and the issuing authority to determine whether the project is or can be designed so as to meet the performance standard set in 310 CMR 10.37.

Notwithstanding 310 CMR 10.24(7) and 10.25 and 10.27 through 10.35, if a proposed project is found by the issuing authority to alter a resource area which is part of the habitat of a state-listed species, such project shall not be permitted to have any short or long term adverse effects on the habitat of the local population of that species. A determination of whether or not a proposed project will have such an adverse effect shall be made by the issuing authority. However, a written opinion of the Program on whether or not a proposed project will have such

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

an adverse effect shall be presumed by the issuing authority to be correct. This presumption is rebuttable and may be overcome upon a clear showing to the contrary.

The conservation commission shall not issue an Order of Conditions under 310 CMR 10.05(6) regarding any such project for at least 30 days after the filing of the Notice of Intent, unless the Program before such time period has elapsed has either determined that the resource area(s) which would be altered by the project is not in fact within the habitat of a state-listed species or, if it has determined that such resource area(s) is in fact within rare species habitat, rendered a written opinion as to whether the project will have an adverse effect on that habitat.

10.37: continued

Notwithstanding any other provision of 310 CMR 10.37, should an Environmental Impact Report be required for a proposed project under the M.G.L. c. 60, §§ 6 through 62H, as determined by 301 CMR 11.00: *MEPA Regulations* the performance standard established under 310 CMR 10.37 shall only apply to proposed projects which would alter the habitat of a rare species for which an occurrence has been entered into the official data base of the Massachusetts Natural Heritage and Endangered Species Program prior to the time that the Secretary of the Executive Office of Energy and Environmental Affairs has determined, in accordance with the provisions of 301 CMR 11.09(4), that a final Environmental Impact Report for that project adequately and properly complies with the M.G.L. c. 30, §§ 6 through 62H (unless, subsequent to that determination, the Secretary requires supplemental information concerning state-listed species, in accordance with the provisions of 301 CMR 11.17: *Transition Rules*).

10.51: Introduction

310 CMR 10.51 through 10.60 applies to all work which will remove, fill, dredge or alter any bank, bordering vegetated wetland, land under water bodies and waterways, land subject to flooding or riverfront area. 310 CMR 10.51 through 10.60 pertains to inland (as opposed to coastal) wetlands, and is promulgated in addition to 310 CMR 10.01 through 10.10 and 10.21 through 10.37. A project may be subject to regulation under both 310 CMR 10.01 through 10.10 and 10.21 through 10.37, in which case compliance with all applicable regulations is required.

310 CMR 10.51 through 10.60 is grouped into five resource areas. Each section begins with a Preamble which specifies the interests identified in M.G.L. c. 131, § 40 to which that resource area is or is likely to be significant. The next subsection defines the resource area and describes the characteristics of that area which are critical to the protection of the interests so identified. The next subsection sets forth the presumptions concerning the significance of the resource area. The last subsection contains the general performance standards to be applied to any work that will remove, fill, dredge or alter the resource area.

10.52: Purpose

310 CMR 10.51 through 10.60 is intended to establish criteria and standards for the uniform and coordinated administration of the provisions of M.G.L. c. 131, § 40. It is intended to ensure that development in and near inland wetlands is sited, designed, constructed and maintained in a manner that protects the public interests identified in M.G.L. c. 131, § 40 and served by these resource areas.

310 CMR 10.51 through 10.60 is intended to ensure coordination between the divisions of the Department and between the Department and other Executive Office of Energy and Environmental Affairs agencies; and to ensure consideration by the Department of relevant policies, laws or programs of other Executive Office of Energy and Environmental Affairs agencies. 310 CMR 10.51 through 10.60 is, in addition, intended to be consistent with and form a part of the Commonwealth's Coastal Zone Management Program as it has been promulgated and defined by 301 CMR 20:00: *Coastal Zone Management Program* issued pursuant to M.G.L. c. 21A. 310 CMR 10.51 through 10.60, however, is adopted independently under M.G.L. c. 131, § 40 and would remain in full force and effect in the absence of 301 CMR 20.00.

310 CMR 10.51 through 10.60 is intended to notify both persons proposing work in Areas Subject to Protection Under M.G.L. c. 131, § 40 and those regulating that work as to the performance standards that should be applied. These standards are intended to identify the level of protection that the issuing authority must impose in order to contribute to the protection of the interests identified in M.G.L. c. 131, § 40. It is the responsibility of the person proposing work

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

to design and complete his project in conformance with these performance standards. It is the responsibility of the issuing authority to impose such conditions on a proposed project as to ensure that the project is designed and completed in a manner consistent with these standards.

10.53: General Provisions

(1) If the Issuing Authority determines that a Resource Area is significant to an interest identified in M.G.L. c. 131, § 40 for which no presumption is stated in the Preamble to the applicable section, the Issuing Authority shall impose such conditions as are necessary to contribute to the protection of such interests. For work in the Buffer Zone subject to review under 310 CMR 10.02(2)(b)3., the Issuing Authority shall impose conditions to protect the interests of the Act identified for the adjacent Resource Area. The potential for adverse impacts to Resource Areas from work in the Buffer Zone may increase with the extent of the work and the proximity to the Resource Area. The Issuing Authority may consider the characteristics of the Buffer Zone, such as the presence of steep slopes, that may increase the potential for adverse impacts on Resource Areas. Conditions may include limitations on the scope and location of work in the Buffer Zone as necessary to avoid alteration of Resource Areas. The Issuing Authority may require erosion and sedimentation controls during construction, a clear limit of work, and the preservation of natural vegetation adjacent to the Resource Area and/or other measures commensurate with the scope and location of the work within the Buffer Zone to protect the interests of M.G.L. c. 131, § 40. Where a Buffer Zone has already been developed, the Issuing Authority may consider the extent of existing development in its review of subsequent proposed work and, where prior development is extensive, may consider measures such as the restoration of natural vegetation adjacent to a Resource Area to protect the interest of M.G.L. c. 131, § 40. The purpose of preconstruction review of work in the Buffer Zone is to ensure that adjacent Resource Areas are not adversely affected during or after completion of the work.

(2) When the site of a proposed project is subject to a Restriction Order which has been duly recorded under the provisions of M.G.L. c. 131, § 40A, such a project shall conform to both the provisions contained in that Order and 310 CMR 10.51 through 10.60.

(3) Notwithstanding the provisions of 310 CMR 10.54 through 10.58 and 10.60, the Issuing Authority may issue an Order of Conditions and impose such conditions as will contribute to the interests identified in M.G.L. c. 131, § 40 permitting the following limited projects (although no such project may be permitted which will have any adverse effect on specified habitat sites of Rare Species, as identified by procedures established under 310 CMR 10.59). In determining whether to exercise its discretion to approve the limited projects listed in 310 CMR 10.53(3), the Issuing Authority shall consider the following factors: the magnitude of the alteration and the significance of the project site to the interests identified in M.G.L. c. 131, § 40, the availability of reasonable alternatives to the proposed activity, the extent to which adverse impacts are minimized, and the extent to which mitigation measures, including replication or restoration, are provided to contribute to the protection of the interests identified in M.G.L. c. 131, § 40.

(a) Work on land to be used primarily and directly in the raising of animals, including but not limited to dairy cattle, beef cattle, poultry, sheep, swine, horses, ponies, mules, goats, bees and fur-bearing animals or on land to be used in a related manner which is incidental thereto and represents a customary and necessary use in raising such animals; and work on land to be used primarily and directly in the raising of fruits, vegetables, berries, nuts and other foods for human consumption, feed for animals, tobacco, flowers, sod, trees, nursery or greenhouse products, and ornamental plants and shrubs; or on land to be used in a related manner which is incidental thereto and represents a customary and necessary use in raising such products, provided they are carried out in accordance with the following general conditions and any additional conditions deemed necessary by the issuing authority:

1. there shall occur no change in the existing topography or the existing soil and surface water levels of the area;

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

2. all fertilizers, pesticides, herbicides and other such materials shall be used in accordance with all applicable state and federal laws and regulations governing their use; and
3. all activities shall be undertaken in such a manner as to prevent erosion and siltation of adjacent water bodies and wetlands as specified by the U.S.D.A. Soil Conservation Service, *Guidelines for Soil and Water Conservation*. A plan prepared by the U.S.D.A. Soil Conservation Service through a county conservation district for the improvement of land for agriculture shall be deemed adequate to prevent erosion and siltation.

10.53: continued

(b) Work on land to be used primarily and directly in the raising of cranberries or on land to be used in a related manner which is incidental thereto and represents a customary and necessary use in raising such products, provided it is carried out in accordance with the following general conditions and any additional conditions deemed necessary by the issuing authority:

1. all fertilizers, pesticides, herbicides and other such materials shall be used in accordance with all applicable state and federal laws and regulations governing their use; and
2. all activities shall be undertaken in such a manner as to prevent erosion and siltation of adjacent water bodies and wetlands as specified by the U.S.D.A. Soil Conservation Service, *Guidelines for Soil and Water Conservation*.

(c) Work on land to be used primarily and directly in the raising of forest products under a planned program to improve the quantity and quality of a continuous crop or on land to be used in a related manner which is incidental thereto and represents a customary and necessary use in raising such products, provided it is carried out in accordance with the following general conditions and any additional conditions deemed necessary by the issuing authority:

1. there shall occur no change in the existing topography or the existing soil and surface water levels of the area except for temporary access roads;
2. the removal of trees shall occur only during those periods when the ground is sufficiently frozen, dry or otherwise stable to support the equipment used; and
3. all activities shall be undertaken in such a manner as to prevent erosion and siltation of adjacent water bodies and wetlands as specified by the U.S.D.A. Soil Conservation Service, *Guidelines for Soil and Water Conservation*.
4. the placement of slash, branches and limbs resulting from the cutting and removal operations shall not occur within 25 feet of the bank of a water body.

(d) The construction, reconstruction, operation and maintenance of underground and overhead public utilities, such as electrical distribution or transmission lines, or communication, sewer, water and natural gas lines, may be permitted, in accordance with the following general conditions and any additional conditions deemed necessary by the issuing authority:

1. the issuing authority may require a reasonable alternative route with fewer adverse effects for a local distribution or connecting line not reviewed by the Energy Facilities Siting Council;
2. best available measures shall be used to minimize adverse effects during construction;
3. the surface vegetation and contours of the area shall be substantially restored; and
4. all sewer lines shall be constructed to minimize inflow and leakage.

(e) The construction and maintenance of a new roadway or driveway of minimum legal and practical width acceptable to the planning board, where reasonable alternative means of access from a public way to an upland area of the same owner is unavailable. Such roadway or driveway shall be constructed in a manner which does not restrict the flow of water. Reasonable alternative means of access may include any previously or currently available alternatives such as realignment or reconfiguration of the project to conform to 310 CMR 10.54 through 10.58 or to otherwise minimize adverse impacts on resource areas. The issuing authority may require the applicant to utilize access over an adjacent parcel of land currently or formerly owned by the applicant, or in which the applicant has, or can obtain, an ownership interest. The applicant shall design the roadway or driveway according to the minimum length and width acceptable to the Planning Board, and shall present reasonable alternative means of access to the Board. The applicant shall provide replication of

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

bordering vegetated wetlands and compensatory flood storage to the extent practicable. In the Certificate of Compliance, the issuing authority may continue a condition imposed in the Order of Conditions to prohibit further activities under 310 CMR 10.53(3)(e).

(f) Maintenance and improvement of existing public roadways, but limited to widening less than a single lane, adding shoulders, correcting substandard intersections, and improving inadequate drainage systems.

(g) The excavation of wildlife impoundments, farm ponds and ponds for fire protection. The above uses are allowed provided that no fill or other material is placed upon the wetland except as may be necessary to construct said impoundments or ponds, to provide access thereto, and to provide bank stabilization.

10.53: continued

(h) The maintenance of beaches and boat launching ramps which existed on the effective date of 310 CMR 10.51 through 10.60 (April 1, 1983).

(i) The maintenance, repair and improvement (but not substantial enlargement except when necessary to meet the Massachusetts Stream Crossing Standards) of structures, including dams and reservoirs and appurtenant works to such dams and reservoirs, buildings, piers, towers, headwalls, bridges, and culverts which existed on the effective date of 310 CMR 10.51 through 10.60 (April 1, 1983). When water levels are drawn down for the maintenance, repair, or improvement of dams or reservoirs or appurtenant works to such dams or reservoirs under 310 CMR 10.53(3)(i), water levels that existed immediately prior to such projects being undertaken shall be restored upon completion of the work, and a new Notice of Intent need not be filed for such restoration. If the Department of Conservation and Recreation Office of Dam Safety determines that it would not be safe to restore the water level existing prior to the project being undertaken, the applicant shall submit a new Notice of Intent within ninety days of the date of the determination describing the measures necessary with a schedule for repairing or replacing the dam and returning water levels to the previous condition, or removing the dam and restoring the riparian habitat.

(j) The construction and maintenance of catwalks, footbridges, wharves, docks, piers, boathouses, boat shelters, duck blinds, skeet and trap shooting decks and observation decks; provided, however, that such structures are constructed on pilings or posts so as to permit the reasonably unobstructed flowage of water and adequate light to maintain vegetation.

(k) The routine maintenance and repair of road drainage structures including culverts and catch basins, drainage easements, ditches, watercourses and artificial water conveyances to insure flow capacities which existed on the effective date of 310 CMR 10.51 through 10.60 (April 1, 1983).

(l) The construction, reconstruction, operation or maintenance of water dependent uses; provided, however that:

1. any portion of such work which alters a bordering vegetated wetland shall remain subject to the provisions of 310 CMR 10.55,
2. such work in any other resource area(s) found to be significant to flood control or prevention of storm damage shall meet the performance standards for that interest(s), and
3. adverse impacts from such work in any other resource area(s) shall be minimized regarding the other statutory interests for which that resource area(s) is found to be significant.

(m) Lake drawdown projects (except those related to the breaching of a dam or a reservoir or an appurtenant work to such dam or reservoir) undertaken in response to written Orders or Recommendation Letters issued by the Department of Conservation and Recreation Office of Dam Safety (DCR). The issuing authority shall, in the Order of Conditions, limit the duration of the drawdown based on information contained in the written finding or superseding finding by DCR pursuant to M.G.L. c. 253, §§ 44 through 50, concerning the time required to repair the dam and the economic practicability of repairing the dam. In no event shall the drawdown continue longer than three years without a new or extended Order of Conditions being obtained permitting the drawdown. Water levels that existed immediately prior to such drawdowns shall be restored no later than the expiration date of the Order of Conditions or any new or extended Order of Conditions, and a new Notice of Intent need not be filed for such restoration.

(n) Airport vegetation removal projects; provided, however, that:

1. such projects must be undertaken in order to comply with Federal Aviation Administration (FAA) Regulation Part 77 (14 CFR Part 77), FAA Advisory Circular 150/5300-13 (Navigational Aids and Approach Light Systems), and FAA Order 6480.4

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

(Air Traffic Control Tower Siting Criteria), all as amended, or to comply with the airport approach regulations set forth in M.G.L. c. 90, §§ 40A through 40I;

2. such projects must be undertaken at airports that are managed by the Massachusetts Port Authority (Massport) or that are subject to certification by the Massachusetts Aeronautics Commission (MAC);
3. the requirement outlined in 310 CMR 10.53(3)(n)1. must be certified in writing by the FAA or by the MAC;
4. such projects shall not include the construction of new airport facilities or the expansion or relocation of existing airport uses;
5. Notices of Intent filed for such projects shall:
 - a. delineate the vegetation requiring removal;

10.53: continued

- b. delineate the affected resource areas;
 - c. identify the proposed method for removal of vegetation and analyze alternatives. At a minimum, the alternatives analysis shall include:
 - i. an alternative (based on a Federal Aviation Administration waiver or airport operation changes) that does not alter resource areas, which will provide baseline data for evaluating other alternatives;
 - ii. an assessment of impacts to resource areas resulting from mechanical methods of vegetation removal, including the use of both large and small equipment; and
 - iii. an assessment of impacts to resource areas resulting from chemical methods of vegetation removal;
 - d. quantify the likely impacts to wildlife habitat and water quality;
 - e. evaluate possible mitigation measures, including but not limited to an assessment of erosion and sedimentation controls, wetland restoration, wetland replication, on-site and off-site wetland enhancement, herbicide application guidelines, spill containment plans, development restrictions, monitoring, and compensatory flood storage; and
 - f. propose a five-year airport vegetation management plan. The vegetation management plan shall, at minimum, contain a purpose and goals statement, identify all airport protective zones, identify proposed vegetation management areas within the protective zones, and identify and prioritize future vegetation removal projects. Updated vegetation management plans shall be provided for each Notice of Intent filed after the expiration of the most recent five-year vegetation management plan period;
6. where such projects require the filing of a Notice of Intent in more than one municipality, the Notice of Intent filed in each municipality shall describe the total impacts to resource areas proposed for the entire project;
 7. in addition to existing notice requirements contained in 310 CMR 10.00, for projects pursuant to 310 CMR 10.53(3)(n) copies of each Notice of Intent shall be filed simultaneously with the Massachusetts Department of Food and Agriculture, the Massachusetts Historical Commission, the Massachusetts Department of Conservation and Recreation (Areas of Critical Environmental Concern Program), and the Division of Water Supply in the Department of Environmental Protection; and
 8. such projects shall be designed, constructed, implemented, operated, and maintained to avoid or, where avoidance is not practicable, to minimize impacts to resource areas, and to meet the following standards to the maximum extent practicable:
 - a. hydrological changes to resource areas shall be minimized;
 - b. best management practices shall be used to minimize adverse impacts during construction, including prevention of erosion and siltation of adjacent water bodies and wetlands in accordance with standard U.S.D.A. Soil Conservation Service methods;
 - c. mitigating measures shall be implemented that contribute to the protection of the interests identified in M.G.L. c. 131, § 40;
 - d. compensatory storage shall be provided in accordance with the standards of 310 CMR 10.57(4)(a)1. for all flood storage volume that will be lost;
 - e. no access road or other structure or activity shall restrict flows so as to cause an increase in flood stage or velocity;
 - f. no change in the existing surface topography or the existing soil and surface water levels shall occur except for temporary access roads;
 - g. temporary structures and work areas in resource areas, such as access roads, shall

be removed within 30 days of completion of the work. Temporary alterations to resource areas shall be substantially restored to preexisting hydrology and topography. At least 75% of the surface of any area of disturbed vegetation shall be reestablished with indigenous wetland plant species within two growing seasons and prior to said vegetative reestablishment any exposed soil in the area of disturbed vegetation shall be temporarily stabilized to prevent erosion in accordance with standard U.S.D.A. Soil Conservation Service methods;

- h. work in resource areas shall occur only during those periods when the ground is sufficiently frozen, dry, or otherwise stable to support the equipment being used; and
- i. slash, branches, and limbs resulting from cutting and removal operations shall not be placed within 25 feet of the bank of any water body.

10.53: continued

- (o) The exploration, development, construction, expansion, maintenance, operation, and replacement of public water supply wells or wellfields (including necessary associated roads, ways, structures, and underground and overhead utility lines) derived from groundwater, provided, however, that:
1. approval for the water supply has been granted under the Public Water Supply Source Approval Process pursuant to 310 CMR 22.21: *Ground Water Supply Protection* and/or the Water Management Act, M.G.L. c. 21G. This general condition shall not apply to exploration; and
 2. such projects shall be designed, constructed, implemented, operated, and maintained to avoid or, where avoidance is not practicable, to minimize impacts to resource areas, and to meet the following standards to the maximum extent practicable:
 - a. hydrological changes to resource areas shall be minimized;
 - b. best management practices shall be used to minimize adverse impacts during construction, including prevention of erosion and siltation of adjacent water bodies and wetlands in accordance with standard U.S.D.A. Soil Conservation Service methods;
 - c. mitigating measures shall be implemented that contribute to the protection of the interests identified in M.G.L. c. 131, § 40;
 - d. compensatory storage shall be provided in accordance with the standards of 310 CMR 10.57(4)(a)1. for all flood storage volume that will be lost;
 - e. no access road or other structure or activity shall restrict flows so as to cause an increase in flood stage or velocity;
 - f. temporary structures and work areas in resource areas, including access roads, shall be removed within 30 days of completion of the work. Temporary alterations to resource areas shall be substantially restored to preexisting hydrology and topography. At least 75% of the surface of any area of disturbed vegetation shall be reestablished with indigenous wetland plant species within two growing seasons and prior to said vegetative reestablishment any exposed soil in the area of disturbed vegetation shall be temporarily stabilized to prevent erosion in accordance with standard U.S.D.A. Soil Conservation Service methods; and
 - g. work in resource areas shall occur only when the ground is sufficiently frozen, dry, or otherwise stable to support the equipment being used.
- (p) The closure of landfills when undertaken to comply with the requirements of 310 CMR 19.000: *Solid Waste Management*; provided, however, that:
1. a project design alternative analysis shall be prepared in accordance with 310 CMR 19.150: *Landfill Assessment Requirements*; and
 2. such projects shall be designed, constructed, implemented, operated, and maintained to avoid or, where avoidance is not practicable, to minimize impacts to resource areas, and to meet the following standards to the maximum extent practicable:
 - a. hydrological changes to resource areas shall be minimized;
 - b. best management practices shall be used to minimize adverse impacts during construction, including prevention of erosion and siltation of adjacent water bodies and wetlands in accordance with standard U.S.D.A. Soil Conservation Service methods;
 - c. mitigating measures shall be implemented that contribute to the protection of the interests identified in M.G.L. c. 131, § 40;
 - d. compensatory storage shall be provided in accordance with the standards of 310 CMR 10.57(4)(a)1. for all flood storage volume that will be lost;
 - e. no access road, assessment or monitoring device, or other structure or activity shall restrict flows so as to cause an increase in flood stage or velocity;

f. temporary structures and work areas in resource areas, such as access roads and assessment and monitoring devices, shall be removed within 30 days of the Department's written determination that the closure of the facility has been completed in accordance with the closure permit. Temporary alterations to resource areas shall be substantially restored to preexisting hydrology and topography. At least 75% of the surface of any area of disturbed vegetation shall be reestablished with indigenous wetland plant species within two growing seasons and prior to said vegetative reestablishment any exposed soil in the area of disturbed vegetation shall be temporarily stabilized to prevent erosion in accordance with standard U.S.D.A. Soil Conservation Service methods. Temporary structures, work areas, and alterations to resource areas are those that no longer are necessary to fulfill the requirements of 310 CMR 19.000: *Solid Waste Management*;

10.53: continued

g. except for direct impacts to resource areas caused by the final cap and cover on the landfill, no changes in the existing topography or the existing soil and surface water levels shall be permitted, except for those resulting from temporary access roads;

h. work in resource areas shall occur only when the ground is sufficiently frozen, dry, or otherwise stable to support the equipment used; and

i. such projects shall not include the construction of new landfills or the expansion or modification of existing landfills.

(q) Assessment, monitoring, containment, mitigation, and remediation of, or other response to, a release or threat of release of oil and/or hazardous material in accordance with the provisions of 310 CMR 40.0000: *Massachusetts Contingency Plan* and the following general conditions (although no such measure may be permitted which is designed in accordance with the provisions of 310 CMR 40.1020: *Background Levels of Oil and Hazardous Material* solely to reduce contamination to a level lower than that which is needed to achieve "No Significant Risk" as defined in 310 CMR 40.0006(12)):

1. there are no practicable alternatives to the response action being proposed that are consistent with the provisions of 310 CMR 40.0000: *Massachusetts Contingency Plan* and that would be less damaging to resource areas. The alternatives analysis shall include, at a minimum, the following:

a. an alternative that does not alter resource areas, which will provide baseline data for evaluating other alternatives; and

b. an assessment of alternatives to both temporary and permanent impacts to resource areas.

A "Comprehensive Remedial Action Alternative" that is selected in accordance with the provisions of 310 CMR 40.0851 through 40.0869 shall be deemed to have met the requirements of 310 CMR 10.53(3)(q)1.; and

2. such projects shall be designed, constructed, implemented, operated, and maintained to avoid or, where avoidance is not practicable, to minimize impacts to resource areas, and shall meet the following standards to the maximum extent practicable:

a. hydrological changes to resource areas shall be minimized;

b. best management practices shall be used to minimize adverse impacts during construction, including prevention of erosion and siltation of adjacent water bodies and wetlands in accordance with standard U.S.D.A. Soil Conservation Service methods;

c. mitigating measures shall be implemented that contribute to the protection of the interests identified in M.G.L. c. 131, § 40;

d. compensatory storage shall be provided in accordance with the standards of 310 CMR 10.57(4)(a)1. for all flood storage volume that will be lost;

e. no access road, assessment or monitoring device, or other structure or activity shall restrict flows so as to cause an increase in flood stage or velocity;

f. temporary structures and work areas in resource areas, such as access roads and assessment and monitoring devices, shall be removed within 30 days of completion of the work. Temporary alterations to resource areas shall be substantially restored to preexisting hydrology and topography. At least 75% of the surface of any area of disturbed vegetation shall be reestablished with indigenous wetland plant species within two growing seasons and prior to said vegetative reestablishment any exposed soil in the area of disturbed vegetation shall be temporarily stabilized to prevent erosion in accordance with standard U.S.D.A. Soil Conservation Service methods. Temporary structures, work areas, and alterations to resource areas are those that no

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

longer are necessary to fulfill the requirements of 310 CMR 40.0000: *Massachusetts Contingency Plan*; and

g. work in resource areas shall occur only when the ground is sufficiently frozen, dry, or otherwise stable to support the equipment being used.

(r) The construction of a new access for forestry, including leaving in place an access constructed in accordance with 310 CMR 10.04(Agriculture)(b)14.d., or the enlargement of an existing access for forestry, provided that:

1. the access is constructed:

a. in accordance with a Forest Cutting Plan approved by the Department of Environmental Management (DEM) under the provisions of M.G.L. c. 132, §§ 40 through 46; or

10.53: continued

- b. on land subject to a permanent, recorded conservation restriction that has been created in accordance with M.G.L. c. 184, §§ 31 through 33 and maintains the land in perpetual forest use;
 2. the access is of the minimum practicable width that is required for the cutting and removal of trees;
 3. practicable alternative access across upland is not available;
 4. the number of access ways located within resource areas is minimized;
 5. activities shall be conducted when the soil is frozen, dry, or otherwise stable to support the equipment used;
 6. the access does not increase flood stage or velocity;
 7. the design and installation of the access complies with the Massachusetts Forestry Best Management Practices Manual. When the access involves fill, culverts or other structures that will obstruct flow, it shall be designed, constructed, and maintained in accordance with the Massachusetts Forestry Best Management Practices Manual. When crossings involve fill, culverts or other structures that will obstruct flow, they shall be designed, constructed, and maintained in accordance with the Massachusetts Forestry Best Management Practices Manual to allow the unobstructed passage of existing flows for at least the 25 year storm; and
- (s) The cutting of trees by owners for their own use of more than 10,000 board feet or 20 cords but less than 25,000 board feet or 50 cords during any 12 month period, provided that:
1. after the cutting, the remaining trees in the resource area shall be evenly distributed throughout the area where cutting occurred and the crown cover shall not be less than 50%. Crown cover is determined as the percent of the ground's surface that would be covered by a vertical projection of foliage from trees with a diameter at breast height of five inches or greater, where minor gaps between branches are disregarded and areas of overlapping foliage are counted only once;
 2. the cutting and removal of trees shall occur only during those periods when the ground is sufficiently frozen, dry, or otherwise stable to support the equipment used;
 3. the cutting, removal, or other destruction of trees and understory vegetation shall be minimized within 25 feet of the bank of a water body, except for the purpose of providing access for the activities described in 310 CMR 10.04(Agriculture)(b)15.;
 4. the placement of slash, branches, and limbs resulting from cutting and removal operations shall not occur within 25 feet of the bank of a water body;
 5. no filling, excavation, or other change shall occur in the existing topography or hydrology of a resource area; and
 6. landings for forest products shall not be located in Bordering Vegetated Wetland or Bank.
- (t) The construction of a new access roadway, or the improvement, repair and/or replacement of an existing access roadway, needed to transport equipment to a renewable energy project site, where reasonable alternative means of access to an upland area is unavailable, provided that it is carried out in accordance with the following general conditions and any additional conditions deemed necessary by the issuing authority. Reasonable alternative means of access may include any previously or currently available alternatives such as realignment or reconfiguration of the project to conform to 310 CMR 10.54 through 10.58 or to otherwise minimize adverse impacts on resource areas. The issuing authority may require the applicant to utilize access over an adjacent parcel of land currently or formerly owned by the applicant, or in which the applicant has, or can obtain, an ownership interest. Such projects shall be designed, constructed, implemented, operated, and maintained to meet all of the following standards to the maximum extent practicable:

1. Hydrological changes to resource areas shall be minimized.
2. Best management practices shall be used to minimize adverse impacts during construction. An applicant shall be presumed to use best management practices to minimize adverse impacts during construction if s/he implements erosion and sediment controls in accordance with the *Massachusetts Erosion and Sediment Control Guidelines*. This presumption may be rebutted by credible evidence from a competent source.
3. No access road or other structure or activity shall restrict flows so as to cause an increase in flood stage or velocity.
4. No change in the existing surface topography or the existing soil and surface water levels shall occur except for temporary access roads.

10.53: continued

5. Temporary structures and work areas in resource areas shall be removed within 30 days of completion of the work. Temporary alterations to resource areas shall be substantially restored to preexisting hydrology and topography. At least 75% of the surface of any area of disturbed vegetation shall be reestablished with indigenous wetland plant species within two growing seasons and prior to said vegetative reestablishment any exposed soil in the area of disturbed vegetation shall be temporarily stabilized to prevent erosion. Surface area shall be presumed to be stabilized to prevent erosion if the applicant implements the procedures set forth in the *Massachusetts Erosion and Sediment Control Guidelines*. This presumption may be rebutted by credible evidence from a competent source.
6. Work in resource areas shall occur only during those periods when the ground is sufficiently frozen, dry, or otherwise stable to support the equipment being used.
7. Slash, branches, and limbs resulting from cutting and removal operations shall not be placed within 25 feet of the bank of any water body.
8. The applicant shall provide replication of bordering vegetated wetlands and compensatory flood storage to the extent practicable.
9. The applicant demonstrates to the satisfaction of the Issuing Authority that any stream crossings meet the general performance standards in 310 CMR 10.54(4)a. and 10.56(4)a.

(4) Ecological Restoration Limited Projects.

(a) Notwithstanding the requirements of any other provision of 310 CMR 10.25 through 10.35, 10.54 through 10.58, and 10.60, the Issuing Authority may issue an Order of Conditions permitting an Ecological Restoration Project listed in 310 CMR 10.53(4)(e) as an Ecological Restoration Limited Project and impose such conditions as will contribute to the interests identified in M.G.L. c. 131, § 40, provided that:

1. the Issuing Authority determines that the project is an Ecological Restoration Project as defined in 310 CMR 10.04;
2. if the project will impact an area located within estimated habitat which is indicated on the most recent *Estimated Habitat Map of State-listed Rare Wetlands Wildlife* published by the Natural Heritage and Endangered Species Program (Program), the applicant has obtained a preliminary written determination from the Program in accordance with 310 CMR 10.11(2) that the project will not have any adverse long-term and short-term effects on specified habitat sites of Rare Species, or the project will be carried out in accordance with a habitat management plan that has been approved in writing by the Natural Heritage and Endangered Species Program and submitted with the Notice of Intent;
3. the applicant demonstrates that the project will be carried out in accordance with any time of year restrictions or other conditions recommended by the Division of Marine Fisheries for coastal waters and the Division of Fisheries and Wildlife in accordance with 310 CMR 10.11(3);
4. if the project involves the dredging of 100 cubic yards of sediment or more or dredging of any amount in an Outstanding Resource Water, the applicant has applied for or obtained a Water Quality Certification by the Department; and
5. the project complies with all applicable provisions of 310 CMR 10.53(1), (2), (7), and (8).

(b) An Ecological Restoration Project permitted as an Ecological Restoration Limited Project in accordance with 310 CMR 10.53(4) may result in the temporary or permanent loss of Resource Areas and/or the conversion of one Resource Area to another when such loss is

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

necessary to the achievement of the project's ecological restoration goals.

(c) As set forth in 310 CMR 10.12(3), a person submitting a Notice of Intent for an Ecological Restoration Limited Project in accordance with 310 CMR 10.12(1) and (2) is exempt from the requirement to perform a wildlife habitat evaluation in accordance with the requirements of 310 CMR 10.60, notwithstanding the provisions of 310 CMR 10.54(4)(a)5., 10.56(4)(a)4., and 10.60.

(d) In determining whether to approve a project as an Ecological Restoration Limited Project, the issuing authority shall consider the following:

10.53: continued

1. the condition of existing and historic coastal Resource Areas proposed for restoration including evidence of the extent and severity of the impairment(s) that reduce the capacity of said Resource Areas to protect and sustain the interests identified in M.G.L. c. 131, § 40;
 2. the magnitude and significance of the benefits of the Ecological Restoration Project in improving the capacity of the affected Resource Areas to protect and sustain the other interests identified in M.G.L. c. 131, § 40; and
 3. the magnitude and significance of the impacts of the Ecological Restoration Project on existing Resource Areas that may be modified, converted and/or lost and the interests for which said Resource Areas are presumed significant in 310 CMR 10.00, and the extent to which the applicant will:
 - a. void adverse impacts to Resource Areas and the interests identified in M.G.L. c. 131, § 40, that can be avoided without impeding the achievement of the project's ecological restoration goals;
 - b. minimize adverse impacts to Resource Areas and the interests identified in M.G.L. c. 131, § 40, that are necessary to the achievement of the project's ecological restoration goals; and
 - c. utilize best management practices such as erosion and siltation controls and proper construction sequencing to avoid and minimize adverse construction impacts to Resource Areas and the interests identified in M.G.L. c. 131, § 40.
- (e) Types of Ecological Restoration Limited Projects. The issuing authority may permit the following projects as Ecological Restoration Limited Projects in accordance with 310 CMR 10.53(4)(a) through (d).
1. Dam Removal Projects. A dam removal project, that does not meet all of the eligibility criteria set forth in 310 CMR 10.13, may be permitted as an Ecological Restoration Limited Project provided that in addition to meeting the eligibility criteria set forth in 310 CMR 10.53(4)(a) through (d), the project as proposed furthers at least one of the interests identified in M.G.L. c. 131, § 40. In considering the factors set forth in 310 CMR 10.53(4)(d)3., the Issuing Authority shall consider whether the project as proposed is consistent with the Department's 2007 Guidance entitled *Dam Removal and the Wetlands Regulations*.
 2. Freshwater Stream Crossing Repair and Replacement Projects. A freshwater stream crossing repair or replacement project that does not meet all of the eligibility criteria set forth in 310 CMR 10.13 may be permitted as an Ecological Restoration Limited Project provided that in addition to meeting the eligibility criteria set forth in 310 CMR 10.53(4)(a) through (d), the project meets all of the following eligibility criteria:
 - a. the applicant demonstrates to the satisfaction of the Issuing Authority that meeting the eligibility criteria set forth in 310 CMR 10.13 would result in significant stream instability or flooding hazard that cannot otherwise be mitigated, and site constraints make it impossible to meet said criteria;
 - b. the project is designed to ensure that the project will not impair the stability of the Bank;
 - c. to the maximum extent practicable, the project provides for the restoration of the stream upstream and downstream of the structure as needed to restore stream continuity and eliminate barriers to aquatic organism movement; and the project complies with the requirements of 310 CMR 10.53(7) and (8).
 3. Stream Daylighting Projects. A stream daylighting project that does not meet all the eligibility criteria set forth in 310 CMR 10.13 may be permitted as an Ecological Restoration Limited Project provided that in addition to the eligibility criteria set forth

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

in 10.53(4)(a) through (d), the proposed project meets to the maximum extent practicable, consistent with the project's ecological restoration goals, all the performance standards for Bank and Land under Water Bodies and Waterways. As set forth in 310 CMR 10.12(3), a person submitting a Notice of Intent for a Stream Daylighting Project that meets the requirements of 310 CMR 10.12(1) and (2) is exempt from the requirement to perform a wildlife habitat evaluation in accordance with the requirements of 310 CMR 10.60, notwithstanding the provisions of 310 CMR 10.54(4)(a)5., 10.56(4)(a)4., and 10.60.

10.53: continued

4. Tidal Restoration Projects. A project that will restore tidal flow and that does not meet all the eligibility criteria set forth in 310 CMR 10.13 may be permitted as an Ecological Restoration Limited Project provided that in addition to the eligibility criteria set forth in 310 CMR 10.53(4)(a) through (d), the project, including any proposed flood mitigation measures, will not significantly increase flooding or storm damage to the built environment, including without limitation, buildings, wells, septic systems, roads or other man-made structures or infrastructure,

5. Other Restoration Projects. An Ecological Restoration Project that is not listed in 310 CMR 10.54(4)(e)2. through 4., that will improve the natural capacity of a Resource Area(s) to protect the interests identified in M.G.L. c. 131, § 40, may be permitted as an Ecological Restoration Limited Project provided that the project meets the eligibility criteria set forth in 310 CMR 10.54(4)(a) through (d). Such projects include, but are not limited to, the restoration, enhancement or management of Rare Species habitat, the restoration of hydrologic and habitat connectivity, the removal of aquatic nuisance vegetation to retard pond and lake eutrophication, the thinning or planting of vegetation to improve habitat value, riparian corridor re-naturalization, river floodplain reconnection, in-stream habitat enhancement, fill removal and regrading, flow restoration, and the installation of fish passage structures.

(5) Notwithstanding the provisions of 310 CMR 10.53(1), 10.54 through 10.58, and 10.60, the issuing authority shall issue an Order of Conditions permitting as a limited project for the support of existing agricultural production the reconstruction of existing dikes, the construction of new ponds or reservoirs, the expansion of existing ponds or reservoirs, and the construction of tailwater recovery systems and by pass canals/channels, provided that the following criteria are met:

(a) The Notice of Intent shall include all relevant portions of the farm Conservation Plan (CP) covering the work which has been prepared for the property and the applicant in cooperation with the United States Soil Conservation Service (SCS) pursuant to the January 20, 1993, Memorandum of Understanding (MOU) between the Department and SCS concerning CPs. At a minimum, the Notice of Intent shall include a description of the project, the number of square feet of each type of resource area that will be altered, and the alternatives that were considered in order to avoid alterations of wetland resource areas.

(b) There shall be a rebuttable presumption, which may be overcome upon a clear showing to the contrary, that:

1. work described in the CP avoids impacts to wetland resource areas or minimizes impacts where they are unavoidable; and
2. construction specifications and mitigation measures contained in the CP minimize impacts where impacts are unavoidable and adequately protect the interests of M.G.L. c. 131, § 40.

(c) If any presumption set forth in 310 CMR 10.53(5)(b) is overcome upon a clear showing to the contrary, the issuing authority shall impose such conditions on the work as are necessary to restore the presumption.

(d) The project will not have any adverse effect on specified habitat sites of Rare Species, as identified by procedures established under 310 CMR 10.59.

(e) The maximum amount of Bordering Vegetated Wetland which may be altered by the above activities is:

1. 20,000 square feet for the construction or expansion of a pond or reservoir;
2. 20,000 square feet for the construction of a tailwater recovery system;
3. 20,000 square feet for the construction of a by-pass canal/channel; and
4. 10,000 square feet for the reconstruction of an existing dike.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

(f) There shall not be any filling or dredging of a Salt Marsh.

(6) Notwithstanding the provisions of 310 CMR 10.58, the Issuing Authority may issue an Order of Conditions permitting as a limited project the construction, rehabilitation, and maintenance of footpaths, bikepaths, and other pedestrian or nonmotorized vehicle access to or along riverfront areas but outside other resource areas, provided that adverse impacts from the work are minimized and that the design specifications are commensurate with the projected use and are compatible with the character of the riverfront area. Generally, the width of the access shall not exceed ten feet of pavement, except within an area that is already altered (*e.g.*, railroad beds within rights of way). Access shall not be located in vernal pools or fenced in a manner which would impede the movement of wildlife.

10.54: continued

(7) The Notice of Intent for any projects involving the construction, repair, replacement or expansion of public or private infrastructure shall include an operation and maintenance plan to ensure that the infrastructure will continue to function as designed. Implementation of the operation and maintenance plan as approved by the Issuing Authority shall be a continuing condition that shall be set forth in the Order of Conditions and the Certificate of Compliance.

(8) Any person proposing the replacement of an existing stream crossing shall demonstrate to the Issuing Authority that the impacts of the crossing have been avoided where possible, and when not possible have been minimized and that mitigation measures have been provided to contribute to the protection of the interests identified in M.G.L. c. 131, § 40. An applicant will be presumed to have made this showing if the project is designed as follows:

(a) If the project includes replacement of an existing non-tidal crossing, the applicant demonstrates to the satisfaction of the Issuing Authority that the crossing complies with the Massachusetts Stream Crossing Standards to the maximum extent practicable.

(b) If the project includes replacement of an existing tidal crossing that restricts tidal flow, the applicant demonstrates to the satisfaction of the Issuing Authority that tidal restriction will be eliminated to the maximum extent practicable.

This presumption may be rebutted by credible evidence from a competent source that the impacts of the project have not been avoided, minimized or mitigated to the maximum extent practicable.

At a minimum, in evaluating the potential to comply with the standards to the maximum extent practicable the applicant shall consider site constraints in meeting the standard, undesirable effects of risk in meeting the standard and the environmental benefit of meeting the standard compared to the cost by evaluating the following:

- The potential for downstream flooding;
- Upstream and downstream habitat (in-stream habitat, wetlands);
- Potential for erosion and head-cutting;
- Stream stability;
- Habitat fragmentation caused by the crossing;
- The amount of stream mileage made accessible by the improvements;
- Storm flow conveyance;
- Engineering design constraints specific to the crossing;
- Hydrologic constraints specific to the crossing;
- Impacts to wetlands that would occur by improving the crossing;
- Potential to affect property and infrastructure; and
- Cost of replacement.

10.54: Bank (Naturally Occurring Banks and Beaches)

(1) Preamble. Banks are likely to be significant to public or private water supply, to ground water supply, to flood control, to storm damage prevention, to the prevention of pollution and to the protection of fisheries and wildlife habitat. Where Banks are composed of concrete, asphalt or other artificial impervious material, said Banks are likely to be significant to flood control and storm damage prevention.

Banks are areas where ground water discharges to the surface and where, under some circumstances, surface water recharges the ground water.

Where Banks are partially or totally vegetated, the vegetation serves to maintain the Banks' stability, which in turn protects water quality by reducing erosion and siltation.

Banks may also provide shade that moderates water temperatures, as well as providing

breeding habitat, escape cover and food, all of which are significant to the protection of fisheries. Banks which drop off quickly or overhang the water's edge often contain numerous undercuts which are favorite hiding spots for important game species such as largemouth bass (*Micropterus salmoides*).

10.54: continued

The topography, plant community composition and structure, and soil structure of banks together provide important food, shelter, migratory and overwintering areas, and breeding areas for wildlife. Topography plays a role in determining the suitability of banks to serve as burrowing or feeding habitat. Soil structure also plays a role in determining the suitability for burrowing, hibernation and other cover. Bank topography and soil structure impact the bank's vegetative structure, as well. Bushes and other undergrowth, trees, vegetation extending from the bank into the water, and vegetation growing along the water's edge are also important to a wide variety of wildlife. A number of tubers and berry bushes also grow in banks and serve as important food for wildlife. Finally, banks may provide important shelter for wildlife which needs to move between wetland areas.

Banks act to confine floodwaters during the most frequent storms, preventing the spread of water to adjacent land. Because Banks confine water during such storms to an established channel they maintain water temperatures and depths necessary for the protection of fisheries. The maintenance of cool water temperatures during warm weather is critical to the survival of important game species such as brook trout (*Salvelinus fontinalis*), rainbow trout (*Oncorhynchus Mykiss*) and brown trout (*Salmo trutta*). An alteration of a Bank that permits water to frequently and consistently spread over a large and more shallow area increases the amount of property which is routinely flooded, as well as elevating water temperature and reducing fish habitat within the main channel, particularly during warm weather.

(2) Definition, Critical Characteristics and Boundary.

(a) A Bank is the portion of the land surface which normally abuts and confines a water body. It occurs between a water body and a vegetated bordering wetland and adjacent flood plain, or, in the absence of these, it occurs between a water body and an upland.

A Bank may be partially or totally vegetated, or it may be comprised of exposed soil, gravel or stone.

(b) The physical characteristics of a Bank, as well as its location, as described in 310 CMR 10.54(2)(a), are critical to the protection of the interests specified in 310 CMR 10.54(1).

(c) The upper boundary of a Bank is the first observable break in the slope or the mean annual flood level, whichever is lower. The lower boundary of a Bank is the mean annual low flow level.

(3) Presumption. Where a proposed activity involves the removing, filling, dredging or altering of a Bank, the issuing authority shall presume that such area is significant to the interests specified in 310 CMR 10.54(1). This presumption is rebuttable and may be overcome upon a clear showing that the Bank does not play a role in the protection of said interests. In the event that the presumption is deemed to have been overcome, the issuing authority shall make a written determination to this effect, setting forth its grounds (Form 6).

(4) General Performance Standard.

(a) Where the presumption set forth in 310 CMR 10.54(3) is not overcome, any proposed work on a Bank shall not impair the following:

1. the physical stability of the Bank;
2. the water carrying capacity of the existing channel within the Bank;
3. ground water and surface water quality;
4. the capacity of the Bank to provide breeding habitat, escape cover and food for fisheries;
5. the capacity of the Bank to provide important wildlife habitat functions. A project or projects on a single lot, for which Notice(s) of Intent is filed on or after November 1,

1987, that (cumulatively) alter(s) up to 10% or 50 feet (whichever is less) of the length of the bank found to be significant to the protection of wildlife habitat, shall not be deemed to impair its capacity to provide important wildlife habitat functions. In the case of a bank of a river or an intermittent stream, the impact shall be measured on each side of the stream or river. Additional alterations beyond the above threshold may be permitted if they will have no adverse effects on wildlife habitat, as determined by procedures contained in 310 CMR 10.60.

10.54: continued

6. Work on a stream crossing shall be presumed to meet the performance standard set forth in 310 CMR 10.54(4)(a) provided the work is performed in compliance with the Massachusetts Stream Crossing Standards by consisting of a span or embedded culvert in which, at a minimum, the bottom of a span structure or the upper surface of an embedded culvert is above the elevation of the top of the bank, and the structure spans the channel width by a minimum of 1.2 times the bankfull width. This presumption is rebuttable and may be overcome by the submittal of credible evidence from a competent source. Notwithstanding the requirement of 310 CMR 10.54(4)(a)5., the impact on bank caused by the installation of a stream crossing is exempt from the requirement to perform a habitat evaluation in accordance with the procedures contained in 310 CMR 10.60.

(b) Notwithstanding the provisions of 310 CMR 10.54(4)(a), structures may be permitted in or on a Bank when required to prevent flood damage to facilities, buildings and roads constructed prior to the effective date of 310 CMR 10.51 through 10.60 or constructed pursuant to a Notice of Intent filed prior to the effective date of 310 CMR 10.51 through 10.60 (April 1, 1983), including the renovation or reconstruction (but not substantial enlargement) of such facilities, buildings and roads, provided that the following requirements are met:

1. The proposed protective structure, renovation or reconstruction is designed and constructed using best practical measures so as to minimize adverse effects on the characteristics and functions of the resource area;
2. The applicant demonstrates that there is no reasonable method of protecting, renovating or rebuilding the facility in question other than the one proposed.

(c) Notwithstanding the provisions of 310 CMR 10.54(4)(a) or (b), no project may be permitted which will have any adverse effect on specified habitat sites of Rare Species, as identified by procedures established under 310 CMR 10.59.

10.55: Bordering Vegetated Wetlands (Wet Meadows, Marshes, Swamps and Bogs)

(1) Preamble. Bordering Vegetated Wetlands are likely to be significant to public or private water supply, to ground water supply, to flood control, to storm damage prevention, to prevention of pollution, to the protection of fisheries and to wildlife habitat.

The plants and soils of Bordering Vegetated Wetlands remove or detain sediments, nutrients (such as nitrogen and phosphorous) and toxic substances (such as heavy metal compounds) that occur in run-off and flood waters.

Some nutrients and toxic substances are detained for years in plant root systems or in the soils. Others are held by plants during the growing season and released as the plants decay in the fall and winter. This latter phenomenon delays the impacts of nutrients and toxins until the cold weather period, when such impacts are less likely to reduce water quality.

Bordering Vegetated Wetlands are areas where ground water discharges to the surface and where, under some circumstances, surface water discharges to the ground water.

The profusion of vegetation in Bordering Vegetated Wetlands acts to slow down and reduce the passage of flood waters during periods of peak flows by providing temporary flood water storage and by facilitating water removal through evaporation and transpiration. This process reduces downstream flood crests and resulting damage to private and public property. During dry periods the water retained in Bordering Vegetated Wetlands is essential to the maintenance of base flow levels in rivers and streams, which in turn is important to the protection of water quality and water supplies.

The Act defines freshwater wetlands by hydrology and vegetation. Hydrology is the driving force which creates wetlands, but it is a transient, temporal parameter. The presence of water

at or near the ground surface during a significant portion of the year supports, and in fact promotes, the growth of wetland indicator plants. Prolonged or frequent saturation or inundation also produces hydric soils, and creates anaerobic conditions that favor the growth of wetland indicator plants. Hydric soils are direct indicators of long-term hydrologic conditions and are present throughout the year.

Wetland vegetation supports a wide variety of insects, reptiles, amphibians, small mammals and birds which are a source of food for important game fish. Bluegills (*Lepomis macrochirus*), pumpkinseeds (*Lepomis gibbosus*), yellow perch (*Perca flavescens*), rock bass (*Ambloplites rupestris*) and all trout species feed upon nonaquatic insects. Large-mouth bass (*Micropterus salmoides*), chain pickerel (*Esox niger*) and northern pike (*Esox lucius*) feed upon small mammals, snakes, nonaquatic insects, birds and amphibians.

10.55: continued

Wetland vegetation provides shade which moderates water temperatures important to fish life. Wetlands flooded by adjacent water bodies and waterways provide food, breeding habitat and cover for fish. Fish populations in the larval stage are particularly dependent upon food provided by over-bank flooding which occurs during peak flow periods (extreme storms) because most river and stream channels do not provide sufficient quantities of the microscopic plant and animal life required for food.

Bordering vegetated wetlands are probably the Commonwealth's most important inland habitat for wildlife. The hydrologic regime, plant community composition and structure, soil composition and structure, topography, and water chemistry of bordering vegetated wetlands provide important food, shelter, migratory and overwintering areas, and breeding areas for many birds, mammals, amphibians and reptiles. A wide variety of vegetated wetland plants, the nature of which are determined in large part by the depth and duration of water, as well as soil and water composition, are utilized by varied species as important areas for mating, nesting, brood rearing, shelter and food (directly and indirectly). The diversity and interspersion of the vegetative structure is also important in determining the nature of its wildlife habitat. Different habitat characteristics are used by different wildlife species during summer, winter and migratory seasons.

Although the vegetational community can often be analyzed to establish an accurate wetland boundary, sole reliance on the presence of wetland indicator plants can be misleading because some species thrive in both uplands and wetlands. Gently sloping areas often produce large transitional zones where the vegetational boundary is difficult to delineate. Hydrology can supplement vegetative criteria to enhance the technical accuracy, consistency, and credibility of wetland boundary delineations, and are especially useful for analyzing disturbed sites.

(2) Definition, Critical Characteristics and Boundary.

(a) Bordering Vegetated Wetlands are freshwater wetlands which border on creeks, rivers, streams, ponds and lakes. The types of freshwater wetlands are wet meadows, marshes, swamps and bogs. Bordering Vegetated Wetlands are areas where the soils are saturated and/or inundated such that they support a predominance of wetland indicator plants. The ground and surface water regime and the vegetational community which occur in each type of freshwater wetland are specified in M.G.L. c. 131, § 40.

(b) The physical characteristics of Bordering Vegetated Wetlands, as described in 310 CMR 10.55(2)(a), are critical to the protection of the interests specified in 310 CMR 10.55(1).

(c) The boundary of Bordering Vegetated Wetlands is the line within which 50% or more of the vegetational community consists of wetland indicator plants and saturated or inundated conditions exist. Wetland indicator plants shall include but not necessarily be limited to those plant species identified in the Act. Wetland indicator plants are also those classified in the indicator categories of Facultative, Facultative+, Facultative Wetland-, Facultative Wetland, Facultative Wetland+, or Obligate Wetland in the *National List of Plant Species That Occur in Wetlands: Massachusetts* (Fish & Wildlife Service, U.S. Department of the Interior, 1988) or plants exhibiting physiological or morphological adaptations to life in saturated or inundated conditions.

1. Areas containing a predominance of wetland indicator plants are presumed to indicate the presence of saturated or inundated conditions. Therefore, the boundary as determined by 50% or more wetland indicator plants shall be presumed accurate when:

- a. all dominant species have an indicator status of obligate, facultative wetland+, facultative wetland, or facultative wetland- and the slope is distinct or abrupt between the upland plant community and the wetland plant community;
- b. the area where the work will occur is clearly limited to the buffer zone; or
- c. the issuing authority determines that sole reliance on wetland indicator plants will

yield an accurate delineation.

2. When the boundary is not presumed accurate as described in 310 CMR 10.55(2)(c)1.a. through c. or to overcome the presumption, credible evidence shall be submitted by a competent source demonstrating that the boundary of Bordering Vegetated Wetlands is the line within which 50% or more of the vegetational community consists of wetland indicator plants and saturated or inundated conditions exist. The issuing authority must evaluate vegetation and indicators of saturated or inundated conditions if submitted by a credible source, or may require credible evidence of saturated or inundated conditions when determining the boundary. Indicators of saturated or inundated conditions sufficient to support wetland indicator plants shall include one or more of the following:

10.55: continued

- a. groundwater, including the capillary fringe, within a major portion of the root zone;
- b. observation of prolonged or frequent flowing or standing surface water;
- c. characteristics of hydric soils.

3. Where an area has been disturbed (*e.g.* by cutting, filling, or cultivation), the boundary is the line within which there are indicators of saturated or inundated conditions sufficient to support a predominance of wetland indicator plants, a predominance of wetland indicator plants, or credible evidence from a competent source that the area supported or would support under undisturbed conditions a predominance of wetland indicator plants prior to the disturbance.

(3) Presumption. Where a proposed activity involves the removing, filling, dredging or altering of a Bordering Vegetated Wetland, the issuing authority shall presume that such area is significant to the interests specified in 310 CMR 10.55(1). This presumption is rebuttable and may be overcome upon a clear showing that the Bordering Vegetated Wetland does not play a role in the protection of said interests. In the event that the presumption is deemed to have been overcome, the issuing authority shall make a written determination to this effect, setting forth its grounds (Form 6).

(4) General Performance Standards.

(a) Where the presumption set forth in 310 CMR 10.55(3) is not overcome, any proposed work in a Bordering Vegetated Wetland shall not destroy or otherwise impair any portion of said area.

(b) Notwithstanding the provisions of 310 CMR 10.55(4)(a), the issuing authority may issue an Order of Conditions permitting work which results in the loss of up to 5000 square feet of Bordering Vegetated Wetland when said area is replaced in accordance with the following general conditions and any additional, specific conditions the issuing authority deems necessary to ensure that the replacement area will function in a manner similar to the area that will be lost:

1. the surface of the replacement area to be created ("the replacement area") shall be equal to that of the area that will be lost ("the lost area");
2. the ground water and surface elevation of the replacement area shall be approximately equal to that of the lost area;
3. The overall horizontal configuration and location of the replacement area with respect to the bank shall be similar to that of the lost area;
4. the replacement area shall have an unrestricted hydraulic connection to the same water body or waterway associated with the lost area;
5. the replacement area shall be located within the same general area of the water body or reach of the waterway as the lost area;
6. at least 75% of the surface of the replacement area shall be reestablished with indigenous wetland plant species within two growing seasons, and prior to said vegetative reestablishment any exposed soil in the replacement area shall be temporarily stabilized to prevent erosion in accordance with standard U.S. Soil Conservation Service methods; and
7. the replacement area shall be provided in a manner which is consistent with all other General Performance Standards for each resource area in Part III of 310 CMR 10.00.

In the exercise of this discretion, the issuing authority shall consider the magnitude of the alteration and the significance of the project site to the interests identified in M.G.L. c. 131, § 40, the extent to which adverse impacts can be avoided, the extent to which adverse

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

impacts are minimized, and the extent to which mitigation measures, including replication or restoration, are provided to contribute to the protection of the interests identified in M.G.L. c. 131, § 40.

(c) Notwithstanding the provisions of 310 CMR 10.55(4)(a), the issuing authority may issue an Order of Conditions permitting work which results in the loss of a portion of Bordering Vegetated Wetland when;

1. said portion has a surface area less than 500 square feet;
2. said portion extends in a distinct linear configuration ("finger-like") into adjacent uplands; and

10.55: continued

3. in the judgment of the issuing authority it is not reasonable to scale down, redesign or otherwise change the proposed work so that it could be completed without loss of said wetland.
- (d) Notwithstanding the provisions of 310 CMR 10.55(4)(a),(b) and (c), no project may be permitted which will have any adverse effect on specified habitat sites of rare vertebrate or invertebrate species, as identified by procedures established under 310 CMR 10.59.
- (e) Any proposed work shall not destroy or otherwise impair any portion of a Bordering Vegetated Wetland that is within an Area of Critical Environmental Concern designated by the Secretary of Energy and Environmental Affairs under M.G.L. c. 21A, § 2(7) and 301 CMR 12.00: *Areas of Critical Environmental Concern*. 310 CMR 10.55(4)(e):
 1. supersedes the provisions of 310 CMR 10.55(4)(b) and (c);
 2. shall not apply if the presumption set forth at 310 CMR 10.55(3) is overcome;
 3. shall not apply to work proposed under 310 CMR 10.53(3)(l); and
 4. shall not apply to maintenance of stormwater detention, retention, or sedimentation ponds, or to maintenance of stormwater energy dissipating structures, that have been constructed in accordance with a valid order of conditions.

10.56: Land under Water Bodies and Waterways (under any Creek, River, Stream, Pond or Lake)

(1) Preamble. Land under Water Bodies and Waterways is likely to be significant to public and private water supply, to ground water supply, to flood control, to storm damage prevention, to prevention of pollution and to protection of fisheries and wildlife habitat. Where such land is composed of concrete, asphalt or other artificial impervious material, said land is likely to be significant to flood control and storm damage prevention.

Where Land under Water Bodies and Waterways is composed of pervious material, such land represents a point of exchange between surface and ground water.

The physical nature of Land under Water Bodies and Waterways is highly variable, ranging from deep organic and fine sedimentary deposits to rocks and bedrock. The organic soils and sediments play an important role in the process of detaining and removing dissolved and particulate nutrients (such as nitrogen and phosphorous) from the surface water above. They also serve as traps for toxic substances (such as heavy metal compounds).

Land under Water Bodies and Waterways, in conjunction with banks, serves to confine floodwater within a definite channel during the most frequent storms. Filling within this channel blocks flows which in turn causes backwater and overbank flooding during such storms. An alteration of Land under Water Bodies and Waterways that causes water to frequently spread out over a larger area at a lower depth increases the amount of property which is routinely flooded. Additionally, it results in an elevation of water temperature and a decrease in habitat in the main channel, both of which are detrimental to fisheries, particularly during periods of warm weather and low flows.

Land under rivers, streams and creeks that is composed of gravel allows the circulation of cold, well oxygenated water necessary for the survival of important game fish species such as brook trout (*Salvelinus fontinalis*), rainbow trout (*Oncorhynchus mykiss*), brown trout (*Salmo trutta*) and atlantic salmon (*Salmon salar*). River, stream and creek bottoms with a diverse structure composed of gravel, large and small boulders and rock outcrops provides escape cover and resting areas for the above mentioned game fish species (*salmonids*). Such bottom type also provides areas for the production of aquatic insects essential to fisheries.

Land under ponds and lakes is vital to a large assortment of warm water fish during spawning periods. Species such as large mouth bass (*Micropterus salmoides*), smallmouth bass (*Micropterus dolomieu*), blue gills (*Lepomis macrochirus*), pumpkinseeds (*Lepomis gibbosus*), black crappie (*Pomoxis nigromaculatus*) and rock bass (*Ambloplites rupestris*) build nests on the

lake and bottom substrates within which they shed fertilize their eggs.

The plant community composition and structure, hydrologic regime, topography, soil composition and water quality of land under water bodies and waterways provide important food, shelter, migratory and overwintering areas, and breeding areas for wildlife. Certain submerged, rooted vegetation is eaten by water fowl and some mammals. Some amphibians (as well as some invertebrate species eaten by vertebrate wildlife) attach their eggs to such vegetation. Some aquatic vegetation protruding out of the water is also used for nesting, and many species use dead vegetation resting on land under water but protruding above the surface for feeding and basking. Soil composition is also important for hibernation and for animals which begin to burrow their tunnels under water. Hydrologic regime, topography, and water quality not only affect vegetation, but also determine which species feed in an area.

10.56: continued

(2) Definition, Critical Characteristics and Boundaries.

(a) Land under Water Bodies and Waterways is the land beneath any creek, river, stream, pond or lake. Said land may be composed of organic muck or peat, fine sediments, rocks or bedrock.

(b) The physical characteristics and location of Land under Water Bodies and Waterways specified in 310 CMR 10.56(2)(a) are critical to the protection of the interests specified in 310 CMR 10.56(1).

(c) The boundary of Land under Water Bodies and Waterways is the mean annual low water level.

(3) Presumption. Where a project involves removing, filling, dredging or altering of Land under Water Bodies and Waterways, the issuing authority shall presume that such area is significant to the interests specified in 310 CMR 10.56(1). This presumption is rebuttable and may be overcome upon a clear showing that said land does not play a role in the protection of said interests. In the event that the presumption is deemed to have been overcome, the issuing authority shall make a written determination to this effect, setting forth the grounds (Form 6).

(4) General Performance Standards.

(a) Where the presumption set forth in 310 CMR 10.56(3) is not overcome, any proposed work within Land under Water Bodies and Waterways shall not impair the following:

1. The water carrying capacity within the defined channel, which is provided by said land in conjunction with the banks;

2. Ground and surface water quality;

3. The capacity of said land to provide breeding habitat, escape cover and food for fisheries; and

4. The capacity of said land to provide important wildlife habitat functions. A project or projects on a single lot, for which Notice(s) of intent is filed on or after November 1, 1987, that (cumulatively) alter(s) up to 10% or 5,000 square feet (whichever is less) of land in this resource area found to be significant to the protection of wildlife habitat, shall not be deemed to impair its capacity to provide important wildlife habitat functions. Additional alterations beyond the above threshold may be permitted if they will have no adverse effects on wildlife habitat, as determined by procedures established under 310 CMR 10.60.

5. Work on a stream crossing shall be presumed to meet the performance standard set forth in 310 CMR 10.56(4)(a) provided the work is performed in compliance with the Massachusetts Stream Crossing Standards by consisting of a span or embedded culvert in which, at a minimum, the bottom of a span structure or the upper surface of an embedded culvert is above the elevation of the top of the bank, and the structure spans the channel width by a minimum of 1.2 times the bankfull width. This presumption is rebuttable and may be overcome by the submittal of credible evidence from a competent source. Notwithstanding the requirements of 310 CMR 10.56(4)(a)4., the impact on Land under Water Bodies and Waterways caused by the installation of a stream crossing is exempt from the requirement to perform a habitat evaluation in accordance with the procedures established under 310 CMR 10.60.

(b) Notwithstanding the provisions of 310 CMR 10.56(4)(a), the issuing authority may issue an Order in accordance with M.G.L. c. 131, § 40 to maintain or improve boat channels within Land under Water Bodies and Waterways when said work is designed and carried out using the best practical measures so as to minimize adverse effects such as the suspension or transport of pollutants, increases in turbidity, the smothering of bottom organisms, the

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

accumulation of pollutants by organisms or the destruction of fisheries habitat or nutrient source areas.

(c) Notwithstanding the provisions of 310 CMR 10.56(4)(a) or (b), no project may be permitted which will have any adverse effect on specified habitat sites of rare vertebrate or invertebrate species, as identified by procedures established under 310 CMR 10.59.

10.57: Land Subject to Flooding (Bordering and Isolated Areas)(1) Preamble.(a) Bordering Land Subject to Flooding:

1. Bordering Land Subject to Flooding is an area which floods from a rise in a bordering waterway or water body. Such areas are likely to be significant to flood control and storm damage prevention.

2. Bordering Land Subject to Flooding provides a temporary storage area for flood water which has overtopped the bank of the main channel of a creek, river or stream or the basin of a pond or lake. During periods of peak run-off, flood waters are both retained (*i.e.*, slowly released through evaporation and percolation) and detained (slowly released through surface discharge) by Bordering Land Subject to Flooding. Over time, incremental filling of these areas causes increases in the extent and level of flooding by eliminating flood storage volume or by restricting flows, thereby causing increases in damage to public and private properties.

3. Certain portions of Bordering Land Subject to Flooding are also likely to be significant to the protection of wildlife habitat. These include all areas on the ten year floodplain or within 100 feet of the bank or bordering vegetated wetland (whichever is further from the water body or waterway, so long as such area is contained within the 100 year floodplain), and all vernal pool habitat on the 100 year floodplain, except for those portions of which have been so extensively altered by human activity that their important wildlife habitat functions have been effectively eliminated (such "altered" areas include paved and gravelled areas, golf courses, cemeteries, playgrounds, landfills, fairgrounds, quarries, gravel pits, buildings, lawns, gardens, roadways (including median strips, areas enclosed within highway interchanges, shoulders, and embankments), railroad tracks (including ballast and embankments), and similar areas lawfully existing on November 1, 1987 and maintained as such since that time).

The hydrologic regime, plant community composition and structure, topography, soil composition and proximity to water bodies and bordering vegetated wetlands of these portions of bordering land subject to flooding provide important food, shelter, migratory and overwintering areas, and breeding areas for wildlife. Nutrients from flood waters, as well as the inundation of floodplain soil, create important wildlife habitat characteristics, such as richness and diversity of soil and vegetation. A great many species require or prefer habitat which is as close as possible to water and/or has moist conditions, characteristics generally present on lower floodplains. Similarly, lower floodplains, because of their proximity to water and vegetated wetlands, can provide important shelter for wildlife which needs to migrate between such areas, or between such areas and uplands. The "edge" where floodplain habitat borders vegetated wetlands or water bodies is frequently very high in wildlife richness and diversity. Similar "edges" may be found elsewhere the lower floodplain, where differences in topography and frequency of flooding have created varied soil and plant community composition and structure.

Finally, vernal pool habitat is found at various locations throughout the 100 year floodplain, the pool itself generally formed by meander scars, or sloughs left after the main water channel has changed course. These pools are essential breeding sites for certain amphibians which require isolated areas that are generally flooded for at least two continuous months in the spring and/or summer and are free from fish predators. Most of these amphibians remain near the breeding pool during the remainder of their lifecycle. Many reptiles, birds and mammals also feed here.

(b) Isolated Land Subject to Flooding:

1. Isolated Land Subject to Flooding is an isolated depression or a closed basin which

serves as a ponding area for run-off or high ground water which has risen above the ground surface. Such areas are likely to be locally significant to flood control and storm damage prevention. In addition, where such areas are underlain by pervious material they are likely to be significant to public or private water supply and to ground water supply. Where such areas are underlain by pervious material covered by a mat of organic peat and muck, they are also likely to be significant to the prevention of pollution. Finally, where such areas are vernal pool habitat, they are significant to the protection of wildlife habitat.

10.57: continued

2. Isolated Land Subject to Flooding provides a temporary storage area where run-off and high ground water pond and slowly evaporate or percolate into the substrate. Flooding causes lateral displacement of the ponded water onto contiguous properties, which may in turn result in damage to said properties.

3. Isolated Land Subject to Flooding, where it is underlain by pervious material, provides a point of exchange between ground and surface waters. Contaminants introduced into said area, such as septic system discharges and road salts, find easy access into the ground water and neighboring wells. Where these conditions occur and a mat of organic peat or muck covers the substrate of the area, said mat serves to detain and remove contaminants which might otherwise enter the ground water and neighboring wells.

4. Isolated Land Subject to Flooding, where it is vernal pool habitat, is an essential breeding site for certain amphibians which require isolated areas that are generally flooded for at least two continuous months in the spring and/or summer and are free from fish predators. Most of these amphibians remain near the breeding pool during the remainder of their lifecycle. Many reptiles, birds and mammals also feed here.

(2) Definitions, Critical Characteristics and Boundaries.

(a) Bordering Land Subject to Flooding.

1. Bordering Land Subject to Flooding is an area with low, flat topography adjacent to and inundated by flood waters rising from creeks, rivers, streams, ponds or lakes. It extends from the banks of these waterways and water bodies; where a bordering vegetated wetland occurs, it extends from said wetland.

2. The topography and location of Bordering Land Subject to Flooding specified in the foregoing 310 CMR 10.57(2)(a)1. are critical to the protection of the interests specified in 310 CMR 10.57(1)(a). Where Bordering Land Subject to Flooding is significant to the protection of wildlife habitat, the physical characteristics as described in the foregoing 310 CMR 10.57(1)(a)(3) are critical to the protection of that interest.

3. The boundary of Bordering Land Subject to Flooding is the estimated maximum lateral extent of flood water which will theoretically result from the statistical 100-year frequency storm. Said boundary shall be that determined by reference to the most recently available flood profile data prepared for the community within which the work is proposed under the National Flood Insurance Program (NFIP, currently administered by the Federal Emergency Management Agency, successor to the U.S. Department of Housing and Urban Development). Said boundary, so determined, shall be presumed accurate. This presumption is rebuttable and may be overcome only by credible evidence from a registered professional engineer or other professional competent in such matters.

Where NFIP Profile data is unavailable, the boundary of Bordering Land Subject to Flooding shall be the maximum lateral extent of flood water which has been observed or recorded. In the event of a conflict, the issuing authority may require the applicant to determine the boundary of Bordering Land Subject to Flooding by engineering calculations which shall be:

- a. based upon a design storm of seven inches of precipitation in 24 hours (*i.e.*, a Type III Rainfall, as defined by the U.S. Soil Conservation Service);
- b. based upon the standard methodologies set forth in U.S. Soil Conservation Service Technical Release No. 55, *Urban Hydrology for Small Watersheds* and Section 4 of the U.S. Soil Conservation Service, *National Engineering Hydrology Handbook*; and
- c. prepared by a registered professional engineer or other professional competent in

such matters.

4. The boundary of the ten year floodplain is the estimated maximum lateral extent of the flood water which will theoretically result from the statistical ten-year frequency storm. Said boundary shall be determined as specified under 310 CMR 10.57(2)(a)3., except that where NFIP Profile data is unavailable, the boundary shall be the maximum lateral extent of flood water which has been observed or recorded during a ten year frequency storm and, in the event of conflict, engineering calculations under 310 CMR 10.57(2)(a)3.a. shall be based on a design storm of $4^{8/10}$ (4.8) inches of precipitation in 24 hours.

10.57: continued

5. The only portions of this resource area which shall be presumed to be vernal pool habitat are those that have been certified as such by the Massachusetts Division of Fisheries and Wildlife, where said Division has forwarded maps and other information needed to identify the location of such habitat to the Conservation Commission and DEP prior to the filing of each Notice of Intent or Abbreviated Notice of Intent regarding that portion. Such presumption is rebuttable, and may be overcome upon a clear showing to the contrary. However, notwithstanding any other provision of 310 CMR 10.57, should an Environmental Impact Report be required for a proposed project as determined by 301 CMR 11.00: *MEPA Regulations* the performance standard established under this Section regarding vernal pool habitat shall only apply to proposed projects which would alter such habitats as have been identified prior to the time that the Secretary of the Executive Office of Energy and Environmental Affairs has determined, in accordance with the provisions of 301 CMR 11.09(4): *Eligible Projects*, that a final Environmental Impact Report for that project adequately and properly complies with the M.G.L. c. 30, § 6 through 62H (unless, subsequent to that determination, the Secretary requires supplemental information concerning vernal pool habitat, in accordance with the provisions of 301 CMR 11.17: *Transition Rules*).
 6. The boundary of vernal pool habitat is that certified by the Massachusetts Division of Fisheries and Wildlife. In the event of a conflict of opinion, or the lack of a clear boundary delineation certified by the Division of Fisheries and Wildlife, the applicant may submit an opinion certified by a registered professional engineer, supported by engineering calculations, as to the probable extent of said habitat. Said calculations shall be prepared in accordance with the general requirements set forth in 310 CMR 10.57(2)(a)3.a. through c., except that the maximum extent of said water shall be based upon the total volume (rather than peak rate) of run-off from the drainage area contributing to the vernal pool and shall be further based upon a design storm of $2^{6/10}$ (2.6) inches (rather than seven inches) of precipitation in 24 hours. Vernal pool habitat shall include the area within 100 feet of the boundary of the vernal pool itself, insofar as such area is contained within the boundaries of this resource area.
- (b) Isolated Land Subject to Flooding.
1. Isolated Land Subject to Flooding is an isolated depression or closed basin without an inlet or an outlet. It is an area which at least once a year confines standing water to a volume of at least $\frac{1}{4}$ acre-feet and to an average depth of at least six inches.
Isolated Land Subject to Flooding may be underlain by pervious material, which in turn may be covered by a mat of organic peat or muck.
 2. The characteristics specified in the foregoing 310 CMR 10.57(2)(b)1. are critical to the protection of the interests specified in 310 CMR 10.57(1)(b).
 3. The boundary of Isolated Land Subject to Flooding is the perimeter of the largest observed or recorded volume of water confined in said area.
In the event of a conflict of opinion regarding the extent of water confined in an Isolated Land Subject to Flooding, the applicant may submit an opinion certified by a registered professional engineer, supported by engineering calculations, as to the probable extent of said water. Said calculations shall be prepared in accordance with the general requirements set forth in 310 CMR 10.57(2)(a)3.a. through c., except that the maximum extent of said water shall be based upon the total volume (rather than peak rate) of run-off from the drainage area contributing to the Isolated Land Subject to Flooding and shall be further based upon the assumption that there is no infiltration of said run-off into the soil within the Isolated Land Subject to Flooding.
 4. The only portions of this resource area which shall be presumed to be vernal pool

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

habitat are those determined under procedures established in 310 CMR 10.57(2)(a)5.

5. The boundary of vernal pool habitat is that determined under procedures established in 310 CMR 10.57(2)(a)6.

(3) Presumption. Where a project involves removing, filling, dredging or altering of Land Subject to Flooding (both Bordering and Isolated Areas) the issuing authority shall presume that such an area is significant to, and only to, the respective interests specified in 310 CMR 10.57(1)(a) and (b). This presumption is rebuttable and may be overcome only upon a clear showing that said land does not play a role in the protection of said interests. In the event that the presumption is deemed to have been overcome, the issuing authority shall make a written determination to this effect, setting forth its grounds (Form 6).

10.57: continued

(4) General Performance Standards.(a) Bordering Land Subject to Flooding.

1. Compensatory storage shall be provided for all flood storage volume that will be lost as the result of a proposed project within Bordering Land Subject to Flooding, when in the judgment of the issuing authority said loss will cause an increase or will contribute incrementally to an increase in the horizontal extent and level of flood waters during peak flows.

Compensatory storage shall mean a volume not previously used for flood storage and shall be incrementally equal to the theoretical volume of flood water at each elevation, up to and including the 100-year flood elevation, which would be displaced by the proposed project. Such compensatory volume shall have an unrestricted hydraulic connection to the same waterway or water body. Further, with respect to waterways, such compensatory volume shall be provided within the same reach of the river, stream or creek.

2. Work within Bordering Land Subject to Flooding, including that work required to provide the above-specified compensatory storage, shall not restrict flows so as to cause an increase in flood stage or velocity.

3. Work in those portions of bordering land subject to flooding found to be significant to the protection of wildlife habitat shall not impair its capacity to provide important wildlife habitat functions. Except for work which would adversely affect vernal pool habitat, a project or projects on a single lot, for which Notice(s) of Intent is filed on or after November 1, 1987, that (cumulatively) alter(s) up to 10% or 5,000 square feet (whichever is less) of land in this resource area found to be significant to the protection of wildlife habitat, shall not be deemed to impair its capacity to provide important wildlife habitat functions. Additional alterations beyond the above threshold, or altering vernal pool habitat, may be permitted if they will have no adverse effects on wildlife habitat, as determined by procedures contained in 310 CMR 10.60.

(b) Isolated Land Subject to Flooding. A proposed project in Isolated Land Subject to Flooding shall not result in the following:

1. Flood damage due to filling which causes lateral displacement of water that would otherwise be confined within said area.

2. An adverse effect on public and private water supply or ground water supply, where said area is underlain by pervious material.

3. An adverse effect on the capacity of said area to prevent pollution of the ground water, where the area is underlain by pervious material which in turn is covered by a mat of organic peat and muck.

4. An impairment of its capacity to provide wildlife habitat where said area is vernal pool habitat, as determined by procedures contained in 310 CMR 10.60.

(c) Protection of Rare Wildlife Species. Notwithstanding the provisions of 310 CMR 10.57(4)(a) or (b), no project may be permitted which will have any adverse effect on specified wildlife habitat sites of rare vertebrate or invertebrate species, as identified by procedures established under 310 CMR 10.59.10.58 Riverfront Area

(1) Preamble. Riverfront areas are likely to be significant to protect the private or public water supply; to protect groundwater; to provide flood control; to prevent storm damage; to prevent pollution; to protect land containing shellfish; to protect wildlife habitat; and to protect the fisheries. Land adjacent to rivers and streams can protect the natural integrity of these water

bodies. The presence of natural vegetation within riverfront areas is critical to sustaining rivers as ecosystems and providing these public values. The riverfront area can prevent degradation of water quality by filtering sediments, toxic substances (such as heavy metals), and nutrients (such as phosphorus and nitrogen) from stormwater, nonpoint pollution sources, and the river itself. Sediments are trapped by vegetation before reaching the river. Nutrients and toxic substances may be detained in plant root systems or broken down by soil bacteria. Riverfront areas can trap and remove disease-causing bacteria that otherwise would reach rivers and coastal estuaries where they can contaminate shellfish beds and prohibit safe human consumption. Natural vegetation within the riverfront area also maintains water quality for fish and wildlife.

10.58: continued

Where rivers serve as water supplies or provide induced recharge to wells, the riverfront area can be important to the maintenance of drinking water quality and quantity. Land along rivers in its natural state with a high infiltration capacity increases the yield of a water supply well. When riverfront areas lack the capacity to filter pollutants, contaminants can reach human populations served by wells near rivers or by direct river intakes. The capacity of riverfront areas to filter pollutants is equally critical to surface water supplies, reducing or eliminating the need for additional treatment. In the watershed, mature vegetation within riverfront areas provides shade to moderate water temperatures and slow algal growth, which can produce odors and taste problems in drinking water.

Within riverfront areas, surface water interaction with groundwater significantly influences the stream ecosystem. The dynamic relationship between surface and groundwater within the "hyporheic zone" sustains communities of aquatic organisms which regulate the flux of nutrients, biomass and the productivity of organisms including fish within the stream itself. The hyporheic zone extends to greater distances horizontally from the channel in large, higher order streams with alluvial floodplains, but the interaction within this zone is important in smaller streams as well.

By providing recharge and retaining natural flood storage, as well as by slowing surface water runoff, riverfront areas can mitigate flooding and damage from storms. The root systems of riverfront vegetation keep soil porous, increasing infiltration capacity. Vegetation also removes excess water through evaporation and transpiration. This removal of water from the soil allows for more infiltration when flooding occurs. Increases in storage of floodwaters can decrease peak discharges and reduce storm damage. Vegetated riverfronts also dissipate the energy of storm flows, reducing damage to public and private property.

Riverfront areas are critical to maintaining thriving fisheries. Maintaining vegetation along rivers promotes fish cover, increases food and oxygen availability, decreases sedimentation, and provides spawning habitat. Maintenance of water temperatures and depths is critical to many important fish species. Where groundwater recharges surface water flows, loss of recharge as a result of impervious surfaces within the riverfront area may aggravate low flow conditions and increase water temperatures. In some cases, summer stream flows are maintained almost exclusively from groundwater recharge. Small streams are most readily impacted by removal of trees and other vegetation along the shore.

Riverfront areas are important wildlife habitat, providing food, shelter, breeding, migratory, and overwintering areas. Even some predominantly upland species use and may be seasonally dependent on riverfront areas. Riverfront areas promote biological diversity by providing habitats for an unusually wide variety of upland and wetland species, including bald eagles, osprey, and kingfishers. Large dead trees provide nesting sites for bird species that typically use the same nest from year to year. Sandy areas along rivers may serve as nesting sites for turtles and water snakes. Riverfront areas provide food for species such as wood turtles which feed and nest in uplands but use rivers as resting and overwintering areas. Riverfront areas provide corridors for the migration of wildlife for feeding or breeding. Loss of this connective function, from activities that create barriers to wildlife movement within riverfront areas, results in habitat fragmentation and causes declines in wildlife populations. Wildlife must also be able to move across riverfront areas, between uplands and the river.

Vernal pools are frequently found within depressions in riverfront areas. These pools are essential breeding sites for certain amphibians which require isolated, seasonally wet areas without predator fish. Most of these amphibians require areas of undisturbed woodlands as habitat during the non-breeding seasons. Some species require continuous woody vegetation between woodland habitat and the breeding pools. Depending on the species, during non-breeding seasons these amphibians may remain near the pools or travel $\frac{1}{4}$ mile or more from the

pools. Reptiles, especially turtles, often require areas along rivers to lay their eggs. Since amphibians and reptiles are less mobile than mammals and birds, maintaining integrity of their habitat is critical.

In those portions so extensively altered by human activity that their important wildlife habitat functions have been effectively eliminated, riverfront areas are not significant to the protection of important wildlife habitat and vernal pool habitat.

(2) Definitions, Critical Characteristics and Boundaries.

(a) A Riverfront Area is the area of land between a river's mean annual high water line and a parallel line measured horizontally. The riverfront area may include or overlap other resource areas or their buffer zones. The riverfront area does not have a buffer zone.

10.58: continued

1. A river is any natural flowing body of water that empties to any ocean, lake, pond, or other river and which flows throughout the year. Rivers include streams (see 310 CMR 10.04: Stream) that are perennial because surface water flows within them throughout the year. Intermittent streams are not rivers as defined herein because surface water does not flow within them throughout the year. When surface water is not flowing within an intermittent stream, it may remain in isolated pools or it may be absent. When surface water is present in contiguous and connected pool/riffle systems, it shall be determined to be flowing. Rivers begin at the point an intermittent stream becomes perennial or at the point a perennial stream flows from a spring, pond, or lake. Downstream of the first point of perennial flow, a stream normally remains a river except where interrupted by a lake or pond. Upstream of the first point of perennial flow, a stream is normally intermittent.

a. A river or stream shown as perennial on the current United States Geological Survey (USGS) or more recent map provided by the Department is perennial.

b. A river or stream shown as intermittent or not shown on the current USGS map or more recent map provided by the Department, that has a watershed size greater than or equal to one square mile, is perennial.

c. A stream shown as intermittent or not shown on the current USGS map or more recent map provided by the Department, that has a watershed size less than one square mile, is intermittent unless:

i. The stream has a watershed size of at least $\frac{1}{2}$ (0.50) square mile and has a predicted flow rate greater than or equal to 0.01 cubic feet per second at the 99% flow duration using the USGS Stream Stats method. The issuing authority shall find such streams to be perennial; or

ii. When the USGS StreamStats method cannot be used because the stream does not have a mapped and digitized centerline (including but not limited to streams located in the following basins: North Coastal Basin, Taunton Basin, Buzzards Bay Basin, Cape Cod and Islands Basin, and that portion of the South Coastal Basin that is south of the Jones River sub-basin), and the stream has a watershed size of at least $\frac{1}{2}$ (0.50) square mile, and the surficial geology of the contributing drainage area to the stream at the project site contains 75% or more stratified drift, the issuing authority shall find such streams to be perennial. Stratified drift shall mean sand and gravel deposits that have been layered and sorted by glacial meltwater streams. Areal percentages of stratified drift may be determined using USGS surficial geologic maps, USGS Hydrological Atlases, Massachusetts Geographical Information System (MassGIS) surficial geology data layer, or other published or electronic surficial geological information from a credible source.

d. Notwithstanding 310 CMR 10.58(2)(a)1.a. through c., the issuing authority shall find that any stream is intermittent based upon a documented field observation that the stream is not flowing. A documented field observation shall be made by a competent source and shall be based upon an observation made at least once per day, over four days in any consecutive 12 month period, during a non-drought period on a stream not significantly affected by drawdown from withdrawals of water supply wells, direct withdrawals, impoundments, or other human-made flow reductions or diversions. Field observations made after December 20, 2002 shall be documented by field notes and by dated photographs or video. Field observations made prior to December 20, 2002 shall be documented by credible evidence. All field observations shall be submitted to the issuing authority with a statement signed under the penalties

of perjury attesting to the authenticity and veracity of the field notes, photographs or video and other credible evidence. Department staff, conservation commissioners, and conservation commission staff are competent sources; issuing authorities may consider evidence from other sources that are determined to be competent.

e. Rivers include the entire length and width to the mean annual high-water line of the major rivers (Assabet, Blackstone, Charles, Chicopee, Concord, Connecticut, Deerfield, Farmington, French, Hoosic, Housatonic, Ipswich, Merrimack, Millers, Nashua, Neponset, Parker (Essex County), Quinebaug, Shawsheen, Sudbury, Taunton, Ten Mile, and Westfield).

10.58: continued

- f. Rivers include perennial streams that cease to flow during periods of extended drought. Periods of extended drought for purposes of 310 CMR 10.00 shall be those periods, in those specifically identified geographic locations, determined to be at the "Advisory" or more severe drought level by the Massachusetts Drought Management Task Force, as established by the Executive Office of Energy and Environmental Affairs and the Massachusetts Emergency Management Agency in 2001, in accordance with the Massachusetts Drought Management Plan (MDMP). Rivers and streams that are perennial under natural conditions but are significantly affected by drawdown from withdrawals of water supply wells, direct withdrawals, impoundments, or other human-made flow reductions or diversions shall be considered perennial.
- g. Human-made canals (*e.g.*, the Cape Cod Canal and canals diverted from rivers in Lowell and Holyoke) and mosquito ditches associated with coastal rivers do not have riverfront areas.
- h. Where rivers flow through lakes or ponds, the Riverfront Area stops at the inlet and begins again at the outlet. A water body identified as a lake, pond, or reservoir on the current USGS map or more recent map provided by the Department, is a lake or pond, unless the issuing authority determines that the water body has primarily riverine characteristics. When a water body is not identified as a lake, pond, or reservoir on the current USGS map or more recent map provided by the Department, the water body is a river if it has primarily riverine characteristics. Riverine characteristics may include, but are not limited to, unidirectional flow that can be visually observed or measured in the field. In addition, rivers are characterized by horizontal zonation as opposed to the vertical stratification that is typically associated with lakes and ponds. Great Ponds (*i.e.*, any pond which contained more than ten acres in its natural state, as calculated based on the surface area of lands lying below the natural high water mark; a list is available from the Department) are never rivers.
2. Mean Annual High-water Line of a river is the line that is apparent from visible markings or changes in the character of soils or vegetation due to the prolonged presence of water and that distinguishes between predominantly aquatic and predominantly terrestrial land. Field indicators of bankfull conditions shall be used to determine the mean annual high-water line. Bankfull field indicators include but are not limited to: changes in slope, changes in vegetation, stain lines, top of pointbars, changes in bank materials, or bank undercuts.
- a. In most rivers, the first observable break in slope is coincident with bankfull conditions and the mean annual high-water line.
- b. In some river reaches, the mean annual high-water line is represented by bankfull field indicators that occur above the first observable break in slope, or if no observable break in slope exists, by other bankfull field indicators. These river reaches are characterized by at least two of the following features: low gradient, meanders, oxbows, histosols, a low-flow channel, or poorly-defined or nonexistent banks.
- c. In tidal rivers, the mean annual high-water line is coincident with the mean high water line determined under 310 CMR 10.23.
3. The Riverfront Area is the area of land between a river's mean annual high-water line measured horizontally outward from the river and a parallel line located 200 feet away, except that the parallel line is located:
- a. 25 feet away in Boston, Brockton, Cambridge, Chelsea, Everett, Fall River, Lawrence, Lowell, Malden, New Bedford, Somerville, Springfield, Winthrop, and

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

Worcester;

b. 25 feet away in densely developed areas, as designated by the Secretary of the Executive Office of Energy and Environmental Affairs pursuant to 301 CMR 10.00: *Densely Developed Areas*; and

c. 100 feet away for new agricultural and aquacultural activities.

Measured horizontally means that the riverfront area extends at a right angle to the mean annual high-water line rather than along the surface of the land.

10.58: continued

Where a river runs through a culvert more than 200 feet in length, the riverfront area stops at a perpendicular line at the upstream end of the culvert and resumes at the downstream end. When a river contains islands, the riverfront area extends landward into the island from and parallel to the mean annual high-water line.

(b) The physical characteristics of a Riverfront Area as described in 310 CMR 10.58(2)(a) are critical to the protection of the interests specified in 310 CMR 10.58(1).

(c) The boundary of the Riverfront Area is a line parallel to the mean annual high-water line, located at the outside edge of the riverfront area. At the point where a stream becomes perennial, the riverfront area begins at a line drawn as a semicircle with a 200 foot (25 foot in densely developed areas; 100 foot for new agriculture) radius around the point and connects to the parallel line perpendicular to the mean annual high-water line which forms the outer boundary. When a river flows into coastal waters or an embayment, the river shall end at the mouth of coastal river line as delineated on the current mouth of coastal river map series maintained by the Department, subject to revisions after public notice and referred to as the Massachusetts Mouth of Coastal River Maps. If a mouth of coastal river line is not delineated on the current map series, the issuing authority shall determine the mouth of coastal river line in accordance with the Department's most current Mouth of Coastal River Policy. A mouth of coastal river line shown on the Department's mouth of coastal river map series is not evidence that a stream is perennial; such a determination shall only be made pursuant to 310 CMR 10.58(2)(a)1.

(3) Presumption. Where a proposed activity involves work within the riverfront area, the issuing authority shall presume that the area is significant to protect the private or public water supply; to protect the groundwater; to provide flood control; to prevent storm damage; to prevent pollution; to protect land containing shellfish; to protect wildlife habitat; and to protect fisheries.

The presumption is rebuttable and may be overcome by a clear showing that the riverfront area does not play a role in the protection of one or more of these interests. In the event that the presumption is deemed to have been overcome as to the protection of all the interests, the issuing authority shall make a written determination to this effect, setting forth its grounds on Form 6. Where the applicant provides information that the riverfront area at the site of the activity does not play a role in the protection of an interest, the issuing authority may determine that the presumption for that interest has been rebutted and the presumption of significance is partially overcome.

(4) General Performance Standard. Where the presumption set forth in 310 CMR 10.58(3) is not overcome, the applicant shall prove by a preponderance of the evidence that there are no practicable and substantially equivalent economic alternatives to the proposed project with less adverse effects on the interests identified in M.G.L. c.131 § 40 and that the work, including proposed mitigation, will have no significant adverse impact on the riverfront area to protect the interests identified in M.G.L. c. 131 § 40. In the event that the presumption is partially overcome, the issuing authority shall make a written determination setting forth its grounds in the Order of Conditions and the partial rebuttal shall be taken into account in the application of 310 CMR 10.58 (4)(d)1.a. and c.; the issuing authority shall impose conditions in the Order that contribute to the protection of interests for which the riverfront area is significant.

(a) Protection of Other Resource Areas. The work shall meet the performance standards for all other resource areas within the riverfront area, as identified in 310 CMR 10.30 (Coastal Bank), 10.32 (Salt Marsh), 10.55 (Bordering Vegetated Wetland), and 10.57 (Land Subject to Flooding). When work in the riverfront area is also within the buffer zone to another resource area, the performance standards for the riverfront area shall contribute to

the protection of the interests of M.G.L. c. 131, § 40 in *lieu* of any additional requirements that might otherwise be imposed on work in the buffer zone within the riverfront area.

(b) Protection of Rare Species. No project may be permitted within the riverfront area which will have any adverse effect on specified habitat sites of rare wetland or upland, vertebrate or invertebrate species, as identified by the procedures established under 310 CMR 10.59 or 10.37, or which will have any adverse effect on vernal pool habitat certified prior to the filing of the Notice of Intent.

(c) Practicable and Substantially Equivalent Economic Alternatives. There must be no practicable and substantially equivalent economic alternative to the proposed project with less adverse effects on the interests identified in M.G.L. c. 131 § 40.

10.58: continued

1. Definition of Practicable. As set forth in 310 CMR 10.04, an alternative is practicable and substantially equivalent economically if it is available and capable of being done after taking into consideration costs, existing technology, proposed use, and logistics, in light of overall project purposes. Available and capable of being done means the alternative is obtainable and feasible. Project purposes shall be defined generally (*e.g.*, single family home, residential subdivision, expansion of a commercial development). The alternatives analysis may reduce the scale of the activity or the number of lots available for development, consistent with the project purpose and proposed use. The alternatives analysis shall not include interior design specifications (*i.e.*, neither the proposed use or project purpose in the Notice of Intent nor the Order of Conditions should specify the number of rooms, bedrooms, *etc.* within a building). Transactions shall not be arranged to circumvent the intent of alternatives analysis review. The four factors to be considered are:

a. Costs, and whether such costs are reasonable or prohibitive to the owner. The owner means the individual or entity which owns the area where the activity will occur or which will implement the project purpose. Cost includes expenditures for a project within the riverfront area, such as land acquisition, site preparation, design, construction, landscaping, and transaction expenses. Cost does not include anticipated profits after the project purpose is achieved or expenditures to achieve the project purpose prior to receiving an Order with the exception of land acquisition costs incurred prior to August 7, 1996. In taking costs into account, the issuing authority shall be guided by these principles:

i. The cost of an alternative must be reasonable for the project purpose, and cannot be prohibitive.

ii. Higher or lower costs taken alone will not determine whether an alternative is practicable. An alternative for proposed work in the riverfront area must be a practicable and substantially equivalent economic alternative (*i.e.*, will achieve the proposed use and project purpose from an economic perspective).

iii. In considering the costs to the owner, the evaluation should focus on the financial capability reasonably expected from the type of owner (*e.g.*, individual homeowner, residential developer, small business owner, large commercial or industrial developer) rather than the personal or corporate financial status of that particular owner. Applicants should not submit, nor should issuing authorities request, financial information of a confidential nature, such as income tax records or bank statements.

iv. Issuing authorities may require documentation of costs, but may also base their determinations on descriptions of alternatives, knowledge of alternative sites, information provided by qualified professionals, comparisons to costs normally associated with similar projects, or other evidence. Any documentation of costs should be limited to that required for a determination of whether the costs are reasonable or prohibitive.

b. Existing technology, which includes best available measures (*i.e.*, the most up-to-date technology or the best designs, measures, or engineering practices that have been developed and are commercially available);

c. The Proposed Use. This term is related to the concept of project purpose. In the context of typical single family homes, the project purpose (construction of a single family house) and proposed use (family home) are virtually identical. In the context of projects where the purpose implies a business component, such as residential subdivision, commercial, and industrial projects, the proposed use typically requires

economic viability. Practicable and substantially equivalent economic alternatives include alternatives which are economically viable for the proposed use from the perspective of site location, project configuration within a site, and the scope of the project. In the context of publically financed projects, the proposed use includes consideration of legitimate governmental purposes (*e.g.*, protection of health and safety, providing economic development opportunities, or similar public purposes); and

10.58: continued

d. Logistics. Logistics refers to the presence or absence of physical or legal constraints. Physical characteristics of a site may influence its development. Legal barriers include circumstances where a project cannot meet other applicable requirements to obtain the necessary permits at an alternative site. An alternative site is not practicable if special legislation or changes to municipal zoning would be required to achieve the proposed use or project purpose. An alternative is not practicable if the applicant is unable to obtain the consent of the owner of an alternative site for access for the purpose of obtaining the information required by the Notice of Intent or of allowing the issuing authority to conduct a site visit.

2. Scope of Alternatives. The scope of alternatives under consideration shall be commensurate with the type and size of the project. The issuing authority shall presume that alternatives beyond the scope described below are not practicable and therefore need not be considered. The issuing authority or another party may overcome the presumption by demonstrating the practicability of a wider range of alternatives, based on cost, and whether the cost is reasonable or prohibitive to the owner; existing technology; proposed use; and logistics in light of the overall project purpose.

a. The area under consideration for practicable alternatives is limited to the lot for activities associated with the construction or expansion of a single family house on a lot recorded on or before August 1, 1996.

b. The area under consideration for practicable alternatives is limited to the lot, the subdivided lots and any adjacent lots formerly or presently owned by the same owner for:

i. activities associated with the construction or expansion of a single family house on a lot recorded after August 1, 1996;

ii. any expansion of an existing structure, including enlargement of the footprint of any structure or the addition of associated structures for single family homes (*e.g.*, a garage) on lots recorded after August 1, 1996;

iii. any activity other than the construction or expansion of a single family house where the applicant owned the lot before August 7, 1996, including the creation of a real estate subdivision but excluding public projects, and the applicant will implement the project purpose;

iv. new agriculture or aquaculture projects;

v. any activity by a public entity when funds for the purchase of the site for the project purpose have been appropriated through action of the appropriate municipal board or state agency prior to the August 7, 1996; or

vi. any lot shown on a definitive subdivision plan approved under M.G.L. c. 41, §§ 81K to 81GG, provided there is a recorded deed restriction limiting the total alteration to 5000 square feet or 10%, whichever is greater, of the riverfront area allocated to the lots within the entire subdivision.

c. Except as allowed under 310 CMR 10.58(4)(c)2.b., the area under consideration for practicable alternatives extends to the original parcel and the subdivided parcels, any adjacent parcels, and any other land which can reasonably be obtained within the municipality for:

i. activities associated with residential subdivision or housing complexes, institutional, industrial, or commercial projects; or

ii. activities conducted by municipal government.

For adjacent lots, reasonably be obtained means to purchase at market prices if otherwise practicable, as documented by offers (and any responses). For other land, reasonably be obtained means adequate in size to accommodate the project purpose and listed for sale within appropriately zoned areas, at the time of filing a Request for

Determination or Notice of Intent, within the municipality.

d. Alternatives extend to any sites which can reasonably be obtained within the appropriate region of the state for:

i. residential, institutional, commercial, or industrial activities required to evaluate off-site alternatives in more than one municipality in an Environmental Impact Report under M.G.L. c. 30, §§ 61 through 62H, or an alternatives analysis conducted by the Corps of Engineers for a Section 404 permit under the federal Clean Water Act, 33 U.S.C. 1251 *et seq.*, and used for 401 Water Quality Certification under 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*; or

10.58: continued

ii. activities conducted by district, county, state or federal government entities.

The area to be considered is the service area within the governmental unit boundary or jurisdictional authority, or the municipality if there is no defined service area, consistent with the project purpose.

3. Evaluation of Alternatives. The applicant shall demonstrate that there are no practicable and substantially equivalent economic alternatives as defined in 310 CMR 10.58(4)(c)1., within the scope of alternatives as set forth in 310 CMR 10.58(4)(c)2., with less adverse effects on the interests identified in M.G.L. c. 131 § 40. The applicant shall submit information to describe sites and the work both for the proposed location and alternative site locations and configurations sufficient for a determination by the issuing authority under 310 CMR 10.58(4)(d). The level of detail of information shall be commensurate with the scope of the project and the practicability of alternatives. Where an applicant identifies an alternative which can be summarily demonstrated to be not practicable, an evaluation is not required.

The purpose of evaluating project alternatives is to locate activities so that impacts to the riverfront area are avoided to the extent practicable. Projects within the scope of alternatives must be evaluated to determine whether any are practicable. As much of a project as feasible shall be sited outside the riverfront area. If siting of a project entirely outside the riverfront area is not practicable, the alternatives shall be evaluated to locate the project as far as possible from the river.

The issuing authority shall not require alternatives which result in greater or substantially equivalent adverse impacts. If an alternative would result in no identifiable difference in impact, the issuing authority shall eliminate the alternative. If there would be no less adverse effects on the interests identified in M.G.L. c. 131, § 40, the proposed project rather than a practicable alternative shall be allowed, but the criteria in 310 CMR 10.58(4)(d) for determining no significant adverse impact must still be met. If there is a practicable and substantially equivalent economic alternative with less adverse effects, the proposed work shall be denied and the applicant may either withdraw the Notice of Intent or receive an Order of Conditions for the alternative, provided the applicant submitted sufficient information on the alternative in the Notice of Intent.

(d) No Significant Adverse Impact. The work, including proposed mitigation measures, must have no significant adverse impact on the riverfront area to protect the interests identified in M.G.L. c. 131, § 40.

1. Within 200 foot riverfront areas, the issuing authority may allow the alteration of up to 5000 square feet or 10% of the riverfront area within the lot, whichever is greater, on a lot recorded on or before October 6, 1997 or lots recorded after October 6, 1997 subject to the restrictions of 310 CMR 10.58(4)(c)2.b.vi., or up to 10% of the riverfront area within a lot recorded after October 6, 1997, provided that:

a. At a minimum, a 100 foot wide area of undisturbed vegetation is provided. This area shall extend from mean annual high-water along the river unless another location would better protect the interests identified in M.G.L. c. 131 § 40. If there is not a 100 foot wide area of undisturbed vegetation within the riverfront area, existing vegetative cover shall be preserved or extended to the maximum extent feasible to approximate a 100 foot wide corridor of natural vegetation. Replication and compensatory storage required to meet other resource area performance standards are allowed within this area; structural stormwater management measures may be allowed only when there is no practicable alternative. Temporary impacts where necessary for installation of linear site-related utilities are allowed, provided the area is restored to its natural conditions. Proposed work which does not meet the

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

requirement of 310 CMR 10.58(4)(d)1.a. may be allowed only if an applicant demonstrates by a preponderance of evidence from a competent source that an area of undisturbed vegetation with an overall average width of 100 feet will provide equivalent protection of the riverfront area, or that a partial rebuttal of the presumptions of significance is sufficient to justify a lesser area of undisturbed vegetation;

b. Stormwater is managed according to standards established by the Department in its Stormwater Policy.

10.58: continued

c. Proposed work does not impair the capacity of the riverfront area to provide important wildlife habitat functions. Work shall not result in an impairment of the capacity to provide vernal pool habitat identified by evidence from a competent source, but not yet certified. For work within an undeveloped riverfront area which exceeds 5,000 square feet, the issuing authority may require a wildlife habitat evaluation study under 310 CMR 10.60.

d. Proposed work shall not impair groundwater or surface water quality by incorporating erosion and sedimentation controls and other measures to attenuate nonpoint source pollution.

The calculation of square footage of alteration shall exclude areas of replication or compensatory flood storage required to meet performance standards for other resource areas, or any area of restoration within the riverfront area. The calculation also shall exclude areas used for structural stormwater management measures, provided there is no practicable alternative to siting these structures within the riverfront area and provided a wildlife corridor is maintained (*e.g.* detention basins shall not be fenced).

2. Within 25 foot riverfront areas, any proposed work shall cause no significant adverse impact by:

a. Limiting alteration to the maximum extent feasible, and at a minimum, preserving or establishing a corridor of undisturbed vegetation of a maximum feasible width. Replication and compensatory storage required to meet other resource area performance standards are allowed within this area; structural stormwater management measures shall be allowed only when there is no practicable alternative;

b. Providing stormwater management according to standards established by the Department;

c. Preserving the capacity of the riverfront area to provide important wildlife habitat functions. Work shall not result in an impairment of the capacity to provide vernal pool habitat when identified by evidence from a competent source but not yet certified; and

d. Proposed work shall not impair groundwater or surface water quality by incorporating erosion and sedimentation controls and other measures to attenuate nonpoint source pollution.

3. Notwithstanding the provisions of 310 CMR 10.58(4)(d)1. or 2., the issuing authority shall allow the construction of a single family house, a septic system if no sewer is available, and a driveway, on a lot recorded before August 7, 1996 where the size or shape of the lot within the riverfront area prevents the construction from meeting the requirements of 310 CMR 10.58(4)(d)1. or 2., provided that:

a. The lot can be developed for such purposes under the applicable provisions of other municipal and state law; and

b. The performance standards of 310 CMR 10.58(4)(d) are met to the maximum extent feasible. In difficult siting situations, the maximum extent of yards around houses should be limited to the area necessary for construction. Except where the lot contains vernal pool habitat or specified habitat sites of rare species, a wildlife habitat evaluation study shall not be required.

4. Notwithstanding the provisions of 310 CMR 10.58(4)(d)1. or 2., the issuing authority may allow the construction of a commercial structure of minimum feasible dimension, on a lot recorded before August 7, 1996 where the size or shape of the lot within the riverfront area prevents the construction from meeting the requirements of 310 CMR 10.58(4)(d)1. or 2., only if:

a. The lot can be developed for such purposes and cannot be developed for any other

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

purposes under the applicable provisions of other municipal and state law;

b. The work is not eligible for 310 CMR 10.58(5); and

c. The performance standards of 310 CMR 10.58(4)(d)1. or 2. are met to the maximum extent feasible.

10.58: continued

(5) Redevelopment Within Previously Developed Riverfront Areas; Restoration and Mitigation. Notwithstanding the provisions of 310 CMR 10.58(4)(c) and (d), the issuing authority may allow work to redevelop a previously developed riverfront area, provided the proposed work improves existing conditions. Redevelopment means replacement, rehabilitation or expansion of existing structures, improvement of existing roads, or reuse of degraded or previously developed areas. A previously developed riverfront area contains areas degraded prior to August 7, 1996 by impervious surfaces from existing structures or pavement, absence of topsoil, junkyards, or abandoned dumping grounds. Work to redevelop previously developed riverfront areas shall conform to the following criteria:

(a) At a minimum, proposed work shall result in an improvement over existing conditions of the capacity of the riverfront area to protect the interests identified in M.G.L. c. 131 § 40. When a lot is previously developed but no portion of the riverfront area is degraded, the requirements of 310 CMR 10.58(4) shall be met.

(b) Stormwater management is provided according to standards established by the Department.

(c) Within 200 foot riverfront areas, proposed work shall not be located closer to the river than existing conditions or 100 feet, whichever is less, or not closer than existing conditions within 25 foot riverfront areas, except in accordance with 310 CMR 10.58(5)(f) or (g).

(d) Proposed work, including expansion of existing structures, shall be located outside the riverfront area or toward the riverfront area boundary and away from the river, except in accordance with 310 CMR 10.58(5)(f) or (g).

(e) The area of proposed work shall not exceed the amount of degraded area, provided that the proposed work may alter up to 10% if the degraded area is less than 10% of the riverfront area, except in accordance with 310 CMR 10.58(5)(f) or (g).

(f) When an applicant proposes restoration on-site of degraded riverfront area, alteration may be allowed notwithstanding the criteria of 310 CMR 10.58(5)(c), (d), and (e) at a ratio in square feet of at least 1:1 of restored area to area of alteration not conforming to the criteria. Areas immediately along the river shall be selected for restoration. Alteration not conforming to the criteria shall begin at the riverfront area boundary. Restoration shall include:

1. removal of all debris, but retaining any trees or other mature vegetation;
2. grading to a topography which reduces runoff and increases infiltration;
3. coverage by topsoil at a depth consistent with natural conditions at the site; and
4. seeding and planting with an erosion control seed mixture, followed by plantings of herbaceous and woody species appropriate to the site;

(g) When an applicant proposes mitigation either on-site or in the riverfront area within the same general area of the river basin, alteration may be allowed notwithstanding the criteria of 310 CMR 10.58(5)(c), (d), or (e) at a ratio in square feet of at least 2:1 of mitigation area to area of alteration not conforming to the criteria or an equivalent level of environmental protection where square footage is not a relevant measure. Alteration not conforming to the criteria shall begin at the riverfront area boundary. Mitigation may include off-site restoration of riverfront areas, conservation restrictions under M.G.L. c. 184, §§ 31 through 33 to preserve undisturbed riverfront areas that could be otherwise altered under 310 CMR 10.00, the purchase of development rights within the riverfront area, the restoration of bordering vegetated wetland, projects to remedy an existing adverse impact on the interests identified in M.G.L. c. 131, § 40 for which the applicant is not legally responsible, or similar activities undertaken voluntarily by the applicant which will support a determination by the issuing authority of no significant adverse impact. Preference shall be given to potential mitigation projects, if any, identified in a River Basin Plan approved by the Secretary of the

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

Executive Office of Energy and Environmental Affairs.

(h) The issuing authority shall include a continuing condition in the Certificate of Compliance for projects under 310 CMR 10.58(5)(f) or (g) prohibiting further alteration within the restoration or mitigation area, except as may be required to maintain the area in its restored or mitigated condition. Prior to requesting the issuance of the Certificate of Compliance, the applicant shall demonstrate the restoration or mitigation has been successfully completed for at least two growing seasons.

10.58: continued

(6) Notwithstanding the Provisions of 310 CMR 10.58(1) through (5), Certain Activities or Areas Are Grandfathered or Exempted from Requirements for the Riverfront Area:

- (a) Any excavation, structure, road, clearing, driveway, landscaping, utility line, rail line, airport owned by a political subdivision, marine cargo terminal owned by a political subdivision, bridge over two miles long, septic system, or parking lot within the riverfront area in existence on August 7, 1996. Maintenance of such structures or areas is allowed (including any activity which maintains a structure, roads (limited to repairs, resurfacing, repaving, but not enlargement), clearing, landscaping, *etc.* in its existing condition) without the filing of a Notice of Intent for work within the riverfront area, but not when such work is within other resource areas or their buffer zones except as provided in 310 CMR 10.58(6)(b). Changes in existing conditions which will remove, fill, dredge or alter the riverfront area are subject to 310 CMR 10.58, except that the replacement within the same footprint of structures destroyed by fire or other casualty is not subject to 310 CMR 10.58.
- (b) Certain minor activities as identified in 310 CMR 10.02(2)(b)1.
- (c) On-site sewage disposal systems in existence on August 7, 1996 and the repair or upgrade of existing systems in compliance with 310 CMR 15.000: *The State Environmental Code, Title 5: Standard Requirements for the Siting, Construction, Inspection, Upgrade and Expansion of On-site Sewage Treatment and Disposal Systems and for the Transport and Disposal of Septage*. New construction of a system under 310 CMR 15.000 must comply with 310 CMR 10.58, subject to the presumption for the siting of systems in 310 CMR 10.03.
- (d) The expansion of structures, airports, and marine cargo terminals, provided they are owned by a political subdivision and the expansion activity was physically begun on or before November 1, 1996.
- (e) Projects for which a draft environmental impact report was prepared and submitted pursuant to M.G.L. c. 30, § 62B, on or before November 1, 1996, or as extended by the Department for just cause but no later than December 31, 1996.
- (f) Projects for which a building permit conforming to local requirements was filed on or before October 1, 1996 and granted on or before April 1, 1997, or as extended by the conservation commission for just cause by no more than 60 days.
- (g) The road and infrastructure shown on a definitive subdivision plan approved or endorsed under M.G.L. c. 41, § 81U, on or before August 1, 1996. Activities on the subdivided lots are subject to 310 CMR 10.58 unless they received a building permit under 310 CMR 10.58(6)(f).
- (h) Construction, expansion, repair, restoration, alteration, replacement, operation and maintenance of public or private local or regional wastewater treatment plants and their related structures, conveyance systems, and facilities, including utility lines.
- (i) Structures and activities subject to a M.G.L. c. 91 waterways license or permit, or authorized prior to 1973 by a special act, are exempt, provided the structure or activity is subject to jurisdiction and obtains a license, permit, or authorization under 310 CMR 9.00: *Waterways*.
- (j) Activities within riverfront areas subject to a protective order under M.G.L. c. 21, § 17B, the Scenic Rivers Act.
- (k) Activities within an Historic Mill Complex.

10.59: Estimated Habitats of Rare Wildlife (for Inland Wetlands)

If a project is within estimated habitat which is indicated on the most recent Estimated Habitat Map of State-listed Rare Wetlands Wildlife (if any) published by the Natural Heritage and Endangered Species Program (hereinafter referred to as the Program), a fully completed copy of the Notice of Intent (including all plans, reports, and other materials required under 310 CMR

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

10.05(4)(a) and (b)) for such project shall be sent to the Program via the U.S. Postal Service by express or priority mail (or otherwise sent in a manner that guarantees delivery within two days). Such copy shall be sent no later than the date of the filing of the Notice of Intent with the issuing authority. Proof of timely mailing or other delivery to the Program of the copy of such Notice of Intent shall be included in the Notice of Intent which is submitted to the issuing authority and sent to the Department's regional office.

Estimated Habitat Maps shall be based on the estimated geographical extent of the habitats of all state-listed vertebrate and invertebrate animal species for which a reported occurrence within the last 25 years has been accepted by the Program and incorporated into its official data base.

10.59: continued

Within 30 days of the filing of such a Notice of Intent with the issuing authority the Program shall determine whether any state-listed species identified on the aforementioned map are likely to continue to be located on or near the site of the original occurrence and, if so, whether the area to be altered by the proposed project is in fact part of such species' habitat. Such determination shall be presumed by the issuing authority to be correct. Any proposed project which would alter a resource area that is not located on the most recent Estimated Habitat Map (if any) provided to the conservation commission, shall be presumed not to be within a rare species' habitat. Both of these presumptions are rebuttable and may be overcome upon a clear showing to the contrary. If the issuing authority fails to receive a response from the Program within 30 days of the filing of such a Notice of Intent, a copy of which was received by the Program in a timely manner, it shall issue its Order of Conditions based on available information; however, the fact that a proposed project would alter a resource area that is located on an Estimated Habitat Map shall not be considered sufficient evidence in itself that such project is in fact within the habitat of a rare species.

If the Program determines that a resource area which would be altered by a proposed project is in fact within the habitat of a state-listed species, it shall provide in writing to the applicant and to the Conservation Commission and the Department, the identification of the species whose habitat would be altered by the proposed project, and all other relevant information which the Program has regarding the species' location and habitat requirements, insofar as such information may assist the applicant and the issuing authority to determine whether the project is or can be designed so as to meet the performance standard set in 310 CMR 10.59.

Notwithstanding 310 CMR 10.53 through 10.58 and 10.60, if a proposed project is found by the issuing authority to alter a resource area which is part of the habitat of a state-listed species, such project shall not be permitted to have any short or long term adverse effects on the habitat of the local population of that species. A determination of whether or not a proposed project will have such an adverse effect shall be made by the issuing authority. However, a written opinion of the Program on whether or not a proposed project will have such an adverse effect shall be presumed by the issuing authority to be correct. This presumption is rebuttable and may be overcome upon a clear showing to the contrary.

The conservation commission shall not issue an Order of Conditions under 310 CMR 10.05(6) regarding any such project for at least 30 days after the filing of the Notice of Intent unless the Program before such time period has elapsed has either determined that the resource area(s) which would be altered by the project is not in fact within the habitat of a state-listed species or, if it has determined that such resource area(s) is in fact within rare species habitat, rendered a written opinion as to whether the project will have an adverse effect on that habitat.

Notwithstanding any other provision of 310 CMR 10.58, should an Environmental Impact Report be required for a proposed project under the M.G.L. c. 30, §§ 6 through 62H, as determined by 301 CMR 11.00: *MEPA Regulations* the performance standard established under 310 CMR 10.58 shall only apply to proposed projects which would alter the habitat of a rare species for which an occurrence has been entered into the official data base of the Massachusetts Natural Heritage and Endangered Species Program prior to the time that the Secretary of the Executive Office of Energy and Environmental Affairs has determined, in accordance with the provisions of 301 CMR 11.09(4): *Eligible Projects*, that a final Environmental Impact Report for that project adequately and properly complies with the M.G.L. c. 30, §§ 6 through 62H (unless, subsequent to that determination, the Secretary requires supplemental information concerning state-listed species, in accordance with the provisions of 301 CMR 11.17: *Transition Rules*).

10.60: Wildlife Habitat Evaluations

(1) Measuring Adverse Effects on Wildlife Habitat.

(a) To the extent that a proposed project on inland Banks, Land under Water, Riverfront Area, or Land Subject to Flooding will alter vernal pool habitat or will alter other wildlife habitat beyond the thresholds permitted under 310 CMR 10.54(4)(a)5., 10.56(4)(a)4., 10.57(4)(a)3. and 10.58(4)(d)1., such alterations may be permitted only if they will have no adverse effects on wildlife habitat. Adverse effects on wildlife habitat mean the alteration of any habitat characteristic listed in 310 CMR 10.60(2), insofar as such alteration will, following two growing seasons of project completion and thereafter (or, if a project would eliminate trees, upon the maturity of replanted saplings) substantially reduce its capacity to provide the important wildlife habitat functions listed in 310 CMR 10.60(2). Such performance standard, however, shall not apply to the habitat of rare species, which are covered by the performance standards established under 310 CMR 10.59.

10.60: continued

(b) An evaluation by the applicant of whether a proposed project will have an adverse effect on wildlife habitat beyond permissible thresholds shall be performed by an individual with at least a masters degree in wildlife biology or ecological science from an accredited college or university, or other competent professional with at least two years experience in wildlife habitat evaluation.

(c) Any wildlife habitat management practices conducted by the Division of Fisheries and Wildlife, and any wildlife management practices of any individual or organization if reviewed and approved in writing by said Division, shall be presumed to have no adverse effect on wildlife habitat. Such presumption is rebuttable, and may be overcome by a clear showing to the contrary.

(2) Wildlife Habitat Characteristics of Inland Resource Areas.

(a) Banks. The topography, soil structure, and plant community composition and structure of banks can provide the following important wildlife habitat functions:

1. Food, shelter and migratory and breeding areas for wildlife
2. Overwintering areas for mammals and reptiles.

(b) Land under Water Bodies or Waterways. The plant community and soil composition and structure, hydrologic regime, topography and water quality of land under water bodies or waterways can provide the following important wildlife habitat functions:

1. Food, shelter and breeding areas for wildlife;
2. Overwintering areas for mammals, reptiles and amphibians.

(c) Vernal Pool Habitat. The topography, soil structure, plant community composition and structure, and hydrologic regime of vernal pool habitat can provide the following important wildlife habitat functions:

1. Food, shelter, migratory and breeding areas, and overwintering areas for amphibians;
2. Food for other wildlife.

(d) Lower Floodplains. The hydrologic regime, plant community and soil composition and structure, topography, and proximity to water bodies and waterways of lower floodplains can provide the following important wildlife habitat functions:

1. Food, shelter, migratory and overwintering areas for wildlife;
2. Breeding areas for birds, mammals and reptiles.

(e) Riverfront Area. The topography, soil structure, plant community composition and structure, and hydrologic regime can provide the following important wildlife habitat functions:

1. Food, shelter, overwintering and breeding areas for wildlife, including turtle nesting areas, nesting sites for birds which typically reuse specific nesting sites, cavity trees, and isolated depressions that function as vernal pools.
2. Migratory areas along the riparian corridor including the movement of wildlife unimpeded by barriers within the riverfront area.

(3) Restoration and Replication of Altered Habitat. Alterations of wildlife habitat characteristics beyond permissible thresholds may be restored onsite or replicated offsite in accordance with the following general conditions, and any additional conditions the issuing authority deems necessary to insure that the standard in 310 CMR 10.60(1)(a) is satisfied:

- (a) the surface of the replacement area to be created ("the replacement area") shall be equal to that of the area that will be lost ("the lost area");
- (b) the elevation of groundwater relative to the surface of the replacement area shall be approximately equal to that of the lost area;
- (c) the replacement area shall be located within the same general area as the lost area. In

the case of banks and land under water, the replacement area shall be located on the same water body or waterway if the latter has not been rechanneled or otherwise relocated. In the case of bordering land subject to flooding, the replacement area shall be located approximately the same distance from the water body or waterway as the lost area. In the case of vernal pool habitat, the replacement area shall be located in close proximity to the lost area;

(d) interspersion and diversity of vegetation, water and other wildlife habitat characteristics of the replacement area, as well as its location relative to neighboring wildlife habitats, shall be similar to that of the lost areas, insofar as necessary to maintain the wildlife habitat functions of the lost area;

10.60: continued

(e) the project shall not alter ten or more acres of Land Subject to Flooding or Land under Water found to be significant to the protection of wildlife habitat, or 2,000 feet or more of Bank found to be significant to the protection of wildlife habitat (in the case of a bank of a stream or river, this shall be measured on each side of said stream or river).

(f) if the replacement area is located in an area subject to M.G.L. c. 131, § 40, there shall be no adverse effect on the existing important wildlife habitat functions of said area as measured by the standards of 310 CMR 10.60;

(g) the "thresholds" established in 310 CMR 10.54(4)(a)5., 10.56(4)(a)4., 10.57(4)(a)3. and 10.58(4)(d)1.c. (below which alterations of resource areas are not deemed to impair capacity to provide important wildlife habitat functions) shall not apply to any replacement area; and

(h) the replacement area shall be provided in a manner which is consistent with all other General Performance Standards for each resource area in 310 CMR 10.51 through 10.60.

REGULATORY AUTHORITY

310 CMR 10.00: M.G.L. c. 131, § 40.

NON-TEXT PAGE

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

310 CMR 11.00: GENERAL APPLICATION AND ADMINISTRATION ENVIRONMENTAL CODE,
TITLE 1

Section

- 11.01: Scope of Application; Effective Date
- 11.02: Local Rules and Regulations
- 11.03: Inspection -- Interference
- 11.04: Methods of Enforcement by Local Boards of Health
- 11.05: Emergency
- 11.06: Enforcement by the Department of Environmental Quality Engineering of Commonwealth
- 11.07: Service of Orders
- 11.08: Hearing
- 11.09: Appeal
- 11.10: Penalties
- 11.11: Variance
- 11.12: Variance, Grant of Special Permission: Expiration, Modification, Suspension of
- 11.13: Partial Invalidity

11.01: Scope of Application; Effective Date

(1) Application. The State Environmental Code shall apply throughout the Commonwealth unless and to the extent that the provisions of any title are expressly limited.

(2) Effective Date. 310 CMR 11.00 shall be effective and have the force of law upon filing with the Secretary of State. Every other title shall be effective and have the force of law in accordance with the provisions of each. If a title fails to state a date from when it is to be effective, it shall become effective from the day following the date it is filed with the Secretary of State.

11.02: Local Rules and Regulations

Unless otherwise expressly provided in any other title, the legally designated health authority of any city, town, county or other legally constituted governmental unit within the Commonwealth having the usual powers and duties of the board of health may, as it considers necessary to promote and protect the health and well being of the particular locality under its jurisdiction, adopt under its own legal power as exists in the General Laws any rules or regulations containing requirements stricter than those contained in this code. Nor should the existence of this code limit or otherwise affect the power of any health authority with respect to any matter for which this code makes no provision.

11.03: Inspection -- Interference

(1) Inspection. In order properly to carry out their respective responsibilities under 310 CMR and properly to protect the health, environment and well-being of the people of the Commonwealth, the board of health and the Department of Environmental Quality Engineering or the authorized agent or representative of either are authorized to enter, examine, or survey at any reasonable time such places as they consider necessary, and otherwise to conduct such examination or survey as is expressly provided in any other title.

(2) Interference. If any owner, occupant, or other person refuses, impedes, inhibits, interferes with, restricts, or obstructs entry and free access to every part of the structure, operation or premise where inspection authorized by 310 CMR is sought, the board of health or the Commissioner of the Department of Environmental Quality Engineering or the authorized agency or representative of either may:

- (a) seek in a court of competent jurisdiction a search warrant so as to apprise the owner, occupant or other person concerning the nature of the inspection and justification for it and may seek the assistance of police authorities in presenting said warrant and/or
- (b) revoke or suspend any license, permit or other permission regulated under this code where inspection of the structure, operation or premises is sought to determine compliance with 310 CMR 11.00.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

11.04: Methods of Enforcement by Local Boards of Health

Unless otherwise expressly provided in any title 310 CMR , code, each board of health may enforce 310 CMR by fine in accordance with 310 CMR 11.10, or otherwise at law or in equity in the same manner that local rules and regulations are enforced.

11.05: Emergency

(1) General. Whenever an emergency exists in which the interest of protecting the public health or the environment requires that ordinary procedures be dispensed with, the board of health or its authorized agent, acting in accordance with the provisions of M.G.L. c. 111, § 30, may, without notice or hearing, issue an order reciting the existence of the emergency and requiring that such action be taken as the board of health deems necessary to meet the emergency. Notwithstanding any other provision of 310 CMR, any person to whom such order is directed shall comply therewith within the time specified in the order. Each day's failure to comply with the order shall constitute a separate offense. Upon compliance with the order and within seven days after the day the order has been served, he may file a written petition in the office of the board of health requesting a hearing. He shall be granted a hearing as soon as possible. The procedures for such hearing shall otherwise conform with the hearing requirements which would have existed had the order been issued under non-emergency circumstances.

(2) Emergency Powers of the Department. No provision of 310 CMR 11.00 shall be construed as a limitation on the emergency powers of the Department of Environmental Quality Engineering of the Commonwealth.

11.06: Enforcement by Department of Environmental Quality Engineering of the Commonwealth

(1) General. If as a result of any study, inspection, or survey made under 310 CMR 11.03 or under the provisions of any other title of 310 CMR, the Commissioner of Environmental Quality Engineering or his authorized representative determines that compliance with this code has not been effected, he shall, in writing, notify the appropriate board of health of such determination, allotting a reasonable time in which compliance shall be effected, and requesting that the board of health, in writing, notify the Commissioner of Environmental Quality Engineering of what action it has taken, and what other action has been taken to effect compliance with 310 CMR 11.00. If the Commissioner is not so notified, or if after notification he determines that action sufficient to effect compliance with the provisions of this code has not been taken, the local board of health shall be deemed to have failed to effect compliance with 310 CMR 11.00.

(2) Failure to Enforce Code by Board of Health. Whenever any local board of health has failed after a reasonable length of time to enforce 310 CMR 11.00, the Commissioner of Environmental Quality Engineering of the Commonwealth or his designated representative may act for the Commonwealth in any way that the local board of health is authorized to act to effect compliance.

11.07: Service of Orders

Unless otherwise stated in any title of this code, orders issued under the provisions of 310 CMR 11.00 shall be served on all persons responsible for the violation of regulations. These orders shall be served in the following manner:

- (a) personally, by any person authorized to serve civil process, or
- (b) by any person authorized to serve civil process by leaving a copy of the order at his last and usual place of abode, or
- (c) by sending him a copy of the order by registered or certified mail, return receipt requested, if he is within the Commonwealth, or
- (d) if his last and usual place of abode is unknown or outside the Commonwealth, by posting a copy of the order in a conspicuous place on or about the premises and by advertising it for at least three out of five consecutive days in one or more newspapers of general circulation within the municipality wherein the building or premises affected is situated.

11.08: Hearing

- (1) Procedure for Requesting and Holding Hearing. Unless otherwise specified in 310 CMR 11.00, the person or persons to whom any order has been served pursuant to any regulation of 310 CMR may request a hearing before the board of health by filing with the board of health within seven days after the day the order was served, a written petition requesting a hearing on the matter. Upon receipt of such petition, the board of health shall set a time and place for such hearing and shall inform the petitioner thereof in writing. The hearing shall be commenced not later than 30 days after the day on which the order was served. The board of health, upon application of the petitioner, may postpone the date of hearing for a reasonable time beyond such 30-day period if in the judgment of the board of health the petitioner has submitted a good and sufficient reason for such postponement.
- (2) Hearing of Petitioner. At the hearing the petitioner shall be given an opportunity to be heard and to show why the order should be modified or withdrawn.
- (3) Procedure by the Board After Hearing. After the hearing the board of health shall sustain, modify, or withdraw the order and shall inform the petitioner in writing of its decision. If the board of health sustains or modifies the order, it shall be carried out within the time period allotted in the original order or in the modification.
- (4) Public Record. Every notice, order, or other record prepared by the board of health in connection with the hearing shall be entered as a matter of public record in the office of the clerk of the city or town, or in the office of the board of health.
- (5) Hearing Petition Not Submitted, or Sustaining of Order. If a written petition for a hearing is not filed with the board of health within seven days after the day an order has been served or if after a hearing the order has been sustained in any part, each day's failure to comply with the order as issued or modified shall constitute an additional offense.

11.09: Appeal

Any person aggrieved by the final decision of the board of health with respect to the denial of plan approval, the denial of revocation or failure to renew a license, or with respect to any order issued under the provisions of 310 CMR 11.00 may seek relief therefrom in any court of competent jurisdiction, as provided by the laws of this Commonwealth.

11.10: Penalties

- (1) Interference After Search Warrant Presented. Any owner, occupant, or other person who refuses, impedes, inhibits, interferes with, restricts or obstructs entry and free access to every part of the structure, operation or premises where inspection authorized by 310 CMR 11.00 is sought after a search warrant has been obtained and presented in accordance with 310 CMR 11.03(2) shall be fined not less than \$10 nor more than \$500.
- (2) Failure to Comply With an Order. Any person who shall fail to comply with any order issued pursuant to the provisions of 310 CMR 11.00 shall upon conviction be fined not less than \$10 nor more than \$500. Each day's failure to comply with an order shall constitute a separate violation.
- (3) Penalties Not Otherwise Provided. Any person who shall violate any provision of 310 CMR 11.00 for which penalty is not otherwise provided in any of the General Laws or in any other provision of this code shall upon conviction be fined not less than \$10 nor more than \$500.

11.11: Variance

The board of health may vary the application of any provision of 310 CMR 11.00 with respect to any particular case when, in its opinion, the enforcement thereof would do manifest injustice; provided, that the decision of the board of health shall not conflict with the spirit of these minimum standards. Any variance granted by the board of health shall be in writing. A copy of any such variance shall, while it is in effect, be available to the public at all reasonable hours in the office of the clerk of the city or town, or in the office of the board of health, and notice of the grant of variance shall be filed with the Commissioner of Environmental Quality Engineering of the Commonwealth.

11.12: Variance, Grant of Special Permission: Expiration, Modification, Suspension of

Any variance or other modification authorized to be made by 310 CMR 11.00 may be subject to such qualification, revocation, suspension, or expiration as the board of health or Commissioner of Environmental Quality Engineering expresses in its grant. A variance or other modification authorized to be made by 310 CMR 11.00 may otherwise be revoked, modified, or suspended, in whole or in part, only after the holder thereof has been notified in writing and has been given an opportunity to be heard, in conformity with the requirements for an order and hearing of 310 CMR 11.07 and 11.08.

11.13: Partial Invalidity

If any Title, regulation, paragraph, sentence, clause, phrase, or word of 310 CMR 11.00 shall be declared invalid for any reason whatsoever, that decision shall not affect any other portion of 310 CMR 11.00, which shall remain in full force and effect; and to this end the provisions of 310 CMR 11.00 are hereby declared severable.

12.01: Introduction

(1) Authority. 310 CMR 12.00 is issued by the Department of Environmental Protection pursuant to the authority granted under M.G.L. c. 21A, § 2 (28).

(2) Purpose. 310 CMR 12.00 is promulgated in order to: (a) define and explain the language of M.G.L. c. 130, § 105, and (b) establish the general procedures under which the Department of Environmental Protection will exercise its responsibilities under M.G.L. c. 130, § 105.

It is the intent of the Department that 310 CMR 12.00 is to be used to preserve the public safety, health and welfare, private property, wildlife and marine fisheries. It is further intended that these goals shall be accomplished through the adoption of Orders imposing restrictions on the coastal wetlands of the Commonwealth. The Orders shall regulate, restrict, prohibit, control or abate certain specified activities or uses, including dredging, filling, removing, otherwise altering or polluting coastal wetlands. The Orders shall allow other specified activities and uses within these areas, subject to the applicable requirements of M.G.L. c. 131, § 40. Each Order as adopted shall apply to a specific city or town within which coastal wetlands are located.

It is also the intent of the Department that 310 CMR 12.00 be consistent with and form a part of the Commonwealth's Coastal Zone Management Program (hereinafter "CZM Program") as it has been promulgated and defined in 301 CMR 20.00 issued pursuant to M.G.L. c. 21A entitled "Establishment of the Coastal Zone Management Program by the Executive Office of Environmental Affairs". 310 CMR 12.00, however, is adopted independently under M.G.L. c. 130, § 105 and would remain in full force and effect in the absence of the CZM Program or 301 CMR 20.00.

The interpretation and application of 310 CMR 12.00 shall be consistent with the policies of the CZM Program to the maximum extent permissible under M.G.L. c. 130, § 105. 301 CMR 20.00 establish the CZM policies as part of the CZM Program, and the Department recognizes these policies as state environmental policy, which it will carry out in accordance with M.G.L. c. 21A. Specifically 301 CMR 20.99 Appendix, policies 1, 2, 3, 4, 5, 7, 9, and 10 are applicable to the administration of M.G.L. c. 130, § 105, but the provisions of the more specific regulations contained in 310 CMR 12.00 shall govern, unless the Secretary of Environmental Affairs (hereinafter "The Secretary") pursuant to the conflict resolution procedures of M.G.L. c. 21A, § 4, and 301 CMR 20.06(20) through 20.06(28), has resolved any conflict and has determined that the CZM policies should or should not apply.

(3) Coordination with the CZM Office and Local Governments: In accordance with 301 CMR 20.06, the Department shall notify the CZM Office at least 60 days beforehand of the adoption of any proposed Order and shall provide local government agencies with notice of the proposed Order at

least 30 days prior to its adoption.

12.01: continued

(4) Restriction of Areas of Critical Environmental Concern. Whenever the Secretary notifies the Commissioner that he has accepted the nomination of a coastal wetland for designation as an Area of Critical Environmental Concern (hereinafter "ACEC") in accordance with 301 CMR 20.06, the Commissioner shall, within 30 days of such acceptance, submit the following to the Secretary and to the Director of the Coastal Zone Management Office:

- (a) a narrative description of the current status of mapping activity and of any past or current wetlands restriction activity within the suggested boundaries of the nominated ACEC and within related contiguous upland areas within the coastal zone, as defined in 301 CMR 20.03;
- (b) a schedule for restricting the coastal wetlands in the nominated ACEC within 15 months of the Secretary's designation of the ACEC pursuant to 301 CMR 20.06.

In carrying out the restriction of the coastal wetlands of an ACEC within 15 months of its designation, the Department shall review the adequacy and consistency of all previously recorded restrictions within the ACEC and shall, as necessary, amend or modify and rerecord such restrictions to ensure full compliance with the management goals of the Secretary's designation of the ACEC.

If the Commissioner determines that the process of restricting all of the coastal wetlands in an ACEC cannot be completed within 15 months of designation, the Commissioner may request that the Secretary grant a one-time extension of up to 90 days.

12.02: Definitions

Act means M.G.L. c. 130, § 105.

Altering means causing change, directly or indirectly within any coastal wetland and includes, but is not limited to, one or more of the following actions:

- (a) changing pre-existing drainage characteristics, flushing characteristics, salinity distribution, sedimentation patterns, flow patterns and flood storage retention areas;
- (b) draining or otherwise disturbing surface or groundwater levels;
- (c) degrading water quality;
- (d) driving pilings or erecting buildings or structures of any kind;
- (e) placing any obstruction to water flow;
- (f) destroying plant life, including the cutting of trees;
- (g) discharging, releasing, or causing to be released, any contaminating materials, including sediments, from any source into a coastal wetland whether by overland flow or through a new or existing pipe or other conduit;
- (h) causing adverse effects to wildlife, shellfish or other marine fisheries, or to their habitat;
- (i) lowering, polluting, or otherwise changing the level, quantity, or quality of ground water by doing any work in a coastal wetland.

Amendment means any change in the allowed or prohibited activities or uses contained in any Order adopted under the Act; any addition to or deletion of, including any change in the definition of, the types of coastal wetlands defined in any Order; any addition to or deletion of any wetland areas; or any addition to any list of assessed owners adopted as part of the Order. An amendment shall not include a correction as defined in 310 CMR 12.02 Correction.

Assessed owner means the person to whom land within a coastal wetland affected by an Order was assessed in the last preceding annual tax levy.

Bank means the seaward face or side of any elevated landform which lies at the landward edge of a coastal beach, land subject to tidal action or coastal storm flowage, or any other coastal wetland.

Contiguous land means any area landward of and adjacent to any coastal wetland or low land subject to tidal action or coastal storm flowage, which the Commissioner deems necessary to include in any Order to protect any interest of M.G.L. c. 130, § 105.

Coastal wetland means any bank, marsh, swamp, meadow, flat or other low land subject to tidal action or coastal storm flowage and such contiguous land as the Commissioner deems necessary to

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

include in any Order pursuant to M.G.L. c. 130, § 105.

12.02: continued

Commissioner means the Commissioner of the Department of Environmental Protection.

Correction means any minor change in the location of the wetland boundary line on a plan, for the purpose of describing the correct wetland boundary, the substitution or deletion of any name or names from the list of assessed owners adopted as part of any order as long as this does not include the deletion of any wetland area, or any typographical, grammatical or other change which does not alter the sense or meaning of any Order.

Department means the Department of Environmental Protection.

Dredging means the removal of materials including, but not limited to, rocks, bottom sediments, debris, sand, refuse, plant or animal matter, in any excavating, grading, cleaning, deepening, widening or lengthening, either permanently or temporarily, of any coastal wetland. Dredging shall include improvement dredging and backfilling or other dredging and subsequent refilling.

Filling means the placing of any material that raises, either temporarily or permanently, the existing elevation of any coastal wetland.

Flat means any nearly level area which typically extends from the mean low water line landward to the more steeply sloping seaward face of the coastal marsh or other landform or which may be separated from the coastal marsh or other landform by tidal waters.

Improvement Dredging means any dredging under a license in an area which has not previously been dredged or which extends the original dredged width, depth, length, or otherwise alters the boundaries of a previously dredged area.

Land affected by an Order means any land that is subject to any restriction under an Order.

Low land subject to tidal action or coastal storm flowage means any land between mean low water or any other seaward boundary of the Commonwealth, and the landward boundary of the 100 year flood, as determined by the Department of Housing and Urban Development pursuant to the National Flood Insurance Program or by any other scientifically reliable determination. Such areas shall include, but not be limited to, land under salt ponds, land containing shellfish, rocky intertidal shores, coastal beaches, barrier beaches, coastal dunes, banks, marshes and flats.

Maintenance Dredging means dredging under a license in any previously dredged area which does not extend the originally dredged width, depth, or length, but does not mean improvement dredging or backfilling.

Marsh means a salt marsh or coastal wetland that extends landward up to the highest tide line, that is, the highest spring tide of the year, and is characterized by plants that are well adapted to or prefer living in saline soils. Dominant plants within salt marshes are salt meadow cord grass (*Spartina patens*) and/or salt marsh cord grass (*Spartina alterniflora*). A salt marsh may contain tidal creeks, ditches, and pools.

Meadow means any marsh as defined in 310 CMR 12.02 Marsh.

Mean low water line means the arithmetic mean of the low water heights observed over a specific 19-year Metonic cycle (the National Tidal Datum Epoch) and shall be determined using the nautical charts, harbor charts series (1:50,000 and larger), prepared by the National Ocean Survey, U.S. Department of Commerce. For those coastal areas not covered by such published harbor charts, the mean low water line shall be determined using hydrographic survey data obtainable from the National Ocean Survey.

Modification means any amendment as defined in 310 CMR 12.02 Amendment.

Order means any instrument issued by the Commissioner that imposes restrictions on any coastal

wetland in accordance with M.G.L. c. 130, § 105.

12.02: continued

Person means any individual, group of individuals, association, partnership, corporation, company, business organization, trust, estate, the Commonwealth or political subdivision thereof, any administrative agency, public or quasi-public corporation or body, or any other legal entity or its legal representative, agents or assigns.

Person having an interest means any assessed owner or any holder of record of an easement, covenant, restriction or any other property interest or any other holder of any such property interest known to the Commissioner.

Plan means a map made by surveying techniques, a line and symbol photogrammetric map or an orthophoto map, which meets National Map Accuracy Standards, upon which coastal wetlands are delineated.

Polluting means, but is not limited to, the discharge, release or flow of any product, by-product, material or waste resulting from sewage, sewage processing, or from any agricultural, industrial, commercial, or other man-made process, any man-made thermal discharge, run-off, leachate, or any other substance in any form, which is or can be drained, discharged or infiltrated, or otherwise introduced into any coastal wetland.

Removing means to take away any type of material that alters the elevation of any coastal wetland.

Repeal means the rescinding of any Order, including the plan or plans and list of assessed owners incorporated with the Order.

Restriction means any provision in any Order limiting activities or uses in or on coastal wetlands. A restriction shall be unlimited in time unless repealed.

Shellfish means, but is not limited to, the following species: Bay scallop (*Argopecten irradians*); Blue Mussel (*Mytilus edulis*); Ocean Quahaug (*Arctica islandica*); Oyster (*Crassostrea virginica*); Quahaug (*Mercenaria mercenaria*); Razor Clam (*Ensis directus*); Sea Clam (*Spisula solidissima*); Sea Scallop (*Placopecten magellanicus*); and Soft Shell Clam (*Mya arenaria*).

Swamp means any marsh as defined in 310 CMR 12.00.

Wetland area means any coastal wetland delineated by a continuous boundary line which encloses that wetland, or any coastal wetland for which the aquatic or seaward boundary is mean low water, and which may include lands held by more than one assessed owner.

12.03: Notice

Prior to adopting any Order under M.G.L. c. 30, § 105, the Commissioner shall first give notice, as provided below, of a preliminary informational meeting and a public hearing.

(1) Persons To Be Given Notice. The Department shall mail notice of the meeting and the hearing to the following persons by certified mail at their last known address, at least 14 days prior to the date of the preliminary informational meeting and at least 21 days prior to the date of the public hearing:

- (a) any assessed owner;
- (b) any person other than an assessed owner having an interest in any coastal wetland to be affected and whose name appears on an assessor's map;
- (c) any other person having a recorded interest in any coastal wetland to be affected and whose name and/or address is known to the Commissioner;
- (d) any person having an unrecorded interest in any coastal wetland to be affected and whose name and/or address is known to the Commissioner;
- (e) any person who has acquired, subsequent to the last annual tax levy, a fee simple interest in any coastal wetlands to be affected and whose name has been entered in the records of the assessor's office and is available to the Department at least 60 days prior to the date of the public hearing;

12.03: continued

(f) the State Reclamation Board, the Department of Public Works, the Department of Environmental Management, the Metropolitan District Commission, the Coastal Zone Management Office, other appropriate agencies of the Commonwealth, federal and local government, appropriate regional planning agencies, and to the Selectmen or Mayor, Conservation Commission, Planning Board and Assessors of the city or town in which the coastal wetlands to be affected are located.

The Commissioner shall give notice by regular mail to any person who has filed a written request to receive notice of public hearing to be held pursuant to the Act, and to any other person he may deem appropriate, at least 14 days prior to the date of the preliminary informational meeting and at least 21 days prior to the date of the public hearing.

Any of the notices required to be given pursuant to 310 CMR 12.03(1) shall be deemed to have been given upon mailing a copy of the notice. The number of days between the giving of notice and the date of the preliminary informational meeting and public hearing shall include Saturdays, Sundays and legal holidays.

(2) Publication of Notice. The Commissioner shall publish notice of the preliminary informational meeting and public hearing at least 14 days prior to the date of the preliminary informational meeting and at least 21 days prior to the date of the public hearing in a newspaper or newspapers of general circulation in the city or town in which the coastal wetlands to be affected are located, and, where appropriate, in such trade, industry or professional publications as the Commissioner may select.

(3) Posting of Notice. The Commissioner shall post notice of the preliminary informational meeting and public hearing at least 14 days prior to the date of the preliminary informational meeting and at least 21 days prior to the date of the public hearing in the city or town hall of the city or town in which coastal wetlands to be affected are located, and in any other location as determined by the Commissioner.

(4) Filing Notice With the Secretary of the Commonwealth. The Commissioner shall file notice of the public hearing with the Secretary of State at least 21 days prior to the date of the public hearing.

(5) Content of Notice. Notice, other than notice by publication, shall include, but shall not be limited to, the following information and materials:

- (a) A description of the Department's statutory authority to adopt Orders, a copy of the statute, M.G.L. c. 130, § 105, and a copy of the proposed Order.
- (b) A copy of an index map or portion of the proposed plan with the coastal wetland area or areas to be affected identified thereon.
- (c) Notice that the Department's wetland boundary delineation services are available to persons having an interest in land to be affected by the Order.
- (d) The time, place and location of the preliminary informational meeting and public hearing.
- (e) The name of the Commissioner or his agent or agents designated to receive inquiries or requests prior to the public hearing.
- (f) Notice that any person may submit written comments concerning the proposed Order to the Department, and/or request to speak at the hearing.

Notice published in newspapers or posted in the city or town hall or other public place pursuant to 310 CMR 12.03(15) shall include the items listed at 310 CMR 12.03(5)(c), (d), and (f), and may also contain a list of parcels within which coastal wetlands are located, and for which no assessed owner is known.

12.04: Preliminary Informational Meetings

The Commissioner shall, at least seven days prior to the date of the public hearing, hold a preliminary informational meeting in the city or town in which the coastal wetlands to be affected are located.

(1) Materials for Display and Inspection. The following information and materials shall be available for display and inspection:

12.04: continued

- (a) photogrammetric, line and symbol, or orthophoto maps depicting coastal wetland boundaries, or any other maps intended for use as plans;
- (b) aerial photographs of the coastal wetlands to be affected;
- (c) assessor's maps depicting the area to be affected;
- (d) a list of all persons who have been given notice of the preliminary informational meeting and the public hearing.

(2) Materials for Distribution. The following information and materials shall be available for distribution:

- (a) copies of M.G.L. c. 130, § 105 and 310 CMR 12.00;
- (b) copies of the proposed Order;
- (c) on-site inspection request forms as shown in Appendix A.

(3) Conduct of the Preliminary Informational Meeting. A representative of the Department shall be present at the preliminary informational meeting to distribute materials upon request, to answer questions concerning the location of proposed coastal wetland boundary lines, and if time permits, to answer other questions concerning the program.

12.05: Public Hearings

Prior to adopting any Order under M.G.L. c. 130, § 105, the Commissioner shall first hold a public hearing in the city or town in which the coastal wetlands to be affected are located.

The Commissioner or his agent designated as the Presiding Officer shall conduct the public hearing. Copies of all information and materials available at the preliminary informational meeting shall be available at the public hearing.

The Presiding Officer shall convene the public hearing. He or she or a representative of the Department shall first state the statutory authority under which the program operates, and shall explain the purpose of the program, effect of the proposed Order, and the Department's mapping, designating and recording procedures. The Presiding Officer shall inform persons having an interest in any affected coastal wetland of their right to request an on-site inspection and other procedures pursuant to 310 CMR 12.06.

The Presiding Officer shall specify the order of participation. Representatives of the Department shall speak first, followed by elected officials. Persons or groups representing agencies of the Commonwealth, federal agencies or local governments who have requested permission to speak shall proceed next, followed by those persons who have submitted requests to comment. Other persons who wish to speak may then proceed at the discretion of the Presiding Officer. The Presiding Officer shall have the right to limit the length of time of each presentation.

The Presiding Officer may entertain questions from the audience. The Presiding Officer shall have the authority to adjourn the public hearing and to continue it to another date.

A record of the public hearing shall be compiled by having the proceedings recorded by a stenographer or on tape.

12.06: Wetland Boundary Delineation Procedures

Any person having an interest in any affected coastal wetland (hereinafter referred to in 310 CMR 12.06 as the "requesting person") shall have the right to request a wetland boundary delineation in accordance with the procedures set forth below. Such a request may be made at any time subsequent to the Department's giving notice pursuant to 310 CMR 12.03 but not later than 14 days after the close of the public hearing record, unless good cause for the delay in making such a request can be shown to the Department.

(1) On-Site Inspections. The Department shall make available, for the purpose of requesting on-site inspections pursuant to 310CMR 12.06 request forms as shown in 310 CMR 12.22 Appendix A. These forms shall be available at the preliminary informational meeting and public hearing held pursuant to 310 CMR 12.00, and at the Wetlands Restriction Program Section of the Department's offices, during normal business hours, at 1 Winter Street, Boston, Massachusetts 02108.

12.06: continued

Completed request forms shall be sent to the Department at the above address. No form shall be deemed to be received unless properly completed, and improperly completed forms shall be returned.

The requesting person shall also contact the Department to arrange a time, date and meeting place for the on-site inspection. The location of the inspection shall be at the place or places specified on the request form.

The Department's representative shall meet with the requesting person at the agreed upon time, date and place.

The Department's representative shall indicate the location of the coastal wetland boundary on the site. The Department may, through its representative, conduct the on-site inspection without the requesting person, if the Department, prior thereto, has secured permission to do so from the requesting person.

The Department may answer any questions posed by the requesting person concerning the designation of the site inspected as land affected by an Order.

(2) Delineation of Coastal Wetlands on Assessor's Maps. The Department, if requested, shall send the requesting person a tracing or copy of the applicable portion of the assessor's map or maps indicating the location of the boundary of the affected coastal wetland in relation to the requesting person's land.

(3) Delineation of Coastal Wetlands on Plot Plans. The Department, if requested, shall indicate the location of the affected coastal wetland on an individual plot plan submitted by the requesting person to the Department.

12.07: Adoption of Orders

The Commissioner shall adopt Orders, including Amending, Modifying and Repealing Orders. No order shall be adopted until the close of the public hearing record.

12.08: Recording of Orders

The Commissioner, upon the adoption of any Order, including the adoption of any Amending, Modifying or Repealing Order shall record a copy of the Order, together with the plan and list of the assessed owners of land affected by the Order, in the registry of deeds or, if such coastal wetlands are registered, in the registry of the land court. The list of assessed owners shall include a reference to the book and page number in the registry where the deed for the affected parcel is recorded.

12.09: Notice of Orders

The Commissioner shall, following completion of the recording procedures pursuant to 310 CMR 12.08 send by certified mail a copy of the Order and plan to each person having an interest in coastal wetlands who was given notice and to the clerk and board of assessors of each city or town in which the affected coastal wetlands are located.

12.10: Recording in the Public Restriction Tract Index

If any county or district having coastal wetlands affected by an Order has established a Public Restriction Tract Index pursuant to M.G.L. c. 184, § 33, the Commissioner shall request that the Order, or any Amending, Modifying or Repealing Order, be indexed in the Public Restriction Tract Index for that county or district and that reference be made to the Order, list and plan. The Order shall be indexed pursuant to the statutory procedures established under M.G.L. c. 184, § 33 as most recently amended, and pursuant to the rules established by the Register of Deeds for the county or district.

12.11: Amending or Modifying Orders

Prior to adopting any Amending or Modifying Order under M.G.L. c. 130, § 105, the Commissioner shall first give notice as required by, and shall hold a public hearing pursuant to, 310 CMR 12.03 and 12.05. The Commissioner shall also conduct any boundary delineation procedures as required by 310 CMR 12.06.

Any Amending or Modifying Order shall be adopted and recorded in the manner required by 310 CMR 12.07 and 12.08 and a copy of the Amending or Modifying Order and plan shall be sent by certified mail to those assessed owners affected by the Amending or Modifying Order.

12.12: Repeal of Orders

Prior to adopting any Repealing Order under M.G.L. c. 130, § 105, the Commissioner shall first give notice in the manner required by 310 CMR 12.03 and shall hold a public hearing in the manner required by 310 CMR 12.05.

Any Repealing Order shall be adopted and recorded in the manner required by 310 CMR 12.07 and 12.08 and a copy of the Repealing Order and plan shall be sent by certified mail to those persons whose names appear on the list of assessed owners recorded with the Order being repealed.

12.13: Correcting Orders

Any person having an interest in coastal wetlands affected by any Order adopted pursuant to M.G.L. c. 130, § 105, and who has reason to believe that the wetland boundary line of his or her wetland has been incorrectly delineated on the plan which has been included with an Order, may request the Department to have the location of his or her boundary line redrawn on a corrected plan.

Upon receipt of the request, a representative of the Department shall, within 15 days, arrange to conduct an on-site field inspection. If the Department finds that the boundary line is incorrectly delineated, the Commissioner shall record, pursuant to the procedures provided in 310 CMR 12.08 and send to the person requesting the correction, a corrected plan with the new boundary delineated thereon. The Commissioner may also correct any typographical, grammatical or other errors contained in any Order by recording a copy of the corrected Order pursuant to the procedures provided in 310 CMR 12.08 and by sending a copy of the corrected Order to the assessed owner or person having an interest in coastal wetlands affected by the Order.

12.14: Monitoring Procedures

The Commissioner shall periodically examine the coastal wetlands affected by Orders.

In addition, any person who has an interest in any coastal wetland affected by an Order may request the Department of Environmental Protection to conduct a review. Upon receipt of the request, the Department shall conduct on-site inspection. If the Commissioner determines, following examination, that significant change has occurred in any such coastal wetland, the Department shall adopt an Amending, Modifying or Repealing Order or shall correct the Order pursuant to the procedures provided in 310 CMR 12.00.

12.15: Departmental Review of Orders

Any Conservation Commission, Mayor or Board of Selectmen may petition the Department to conduct a review to determine if an Order has been violated. Upon receipt of such a petition, the Department shall conduct an on-site inspection of the area and shall take such corrective measures as are warranted.

12.16: Judicial Review of Orders

Any person having an interest in land affected by any such Order, may within 90 days after receiving notice thereof, petition the Superior Court to determine whether such Order so restricts the use of his property as to deprive him of the practical uses thereof and is therefore an unreasonable exercise of the police power because the Order constitutes the equivalent of a taking without compensation.

If the court finds the Order to be an unreasonable exercise of the police power, and enters a finding that such Order shall not apply to the land of the petitioner, the Commissioner shall cause a copy of such finding to be recorded in the proper registry of deeds or, if the land is registered, in the registry district of the land court.

The Department may, after a finding has been entered that such Order shall not apply to certain land as provided in the preceding paragraph, take the fee or any lesser interest in such land in the name of the Commonwealth by eminent domain under the provisions of M.G.L. c. 79 and hold the same for the purposes set forth in 310 CMR 12.16.

12.17: Public Meetings

The Commissioner may, from time to time, hold public meetings in any municipality in which coastal wetlands are located, for the purpose of describing or explaining the status of the Coastal Wetlands Restriction Program or any other aspect of the Program.

12.18: Effect on Other Orders

All Orders adopted under M.G.L. c. 130, § 105 prior to the effective date of 310 CMR 12.00 shall remain in full force and effect.

12.19: Severability

If any provision of 310 CMR 12.00 is held to be invalid, such invalidity shall not affect any provision of 310 CMR 12.00 not specifically held to be invalid.

12.20: (Coastal): Storm Emergency Provisions in the Aftermath of TROPICAL STORM SANDY (ON OR ABOUT OCTOBER 28, 2012)

The terms of any restriction order adopted pursuant to M.G.L. c. 130, § 105, that are inconsistent with the provisions of 310 CMR 10.61: *Storm Emergency Regulations in the Aftermath of TROPICAL STORM SANDY (ON OR ABOUT OCTOBER 28, 2012)* shall not prohibit work undertaken in accordance with 310 CMR 10.61. Work initiated in accordance with 310 CMR 10.61 may continue until FEBRUARY 23, 2013 if an Emergency Certification pursuant to 310 CMR 10.06: *Emergencies* or 10.61 is granted not later than DECEMBER 26, 2012.

REGULATORY AUTHORITY

310 CMR 12.00: M.G.L. c. 21A, §§ 2(2), (5), (7), (9), (10), (11), (13), (15), (20) and (28).

- 13.22: Appendix A - Request for On-Site Inspection

13.01: Introduction

(1) Authority. 310 CMR 13.00 is issued by the Department of Environmental Protection pursuant to the authority granted under M.G.L. c. 21A, § 2(28).

(2) Purpose. 310 CMR 13.00 is promulgated in order to:

- (a) define and explain the language of M.G.L. c. 131, § 40A, and
- (b) establish the procedures under which the Department will exercise its responsibilities under M.G.L. c. 131, § 40A.

It is the intent of the Department that these definitions and procedures are to be used to preserve and promote the public safety, private property, wildlife, fisheries, water resources, flood plain areas and agriculture, and to prevent damage to the environment.

It is further intended that these goals shall be accomplished through the adoption of Orders imposing restrictions on the inland wetlands and flood plain areas of the Commonwealth. The Orders shall regulate, restrict, or prohibit certain specified activities or uses, including dredging, filling, removing or otherwise altering or polluting inland wetlands and shall establish encroachment lines along waterways or flood-prone areas beyond which in the direction of the waterway or flood-prone area, no obstruction or encroachment shall be placed unless authorized by the Commissioner of the Department of Environmental Protection.

It is also the intent of the Department that, where inland wetlands and flood plain areas occur within the boundary of the Massachusetts coastal zone as defined in the Commonwealth's Coastal Zone Management Program (hereinafter "CZM Program"), 310 CMR 13.00 be consistent with and form a part of the CZM Program as it has been promulgated and defined in 301 CMR 20.00 issued pursuant to M.G.L. c. 21A entitled "Establishment of the Coastal Zone Management Program by the Executive Office of Environmental Affairs". 310 CMR 13.00, however, is adopted independently under M.G.L. c. 131, § 40A and would remain in full force and effect in the absence of the CZM Program or 301 CMR 20.00.

The interpretation and application of 310 CMR 13.00 to inland wetlands and flood plain areas within the boundary of the coastal zone shall be consistent with the policies of the CZM Program to the maximum extent permissible under M.G.L. c. 131, § 40A; except when to do so would require an act impermissible at law, or where the Secretary of Environmental Affairs, pursuant to the conflict resolution procedures of M.G.L. c. 21A, § 4 and 301 CMR 20.06, has resolved any conflict and has

determined that the CZM policies should or should not apply.

13.01: continued

(3) Coordination with the CZM Office and Local Governments. If inland wetlands and flood plain areas proposed for restriction occur within the Coastal Zone, as defined in 301 CMR 20.03 the Department, in accordance with 301 CMR 20.06, shall notify the CZM Office at least 60 days beforehand of the adoption of any proposed Order and shall provide local government agencies with notice of the proposed Order at least 30 days prior to its adoption.

(4) Restriction of Areas of Critical Environmental Concern. Whenever the Secretary notifies the Commissioner that he has accepted the nomination of an inland wetland or flood plain area for designation as an Area of Critical Environmental Concern (hereinafter "ACEC"), the Commissioner shall, within 30 days of such acceptance, submit the following to the Secretary, and to the Director of the Coastal Zone Management Office if the nominated inland wetland or flood plain area lies within the coastal zone as defined in 301 CMR 20.03:

(a) a narrative description of the current status of mapping activity and of any past or current wetlands restrictions activity within the suggested boundaries of the nominated ACEC.

(b) a schedule for restricting the inland wetlands and flood plain areas in the nominated ACEC within 15 months of the Secretary's designation of the ACEC. In carrying out the restriction of the inland wetlands and flood plain areas of an ACEC within 15 months of its designation, the Department shall review the adequacy and consistency of all previously recorded restrictions within the ACEC and shall, as necessary, amend or modify and rerecord such restrictions to ensure full compliance with the management goals of the Secretary's designation of the ACEC.

If the Commissioner determines that the process of restricting all of the inland wetlands and flood plain areas in an ACEC cannot be completed within 15 months of designation, the Commissioner may request that the Secretary grant a one-time extension of up to 90 days.

13.02: Definitions

Act means M.G.L. c. 131, § 40A.

Agriculture purposes means one or more of the following activities or uses: raising, breeding or producing a specified type of animal or vegetable life, including, but not limited to, dairy cattle, beef cattle, poultry, sheep, swine, horses, ponies, mules, goats, bees, fur-bearing animals, and fruits, vegetables, berries, nuts and other foods for human consumption, feed for animals, tobacco, flowers, sod, trees, nursery or green house products, forest products, and ornamental plants, shrubs, fish and shellfish, provided that such activity or use results in or is or was clearly intended to result in a product of demonstrable market value.

Altering means causing change, directly or indirectly within any inland wetland or flood plain area and includes, but is not limited to, one or more of the following actions:

(a) changing pre-existing drainage characteristics, flushing characteristics, salinity distribution, sedimentation patterns, flow patterns and flood storage retention areas;

(b) draining or otherwise disturbing surface or groundwater levels;

(c) degrading water quality;

(d) driving pilings or erecting buildings or structures of any kind;

(e) placing any obstruction to water flow;

(f) destroying plant life, but not including the limbing of trees;

(g) discharging, releasing, or causing to be released, any contaminating materials, including sediments, from any source directly into any inland wetland or flood plain area whether by overland flow or through a new or existing pipe or other conduit;

(h) causing adverse effects to wildlife, inland fisheries, or to their habitat;

(i) lowering, polluting, or otherwise changing the level, quantity, or quality of ground water by doing any work in an inland wetland or flood plain area.

13.02: continued

Amendment means any change in the allowed or prohibited activities or uses contained in any Order adopted under M.G.L. c. 131, § 40A; any addition to or deletion of, including any change in the definition of, the types of inland wetlands defined in any Order; any addition to or deletion of any wetland or flood plain area; any change in the location of any wetland boundary or encroachment line which does not constitute a correction; or any addition to any list of assessed owners adopted as part of the Order. An amendment shall not include a correction as defined in 310 CMR 13.02.

Assessed owner means the person to whom land within an inland wetland or flood plain area affected by an Order was assessed in the last preceding annual tax levy.

Bank means the contiguous upland slope landward of any inland water or freshwater wetland up to and including the crest of the slope, which may or may not include vegetation characteristic of transitional zones (ecotones) or plant communities immediately adjacent to any inland water or freshwater wetland.

Commissioner means the Commissioner of the Department of Environmental Protection.

Correction means any minor change in the location of the inland wetland or flood plain area boundary or encroachment line on a plan, the substitution or deletion of any name or names from the list of assessed owners adopted as part of any Order, or any typographical, grammatical or other correction which does not change the sense or meaning of any Order.

Department means the Department of Environmental Protection.

Dredging means the removal of materials including, but not limited to, rock, bottom sediment, debris, loam, peat, soil, sand, refuse, plant or animal matter, in any excavating, grading, cleaning, deepening, widening or lengthening, either permanently or temporarily, of any inland wetland or flood plain area. Dredging shall include improvement dredging, maintenance dredging, back-filling or other dredging and subsequent refilling.

Encroachment Line means any boundary line which is based upon an inland wetland boundary line beyond which no structures or other encroachments may be established in the direction of the waterway or flood-prone area.

Filling means the placing of any material that raises, either temporarily or permanently, the existing elevation of any inland wetland or flood plain area.

Flood Plains, means for the purposes of M.G.L. c. 131, § 40A, inland wetlands that are subject to flooding, and normally dry land areas which are subject to a general and temporary condition of partial or complete inundation by runoff from surface water or by overflow of inland waters. Flood plains or flood plain areas may further include those areas of land which have been designated as being within the 100-year flood as determined by the Office of Federal Insurance and Hazard Mitigation within the Federal Emergency Management Agency.

Flood Plain Area means any inland wetland or flood plain delineated by a continuous boundary line which encloses that area.

Flooding means a local and temporary inundation or rise in the surface water level of any inland water such that it inundates or overflows land not usually under water.

Inland Wetlands means "freshwater wetlands" as defined in M.G.L. c. 131, § 40 and that portion of any bank which touches any inland waters or any freshwater wetland, and any freshwater wetland subject to flooding.

Improvement Dredging means any dredging in an area which has not previously been dredged or which extends the original dredged width, depth, length, or otherwise alters the original boundaries of a previously dredged area.

13.02: continued

Inland Wetland affected by an Order means any inland wetland or flood plain area that is subject to any restriction under an Order.

Modification means any amendment as defined in 310 CMR 13.02 Amendment.

Obstruction or Encroachment shall be defined as including, but not limited to, any structure, building, fence, wall, fixture, or other barrier.

Maintenance Dredging means any dredging under a License in any previously dredged area which does not extend the originally dredged width, depth, or length, but does not mean improvement dredging or backfilling.

National Map Accuracy Standards means meeting or exceeding the map accuracy standards established by the U.S. Bureau of the Budget on June 10, 1941, as revised April 26, 1943 and June 17, 1947, and as amended from time to time. For maps on publication scales larger than 1:20,000, not more than 10% of the points tested may be in error by more than 1/30 inch (0.846mm) measured on the publication scale; for maps on publication scales of 1:20,000 or smaller, 1/50 inch (0.508mm). These limits of accuracy shall apply in all cases to positions of well-defined points only. Well-defined points are those that are easily visible or recoverable on the ground. In general, what is well-defined will also be determined by what is plottable on the scale of the map within 1/100 inch (0.254mm).

Order means any instrument issued by the Commissioner that imposes restrictions on any inland wetland or flood plain area in accordance with M.G.L. c. 131, § 40A.

Person means any individual, group of individuals, association, partnership, corporation, company, business organization, trust, estate, the Commonwealth or political subdivision thereof, any administrative agency, public or quasi-public corporation or body or any other legal entity or its legal representative, agents or assigns.

Person having an ownership interest means any assessed owner or any record holder of an easement, covenant, restriction or any other ownership interest, any lessee holding a lease of 25 years length or more and any mortgagor.

Plan means a map made by surveying techniques, a line and symbol photogrammetric map or an orthophoto map, which meets National Map Accuracy Standards, upon which inland wetlands and flood plain areas are delineated.

Polluting means, but is not limited to, the discharge, release or flow of any product, by-product, material or waste resulting from sewage, sewage processing, or from any industrial, commercial, or other man-made process, any man-made thermal discharge, run-off, leachate, or any other substance in any form, which is or can be drained, discharged or infiltrated, or otherwise introduced into any inland wetland or flood plain area, or any discharge or release of agricultural waste or chemicals for non-agricultural purposes.

Removing means to take away any type of material that alters the elevation of any inland wetland or flood plain area.

Repeal means the rescinding of any Order, including the plan or plans and list of assessed owners incorporated with the Order.

Restriction means any provision in any Order limiting activities or uses in or on inland wetlands or flood plain areas.

Wetland area means any inland wetland or flood plain delineated by a continuous boundary line which encloses that area.

13.03: Notice

Prior to adopting any Order under M.G.L. c. 131, § 40A, the Commissioner shall first give notice, as provided below, of a preliminary informational meeting and a public hearing.

(1) Persons To Be Given Notice. The Department shall mail notice of the meeting and the hearing to the following persons by certified mail at their address as listed in the assessor's records, at least 14 days prior to the date of the preliminary informational meeting and at least 21 days prior to the date of the public hearing:

- (a) any assessed owner, unless a different owner or different address is known to the Commissioner to be the correct one, in which case the notice shall be so addressed;
- (b) any person, other than an assessed owner, having an ownership interest in any inland wetland or flood plain area to be affected and whose name appears in the assessor's records; (c) any person who has acquired, subsequent to the last annual tax levy, an ownership interest in any inland wetland or flood plain area to be affected and whose name has been entered in the records of the assessor's office and is available to the Department at least 60 days prior to the date of the public hearing;

(d) the State Reclamation Board, the Department of Public Works, the Department of Environmental Management, the Metropolitan District Commission, the Coastal Zone Management Office, other agencies of the Commonwealth, federal and local government as the Commissioner deems appropriate regional planning agencies within the area to be affected, and to the Selectmen or Mayor, Conservation Commission, Planning Board and Assessors of the city, town or watershed region in which the inland wetlands or flood plain areas to be affected are located.

The Commissioner shall give notice by regular mail to any person who has filed a written request to receive notice of public hearings to be held pursuant to M.G.L. c. 131, § 40A, and to any other person he may deem appropriate, at least 14 days prior to the date of the preliminary informational meeting and at least 21 days prior to the date of the public hearing.

Any of the notices required to be given pursuant to 310 CMR 13.03(1) shall be deemed to have been given upon mailing a copy of the notice. The number of days between the giving of notice and the date of the preliminary informational meeting and public hearing shall include Saturdays, Sundays and legal holidays.

(2) Publication of Notice. The Commissioner shall publish notice of the preliminary informational meeting and public hearing at least 14 days prior to the date of the preliminary informational meeting and at least 21 days prior to the date of the public hearing in a newspaper or newspapers of general circulation in the city, town or watershed region in which the inland wetlands or flood plain areas to be affected are located, and where appropriate, in such trade, industry or professional publications as the Commissioner may select.

(3) Posting of Notice. The Commissioner shall post notice of the preliminary informational meeting and public hearing at least 14 days prior to the date of the preliminary informational meeting and at least 21 days prior to the date of the public hearing in the city or town hall of the city or town in which inland wetlands or flood plain areas to be affected are located, and in any other location as determined by the Commissioner.

(4) Filing Notice With the Secretary of the Commonwealth. The Commissioner shall file notice of the public hearing with the Secretary of State at least 21 days prior to the date of the public hearing.

(5) Content of Notice. Notice, other than notice by publication, shall include, but need not be limited to, the following information and materials:

- (a) A description of the Department's statutory authority to adopt Orders, a copy of the statute,

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

M.G.L. c. 131, § 40A, and a copy of the proposed Order.

(b) A copy of an index map or portion of the proposed plan with the inland wetland or flood plain area or areas to be affected identified thereon.

(c) Notice that the Department's wetland boundary delineation services are available to persons having an ownership interest in land to be affected by the Order.

(d) The time, place and location of the preliminary informational meeting and public hearing.

13.03: continued

(e) The name of the Commissioner or his agent or agents designated to receive inquiries or requests prior to the public hearing.

(f) Notice that any person may submit written comments concerning the proposed Order to the Department, and/or request to speak at the hearing.

Notice published in newspapers or posted in the city or town hall or other public place pursuant to 310 CMR 13.03(5) shall include the items listed in 310 CMR 13.03(5)(c), (d), and (f), and may also contain a list of parcels within which inland wetlands or flood plain areas are located, and for which no assessed owner is known.

13.04: Preliminary Informational Meetings

The Commissioner shall, at least seven days prior to the date of the public hearing, hold a preliminary informational meeting in a city or town in which the inland wetlands or flood plain areas to be affected are located.

(1) Materials for Display and Inspection. The following information and materials shall be available for display and inspection:

- (a) photogrammetric, line and symbol, or orthophoto maps depicting inland wetland or flood plain area boundaries or encroachment lines, or any other maps intended for use as plans;
- (b) aerial photographs of the inland wetlands or flood plain areas to be affected;
- (c) assessor's maps depicting the area to be affected;
- (d) a list of all persons who have been given notice of the preliminary informational meeting and the public hearing.

(2) Materials for Distribution. The following information and materials shall be available for distribution:

- (a) copies of M.G.L. c. 131, § 40A and 310 CMR 13.00;
- (b) copies of the proposed Order;
- (c) on-site inspection request forms as shown in Appendix A.

(3) Conduct of the Preliminary Informational Meeting. A representative of the Department shall be present at the preliminary informational meeting to distribute materials upon request, to answer questions concerning the location of proposed inland wetland or flood plain area boundary lines or encroachment lines, and if time permits, to answer other questions concerning the program.

13.05: Public Hearings

Prior to adopting any Order under M.G.L. c. 131, § 40A, the Commissioner shall first hold a public hearing in a city or town in which the inland wetlands or flood plain areas to be affected are located.

The Commissioner or his agent designated as the Presiding Officer shall conduct the public hearing. Copies of all information and materials available at the preliminary informational meeting shall be available at the public hearing.

The Presiding Officer shall convene the public hearing. He or she or a representative of the Department shall first state the statutory authority under which the program operates, and shall explain the purpose of the program, effect of the proposed Order, and the Department's mapping, designating and recording procedures. The Presiding Officer shall inform persons having an ownership interest in any affected inland wetland or flood plain area of their right to request an onsite inspection and other procedures pursuant to 310 CMR 13.07.

The Presiding Officer shall specify the order of participation. Representatives of the Department shall speak first, followed by elected officials. Persons or groups representing agencies of the Commonwealth, federal agencies or local governments who have requested permission to speak shall proceed next, followed by those persons who have submitted requests to comment. Other persons who wish to speak may then proceed at the discretion of the Presiding Officer. The Presiding Officer shall have the right to limit the length of time for each presentation.

13.05: continued

The Presiding Officer may entertain questions from the audience. The Presiding Officer shall have the authority to adjourn the public hearing and to continue it to another date.

A record of the public hearing shall be compiled by having the proceedings recorded by a stenographer or on tape.

Findings will be made by the Presiding Officer and recommendations based on said findings submitted to the Commissioner within four weeks following the public hearing.

13.06: Combined Inland and Coastal Wetlands Preliminary Informational Meetings and Public Hearings

Where coastal wetlands within a city or town are also concurrently proposed for restriction under M.G.L. c. 130, § 105, the preliminary informational meeting and public hearing required under that statute shall also serve as the preliminary informational meeting and public hearing required under M.G.L. c. 131, § 40A.

13.07: Wetland or Flood Plain Boundary or Encroachment Line Delineation Procedures

Any person having an ownership interest in any affected inland wetland or flood plain area, (hereinafter referred to in 310 CMR 13.07 as the "requesting person") shall have the right to request a wetland, flood plain boundary or encroachment line delineation in accordance with the procedures set forth below.

Prior to the adoption of any Order, such a request may be made at any time subsequent to the Department's giving notice pursuant to 310 CMR 13.03, but not later than 14 days after the close of the public hearing record, unless good cause for the delay in making such a request can be shown to the Department.

Subsequent to the adoption of any Order, such a request may be made only for good cause shown.

(1) On-Site Inspections. The Department shall make available, for the purpose of requesting on-site inspections pursuant to 310 CMR 13.07, request forms as shown in Appendix A of 310 CMR 13.00. These forms shall be available at the preliminary informational meeting and public hearing held pursuant to 310 CMR 13.00, and at the Wetlands Restriction Program of the Department's offices, during normal business hours, at 1 Winter Street, Boston, Massachusetts 02108.

Completed request forms shall be sent to the Department at the above address. No form shall be deemed to be received unless properly completed, and improperly completed forms shall be returned.

The requesting person shall also contact the Department to arrange a time, date and meeting place for the on-site inspection. The location of the inspection shall be at the place or places specified on the request form.

The Department's representative shall meet with the requesting person at the agreed upon time, date and place.

The Department's representative shall indicate the location of the inland wetland and flood plain boundary or encroachment line on the site. The Department may, through its representative, conduct the on-site inspection without the requesting person, if the Department, prior thereto, has secured permission to do so from the requesting person.

The Department may answer any questions posed by the requesting person concerning the designation of the site inspected as land affected by an Order.

(2) Delineation of Inland Wetlands, Flood Plain Areas or Encroachment Lines on Assessor's Maps. The Department, if requested, shall send the requesting person a tracing or copy of the applicable portion of the assessor's map or maps indicating the location of the inland wetland or flood plain boundary or encroachment line of the affected land in relation to the requesting person's land. The Department does not accept responsibility for the accuracy of any assessor's map or maps.

(3) Delineation of Inland Wetlands, Flood Plain Areas or Encroachment Lines on Plot Plans. The Department, if requested, shall indicate the location of the boundary of the inland wetland or flood plain area, or encroachment line on an individual plot plan submitted by the requesting person to the Department. The Department does not accept responsibility for the accuracy of any plot plan submitted.

13.08 Adoption of Orders

The Commissioner shall adopt Orders, including Amending, Modifying and Repealing Orders. No Order shall be adopted for any city or town until it is approved by the Selectmen or City Council of the city or town in which the inland wetlands or flood plains are located; provided, that if the Selectmen or the City Council fail to approve or disapprove in writing, stating reasons for the disapproval of the proposed Order within 30 days after receipt of a written request from the Commissioner, such Order shall be deemed to have been approved, and provided, further, if such Order is so disapproved the Commissioner may, after expiration of six months from the date of such disapproval and after due consideration of the reasons for such disapproval, adopt such order.

No order shall be adopted until the close of the public hearing record.

13.09: Recording of Orders

The Commissioner, upon the adoption of any Order, including the adoption of any Amending, Modifying or Repealing Order shall record a copy of the Order, together with the plan and list of the assessed owners of land affected by the Order, in the registry of deeds or, if such inland wetlands or flood plain areas are registered, in the registry of the land court. The list of assessed owners shall include a reference to the book and page number in the registry where the deed for the affected parcel is recorded.

The Commissioner shall also cause the Order to be marginally referenced to the deeds of the list of assessed owners of land affected by the Order.

13.10: Notice of Orders

The Commissioner shall, following completion of the recording procedures pursuant to 310 CMR 13.09, send by certified mail a copy of the Order and plan to each person having an interest in wetlands who was given notice and to the clerk and board of assessors of each city or town in which the affected wetlands are located.

13.11: Recording in the Public Restriction Tract Index

If any county or district having inland wetlands or flood plain areas affected by an Order has established a Public Restriction Tract Index pursuant to M.G.L. c. 184, § 33, the Commissioner shall request that the Order or any Amending, Modifying or Repealing Order, be indexed in the Public Restriction Tract Index for that county or district and that reference be made to the Order, list and plan. The Order shall be indexed pursuant to the statutory procedures established under M.G.L. c. 184, § 33 as most recently amended, and pursuant to the rules established by the Register of Deeds for the county or district.

13.12: Amending or Modifying Orders

Prior to adopting any Amending or Modifying Order under M.G.L. c. 131, § 40A, the Commissioner shall first give notice as required by, and shall hold a public hearing pursuant to, 310 CMR 13.03 and 13.05. The Commissioner shall also conduct any boundary delineation procedures as required by 310 CMR 13.07.

Any Amending or Modifying Order shall be adopted and recorded in the manner required by 310 CMR 13.08 and 13.09, and a copy of the Amending or Modifying Order and plan shall be sent by certified mail to those assessed owners affected by the Amending or Modifying Order.

13.13: Repeal of Orders

Prior to adopting any Repealing Order under M.G.L. c. 131, § 40A, the Commissioner shall first give notice in the manner required by 310 CMR 13.05.

Any Repealing Order shall be adopted and recorded in the manner required by 310 CMR 13.08 and 13.09 and a copy of the Repealing Order and plan shall be sent by certified mail to those persons whose names appear on the list of assessed owners recorded with the Order being repealed.

13.14: Correcting Orders

Any person having an ownership interest in inland wetlands or flood plain areas affected by any Order adopted pursuant to M.G.L. c. 131, § 40A, and who has reason to believe that the wetland or flood plain boundary or encroachment line of his or her wetland or flood plain areas has been incorrectly delineated on the plan which has been included with an Order, may request the Department to have the location of his or her boundary or encroachment line redrawn on a corrected plan.

Upon receipt of the request, a representative of the Department shall, within 15 days, arrange to conduct an on-site field inspection. If the Department finds that the boundary or encroachment line is incorrectly delineated, the Commissioner shall record, pursuant to the procedures provided in 310 CMR 13.09 and send to the person requesting the correction, a corrected plan with the new boundary or encroachment line delineated thereon. The Commissioner may also correct any typographical, grammatical or other errors contained in any Order by recording a copy of the corrected Order pursuant to the procedures provided in 310 CMR 13.09 and by sending a copy of the corrected Order to the assessed owner or person having an ownership interest in inland wetlands or flood plain areas affected by the Order.

13.15: Monitoring Procedures

The Commissioner shall periodically review and examine the inland wetlands affected by Orders.

In addition, any person who has an interest in any inland wetland or flood plain area affected by an Order may request the Department of Environmental Protection to conduct a review. Upon receipt of the request, the Department shall conduct an on-site inspection. If the Commissioner determines, following examination, that significant change has occurred in any such inland wetland or flood plain area, the Department shall adopt an Amending, Modifying or Repealing Order or shall correct the Order pursuant to the procedures provided in 310 CMR 13.00.

13.16: Department Review of Orders

Any Conservation Commission, Mayor or Board of Selectmen may petition the Department to conduct a review to determine if an Order has been violated. Upon receipt of such a petition, the Department shall conduct an on-site inspection of the area and shall take corrective measures as are warranted. Any abutter or other person having an interest in any inland wetland affected by an Order may request a review to determine if an Order has been violated, to be granted at the discretion of the Department.

13.17: Judicial Review of Orders

Any person having an ownership interest, any lessee holding lease of 25 years length or more, and any mortgagor having an interest in land affected by any such Order, may within 90 days after receiving notice thereof, petition the Superior Court to determine whether such Order so restricts the use of his property as to deprive him of the practical uses thereof and is therefore an unreasonable exercise of the police power because the Order constitutes the equivalent of a taking without compensation.

If the court finds the Order to be an unreasonable exercise of the police power, and enters a finding that such Order shall not apply to the land of the petitioner, the Commissioner shall cause a copy of such finding to be recorded in the proper registry of deeds or, if the land is registered, in the registry district of the land court.

The Department may, after a finding has been entered that such Order shall not apply to certain land as provided in the preceding paragraph, take the fee or any lesser interest in such land in the name of the Commonwealth by eminent domain under the provisions of M.G.L. c. 79 and hold the same for the purposes set forth in 310 CMR 13.17.

13.18: Public Meetings

The Commissioner may, from time to time, hold public meetings in any municipality in which inland wetlands or flood plain areas are located, for the purpose of describing or explaining the status of the Inland Wetlands Restriction Program or any other aspect of the Program.

13.19: Effect on Other Orders

All Orders adopted under M.G.L. c. 131, § 40A prior to the effective date of 310 CMR 13.00 shall remain in full force and effect.

13.20: Existing Structures

Any existing buildings or structure within an area subject to an Order of Restriction may continue to exist and may be repaired and maintained.

Any existing building or structure which is accidentally destroyed, may be rebuilt on the same location but no larger than the original overall dimensions.

13.21: Severability

If any provision of 310 CMR 13.00 is held to be invalid, such invalidity shall not affect any provision of 310 CMR 13.00 not specifically held to be invalid.

13.23: (Inland): Storm Emergency Provisions in the Aftermath of TROPICAL STORM SANDY (ON OR ABOUT OCTOBER 28, 2012)

The terms of any restriction order adopted pursuant to M.G.L. c. 131, § 40A, that are inconsistent with the provisions of 310 CMR 10.61: *Storm Emergency Regulations in the Aftermath of TROPICAL STORM SANDY (ON OR ABOUT OCTOBER 28, 2012)* shall not prohibit work undertaken in accordance with 310 CMR 10.61. Work initiated in accordance with 310 CMR 10.61 may continue until FEBRUARY 23, 2013 if an Emergency Certification pursuant to 310 CMR 10.06: *Emergencies* or 10.61 is granted not later than DECEMBER 26, 2012.

REGULATORY AUTHORITY

310 CMR 13.00: M.G.L. c. 21A, §§ 2(2), (3), (5), (7), (9), (10), (11), (13), (15), (20) and (28).

Appendix 1: Model Grant of Title 5, Covenant and Easement

SUBPART A: GENERAL PROVISIONS AND ENFORCEMENT

15.001: Purpose, Authority and Related Provisions

- (1) The purpose of Title 5, 310 CMR 15.000, of the State Environmental Code is to provide for the protection of public health, safety, welfare and the environment by requiring the proper siting, construction, upgrade, and maintenance of on-site sewage disposal systems and appropriate means for the transport and disposal of septage.
- (2) 310 CMR 15.000 is promulgated pursuant to the authority of M.G.L. c. 21A, § 13.
- (3) The provisions of 310 CMR 15.000 should be read together with 314 CMR 5.00: *Ground Water Discharge Permit Program* which applies to all discharges to ground of sanitary sewage.
- (4) Title 5, 310 CMR 15.000, should be read together with M.G.L. c. 21A, §§ 13 and 13A, M.G.L. c. 21 §§ 26 through 53, M.G.L. c. 111, §§ 17, 27, 27A, 27B, 27C, 30, 31, 31A, 31B, 31C, 31D, 31E, 122, 124, 125, 125A, 127, 127A, 127P, 127B and 129; M.G.L. c. 83, § 11; M.G.L. c. 131, § 40; St. 1996, c. 204, § 148; and St. 2002, c.176; St. 2004, c. 149, § 39.

15.002: Definitions

For the purposes of 310 CMR 15.000, the following terms shall have the following meanings, unless the context clearly requires otherwise. Terms expressed in the singular shall be construed to incorporate the plural, and vice versa, unless the context otherwise requires.

1978 Code - Title 5 of the State Environmental Code, 310 CMR 15.000, as revised and in effect as of 1978.

15.002: continued

Acre - a unit of land measure equal to 40,000 square feet which is considered a building acre in accordance with standard real estate practices.

Agency - an agency, department, board, commission or authority of the Commonwealth or of the federal government and any authority of any political subdivision, which is specifically created as an authority under special or general law. The term shall not include housing authorities permitted pursuant to M.G.L. c. 40A.

Alternative Systems - Systems designed to provide or enhance on site sewage disposal which either do not contain all of the components of an on site disposal system constructed in accordance with 310 CMR 15.100 through 15.255 or which contain components in addition to those specified in 310 CMR 15.100 through 15.255 and which are proposed to the Local Approving Authority and/or the Department, or an agent authorized by the Department, for remedial, pilot, provisional, or general use approval pursuant to 310 CMR 15.280 through 15.289.

Approved Capacity - The capacity of a 1978 Code system reflected by the sewage flow as shown on the Disposal Works Construction Permit Application or as shown on the Certificate of Compliance, whichever is less for that system and not the calculated capacity based on 1978 Code loading rates which may account for overdesign or safety factors. For a system designed in accordance with 310 CMR 15.000, the approved calculated capacity is based on the loading rates found at 310 CMR 15.242.

Approving Authority - A Local Approving Authority as defined in 310 CMR 15.002; or the Department, with regard to systems owned or operated by an agency of the Commonwealth or of the federal government, systems serving a facility with a design flow of 10,000 gallons per day or greater, systems subject to a variance granted under 310 CMR 15.416, or on a case by case basis as determined by the Department to be necessary to carry out the purposes of 310 CMR 15.000; or the Department with regard to alternative systems proposed in compliance with 310 CMR 15.280 through 15.289.

ASTM - The American Society of Testing and Materials.

Authorized Agent - A person or entity authorized in writing by the Department to act on its behalf in the implementation and oversight of responsibilities, as identified in 310 CMR 15.000.

Bank (Coastal) - Any land or surface area so defined by the Massachusetts Wetlands Protection Act, M.G.L. c. 131, § 40 and 310 CMR 10.30(2). Generally, the seaward face or side of any elevated landform, other than a coastal dune, which lies at the landward edge of a coastal beach, land subject to tidal action, or other wetland.

Bank (Inland) - Any land or surface area so defined by the Massachusetts Wetlands Protection Act, M.G.L. c. 131, § 40 and 310 CMR 10.54(2). Generally, a portion of the land surface which normally abuts and confines a water body.

Barrier Beach - Any land or surface area so defined by the Massachusetts Wetlands Protection Act, M.G.L. c. 131, § 40 and 310 CMR 10.29(2). Generally, a narrow low-lying strip of land generally consisting of coastal beaches and coastal dunes extending roughly parallel to the trend of the coast, separated from the mainland by a narrow body of fresh, brackish, or saline water or a marsh system.

Bedrock - Solid rock exposed at the surface or overlain by unconsolidated gravel, sand, silt and/or clay. Bedrock includes weathered or saprolitic components thereof. Bedrock types are defined and most of their areal extent are described in the "Bedrock Geologic Map of Massachusetts" published by the Massachusetts Department of Public Works (1983).

Bedroom - A room providing privacy, intended primarily for sleeping and consisting of all of the following:

- (a) floor space of no less than 70 square feet;
- (b) for new construction, a ceiling height of no less than seven feet three inches;

15.002: continued

- (c) for existing houses and for mobile homes, a ceiling height of no less than seven feet zero inches;
- (d) an electrical service and ventilation; and
- (e) at least one window.

Living rooms, dining rooms, kitchens, halls, bathrooms, unfinished cellars and unheated storage areas over garages are not considered bedrooms. Single family dwellings shall be presumed to have at least three bedrooms. Where the total number of rooms for single family dwellings exceeds eight, not including bathrooms, hallways, unfinished cellars and unheated storage areas, the number of bedrooms presumed shall be calculated by dividing the total number of rooms by two then rounding down to the next lowest whole number. The applicant may design a system using design flows for a smaller number of bedrooms than are presumed in this definition by granting to the Approving Authority a deed restriction limiting the number of bedrooms to the smaller number.

Best Available Nitrogen Reducing Technology:

- (a) An alternative system(s) which has a Total Nitrogen effluent performance value of 10 mg/L or less and is certified by the Department for general use pursuant to 310 CMR 15.288 when the Disposal System Construction Permit application is filed and has been approved for the type and design flow of the facility where it is to be used; or
- (b) If no such alternative system(s) meeting 10 mg/L or less has received general use approval at the time the Disposal System Construction Permit application is filed, then an alternative system(s) with the lowest Total Nitrogen effluent performance value certified by the Department for general use when the Disposal System Construction Permit application is filed and has been approved for the type and design flow of the facility where it is to be used; or
- (c) An alternative system(s) granted provisional approval by the Department pursuant to 310 CMR 15.286 or an alternative system(s) approved by the Department for piloting pursuant to 310 CMR 15.285; provided that for an alternative system(s) granted provisional approval or an alternative system(s) approved for piloting such system(s) is approved for the type and design flow of the facility and has a Total Nitrogen performance value less than or equal to 10 mg/L; or, if no system(s) with a Total Nitrogen performance value less than or equal to 10 mg/L has received general use approval, then a system(s) with a Total Nitrogen effluent performance value less than or equal to the lowest alternative system(s) certified by the Department for general use pursuant to 310 CMR 15.288 when the Disposal System Construction Permit application is filed.

Biological Mat - A layer composed of microorganisms and organic material located below a soil absorption system which forms on the infiltrative surface of soil and which provides biological treatment of septic tank effluent.

Blackwater - Wastewater from toilets, urinals, and any drains equipped with garbage grinders.

Bordering Vegetated Wetland - Any land or surface area so defined by the Massachusetts Wetlands Protection Act, M.G.L. c. 131, § 40 and 310 CMR 10.55(2).

Building - A structure enclosed within exterior walls or firewalls, built, erected, or framed of any materials, whether portable or fixed, having a roof, to form a structure for the shelter of persons, animals or property.

Building Sewer - A pipe which begins outside the inner face of a building wall and extends to an on-site system or municipal or private sewer.

Campground - A facility regulated pursuant to 105 CMR 430.00: *Minimum Standards for Recreational Camps for Children (State Sanitary Code: Chapter IV)* or 105 CMR 440.00: *Minimum Standards for Developed Family Type Campgrounds (State Sanitary Code: Chapter VI)* and any campground operated by the Department of Conservation and Recreation in a State Park.

Cellar Wall - That portion of the outside surface of the foundation wall enclosing a full basement which is above the cellar floor and below the ground surface.

15.002: continued

Certificate of Compliance or Certificate - A certificate issued by the Approving Authority to the owner or operator of a system in accordance with 310 CMR 15.021 indicating that an on-site system has been constructed or upgraded, and inspected, as necessary in compliance with 310 CMR 15.000.

Certified System - An alternative system which has been approved by the Department for specified uses or site conditions pursuant to 310 CMR 15.288. Systems which have been certified may be approved for use by approving authorities without further Departmental review but subject to any limitations on their use imposed by the Department pursuant to 310 CMR 15.000.

Certified Vernal Pool - A surface water body that has been certified by the Massachusetts Division of Fisheries and Wildlife as a vernal pool in accordance with the "Vernal Pool Certification Guidelines" pursuant to the Massachusetts Natural Heritage and Endangered Species Program administered by the Massachusetts Department of Fish and Game at the time a permit application is submitted to the Approving Authority.

Cesspool - A pit with open-jointed linings or holes in the bottom and/or sidewalls into which raw sewage is discharged, the liquid portion of the sewage being disposed of by seeping or leaching into the surrounding soils, and the solids or sludge being retained in the pit. Cesspools are nonconforming systems.

Cluster Development - A cluster development as allowed by local zoning ordinances or by-laws in accordance with M.G.L. c. 40 A § 9. Where no local cluster development zoning ordinances or by-laws have been enacted in accordance with M.G.L. c. 40 A, § 9, a cluster development means a residential development design that preserves a minimum of 50% open space which may include wetlands. For these latter developments, the percentage of open space that can be wetland shall not exceed the percentage of wetland for the entire site under existing conditions as shown on a plan, but in no case may the wetland portion of the required open space exceed 50% of the open space. The open space shall be subject to a deed restriction that provides for a common area and limits its use to passive recreation.

Coastal Beach - Shall mean any land or surface area so defined by the Massachusetts Wetlands Protection Act, M.G.L. c. 131, § 40 and 310 CMR 10.27(2): *Definitions*. Generally, unconsolidated sediment subject to wave, tidal and coastal storm action which forms the gently sloping shore of a body of salt water and includes tidal flats.

Commercial Sewage Waste - Non-toxic, non-hazardous wastewater from commercial facilities, including but not limited to institutional and commercial food operations, and animal holding facilities.

Cover Material - The soils placed on top of a soil absorption system to bring the area to finish grade.

Crown - The top of the internal cross section of a pipe or fitting.

Deep Observation Hole - An open pit dug to permit examination of the soils and to obtain data relative to the mean annual high groundwater elevation.

Department - The Massachusetts Department of Environmental Protection.

Design Flow - The quantity of sanitary sewage, expressed in gallons per day (gpd), for which a system must be designed in accordance with 310 CMR 15.203.

Designer - A registered sanitarian or a professional engineer registered in the Commonwealth of Massachusetts who has either designed the system and/or has witnessed all phases of the system installation for the purpose of making the certification required of the Designer under 310 CMR 15.021(3).

15.002: continued

Disposal Area - The subsurface environment in which a soil absorption system or reserve area is located.

Disposal System - *see* On-site System.

Disposal System Construction Permit or Permit - Written approval issued by the Approving Authority in accordance with 310 CMR 15.020 authorizing the construction, upgrade or expansion of an on-site system.

Disposal System Installer - A person, licensed in accordance with 310 CMR 15.019, who constructs, repairs, or replaces an on-site subsurface sewage disposal system.

Disposal System Installer Permit - A permit issued in accordance with 310 CMR 15.019.

Distribution Box - A level, watertight structure which receives septic tank effluent and distributes it in substantially equal portions to distribution lines in a soil absorption system.

Distribution Line - A pipe which provides dispersion of septic tank effluent within a soil absorption system.

Dosing - the pumping of septic tank effluent at a prescribed rate to a distribution box for gravity distribution to a soil absorption system.

Dosing Chamber - A watertight structure placed between a septic tank and either a distribution box or soil absorption system which is equipped with a pump designed to discharge septic tank effluent at a predetermined rate to a soil absorption system.

Dry Well - A pit with open-jointed lining or holes through which storm-water drainage from roofs, basement floors, foundations or other areas seeps into the surrounding soil.

Dune - A coastal dune, as defined in M.G.L. c. 131, § 40 and 310 CMR 10.28(2): *Definition*.

Dwelling - A building which is used, intended, or designed for human habitation, including but not limited, to houses, hotels, motels, apartments, mobile and modular homes and condominiums and cooperatives.

Effective Capacity - The volume of a tank below the design discharge point, liquid level line.

Effluent - Sanitary sewage discharged into the environment, whether or not treated.

Emergency Repair - The repair of a system which is necessary to prevent sewage backup into a building, surface breakout of sewage, or to alleviate an imminent danger to public health, safety or the environment in accordance with 310 CMR 15.353.

Environmental Justice (EJ) Population:

(a) A Neighborhood that meets one or more of the following criteria:

1. the annual median household income is not more than 65% of the statewide annual median household income;
2. minorities comprise 40% or more of the population;
3. 25% or more of households lack English language proficiency;
4. minorities comprise 25% or more of the population and the annual median household income of the municipality in which the neighborhood is located does not exceed 150% of the statewide annual median household income; or

(b) a geographic portion of a Neighborhood designated by the Secretary as an Environmental Justice Population pursuant to M.G.L. c. 30, § 62; provided, however, that a Neighborhood or a geographic portion of a Neighborhood that the Secretary has determined shall not be designated an Environmental Justice Population pursuant to M.G.L. c. 30, § 62 shall not be considered an Environmental Justice Population under 310 CMR 15.000.

15.002: continued

EPA - The United States Environmental Protection Agency.

Equalization Basin - A watertight tank or basin of sufficient size that has the capacity to store at a minimum the proposed daily design flows for the facility.

Facility - Any real property (including any abutting real property) and any buildings thereon, which is served, is proposed to be served, or could in the future be served, by a system or systems, where:

- (a) legal title is held or controlled by the same owner or owners; or
- (b) the local Approving Authority or the Department otherwise determines such real property is in single ownership or control pursuant to 310 CMR 15.011 (aggregation).

Failed Subsurface Sewage Disposal System or Failed System - A system which fails to protect public health and safety or the environment as set forth at 310 CMR 15.303 or 15.304.

Family Mobile Home Park - A facility upon which two or more mobile homes are located on a continual or seasonal non-recreational basis, regardless of whether a charge is made therefor.

Fill - The clean, uncontaminated, nonindigenous soil placed beneath, above, and/or around a soil absorption system, as specified in 310 CMR 15.201 through 15.293.

Foundation Drain - A drain around a foundation, usually located at the footing, and consisting of perforated pipe surrounded by crushed stone and filter fabric.

Geotextile Fabric - A porous material suitable to prevent fines from migrating down through the soil absorption system while still letting air circulate.

Grease Trap - A watertight structure located on a building sewer before a septic tank in which grease and oils are separated from other solid and liquid constituents of sewage and accumulated in accordance with 310 CMR 15.230.

Greywater - Any putrescible wastewater discharged from domestic activities including but not limited to washing machines, sinks, showers, bath tubs, dishwashers, or other source except toilets, urinals and any drains equipped with garbage grinders.

Groundwater - Water found in cracks, fissures and pore spaces in the saturated zone below the ground surface, including but not limited to perched groundwater.

High Groundwater Elevation - As determined in accordance with 310 CMR 15.101, 15.102 and 15.103.

Housing for the Elderly - A facility restricted to use by adults over 55 years of age (in accordance with 42 USC 3601 *et seq.* as referenced in M.G.L. c. 151B, § 4, paragraph 7.).

H-10 Loading - Standard H-10 truck loading as specified by the American Association of State Highway and Transportation Officials.

H-20 Loading - Standard H-20 truck loading as specified by the American Association of State Highway and Transportation Officials.

Humus/Composting Toilet - A self-contained system consisting of a composter with a separate toilet fixture from which no liquid or solid waste materials are discharged to the surface or subsurface environment and from which a humus/compost-like end product is produced. Such systems may be used in accordance with the provisions of 310 CMR 15.289.

Impervious Material - Soils with a percolation rate greater than 60 minutes per inch. (*See, also, the definition of unsuitable material.*)

Individual - A single or specific person (*See definition of Person.*)

15.002: continued

Industrial Waste - Any water-carried or liquid waste resulting from any process or industry, manufacture, trade, business, or activity listed in 310 CMR 15.004.

Interim Wellhead Protection Area (IWPA) - An interim well-head protection area, as defined in Massachusetts drinking water regulations, 310 CMR 22.02. Generally, this is a ½-mile radius for sources whose approved pumping rate is 100,000 gallons per day or greater. For smaller sources, the radius in feet is determined by multiplying the approved pumping rate in gallons per minute by 32, and adding 400.

Invert - The lowest portion of the internal cross section of a pipe or fitting.

Irrigation Well - Any on-site source of groundwater not certified as a potable water supply by the local Board of Health or the Department in accordance with M.G.L. c.111, § 122A and 160 or 310 CMR 22.00.

Local Approving Authority - The board of health or its authorized agent or an agent of a health district constituted pursuant to M.G.L. c. 111, § 27 acting on behalf of the applicable board of health.

Local Upgrade Approval - An approval granted by the Approving Authority allowing the owner or operator of an existing system, including a nonconforming system, to perform an upgrade of that system to the maximum feasible extent, all in accordance with the provisions of 310 CMR 15.401 through 15.405.

Long-term Acceptance Rate (LTAR) - The stable rate of effluent acceptance through the biological mat of a soil absorption system measured in gallons per day per square foot (gpd/sf) or centimeters per day (cm/d).

Maintenance - All activities required to assure the effective and continuous operation and performance of an on-site system including, but not limited to, solids and scum removal from the septic tank, grease trap, dosing chamber or pump chamber and, re-leveling the distribution box, but not including a system upgrade.

Massachusetts Estuary Project Report or MEP Report - A technical report produced by the Massachusetts Estuaries Project that has been accepted by the Department and was created to: determine current nitrogen loads to estuaries; evaluate reductions that would be necessary to support healthy ecosystems based on a linked model to evaluate nitrogen inputs to estuaries; and provide technical guidance to support appropriate wastewater, watershed, and embayment management techniques to reduce nitrogen loading.

Mobile Home - A single transportable structure on a chassis designed to be used, with or without a permanent foundation, as a dwelling. The support system of a mobile home is constructed so that the mobile home may be moved from time to time.

Modular Home - A prefabricated building designed and constructed to be used as a dwelling and to be transported in two or more sections to a site where the sections are permanently connected and installed on a permanent foundation.

Mottling Due to Wetness (Redoximorphic Features) - A color pattern in soil consisting of blotches or spots of contrasting high or low chroma colors which may be an indication of the upper extent of soil saturation by groundwater.

Multiple Compartment Tank - A septic tank containing more than one settling compartment in series.

Munsell System - The system of classifying soil color consisting of an alpha-numeric designation for hue, value and chroma together with a descriptive color name accepted by the USDA/Natural Resources Conservation Service (NRCS) used as a standard procedure in soil classification.

15.002: continued

Naturally Occurring Pervious Material - Naturally occurring soil exhibiting a percolation rate of 60 minutes or less per inch which was deposited on a site by natural causes and not by human action.

New Construction - The construction of a new building for which an occupancy permit is required or an increase in the actual or design flow to any system or an increase in the actual or design flow to any nonconforming system or an increase in the design flow to any system above the existing approved capacity. New construction shall not include replacement or repair of a building in existence as of March 31, 1995 that has been totally or partially destroyed or demolished, provided there is no increase in design flow, no increase in design flow above the existing approved capacity to any system, no increase in the number of dwellings or dwelling units or no increase in the number of bedrooms in any dwelling or dwelling unit.

Nitrogen Sensitive Area - An area of land and/or natural resource area so designated by the Department in accordance with 310 CMR 15.214.

Nonconforming System - Any system which is not in full compliance with the standards and requirements of 310 CMR 15.000 and for which a variance or local upgrade approval has not been obtained. Nonconforming systems include, but are not limited to, cesspools, privies, failed systems, and systems with a design flow above 10,000 gpd.

Notice of Intent and Application Period - The two-year period that begins on the effective date of a Nitrogen Sensitive Area designation pursuant to 310 CMR 15.214(1)(b).

Observed Ground-Water Elevation - That elevation below the ground surface at which water is observed weeping, flowing from the walls of, or standing in a deep observation hole.

On-site System or Disposal System or On-site Subsurface Sewage Disposal System or System - A system or series of systems for the treatment and disposal of sanitary sewage below the ground surface on a facility.

(a) The standard components of a system are: a building sewer; a septic tank to retain solids and scum; a distribution system; a soil absorption system containing effluent distribution lines to distribute and treat septic tank effluent prior to discharge to appropriate subsurface soils; and a reserve area.

(b) These terms also include tight tanks, shared systems and alternative systems. Unless the text of 310 CMR 15.000 indicates otherwise, these terms also include nonconforming systems.

Open Drain - Any uncovered ditch or culvert used for the conveyance of surface water runoff or groundwater. A culvert that carries a water course or intermittent stream is not a surface drain.

Operate - To use or occupy a facility served by an on-site system or to own a facility where such use or occupation exists.

Operator - A person who alone or together with other persons has charge or control of any system.

Owner - A person who, alone or together with other persons, has legal title to any facility served by a system or control of the facility, including but not limited to any agent, executor, administrator, trustee, lessee, or guardian of the estate for the holder of legal title.

Percolation Test - A field test to assess the suitability of soils in a defined area for the subsurface disposal of sewage as described at 310 CMR 15.104 and 15.105.

Person - Any individual, partnership, corporation, firm, association, authority, trust or group, including, but not limited to, a city, town, county, the Commonwealth and its agencies, and the federal government.

Pervious Soil - Soil with a percolation rate of 60 minutes per inch or less found in the B and C horizons.

15.002: continued

Pressure Distribution - The application under pressure of septic tank or treatment unit effluent to the entire soil absorption system at a prescribed rate.

Privy - A structure used for the disposal of human wastes without water transport consisting of a shelter built over an unlined pit or vault in the ground into which waste is deposited. A privy is a nonconforming system.

Pump Chamber - A watertight structure equipped with a pump designed to discharge effluent at a predetermined rate. (*See* definition of Dosing Chamber)

Recirculating Sand Filter (RSF) - A biological and physical treatment unit consisting of a bed of sand to which septic tank effluent is distributed and then collected in a recirculating tank prior to recirculating a portion through the sand bed filter and discharging a portion of the filtrate to the soil absorption system.

Regulatory Floodway - The channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than a designated height (typically one foot), the boundary of which is the area designated as floodway on the most recently available flood profile data prepared for the community within which the site is located under the National Flood Emergency Program (NFIP, currently administered by the Federal Emergency Management Agency, successor to the U.S. Department of Housing and Urban Development). Within this area flooding characterized by a significant velocity of flow is likely to occur.

Reserve Area - An area of land with demonstrated capacity for subsurface sewage disposal upon which no permanent structure shall be constructed and which is intended for replacement of the primary disposal area should it fail.

Retirement Mobile Home Park - A facility upon which two or more mobile homes, restricted to use by adults over 55 years of age (in accordance with 42 USC 3601 *et seq.*), are located on a continual or seasonal non-recreational basis, regardless of whether a charge is made therefore.

Salt Marsh - A coastal wetland as defined in the Massachusetts Wetlands Protection Act, M.G.L. c. 131, § 40, and the regulations promulgated pursuant thereto at 310 CMR 10.32(2).

Sanitary Sewage or Sewage - Either greywater or blackwater or a combination of greywater and blackwater from domestic, commercial and other non-industrial sources. Sanitary sewage does not include stabilized waste.

Sanitary Sewer - Any system of pipes, conduits, pumping stations, force mains and all other structures and devices used for collecting and conveying wastewater to a public or private treatment works.

Saturated Zone - Any portion of the earth below the land surface where available openings (pore, fissure, joint or solution cavity) are filled with water.

Scientific Evaluation - A watershed assessment that is accepted by the Department because it is scientifically rigorous and based upon information, data, modeling, and analyses that could be used to:

- (a) delineate the watershed,
- (b) develop and implement an EPA-approved TMDL, and
- (c) develop and implement wastewater and nutrient management plans to satisfy the TMDL; and which produces, at a minimum, the following:
 1. quantitative and qualitative assessments of the nutrient related health of the waterbodies being assessed;
 2. identification of all controllable and uncontrollable nutrient sources and their respective contributions to the waterbodies for the present day and the next 20 years, including any projected buildout;

15.002: continued

3. nutrient threshold concentrations that must be achieved to comply with 314 CMR 4.00: *Massachusetts Surface Water Quality Standards* to support the ecosystem and restore and maintain indicator habitats, such as eel grass and benthic species, associated with nitrogen impacts;
4. analyses of watershed nutrient loading reductions that will be necessary to achieve at least the minimum nutrient threshold concentrations in the waterbody and restore and maintain the indicator habitats; and
5. site-specific, calibrated, watershed-waterbody model(s) that can be used to simulate the efficacy of strategies towards restoration and maintenance of the waterbodies.

A TMDL is not required to complete the Scientific Evaluation.

Scum - A mass of light solids, such as hair, grease, oils and soaps, floating on the surface of the wastewater in a septic tank.

Separation Distance - The clear distance between system components.

Septage - Material physically removed from any part of an on-site system, including, but not limited to, the solids, semi-solids, scum, sludge and liquid contents of a septic tank, privy, chemical toilet, cesspool, holding tank, or other sewage waste receptacle. It does not include any material which is hazardous waste.

Septage Hauler - A person licensed by an Approving Authority to remove septage from on-site sewage disposal systems and transport it to an approved disposal location in accordance with 310 CMR 15.500.

Septage Hauler Permit - A permit issued pursuant to the authority of M.G.L. c. 111, § 31 and 310 CMR 15.500 entitling a person to transport septage within the Commonwealth.

Septic System Additive - Any solid or liquid material or biological agent intended or used primarily for cleaning, treating, degreasing, unclogging, disinfecting, deodorizing or otherwise affecting the performance of any component of an on-site system.

Septic Tank - A watertight receptacle to receive sewage from a building sewer which is designed and constructed to allow for the separation of scum and sludge and the partial digestion of organic matter before discharge of the liquid portion to a soil absorption system or other intermediate structure in the treatment sequence.

Septic Tank Effluent - The liquid portion of settled sewage which is discharged from the outlet of a septic tank.

Shared System - A system sited and designed in accordance with 310 CMR 15.100 through 15.293 which serves, or is proposed to serve, more than one facility and which has been approved in accordance with 310 CMR 15.290 through 15.293. A system serving a condominium located on the same facility is not a shared system.

Soil Absorption System - A system of trenches, galleries, chambers, pits, field(s) or bed(s) together with effluent distribution lines and aggregate which receives effluent from a septic tank or treatment system.

Soil Evaluator - A person approved by the Department pursuant to 310 CMR 15.017 as capable of evaluating the suitability of a specific site for the use of an on-site subsurface sewage disposal system in compliance with 310 CMR 15.000.

Soil Texture - The relative proportions of sand, silt and clay in a given soil medium as defined by the USDA/NRCS.

Stabilized Waste - Any waste chemically fixated for the control of odors or whereby biological decomposition is affected.

15.002: continued

Structural Component - A tangible, removable item that is part of the on-site system. A soil absorption system is not a structural component.

Subsurface Drain - Any underground conduit used for the conveyance of surface or groundwater, including, but not limited to, stormwater culverts, curtain drains and French drains.

Supermarket - A retail market selling foods and household goods that also consists of a bakery, deli, or on-site meal preparation.

Surface Water - All waters other than groundwaters within the jurisdiction of the Commonwealth, including without limitation, rivers, streams, lakes, ponds, springs, reservoirs, impoundments, estuaries, wetlands, coastal waters and certified vernal pools.

Surface Water Supply - Any lake, pond, reservoir, or impoundment designated as a public water supply in 314 CMR 4.00: *Massachusetts Surface Water Quality Standards*.

System - *see* on-site system.

System Inspector - A person approved by the Department pursuant to 310 CMR 15.340 as capable of appropriately assessing the condition of systems in accordance with 310 CMR 15.000.

Temporary - A single time period or an accumulation of time periods not exceeding 180 total days in any 365-day period.

Tight Tank - A water tight vessel having an inlet to receive raw sewage but no outlet and which is designed and used to collect and store sewage until it is removed for disposal.

Title 5 of the State Environmental Code, 310 CMR 15.000 - The Department's regulation for the siting, construction, inspection, upgrade and expansion of on-site sewage treatment and disposal systems and for the transport and disposal of septage.

Total Maximum Daily Load or TMDL - The sum of a receiving water's individual waste load allocations and load allocations and natural background, which, together with a margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality, represents the maximum amount of a pollutant that a waterbody can receive and still meet water quality standards in all seasons.

Training Contact Hours (TCH) - The hours of training a person has had prior to the renewal of either a soil evaluator or system inspector approval. Each seminar, workshop, training course, or college course will have a specific training hour value as rated by the Department or an agent authorized by the Department.

Treatment Works - Any and all devices, processes, and properties, real or personal, used in the collection, pumping, transmission, storage, treatment, disposal, recycling, reclamation or reuse of waterborne pollutants, including septage receiving facilities but not including any works receiving a hazardous waste from off the site of the works for the purpose of treatment, storage or disposal. Treatment works must be permitted by the Department pursuant to the authority of M.G.L. c. 21, §§ 27 through 52 and regulations thereunder.

Tributary to Surface Water Supply - Any body of running water, including a river, stream, brook or creek, which moves in a definite channel in the ground due to a hydraulic gradient, and which is designated as a tributary to a public water supply in 314 CMR 4.00: *Massachusetts Surface Water Quality Standards*, provided that such water supply is a surface water supply as defined in 310 CMR 15.000. The exact location and extent of tributaries to surface water supplies shall be determined by reference to the most current U.S.G.S. and/or GIS maps and in consultation with the Department's Division of Watershed Management and the Drinking Water Program.

15.002: continued

Underground Injection Control Program or UIC Program - The Underground Injection Control Program under Part C of the federal Safe Drinking Water Act, 42 U.S.C. §§ 300f *et seq.*, which is implemented and enforced by the Department in Massachusetts pursuant to its UIC regulations at 310 CMR 27.00: *Underground Injection Control Regulations*.

Unsuitable Material - All impervious material, all organic sediments, and all material found in the following horizons: O (organic), A (topsoil), and E (mineral). All bedrock, including saprolite or weathered bedrock, schist, and ledge. (*see*, also, the definition of impervious material).

Upgrade - The modification of one or more components of an on-site system or the design and construction of a new on-site system which is intended to bring an existing system, including a nonconforming system, into conformance with 310 CMR 15.000. An emergency repair is not an upgrade.

USDA/NRCS - The United States Department of Agriculture, Natural Resources Conservation Service.

USGS - The United States Geological Survey, within the United States Department of the Interior.

Velocity Zone or V-zone, also known as the Coastal High Hazard Area - An area within the Special Flood Hazard Area that is subject to high velocity wave action or seismic sources. The Velocity Zone Boundaries are determined by reference to the currently effective or preliminary Flood Insurance Rate Map (FIRM) map whichever is more recent, prepared by the Federal Emergency Management Agency or at a minimum to the inland limit of the primary frontal dune, whichever is further landward.

Vernal Pool - *see* Certified Vernal Pool.

Waters of the Commonwealth or Waters or Water Bodies - All waters within the jurisdiction of the Commonwealth, including, without limitation, rivers, streams, lakes, ponds, springs, impoundments, wetlands, estuaries, coastal waters, groundwaters, and vernal pools.

Watershed - Any region or area measured in a horizontal topographic divide which directs water runoff from precipitation, normally by gravity, into a stream, a body of impounded surface water, or a coastal embayment, or any region or area measured by a groundwater divide which directs groundwater into a stream, a body of impounded surface water, or a coastal embayment.

Watershed Permit - A permit issued by the Department pursuant to 314 CMR 21.00: *Massachusetts Watershed Permit Regulations*, including the Pleasant Bay Watershed Permit (Permit No. 001-0) that was issued August 3, 2018, by the Department prior to the promulgation of 314 CMR 21.00.

Water Supply Well - Any public or private source of groundwater used for human consumption, including but not limited to, a source approved for such use by the local Board of Health or the Department in accordance with M.G.L. c. 111, § 122A or 310 CMR 22.00: *Drinking Water*.

Wetland - Any land area or surface area so defined by the Massachusetts Wetlands Protection Act, M.G.L. c. 131, § 40 and regulations promulgated pursuant thereto at 310 CMR 10.00: *Wetlands Protection* or pursuant to § 404 of the Federal Water Pollution Control Act, 33 U.S.C. 1341.

Working Level - The level between the pump “off” elevation and the high level alarm elevation.

15.002: continued

Zone I - The protective radius required around a public water supply well or wellfield, as defined in Massachusetts Drinking Water Regulations, 310 CMR 22.02: *Definitions*. For public water supply system wells with approved yields of 100,000 gpd or greater, the protective radius is 400 feet. Tubular well fields require a 250-foot protective radius. Protective radii for all other public water system wells are determined by the following equation: Zone I radius in feet = $[150 \times \log \text{ of pumping rate in gpd}] - 350$.

Zone II - That area of an aquifer which contributes water to a well under the most severe pumping and recharge conditions that can realistically be anticipated, as defined in Massachusetts Drinking Water Regulations, 310 CMR 22.02: *Definitions*.

Zone A - As defined in Massachusetts Drinking Water Regulations, 310 CMR 22.02: *Definitions*:

- (a) the land area between the surface water source and the upper boundary of the bank;
- (b) the land area within a 400 foot lateral distance from the upper boundary of the bank of a Class A surface water used as a drinking water source, as defined in the 314 CMR 4.00: *Massachusetts Surface Water Quality Standards*; and
- (c) the land area within a 200 foot lateral distance from the upper boundary of the bank of a tributary or associated surface water body.

15.003: Coordination with Local Approving Authorities

(1) In general, full compliance with the provisions of 310 CMR 15.000 is presumed by the Department to be protective of the public health, safety, welfare and the environment. Specific site or design conditions, however, may require that additional criteria be met in order to achieve the purpose or intent of 310 CMR 15.000.

(2) The approval of any system, including the issuance of Disposal System Construction Permits, Local Upgrade Approvals, and Certificates of Compliance, shall be by the Local Approving Authority, except that the Department shall be the Approving Authority for systems owned or operated by an agency of the Commonwealth or of the federal government, for systems serving a facility with a design flow of 10,000 gallons per day or greater, and for variances granted in accordance with 310 CMR 15.416. Unless otherwise specified herein, the following systems or circumstances are approved by the Department only:

- (a) alternative systems which are proposed in compliance with 310 CMR 15.280 through 15.289;
- (b) upgrade or expansion of systems with a design flow of 10,000 gpd or greater but less than 15,000 gpd, or continued use of systems subject to 310 CMR 15.304(2); and
- (c) any system or proposed system which the Department determines requires its review for the purposes of protection of public health, safety, welfare and the environment, or determining consistency with 310 CMR 15.000.

(3) Local approving authorities may enact more stringent regulations to protect public health, safety, welfare and the environment only in accordance with M.G.L. c. 111, § 31.

(4) Local requirements, or portions thereof, which were in effect prior to March 31, 1995 and which are less stringent than 310 CMR 15.000 shall not be applied to new construction, upgrade or expansion of existing systems.

(5) Local regulations adopted under M.G.L. c. 111, § 31 shall be filed with the Department's Boston Office in accordance with M.G.L. c. 21A, § 13.

15.004: Applicability

(1) The Approving Authority shall not approve the construction, upgrade, or expansion of an on-site subsurface sewage disposal system unless it is:

- (a) a system serving or designed to receive only sanitary sewage from a facility where the total design flow generated on the facility, is less than 10,000 gallons per day;

15.004: continued

(b) a system upgrade approvable in accordance with 310 CMR 15.403 or 310 CMR 15.404;
or

(c) a facility for which subdivision approval has been obtained, to construct dwellings with a cumulative total design flow of 10,000 gpd or greater provided that a disposal system construction permit to construct a system in compliance with 310 CMR 15.000 on each of the subdivision lots to be served by a system is obtained and such separate subdivision lots are to be conveyed to independent owners.

(2) No system shall serve more than one facility except as explicitly allowed pursuant to 310 CMR 15.010 (division and aggregation) or 310 CMR 15.290 through 15.292 (shared systems).

(3) No new system shall be constructed, and no system shall be upgraded or expanded, if it is feasible to connect the facility, or any portion of the facility for which system approval is sought, to a sanitary sewer, except in the following circumstances and particularly to promote recharge of stressed basins, improve low stream flow, or address other local water resource needs:

(a) the system is an alternative system approved for use pursuant to 310 CMR 15.280 through 15.288 and the Department has made the determination that any person using such alternative system need not connect the facility to such sanitary sewer;

(b) the system fully complies with 310 CMR 15.000 and does not require:

1. a local upgrade approval, unless issued pursuant to 310 CMR 15.405(1)(a) or (b); or
2. a variance; or

(c) the owner of an existing system has obtained a variance from this requirement pursuant to 310 CMR 15.410 through 15.415.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

15.004: continued

(4) The provisions of 310 CMR 15.000 apply only to the on site collection, treatment and disposal of sanitary sewage, and to the transport and disposal of associated septage and grease, and do not apply to the wastewater containing wastes from any other activity including, but not limited to, activities under the Standard Industrial Classification (SIC) Codes set forth at 310 CMR 15.004(5). SIC Codes are established by the U.S. Office of Management and Budget and may be determined by referring to the publication *Standard Industrial Classification Manual*. Systems designed to dispose of only sanitary sewage from facilities subject to the following SIC codes may be approved under 310 CMR 15.000. Facilities discharging wastewater that contains wastes from activities under the SIC codes listed below may request a determination from the Department that the wastewater's constituents are substantially similar to sanitary sewage and may be discharged to an on-site septic system.

(5) SIC CODE(S)	INDUSTRY CATEGORY
753-7549	Automotive Repairs and Services
7231,7241	Beauty Shops, Barber Shops
7211-7219	Laundry Cleaning and Garment Services
4911,4925,4931,4939	Electric, Gas Services (Power Generation Gas Production Only)
4011 - 4581	Transportation (Maintenance Only)
8062 - 8069	Hospitals
2000 - 3999	Manufacturing
2000 - 2099	Food Products
2100 - 2199	Tobacco Products
2200 - 2299	Textile Mill Products
2300 - 2399	Apparel and Other Finished Products Made from Fabrics and Similar Materials
2400 - 2499	Lumber and Wood Products, Except Furniture
2500 - 2599	Furniture and Fixtures
2600 - 2699	Paper and Allied Products
2700 - 2799	Printing, Publishing and Allied Industries
2800 - 2899	Chemicals and Allied Products
2900 - 2999	Petroleum Refining and Related Industries
3000 - 3099	Rubber and Miscellaneous Plastics
3100 - 3199	Leather Tanning and Finishing
3200 - 3299	Stone, Clay, Glass and Concrete Products
3300 - 3399	Primary Metal Industries
3400 - 3499	Fabricated Metal Products (Except Machinery and Transportation Equipment)
3500 - 3599	Industrial and Commercial Machinery and Computer Equipment
3600 - 3699	Electronic and Other Electrical Equipment and Components, Except Computer Equipment
3700 - 3799	Transportation Equipment
3800 - 3899	Measuring, Analyzing and Controlling Instruments; Photographic, Medical and Optical Goods; Watches and Clocks
3900 - 3900	Miscellaneous Manufacturing Industries

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

15.004: continued

(6) No person shall discharge or allow the discharge of wastes from the industry categories listed in 310 CMR 15.004(5) to any system regulated under 310 CMR 15.000. No system shall receive oil, hazardous materials or waste, medical wastes or radioactive wastes.

(7) No person shall discharge or allow the discharge of stabilized recreational vehicle wastes, stabilized boat wastes, stabilized motorcoach/bus wastes, stabilized portable toilet wastes, wastes from funeral homes, or vehicles washes to any system regulated under 310 CMR 15.000.

(8) 310 CMR 15.000 prohibits the discharge of sewage to a dry well or open drain. Discharges to dry wells shall be in compliance with the Department's Underground Injection Control regulations at 310 CMR 27.00: *Underground Injection Control Regulations*. Backwash of water purification or filtration devices shall not be discharged to an on-site system. The owner of the dry well shall register the dry well in accordance with 310 CMR 27.00: *Underground Injection Control Regulations*.

15.006: Facilities with a Design Flow of 10,000 gpd or Greater but Less than 15,000 gpd

(1) It shall be the duty of each owner or operator of systems with a design flow of 10,000 gpd or greater to ascertain the actual design flow of their system or systems.

(2) The Department may require the issuance of a groundwater discharge permit pursuant to 314 CMR 5.00: *Ground Water Discharge Permit Program* and the installation of technology capable of discharging effluent which meets groundwater standards pursuant to 314 CMR 5.00: *Ground Water Discharge Permit Program* for any system with design flow of 10,000 gpd or greater but less than 15,000 gpd unless the Department determines after consideration of the factors set forth in 310 CMR 15.304(3) that this requirement would be manifestly unjust, considering all the relevant facts and circumstances of the individual case, and the owner or operator has established that a level of environmental protection that is at least equivalent to that provided by 314 CMR 5.00: *Ground Water Discharge Permit Program* can be achieved without strict application of 310 CMR 15.006.

(3) There shall be no increased flow to an existing system which results in a design flow of 10,000 gpd or greater except in accordance with a variance issued by the Department pursuant to 310 CMR 15.414.

15.007: Campgrounds

(1) For the purposes of 310 CMR 15.000, a campground is any facility which is regulated pursuant to 105 CMR 430.00: *Minimum Standards for Recreational Camps for Children (State Sanitary Code: Chapter IV)* or 440.00: *Minimum Standards for Developed Family Type Campgrounds (State Sanitary Code: Chapter VI)* and/or is a campground operated by the Department of Conservation and Recreation in a State Park.

(2) Except as otherwise set forth in 310 CMR 15.007(3) and (4), a campground in existence on December 1, 1993 with design flows in excess of 10,000 gpd but less than 15,000 gpd and which receives only temporary use is in compliance with 310 CMR 15.000 provided that all of the following conditions are met:

- (a) the campground is not subject to an existing enforcement order issued by the local Approving Authority, the Department or court;
- (b) the campground is not failing to protect public health or safety or the environment pursuant to 310 CMR 15.304(2);
- (c) each system serving the facility is in compliance with 310 CMR 15.000;
- (d) no single system on the facility has a design flow in excess of 10,000 gpd;
- (e) no system is less than 100 feet from another system;
- (f) systems on the campground are inspected and maintained in accordance with 310 CMR 15.300 through 15.354, including necessary upgrade of systems or components;
- (g) no sewage from mobile home tight tanks which has been fixated or treated with chemical additives, except as approved by the Department, is disposed of at the campground; and
- (h) no additional flows of sewage are added over the approved design flow of the system as of March 1, 1995.

15.007: continued

- (3) Campgrounds in existence as of December 1, 1993 and which receive more than temporary use are in compliance with 310 CMR 15.000 provided:
 - (a) the provisions of 310 CMR 15.007(2) are complied with; and
 - (b) the volume of sewage flow generated from all systems on the facility from non-temporary use does not exceed 10% of the design flow generated during peak seasonal use.
- (4) All new construction at campgrounds shall be in accordance with the provisions of 310 CMR 15.000.

15.010: Division and Aggregation of Facilities

- (1) Ownership of a facility and the design flow of the facility shall be determined whenever application is made for a Disposal System Construction Permit.
- (2) Prior to dividing a facility all existing systems shall be inspected in accordance with 310 CMR 15.301(8). The division of a facility shall not be approved unless the Approving Authority has determined that the division will not put existing systems in noncompliance with the Title 5 and the applicant has demonstrated to the satisfaction of the Approving Authority that the division of property will not prevent the upgrade of existing systems in accordance with Title 5. Failed systems shall be upgraded in accordance with 310 CMR 15.305. Existing systems shall be altered as required by the Approving Authority for each new facility divided out of the original facility. Prior to the division of a facility, any shared systems to be created as a result of the division shall comply with 310 CMR 15.290, and the owner(s) or operator(s) shall obtain a shared system approval if the system will serve more than one facility after division of the facility.
- (3) If two or more facilities in separate ownership are later joined into single ownership control after construction of systems to serve the separate facilities, the owner or operator of the new combined facility shall obtain a Certificate of Compliance from the Approving Authority for the new, combined facility within one year. If the total design flow from the facility is 10,000 gpd or greater, the owner shall have an inspection of all of the systems pursuant to 310 CMR 15.301(6) and 15.302 completed within one year.
- (4) Whenever the Department or the local Approving Authority determines, based upon consideration of one or more of the factors in 310 CMR 15.011, that facilities asserted to be in separate ownership or control shall be regulated as a single facility, the Department or the local Approving Authority, based on the total design flow from the single facility, may order the single facility to comply with the requirements of 310 CMR 15.202 (Recirculating Sand Filters) or the Department may order the single facility to comply with the requirements of 314 CMR 5.00: *Ground Water Discharge Permit Program* by obtaining a groundwater discharge permit.

15.011: Criteria to Assess Whether Facilities are in Separate Ownership or Control

- (1) In assessing whether facilities are in single ownership for purposes of determining whether the total design flow exceeds the 2,000 gpd threshold of 310 CMR 15.202 (recirculating sand filters) or the permitting, treatment and effluent standard requirements of 314 CMR 5.00: *Ground Water Discharge Permit Program*, the Approving Authority may consider one or more of the following factors:
 - (a) whether the owner or operator of facilities asserted to be in separate ownership operate the facilities independently, including whether there are any common or related beneficiaries among the separate ownership entities, and whether each owner acts with due regard for the independent financial interests of the owner, operator and any beneficiaries of the assertedly separate facilities;
 - (b) whether, and the extent to which, legal agreements exist which provide the owner or operator of facilities asserted to be in separate ownership the right to access each other's facilities and/or to use and share financial responsibility for common buildings, infrastructure, or services;

15.011: continued

- (c) the existence of some evidence that ownership or control of the facilities asserted to be in separate ownership or control was arranged to circumvent the requirements of 310 CMR 15.202 (Recirculating Sand Filters), or 314 CMR 5.00: *Ground Water Discharge Permit Program*, including evidence that two or more facility owners have acted in concert to acquire or dispose of adjacent properties to avoid the above regulatory requirements;
- (d) the effect of the facilities on the public health and environment, including an evaluation of whether the facilities provide local groundwater recharge and/or are cluster developments that preserve open space.

(2) In the event the Approving Authority determines, using the criteria set forth at 310 CMR 15.011(1) that facilities asserted to be in separate ownership or control should be treated as a single facility for the purposes of 310 CMR 15.000, that determination may be appealed in accordance with 310 CMR 15.422 (appeals).

15.017: Approval of Soil Evaluators

(1) Any person who meets the criteria of 310 CMR 15.017(2) and who passes a standardized examination prepared and administered by the Department or an agent of the Department shall be approved as a Soil Evaluator by the Department.

(2) Eligibility for the examination described in 310 CMR 15.017(6) may be demonstrated to the Department, or an agent authorized by the Department, by people with the following qualifications:

- (a) Massachusetts Registered Sanitarians;
- (b) Massachusetts Registered Professional Engineers;
- (c) Engineers in Training (EIT certificate) with a concentration in civil, sanitary or environmental engineering;
- (d) Massachusetts Registered Land Surveyors;
- (e) Certified Health Officers;
- (f) Board of Health Members or Agents;
- (g) Employees of the Department involved in the administration of 310 CMR 15.000;
- (h) Those with a Bachelor of Arts or Sciences degree, or more advanced degree in Soil or Geological Sciences from an accredited college or university; or
- (i) Those successfully completing a minimum of 15 semester credits in soil science courses from an accredited institution. At least three of the 15 credits must be in Soil Genesis, Classification, Morphology and Mapping. The remaining soil science credits must be in at least three of the following six categories: Introductory Soil Science; Soil Chemistry/Fertility; Soil Physics; Soil Microbiology/Biochemistry; Soil Survey Interpretations/Soils and Land-use/Soils and the Environment; and Independent Study/Seminar/Geology.

(3) The Department or an agent authorized by the Department shall maintain a list of approved Soil Evaluators. Any person who is denied approval as a Soil Evaluator based on failure to pass the examination required in 310 CMR 15.017(6) may request, within 90 days of receiving the results of the examination, and is entitled to receive from the Department or its agent, a written statement of the Department's basis for denial.

(4) The Department may revoke or suspend the approval and/or listing of a Soil Evaluator approved pursuant to 310 CMR 15.017, for a time specified by the Department, during which time the Soil Evaluator may not reapply to become a Soil Evaluator, after opportunity for a hearing conducted pursuant to M.G.L. c. 30A, when it determines that the Soil Evaluator has failed to comply with 310 CMR 15.000 with respect to one or more soil evaluations or has violated the provisions of 310 CMR 15.018 or has falsified, substantially misinterpreted or misrepresented a soil evaluation in the evaluator's certification, or has failed to perform a soil evaluation as required pursuant to 310 CMR 15.100 through 15.107. Reinstatement following revocation shall be by written and field examination only. Based on a Soil Evaluator's non-compliance with 310 CMR 15.000, the Department, by issuance of an order, may require the Soil Evaluator to, among other things, attend or repeat the training course referred to in 310 CMR 15.017(5) and/or to retake the examination referred to in 310 CMR 15.017(1).

15.017: continued

(5) A training course provided by the Department or an agent authorized by the Department is highly recommended for any person meeting the criteria of 310 CMR 15.017(2) in order to prepare for the standardized examination required pursuant to 310 CMR 15.017(6).

(6) A standardized written and field examination shall be prepared and administered by the Department or an agent authorized by the Department to the applicant meeting the criteria of 310 CMR 15.017(2). The examination shall consist of at least the following elements:

- (a) principles of on-site sewage treatment and disposal;
- (b) geology and soils of Massachusetts;
- (c) soil profile descriptions;
- (d) estimating high ground-water elevations using soil morphology;
- (e) principles of ground-water hydrology;
- (f) methods for documenting site conditions;
- (g) important reference materials; and
- (h) field training in soil evaluation and logging.

The passing score shall be correctly answering 70% of all the questions on the written examination and successful completion of the field examination.

(7) Soil Evaluators initially approved by the Department prior to January 1, 2005, shall apply to the Department to renew their approval by January 1, 2007. Soil Evaluators initially approved after January 1, 2005, shall apply to the Department or an agent authorized by the Department to renew their approval at least 90 days prior to the expiration of the three years following their initial approval date. Provided that a Soil Evaluator timely files a complete renewal application, the Soil Evaluator's approval shall not expire until the Department issues a final determination on the renewal application. A fee established by the Department shall accompany each renewal application; any application that does not include payment of the fee shall be deemed incomplete. The approval of a renewal application shall expire three years from the date of its issuance. Each Soil Evaluator thereafter shall file a complete renewal application at least 90 days prior to the expiration date of his/her most recent approval.

(8) Beginning in 2010, at the time of filing any subsequent renewal application in accordance with 310 CMR 15.017(7), a Soil Evaluator shall demonstrate that he or she has earned ten Training Contact Hours in the previous three years that improve the Soil Evaluator's abilities in the following areas:

- (a) safely and accurately conducting soil evaluations according to the requirements of 310 CMR 15.000;
- (b) the principles of on-site sewage treatment and disposal;
- (c) the geology and soils of Massachusetts;
- (d) soil profile descriptions;
- (e) accurately estimating high groundwater elevations using soil morphology;
- (f) the methods of documenting site conditions; and
- (g) field training in soil evaluation and logging.

15.018: Function of Soil Evaluators

(1) The function of the Soil Evaluator is to enhance the review and approval of proposed systems by ensuring that appropriate expertise in soil identification, groundwater hydrology, and topography is available when the characteristics of the proposed disposal area are determined for purposes of applying the siting and design criteria set forth in 310 CMR 15.000. Soil Evaluators may perform the site evaluation required by 310 CMR 15.100 while acting either as an agent of an Approving Authority (a fee may be assessed pursuant to M.G.L. c. 40, § 22F), or as an independent agent of the owner in the presence of the Approving Authority. If the evaluator is an agent or member of the Approving Authority having jurisdiction over the system, he or she shall not act as an agent for the owner.

(2) Based upon an evaluation of the suitability of the proposed disposal area for a proposed, upgraded or expanded system in accordance with 310 CMR 15.100 through 15.107, the Soil Evaluator shall certify to the Approving Authority and the Designer as to the accuracy of the soil evaluation in conformance with 310 CMR 15.100 through 15.107. The certification shall contain a recitation of the facts and rationale underlying the soil evaluation and a copy of the soil evaluation form. The soil evaluator shall submit the results to the Approving Authority with the following statement:

15.018: continued

I certify that I am currently approved by the Department of Environmental Protection pursuant to 310 CMR 15.017 to conduct soil evaluations and that the above analysis has been performed by me consistent with the required training, expertise, and experience described in 310 CMR 15.017. I further certify that the results of my soil evaluation, as indicated on the attached soil evaluation form, are accurate and in accordance with 310 CMR 15.100 through 15.107.

Any certifications shall be forwarded to the Approving Authority, the Designer and the property owner. Failure to forward certifications to the Approving Authority within 60 days of the date of the field testing shall be cause for revocation of the Soil Evaluator's approval.

15.019: Disposal System Installer's Permit

No individual shall engage in the construction, upgrade, modification, emergency repair, or expansion of any on-site system without first obtaining a Disposal System Installer's Permit from the Approving Authority. Disposal System Installer Permits shall be issued for a period of not more than two years. The Local Approving Authority shall issue Disposal System Installer Permits only to those individuals who have demonstrated knowledge of and experience with the proper construction and installation of systems in accordance with 310 CMR 15.000. The Approving Authority, by issuance of an order, may suspend or revoke a Disposal System Installer's Permit, for a time specified in the order, when it determines that the Installer has failed to comply with 310 CMR 15.000 with respect to the installation of one or more systems, including, without limitation, the Installer's failure to provide the certification required by 310 CMR 15.021(3), or the Installer's installation or certification of a system that fails to comply with the Disposal System Construction Permit.

15.020: Disposal System Construction Permits

(1) No person shall construct, upgrade, modify or expand a system without a Disposal System Construction Permit which has been issued by the Approving Authority after the site evaluation set forth in 310 CMR 15.100 through 15.107 has been completed. In the event it is discovered during installation of the system that site conditions differ from those contained in the site evaluation and/or the approved design plans, the originally issued Disposal System Construction Permit is void, installation shall stop, and the applicant shall reapply for a new Disposal System Construction Permit. Except for subdivisions entitled to M.G.L. c. 111, § 127P protection, M.G.L. c. 40B comprehensive permit land, and large systems with approved plans or pursuant to a variance issued by the Department in accordance with 310 CMR 15.414, a Disposal System Construction Permit shall not authorize increased design flow which would bring the total design flow to 10,000 gpd or greater. Disposal System Construction Permits shall be in a form approved by the Department.

(2) Construction of all systems for which a Disposal System Construction Permit application has been approved by the local Approving Authority and/or the Department shall be completed, and the Certificate of Compliance obtained within three years of issuance of the final approval. Unless an extension pursuant to 310 CMR 15.020(3) is issued, the permit, and any variances or local upgrade approvals from 310 CMR 15.000 allowed therewith, shall expire if the work authorized by it is not completed within the three-year period.

(3) The local Approving Authority or the Department may issue a written one year extension to the Disposal System Construction Permit required by 310 CMR 15.020(1) upon written request of the permittee, filed before the expiration date, and documenting the facts that prevent completion of the approved system within the time of the original permit. Only one extension may be granted.

(4) The local Approving Authority shall not issue a Disposal System Construction Permit until any approval(s) required by the Department pursuant to 310 CMR 15.000 have been issued.

15.020: continued

(5) Any person required to obtain a permit pursuant to 310 CMR 15.000 shall complete and submit the appropriate application forms to the Approving Authority. As part of an application for a permit or approval, the Approving Authority may require the applicant to provide information and analyses as it may reasonably require to determine whether such applicant meets the requirements of 310 CMR 15.000.

15.021: Certificates of Compliance

(1) No person shall discharge sewage to a new, upgraded or expanded system without first obtaining a Certificate of Compliance from the Approving Authority in accordance with 310 CMR 15.021(2) through (5). Certificates of Compliance shall be in a form approved by the Department. The Approving Authority shall provide the owner or operator a copy of the Department's operation and maintenance guide, or inform him or her where a copy can be obtained.

(2) Subsurface components of a system shall not be backfilled or otherwise concealed from view until a final inspection has been conducted by the Approving Authority and permission has been granted by the Approving Authority to backfill the system. The Designer shall inspect the construction after the initial excavation, prior to backfilling, and during backfilling. In addition, the final inspection of the system shall be conducted by the Approving Authority, the system installer and the Designer prior to the issuance of a Certificate of Compliance pursuant to 310 CMR 15.021(3). Any component of the system which has been covered without such permission shall be uncovered upon the request of the Approving Authority or the Department.

(3) Upon availability, the designer shall file an electronic registration for the system with the Department or an agent authorized by the Department, prior to signing the Certificate of Compliance in accordance with 310 CMR 15.021(4). Documentation of the registration must be provided to the Approving Authority and the system owner.

(4) Within 30 days of the final inspection of the system and prior to the issuance of a Certificate of Compliance, the Disposal System Installer and the Designer shall certify in writing on a form approved by the Department that the system has been constructed in compliance with 310 CMR 15.000, the approved design plans and all local requirements, and that any changes to the design plans have been reflected on as-built plans which have been submitted to the Approving Authority by the Designer prior to the issuance of a Certificate of Compliance. The as-built plans shall be prepared in accordance with 310 CMR 15.220 and, at a minimum, shall reflect any changes to the approved design plans and show the exact location and elevation of all system components. As-built plans are required to be submitted to the Approving Authority only when changes have been made to the approved plans. If no changes have been made to the approved plans, the approved plan showing the distances from a known structure to the system components shall be submitted to the Approving Authority in place of an as-built plan. Prior to the issuance of a Certificate of Compliance for a system, the Approving Authority shall make sufficient inspections of the system in accordance with 310 CMR 15.021(2) to determine that the work has been completed in compliance with the requirements of 310 CMR 15.000, the Disposal System Construction Permit, the approved design plans, and any local requirements.

(5) A Certificate of Compliance does not constitute a statement that the system will function as designed nor shall it in any way limit the powers or responsibilities of the local Approving Authority or the Department to enforce any requirement, or to take any other action to protect public health, safety, welfare or the environment.

(6) The Approving Authority shall give to the building inspector or other official of the municipality responsible for the issuance of a Certificate of Occupancy pursuant to 780 CMR 100 a copy of the Certificate of Compliance. No person shall apply for a Certificate of Occupancy to inhabit or use new construction until a Certificate of Compliance has been issued by the Approving Authority.

15.022: Duty of Compliance

Except as otherwise specified, the duty to comply with the provisions of 310 CMR 15.000 with regard to any system shall be upon the owner(s) and the operator(s) of a facility served by a system, jointly and severally.

15.023: Approving Authority Access

The local Approving Authority or the Department may at any reasonable time examine facilities served by systems in order to determine compliance with 310 CMR 15.000 and any permits, approvals or orders issued under 310 CMR 15.000 or under local authority. If access to a facility is denied or restricted, the local Approving Authority or the Department may seek a warrant in order to obtain access. The filing of an application for a Disposal System Construction Permit or other approval under 310 CMR 15.000 shall constitute the applicant's consent for entry at reasonable times for these purposes.

15.024: Violations of 310 CMR 15.000

Violations of Title 5 shall include but not be limited to the following:

- (1) construction or use of a system in any manner that is not in compliance with an applicable Disposal System Construction Permit, Certificate of Compliance, or the terms and conditions of any other approval or order issued by the Approving Authority or the Department;
- (2) construction or use of a system prior to obtaining the applicable Disposal System Construction Permit, Certificate of Compliance, or any other approval or order issued by the Approving Authority or the Department;
- (3) use, modification, or alteration of a facility in such a way that a larger system is required under 310 CMR 15.000 using the design flows at 310 CMR 15.203 without the approval of the Approving Authority in accordance with 310 CMR 15.000;
- (4) aggregation of facilities or division of a facility into separate facilities without complying with the provisions of 310 CMR 15.010;
- (5) construction, upgrade, or expansion of a system without the prior approval of the Approving Authority or the Department in the form of a Disposal System Construction Permit or approval of an emergency repair;
- (6) failure to upgrade systems or to take other necessary corrective actions as ordered or otherwise directed by the Approving Authority or the Department in accordance with 310 CMR 15.000;
- (7) failure to obtain an inspection in accordance with 310 CMR 15.000 when and as required by 310 CMR 15.301;
- (8) discharge of effluent directly or indirectly to the surface of the ground through ponding or surface breakout above the disposal area or to a surface water of the Commonwealth;
- (9) violation of any other provision of 310 CMR 15.000;
- (10) violation of the terms and conditions of a deed restriction, covenant or easement recorded or imposed pursuant to 310 CMR 15.000;
- (11) failure to submit a soil evaluation to the Approving Authority as required by 310 CMR 15.018(2);
- (12) failure to submit an inspection form to the Approving Authority as required by 310 CMR 15.301(10);
- (13) making any false, inaccurate, incomplete or misleading statement in any submission required by 310 CMR 15.000;
- (14) making any false, inaccurate, incomplete or misleading statement in any record, report, plan, file, log, register, or other document required to be kept pursuant to 310 CMR 15.000; or
- (15) failure to provide any information required by the Approving Authority under 310 CMR 15.000.

15.025: Enforcement by Approving Authorities

- (1) The provisions of 310 CMR 15.000 shall be implemented and enforced by the Approving Authority with oversight and assistance by the Department as necessary or as set forth in 310 CMR 15.000.
- (2) Local Approving Authorities may enforce the provisions of 310 CMR 15.000 in the same manner in which local health rules and regulations are enforced.
- (3) The Department may enforce the provisions of 310 CMR 15.000 under applicable provisions of M.G.L. c. 21, §§ 26 through 53; M.G.L. c. 21A, §§ 13, 13A and 16 and any other applicable law. In addition, the Department may require any person to provide information as the Department may reasonably require to determine whether that person is subject to or in violation of M.G.L. c. 21A, §§ 13, 13A and 16, 310 CMR 15.000, and/or M.G.L. c. 21, §§ 26 through 53 and the Department regulations promulgated thereunder.
- (4) The local Approving Authority or the Department may document the noncompliance of an owner or operator of a system through the issuance of a notice of noncompliance which requests the recipient to perform actions necessary to come into compliance with 310 CMR 15.000. Such letter is not an order and is not appealable pursuant to 310 CMR 15.420 through 15.422.
- (5) Whenever a Local Approving Authority fails to enforce 310 CMR 15.000 within a reasonable time, the Department may act to affect compliance with 310 CMR 15.000. Nothing in 310 CMR 15.025 shall be construed to limit the authority of the Department to take any action pursuant to M.G.L. c. 21 or other applicable law.

15.026: Orders

- (1) The Local Approving Authority or the Department may issue orders requiring the owner or operator of a facility, or a system inspector, system installer, designers, soil evaluator, or the holder of a permit, approval or certification issued pursuant to 310 CMR 15.000 to come into compliance with the provisions of 310 CMR 15.000 or to take any other action necessary to protect public health, safety, welfare or the environment. Any person aggrieved by such orders may appeal to any court of competent jurisdiction pursuant to 310 CMR 15.421 if such order is issued by the local Approving Authority. Any person who is subject to an order issued by the Department may request an adjudicatory hearing pursuant to 310 CMR 15.422.
- (2) Unless otherwise stated in 310 CMR 15.000, orders may be served on any person responsible for a violation of 310 CMR 15.000 in accordance with the following procedure:
 - (a) personally, by any person authorized to serve civil process, or
 - (b) by any person authorized to serve civil process by leaving a copy of the order at his or her last and usual place of abode, or
 - (c) by sending him or her a copy of the order by registered or certified mail, return receipt requested, if his or her last and usual place of abode can be determined based on a review of the local tax assessor's records, or
 - (d) if his or her last and usual place of abode is unknown, by posting a copy of the order in a conspicuous place on or about the facility and by advertising it for at least three out of five consecutive days in one or more newspapers of general circulation within the municipality wherein the affected facility is situated.
- (3) Whenever an imminent threat to public health, safety, welfare or the environment exists, or could result during the pendency of a hearing on the order, the local Approving Authority or the Department may issue the order reciting the existence of the emergency and requiring that such action be taken as they may deem necessary.
- (4) Notwithstanding any other provision of 310 CMR 15.000, any person to whom an order is directed shall comply therewith within the time specified in the order. Each day's failure to comply with the order shall constitute a separate offense and may result in penalties. Any person who is subject to an order issued by the Department may seek review pursuant to 310 CMR 15.421 or 15.422 (Appeals).

15.027: Prohibition of Septic System Additives

- (1) It shall be a violation of 310 CMR 15.000 for any approved System Inspector, Soil Evaluator, Permitted System Installer or Septage Hauler to add, place, introduce or recommend the addition, placement or introduction of septic system additives to any system without the prior written determination of the Department that the additive has met the criteria set forth in 310 CMR 15.027(3). The Department shall maintain and publish a list of allowed septic system additives.
- (2) It shall be a violation of 310 CMR 15.000 for any person to add, place or introduce septic system additives to any system without the prior written determination of the Department that the additive has met the criteria set forth in 310 CMR 15.027(3).
- (3) The Department may allow a septic system additive when it is demonstrated to the Department's satisfaction that the additive will not:
 - (a) harm the components of the system;
 - (b) adversely affect the functioning of the system; or
 - (c) adversely affect the environment.
- (4) A Department determination that an additive has met the criteria contained in 310 CMR 15.027 shall not constitute an endorsement or approval with respect to the effectiveness or performance of the additive. Representation by any person that such Department determination constitutes such endorsement or approval shall be a violation of 310 CMR 15.000.

15.028: Soil Absorption System Restoration

- (1) It shall be a violation of 310 CMR 15.000 for any person or any approved System Inspector, Soil Evaluator, Permitted Installer or Septage Hauler to introduce, recommend the use of, or market for sale any physical, chemical or biological treatment process to restore or condition a soil absorption system that has not been approved by the Department for use as an alternative system pursuant to 310 CMR 15.280 through 15.288. Physical treatment includes a physical application to or alteration of the leaching field within the soil absorption system, but is not intended to include pumping, flushing, and routing of pipes or any mechanical methods of repairing existing components. The Department shall maintain and publish a list of allowed treatment processes.
- (2) It shall be a violation of 310 CMR 15.000 for any person to use any physical, chemical or biological treatment process to restore or condition a soil absorption system that has not been approved by the Department for use as an alternative system pursuant to 310 CMR 15.280 through 15.288.
- (3) A Department approval of the treatment process use as an alternative system pursuant to 310 CMR 15.280 through 15.288 shall not constitute an endorsement or approval with respect to the effectiveness or performance of the treatment process. Representation by any person that such Department determination constitutes such endorsement or approval shall be a violation of 310 CMR 15.000.

15.029: Construction of Wells Near Existing Systems

It is a violation of 310 CMR 15.000 for any person to construct or install a water supply well closer to a system component than the relevant setbacks set forth in 310 CMR 15.211.

15.030: Records

- (1) The Approving Authority shall maintain records for each system within its jurisdiction and shall keep on file copies of the following documents:
 - (a) applications, plans and specifications for the construction, upgrade or expansion of on-site subsurface sewage disposal systems, including all forms and data submitted by the applicant and Soil Evaluator;
 - (b) disposal system construction permits;

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

15.030: continued

- (c) as-built plans indicating all modifications to the approved plans subsequent to the issuance of a Disposal System Construction Permit;
- (d) reports of construction inspections made prior to issuance of a Certificate of Compliance;
- (e) Certificates of Compliance issued or denied;
- (f) inspection forms and plans and specifications for the upgrade or expansion of failing or nonconforming on-site subsurface sewage disposal systems in compliance with 310 CMR 15.300 through 15.354;
- (g) system pumping records;
- (h) Letters of Non-compliance issued;
- (i) local enforcement actions taken; and
- (j) disposal system installers permits.

(2) The records listed in 310 CMR 15.030(1) shall be available for review upon request.

(3) The Approving Authority shall maintain the records set forth in 310 CMR 15.030(1) until such time as the system is abandoned in accordance with 310 CMR 15.000 or an approved connection is made to a sewer in accordance with 314 CMR 7.00: *Sewer System Extension and Connection Permit*.

15.040: Advisory Committee

An Advisory Committee shall be appointed by the Commissioner of the Department to consult with the Department regarding the implementation of 310 CMR 15.000 and to make recommendations regarding regulatory revisions as appropriate. The advisory committee shall at a minimum consist of representatives from health boards, environmental, real estate, and homebuilders organizations and a concerned citizen. The advisory committee shall meet at least quarterly and the members shall serve without compensation. The Commissioner may invite the heads of other state agencies to delegate representatives to the Advisory Committee.

15.050: Severability

The provisions of 310 CMR 15.000 are severable. If any provision of 310 CMR 15.000 is declared to be invalid or inapplicable to any particular circumstance, that invalidity or inapplicability will not effect the enforceability of the remainder of 310 CMR 15.000.

SUBPART B: SITING OF SYSTEMS

15.100: General Provisions

(1) Every location proposed for the construction, upgrade, or expansion of an on-site subsurface sewage disposal system shall be evaluated based upon an analysis of all site characteristics which may affect system function and performance in accordance with the evaluation criteria specified in 310 CMR 15.101 through 15.107.

(2) Each location shall be field evaluated for suitability for subsurface sewage disposal consistent with 310 CMR 15.000 by a Soil Evaluator approved by the Department in accordance with 310 CMR 15.017 prior to the commencement of final system design pursuant to Subpart C of 310 CMR 15.000 and application for a Disposal System Construction Permit. The evaluation shall include a soil profile on every proposed disposal area for which a Disposal System Construction Permit has not yet been issued.

15.101: Site Evaluation Criteria

(1) Every proposed disposal area shall be examined by a Soil Evaluator and the Approving Authority to determine if the disposal area is compatible with the proposed sewage disposal system in relation to the design flow set forth in 310 CMR 15.203 and system location criteria set forth in 310 CMR 15.106.

15.101: continued

- (2) Every proposed disposal area shall be assessed based on the following field test and analysis criteria:
 - (a) deep observation hole testing;
 - (b) soil profile determination;
 - (c) percolation testing;
 - (d) landscape position; and
 - (e) hydrogeologic properties
- (3) Site evaluation may be conducted at any time of the calendar year, provided that the Soil Evaluator makes and records on the site evaluation form proper consideration of the hydrogeologic properties of the specific site as required in 310 CMR 15.107 for the period of the water year within which the evaluation is performed.

15.102: Deep Observation Hole Test

- (1) The purpose of the deep observation hole test is to determine in accordance with 310 CMR 15.103 the soil profile in the proposed disposal area, the depth of overburden above ledge, bedrock or impervious layer(s), and to determine the observed ground-water elevation at the time of testing and to gather evidence to determine the adjusted ground-water elevation.
- (2) A minimum of two deep observation hole tests shall be performed in the presence of the Approving Authority at every proposed disposal area, two in the primary area and two in the reserve area. Additional testing shall be required if, in the opinion of the Soil Evaluator or the Approving Authority, there is evidence of inconsistent soil characteristics, the presence of ledge, or additional testing is necessary to properly assess site conditions within the proposed location to ensure that it can be installed entirely on soils and slopes in conformance with the requirements of 310 CMR 15.000. When a trench system is to be designed with the reserve area between the trenches, the Approving Authority may allow two deep hole observations if in the opinion of the Approving Authority the two deep holes adequately characterize the soils in both the primary and reserve areas.
- (3) Deep observation holes shall be excavated in two adjoining segments, the first ending at approximately the five-foot level to allow detailed examination by the Soil Evaluator without need for shoring, and an adjoining segment which shall extend to a minimum depth of four feet below the bottom elevation of the proposed soil absorption system but in no case less than ten feet below existing/natural grade unless such depth is unattainable due to bedrock or refusal or high groundwater, or where human safety may be in jeopardy.
- (4) Every deep observation hole shall be located from known and recoverable reference points or benchmarks so that it may be located on the system design plan with an accuracy of one foot. The location of the hole shall be defined as being half way between the side walls of the excavation at the point where the five foot deep segment adjoins the deeper segment.
- (5) It shall be the responsibility of the owner or agent to ensure that every deep observation hole is secured to prevent accidents whenever work is not in progress.

15.103: Soil Profile

- (1) The Soil Evaluator shall prepare a soil log using a form approved by the Department, in accordance with the Department's most recent manual for Soil Evaluators.
- (2) The following characteristics of each recognizable soil horizon or substratum in the deep observation hole testing shall be determined and recorded on the form:
 - (a) depth and thickness of horizon;
 - (b) estimated soil textural class, using the USDA/NRCS system of classification;
 - (c) estimated volume percentage of coarse fragments;
 - (d) abundance, size and contrast of redoximorphic features, if present;
 - (e) soil structure (soil profile pits only); and
 - (f) soil consistence.

15.103: continued

- (3) High ground-water elevation shall be determined by:
- (a) soil color using the Munsell system, the abundance, size and contrast of redoximorphic features, if present;
 - (b) one or more of the following methods may be used to supplement the method in 310 CMR 15.103(3)(a) and shall be used when no redoximorphic features are present:
 1. observation of actual water table during times of annual high water table;
 2. the use of USGS wells for correlating comparisons in water tables during times when the water table is not at the annual high range;
 3. a Department-approved method for determining inland high ground-water elevation as contained in Frimpter, M.H. "Probable High Groundwater Levels in Massachusetts," Open File Report 80-1205, USGS or Frimpter, M.H. and G.C. Belfit, 1992, "Estimating highest ground-water levels for construction and land use planning, Cape Cod, Massachusetts," updated, Barnstable, MA Cape Cod Commission Technical Bulletin 92-001"; or
 4. a Department-approved method for determining coastal high groundwater elevation which incorporates tidal fluctuation information into the use of historical high groundwater data as contained in Frimpter, M.H. and G.C. Belfit, 1992, "Estimating highest ground-water levels for construction and land use planning, Cape Cod, Massachusetts," updated, Barnstable, MA, Cape Cod Commission Technical Bulletin 92-001 or, if the location of the system is affected by tidal cycle typically within 300 feet of mean high water of the ocean, monitoring the high groundwater elevation over a tidal cycle during a full moon high tide.
- (4) The Soil Evaluator shall indicate on the soil log whether four feet of naturally occurring pervious materials exist in all areas observed throughout the area proposed for the soil absorption system.

15.104: Percolation Testing

- (1) The standard percolation test is intended to give an approximate measure of the soil's percolating capacity. Unsaturated hydraulic conductivities vary dramatically from the saturated hydraulic conductivity with changes in soil characteristics and moisture content. Percolation testing may be conducted at any time of the year and the data obtained in accordance with the procedures specified by 310 CMR 15.000 may be deemed valid for an indefinite period provided the soils within the site evaluated remain undisturbed and unaltered. All percolation testing shall be performed in the presence of the Approving Authority.
- (2) A percolation test shall provide data necessary to assess the suitability of the soil to transmit water from the soil absorption system and to a depth of four feet below this elevation. Where the soil varies with depth as indicated by the results of the deep observation hole testing performed pursuant to 310 CMR 15.102, percolation tests shall be conducted in the soil which is identified to be the most restrictive by the Soil Evaluator with the concurrence of the Approving Authority.
- (3) Percolation tests shall be performed by a Massachusetts Registered Professional Engineer, Massachusetts Registered Sanitarian, a Soil Evaluator, or a person who:
- (a) in the opinion of the Approving Authority is qualified to perform such tests;
 - (b) has one year of documented experience in satisfactorily performing such tests; and
 - (c) has used or gained skills that demonstrate sufficient competence to perform such tests.
- (4) At least one percolation test shall be performed at every proposed disposal area, one in the primary area in which the soil absorption system is to be located and one in the proposed reserve area. Additional tests shall be required where soil conditions vary or as determined by the Approving Authority or where system design exceeds 2,000 gpd. In such instances, a minimum of three percolation tests, spaced uniformly over the proposed soil absorption area, shall be performed in addition to the test in the proposed reserve area.
- (5) Where 310 CMR 15.104(4) or the Approving Authority requires multiple percolation tests, the results of the test providing the slowest rate shall be used for system design. Averaging of percolation test rates across the site is prohibited.

15.104: continued

- (6) Percolation tests may be performed at any time of the year provided the soil to be tested is below the frozen soil layer.
- (7) Percolation tests shall not be performed in holes that have remained open to the atmosphere for more than three consecutive days.
- (8) Percolation tests shall not be performed in filled or disturbed ground.

15.105: Procedure for Performing a Percolation Test

A percolation test shall be conducted by performing the following steps in sequence:

- (1) Prepare a test hole located within the proposed disposal area which, in the judgment of the Soil Evaluator and the Approving Authority, is the most limiting. The test hole shall have a diameter of 12 inches, as precisely as possible, with vertical sides 18 inches deep not including any allowable liners or filter layers on either the bottom or sides.
- (2) Establish a fixed point at the top or bottom of the test hole from which all measurements will be taken.
- (3) Scratch the bottom and sides of the test hole to remove any smeared soil surfaces, taking care not to significantly change the hole dimensions. Add two inches of coarse sand to protect the bottom from scouring, or insert a board or other impervious object in the hole so that water may be poured down or on it during the filling operation. A mesh or perforated liner designed to maintain the test hole dimensions in extremely loose soils while allowing essentially unrestricted flow of water may be used with permission of the Approving Authority.
- (4) Carefully fill the hole with clear water to a minimum depth of 12 inches from the bottom of the hole. Maintain this minimum 12 inch or greater water level by adding water as necessary in order to saturate surrounding soils for a period of no less than 15 minutes after first filling the hole.
- (5) After saturation, let the water level drop to a depth of nine inches and then measure the length of time in minutes for it to drop from a depth of nine inches to a depth of six inches. If the rate is erratic in the opinion of the Approving Authority, the hole shall be refilled and soaked until the drop per increment of time is steady. The time for the level to drop from a depth of nine inches to a depth of six inches, divided by three, is the percolation rate in minutes per inch.
- (6) In certain soils, particularly coarse sands, the soil may be so pervious as to make a percolation test difficult, impractical, and meaningless. At the discretion of the Soil Evaluator and with the concurrence of the Approving Authority, the percolation test may be discontinued and a rate of two minutes per inch or less can be assumed provided that at least 24 gallons of water has been added to the percolation hole within 15 minutes and it is impossible to obtain a liquid depth of nine inches.

15.106: Landscape Position

- (1) The topography of the proposed disposal area shall be identified and recorded on the evaluation form. Particular attention shall be given to recording features which may adversely affect the functioning of an on-site system. These include:
 - (a) bedrock outcrops or areas with many stones and/or boulders;
 - (b) steep slopes (greater than 3:1, horizontal to vertical) exhibiting signs of unstable soil such as landslide scars, slump blocks, tree trunks or shrubs bending downslope;
 - (c) highly disturbed ground as indicated by such features as remnants of foundations or pavements or buried construction debris;
 - (d) low-lying coastal areas exhibiting signs of tidal inundation or tidal marsh vegetation;
 - (e) low-lying inland areas exhibiting signs of influence of surface water runoff, ponding or freshwater wetland vegetation;
 - (f) flat low-lying areas adjacent to surface water bodies and streams; and
 - (g) the boundary of a velocity zone.

15.107: Hydrogeologic Properties

(1) The hydrogeologic properties of the proposed disposal area shall be identified and recorded on the evaluation form with respect to the following:

- (a) estimated direction of ground-water flow;
- (b) high ground-water elevation;
- (c) estimated depth to bedrock if a factor in design of proposed system, or actual depth if encountered during deep observation hole tests;
- (d) depth of unsaturated zone, including any perched water tables;
- (e) drainage classification of dominant soil type as defined by NRCS;
- (f) lateral distance to surface water and wetland delineation;
- (g) location of every water supply, public and private,
 - 1. within 400 feet of the proposed system location in the case of surface water supplies and gravel packed public water supply wells,
 - 2. within 250 feet of the proposed system location in the case of tubular public water supply wells, and
 - 3. within 150 feet of the proposed system location in the case of private water supply wells;
- (h) approximate safe yield or design capacity of every public water supply, if information is available; and
- (i) identification of proposed disposal area in relation to the location of nitrogen sensitive areas designated pursuant to 310 CMR 15.214.

(2) When observation wells are appropriate or necessary to determine the hydrogeologic properties of a site or region, such as direction of ground-water flow, perched ground-water tables and seasonal ground-water elevation fluctuations, the general guide for the proper use and installation of ground-water observation wells provided in Department guidance shall be followed.

SUBPART C: DESIGN, CONSTRUCTION, REPAIR, AND REPLACEMENT OF
ON-SITE SEWAGE DISPOSAL SYSTEMS

15.201: Type of System

Each on-site subsurface sewage disposal system approved pursuant to 310 CMR 15.000 shall consist of a septic tank which discharges liquid effluent through a gravity distribution, dosing or pressure distribution network to a soil absorption system as hereinafter described. No modifications or alterations to the design criteria shall be allowed except pursuant to the alternative system and shared systems provisions of 310 CMR 15.280 through 15.293, or the local upgrade approval or variance procedures of 310 CMR 15.400.

15.202: Use of Recirculating Sand Filters

(1) A recirculating sand filter ("RSF") or equivalent alternative technology approved by the Department in accordance with 310 CMR 15.280 through 15.288 is a required component of all systems designed to serve a facility or facilities with a design flow of 2,000 gpd or more to be located in a Nitrogen Sensitive Area as designated in 310 CMR 15.214(1)(a), provided that such RSF shall not be required for a facility for which subdivision approval has been obtained to construct dwellings with a cumulative total design flow of 2,000 gpd or greater if a disposal system construction permit to construct a system with a total design flow of less than 2,000 gpd in full compliance with 310 CMR 15.000 on each of the subdivision lots to be served by a system is obtained and such separate subdivision lots are to be conveyed to independent owners.

(2) A recirculating sand filter or equivalent alternative technology approved by the Department in accordance with 310 CMR 15.280 through 15.288, may be used to enhance nitrogen removal in systems in Nitrogen Sensitive Areas designated pursuant to 310 CMR 15.214(1)(a), in accordance with 310 CMR 15.217 (Systems with Enhanced Nitrogen Removal).

(3) Recirculating sand filters designed and approved in accordance with Department guidance are certified for general use.

15.202: continued

- (4) Recirculating sand filters or equivalent alternative technology shall meet the following requirements:
- (a) effluent discharge concentrations shall meet or exceed secondary treatment standards of 30 mg/L BOD₅ and 30 mg/L TSS. The effluent pH range shall be 6.0 to 9.0.
 - (b) total nitrogen concentration in the effluent shall not exceed 25 mg/L.
 - (c) system owners shall have effluent quality monitored quarterly for systems serving a facility with a design flow of less than 2,000 gallons per day, and both influent and effluent quality monitored quarterly for systems serving a facility with a design flow of 2,000 gallons per day or greater, for BOD₅, TSS, pH and total nitrogen, unless otherwise required or approved by the Department. Unless otherwise required by the Department, the system owner shall submit all monitoring results to the local Approving Authority and the Department by January 31st of each year for monitoring conducted during the previous calendar year.
 - (d) recirculating sand filter systems shall contain all components of a standard on-site system and be capable of functioning as a conventional system. Any departures from this provision require written approval from the Department.
 - (e) the system owner shall notify the local Approving Authority of any system failure within 24 hours of detection of such failure.
 - (f) pressure distribution, in accordance with 310 CMR 15.254, is required for all systems serving a facility with a design flow of 2,000 gallons per day or greater. Pressure distribution systems shall be designed in accordance with Department guidance.
 - (g) for systems serving a facility with a design flow of 2,000 gpd or greater, the separation from high groundwater as required under 310 CMR 15.212 shall be calculated after adding the effect of groundwater mounding to the high groundwater elevation as determined pursuant to 310 CMR 15.103(3).
 - (h) by January 31st of each year, unless otherwise determined by the Department, the system must be inspected at least annually by a Massachusetts certified operator of an appropriate grade to operate the system, unless the Department has approved in writing a reduction in frequency of inspection or the facility is subject to a Department approved comprehensive local plan of on-site system inspection, the system owner shall submit a certification by the system operator to the local Approving Authority and the Department for the previous calendar year stating that the system and its components are functioning as designed and were inspected in accordance with the Department's approval.
 - (i) an operation and maintenance manual shall be prepared by the system designer or a Massachusetts Registered Professional Engineer and submitted as part of the application.

15.203: System Sewage Flow Design Criteria

- (1) Each component of an on-site subsurface sewage disposal system shall be designed to treat sanitary sewage discharged from all buildings to be served by the system using the System Sewage Flow Design flows set forth at 310 CMR 15.203(2) through (5), except as provided in 310 CMR 15.203(6). Actual water meter data shall not be substituted for the design flow criteria for the activities listed in 310 CMR 15.203(2) through (5) unless pursuant to 310 CMR 15.416. Design flow is equivalent to estimated generated flow for the proposed use plus a factor representing flow variations.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

15.203: continued

TYPE OF ESTABLISHMENT	UNIT	GALLONS PER DAY	MINIMUM ALLOWABLE GPD FOR SYSTEM DESIGN

***** All schools to be served by an alternative technology approved pursuant to 310 CMR 15.280 through 15.288 shall have an equalization basin as part of the system design and have it installed prior to the treatment device.

(6) Facilities other than those listed in 310 CMR 15.203(2) through (5), and nonresidential facilities with unique design features that result in significantly different design flows than those listed above may apply to the Department for a determination of design flow using actual meter readings of established flows from existing or similar installations without the need for a variance pursuant to 310 CMR 15.410 or 15.416. Prior to making a determination the Department will consult with the local Approving Authority. For state and federal facilities, the Department may also establish system design flows other than those listed above using actual meter readings of established flows from existing or similar installations. Any design flow established by the Department pursuant to 310 CMR 15.203(6), shall be based on 200% of average water meter readings in order to assimilate maximum daily flows or on other methods determined to be appropriate by the Department.

(7) In schools, flows generated from sinks or other drains receiving wastes from science laboratories, graphics arts classrooms, or vocational school activities, including, but not limited to, automotive repair painting, or metal fabrication are classified industrial wastes and shall be directed pursuant to an appropriate permit, to a sewer, if a sewer connection is feasible and, if not, then to an industrial waste holding tank in accordance with 314 CMR 18.000: *Industrial Wastewater Holding Tank and Container Construction, Operation, and Record Keeping Requirements* or an approved hazardous waste collection receptacle.

15.204: Increases in Design Flow to System

No person shall increase the actual or design flow to any cesspool or to any other system above the existing approved capacity, or change the type of establishment of a facility served by a cesspool, unless the cesspool or system is upgraded first. Upgrades to accept increased design flow shall be performed in full compliance with the requirements applicable to new construction unless a variance is allowed pursuant to 310 CMR 15.414. For purposes of 310 CMR 15.204, the approved design flow shall be the flow listed in the most recent Disposal Works Construction Permit.

15.211: Minimum Setback Distances

(1) All systems must conform to the minimum setback distance for septic tanks, holding tanks, pump chambers, treatment units and soil absorption systems, including reserve area, measured in feet and as set forth below. Where more than one setback applies, all setback requirements shall be satisfied.

	Septic Tank Holding Tank Pump Chamber Treatment Unit Grease Traps	Soil Absorption System
Property Line	10[5]	10[5]
Cellar or Crawl Space Wall, Swimming Pool (inground), foundation drain	10	20
Slab Foundation	10	10
Water Supply Line (pressure)	10[1]	10[1]
Surface Waters (except wetlands) Bordering Vegetated Wetland (BVW), Salt Marshes, Inland and Coastal Banks	25	50
Surface Water Supply - Reservoirs and Impoundments	400	400
Tributaries to Surface Water Supplies	200	200
Wetlands bordering Surface Water Supply or Tributary thereto	100	100
Certified Vernal Pools	50	100[2]
Private Water Supply Well or Suction Line	50	100
Public Water Supply Well	(2)	(2)
Irrigation Well	10	25
Open, Surface or Subsurface Drains which discharge to Surface Water Supplies or tributaries thereto	50	100
Other Open, Surface or Subsurface Drains (excluding foundation drains) which intercept seasonal high groundwater table [3]	25	50
Other Open, Surface or Subsurface Drains (excluding foundation drains)	5	10
Leaching Catch Basins & Dry Wells	10	25
Downhill Slope	not applicable	15[4]

[1] Disposal facilities shall be at least 18 inches below water supply lines. Wherever sewer lines must cross water supply lines, both pipes shall be constructed of class 150 pressure pipe and shall be pressure tested to assure watertightness.

[2] The required setback shall be 50 feet where the applicant has provided hydrogeologic data acceptable to the Approving Authority demonstrating that the location of the soil absorption system is hydraulically downgradient of the vernal pool. Surface topography alone is not determinative.

15.211: continued

[3] Surface or subsurface drains which will regularly or periodically intercept the seasonal high groundwater table and carry that groundwater away from an area must meet the specified setbacks.

[4] The setback distance shall be measured from a naturally-occurring downhill slope which is not steeper than 3:1 (horizontal:vertical). A minimum 15 foot horizontal separation distance shall be provided between the top of the two inch layer of 1/8 to 1/2 inch washed stone above the pipe, or the geotextile material above the pipe or the top of the chamber and the adjacent downhill slope. For a system located in an area with any adjacent naturally occurring downhill slope steeper than 3:1, slope stabilization shall be provided in accordance with best engineering practice which may include construction of a retaining wall designed by a Massachusetts Registered Professional Engineer.

[5] Locating a system component or any part thereof beyond a property line of the facility, whether pursuant to an easement or otherwise, requires a variance issued in accordance with 310 CMR 15.410, except that the placement of fill or grading material beyond the property line of the facility, pursuant to an easement or otherwise, shall not require a variance under 310 CMR 15.410.

(2) No system shall be constructed within a Zone I of a public water supply well or wellfield. No system shall be upgraded or expanded within a Zone I of a public water supply well or wellfield unless a variance is granted pursuant to 310 CMR 15.410 through 15.415.

(3) All setback distances from water bodies shall be measured from the bank of the water body. All setback distances from wetlands shall be measured in accordance with the criteria of the Wetlands Protection Act and 310 CMR 10.00: *Wetlands Protection*, from the most landward edge of the following features: bordering vegetated wetland as defined in 310 CMR 10.55(2): *Definition, Critical Characteristics and Boundary*; salt marsh as defined in 310 CMR 10.32(2): *Definitions*; top of inland bank as defined in 310 CMR 10.54(2): *Definition, Critical Characteristics and Boundary*; or top of coastal bank as defined in 310 CMR 10.30(2): *Definition*. In the event of disputes concerning landward boundary of resources subject to the Wetlands Protection Act, the boundary shall be as delineated by the municipal Conservation Commission or the Department in accordance with 310 CMR 10.00: *Wetlands Protection*, and relevant interpretive guidance documents.

15.212: Depth to Groundwater

(1) The minimum vertical separation distance between the bottom of the stone underlying the soil absorption system above the high ground-water elevation shall be

- (a) four feet in soils with a recorded percolation rate of more than two minutes per inch;
- (b) five feet in soils with a recorded percolation rate of two minutes or less per inch.

(2) For systems with a design flow of 2,000 gpd or greater, the separation from high groundwater as required by 310 CMR 15.212(1) shall be calculated after adding the effect of groundwater mounding to the high groundwater elevation as determined pursuant to 310 CMR 15.103(3).

15.213: Construction in Velocity Zones and Floodways

(1) No septic tank or humus/composting toilet shall be constructed in a velocity zone on a coastal beach, barrier beach, or dune, or in a regulatory floodway, except a septic tank that replaces a tank in existence on the site as of March 31, 1995 that has been damaged, removed or destroyed, where placement of the tank outside of the velocity zone or regulatory floodway, either horizontally or vertically, is not feasible. Where reconstruction of a system in existence on March 31, 1995 occurs or reconstruction of a building or buildings is allowed in accordance with the Wetlands Protection Act and 310 CMR 10.00: *Wetlands Protection*, it shall be presumed to be feasible to elevate the tank if the building is elevated above the velocity zone or regulatory floodway.

(2) No soil absorption system shall be constructed in a velocity zone on a coastal beach, barrier beach, or dune, or in a regulatory floodway, unless

- (a) the system is to serve a building or buildings that were in existence on March 31, 1995 or reconstruction of such building or buildings where allowed in accordance with the Wetlands Protection Act, M.G.L. c. 140, § 131 and its implementing regulations as 310 CMR 10.00: *Wetlands Protection*;

15.213: continued

- (b) there is no increase in design flow from such building or buildings;
- (c) no connection to a public sewer or shared system is available;
- (d) the owner or applicant cannot site the system elsewhere;
- (e) the septic tank or humus/composting toilet is sited outside of the velocity zone or regulatory floodway, either horizontally or vertically;
- (f) the system achieves separation from high groundwater elevation as required by 310 CMR 15.212; and
- (g) any portion of the soil absorption system that is within the velocity zone or regulatory floodway is a leaching bed or trench system or any other system constructed in accordance with the Wetlands Protection Act and 310 CMR 10.00: *Wetlands Protection*.

15.214: Designation of Nitrogen Sensitive Areas

(1) The following areas have been determined by the Department to be particularly sensitive to the discharge of pollutants from on-site sewage disposal systems and are therefore designated Nitrogen Sensitive Areas:

(a) Public and Private Water Supply Protection Areas:

- 1. Department-approved Zone IIs for wells or wellfields used by public water systems as defined in 310 CMR 22.02 and, in the absence of a Department-approved Zone II, the Interim Wellhead Protection Area (IWPA) for a public water system's well or wellfield as defined in 310 CMR 22.02; and
- 2. Any areas where the use of both on-site systems and wells that are not regulated as public water supplies under 310 CMR 22.00: *Drinking Water* serve facilities.

(b) Natural Resource Areas:

- 1. any watershed to an embayment or sub-embayment that on July 7, 2023 is the subject of a nitrogen Total Maximum Daily Load (TMDL) approved by the EPA and an Area Wide Water Quality Management Plan approved by the EPA for Cape Cod in 2015 pursuant to Section 208 of the Federal Clean Water Act, 33 U.S.C. § 1251 *et. Seq.* ("208 Plan"), addressing nitrogen pollution. For any such watershed that is subject to an approved nitrogen TMDL and an approved 208 Plan as of July 7, 2023, the effective date of designation is July 7, 2023. A Nitrogen Sensitive Area designation for watersheds subject to the 208 Plan that receive an EPA-approved TMDL after July 7, 2023 becomes effective on the date EPA approves the TMDL.
- 2. any watershed to an embayment or sub-embayment subject to the 208 Plan as of July 7, 2023 that the Department designates as a Nitrogen Sensitive Area after a public review process based on:
 - a. a Massachusetts Estuary Project Report demonstrating nitrogen impacts; or
 - b. a Scientific Evaluation demonstrating nitrogen impacts. Nitrogen impacts include, but are not limited to, nitrogen related eutrophication; nitrogen related adverse ecological and habitat impacts; nitrogen concentrations that would cause or contribute to impairment of existing or designated uses pursuant to 314 CMR 4.00: *Massachusetts Surface Water Quality Standards*; or nitrogen concentrations that exceed site-specific criteria developed by the Department pursuant to 314 CMR 4.00. The Department may accept a Scientific Evaluation commenced prior to July 7, 2023. If the Scientific Evaluation will not be conducted by or on behalf of the Department, a scope of work for the proposed Scientific Evaluation shall be submitted to the Department for its review and approval before the evaluation commences, by:
 - i. submitting a draft scope of work for the Scientific Evaluation in accordance with the Department's guidelines;
 - ii. within 21 days of submitting the draft scope of work to the Department, placing a public notice in the *Environmental Monitor* that the draft scope of work has been submitted to the Department for review and approval;
 - iii. conducting a joint pre-scoping meeting with the Department and appropriate representatives of the municipalities within the evaluation area to discuss the proposed scope of work and set a timeline for routine update meetings; and

15.214: continued

iv. submitting to the Department a copy of the public notice published in the *Environmental Monitor*; a proposed final scope of work for Department review; and a proposed plan and website to provide periodic informational updates regarding the Scientific Evaluation process to the community(ies) that may be affected.

(2) A public review process shall precede a final Nitrogen Sensitive Area designation pursuant to 310 CMR 15.214(1)(b)2. and shall include, at a minimum, the following:

(a) Public Notice. The Department shall provide public notice of its intent to formally designate the Nitrogen Sensitive Area. Public notice shall afford a public comment period of at least 60 days after the date of publication in the *Environmental Monitor*. The Department may elect to extend the public comment period. If the Department provides such an extension, the Department shall post notice thereof on the Department's website and provide electronic copies of the notice to anyone who requests it.

(b) The Department shall publish public notice of the intended designation in the *Environmental Monitor* and in a local or regional newspaper with the largest readership distribution both online and in hardcopy, if hardcopy exists, within the area that may be affected by the designation. The Department will request that notice be published in the local town or city hall and on the website of the community or communities that may be affected. The Department will also post notice on the Department's webpage. In municipalities with Environmental Justice Populations where the preceding method for publishing public notice does not specifically serve the Environmental Justice Population(s), public notice shall be provided by the Department to at least one additional news organization that primarily serves the Environmental Justice Population(s) within the area that may be affected by the designation. The public notice shall be translated into other languages that are prevalent in areas with persons of limited English proficiency.

(c) The Department shall send a copy of the public notice to the chief municipal elected official and the Board of Health of any municipality that may be affected by the intended designation.

(d) The public notice shall contain the following minimum information and any additional information the Department deems appropriate:

1. identification of the watershed or sub-watershed to be addressed by the intended designation;
2. a link to a website that includes a detailed factual and scientific basis and regulatory rationale explaining how the watershed satisfies the criteria for the intended designation under 310 CMR 15.214(1)(b)2.; and
3. the time within which the public may comment or request a public hearing.

(e) Public Hearings. If the Department determines a public hearing to be in the public interest, then the Department shall schedule and conduct such hearing in a community within the area that may be affected by the designation. Public notice of the public hearing shall be published in the same manner as the public notice for the public comment period. When a public hearing is held, the public comment period shall be extended to the conclusion of the public hearing or such later date as may be established by the Department.

(f) Determination. After the conclusion of the public comment period, the Department may issue or deny a final designation, which will be published on the Department's website. The effective date of the designation shall be the date of issuance and the requirements of 310 CMR 15.215 take effect upon that date.

(g) Appeals. Any person aggrieved by a Department final determination to designate a Nitrogen Sensitive Area pursuant to 310 CMR 15.214(1)(b)2.a. or b. and who also participated in the public comment period or public hearing may request an adjudicatory hearing in accordance with 310 CMR 1.00: *Adjudicatory Proceedings* and M.G.L. c. 30A within 21 days of the designation's issuance but only with respect to whether there is a sufficient factual or scientific basis for the Nitrogen Sensitive Area designation under 310 CMR 15.214(1)(b)2.a. or b. Participating in the public comment period or public hearing means verbally commenting during the public hearing or submitting written information to the Department prior to close of the public comment period.

15.215: Nitrogen Loading Limitations

The necessity of providing increased treatment of pollutants and reduction in nutrients discharged from on-site sewage disposal systems in areas designated as nitrogen sensitive areas warrants the imposition of the following nitrogen loading limitations:

(1) Public and Private Water Supply Protection Areas. No facility owner for New Construction in Nitrogen Sensitive Areas designated in 310 CMR 15.214(1)(a) shall install a system designed to receive or allow 310 CMR 15.202 (use of recirculating sand filters), a system to receive more than 440 gallons of design flow per day per acre except as set forth in 310 CMR 15.216 (aggregate flows) or 15.217 (enhanced nitrogen removal).

(2) Natural Resource Areas. Any system serving New Construction or an existing facility in a Nitrogen Sensitive Area designated pursuant to 310 CMR 15.214(1)(b) on or after July 7, 2023 shall incorporate Best Available Nitrogen Reducing Technology, as follows:

(a) Existing Systems. The owner of a system serving, or approved to serve, an existing facility as of the effective date of the Nitrogen Sensitive Area designation shall upgrade the system pursuant to 310 CMR 15.401 through 15.405 to incorporate the Best Available Nitrogen Reducing Technology within five years of the date on which the Notice of Intent and Application Period ends unless:

1. Except as otherwise provided in 310 CMR 15.215(2)(c)4. and 314 CMR 21.12(5), a Notice of Intent, a Watershed Permit application, or a *De Minimis* Nitrogen Load Exemption application is filed for the area during the Notice of Intent and Application Period pursuant to 310 CMR 15.215(2)(c), 314 CMR 21.03: *Application for a Watershed Permit*, or 314 CMR 21.12: *De Minimis Nitrogen Load Exemption*, respectively; or
2. The Nitrogen Sensitive Area is subject to a *De Minimis* Nitrogen Load Exemption and the facility is within the area covered by the exemption; or
3. The Nitrogen Sensitive Area is subject to a Watershed Permit, the facility is within the area covered by the permit, and:
 - a. The Watershed Permit to which the Nitrogen Sensitive Area is subject specifies that the five-year upgrade requirement has been suspended on the basis of permit conditions that ensure at least equivalent nitrogen reductions within the schedule included in the Watershed Permit; or, for Watershed Permits issued before promulgation of 314 CMR 21.00: *Massachusetts Watershed Permit Regulations*, the five-year upgrade requirement is suspended for each permittee's watershed area, unless and until the permit is revoked or terminated, in which case 310 CMR 15.215(2)(d) shall go into effect for each system in the watershed area of each permittee to whom the revocation or termination is applicable; and
 - b. The watershed permittee(s) is in compliance with the terms and conditions of the permit.

(b) New Construction. Beginning six months after the effective date of the Nitrogen Sensitive Area designation any systems serving New Construction shall incorporate Best Available Nitrogen Reducing Technology. The Department will suspend this requirement only if:

1. Except as otherwise provided in 310 CMR 15.215(2)(c)4. and 314 CMR 21.12(5), a Notice of Intent, a Watershed Permit application, or a *De Minimis* Nitrogen Load Exemption application is filed for the area during the Notice of Intent and Application Period pursuant to 310 CMR 15.215(2)(c), 314 CMR 21.03: *Application for a Watershed Permit*, or 314 CMR 21.12: *De Minimis Nitrogen Load Exemption*, respectively; or
2. The Nitrogen Sensitive Area is subject to a *De Minimis* Nitrogen Load Exemption and the facility is within the area covered by the exemption; or
3. The Nitrogen Sensitive Area is subject to a Watershed Permit and the New Construction is within the area covered by the permit and:
 - a. The Watershed Permit to which the Nitrogen Sensitive Area is subject specifies that the Best Available Nitrogen Reducing Technology incorporation requirement has been suspended on the basis of permit conditions that ensure nitrogen reductions will be sufficient to offset future additional nitrogen loads from newly constructed on-site systems; and
 - b. The watershed permittee(s) is in compliance with the terms and conditions of the Watershed Permit.

15.215: continued

(c) Notice of Intent and Application Period.

1. The filing of an application for a Watershed Permit or a *De Minimis* Nitrogen Load Exemption or a Notice of Intent to apply for a Watershed Permit during the Notice of Intent and Application Period by a party who could otherwise apply for such permit under 314 CMR 21.00: *Massachusetts Watershed Permit Regulations* will prevent commencement of the five-year time period in which Title 5 system upgrades would otherwise be required under 310 CMR 15.215(2)(a).

2. An application for a Watershed Permit or *De Minimis* Nitrogen Load exemption shall be filed pursuant to 314 CMR 21.03: *Application for a Watershed Permit* or 21.12: *De Minimis Nitrogen Load Exemption*, respectively. A Notice of Intent shall be filed on a form provided by the Department and shall include a proposed schedule with sufficient milestones to be approved by the Department for the filing of a Watershed Permit application and issuance of the permit as soon as practicable but no later than seven years from the applicable Nitrogen Sensitive Area designation under 310 CMR 15.214(1)(b).

3. Within 28 days of filing a Notice of Intent, a Watershed Permit application, or *De Minimis* Nitrogen Load Exemption application, the party who filed such notice or application must publish notice of its filing and any suspension of the Title 5 upgrade and New Construction requirements under 310 CMR 15.215(2)(a) and (b) in the forthcoming *Environmental Monitor*; on the party's official website; in the town hall where similar notices are published; and in a local or regional newspaper with the largest readership distribution within the area that may be affected by the Title 5 upgrade and New Construction requirements in 310 CMR 15.215(2)(a) and (b). In municipalities with Environmental Justice Populations where the preceding method for publishing public notice does not specifically serve the Environmental Justice Population(s), the party who filed the Notice of Intent or Watershed Permit application must publish the preceding notice in at least one additional news organization that primarily serves the Environmental Justice Population(s) within the area that may be affected by the designation. The public notice shall be translated into other languages that are prevalent in areas with persons of limited English proficiency.

4. A party's failure to comply with deadlines in a Watershed Permit application schedule in a Notice of Intent approved under 310 CMR 15.215(2)(c)2. will commence the New Construction requirements and five-year time period for mandatory upgrades to existing systems under 310 CMR 15.215(2)(a) and (b) upon issuance of notice from the Department to the noncompliant party. Within 28 days of issuing that notice to the noncompliant party, the Department shall publish notice in accordance with the notice publication provisions in 310 CMR 15.215(2)(c)3. that the Title 5 upgrade and New Construction requirements under 310 CMR 15.215(2)(a) and (b) have been invoked.

(d) Termination or Revocation of Watershed Permit or *De Minimis* Nitrogen Load Exemption. If a *De Minimis* Nitrogen Load Exemption or a Watershed Permit is terminated or revoked pursuant to 314 CMR 21.00: *Massachusetts Watershed Permit Regulations* for one or more permittees to the permit, any owner of an existing system or a system to serve New Construction in the designated Nitrogen Sensitive Area pertaining either to each permittee whose permit status is terminated or revoked or to the area that was covered by the *De Minimis* Nitrogen Load Exemption, as applicable, shall incorporate Best Available Nitrogen Reducing Technology, as follows:

1. For existing systems or those with a Disposal System Construction Permit for installation as of the date of the Watershed Permit or *De Minimis* Nitrogen Load Exemption termination or revocation, within five years of the date when the Notice of Intent and Application Period would have otherwise ended by its own terms or within two years of the date of termination or revocation of the Watershed Permit or *De Minimis* Nitrogen Load exemption (as applicable), whichever is longer.

2. New systems installed after the effective date of the Watershed Permit or *De Minimis* Nitrogen Load Exemption termination or revocation shall incorporate Best Available Nitrogen Reducing Technology.

(e) Notwithstanding 310 CMR 15.215(2)(a) through (d), the Department may extend any time limit contained in 310 CMR 15.215 for good cause including, but not limited to, an insufficient supply of necessary equipment or materials or unavailability of contractors.

15.215: continued

(f) Facility owners that install Best Available Nitrogen Reducing Technology pursuant to 310 CMR 15.215(2) shall not be required to upgrade to subsequent Best Available Nitrogen Reducing Technology unless the Approving Authority determines that: the system has failed and is required to be upgraded; there is an alteration to or change in use of the facility that is determined to be New Construction; or the system is failing to protect the public health, safety, and the environment.

(g) The Department will maintain and publish a list on its website of Best Available Nitrogen Reducing Technologies and nitrogen reducing technologies that have received general, provisional, or piloting approval pursuant to 310 CMR 15.285 through 15.288. The Department may allow the use of technologies that do not meet the Best Available Nitrogen Reducing Technology definition in the event of significant supply or market limitations. The Department may prohibit the use of a technology as Best Available Nitrogen Reducing Technology based on a technology's noncompliance with the performance standards established in the technology's approval.

(h) Facility owners that upgraded their system within ten years of the effective date of the Nitrogen Sensitive Area designation with Department-approved nitrogen removing technology are exempt from the individual system upgrade requirements in 310 CMR 15.215(2)(a) unless the Approving Authority determines that: the system has failed and is required to be upgraded; there is an alteration to or change in use of the facility that is determined to be New Construction; or the system is failing to protect the public health, safety, and the environment.

(i) A facility owner of a system(s), which pursuant to 310 CMR 15.006 serves an existing facility with a design flow of 10,000 gpd or greater but less than 15,000 gpd, shall upgrade the system(s) pursuant to 310 CMR 15.304 when the facility is in a location designated as a Nitrogen Sensitive Area pursuant to 310 CMR 15.214.

(3) The owner of a system serving New Construction in a Nitrogen Sensitive Area designated in both 310 CMR 15.214(1)(a) and (1)(b) shall comply with the requirements of 310 CMR 15.215(2).

(4) The owner of a system or proposed system shall ascertain whether the facility is in a designated Nitrogen Sensitive Area. The Department will prepare and make available on the Department's website maps portraying designated Nitrogen Sensitive Areas within the Commonwealth. Prior to any transfer of title for property where the facility is located, the transferor shall disclose to the transferee and Board of Health whether the facility is subject to an upgrade requiring Best Available Nitrogen Reducing Technology pursuant to 310 CMR 15.215.

15.216: Aggregate Determinations of Flows and Nitrogen Loadings

(1) The 440 gallons per day per acre nitrogen loading limitation imposed by 310 CMR 15.215(1) may be calculated in the aggregate by using nitrogen credit land in accordance with an approved Facility Aggregation Plan or Community Aggregation Plan. Applicants proposing systems to be located within a community or region covered by a Community Aggregation Plan approved by the Department shall calculate aggregate determinations of flows and nitrogen loadings in accordance with the Plan and the Department's *Guidelines for Title 5 Aggregation of Flows and Nitrogen Loading*. All other applicants seeking aggregate determination of flows and nitrogen loading shall prepare a Facility Aggregation Plan in accordance with 310 CMR 15.216 and the Department's *Guidelines for Title 5 Aggregation of Flows and Nitrogen Loading*.

15.216: continued

- (2) To qualify as Nitrogen Credit Land, the land must:
- (a) be within the same Nitrogen Sensitive Area as the facility if the facility is in a Nitrogen Sensitive Area;
 - (b) be within the same subdivision in an area where the use of both on-site systems and drinking water wells are proposed to serve the facility;
 - (c) not have any manmade sources of nitrogen, including, but not limited to, wastewater discharges and nitrogen based fertilizer located thereon;
 - (d) not be used for raising, breeding or keeping of animals;
 - (e) be pervious;
 - (f) be outside of Zone As, Velocity Zones and Regulatory Floodways;
 - (g) not be covered by any surface water body including, but not limited to, a river, stream, lake, pond, or ocean;
 - (h) not be currently designated as nitrogen credit land; and
 - (i) meet the criteria set forth in the Department's *Guidelines for Title 5 Aggregation of Flows and Nitrogen Loading*.
- (3) Land located within a Zone I of a public water supply well may be used as nitrogen credit land unless the well is determined to be at risk in accordance with the Department's "Guidelines for Title 5 Aggregation of Flows and Nitrogen Loading" or the proposed design flow is 2,000 gallons per day or greater.
- (4) Community Aggregation Plans.
- (a) A city or town may seek Department approval for aggregate determination of flows and nitrogen loading across a region wide area such as, but not limited to, a Zone II of a public water supply well. Department approval of a Community Aggregation Plan may authorize the local Approving Authority to approve site specific facility aggregation plans in accordance with the approved Community Aggregation Plan.
 - (b) The Department may approve a Community Aggregation Plan provided that the following conditions are met:
 1. the local Approving Authority has approved the Plan;
 2. the Plan contains a mechanism to protect surface and ground water supplies within the community or region from pollutant and nitrogen loading and a proposed mechanism for implementing the Plan;
 3. the Plan meets the criteria in the Department's "Guidelines for Title 5 Aggregation of Flows and Nitrogen Loading;"
 4. for areas that include a Zone II, the Plan includes a nitrate loading analysis and nitrate management plan as specified in 310 CMR 22.21(2)(d); and
 5. any other conditions that the Department deems appropriate.
- (5) Facility Aggregation Plans. The Approving Authority may approve a Facility Aggregation Plan provided that the following conditions are met:
- (a) The proposed facility meets the criteria in the Department's *Guidelines for Title 5 Aggregation of Flows and Nitrogen Loading*,
 - (b) the design flow of 440 gallons per day per acre equivalency across the facility and other land areas for which nitrogen credit is sought, but not necessarily on every individual acre, will be met through recorded land use restrictions that restrict nitrogen loading on facility land and nitrogen credit land. These land use restrictions must be substantially identical to those contained in the Department's *Guidelines for Title 5 Aggregation of Flows and Nitrogen Loading*, run in perpetuity, be approved by the respective land owners, run to the benefit of the municipality acting by and through the Local Approving Authority and, in the case of nitrogen credit land, also run to the benefit of the facility land. The applicant shall record or register such restrictions and easements in the appropriate Registry of Deeds or Land Registration Office within 30 days of approval of the plan; and
 - (c) any other conditions that the Approving Authority deems appropriate.

15.217: Systems with Enhanced Nitrogen Removal

(1) The nitrogen loading limitations established in 310 CMR 15.215(1) shall not apply to discharge of an effluent meeting the federal Safe Drinking Water Act nitrate standard of 10 ppm through either an approved alternative system or a treatment works with a groundwater discharge permit issued pursuant to 314 CMR 5.00: *Ground Water Discharge Permit Program*.

(2) For systems located in a Nitrogen Sensitive Area designated pursuant to 310 CMR 15.214(1)(a), an increase in calculated allowable nutrient loading per acre may be allowed with the use of a technology approved for enhanced nutrient removal pursuant to either the piloting, provisional or general use certification provisions in 310 CMR 15.281 through 15.288 as illustrated by the following example: Recirculating Sand Filter 550 gpd/acre

(3) In the event that the Department determines that a system approved for enhanced nutrient removal using a technology approved by the Department on a piloting or provisional basis pursuant to 310 CMR 15.285 and 15.286 respectively is not performing in accordance with the approval, the Department or the Local Approving Authority may require the system owner to instead use an enhanced nutrient removal technology that has been certified for general use by the Department. The increased design flow allowed reflects the nutrient removal performance of the approved technology compared to a standard system otherwise described in 310 CMR 15.100 through 15.255. A system receiving a design flow credit for enhanced nutrient removal pursuant to 310 CMR 15.217 must still comply with the requirements of 310 CMR 15.100 through 15.293 with respect to system siting and design; the credit does not affect any other siting or design requirement.

15.220: Preparation of Plans and Specifications

The plans and specifications for every on-site system shall be prepared as follows:

(1) Every system shall be designed by a Massachusetts Registered Professional Engineer or a Massachusetts Registered Sanitarian provided that a Registered Sanitarian shall not design a system to discharge more than 2,000 gallons per day pursuant to 310 CMR 15.203. Any other agent of the owner may prepare plans for the repair of one or more components, excluding the soil absorption system, of a system designed to discharge not more than 2,000 gallons per day pursuant to 310 CMR 15.203 provided the plans are reviewed and stamped by a Massachusetts Registered Sanitarian or Massachusetts Registered Professional Engineer and approved by the Approving Authority.

(2) Every plan submitted for approval must be dated and bear the stamp and signature of the designer. At least one copy submitted shall bear the original stamp and signature of the designer.

(3) Every plan for a new system or plan for the upgrade or expansion of an existing system which requires a variance to a property line setback distance, must also reference a plan which bears the stamp and signature of a Massachusetts Licensed Land Surveyor in accordance with M.G.L. c. 112, § 81D;

(4) Every plan for a system shall be of suitable scale (one inch = 40 feet or fewer for plot plans and one inch = 20 feet or fewer for details of system components) and shall include depiction of:

- (a) the legal boundaries of the facility to be served;
- (b) the holder and location of any easements appurtenant to or which could impact the system;
- (c) the location of all dwelling(s) and building(s) existing and proposed on the facility and identification of those to be served by the system;
- (d) the location of existing or proposed impervious areas, including driveways and parking areas;
- (e) location and dimensions of the system (including reserve area);
- (f) system design calculations, including design daily sewage flow, septic tank capacity (required and provided); soil absorption system capacity (required and provided); and whether system is designed for garbage grinder;
- (g) North arrow and existing and proposed contours;

15.220: continued

- (h) location and log of deep observation hole tests including the date of test, existing grade elevations marked on each test, and the names of the representative of the Approving Authority and soil evaluator;
- (i) location and results of percolation tests including the date of test and the names of the representative of the Approving Authority and soil evaluator;
- (j) name and approval date of the Soil Evaluator of record;
- (k) location of every water supply, public and private,
 1. within 400 feet of the proposed system location in the case of surface water supplies and gravel packed public water supply wells,
 2. within 250 feet of the proposed system location in the case of tubular public water supply wells, and
 3. within 150 feet of the proposed system location in the case of private water supply wells;
- (l) any surface waters of the Commonwealth, Zone As, rivers, bordering vegetated wetlands, salt marshes, inland or coastal banks, regulatory floodway, velocity zone, surface water supplies, tributaries to surface water supplies, certified vernal pools, private water supplies or suction lines, gravel packed or tubular public water supply wells, and subsurface drains located up to 100 feet beyond the setback distances in 310 CMR 15.211, any leaching catch basins and dry wells located up to 25 feet beyond the setback distances in 310 CMR 15.211; and the location of any nitrogen sensitive area identified in 310 CMR 15.214 within which any portion of the facility or the proposed system is located as well as any nitrogen sensitive area up to 100 feet beyond any property line of the facility.
- (m) location of water lines and other subsurface utilities on the facility;
- (n) observed and adjusted ground-water elevation in the vicinity of the system;
- (o) a complete profile of the system;
- (p) a note on the plan listing all variances to the provisions of 310 CMR 15.000 sought in conjunction with the plan;
- (q) the location and elevation of one benchmark within 50 to 75 feet of the system components which is not subject to dislocation or loss during construction on the facility;
- (r) when pressure distribution or dosing is proposed, complete design and specifications of the distribution system proposed including but not limited to dosing chamber capacity (required and provided), pump curves and specifications, number of dosing cycles and depth per cycle;
- (s) when a Recirculating Sand Filter or equivalent alternative technology is required or proposed, a complete plan and specifications for the system, including a hydraulic profile;
- (t) a locus plan to show the location of the facility including the nearest existing street;
- (u) the street number and lot number, if any, and the tax map number and lot number, if any, of the facility; and
- (v) the materials of construction and the specifications of the system.

15.221: General Construction Requirements for All System Components

- (1) All tanks, including septic tanks, distribution boxes, pump chambers, dosing chambers and grease traps, shall be either:
 - (a) watertight through manufacturer's specification and warranty; or
 - (b) made watertight by the manufacturer, equipment supplier or installer using asphalt or synthetic polymer sealer specified by the concrete or synthetic material manufacturer.
- (2) Septic tanks, grease traps, pump chambers, dosing chambers and distribution boxes shall be constructed or set level and true to grade on a level stable base which has been mechanically compacted. If the component is placed in fill, proper compaction is required to ensure stability and to prevent settling; native ground with a six inch aggregate base is otherwise adequate.
- (3) Septic tanks, grease traps, pump chambers and dosing chambers shall be equipped with a watertight access manhole(s) with a minimum diameter of 20 inches and constructed of durable material.
- (4) All system components shall be constructed of corrosion resistant materials.

15.221: continued

- (5) All piping shall be a minimum of SDR 35 PVC in areas not subject to automobile or heavy equipment traffic. In areas where such traffic exists or is anticipated, Schedule 40 PVC, or an equivalent standard approved by the Department, shall be used.
- (6) All pressurized pipes shall be designed and installed to meet the following requirements:
 - (a) to prevent freezing by being installed below the frost line, by being adequately insulated if installed above the frost line, or be self-draining;
 - (b) to specify the appropriate class or schedule of pipe to withstand maximum pressure and/or anticipated vehicular loads; and
 - (c) to specify appropriate thrust blocking at all angles, bends, branches, plugs and wherever else necessary to prevent disruption of proper functioning of the line.
- (7) The top of all system components, including the septic tank, distribution box, pump chamber, dosing chamber and soil absorption system, shall be installed no more than 36" below finish grade.
- (8) Where any portion of any component is to be placed at or below the ground-water table, all system tankage, including the septic tank, distribution box, pump chamber or grease trap, shall be designed with counter weights, anchors or ballast and a buoyancy calculation for the entire volume of each component, when empty, shall be performed and submitted with the system plans and specifications.
- (9) Recirculating sand filters or equivalent technology shall be used in accordance with the provisions of 310 CMR 15.202 and Department guidance.
- (10) Except as provided in 310 CMR 15.232(3), all pipes connecting system components shall be designed to provide a minimum flow velocity of two feet per second when flowing full.
- (11) All septic tanks, tight tanks, pump chambers, dosing chambers and grease traps shall be watertight.
- (12) All system components shall be marked with magnetic marking tape or a comparable means in order to locate them once buried.
- (13) For septic tanks and d-boxes equipped with risers, the risers shall be no deeper than six inches below ground surface.

15.222: Building Sewers

- (1) The building sewer shall be sufficient to serve the connected fixtures. In no case shall the building sewer be less than four inches in diameter.
- (2) The minimum distance between a building sewer, and a private water supply well or suction line shall be ten feet.
- (3) The building sewer shall be constructed of corrosion resistant material and equipped with water tight joints; cast-iron, schedule 40 PVC pipe or the equivalent.
- (4) All pipe joints of the building sewer shall be made water-tight and protected against damage by roots. Poured-type joints shall be properly wiped on the inside to eliminate obstruction of flow.
- (5) The building sewer shall be laid on a compacted firm base.
- (6) The building sewer shall be designed to provide a minimum velocity of sewage flow of two feet per second when flowing full. This requirement is met when a four-inch building sewer is laid at a slope of not less than 0.01 (1/8 inch per foot). A slope of 0.02 (1/4 inch per foot) is preferable.

15.222: continued

(7) The building sewer shall be laid on a continuous grade and as nearly as possible in a straight line in accordance with accepted engineering practice.

(8) Manholes, with metal frames and covers at grade, sweeping bends, or a cleanout accessible at the surface of the ground, shall be provided at the junction of two or more sewers, at all changes in direction or a change in grade of the sewers, and at intervals no greater than 100 feet. All gravity sewer manholes shall have an open channel depth equal to or greater than the diameter of the inlet sewer and the change of direction in each manhole shall not exceed 90°. (Change of direction is the interior angle between the new direction of flow and the projected extension of the original direction of flow.)

(9) The building sewer shall be vented through the vent stack or main vent of the building served by it. No trap shall be installed in the building sewer or building drain.

(10) All building sewers shall be constructed in accordance with the State Plumbing Code, 248 CMR 2.00.

15.223: Septic Tanks

(1) Septic tanks shall have the following capacities:

(a) For a single family dwelling unit with a design flow of less than 1,000 gallons per day, a minimum effective liquid capacity of 200% of the design flow or a minimum hydraulic detention flow of 48 hours, whichever is greater, shall be required. In no case shall the effective liquid capacity of the tank as measured below the outlet invert elevation be less than 1,500 gallons.

(b) When designed to serve facilities other than a single family dwelling unit or whenever the calculated design flow is 1,000 gallons per day or greater, a two compartment tank or two tanks in series are required. The design of the tanks shall be in accordance with 310 CMR 15.224 for multiple compartment tanks and 310 CMR 15.225 for tanks in series. At a minimum, the total, combined effective liquid capacity of both tanks in series or of the multiple compartment tank shall not be less than 1,500 gallons.

(c) When a domestic garbage grinder is proposed or installed, the minimum liquid capacity of the septic tank shall be 200% of the design flow with a minimum tank size of 1,500 gallons and a two compartment tank or two tanks in series shall be required which meet the design criteria specified in 310 CMR 15.223(1)(b). Domestic garbage grinders are prohibited in facilities which include an elevated septic tank constructed in accordance with 310 CMR 15.213 (construction in V-zones).

(2) The liquid depth of the tank, measured from the outlet tee invert to the tank bottom, shall be a minimum of four feet. A tank with a minimum depth of three feet below the outlet tee invert may be permitted only for upgrade of existing nonconforming or failed systems, pursuant to 310 CMR 15.405 (local upgrade approvals), where installation of a tank with a four foot liquid depth is not feasible and shall be pumped on an annual basis with the results submitted to the Approving Authority.

(3) Tanks which are rectangular in cross-section shall have a minimum inside length to width ratio of no less than 1.5 to 1. Round tanks may be allowed. The inside length of all tanks, measured from the inlet tee to the outlet tee, shall be a minimum of six feet. The inside width of the tank shall be a minimum of three feet. Larger length to width ratios are preferred.

(4) Vertical cylindrical tanks shall have a minimum diameter of five feet.

(5) Horizontal cylindrical tanks shall have a minimum length of six feet and a minimum width at the liquid surface of three feet.

15.224: Multiple Compartment Tanks

Tanks with multiple compartments shall be required as specified in 310 CMR 15.223(1). When multiple compartment tanks are used the following shall be required:

15.224: continued

- (1) The number of compartments shall not exceed two;
- (2) The first compartment shall be sized for a minimum hydraulic detention time of 48 hours based on the design flow;
- (3) The second compartment shall be sized for a minimum hydraulic detention time of 24 hours based on the design flow;
- (4) The compartments shall be interconnected by a minimum four inch vented, inverted U-shaped pipe which extends below the bottom of the scum layer; and
- (5) The outlet tee of each compartment shall be equipped with a corrosion resistant gas baffle or a Department approved effluent tee filter.

15.225: Tanks in Series

Tanks in series may be approved to satisfy the requirements of 310 CMR 15.224 provided that:

- (a) the number of tanks does not exceed two; and
- (b) the design criteria of each tank corresponds to the requirements for compartmental tanks in 310 CMR 15.224.

15.226: Construction of Septic Tanks

(1) Septic tanks shall be constructed of sound and durable watertight materials not subject to excessive corrosion, decay, or frost damage, or cracking or buckling due to settlement or backfilling. Septic tanks may be constructed of the following materials:

- (a) poured-in-place concrete;
- (b) precast reinforced concrete;
- (c) fiberglass reinforced plastic;
- (d) polyethylene; or
- (e) other materials as approved in writing by the Department.
- (f) metal septic tanks are prohibited.

(2) Tank construction materials shall meet the following minimum specifications or an ASTM equivalent standard:

- (a) Concrete
 1. Concrete Strength f_c 4,000 PSI @ 28 days. Density 140 PCF
 2. Cement, Portland Type I or III per ASTM C150-96
 3. Admixtures per ASTM C233-95
 4. Reinforcing per ASTM A615 for wire fabric. Grade 40/60 R'd or equivalent.
 5. Design loading H-10
 6. Minimum wall thickness: four inches; three inch thickness is allowable if reinforced.
 7. The tank shall be watertight.
- (b) Fiberglass Reinforced Plastic.
 1. Unless otherwise indicated, plastics terminology is in accordance with the definitions given in the most recent edition of ASTM D 883 or equivalent method.
 2. Fiberglass reinforced plastic (FRP) tanks shall be made of a chemical resistant grade of polyester resin reinforced with a suitable grade of glass fiber (E glass) treated with a coupling agent that will provide a compatible bond between the resin and the glass. Glass fiber surfacing materials, if used, shall be of a chemical resistant glass (C glass) bonded with a suitable binder.
 3. The resins shall not contain fillers except as required for viscosity control. Up to 2% by weight of the total resin content of thixotropic agent that will not interfere with visual inspection may be added to the resin for viscosity control.
 4. The tank shall be constructed as a laminate consisting of the following:
 - a. Primary chemical resistant surface between 0.13 and 0.30 mm of a reinforced resin rich surface.

15.226: continued

- b. Internal wicking barrier shall be not less than 2.5 mm of chemical resistant laminate next to the inner surface and reinforced by not less than 20% and not more than 30% by weight of mat and chopped strand.
 - c. Structural layer of chemically resistant construction of minimum ¼ inch thickness meeting a tensile strength of a minimum of 12,000 psi when tested in accordance with the most recent edition of ASTM D-638. It shall meet a flexural strength minimum of 19,000 psi and flexural modulus of elasticity of 800,000 psi both of which tested in accordance with the most recent edition of D-790.
 - d. External wicking barrier as in 310 CMR 15.226(2)(b)4.b.
 - e. Exterior surface layer between 0.13 and 0.30 inch thick consisting of resin. No glass fibers are allowed in this layer.
5. All cut edges shall be treated and shall be coated with resin so that no glass fibers are exposed and all voids are filled. Structural elements having edges exposed to the chemical environment shall be made with chopped strand glass reinforcement only.
 6. The tank laminate shall have a Barcol Hardness of at least the manufacturers minimum specified hardness for cured resins when tested in accordance with the most recent edition of ASTM D-2583.
 7. The tank shall be free from visual defects. The most recent edition of ASTM D-2563 visual acceptance level 3 shall be the minimum standard for acceptance.
 8. The tank shall be watertight.

(c) Polyethylene.

1. The polyethylene used shall be Type II or III and category three per the most recent edition of ASTM D-1248, Class B (requiring an ultraviolet stabilizer) or Class C (requiring a minimum of 1% carbon black), and shall have a stress crack resistance of 150 hours, Condition C (20% failure rate) when measured in accordance with the most recent edition of ASTM D-1693 and ASTM-638 with a value of equal to or greater than 2400 psi; ASTM-790, with a flexural modulus of elasticity equal to or greater than 85,000 psi.
2. Wall thickness of the sides, top and bottom shall be a minimum of ¼ inch. The thickness of the inlet and outlet ends shall be at least ¼ inch and the thickness of internal walls shall be at least 3/16 inches.
3. The tank shall be watertight.

(3) Tanks, covers, connections and piping shall be designed and constructed so as to withstand an anticipated minimum H-10 loading. Any tank installed in a location where there is the potential for vehicles or heavy equipment to pass over it shall be designed to withstand an H-20 loading.

(4) Septic tanks shall be manufactured in accordance with a quality control/quality assurance program. The program for concrete tanks shall be in conformity with ASTM standard C 1227-96 or an ASTM equivalent standard. Concrete tanks shall be embossed with a seal stating that this ASTM standard has been met.

15.227: Placement and Construction of Tees

(1) Inlet and outlet tees shall be Schedule 40 PVC and shall extend a minimum of six inches above the flow line of the septic tank and be on the center line of the septic tank located directly under the clean-out manhole. Transverse flow baffles shall not be used as substitutes for inlet or outlet tees.

(2) The minimum separation between inlet and outlet tees shall be no less than the liquid depth of the septic tank and shall be the longest direction (which shall not include the diagonal distance) across the tank in plan view.

(3) Inlet and outlet tees to rectangular tanks shall be set in the end walls or into a side wall within 12 inches of the end wall. For circular tanks, the inlet and outlet tees shall be set and stabilized on opposite ends of a diameter of the tank.

15.227: continued

(4) There shall be an air space of at least three inches between the tops of the tees and the inside of the tank cover. The tops of the tees shall be left open to provide ventilation or separate ventilation shall be provided. All outlet tees shall be equipped with a gas baffle or a Department approved effluent tee filter.

(5) The inlet pipe elevation shall be no less than two inches nor more than three inches above the invert elevation of the outlet pipe. The inlet and outlet invert elevations shall be at least 12 inches above the high groundwater elevation. If high groundwater (redoximorphic features) is determined by soil evaluation in accordance with 310 CMR 15.100 through 15.107 at the proposed location of the septic tank, the Approving Authority may reduce the 12 inch required separation, but in no cases shall it be reduced to less than one inch above high groundwater as determined by redoximorphic features.

(6) The inlet tee shall extend a minimum of ten inches below the flow line. The outlet shall be provided with a tee extending below the flow line in accordance with the following table:

Liquid Depth in Septic Tank	Depth of Outlet Tee below Flow Line
4 feet	14 inches
5 feet	19 inches
6 feet	24 inches
7 feet	29 inches
8 feet	34 inches

(7) Effluent tee filters may be installed in *lieu* of outlet tees provided that they are installed in accordance with the manufacturer's specifications, include an appropriate outlet cover at grade, and are inspected and cleaned at least on an annual basis.

15.228: Placement and Accessibility of Septic Tank

(1) Septic tanks shall be installed level and true to grade on a level stable base that has been mechanically compacted and on to which six inches of crushed stone has been placed to minimize uneven settling. If the septic tank is placed in fill, proper compaction is required to ensure stability and to prevent settling. Septic tanks shall have a minimum cover of nine inches. Systems buried greater than nine inches below grade must be equipped with risers on all tank top openings and the distribution box.

(2) At least three manholes with readily removable impermeable covers of durable material shall be provided. The manholes over the inlet and outlet tees shall have a minimum opening of 20 inches and the center manhole shall have a minimum opening of eight inches. By July 1, 2007, manufacturers of fiberglass and polyethylene tanks shall comply with the center hole requirement. Access ports shall be placed at the center and over each inlet and outlet tee. For compartmental tanks, the center manhole shall be placed as access to the compartment connection. Inlet and outlet tees shall be made accessible for inspection and maintenance by providing precast concrete or equivalent watertight risers (with steps where appropriate) with covers over the access ports to within six inches of finish grade for system designs in excess of 1,000 gpd. For system designs of 1,000 gpd or less, at least one access port shall be accessible within six inches of final grade. Manholes brought to final grade shall be secured to prevent unauthorized access.

(3) Septic tanks shall be accessible for inspection and maintenance. No structures shall be located directly upon or above the septic tank access locations which interfere with performance, access, inspection, pumping, or repair.

(4) Septic tanks shall be inspected and maintained in accordance with 310 CMR 15.300 and applicable local requirements.

15.229: Pumping to Septic Tanks

(1) System designs specifying pumping of sewage to a septic tank may be approved by the Approving Authority for a single family dwelling provided that the volume of sewage pumped is less than 25% of the design flow of the system, the pump discharge pipe is connected to the building sewer and:

- (a) where a sewage ejector pump (non-grinder pump) is used, the discharge flow rate shall be fewer than 60 gallons per minute at the design total dynamic head (TDH) and capable of passing a two-inch diameter solid, and the septic tank shall have a minimum effective volume of 1,500 gallons; or
- (b) where a grinder pump is used, the discharge flow rate shall comply with the discharge capacity specified in the State Plumbing Code for sump and ejector pumps in sanitary drainage systems, and the septic tank shall either be a multi-compartment tank or two tanks in series.

(2) It is not recommended to pump greater than 25% of the design flow of the system to a septic tank; however, when necessary system designs specifying pumping of sewage to a septic tank may be approved by the Approving Authority for a single family dwelling discharging a volume of sewage greater than 25% of the design flow of the system, provided the pump discharge pipe is connected to the building sewer and:

- (a) the requirements of 310 CMR 15.229(1)(a) or 15.229(1)(b) are met;
 - (b) the building sewer discharges to a multi-compartment septic tank or two tanks in series designed in accordance with 310 CMR 15.223 and 15.224; and
 - (c) standby power, a hookup for standby power or storage capacity in the pump chamber equal to at least the volume of the design flow for one day is provided.
- Non-grinder pumps are the preferred alternative.

(3) All other uses of sewage pumps prior to the septic tank without the prior written approval of the Approving Authority are prohibited.

15.230: Pretreatment Units - Grease Traps

(1) Grease traps shall be provided for kitchen flows at restaurants, nursing homes, schools, hospitals and other facilities from which grease can be expected to be discharged.

(2) Grease traps shall be installed on a separate building sewer serving kitchen flows into which the grease will be discharged. The discharge from the grease trap must flow to a properly designed septic tank or to a building sewer prior to the septic tank.

(3) Grease traps shall have a minimum depth of four feet and a minimum capacity of 1,000 gallons, and shall have sufficient capacity to provide at least a 24-hour detention period for the kitchen flow. Kitchen flow shall be calculated in accordance with 310 CMR 15.203.

(4) Grease traps shall be watertight and constructed of the materials specified in 310 CMR 15.221 and 15.226(1) and (2).

(5) The inlet tee shall extend to the mid depth of the tank. The outlet tee shall extend to within 12 inches of the bottom of the tank. Tees shall be Schedule 40 PVC and properly supported by a hanger, strap or other device.

(6) Grease traps shall be installed on a level stable base that has been mechanically compacted and onto which six inches of crushed stone has been placed to minimize uneven settling.

(7) Grease traps shall be provided with a minimum 20-inch diameter manhole frame and cover to grade over the inlet and outlet tees.

(8) Grease traps shall be accessible for inspection and maintenance. No structures shall be constructed directly upon or above the grease trap access locations.

(9) The invert elevation of the inlet of a grease trap shall be at least two inches above the invert elevation of the outlet. The inlet and outlet shall be located at the center line of the tank, and at least 12 inches above the high groundwater elevation.

15.230: continued

- (10) Backfill around the grease trap shall be placed in such a manner as to prevent damage to the tank.
- (11) Grease traps shall be maintained in accordance with 310 CMR 15.351.
- (12) Grease removal by other devices located within the building as part of the internal plumbing are not within the jurisdiction of 310 CMR 15.000, shall not be considered for compliance with 310 CMR 15.230 and shall comply with the State Plumbing Code. Grease removal devices located outside of the building, other than those in compliance with 310 CMR 15.230, require the prior written approval of the Department.
- (13) The Approving Authority may require that alarms and/or remote monitoring devices be installed and connected to grease traps.

15.231: Dosing Chambers and Pumps

- (1) A dosing chamber shall be required for any system that is not designed to discharge by gravity to the soil absorption system, for any system that is designed for the intermittent discharge of septic tank or recirculating sand filter effluent, and in conjunction with pressure distribution pursuant to 310 CMR 15.254(2) for any system with either a design flow of 2,000 gpd or greater, or where multiple soil absorption systems are proposed.
- (2) All dosing chambers shall have an emergency storage capacity above the working level equal to the daily design flow of the system, or standby power, and shall be equipped with sensors and alarms to protect against high water due to failure of the pump or pump controls. It is advisable to provide some emergency storage even if an on-site emergency generator is provided. The volume below the working level shall include an allowance for the volume of all drainage which may flow back to the chamber when pumping has ceased.
- (3) The volume of the dosing chamber between pump operating levels shall be adequate to assure the entire soil absorption system is dosed each cycle in accordance with the required number of cycles per day.
- (4) Construction and materials of dosing chambers shall be in accordance with 310 CMR 15.221 and 15.226.
- (5) All dosing chambers shall be designed and constructed to withstand a minimum H-10 loading. Any dosing chamber installed where there is the potential for vehicles or heavy equipment to pass over it shall be designed to withstand an H-20 loading. Dosing chambers shall be equipped with one manhole with a minimum opening of 20 inches with a readily removable watertight cover of durable material. The access cover shall be located at final grade.
- (6) Every dosing chamber, except for systems serving two dwelling units or less, shall be equipped with two pumps the discharge lines of which shall be valved to allow dosing of the entire soil absorption system by either pump.
- (7) Pumps shall be installed in accordance with the manufacturers and the designer's specifications.
- (8) Pumps shall operate in the following sequence:
 - (a) pumps off
 - (b) primary (lead) pump on
 - (c) backup (lag) pump on and alarm on
 - (d) pumps must alternate.
- (9) All pumps must be equipped with a high water level alarm located in the building served which is powered by a circuit separate from the circuit to the pumps.

15.231: continued

- (10) An effluent tee filter or equivalent technology approved by the Department is required prior to or within a dosing chamber.
- (11) All dosing chambers shall be watertight.
- (12) All dosing chambers proposed to provide standby power instead of emergency storage capacity shall include a permanently installed on-site emergency generator that shall automatically switch on in the event of power failure.

15.232: Distribution Boxes

- (1) For all gravity flow distribution systems, a water tight distribution box designed to provide equal distribution of septic tank effluent to the distribution lines of the soil absorption system shall be provided between the septic tank and soil absorption system.
- (2) Construction of the distribution box shall be in conformance with the provisions of 310 CMR 15.221 (general construction requirements) and 15.226 (septic tank construction), with the following exceptions:
 - (a) The distribution box may be constructed of plastic or other materials approved by the Department if it is installed level and true to grade on a level stable base that has been mechanically compacted and onto which six inches of crushed stone has been placed to minimize uneven settling or on a concrete pad which is at least six inches in thickness and 1.5 times the bottom surface area of the distribution box.
 - (b) The minimum inside dimension of the distribution box, regardless of material, shall be 12 inches.
 - (c) The minimum wall thickness for reinforced concrete shall be two inches.
- (3) The distribution box shall conform to the following design specifications:
 - (a) When the soil absorption system is to be dosed or the slope of the inlet pipe exceeds 0.08 feet per foot, an inlet tee, baffle or splash plate extending to one inch above the outlet invert elevation shall be provided to dissipate the velocity of the influent.
 - (b) The invert elevation of all outlets shall be equal to each other and located at least two inches below the invert elevation of the inlet. The distribution lines leading from the distribution box shall all have the same invert elevation as determined by flooding the distribution box to the height of the distribution line invert after all lines have been sealed in place. If all inverts are not the same elevation, they shall be adjusted by filling with durable and non-deformable material permanently fastened to the line or reconstructing the lines until all inverts are at the same elevation.
 - (c) Outlet distribution lines shall be level for a minimum of the first two feet of their length. There shall be at least one outlet for each effluent distribution line.
 - (d) Every distribution box shall have a water tight cover or in the case of systems with a design flow greater than 2,000 gpd, water tight manhole with cover.
 - (e) Every distribution box shall have a minimum sump of six inches as measured below the outlet invert elevation.
 - (f) Distribution boxes buried greater than nine inches below grade shall be equipped with risers.

15.233: Siphons

The use of siphons for on-site systems, including shared systems, is prohibited.

15.240: Soil Absorption Systems

- (1) On-site subsurface sewage disposal systems shall be located in an area where there is at least a four foot depth of naturally occurring pervious soil below the entire area of the soil absorption area and reserve area unless a variance is issued in accordance with the provisions of 310 CMR 15.415(2). The four foot stratum must be free of impervious and unsuitable materials.

15.240: continued

- (2) Effluent from any component of an on-site sewage disposal system shall not be disposed of by direct discharge to any waters of the Commonwealth, unless in compliance with a permit issued pursuant to 314 CMR 3.00 (surface water permitting) or 314 CMR 5.00 (groundwater permitting).
- (3) Soil absorption systems shall be designed as an integral part of the system. Septic tank effluent is to be distributed throughout the soil absorption system by means of effluent distribution lines so that the effluent can migrate through the underlying soil column under unsaturated flow conditions. All soil absorption systems shall achieve the following objectives of the soil treatment process:
 - (a) maximum stabilization of organic wastes in the effluent;
 - (b) removal of pathogenic organisms, nutrients, and particulates;
 - (c) recharge of the ground-water table with adequately treated effluent with minimal attendant pollution of the groundwater; and
 - (d) disposal of the effluent without discharge to the ground surface or the creation of any nuisance.
- (4) The minimum area for the design of a soil absorption system shall be determined by the results of the site evaluation set forth in 310 CMR 15.100 through 15.107 and in accordance with the appropriate long-term acceptance rate criteria specified in 310 CMR 15.242 (effluent loading rates). Area requirements increase by 50% when garbage grinders are installed and the system shall be upgraded to meet such requirements prior to the installation of a garbage grinder.
- (5) All soil absorption systems designed to serve single family dwellings, including but not limited to single family condominiums and cooperatives, shall be designed to serve a minimum of three bedrooms, unless a deed restriction limiting use to two bedrooms is granted to the local Approving Authority.
- (6) Absorption trenches should be used whenever possible.
- (7) No driveway, parking or turning area or other impervious area shall be located above a soil absorption system, except where restrictions on the use of the land make it unavoidable. In such cases, the soil absorption system shall be vented to the atmosphere in accordance with 310 CMR 15.241.
- (8) The bottom of each soil absorption system shall be excavated to a level grade. If the removal of stones or boulders is required, creating localized depressions, filling to grade with the excavated naturally occurring pervious soil or material in compliance with 310 CMR 15.255 is acceptable.
- (9) The soil placed as backfill over the soil absorption system shall be a minimum of nine inches, excluding topsoil, placed in lifts and sufficiently compacted to prevent depressions due to settling which may intercept or collect surface water runoff above the system. Backfill must be clean and free of stones and boulders greater than six inches in size. Tailings, clay or similar materials are prohibited.
- (10) Final cover above the system shall be stabilized and graded to reduce infiltration of surface water and minimize erosion. Finish grade shall have a minimum slope of 0.02 feet per foot.
- (11) Surface drainage shall be directed away from the soil absorption system.
- (12) For systems with a design flow of 2,000 gpd or greater, the separation distance to the high groundwater elevation required by 310 CMR 15.212 shall be determined by adding the effect of groundwater mounding to the high groundwater elevation as determined pursuant to 310 CMR 15.103(3).

15.240: continued

(13) All soil absorption systems shall have a minimum of one inspection port consisting of a perforated four inch pipe placed vertically down into the stone to the naturally occurring soil or sand fill below the stone. The pipe shall be capped with a screw type cap and accessible to within three inches of finish grade.

15.241: System Venting

Systems to be located either in whole or in part under driveways, parking or turning areas or other areas of impervious material shall be designed to achieve proper venting of the system according to the following criteria:

- (a) the disposal area distribution system shall be piped to the atmosphere using the same diameter pipe as the distribution system;
- (b) the vent pipe shall be designed to prevent entrance of animals or precipitation and shall be backfilled tightly to prevent seepage of surface water into the system;
- (c) the vent pipe shall be located beyond the limit of the impervious area subject to vehicular traffic;
- (d) where trenches, fields or beds are used, the end of each distribution lateral shall be connected to one or more vent(s);
- (e) where pits are used, the vent shall extend under the cover of the pit; and
- (f) the riser and above ground components of the vent shall be constructed of durable, non-corrosive materials.

15.242: LTAR - Effluent Loading Rates

(1) The effluent loading rates set forth below are adjusted to account for the long term acceptance rate (LTAR) of the proposed soil absorption system. The LTAR is limited in large part by both the texture of the most hydraulically restrictive soil layer included within the four-foot zone beneath the proposed soil absorption system and the formation of a biomat based on the strength of effluent applied to the soil. As such the effluent loading rates have been based on the strength of typical settled sanitary sewage and may be adjusted proportionately downward if the proposed effluent strength is determined by the local Approving Authority or the Department to exceed that of typical sanitary sewage. Soil textural classes and soil types comprising the classes are defined in 310 CMR 15.243 and 310 CMR 15.244 based upon the general soil classification used by the U.S. Department of Agriculture.

- (a) The following effluent loading rates apply:

EFFLUENT LOADING RATE gpd/sq.ft (cm/day)

PERC. RATE (min./inch)	SOIL CLASS			
	CLASS I	CLASS II	CLASS III	CLASS IV
≤5	.74 (3.0)	0.60 (2.5)	-	-
6	0.70 (2.9)	0.60 (2.5)	-	-
7	0.68 (2.8)	0.60 (2.5)	-	-
8	0.66 (2.7)	0.60 (2.5)	-	-
10	-	0.60 (2.5)	-	-
15	-	0.56 (2.3)	0.37 (1.5)	-
20	-	0.53 (2.2)	0.34 (1.4)	-
25	-	0.40 (1.6)	0.33 (1.3)	-
30	-	0.33 (1.3)	0.29 (1.2)	-
40	-	-	0.25 (1.0)	-
50	-	-	0.20 (0.8)	0.20 (0.8)
60	-	-	0.15 (0.6)	0.15 (0.6)

- (b) The effluent loading rates set forth below may be used in place of those listed above at 310 CMR 15.242(1)(a) when the effluent from a septic tank, installed in compliance with 310 CMR 15.223, is distributed over the soil absorption system using pressure distribution designed in compliance with 310 CMR 15.254(2). However, the effluent loading rates set forth below cannot be used in conjunction with reductions to the soil absorption system approved under 310 CMR 15.280 through 15.289 or 310 CMR 15.404 through 15.405.

15.242: continued

SEPTIC TANK EFFLUENT LOADING RATE WITH PRESSURE DISTRIBUTION
gpd/sq.ft (cm/day)

PERC. RATE (min./inch)	SOIL CLASS			
	CLASS I	CLASS II	CLASS III	CLASS IV
10	-	0.63(2.6)		
15	-	0.61(2.5)	0.41(1.7)	
20	-	0.58(2.4)	0.37(1.5)	
25	-	0.44(1.8)	0.36(1.4)	
30	-	0.38(1.6)	0.33(1.3)	
40	-	-	0.29 (1.2)	
50	-	-	0.25 (1.0)	0.25 (1.0)
60	-	-	0.20 (0.8)	0.20 (0.8)

15.243: Types of Soil Textural Classes

(1) The following soil textural classes apply to soil types of which they are composed:

- CLASS I Sands, Loamy Sands
- CLASS II Sandy Loams, Loams
- CLASS III Silt Loams, Sandy Clay Loams with less than 27% clay, Silt
- CLASS IV Clays, Silty Clay Loams, Sandy Clay Loams with 27% or more Clay, Clay Loams and Silty Clays

15.243: continued

(2) Textural Classifications are made based on the relative proportion of sand, silt and clay in the soils and in accordance with the following textural triangle:

SOIL TEXTURAL TRIANGLE

percentage of clay is 15 or less.

- Loamy sands: At the upper limit soil is 85 to 90% sand and the percentage of silt plus 1.5 times the percentage of clay is 15 or less; at the lower limit, soil is 70 to 85% sand and the percentage of silt plus twice the percentage of clay is 30 or less.
- Sandy loams: Soil is 20% or less clay and 52% or more sand and the percentage of silt plus twice the percentage of clay exceeds 30; or soil is less than 7% clay, less than 50% silt, and between 43 and 52% sand.
- Loam: Soil is 7 to 27% clay, 28 to 50% silt, and less than 52% sand.
- Silt loam: Soil is 50% or more silt and 12 to 27% clay; or 50 to 80% silt and less than 12% clay.
- Silty clay loam: Soil is 27 to 40% clay and less than 20% sand.
- Clay: 40% or more clay, less than 45% sand, and less than 40% silt.
- Silt: 80% or more silt and less than 12% clay.
- Sandy clay loam: 20 to 35% clay, less than 28% silt, and more than 45% sand.
- Clay loam: 27 to 40% clay and 20 to 46% sand.
- Sandy clay: 35% or more clay and 45% or more sand.

15.245: Soil Absorption System Siting Requirements

- (1) Systems serving new construction shall not be sited in areas with percolation rates slower than 60 minutes per inch.
- (2) When recorded percolation rates are between those listed in 310 CMR 15.242, the next slower rate shall be used for design purposes.
- (3) Surface and subsurface drainage shall be directed away from the soil absorption system.
- (4) Approval of a soil absorption system in soils with a recorded percolation rate of between 60 and 90 minutes per inch may be granted only for upgrades of existing systems with no increase in design flow. In such cases, the soil absorption system design shall be based on a maximum effluent loading rate of 0.15 gpd/square foot.

15.246: Excavation and Flagging of Soil Absorption System

- (1) Excavation for construction of a soil absorption system may be by mechanical means, provided care is taken to assure that the soil at the bottom of the excavation is not compacted or smeared. The bottom and sides of the excavation shall be level and scarified. Vehicular traffic and parking of vehicles or equipment in or on the area of the soil absorption system should be avoided at all times prior, during and after construction of the system.
- (2) Prior to the installation of the soil absorption system and until receipt of a Certificate of Compliance from the Approving Authority in accordance with 310 CMR 15.021, the perimeter of the soil absorption system shall be staked and flagged to identify the location of the soil absorption system and prevent the use of such area for all activities which might damage the soil absorption system. Such flagging is not intended to preclude the final grading and landscaping of the area of the soil absorption system. Stockpiling of materials or equipment within the area is prohibited.

15.247: Aggregate

Aggregate shall be required for all soil absorption systems, unless otherwise approved in writing by the Department in accordance with 310 CMR 15.280 through 15.288, according to the following specifications:

- (a) Base aggregate for leaching structures shall be provided from below the elevation of the crown of the distribution line(s) to the bottom elevation of the soil absorption system and shall consist of double washed stone ranging from $\frac{3}{4}$ to $1\frac{1}{2}$ inches in diameter and shall be free of iron particles, fines and dust in place;
- (b) A minimum of a two-inch layer of double washed stone ranging from $\frac{1}{8}$ to $\frac{1}{2}$ inch diameter and free of iron particles, fines and dust in place shall cover the base aggregate to prevent intrusion of fine textured soils to the system. Geotextile fabric may be substituted for the minimum two-inch layer of double washed stone.

15.248: Reserve Area

- (1) Systems for new construction or increased flow designed and approved in accordance with 310 CMR 15.000 shall include a reserve area sufficient to replace the primary soil absorption system. The area required for the reserve area shall be calculated in accordance with 310 CMR 15.242 (effluent loading rates), based on the percolation rate in the reserve area.
- (2) No permanent buildings or other structures shall be constructed on the reserve area.

15.249: Design Criteria for Soil Absorption Systems

- (1) Every soil absorption system shall consist of one or more trenches, beds, fields, pits, galleries or chambers.
- (2) Effluent disposal area requirements shall be determined in accordance with 310 CMR 15.242.
- (3) System designs employing equipment designed to distribute effluent without the use of aggregate (*i.e.*, "gravelless systems") are prohibited except in accordance with the procedures set forth at 310 CMR 15.280 through 15.288.
- (4) Soil absorption systems for Class III and IV soils with percolation rates greater than 60 minutes per inch shall not include beds or fields except in accordance with 310 CMR 15.245(4).

15.251: Trenches

- (1) Trench Design Specifications:
 - (a) Length (each trench) 100 feet maximum
 - (b) Width (each trench) 2 feet minimum
3 feet maximum
 - (c) Effective Depth: shall be equal to the depth of the trench below the invert of the distribution pipe with a minimum of six inches up to a maximum of two feet.
 - (d) The minimum separation distance between any two trenches shall be two times the effective width or depth of each trench, whichever is greater, or where the area between trenches is designated as reserve area, three times the effective width or depth of each trench, whichever is greater.
 - (e) The effective leaching area shall be calculated using the bottom area and a maximum of two feet (per side) of side wall area for each trench.
- (2) Trenches shall be situated, where possible, with their long dimension perpendicular to the slope of the natural soil. Where possible they shall follow the contour lines.
- (3) Trenches constructed at different elevations shall be designed to prevent effluent from the higher trench(es) flowing into the lower trench(es).
- (4) The area between trenches may be designated as system reserve area only where the separation distance between the excavation sidewalls of the primary trenches is at least three times the effective width or depth of each trench, whichever is greater.
- (5) Distribution lines for soil absorption systems shall be constructed of either polyvinyl chloride (PVC), acrylonitrile-butadiene-styrene (ABS), or high density polyethylene (HDPE). PVC pipe shall be schedule 40 General Purpose Sewer Pipe (ASTM D 1785), schedule 40 Drain, Waste and Vent Pipe (ASTM D 2665) or SDR 35 PVC Gravity Sewer Pipe and Drain Pipe (ASTM D 3034). ABS pipe shall be schedule 40 (ASTM F 628). HDPE pipe shall meet ASTM F 810 for Smoothwall Polyethylene Pipe for use in Drainage and Waste Disposal Fields. A material that meets an equivalent ASTM standard as a material specified in 310 CMR 15.251(5) may be substituted for that material.
- (6) All connections and joints shall be mechanically sound and tight.
- (7) Minimum diameter of each gravity distribution line shall be three inches.
- (8) Gravity effluent distribution line outlet orifices shall be evenly spaced along two rows running the length of the line, on each side, midway between the invert and center-line which separates the upper and lower halves of the pipe, and orifices shall be no smaller than $\frac{3}{8}$ inch and no larger than $\frac{5}{8}$ inch in diameter.
- (9) Gravity effluent distribution lines shall have a slope of 0.005 feet per foot along a straight line without bends and shall have ends capped or connected together by unperforated pipe of the same materials specifications.

15.251: continued

- (10) Distribution lines connecting the distribution box or pump chamber to the soil absorption system distribution lines shall be unperforated with water tight connections and joints.
- (11) Effluent distribution lines exceeding 50 feet in length shall be connected and venting provided in accordance with 310 CMR 15.241.

15.252: Beds or Fields

- (1) The use of leaching beds or fields is restricted to systems with a calculated design flow of less than 5,000 gpd per leaching bed or field.
- (2) Bed or field specifications:
 - (a) Minimum number of distribution lines = 2.
 - (b) Length - 100 feet maximum.
 - (c) Slope of distribution lines - 0.005 feet per foot.
 - (d) Separation distance between lines - six feet maximum.
 - (e) Lateral separation distance between lines and edge of the bed - four feet maximum.
 - (f) Separation distance between adjacent beds/fields - ten feet.
 - (g) Aggregate depth (below the invert of the distribution lines) - six inches minimum, 12 inches maximum.
 - (h) Distribution lines - refer to 310 CMR 15.251(5) through (10) (Trenches).
 - (i) Effective leaching area - shall include only the bottom area, not the sidewalls.

15.253: Pits, Galleries, or Chambers

- (1) Pit, Gallery or Chamber design specifications:
 - (a) Effective Depth - A maximum of two feet of sidewall depth below the invert of the inlet per unit shall be used when calculating the effective leaching area.
 - (b) Surrounding Aggregate -

1 foot minimum per side.
4 feet maximum per side.
 - (c) Separation Distance Between Units - two times the effective width or depth, whichever is greater.
- (2) Construction shall be of precast perforated concrete or interlocking concrete blocks laid dry with open joints in a manner to prevent displacement or as otherwise approved by the Department.
- (3) Each pit, gallery or chamber shall have a minimum of one inspection access cover per unit. For systems with a design flow greater than 2,000 gpd, the manholes shall be at least 24 inches in diameter with metal frames and covers to finished grade.
- (4) When two or more pits are used, the system shall be designed so that all pits function in parallel.
- (5) Two or more chambers or galleries connected in series shall constitute a chamber or gallery system. The application of 310 CMR 15.253(1)(c) (separation distance) shall be applied to adjacent chamber or gallery systems as a unit rather than to the individually connected chambers or galleries.
- (6) Inlets to chamber and gallery systems installed in trench configuration shall be provided at intervals not to exceed 20 feet. Chamber or gallery systems in bed configuration shall be provided with at least one inlet for every 40-foot square section.
- (7) when using pits, galleries, or chambers in a leaching bed or field configuration, the effective leaching area shall include only the bottom area, not the side walls.

15.254: Pressure Dosing and Pressure Distribution

(1) Gravity Distribution.

- (a) Dosing systems employing gravity distribution to the soil absorption system shall be restricted to systems designed to accept less than 2,000 gpd.
- (b) The dosing chamber and pumps shall be designed in accordance with 310 CMR 15.231.
- (c) Distribution lines to the soil absorption system shall have a minimum diameter of two inches and shall otherwise be in conformance with the provisions of 310 CMR 15.251(Trenches).
- (d) Septic tank effluent shall be dosed to the soil absorption system at a rate based on volume and number of doses that prevent the ponding of the effluent in the soil absorption system.

(2) Pressure Distribution.

- (a) Pressure distribution of septic tank/recirculating sand filter effluent to the soil absorption system shall be required for: a system to serve a facility with a design flow of 2,000 gpd or greater; a system that is not designed to discharge by gravity either from the septic tank or to the soil absorption system; a system designed for intermittent discharge of effluent to the soil absorption system; and a system with a multiple soil absorption system, unless otherwise determined in writing by the Approving Authority.
- (b) The pumping chamber and pumps shall be designed in accordance with 310 CMR 15.231.
- (c) The pressure distribution system shall be designed in accordance with Department guidance.
- (d) Pumps, alarms and other equipment requiring periodic or routine inspection and maintenance shall be operated, inspected and maintained in accordance with the manufacturer's and the designer's specifications. In no instance shall inspection be performed less frequently than once every three months for a system serving a facility with a design flow of 2,000 gallons per day or greater and annually for a system serving a facility with a design flow of less than 2,000 gallons per day. The system owner shall submit the results of such inspections to the Approving Authority annually by January 31st of each year for the previous calendar year.

15.255: Construction in Fill

(1) Any system where fill is required to replace topsoil, peat or other unsuitable or impervious soil layer above the requisite four feet of naturally occurring pervious material is a system constructed in fill. Any system constructed in fill which extends either wholly or partially above natural grade for the purpose of complying with 310 CMR 15.212 (depth to groundwater) is a mounded system. All soil absorption systems constructed in fill shall be sized using the soil class of the underlying naturally occurring pervious material.

(2) The finished side slopes of a mounded system shall not be steeper than 3:1 (horizontal:vertical). A minimum 15 foot horizontal separation distance shall be provided between the soil absorption area and the adjacent side slope as measured from the edge of the top of the two inch layer of 1/8 to 1/2 inch washed stone aggregate or geotextile fabric cover. The toe of the slope shall be a minimum of five feet from any property line, or a swale or other drainage system directing runoff away from the adjacent property shall be installed. Adjustments to the above horizontal separation may be allowed if a suitable impervious barrier is installed to prevent potential sewage breakout. The impervious barrier shall meet the following requirements:

- (a) the impervious barrier shall be designed by a Massachusetts Registered Sanitarian or a Massachusetts Registered Professional Engineer.
- (b) construction of the impervious barrier shall be supervised by the designer.
- (c) prior to issuance of a Certificate of Compliance, the applicant shall submit to the Approving Authority an as-built plan prepared and certified by the designer that the impervious barrier has been constructed in accordance with the approved design plan.
- (d) the elevation of the top of the impervious barrier shall be no lower than the "breakout" elevation, which is the elevation of the top of the two inch layer of 1/8 inch to 1/2 inch washed stone aggregate cover.
- (e) the recommended distance from the impervious barrier to the edge of the soil absorption system closest to the barrier should be at least ten feet.

15.255: continued

(f) where a retaining wall to stabilize the slope is required and also is proposed as an impervious barrier, in addition to meeting the requirements in 310 CMR 15.255(2), it shall be constructed of suitable structural material and be designed by a Massachusetts Registered Professional Engineer.

(3) Fill material for systems constructed in fill shall consist of select on-site or imported soil material. The fill shall be comprised of clean granular sand, be free from organic matter and deleterious substances, and shall not contain Remediation Waste as that term is defined in 310 CMR 40.0000. Mixtures and layers of different classes of soil shall not be used. The fill shall not contain any material larger than two inches. A sieve analysis, using a #4 sieve, shall be performed on a representative sample of the fill. Up to 45% by weight of the fill sample may be retained on the #4 sieve. Sieve analyses also shall be performed on the fraction of the fill sample passing the #4 sieve, such analyses must demonstrate that the material meets each of the following specifications:

SIEVE SIZE	EFFECTIVE PARTICLE SIZE	% THAT MUST PASS SIEVE
# 4	4.75 mm	100%
# 50	0.30 mm	10% - 100%
#100	0.15 mm	0% - 20%
#200	0.075 mm	0% - 5%

A plot of the sieve analyses of the portion of the sample passing the #4 sieve shall fall on or between the lines on the following graph:

PARTICLE SIZE DISTRIBUTION

15.255: continued

(4) If required by the Approving Authority, a minimum of one representative sample shall be taken from the in-place fill for a system serving a single family residence and tested for compliance with the grain size distribution specification. One soil test per pit per removal day shall be required for systems with design flows of 2,000 gpd or more.

(5) Where fill is required to replace unsuitable or impermeable soils, the excavation of the unsuitable material shall extend a minimum of five feet laterally in all directions beyond the outer perimeter of the soil absorption system to the depth of naturally occurring pervious material as required by 310 CMR 15.240 (soil absorption systems) and replaced with fill material meeting the specifications of 310 CMR 15.255(3).

(6) Prior to placement of the fill, which shall be stockpiled at the edge of the excavation and filled in gradually, the bottom surface of the excavation shall be scarified and relatively dry. Fill shall not be placed during rain or snow storms. If the groundwater elevation is above the elevation of the bottom of the excavation, the excavation shall be dewatered prior to placement of the fill.

15.260: Tight Tanks

(1) Approval of a tight tank may be granted only to eliminate a failed on-site system when no other feasible alternative to upgrade the system in accordance with 310 CMR 15.201 through 15.293 exists, except as provided in 310 CMR 15.260(8). Tight tanks shall not be approved for new construction or for increased flow to existing systems except as approved by the Approving Authority for:

- (a) boat waste pump-out facilities where no other feasible alternative exists; or
- (b) to serve buildings necessary for the operation of a public water supply where it is not feasible to connect to a sewer or to construct a system in compliance with 310 CMR 15.000;
- (c) to serve publicly owned and operated seasonal structures where it is not feasible to connect to a sewer or to construct a system in compliance with 310 CMR 15.000.

(2) The design of a tight tank shall conform to the following criteria:

- (a) The tight tank shall be sized at a minimum of 500% of the system sewage design flow established by 310 CMR 15.203, but in no case less than 2,000 gallons;
- (b) plans for the tank shall be prepared, stamped and signed by a Massachusetts Registered Professional Engineer or Registered Sanitarian and submitted to the Approving Authority by the applicant for approval;
- (c) audio and visual alarms shall be set to activate at 3/5 tank capacity in a suitably convenient location. Transmission of the alarm signal to a locus manned 24 hours per day may be required;
- (d) the application for approval shall indicate the method and frequency of removal of the contents;
- (e) the specific location and method of disposal of the contents shall be indicated and be in accordance with 310 CMR 15.501 through 15.505;
- (f) the tight tank shall have at least one 24-inch diameter cast iron frame and cover at finished grade constructed so as to eliminate entrance of surface waters. Permanent suction piping may also be required;
- (g) the tight tank shall be located so as to provide year round access for pumping;
- (h) a permit to install the tank shall be obtained from the Approving Authority;
- (i) an operation and maintenance plan, acceptable to the Approving Authority, shall be implemented which requires monitoring of the system to ensure proper operation and maintenance;
- (j) the tight tank shall be waterproof and watertight and shall not be located below the water table without extensive testing to prove the integrity of the tank and design against uplift;
- (k) aeration or other method of odor control may be required; and
- (l) the tight tank shall be designed in compliance with the requirements for the construction of septic tanks in 310 CMR 15.226(1) through (4).

(3) The Approving Authority may require the submission of monthly or less frequent reports concerning operation and maintenance of the tank.

15.260: continued

- (4) No tight tank shall be utilized until written certification by a Massachusetts Registered Professional Engineer or Registered Sanitarian that the tight tank has been constructed and installed in accordance with the approved plan has been submitted to the Approving Authority.
- (5) When a sewer system becomes available, any person owning a tight tank shall connect to the sewer within 30 days and the tight tank system shall be abandoned in accordance with 310 CMR 15.354.
- (6) Prior to the issuance of the Disposal System Construction permit for a tight tank, the facility owner shall record or register in the chain of title for the property served by the tight tank at the Registry of Deeds or the Land Registration Office, as applicable, a copy of the Approving Authority's written approval.
- (7) No tight tank shall be constructed in a velocity zone on a coastal beach, barrier beach, or dune, or in a regulatory floodway, unless it replaces a tank in existence on the site as of March 31, 1995, that has been damaged or destroyed, and placement of the tank outside of the velocity zone or regulatory floodway, either horizontally or vertically, is not feasible.
- (8) The Approving Authority may allow the use of a tight tank at an existing, seasonal-use residential facility as remedial upgrade of the failed system serving such facility. For the purposes of 310 CMR 15.260(8), a seasonal-use residential facility means a residential facility that is used six months or less during the calendar year. This approval may be renewed upon transfer of the property. The tight tank must comply with the provisions of 310 CMR 15.260. Prior to the issuance of the Certificate of Compliance by the Approving Authority the facility owner shall record or register in the chain of title for the property served by the tight tank at the Registry of Deeds or the Land Registration Office, as applicable, a deed restriction limiting the facility to seasonal residential use and to the approved design flow.

15.262: Greywater Systems

- (1) Greywater from residential, commercial and public facilities may be discharged or reused in accordance with the provisions of 310 CMR 15.262. For purposes of 310 CMR 15.262, public facilities shall include facilities owned or operated by a local political subdivision of the Commonwealth or an agency of the Commonwealth or federal government.
- (2) Soil Absorption System for Greywater. When the total discharge to an on-site subsurface sewage disposal consists entirely of greywater as defined in 310 CMR 15.002 (Greywater), the following shall apply:
 - (a) the minimum soil absorption area for residential systems, as determined by the results of the site evaluation set forth in 310 CMR 15.100 through 15.107 and in accordance with the appropriate long-term acceptance rate criteria specified in 310 CMR 15.242, for design of a soil absorption system for new construction of a facility, or for upgrades to existing systems may be reduced by no more than 50%, provided, however, that for new construction, the owners of residential facilities shall demonstrate that a system in full compliance with 310 CMR 15.000 can be installed on the facility to serve the proposed design flow. Reductions for commercial and public facility systems shall be determined on a case-by-case basis as approved by the Department in accordance with 310 CMR 15.203(6).
 - (b) the depth of soil placed as backfill over the system shall be at least nine inches, placed in lifts and sufficiently compacted to prevent depression due to settling which may intercept surface runoff above the system. Backfill must be clean and free of stones greater than two inches in size. Tailings, clay, or similar material is prohibited.
 - (c) in a remedial upgrade of an existing system with no increase in flow, the required separation between the bottom of the soil absorption system and the high groundwater elevation may be reduced to a minimum of two feet in soils with a recorded percolation rate of more than two minutes per inch or a minimum of three feet in soils with a recorded percolation rate of two minutes or less per inch.

15.262: continued

(3) Septic Tanks or Filter for a Greywater System. Greywater systems may include either a septic tank or a filter, provided the filter has been approved by the Board of State Examiners of Plumbers and Gas Fitters and/or the Department in accordance with 310 CMR 15.289(1)(b).

(a) The septic tank shall have a minimum effective liquid capacity of 1000 gallons and shall be designed in accordance with 310 CMR 15.223 through 15.226.

(b) Septic tanks for commercial and public facilities shall be at least $\frac{2}{3}$ the size of a septic tank based on the design flows presented in 310 CMR 15.203.

(c) When 310 CMR 15.203 does not provide design flows the design flow shall be based on historical flows (one year or more) of the facility or similar facilities if historical flows are not available and shall be 200% of average water meter readings or 125% of the recorded peak flow, whichever is greater.

(4) Greywater may be discharged using an alternative to a soil absorption system approved by the Department pursuant to 310 CMR 15.280 through 15.288.

(5) Greywater from commercial or public facilities may be approved by the Department on a case-by-case basis for reuse in accordance with 314 CMR 20.00: *Reclaimed Water Permit Program and Standards*, and applicable policies and guidance of the Department pertaining to wastewater reuse.

(6) Greywater systems shall be operated, maintained, and inspected in accordance with 310 CMR 15.300.

(7) For residential facilities utilizing composting toilets and greywater systems in nitrogen sensitive areas an allowable loading rate of 660 gpd/acre may be used provided that there is no discharge of blackwater at the facility and the compost is disposed off-site. Annual inspections shall be conducted in accordance with 310 CMR 15.300(5).

(8) For commercial and public facilities utilizing composting toilets and greywater systems in nitrogen sensitive areas, an allowable loading rate up to 770 gpd/acre shall be determined by the Department on a case-by-case basis provided that there is no discharge of blackwater at the facility and the compost is disposed off-site. Annual inspections shall be conducted in accordance with 310 CMR 15.300(5).

(9) Greywater systems for new construction or increases in flows to existing systems within nitrogen sensitive areas as defined in 310 CMR 15.214 must comply with the nitrogen loading limitations in accordance with 310 CMR 15.215.

15.280: Approval of Alternative Systems

15.281: Purpose

(1) Alternative systems, when properly designed, constructed, operated and maintained, may provide enhanced protection of public health, safety, welfare and the environment. The purposes of 310 CMR 15.281 through 15.288 are: to provide an orderly system to facilitate review of proposed alternative systems; to encourage development of alternative systems with performance superior to conventional systems; and to ensure that alternative systems are approved with appropriate conditions to protect public health, safety, welfare and the environment.

(2) The provisions of 310 CMR 15.281 through 15.288 shall apply to all proposals to construct, upgrade, or replace on-site systems using alternative systems.

15.281: continued

(3) Any proposed system which is designed or constructed in any manner other than as described in 310 CMR 15.100 through 15.262 shall be considered an alternative system, unless a groundwater discharge permit is obtained pursuant to 314 CMR 5.00 (groundwater discharge permit program). Alternative systems may include substitutes or alternatives for one or more components of a conventional system as described in 310 CMR 15.100 through 15.262, or may be fundamentally different approaches intended to eliminate the need for a conventional system. The use of an alternative system in accordance with conditions established pursuant to 310 CMR 15.281 through 15.289 may be authorized without a variance. It shall be a violation of 310 CMR 15.000 for any person to sell or install an alternative system which has not been approved by the Department.

(4) The review processes established in 310 CMR 15.280 through 15.288 are intended to provide two different mechanisms for approval of alternative systems. Approval for remedial use (310 CMR 15.284) is intended to provide a mechanism for system owners to improve existing conditions at particular sites (including upgrade or replacement of failed or nonconforming systems) through the use of an alternative system. The sequence of approval for piloting (310 CMR 15.285), provisional approval (310 CMR 15.286), and certification for general use (310 CMR 15.288), is intended to provide a process through which proponents of an alternative system may have that system approved for general usage in the Commonwealth, including use for new construction. This sequence is intended to develop information on the performance of the alternative system; if adequate information from other jurisdictions or from systems in remedial use is available, it is unnecessary to proceed separately through all three steps of this sequence.

15.282: Types of Alternative Systems

Alternative systems proposed may include, but shall not be limited to, any of the following:

- (1) humus or other composting toilets;
- (2) alternative mounded systems (such as the "Wisconsin mound") designed to overcome limiting site conditions;
- (3) any system designed to chemically or mechanically aerate, filter, separate or pump the liquid, semi-solid or solid constituents in the system; or
- (4) any system designed specifically to reduce, convert, or remove nitrogenous compounds, phosphorus, or pathogenic organisms (including bacteria and viruses) by biological, chemical, or physical means.

15.283: Process for Review of Alternative System Proposals

(1) A person seeking approval of an alternative system shall prepare and submit a formal application to the Department, or an agent authorized by the Department. No application to the Department is required for use of an alternative system that has been certified for general use pursuant to 310 CMR 15.288, provided that such use is consistent with any conditions established in the certification.

(2) For site specific piloting use approval pursuant to 310 CMR 15.285, the applicant shall obtain the approval of the Local Approving Authority prior to seeking approval by the Department.

(3) Any proposal to construct, upgrade or expand any existing system using an alternative system of any type shall be subject to the permitting requirements set forth at 314 CMR 5.00 (discharges of pollutants to groundwater) unless the applicant complies with the terms and conditions of 310 CMR 15.281 through 15.288.

15.283: continued

(4) The Department or an agent authorized by the Department may request additional information regarding alternative system proposals in the course of its application review, pursuant to 310 CMR 4.00: *Timely Action Schedule and Fee Provisions*, and may consider any such information submitted when acting on the application.

(5) When using alternative systems designed under 310 CMR 15.280 through 15.288, if the facility design and operation will result in flows significantly different from the values listed in 310 CMR 15.203(1) through (5), the alternative technology shall reflect the actual range of flows and loadings that the facility is expected to generate rather than the peak flow values listed in 310 CMR 15.203(1) through (5). The applicant, with the approval of the Department, may request to demonstrate a more appropriate design flow in accordance with 310 CMR 15.203(6). Notwithstanding the requirements of 310 CMR 15.203(6), the Department may establish a design flow thereunder that is based on the actual range of flows rather than based on 200% of average water meter readings. The soil absorption system and other units shall still be designed in accordance with 310 CMR 15.203(1) through (5) and 15.242.

15.284: Approval for Remedial Use

(1) The purpose of approval for remedial use is to allow for the rapid approval of an alternative system that is likely to improve existing conditions at a particular facility or facilities currently served by a failed, failing or nonconforming system.

(2) Remedial use of an alternative system shall be allowed where the Department finds that all of the following conditions are met:

(a) the proposed use of the alternative system is for upgrade of a failed, failing or nonconforming existing system(s);

(b) the design flow is less than 10,000 gallons per day, and there is no increase in design flow to be served by the proposed alternative system;

(c) the applicant has established, through evidence of effective past performance of the alternative system over a period of at least one year of general usage in other states where relevant physical and climatological conditions are similar to those in Massachusetts, that the alternative system will provide a level of environmental protection

1. at least equivalent to that of a system designed and constructed in accordance with 310 CMR 15.100 through 15.255, for use where connection to a sewer system is not feasible, or

2. at least equivalent to a sewer system, for use where connection to a sewer system is feasible.

The Department may waive this requirement in situations where such evidence is already on file with the Department for that system. When relying on system performance in other states, all available information including but not limited to a copy of the other state's written approval, testing and performance data shall be provided.

(d) the Local Approving Authority has found that that conditions of 310 CMR 15.284(2)(a) through (c) are satisfied; and

(e) the applicant has made arrangements through contract with a vendor or in another manner acceptable to the local Approving Authority and the Department to ensure that necessary operation and maintenance of the alternative system will be performed appropriately.

(3) The provisions of 310 CMR 15.287 apply to any remedial use of an alternative system.

(4) If at any time the Local Approving Authority or the Department determines that a system that has been installed pursuant to an approval for remedial use is failing or has failed, enforcement action may be taken.

(5) Unless an environmental and performance monitoring and reporting program has been approved by the Department and implemented at facilities approved for remedial use, the record of performance of an alternative system at such facilities shall not constitute a basis to approve that alternative system for provisional use or to certify the system for general use. Approval for remedial use is not intended to provide the sole means for demonstrating that an alternative system is acceptable for provisional approval or certification for general use.

15.284: continued

(6) In approving remedial use of an alternative system, the Department shall determine whether any person wishing to use such system must connect the facility to a sanitary sewer if such connection is or becomes feasible.

15.285: Approval for Piloting

(1) Approval for piloting is intended to provide field testing and technical demonstration that a particular alternative system can or cannot function effectively under relevant physical and climatological conditions at one or more pilot facilities. Although information obtained during piloting is likely to be relevant to long term operation and maintenance concerns about a particular alternative system, approval for piloting is not intended, in and by itself, to provide a full evaluation of these issues. Approvals for site-specific piloting may be issued to technology proponents or to individuals seeking to use an alternative system at a particular Facility.

(2) The Department shall approve a number of pilot facilities, not greater than 15, at which piloting may be conducted for an alternative system, and shall approve each individual proposed piloting facility prior to use of the alternative system on that facility. The use of multiple piloting sites is strongly encouraged and may be required by the Department. Piloting facilities must comply with one or more of the following conditions:

- (a) the proposed use of the alternative system will modify or replace an existing system provided there is no increase in design flow to the system;
- (b) the proposed use of the alternative system is for new construction or increased flow to serve a facility for which an on-site sewage disposal system in compliance with 310 CMR 15.000 exists on site, or for which a site evaluation for an on-site system in compliance with 310 CMR 15.100 through 15.255 has been approved by the Approving Authority;
- (c) the proposed use of the alternative system is for new construction or increased flow to serve a facility which has access to a municipal sewer, as evidenced by a local connection or discharge permit, to which any discharge from the proposed system will be made should the alternative system fail; or
- (d) the site is owned or controlled by an agency of the Commonwealth or of the federal government and has been approved by the Department.

A local Approving Authority may impose additional conditions on the use of alternative systems approved for piloting under 310 CMR 15.000 only in accordance with regulations adopted pursuant to 310 CMR 15.003(3).

(3) The Department shall approve an alternative system for piloting when all of the following conditions are met:

- (a) the Department has determined, based upon relevant technical data including without limitation actual field performance of the proposed alternative system in other states or data obtained by independent testing organizations, that the proposed alternative system is likely to be capable of providing a level of environmental protection at least equivalent to that of a system designed and constructed in accordance with 310 CMR 15.100 through 15.255. When relying on system performance in other states, all available information including but not limited to a copy of the other state's written approval, testing and performance data shall be provided;
- (b) the applicant has proposed an environmental monitoring and reporting plan covering no less than 18 months of operation at each pilot facility that will produce a timely and full technical evaluation of the performance of the alternative system at the pilot facilities, including prompt identification of performance difficulties and the effectiveness of any corrective actions or adjustments to the alternative system; and
- (c) the applicant has made arrangements through contract with a vendor or in another manner acceptable to the Department and the local Approving Authority to ensure that necessary operation and maintenance activities will be performed appropriately.

(4) The Department may establish special conditions, as it deems necessary, to ensure protection of public health, safety, welfare and the environment in its approval for piloting.

(5) The provisions of 310 CMR 15.287 apply to any piloting of an alternative system.

15.285: continued

- (6) If at any time the Department or the local Approving Authority determines that an alternative system installed pursuant to an approval for piloting is failing or has failed, enforcement action may be taken.
- (7) Upon completion of piloting in compliance with 310 CMR 15.285, the Department may: grant provisional approval of the alternative system pursuant to 310 CMR 15.286; determine that additional piloting in accordance with this 310 CMR 15.285 is required; or disapprove use of the alternative system. The Department may determine that successful site-specific pilots may remain in place at an individual Facility on a long-term basis consistent with the terms and conditions of the system approval.
- (8) If the Department determines that additional piloting is necessary, it may require an additional number of piloting facilities, not greater than five, and may require any modifications or adjustments to the alternative system, or impose such other requirements, as the Department deems necessary to ensure protection of public health, safety, welfare and the environment.
- (9) Should the Department disapprove use of the alternative system, any person wishing to use such an alternative system may file a permit application for use of such alternative system pursuant to 314 CMR 5.00: *Ground Water Discharge Permit Program*. Denial for the use of an alternative system pursuant to 310 CMR 15.000 shall not prejudice any action on an application pursuant to 314 CMR 5.00: *Ground Water Discharge Permit Program*.
- (10) It shall be a violation of 310 CMR 15.000 to make a false representation that an alternative system has been approved for piloting.

15.286: Provisional Approval of Alternative System

- (1) Provisional approval is intended to evaluate alternative systems that appear technically capable of providing levels of protection at least equivalent to those of standard on-site disposal systems, to determine whether, under actual field conditions in Massachusetts with broader usage than a controlled pilot setting, general use of the alternative system will provide such protection, and to determine whether any additional conditions addressing long term operation, maintenance and monitoring considerations are necessary to ensure that such protection will be provided.
- (2) The Department shall grant provisional approval for use of an alternative system where connection to a sewer is not feasible if the applicant demonstrates that the alternative system is likely to provide a level of environmental protection at least equivalent to that of a system designed and constructed in accordance with 310 CMR 15.100 through 15.255. The Department shall grant provisional approval for use of an alternative system where connection to a sewer is feasible if the applicant demonstrates that the alternative system is likely to provide a level of environmental protection at least equivalent to that of a sewer in the following manner:
 - (a) evidence, satisfactory to the Department, of effective past performance of the alternative system over a period of at least two years of general usage in one or more states where relevant physical and climatological conditions are comparable to those in Massachusetts;
 - or
 - (b) successful completion of piloting pursuant to 310 CMR 15.285, or equivalent piloting in one or more states where relevant physical and climatological conditions are comparable to those in Massachusetts. Piloting shall be considered successful when at least 75% of piloted systems have performed at the relevant level for at least 12 months.When relying on system performance in other state's, all available information including but not limited to a copy of the other state's written approval, testing and performance data shall be provided.

15.286: continued

(3) The Department may establish any special conditions deemed necessary to ensure adequate protection of public health, safety and the environment, and to ensure appropriate evaluation and testing of the alternative system in the provisional use approval. Such conditions may include without limitation: specification of site or effluent characteristics; flow limitations; monitoring, testing, and reporting requirements; operation and maintenance contracting requirements; and financial assurance mechanisms. The Department may also specify changes or modifications of requirements otherwise applicable to conventional systems that are appropriate for use of the alternative system.

(4) The Approving Authority may allow the use of a provisionally approved system, subject to any special conditions established pursuant to 310 CMR 15.286(3), in any of the following situations:

(a) the proposed use of the alternative system is for upgrade of an existing system that has failed, is failing, or is nonconforming; provided there is no increase in design flow to the system. If connection of the facility to a sewer is feasible, provisional use shall be allowed only if the Department has determined that the alternative system is likely to provide a level of environmental protection at least equivalent to that of a sewer;

(b) the proposed use of the alternative system is for new construction or increased flow to serve a facility where access to a sewer is not feasible and for which an on site sewage disposal system in compliance with 310 CMR 15.000 exists on site, or for which a site evaluation for an on site system in compliance with 310 CMR 15.100 through 15.255 has been approved by the Approving Authority;

(c) the proposed use of the alternative system is for new construction or increased flow to serve a facility which has access to a municipal sewer, as evidenced by a local connection or discharge permit, and to which any discharge from the proposed system will be made should the alternative system fail, if the Department has determined that the alternative system is likely to provide a level of environmental protection at least equivalent to that of a sewer; or

(d) the site is owned or controlled by an agency of the Commonwealth or of the federal government and has been approved by the Department for use of the provisionally approved system.

(5) A Local Approving Authority may impose additional conditions on the use of alternative systems approved for provisional use under 310 CMR 15.000 only in accordance with regulations adopted pursuant to 310 CMR 15.003(3).

(6) Prior to making a determination on an application for provisional use approval of a technology pursuant to 310 CMR 15.286, the applicant shall publish notice of the application in the MEPA Environmental Monitor.

(7) The proponent of a provisionally approved alternative system shall conduct a performance evaluation of at least the first three years of operation of at least the first 50 systems installed pursuant to the provisional approval, and a representative sampling of additional systems installed during this period in accordance with a plan approved by the Department pursuant to 310 CMR 15.287(2). The evaluation plan shall be designed to identify promptly any failure of the alternative system to provide the expected level of environmental protection, and to identify the cause if possible. The plan shall provide for reporting to the Department or an agent authorized by the Department at periodic intervals.

(8) Upon receipt of the performance evaluation conducted pursuant to 310 CMR 15.286(7), the Department may: certify the alternative system for general use pursuant to 310 CMR 15.288; determine that additional evaluation in accordance with 310 CMR 15.286 is required; or disapprove use of the alternative system.

(9) If the Department determines that additional evaluation is required, it may require any modifications or adjustments to the alternative system, or impose such other requirements, as are necessary.

15.286: continued

(10) Should the Department disapprove general use of the alternative system which was provisionally approved, any person wishing to use such system may file a permit application for use of the alternative system pursuant to 314 CMR 5.00: *Ground Water Discharge Permit Program*. Disapproval under 310 CMR 15.286 shall not prejudice any action on an application pursuant to 314 CMR 5.00: *Ground Water Discharge Permit Program*.

(11) The conditions established in 310 CMR 15.287 apply to any use of a provisionally-approved alternative system.

(12) If at any time the Local Approving Authority or the Department determines that an alternative system that has been installed pursuant to a provisional approval is failing or has failed, enforcement action may be taken.

(13) It shall be a violation of 310 CMR 15.000 to make a false representation that an alternative system has been approved for provisional use.

15.287: General Conditions for Use of Alternative Systems Pursuant to 310 CMR 15.284 through 15.286

The following conditions shall apply to all uses of alternative systems pursuant to 310 CMR 15.284 through 15.286:

(1) All plans and specifications shall be designed in accordance with 310 CMR 15.220.

(2) Any required operation and maintenance, monitoring and testing plans shall be submitted to the Department or an agent authorized by the Department and approved by the Department prior to initiation of the use. Monitoring and sampling shall be performed in accordance with a plan approved by the Department. Sample analysis shall be conducted by an independent U.S. EPA or Commonwealth of Massachusetts approved testing laboratory, or an approved independent university laboratory, unless otherwise provided in the written approval of the Department. It shall be a violation of 310 CMR 15.000 to omit from a report or falsify any data collected pursuant to an approved testing plan.

(3) The facility served by the alternative system and the system itself shall be open to inspection and sampling by the Department, any agent authorized by the Department, and the Local Approving Authority at all reasonable times.

(4) The Department and/or the Local Approving Authority may require the owner or operator of the system to cease operation of the system and/or to take any other action necessary to protect public health, safety, welfare and the environment.

(5) Prior to the transfer of any ownership interest in an alternative system, or of any right or responsibility to operate an alternative system, the owner or operator shall provide written notice to the proposed new owner or operator that the system is an alternative system. Such notice shall include notice of the general conditions and any special conditions applicable to the system and its owner. In addition, the owner shall include either a copy in full or a reference to the notice of the alternative system described in 310 CMR 15.287(10), and the recording information for that notice, in the instrument of transfer of any such ownership interest. In the event of the transfer of any such right or responsibility without a transfer of ownership interest, the owner or operator shall include a copy in full or a reference to the notice of the alternative system described in 310 CMR 15.287(10), and the recording information for that notice, in the agreement transferring such right or responsibility.

(6) The owner or operator, or the proponent of the alternative system, shall obtain and provide the Department or an agent authorized by the Department with a determination from the board of certification of operators of wastewater treatment facilities established pursuant to M.G.L. c. 21, § 34A, as to whether a certified operator is required for operation of the alternative system. The Department shall waive this requirement if it has on file a determination for the alternative system, and shall notify the owner, operator, or proponent of the determination.

15.287: continued

(7) It is a violation of 310 CMR 15.000 to install, construct, or operate an alternative system except in full compliance with the written approval and 310 CMR 15.287.

(8) The Department may require the issuance of a groundwater discharge permit pursuant to 314 CMR 5.00: *Ground Water Discharge Permit Program* for any alternative system.

(9) The system owner shall maintain an operation and maintenance contract with a Massachusetts certified operator where one is required by 257 CMR 2.00: *Certification of Operators of Wastewater Treatment Facilities*, or otherwise with a person qualified to operate and maintain the system in accordance with the Department's written approval.

(10) Prior to obtaining a Certificate of Compliance for installation of a new or upgraded system, the system owner shall record in the chain of title for the property served by the alternative system in the Registry of Deeds or Land Registration Office, as applicable, a form of Notice approved by the Department disclosing the existence of the alternative on-site system and its approval. The system owner shall provide evidence of such recording to the Approving Authority.

15.288: Certification of Alternative Systems for General Use

(1) Certification for general use is intended to facilitate the use, under appropriate conditions, of alternative systems that have been demonstrated to provide levels of environmental protection at least equivalent to those of conventional on-site systems.

(2) The Department shall certify an alternative system for general use when the Department determines that the applicant has demonstrated that the alternative system in general usage will provide a level of environmental protection at least equivalent to that of a conventional on site system designed and constructed in accordance with 310 CMR 15.100 through 15.255. Such demonstrations shall include the evaluation of broad scale field use in Massachusetts pursuant to 310 CMR 15.286, or comparable use in one or more states where relevant physical and climatological conditions are similar to those in Massachusetts. The required demonstration of comparable use in one or more states shall include, at a minimum, system use and system monitoring, and operation and maintenance information at least as comprehensive as the in-state protocols outlined in 310 CMR 15.280 through 310 CMR 15.288. When relying on system performance in other states, all available information including but not limited to a copy of the other state's written approval, testing and performance data shall be provided. The applicant shall be considered to have demonstrated effective performance of the out of state systems when the applicant has demonstrated to the Department's satisfaction that at least 90% of the systems have performed at a level at least equivalent to that of a conventional on-site system.

(3) The Department may establish any special conditions necessary, to ensure adequate protection of public health, safety, welfare and the environment in its certification of an alternative system for general use. Such conditions may include without limitation: specification of site or effluent characteristics; flow limitations; monitoring, testing, and reporting requirements; operation and maintenance contracting requirements; a requirement that a certified operator shall operate the system; or financial assurance mechanisms. The Department may also specify changes or modifications of requirements otherwise applicable to conventional systems that are appropriate for use of the alternative system.

(4) A Local Approving Authority may impose additional conditions on the use of alternative systems certified for general use under 310 CMR 15.000 only in accordance with regulations adopted pursuant to 310 CMR 15.003(3).

(5) Systems with performance superior to conventional systems:

(a) If the Department determines that an alternative system is more effective than conventional systems in removing nitrates, the Department shall establish the nutrient removal credit which will be allowed for use of such system pursuant to 310 CMR 15.217, based on the nutrient removal performance of the approved technology.

15.288: continued

(b) In certifying an alternative system for general use, the Department may determine that any person wishing to use such system need not connect the facility to a sanitary sewer if such connection is or becomes feasible, if the performance of the alternative system will provide a level of protection to public health and safety and the environment that is at least equivalent to that of a sewer system.

(6) Prior to making a determination on an application for general use approval of a technology pursuant to 310 CMR 15.288, the Department shall publish notice of the application in the *MEPA Environmental Monitor*.

(7) Should the Department deny certification of the alternative system for general use, any person wishing to use such system may file a permit application for use of such alternative system pursuant to 314 CMR 5.00: *Ground Water Discharge Permit Program*. Denial under 310 CMR 15.288 shall not prejudice any action on an application pursuant to 314 CMR 5.00: *Ground Water Discharge Permit Program*.

15.289: Humus/Composting Toilets

(1) Humus/Composting Toilets are certified for general use subject to the following conditions:

(a) There shall be no liquid wastewater discharge from the humus/composting toilet. If the humus/composting toilet produces a liquid by-product that is not recycled through the toilet, the liquid by-product must be either:

1. discharged through a greywater system on the facility that includes a septic tank and leaching system; or
2. removed by a licensed septage hauler and properly disposed.

Any other disposal of a liquid by-product requires specific approval by the Department.

(b) If there is a greywater discharge designed in accordance with 310 CMR 15.262 or a discharge from a drain equipped with a garbage grinder from the facility, there shall be a septic tank and a soil absorption system designed in accordance with 310 CMR 15.262(1)(a) and 310 CMR 15.240(4). A filter system specifically approved by the Department for that purpose may be used in place of the septic tank, provided that there is no discharge of garbage grinder waste or of liquid by-product from the composting toilet to the greywater system. For publicly used state and federal facilities at which the only sources of greywater are handwashing sinks, janitorial basins and drinking water fountains, the Department may approve a design flow for the greywater system based on water meter readings from the same or similar facilities with a safety factor to assimilate maximum daily flows. An existing cesspool may serve as a leaching pit for these purposes where:

1. the cesspool is pumped and cleaned when the other components of the system are installed;
2. the bottom of the cesspool does not extend below the high groundwater elevation as determined by a Soil Evaluator in accordance with 310 CMR 15.103(3);
3. the cesspool meets the design criteria of 310 CMR 15.253 (pits, chambers, and galleries) with respect to effective depth, separation between units, and inspection access, or the cesspool is replaced by a precast concrete leaching pit meeting those requirements; and
4. the hydraulic loading requirements of 310 CMR 15.242 (effluent loading rates) are satisfied; and

(c) The system shall be designed to store compostable and composted solids for at least two years, unless otherwise approved by the Department. Residuals from the system shall be disposed of either:

- a. by burial on-site or in another manner and location approved by the local Approving Authority, covered with a minimum of six inches of clean compacted earth; or
- b. by a licensed septage hauler.

(2) Humus/Composting Toilets are certified for general use in new construction for residential facilities subject to the conditions set forth at 310 CMR 15.289(1)(a), where a system in full compliance with 310 CMR 15.000 could otherwise be installed on the site.

15.289: continued

(3) For commercial and public facilities or private organizations, humus/composting toilets are certified for general use subject to the conditions at 310 CMR 15.289(1)(a) without the need to demonstrate that a system in full compliance with 310 CMR 15.000 could otherwise be installed on the site.

15.290: Shared Systems

(1) An Approving Authority may allow the use of shared systems, subject to any special conditions established pursuant to 310 CMR 15.292, to serve two or more facilities that will result from division of a Facility, for upgrade of existing systems, for new construction, or for increased flow to an existing system, in accordance with 310 CMR 15.290 through 15.292.

(2) Any application for use of a shared system shall include the following:

- (a) complete plans and specifications for the system as required by 310 CMR 15.201 through 15.255;
- (b) a proposed operation and maintenance plan for the shared system;
- (c) a description of the form of ownership which each component of the system serving more than one Facility will take, together with relevant legal documentation describing or establishing that ownership including, without limitation, easements, condominium master deed, or homeowners' association documents. All forms of private ownership of system components serving more than one Facility shall establish that each user of the system has the legal ability to accomplish any necessary maintenance, repair, or upgrade of the component;
- (d) a description of the financial assurance mechanism proposed to ensure effective long-term operation and maintenance of the system. Acceptable financial assurance mechanisms may include, but are not limited to, an escrow account, letter of credit, performance bond, or insurance policy, which names the Approving Authority as beneficiary, and which provides for upgrade of the shared system in the event the shared system fails to protect public health, safety, welfare or environment pursuant to the criteria established in 310 CMR 15.303. A copy of the final financial assurance mechanism shall be provided to the Approving Authority prior to construction of the system; and
- (e) a copy of a proposed Grant of Title 5 Covenant and Easement essentially identical to that contained in 310 CMR 15.000: *Appendix 1* shall be recorded and/or registered with the appropriate Registry of Deeds and/or Land Registration Office within 30 days of the Approving Authority's approval of the Covenant and Easement. The applicant shall file a certified Registry copy of this Covenant and Easement with the Approving Authority within 30 days of its date of recordation and/or registration, and prior to construction of the system.

(3) A Local Approving Authority may impose additional conditions on the use of shared systems under 310 CMR 15.000 only in accordance with 310 CMR 15.003(3).

15.291: Division of a Facility and Upgrades Using Shared Systems

(1) The Approving Authority may allow use of shared systems for upgrade of existing systems or to serve two or more facilities that will result from division of a Facility without granting a variance pursuant to 310 CMR 15.410 through 15.413 only where:

- (a) the proposed shared system satisfies all technical requirements of 310 CMR 15.100 through 15.292 without the need for a variance except setbacks from property lines between facilities served by the shared system;
- (b) there will be no new construction or increase in design flow from the facility or facilities to be served by the shared system;
- (c) the applicant proposes institutional arrangements as described in 310 CMR 15.290(2)(c), and records a Grant of Title 5 Covenant and Easement essentially identical to that contained in 310 CMR 15.000: *Appendix 1*, in accordance with 310 CMR 15.290(2)(e); and
- (d) the applicant provides the Approving Authority with the insurance policy or other comparable financial assurance mechanism required pursuant to 310 CMR 15.290(2)(d).

(2) The use of shared systems for upgrade of existing systems in any situation not described in 310 CMR 15.291(1) may only be approved through a variance.

15.291: continued

(3) A Local Approving Authority may impose additional conditions on the use of shared systems under 310 CMR 15.000 only in accordance with 310 CMR 15.003(3).

15.292: New Construction or Increased Flow to Existing Systems and Division of a Facility Using Shared Systems

(1) The Approving Authority may allow use of shared systems for new construction, increased flow to existing systems, or to serve two or more Facilities that will result from division of a Facility without granting a variance only where:

(a) the proposed shared system satisfies all technical requirements of 310 CMR 15.100 through 15.292 except setbacks from property lines between facilities served by the shared system;

(b) with the exception of a shared system serving a cluster development as defined in 310 CMR 15.002, the applicant demonstrates that the design flow from the facility or facilities to be served by the shared system does not exceed the design flow which could have been constructed in compliance with 310 CMR 15.000 without the use of a shared system;

(c) the applicant proposes institutional arrangements as described in 310 CMR 15.290(2)(c) and records a Grant of Title 5 Covenant and Easement essentially identical to that contained in 310 CMR 15.000: *Appendix I*, in accordance with 310 CMR 15.290(2)(e); and

(d) the applicant provides the Approving Authority with the financial assurance mechanism required by 310 CMR 15.290(2)(d).

(2) The use of shared systems for new construction, for increased flow to existing systems or to serve two or more facilities that will result from division of a Facility in any situation not described in 310 CMR 15.292(1) may only be approved through a variance. An application for shared system approval of an existing system to serve two or more facilities resulting from division of a Facility is presumed to be for new construction where construction of any building served by the system was completed within the five years prior to the filing of the application.

(3) A Local Approving Authority may impose additional conditions on the use of shared systems under 310 CMR 15.000 only in accordance with regulations adopted pursuant to 310 CMR 15.003(3).

SUBPART D: INSPECTION AND MAINTENANCE OF SYSTEMS

15.300: Purpose and General Provisions

(1) The proper operation and maintenance of all systems is essential to their proper functioning, to the avoidance of public health hazards and to the protection of the environment. 310 CMR 15.300 is intended to ensure the proper operation and maintenance of all systems. The goal of system inspection is to provide sufficient information to make a determination as to whether or not the system is adequate to protect public health and the environment. If any of the criteria or conditions listed on the inspection form and specified in 310 CMR 15.303 and 15.304 are met, the system is failing to protect public health or the environment and must be repaired, replaced or upgraded.

(2) The provisions of 310 CMR 15.303 and 15.304 represent an initial effort to identify and upgrade those failed systems which pose the greatest risk to public health and safety, and to the waters of the Commonwealth.

(3) The Department shall produce educational materials suitable for distribution to the general public describing the importance of proper maintenance and operation of on-site systems and the impact of such systems on public health and the environment. In addition to its own distribution, the Department shall make such materials available to Local approving authorities and other interested persons.

(4) Any person owning or operating a facility on which an on site subsurface sewage treatment and disposal system is installed shall be responsible for the inspection and maintenance of, and any necessary upgrades to, the system.

15.300: continued

(5) Facilities with an increase in the nitrogen loading rate in accordance with 310 CMR 15.262(6) and (7) shall be inspected annually. The inspection shall document at a minimum: whether the system has been continually operated as approved; if the system consists of a greywater filter, whether it is operating properly; and whether compost and blackwater are disposed of off-site in accordance with all applicable laws and regulations. The results of each annual inspection shall be submitted to the Department and the Local Approving Authority by January 31st of the following year.

15.301: System Inspection

(1) Inspection at Time of Transfer. Except as provided in 310 CMR 15.301(2), 15.301(3), and 15.301(4), a system shall be inspected at or within two years prior to the time of transfer of title to the facility served by the system. An inspection conducted up to three years before the time of transfer may be used if the inspection report is accompanied by system pumping records demonstrating that the system has been pumped at least once a year during that time. If weather conditions preclude inspection at the time of transfer, the inspection may be completed as soon as weather permits, but in no event later than six months after the transfer, provided that the seller notifies the buyer in writing of the requirements of 310 CMR 15.300 through 15.305. A copy of the complete inspection report shall be submitted to the buyer or other person acquiring title to the facility served by the system.

(2) The following transactions shall not be considered transfers of title for the purposes of 310 CMR 15.301(1):

- (a) taking a security interest in a property, including but not limited to issuance of a mortgage;
- (b) refinancing a mortgage or similar instrument, whether or not the identity of the lender remains the same;
- (c) a change in the form of ownership among the same owners, such as placing the facility within a family trust of which the owners are the beneficiaries, or changing the proportionate interests among a group of owners or beneficiaries;
- (d) adding or deleting a spouse as an owner or beneficiary; or a transfer between spouses during life, out right or in trust; or the death of a spouse;
- (e) the appointment of or a change in a guardian, conservator, or trustee.

(3) Applicability to Specific Transfers of Title.

(a) Units in a Condominium or Cooperative Corporation. The cooperative corporation or condominium association shall be responsible for the inspection, maintenance, and upgrade of any system or systems serving the units, unless otherwise provided in the governing documents of the condominium association or the cooperative corporation. For a facility comprised of five or more condominium or cooperative units, each system located on the facility shall be inspected at least once every three years instead of at time of transfer of title and all existing systems shall be inspected by December 1, 1996. For a facility comprised of fewer than five condominium or cooperative units:

- 1. each system located on the facility shall be inspected at least once every three years and all existing systems shall be inspected by December 1, 1996, or
- 2. at the time of transfer of title of any unit, the system serving that unit shall be inspected in accordance with the time of transfer provisions of 310 CMR 15.301.

15.301: continued

(b) Foreclosure or Deeds in *Lieu* of Foreclosure. Inspection of the system must occur within two years before or six months after the execution of the memorandum of sale (irrespective of whether the foreclosing institution, the loan guarantor, the loan servicer, an unaffiliated third party, or any combination thereof, is/are executing such memorandum of sale) or delivery of the deed in lieu of foreclosure to the foreclosing institution or the loan servicer. An inspection conducted up to three years before the time of transfer may be used if the inspection report is accompanied by system pumping records demonstrating that the system has been pumped at least once a year during that time. To the extent that foreclosing institutions or loan servicers have contractually allocated responsibility for the inspection to the unaffiliated third party or the loan guarantor acquiring the property within the specified timeframes, such foreclosing institutions or loan servicers will not be responsible for inspection of the system(s). Entities foreclosing on properties are required to notify those who acquire title of the inspection and upgrade requirements contained at 310 CMR 15.300 through 15.305, in writing, prior to or at the time of transfer.

(c) Inheritance by Will or Intestacy (Without a Will). With the exception of inheritance by a spouse or inheritance of residential real property between any of the relationships listed in 310 CMR 15.301(4)(d), the inspection of the system must occur within two years before or one year after the will being allowed by the probate court and the appointment of the executor; or within two years before or one year after the appointment of an administrator if the deceased dies intestate regardless of whether the property passes specifically or as part of the residue of the estate. An inspection conducted up to three years before the time of transfer may be used if the inspection report is accompanied by system pumping records demonstrating that the system has been pumped at least once a year during that time. Executors or administrators are required to notify, in writing, those who acquire title to real property from an estate of the inspection and upgrade requirements contained at 310 CMR 15.300 through 15.305.

(d) Legal Life Estate or an Interest for Life or for a Term of Years in Trust. Inspection of the system must occur within two years before or six months of the death of the life tenant or the expiration of a present interest in trust for a term of years. If a successive life interest or an interest in trust for a term of years passes to a spouse, the inspection must occur within two years before or six months of the death of the last surviving spouse or the expiration of a present interest in trust to the spouse for a term of years. An inspection conducted up to three years before the time of transfer may be used if the inspection report is accompanied by system pumping records demonstrating that the system has been pumped at least once a year during that time.

(e) Interfamily Transfers That Are Not Excluded Under 310 CMR 15.301(4)(d). Inspection of the system must occur within two years prior to transfer of title or if weather conditions prevent inspection at the time of transfer, the inspection must occur as soon as the weather permits, but in no event later than six months after the transfer. An inspection conducted up to three years before the time of transfer may be used if the inspection report is accompanied by system pumping records demonstrating that the system has been pumped at least once a year during that time.

(f) Tax Taking Either by the Federal, State, or Municipal Government. Inspection of the system must occur within two years prior to transfer by governmental entity to buyer or within six months after the expiration of the right of redemption, provided that the governmental entity notifies the buyer in writing of the requirements contained at 310 CMR 15.300 through 15.305 for inspection and upgrade, if necessary. An inspection conducted up to three years before the time of transfer may be used if the inspection report is accompanied by system pumping records demonstrating that the system has been pumped at least once a year during that time.

(g) Levy of Execution that Results in a Conveyance of Property. Inspection of the system must occur within two years prior to officer's deed of debtor's interest to buyer or within six months after the expiration of the right of redemption, provided that the officer notifies the buyer in writing of the requirements contained at 310 CMR 15.300 through 15.305 for inspection and upgrade, if necessary. An inspection conducted up to three years before the time of transfer may be used if the inspection report is accompanied by system pumping records demonstrating that the system has been pumped at least once a year during that time.

15.301: continued

(h) Bankruptcy. Inspection of the system must occur within two years prior to transfer by bankruptcy trustee to buyer or within six months after the transfer, provided that the debtor notifies the buyer in writing of the requirements contained at 310 CMR 15.300 through 15.305 for inspection and upgrade, if necessary. An inspection conducted up to three years before the time of transfer may be used if the inspection report is accompanied by system pumping records demonstrating that the system has been pumped at least once a year during that time.

(i) Change in Ownership or the Form of Ownership Where New Parties are Introduced (*e.g.*, introduction of new beneficiary/ies in a nominee trust; introduction of new joint tenant(s) or new tenant(s) in common; introduction of new parties where property is transferring from joint ownership to nominee or business trust, or where a new general partner is introduced; creation of a legal life estate or an interest for life or for a term of years in trust for a party other than the creator or his or her spouse; a change in the controlling ownership interest of a corporation, *etc.*). Inspection of the system must occur within two years prior to transfer or if weather conditions prevent inspection at the time of transfer, the inspection must occur as soon as weather permits, but in no event later than six months after the transfer, provided that the new party is notified in writing of the requirements contained at 310 CMR 15.300 through 15.305 for inspection and upgrade, if necessary. In a nominee trust situation, whoever has authority to add a new beneficiary is responsible for the inspection. An inspection conducted up to three years before the time of transfer may be used if the inspection report is accompanied by system pumping records demonstrating that the system has been pumped at least once a year during that time.

(4) Exclusions. Inspection of a system is not required at the time of transfer of title of the facility served by the system in the following circumstances:

(a) a certificate of compliance for a new system has been issued by the Approving Authority within three years prior to the time of transfer and system pumping records demonstrate that the system was pumped at least once during the third year; or

(b) the owner of the facility or the person acquiring title has signed an enforceable agreement with the Approving Authority to upgrade the system or to connect the facility to a sanitary sewer or a shared system within the next two years following the transfer of title, provided that such agreement has been disclosed to and is binding on the subsequent owner(s); or

(c) the facility is subject to a comprehensive local plan of on-site septic system inspection approved in writing by the Department and administered by a local or regional governmental entity, and the system has been inspected at the most recent time required by the plan. A comprehensive local plan may prioritize systems to be inspected on the basis of proximity to water resources, soil or geological conditions, age or size of systems, history of performance, frequency of pumping or other routine maintenance activity, or other relevant factors, and may establish different schedules and frequency of inspection on the basis of such criteria, provided that all systems are inspected at least once every seven years by a System Inspector approved by the Department; or

(d) the transfer is of residential real property between the following relationships:

1. between current spouses;

2. between parents and their children;

3. between full siblings; and

4. where the grantor transfers the real property to be held in a revocable or irrevocable trust, where at least one of the designated beneficiaries is of the first degree of relationship to the grantor.

(5) A system shall be inspected prior to any change in the type of establishment, or increase in design flow, or prior to any expansion of use of the facility served for which a building permit or occupancy permit from the local building inspector is required. If the system is a cesspool, or if the system is failing as set forth in 310 CMR 15.303 or 15.304(1) or is a significant threat to public health, safety, welfare and the environment as set forth in 310 CMR 15.304(2), then the system shall be upgraded prior to the change in the type of establishment, increase in design flow or expansion of use of the facility. Prior to an increase in the design flow to any cesspool, or to any system above the existing approved capacity, the cesspool or the system shall be upgraded in accordance with the standards applicable to new construction. Whenever an addition to an existing structure which changes the footprint of a building with no increase in

15.301: continued

design flow is proposed, the system inspection shall be an assessment to determine the location of all system components, including the reserve area. The proposed construction shall not be placed upon any of the system components or within any applicable setback distances in 310 CMR 15.211. If official records are available to make a determination regarding location of system components, an inspection is not required for footprint changes.

(6) Facilities with a total design flow of 10,000 or more gallons per day but less than 15,000 gallons per day at full build out shall be inspected by the last day of the applicable calendar year listed below in compliance with the provisions of 310 CMR 15.006, and applicable provisions of 310 CMR 15.300 through 15.354, or 314 CMR 5.00. Such systems shall, unless subject to 310 CMR 15.301(3)(a), be re-inspected during the fifth calendar year following the applicable year of initial inspection, and then during every fifth calendar year thereafter. An inspection of a system conducted within 30 days prior to the last day of the applicable year of initial inspection may be used as the initial inspection, provided that a System Inspection Form approved by the Department is submitted to the Department within 30 days of the inspection. The Department may accept a Certificate of Compliance for the entire system, issued by the Department within the two year period prior to an inspection deadline, as a substitute for a required system inspection.

Year of initial inspection	Basin in which system is located
1997	Charles, Housatonic, Hudson (Hoosic), North Coastal, Ten Mile
1998	Blackstone, Chicopee, Connecticut, Nashua
1999	Boston Harbor (Neponset), Cape Cod, French & Quinebaug, Merrimack, Narragansett Bay/Mt. Hope Bay, Parker
2000	Buzzards Bay, Deerfield, Ipswich, Islands, Millers, Shawsheen
2001	Concord (Sudbury, Assabet, Concord), South Coastal, Farmington, Taunton, Westfield

Basin boundaries shall be determined by reference to the most recent edition of the Massachusetts GIS maps. If all of the components of a system are not located in the same basin, then the system shall be inspected during the earliest of the applicable inspection years.

(7) Shared systems shall be inspected every three years.

(8) When a facility is divided or the ownership of two or more facilities is combined as specified in 310 CMR 15.010(2) or (3), all systems serving the facility or facilities shall be inspected.

(9) All systems shall be inspected when the owner or operator thereof is ordered to do so by the local Approving Authority, the Department or court.

(10) The results of any inspection(s) required by 310 CMR 15.301 shall be submitted to the Approving Authority on a current System Inspection Form approved by the Department within 30 days of the field inspection of the system components by the approved System Inspector, provided that this sentence shall not be construed to require the owner of a system or a System Inspector to submit to the Approving Authority the results of a voluntary assessment of the condition of a system that is not performed to comply with a requirement of 310 CMR 15.301. Any system determined to require upgrade pursuant to 310 CMR 15.303 or 15.304 solely as a result of a voluntary assessment shall not be subject to the deadlines for completion of upgrades in accordance with 310 CMR 15.305 unless the owner or operator of the system is ordered to do so by the local Approving Authority, the Department or court. Inspection forms for systems with design flows over 10,000 gpd, and systems serving state or federal facilities shall be submitted to the Department by the approved System Inspector and the owner. All inspections required by 310 CMR 15.301 shall be conducted by a currently approved System Inspector. For each required inspection, the System Inspector shall complete the System Inspection Form in its entirety. Failure to complete the form is a violation of 310 CMR 15.302.

15.301: continued

(11) Failure of an owner or operator of a system to have the system inspected, and use or operation of any system described in 310 CMR 15.301(1) through (10) after the dates or events set forth therein without a required inspection shall constitute violations of 310 CMR 15.000. The failure to submit the required inspection form in accordance with 310 CMR 15.301(10) shall create a rebuttable presumption that the required inspection has not been performed.

15.302: Criteria for Inspection

(1) The intent of 310 CMR 15.302 is to provide reasonable guidance for the inspection of existing systems in as non-intrusive a manner as possible, set forth the requirements for conducting an inspection, and to avoid damage to the system and any unnecessary disturbance of the surrounding soil area which is related to the treatment process. At a minimum, the septic tank and distribution box, if present, or cesspool, if present, shall be located, uncovered and inspected, and reasonable professional efforts shall be made to locate and identify other components and features, as described in 310 CMR 15.302(2) and (3). The inspection is not designed to provide information to demonstrate that the system will adequately serve the use to be placed upon it by the new owner. The inspection criteria are intended to allow for timely inspection to avoid undue delay in the transfer of property.

- (2) An inspection shall consist of the collection and recording of the following information:
- (a) a general description of the system components and layout;
 - (b) quantification of the source/type of sanitary sewage. This should include type of use (domestic or commercial/industrial) as well as the design flow and whether or not the facility being served is occupied at the time of the inspection;
 - (c) an analysis of the factors set forth in 310 CMR 15.303 (failure criteria) and, if the system has a design flow of 10,000 gpd or greater, 15.304 (threats to public health and environment);
 - (d) water use records for the previous two years for facilities served by public water supply, if available from the supplier;
 - (e) a description of the septic tank including:
 1. approximate age, size, and condition of the tank;
 2. distance between bottom of grease/scum layer and the bottom of the outlet baffle;
 3. distance between the top of the scum layer and the top of the outlet tee;
 4. thickness of the grease/scum layer;
 5. depth of the sludge layer and distance from sludge to outlet tee;
 6. physical condition of inlet and outlet tees;
 7. any evidence of leakage into or out of tank; and
 8. any evidence of backup of effluent.
 9. a characterization of the distribution box, and of dosing tanks with pumps, if any, including:
 - a. any evidence of solids carryover;
 - b. leakage into or out of the distribution box;
 - c. whether the flow is equally divided; and
 - d. any evidence of backup.
 10. a description of the condition of the soil absorption system including:
 - a. any signs of hydraulic failure;
 - b. condition of surface vegetation;
 - c. level of ponding within disposal area;
 - d. encroachments into disposal area; and
 - e. other sources of hydraulic loading.
 11. the location of private water supply well (if any) in relation to system components; and
 12. a copy of pump-out records on file with the local Approving Authority.

15.302: continued

(3) The inspector shall make reasonable professional efforts to determine the location and condition of all system components and relevant physical features. If any component cannot be located or inspected, or any determination cannot be made, the inspector shall state on the inspection form the reasons and the steps taken to complete the inspection. At a minimum, reasonable professional efforts require compliance with the inspection requirements and protocol in 310 CMR 15.302(4) and (5). Where an inspection is conducted for the purpose of refuting or corroborating the findings of a prior inspection, reasonable professional efforts shall require, at a minimum, that the inspector employ methods to determine the location and condition of all system components and relevant physical features that are comparable to the methods employed by the prior inspector. Provided that these requirements are met, and the Approving Authority agrees with the findings in writing, the reinspection shall supersede the prior inspection unless otherwise determined in writing by the Approving Authority.

(4) Determination of High Groundwater Elevation. A deep hole observation test is not required to determine high groundwater elevation during an inspection. High groundwater elevation shall be estimated by the inspector, using best professional judgment, based on the methods described in 310 CMR 15.302(4)(a) through (c).

(a) The inspector shall review local maps and records of groundwater elevation (previous deep hole observation tests or groundwater monitoring results) on the site and nearby properties, if available.

(b) If the system includes a cesspool, the cesspool shall be pumped during the inspection and then examined to determine whether groundwater flows into the cesspool, indicating that the cesspool is below high groundwater elevation.

(c) If the system includes a septic tank and distribution box, the condition of these components and the surrounding soil shall be observed for indications that groundwater has infiltrated the system. Care should be taken not to destabilize the distribution box or the piping to or from the box.

These minimum requirements shall not prevent the use of additional methods. The elevation of nearby water bodies, or evidence of groundwater infiltration in other subsurface structures (for example, cellars), or hand augering to determine depth may aid in determining whether the system is located in the groundwater. The methods used to determine high groundwater elevation shall be described in the inspection report. A system owner may choose to have the high groundwater elevation determined by an observation well or deep hole observation test to confirm or disprove the results obtained by the minimum requirements of 310 CMR 15.302(4), or in place of the minimum requirements.

(5) Location of Soil Absorption System. The location of any cesspool must be determined. For systems with a septic tank and distribution box, excavation is not required to determine the location of the soil absorption system. Reference may be made to as-built plans of the system (if any). All components of the soil absorption system shall be located where the failure criteria specified in 310 CMR 15.303(1) are triggered. Where the failure criteria specified in 310 CMR 15.303(1) are not triggered, the location may be approximated by considering design flow, location of the distribution box and direction of outlet pipes, and physical condition of the site. The location may also be determined by running a metal snake or similar device from the outlet of the distribution box and using a metal detector, or use of similar methods. Nothing in 310 CMR 15.302(5) shall prevent an owner from choosing to establish the location of the leaching system through more intrusive methods.

(6) Compliance with Department Guidance. The inspector shall complete the system inspection in accordance with the Department's *Guidance for the Inspection of Subsurface Disposal Systems*.

15.303: Systems Failing to Protect Public Health and Safety and the Environment

(1) If one or more of the following conditions exist as documented by inspection by an approved System Inspector, or determined by the local Approving Authority or the Department, the system is failing to protect public health and safety and the environment and shall be upgraded in accordance with the timeframes of 310 CMR 15.305(1) and the standards of 310 CMR 15.404 and 15.405:

(a) Conditions applicable to all systems:

1. there is backup of sewage into the facility served by the system or any component of the system as a result of an overloaded and/or clogged soil absorption system or cesspool;

15.303: continued

2. there is a discharge of effluent directly or indirectly to the surface of the ground through ponding, surface breakout or damp soils above the disposal area or to a surface water of the Commonwealth;
 3. the static liquid level in the distribution box is above the level of the outlet invert;
 4. the liquid depth in a cesspool is less than six inches from the inlet pipe invert or the remaining available volume within a cesspool above the liquid depth is less than $\frac{1}{2}$ of one day's design flow;
 5. the septic tank or cesspool requires pumping more than four times a year;
 6. the septic tank and/or the tight tank is made of metal, unless the owner or operator has provided the System Inspector with a copy of a Certificate of Compliance indicating that the tank was installed within the 20 year period prior to the date of the inspection; or the septic tank and/or the tight tank is cracked or is otherwise structurally unsound, indicating that substantial infiltration or exfiltration is occurring or is imminent;
 7. a cesspool, privy or any portion of the soil absorption system extends below the high groundwater elevation;
- (b) Conditions applicable to cesspools and privies:
1. A cesspool or privy is located:
 - a. within 100 feet of a surface water supply or tributary to a surface water supply;
 - b. within a Zone I of a public well;
 - c. within 50 feet of a private water supply well;
 - d. less than 100 feet but 50 feet or more from a private water supply well, unless a well water analysis, conducted at a laboratory that is certified by the Department for the parameters analyzed, indicates an absence of fecal coliform bacteria, the presence of ammonia nitrogen and nitrate nitrogen is equal to or less than five ppm. The laboratory's sampling protocols shall be followed and its chain of custody forms shall be signed and completed. If water well analysis is conducted, the System Inspector shall attach a copy of the chain of custody forms and the laboratory results to the System Inspection Form.
 2. Evaluation of cesspools and privies near water resources:

A cesspool or privy is failing to protect public health and safety, welfare and the environment if any portion of it is within any of the dimensional criteria below and the local Approving Authority in its professional judgment determines the system is not functioning in a manner to protect the public health and safety, welfare and the environment:

 - a. within 50 feet of a surface water;
 - b. within 50 feet of a bordering vegetated wetland or a salt marsh.

In making a determination pursuant to 310 CMR 15.303(1)(b), the local Approving Authority shall consider:

 1. the condition, design, and treatment provided by the existing system;
 2. the vertical separation of the existing soil absorption system from groundwater;
 3. the horizontal separation of the existing soil absorption system from the water body;
 4. the soil characteristics of the site; and
 5. the condition of the waterbody or wetland, including any sensitive use areas such as beaches or shellfish beds.
- (c) Evaluation of systems with septic tanks and soil absorption systems near drinking water supplies:
- If any portion of the soil absorption system is within any of the dimensional criteria listed in 310 CMR 15.303(1)(c), unless the Approving Authority in its professional judgment, with the concurrence of the public water supplier, if any, determines the system is functioning in a manner to protect the public health and safety, welfare and the environment.
1. within 100 feet of a surface water supply or tributary to a surface water supply;
 2. within a Zone I of a public well;
 3. within 50 feet of a private water supply well;
 4. less than 100 feet but 50 feet or more from a private water supply well, unless a well water analysis, conducted at a laboratory that is certified by the Department for the parameters analyzed, indicates an absence of fecal coliform bacteria, and the presence of ammonia nitrogen and nitrate nitrogen is equal to or less than 5 ppm. The laboratory's sampling protocols shall be followed and its chain of custody forms shall be signed and completed. If water well analysis is conducted, the System Inspector shall attach a copy of the chain of custody forms and the laboratory results to the System Inspection Form.
- (d) In making a determination pursuant to 310 CMR 15.303(1)(c), the Approving Authority shall consider:

15.303: continued

1. the condition, design, and treatment provided by the existing system;
2. the vertical separation of the existing soil absorption system from groundwater;
3. the horizontal separation of the existing soil absorption system from the water body;
4. the soil characteristics of the site; and
5. the condition of the water supply, including a water supply analysis that meets the requirements of 310 CMR 15.303(1)(c) for fecal coliform bacteria and whether the presence of ammonia nitrogen and nitrate nitrogen is equal to or less than five ppm. Where available, existing data may be used for this analysis.

(2) Any system shall be upgraded upon the order of the Department or the Local Approving Authority if either determines that a specific circumstance exists by which any system threatens public health, safety, welfare or the environment, causes or threatens to cause damage to property or creates a nuisance. The Local Approving Authority or the Department may require that such upgrades be completed within a shorter period of time than specified in 310 CMR 15.305. Where necessary to protect public health, safety, welfare and the environment, the Department or the Local Approving Authority may require the owner to install a recirculating sand filter or equivalent alternative technology in accordance with 310 CMR 15.202 or to obtain a groundwater discharge permit in accordance with 314 CMR 5.00: *Ground Water Discharge Permit Program*.

(3) A cesspool serving a facility with a design flow of 2000 gpd or greater but less than 10,000 gpd is failing to protect public health, safety, welfare and the environment. The owner of such Facility is required, pursuant to 310 CMR 27.04(4) to notify the Department's Underground Injection Control Program and the Local Approving Authority 30 days prior to upgrading the cesspool and to have completed the upgrade of the cesspool by April 5, 2005.

15.304: Large Systems which Fail to Protect or which Threaten Public Health and Safety and the Environment

(1) A system serving a facility with a design flow of 10,000 gpd or greater but less than 15,000 gpd is failing to protect public health, safety and the environment if any of the conditions identified in 310 CMR 15.303(1) are present, as documented by inspection by an approved System Inspector, or determined by the Local Approving Authority or the Department. Any such system shall be upgraded in accordance with the timeframes of 310 CMR 15.305(1) and the standards of 310 CMR 15.404 and 15.405; provided, that the Department shall be the Approving Authority for all such upgrades.

(2) A system serving a facility with a design flow of 10,000 gpd or greater but less than 15,000 gpd is a significant threat to public health, safety and the environment if any of the following conditions are present, as documented by inspection by an approved System Inspector, or as determined by the Local Approving Authority or the Department:

- (a) the system is located within 400 feet of a surface water supply or within 200 feet of a tributary to a surface water supply; or
- (b) the system is located within a nitrogen sensitive area as designated pursuant to 310 CMR 15.214;
- (c) The owner or operator of any such system shall bring the system and the facility into compliance with the groundwater permit program requirements of 314 CMR 5.00: *Ground Water Discharge Permit Program*, including the obligation to obtain a groundwater discharge permit, within the time required by 310 CMR 15.305(2), unless the Department determines after consideration of the factors set forth in 310 CMR 15.304(3) that this requirement would be manifestly unjust, considering all the relevant facts and circumstances of the individual case, and the owner or operator has established that a level of environmental protection that is at least equivalent to that provided by 314 CMR 5.00 can be achieved without strict application of this requirement.

(3) (a) In determining whether enforcement of the requirement set forth at 310 CMR 15.304(2) would be manifestly unjust, the Department shall include at a minimum the following considerations:

15.304: continued

1. The owners of any such system for which permit applications were filed after May 9, 1994, or anywhere new construction occurred after March 31, 1995, shall be deemed to have had knowledge that a groundwater discharge permit would likely be required for such system pursuant to 310 CMR 15.304(2), and to have had a reasonable opportunity to make arrangements to come into compliance within the timeframes of 310 CMR 15.305(2);
 2. The costs of preparing the demonstrations and implementing control measures required by 310 CMR 15.304 shall be compared to the costs of compliance with the requirement to obtain a groundwater discharge permit; and
 3. Any other relevant factor.
- (b) In determining whether the applicant can provide the same degree of environmental protection as required by 310 CMR 15.304(2), the Department shall require at a minimum, the following:
1. inspection reports for the system as required by 310 CMR 15.301;
 2. an assessment of the groundwater flow at the site, including but not limited to direction and rate of groundwater flow, assessment of saturated flow conditions and concentrations of nitrate and other pollutants associated with the system;
 3. an assessment of water quality of relevant surface water supply, groundwater supply, or nitrogen sensitive areas;
 4. a proposed design and engineering plans for upgrade of the system, prepared by a Massachusetts Registered Professional Engineer, that will, at a minimum,
 - a. satisfy the requirements of 310 CMR 15.202 (recirculating sand filter or equivalent alternative technology);
 - b. satisfy the nitrogen loading requirements of 310 CMR 15.215; and
 - c. ensure that the standards applicable to groundwater discharge permits pursuant to 314 CMR 5.00: *Ground Water Discharge Permit Program* are met at the property line and at the point the discharge from the facility reaches any surface water or water supply well.
 5. a proposed maintenance, monitoring, and reporting plan that will ensure proper functioning of the upgraded system, and detection of any malfunction or failure to attain required discharge quality before discharges from the system leave the property; and
 6. if size and use of the facility is relevant to the demonstration that an equal level of environmental protection has been provided, appropriate use restrictions shall be granted and recorded in the chain of title for the property served by the system in the Registry of Deeds or Land Registration Office, as applicable, to ensure that such conditions are not changed.
- (c) An applicant for a determination pursuant to 310 CMR 15.304(3) shall file a request for such determination not less than two years prior to the date by which the owner would otherwise be required to obtain the groundwater discharge permit pursuant to 310 CMR 15.305(2).
- (d) In making any determination pursuant to 310 CMR 15.304(3), the Department shall impose such conditions as it determines appropriate to ensure protection of public health, safety, welfare and the environment. At a minimum, such conditions shall include upgrade of the system to the standards described in 310 CMR 15.304(3)(b)4., and a maintenance, monitoring and reporting plan as described in 310 CMR 15.304(3)(b)5.
- (4) Any system serving a facility with a design flow of 10,000 gpd or greater but less than 15,000 gpd shall be upgraded upon the order of the Department or the Local Approving Authority when a specific circumstance exists by which the system threatens public health, safety, welfare or the environment or causes or threatens to cause damage to property or creates a nuisance as determined by the Local Approving Authority or the Department. Where necessary to protect public health, safety, welfare and the environment, the Department or the Local Approving Authority may require the owner to install a recirculating sand filter or equivalent alternative technology in accordance with 310 CMR 15.202 or to obtain a groundwater discharge permit in accordance with 314 CMR 5.00.
- (5) A cesspool serving a facility with a design flow of 10,000 gpd or greater but less than 15,000 gpd is failing to protect public health, safety, welfare and the environment. The owner of such Facility is required, pursuant to 310 CMR 27.04(4), to notify the Department's Underground Injection Control Program 30 days prior to upgrading the cesspool and to complete the upgrade of the cesspool by April 5, 2005.

15.305: Deadlines for Completion of Upgrades

(1) If a system is failing to protect public health, safety, welfare or the environment as set forth in 310 CMR 15.303(1) or 15.304(1), the owner or operator shall upgrade the system within two years of discovery unless:

(a) a shorter period of time is set by the Local Approving Authority or the Department based upon the existence of an imminent health hazard; or

(b) the continued use of the system is permitted by the Local Approving Authority in accordance with the provisions of an enforceable schedule for upgrade. Bases for continued use include, but are not limited to, proposals to connect to a sanitary sewer or shared system. A fiscal commitment to the sewerage plan or shared system plan, together with an approved facility plan where appropriate, proposing connection or replacement of the failing system within five years, and an enforceable commitment by the owner to perform interim measures (for example, regular pumping) shall accompany any such local approval. Such approval shall expire in five years or upon the failure of the applicant for such approval to meet interim deadlines set forth in the enforceable schedule for upgrade and the plan. The Department may by specific written approval authorize the Local Approving Authority to allow a longer period of time, where the municipality has provided the Department a proposed implementation schedule for design and construction and has made a demonstrated financial commitment to the construction schedule. The Department may revoke any such approval if the approved schedule is not met.

(2) If a system serving a facility with a design flow of 10,000 gpd or greater but less than 15,000 gpd is a significant threat to public health, safety, welfare or the environment as set forth in 310 CMR 15.304(2), the owner or operator shall upgrade the system within five years of discovery in accordance with the provisions of an enforceable schedule unless:

(a) a shorter period of time is set by the Department based upon the existence of an imminent health hazard;

(b) the continued use of the system is permitted by the Department because it is necessary to allow implementation of an environmentally superior solution. An enforceable commitment by the owner to perform interim measures (*e.g.*, regular pumping, addition of fill) shall accompany any such approval by the Department. Such approval shall expire in seven years or upon the failure of the applicant for such approval to meet interim deadlines set forth in the enforceable schedule for upgrade.

(3) The owner or operator shall take appropriate measures throughout the period between discovery of the condition requiring upgrade and completion of the upgrade to ensure that there is no backup or direct discharge of sewage or effluent to buildings, to the surface of the ground, or to surface waters. The local Approving Authority or the Department may order the owner or operator to take any measure necessary to ensure the protection of public health, safety, welfare and the environment during such period.

(4) Except as provided in 310 CMR 15.004(3), all systems shall be abandoned in accordance with 310 CMR 15.354 and the buildings served by the systems shall be connected to a sewer when a sewer becomes available, unless:

(a) the system is an alternative system approved for such use pursuant to 310 CMR 15.280 through 15.287;

(b) the Department has made the determination in approving either the remedial use of an alternative system pursuant to 310 CMR 15.284 or in certifying an alternative system for general use pursuant to 310 CMR 15.288 that any person using such system need not connect the facility to a sanitary sewer if such connection is feasible; or

(c) the owner of an existing system has obtained a variance from this requirement pursuant to 310 CMR 15.410 through 15.415.

All systems shall be abandoned in accordance with 310 CMR 15.354 and the buildings served by the systems shall be connected to a sewer when directed to do so by the Board of Health pursuant to M.G.L. c. 83, § 11, by the Department pursuant to 310 CMR 15.000, or by court order.

15.340: Approval of System Inspectors

(1) System Inspectors who perform inspections pursuant to 310 CMR 15.301 shall be approved by the Department and shall be limited to:

15.340: continued

- (a) Massachusetts Registered Professional Engineers with a concentration in civil, sanitary or environmental engineering; Massachusetts Registered Sanitarians; or Massachusetts Certified Health Officers;
 - (b) Board of Health members or agents with at least one year of experience at the time of application; Engineers in Training (EIT certified) with a concentration in civil, sanitary or environmental engineering; Massachusetts licensed home inspectors and associate home inspectors as defined in St. 1999, c. 146, licensed septage haulers; disposal system installers; or other individuals with a minimum of one year of demonstrated experience in septic system design or inspection, who have attended training provided or authorized by the Department; and who have passed an examination prepared and administered by the Department or an agent authorized by the Department to qualify as an approved System Inspector pursuant to 310 CMR 15.340(4); or
 - (c) Individuals certified as on-site inspectors by the National Sanitation Foundation or other certifying organizations approved by the Department.
- (2) Individuals who qualify pursuant to 310 CMR 15.340(1) shall apply to the Department, or an agent authorized by the Department, for approval to perform inspections required under 310 CMR 15.000. Such application shall demonstrate satisfactorily to the Department, or an agent authorized by the Department, the qualifications of the applicant and shall be accompanied by a fee as established by the Department.
- (3) No persons other than those listed at 310 CMR 15.340(1) may perform inspections required by 15.301.
- (4) The Department may approve System Inspectors who attend training provided or authorized by the Department and pass a standard examination prepared and administered by the Department or an agent authorized by the Department. Said examination shall be designed to establish the fitness of the applicant for certification to assess the condition and function of on-site systems and to determine whether maintenance, including repair or replacement of system components, is necessary.
- (5) The passing score for the examination shall be 75% correct answers to all questions posed. Any person who is denied approval as a System Inspector based on his or her failure to pass the examination given by the Department, or an agent authorized by the Department, may request, and is entitled to receive, a written statement of the basis for denial.
- (6) The Department, or an agent authorized by the Department, shall maintain a list of all approved System Inspectors. The list shall be available for inspection or examination by any person.
- (7) The Department may revoke or suspend the approval and/or listing of a System Inspector approved pursuant to 310 CMR 15.340(1) for a time specified by the Department, during which time the inspector may not reapply to become a System Inspector, after opportunity for a hearing conducted pursuant to M.G.L. c. 30A, when it determines that the System Inspector has failed to comply with 310 CMR 15.000 with respect to the inspection of one or more systems including, without limitation:
- (a) the inspector has falsified or fraudulently altered a system inspection report or misrepresented the results of an inspection;
 - (b) the inspector has conducted a system inspection which does not comply with 310 CMR 15.000 and has incorrectly passed or failed the system;
 - (c) the inspector has failed to submit or accurately complete a system inspection report as required by 310 CMR 15.000; or
 - (d) the inspector has engaged in deceptive practices. Reinstatement following revocation shall be by written examination only.
- (8) Based on a System Inspector's noncompliance with 310 CMR 15.000, the Department, by issuance of an order, may require the System Inspector, among other things, to attend or repeat the System Inspector training course and/or to take or retake the System Inspector examination described in 310 CMR 15.340(4).

15.340: continued

(9) It shall be a violation of 310 CMR 15.000 for any person to falsify, misrepresent or fraudulently alter a system inspection report or the results of an inspection.

(10) System Inspectors shall submit the results of their inspection within 30 days of completing the inspection on a System Inspection Report form approved by the Department to the Approving Authority together with the signed statement at the bottom of the form certifying that the inspection has been performed and any recommendations regarding upgrade, repair, or maintenance of the system made by the System Inspector on the form were made consistent with the Inspector's training and experience in the maintenance and proper functioning of on site systems.

(11) System Inspectors may perform system inspections required by 310 CMR 15.301 while acting as an agent of an Approving Authority (a fee may be assessed pursuant to M.G.L. c. 40, § 22F), or as an independent agent of the system owner.

(12) System Inspectors initially approved by the Department prior to January 1, 2005, shall apply to the Department, or an agent authorized by the Department, to renew their approval by January 1, 2007. System Inspectors initially approved by the Department after January 1, 2005, shall apply to the Department, or an agent authorized by the Department, to renew their approval at least 90 days prior to the expiration of the three years following their approval date. Provided that a System Inspector timely files a complete renewal application, the System Inspector's approval shall not expire until the Department issues a final determination on the renewal application. A fee established by the Department shall accompany each renewal application; any application that does not include the fee shall be deemed incomplete. The approval of a renewal application shall expire three years from the date of issuance. Each System Inspector thereafter shall file a complete renewal application at least 90 days prior to the expiration date of his/her most recent approval.

(13) Beginning in 2010, at the time of filing any subsequent renewal application in accordance with 310 CMR 15.340(12), a System Inspector shall demonstrate that he or she has earned ten Training Contact Hours in the previous three years that improve the System Inspector's abilities in the following areas:

- (a) the principles of on-site sewage treatment and disposal;
- (b) safely and accurately conducting system inspections according to the requirements of 310 CMR 15.000;
- (c) safely and accurately identifying and locating systems;
- (d) safely and accurately assessing the condition and function of systems; and
- (e) safely and accurately determining whether maintenance, including repair or replacement of system components, is necessary.

15.351: System Pumping and Routine Maintenance

(1) Every septic tank, tight tank, or cesspool shall be pumped whenever necessary to ensure proper functioning of the system. Pumping is required whenever the top of the sludge or solids layer is within 12 inches or less of the bottom of the outlet tee, or the top of the scum layer is within two inches of the top of the outlet tee, or the bottom of the scum layer is within two inches of the bottom of the outlet tee. Pumping frequency is a function of use, although pumping is typically necessary at least once every three years, and is recommended annually for a system with a domestic garbage grinder. Without limiting the foregoing, a septic tank, tight tank, or cesspool shall be pumped when the owner or operator is required to do so by the Local Approving Authority or the Department. Whenever a system component including, but not limited to, a septic tank, tight tank, cesspool, grease trap, pump chamber or distribution box is pumped, its condition shall be noted by the system pumper on a system pumping form approved by the Department, and the results shall be submitted by the system pumper to the Approving Authority within 14 days from the pumping date. Such notation of the system's condition on the system pumping form shall not constitute a System Inspection Report submitted to the Approving Authority in accordance with 310 CMR 15.340.

15.351: continued

(2) Grease traps shall be inspected monthly by the owner/operator and shall be cleaned by a licensed septage hauler whenever the level of grease is 25% of the effective depth of the trap, or at least every three months, whichever is sooner. The owner/operator shall keep all inspection and pumping records.

(3) Pumps, alarms and other equipment requiring periodic or routine inspection and maintenance shall be operated, inspected and maintained in accordance with the manufacturer's and the designer's specifications. In no instance shall inspection be performed less frequently than once every three months for any system serving a facility with a design flow of 2,000 gallons per day or greater, and annually for any system serving a facility with a design flow of less than 2,000 gallons per day. The system owner shall submit the results of such inspections to the Approving Authority annually by January 31st of each year for the previous calendar year.

15.353: Emergency Repair

(1) Emergency repair or replacement of system components shall be completed within 30 days and shall be limited to the following:

- (a) pumping of a septic tank, tight tank, or cesspool as frequently as necessary to prevent backup or breakout; or
- (b) repair or replacement of one or more structural components of a system otherwise in compliance with 310 CMR 15.000, excluding the soil absorption system, such as a clogged building sewer or distribution line, damaged building sewer, septic tank or distribution box, or broken tee, which is determined to be the probable cause of the system failure and for which no modification or alteration of the system design is required.

(2) The emergency repair shall be limited to pumping if pumping alleviates the imminent danger to the public health, safety, welfare or the environment. If pumping does not alleviate the imminent danger to the public health, safety, welfare, or the environment, the Disposal System Installer may repair or replace one or more structural components of a system, excluding the soil absorption system, provided that:

- (a) the system is otherwise in compliance with 310 CMR 15.000;
- (b) any structural component that is repaired or replaced shall be in compliance with or upgraded to the requirements of 310 CMR 15.000;
- (c) the Disposal System Installer has determined the structural component being repaired or replaced is the probable cause of the condition constituting an imminent danger to the public health, safety, welfare or the environment; and
- (d) no modification or alteration of the system design is required.

(3) Only a Permitted Disposal System Installer may conduct an emergency repair.

(4) All emergency repairs other than pumping shall be preceded by at least 24-hour notice to the Approving Authority. All emergency repairs other than pumping shall be followed within 14 days of commencement of the emergency repair by an application for a Disposal System Construction Permit, local upgrade approval, or an application for a variance, if needed, pursuant to 310 CMR 15.411(2). The applicant may backfill any excavation required for the emergency repair unless directed otherwise by the Approving Authority. Pumping shall be reported to the Approving Authority.

(5) Any upgrade or expansion of a system which is not an emergency repair shall be designed, approved, and constructed in accordance with 310 CMR 15.000.

15.354: Abandonment of Systems

(1) Whenever the use of a system is discontinued following connection to a municipal or private sanitary sewer or shared on-site system or following condemnation or demolition of a building served by the system, the system shall be considered abandoned and any further use of the system for any purpose shall be prohibited unless, after inspection, the Approving Authority determines the system is in compliance or can be brought into compliance with 310 CMR 15.000.

15.354: continued

- (2) Continued use of a septic tank where the tank is to become an integral part of a sanitary sewer system requires the prior written approval from the local municipal authority responsible for the operation of the sanitary sewer system.
- (3) The following procedure shall be used to abandon a system:
 - (a) Within 14 days prior to discontinuance of use of a system, the facility owner shall apply to the Approving Authority to abandon the existing system citing the reason(s) abandonment is necessary, and where connection to municipal or private sanitary sewer has been made, a copy of the sewer connection permit shall be submitted with the application;
 - (b) Upon receipt of the Approving Authority's written approval to abandon the system, the septic tank shall be pumped of its entire contents by a licensed septage hauler; and
 - (c) The tank shall be excavated and removed from the site, or the bottom of the tank shall be opened or ruptured after being pumped of its content so as to prevent retainage of water and the tank shall be completely filled with clean sand or other suitable material approved in writing by the Approving Authority.

SUBPART E: PROCEDURES FOR SEEKING AND RECEIVING LOCAL UPGRADE APPROVALS AND VARIANCES FROM THE PROVISIONS OF SUBPARTS B AND C OF 310 CMR 15.000

15.401: General Provisions

- (1) Except as set forth in 310 CMR 15.401 through 15.422, every application to construct, upgrade or expand a system shall be prepared, and the work therefore authorized pursuant to a Disposal System Construction Permit shall be conducted, in full compliance with the procedural and technical requirements of 310 CMR 15.100 through 15.293.
- (2) In general, full compliance with the provisions of 310 CMR 15.000 is presumed to be necessary for the protection of public health, safety, welfare and the environment. Any requests to vary from the standards of 310 CMR 15.000 by means of a local upgrade approval or a variance shall be carefully reviewed by the Approving Authority and, where required, by the Department.

15.402: Use of Local Upgrade Approvals or Variances

- (1) Local Upgrade Approvals may be granted by Local Approving Authorities without review by the Department for a required or voluntary upgrade of existing systems, including failed or nonconforming systems, with design flows below 10,000 gpd and for existing systems required to be upgraded to Best Available Nitrogen Reducing Technology pursuant to 310 CMR 15.215(2)(a) in accordance with the terms and provisions of 310 CMR 15.402 through 15.405. Upgrade Approvals for required or voluntary upgrade of systems with design flows of 10,000 gpd or greater but less than 15,000 gpd which are failing to protect or are a significant threat to public health, and safety, welfare and the environment as set forth in 310 CMR 15.304 shall be approved by the Department.
- (2) Proposals for new construction or for increase in flow to an existing system other than in full compliance with 310 CMR 15.100 through 15.293 must seek and obtain a variance from the Approving Authority in accordance with the terms and conditions of 310 CMR 15.410 through 15.417.

15.403: Local Upgrade Approvals

- (1) The owner or operator may upgrade an existing system, including: a failed or nonconforming system with design flows below 10,000 gpd (systems which trigger failure criteria set forth at 310 CMR 15.303); systems with design flows of 10,000 gpd or greater but less than 15,000 gpd which fail to protect public health, safety, welfare and the environment (large systems set forth at 310 CMR 15.304(1)); and existing systems required to be upgraded to Best Available Nitrogen Reducing Technology pursuant to 310 CMR 15.215(2)(a); all pursuant to a local upgrade approval in accordance with the standards and requirements of 310 CMR 15.404 and 15.405 without obtaining variances. Local upgrade approvals for any system serving a facility owned by an agency of the Commonwealth or the federal government or systems with design flows of 10,000 gpd or greater but less than 15,000 shall be granted by the Department applying the same standards. The application for a local upgrade approval shall be made using a form approved by the Department. Notification to abutters shall be provided pursuant to the process in 310 CMR 15.411(1)(b), as required by 310 CMR 15.405(2), where the application is for reduction in the setback from a property line or from a private water supply well.

15.403: continued

(2) Local Upgrade approvals shall not be granted for upgrade proposals which include the addition of new design flows to a cesspool or privy or for the addition of new design flows above the existing approved capacity of a system constructed in accordance with the provisions of 310 CMR 15.000 or the 1978 Code.

(3) System upgrades which cannot be performed in accordance with 310 CMR 15.404 and 15.405 require a variance from the provisions of 310 CMR 15.000, which shall be processed in accordance with 310 CMR 15.410 through 15.417.

15.404: Maximum Feasible Compliance - Approvals for Upgrades

(1) Goal of Full Compliance. Wherever feasible, existing systems, including failed or nonconforming systems (other than systems threatening public health, safety, welfare or the environment as described in 310 CMR 15.304(2)) and existing systems required to be upgraded to Best Available Nitrogen Reducing Technology pursuant to 310 CMR 15.215(2)(a), shall be brought into full compliance through installation of one or more of the following:

- (a) an upgraded system which is in full compliance with 310 CMR 15.100 through 15.293;
- (b) an alternative system which has been approved for such use pursuant to 310 CMR 15.284 (remedial use), 15.285 (piloting), 15.286 (provisional approval), or 15.288 (certification for general use);
- (c) an RSF or equivalent alternative technology where the system is located in a Nitrogen Sensitive Area and has a design flow of 2000 gpd or greater in accordance with 310 CMR 15.202(1);
- (d) where proposed by the owner or operator, a shared system which has been approved for such use pursuant to 310 CMR 15.290 and 15.291; or
- (e) connection to a sewer system.

(2) Where failure of the system is solely due to failure of the septic tank, distribution box, soil absorption system, piping, and/or building sewer, upgrade of that component(s) in full compliance with 310 CMR 15.000 shall be deemed to meet the goal of full compliance; provided that the upgraded component functions properly with the other system components, the system functions properly hydraulically, and the owner obtains a certificate of compliance from the Approving Authority for the component repaired or replaced. If other system failures are discovered during upgrade of that component(s), such other system failures shall be upgraded in accordance with 310 CMR 15.405.

(3) When full compliance pursuant to 310 CMR 15.404(1) is not feasible, the Approving Authority may issue a local upgrade approval authorizing upgrade of the system with the goal of maximizing protection of public health, safety, welfare and the environment to the maximum extent feasible. The following requirements shall not be varied by the Approving Authority except as explicitly set forth in 310 CMR 15.404(3)(b) and (d):

- (a) a septic tank with an effective liquid capacity providing no less than 24 hours of retention time or 1000 gallons, whichever is greater, shall be provided unless the septic tank is an elevated tank constructed in accordance with 310 CMR 15.213 (construction in V-zones) in which case the effective liquid capacity may consist of a 500-gallon tank;
- (b) a minimum of four feet of separation between the bottom of the soil absorption system and the high groundwater elevation shall be provided, using fill if necessary. The Approving Authority may allow a three foot separation only in full compliance with 310 CMR 15.405(1)(h).
- (c) a minimum of four feet of naturally occurring pervious soil below the entire area of the soil absorption area and reserve area shall be provided;
- (d) the soil absorption system shall be designed to provide as much of the required area as possible on the facility served or, if proposed by the owner or operator, on an abutting facility pursuant to a valid recorded easement. The Approving Authority may reduce the required soil absorption system area no more than 25%, as provided in 310 CMR 15.405(1). Reductions in the required subsurface disposal area in excess of 25% may only be varied by the Department, and may require the installation of a Department-approved septic tank effluent tee filter, dosing of portions of the soil absorption system on an alternating basis, and/or other measures to protect the integrity of the soil absorption system; and
- (e) the soil absorption system shall not be located within 100 feet of a surface water supply or tributary to a surface water supply, within 50 feet of a private water supply well, or within the Zone I of a public water supply well.

15.405: Contents of Local Upgrade Approval

(1) In granting local upgrade approvals pursuant to 310 CMR 15.404(3) where full compliance as defined in 310 CMR 15.404(1) is not feasible, the Approving Authority shall consider the impact of the proposed system and shall vary to the least degree necessary the requirements of 310 CMR 15.100 through 15.293 so as to allow for both the best feasible upgrade within the borders of the lot, and have the least effect on public health, safety, welfare and the environment. Under a local upgrade approval, the Approving Authority is allowed to diverge from the goal of full compliance only to the extent necessary to achieve a feasible upgrade and may allow divergence only from those provisions, and to the extent, as specified in 310 CMR 15.404(2) and 15.405(1). In determining whether full compliance is feasible, the Approving Authority should appropriately consider not only physical possibility as dictated by the conditions of the site, but also the economic feasibility of the upgrade costs. The Approving Authority should emphasize protection of water resources and treatment of the sanitary sewage. Absent conditions which would result in a different outcome based on best professional judgment, the options set forth below should be considered in the order in which they appear with 310 CMR 15.405(1)(a) being the first option to be considered and rejected or adopted and 310 CMR 15.405(1)(k) being the last option to be considered and rejected or adopted:

- (a) Reduction of system location setbacks otherwise established in 310 CMR 15.211 for property lines provided that the system is within the property lines, a survey of the property line is required if a component is to be placed within five feet of the property line, and no such reduction shall result in the soil absorption system being located less than ten feet from a soil absorption system on an abutting property;
- (b) Reductions of system location setbacks from cellar wall, crawl space, swimming pool, or slab foundations; an increase in the maximum allowable depth of system components required by 310 CMR 15.221(7), from 36 inches to 72 inches below finish grade, provided that adequate venting and adequate access are provided and H-20 loading is provided for all system components; a decrease in the liquid depth of the septic tank required by 310 CMR 15.223(2) from four feet to three feet;
- (c) Up to a 25% reduction in the required subsurface disposal area design requirements;
- (d) Where upgrade is required pursuant to 310 CMR 15.303(1) because it is within Zone I of public well or within 100 feet of private well, relocation of the well. Any relocation of a public well shall be performed pursuant to 310 CMR 22.00: *Drinking Water* (water supply source approval);
- (e) Reduction of system location setbacks from bordering vegetated wetlands;
- (f) Reduction of system location setbacks from surface waters, salt marshes, inland and coastal banks, certified vernal pools in accordance with 310 CMR 15.211(1)[2], leaching catch basins, dry wells, or surface or subsurface drains other than those which discharge to surface water supplies or tributaries thereto;
- (g) Reduction of system location setbacks from water supply lines, private water supply wells (but not within 50 feet of the well), tributaries to surface water supplies, surface water supplies, but not within 100 feet of the surface water supply or tributary thereto or open, surface or subsurface drains which discharge to surface water supplies or tributaries thereto;
- (h) the Approving Authority may reduce the required four foot separation (in soils with a recorded percolation rate of more than two minutes per inch) or the required five foot separation (in soils with a recorded percolation rate of two minutes or less per inch) between the bottom of the soil absorption system and the high groundwater elevation only if all of the following conditions are met:
 1. An approved Soil Evaluator who is a member or agent of the local Approving Authority determines the high groundwater elevation;
 2. A minimum three foot separation (in soils with a recorded percolation rate of more than two minutes per inch) or a minimum four foot separation (in soils with a recorded percolation rate of two minutes or less per inch) between the bottom of the soil absorption system and the high groundwater elevation is maintained;
 3. The system is a failed or non-conforming system serving an existing building with a design flow of less than 2,000 gpd;
 4. No increase in design flow is allowed;
 5. No reduction in required soil absorption system size or setbacks from public or private wells, bordering vegetated wetlands, surface waters, salt marshes, coastal banks, certified vernal pools, water supply lines, surface water supplies or tributaries to surface water supplies, or drains which discharge to surface water supplies or their tributaries, is allowed.

15.405: continued

- (i) A sieve analysis may be performed in accordance with Department guidance if a percolation test in accordance with 310 CMR 15.104 and 15.105 can not be performed as determined by the Approving Authority;
 - (j) Reduction of the requirement of a 12 inch separation between the inlet and outlet tees and high groundwater, provided that all boots or pipe joints are sealed with hydraulic cement or installed with watertight sleeves and the tank is proven watertight. Expandable foam spray is not an acceptable alternative for sealing pipe joints; or
 - (k) At least one deep hole has been performed in the proposed disposal area and it has been determined by the Approving Authority that the deep hole adequately characterizes the soils for the purpose of designing the soil absorption system.
- (2) No application for a local upgrade approval in which the setback from property lines or a private water supply well is reduced shall be complete until the applicant has notified all abutters whose property or well is affected by certified mail at his or her own expense at least ten days before the Board of Health meeting at which the upgrade approval will be on the agenda. The notification shall reference the standards set forth in 310 CMR 15.402 through 15.405 and indicate the date, time and place where the upgrade approval will be discussed.
- (3) If the system cannot be upgraded in accordance with 310 CMR 15.404 and 15.405(1) the owner shall:
- (a) obtain a groundwater discharge permit pursuant to 314 CMR 5.00: *Ground Water Discharge Permit Program*;
 - (b) apply to the Approving Authority to use a tight tank in accordance with the provisions of 310 CMR 15.260;
 - (c) apply for a variance pursuant to 310 CMR 15.410 through 15.415; or
 - (d) abandon the system in compliance with 310 CMR 15.354.
- (4) Nothing in 310 CMR 15.405 shall authorize violation of M.G.L. c. 131, § 40 and 310 CMR 10.00: *Wetlands Protection*, or any other applicable provision of law.

15.410: Variances - Standard of Review

- (1) Local Approving Authorities and the Department may vary the application of any provisions of 310 CMR 15.000 with respect to any particular case except those listed in 310 CMR 15.415. Variances for increased flow to existing systems shall be governed by the provisions of 310 CMR 15.414. Variances for schools shall be governed by the provisions of 310 CMR 15.416. Variances shall be granted only when, in the opinion of the Approving Authority:
- (a) The person requesting a variance has established that enforcement of the provision of 310 CMR 15.000 from which a variance is sought would be manifestly unjust, considering all the relevant facts and circumstances of the individual case; and
 - (b) The person requesting a variance has established that a level of environmental protection that is at least equivalent to that provided under 310 CMR 15.000 can be achieved without strict application of the provision of 310 CMR 15.000 from which a variance is sought.
- (2) With regard to variances for new construction, enforcement of the provision from which a variance is sought must be shown to deprive the applicant of substantially all beneficial use of the subject property in order to be manifestly unjust.

15.411: Process for Seeking a Variance from Local Approving Authorities

- (1) The Local Approving Authority shall review requests for variances as follows.
- (a) Every request for a variance shall be in writing, shall make reference to the specific provision of 310 CMR 15.000 for which a variance is sought, and shall include a statement demonstrating compliance with 310 CMR 15.410.
 - (b) No application for a variance shall be complete until the applicant has notified all abutters by certified mail at his or her own expense at least ten days before the Board of Health meeting at which the variance request will be on the agenda. The notification shall reference the specific provisions of 310 CMR 15.000 from which a variance is sought, a statement demonstrating compliance with 310 CMR 15.410, and the date, time and place where the application will be discussed.

15.411: continued

(2) Emergency repairs pursuant to 310 CMR 15.353 may be performed prior to seeking a variance. The owner of the system shall seek a variance within 14 days of commencement of the emergency repairs.

(3) Any variance allowed by the Local Approving Authority shall be in writing. Any denial of a variance shall also be in writing and shall contain a brief statement of the reasons for the denial. A copy of each variance shall be conspicuously posted for 30 days following its issuance; and shall be available to the public at all reasonable hours in the office of the city or town clerk or the office of the Board of Health while it is in effect.

(4) A request for a variance for a residential facility with four units or less, as described in M.G.L. c. 111, § 31E, shall be deemed constructively approved by the Local Approving Authority if the Local Approving Authority does not act upon it within 45 days of receipt of a complete application.

(5) With the exception of those watersheds (Ware, Quabbin and Wachusett) to which the provisions of 350 CMR 11.00: *Watershed Protection* apply, Local Approving Authorities may, after consultation with the local water supplier, issue variances for the siting of systems within the setbacks from surface water supplies, or from tributaries to surface water supplies, and may exempt tributaries consistent with the standards and procedures of 350 CMR 11.00: *Watershed Protection* without Department approval, provided that no such variance or exemption shall result in: the siting of a septic tank or soil absorption system within 200 feet of said surface water supplies or 100 feet of said tributaries; or siting of a septic tank within 25 feet or a soil absorption system within 50 feet of any surface water. Copies of all such variances and exemptions of tributaries shall be submitted to the Department by the Local Approving Authority within 30 days of issuance.

15.413: Conditioning of Variances

(1) The Local Approving Authority or the Department may issue variances subject to such conditions, including, but not limited to, monitoring and reporting requirements, deed recordation requirements, financial assurances or other qualifications on the use of the system, as it deems necessary to protect public health, safety, welfare and the environment. Any conditions shall be expressed in writing in allowing the variance.

(2) Any denial of a variance by the Local Approving Authority or the Department may direct the applicant to upgrade an existing system consistent with the requirements and standards of 310 CMR 15.404 and 15.405. Failure to do so may be the subject of enforcement action by the Local Approving Authority or the Department.

15.414: Variances for Increased Flow to Existing System

(1) Local Approving Authorities or the Department may vary the application of any provisions of 310 CMR 15.000 with respect to any particular case involving increased flow to an existing system only when in the opinion of the Department or the Local Approving Authority all of the conditions in 310 CMR 15.414(2) through (4) are met. A showing by the person requesting a variance that the proposed variance would satisfy the maximum feasible compliance provisions as set forth in 310 CMR 15.404 and 15.405 shall not presumptively entitle such person to a variance.

(2) The person requesting a variance has established that strict enforcement of the provision of 310 CMR 15.000 from which a variance is sought would be manifestly unjust, considering all the relevant facts and circumstances of the individual case including, at a minimum, the following:

- (a) the owners of any such system for which permit applications were filed after March 31, 1995 shall be deemed to have had knowledge that full compliance with the requirements applicable to new construction is preferred;
- (b) the costs of full compliance with the requirements applicable to new construction shall be compared to the costs of compliance with a variance; and

15.414: continued

- (c) whether an upgrade in full compliance with 310 CMR 15.000 is feasible without increased flow.
- (3) The system cannot be brought into full compliance through any of the following:
 - (a) an upgraded system which is in full compliance with 310 CMR 15.100 through 15.293;
 - (b) an alternative system which has been approved for such use pursuant to 310 CMR 15.284 (remedial use), 15.285 (piloting), 15.286 (provisional approval), or 15.288 (certification for general use);
 - (c) a shared system which has been approved for such use pursuant to 310 CMR 15.290 and 15.291; or
 - (d) connection to a sewer system.
- (4) The upgraded system with the increased flow provides better protection of public health and safety and the environment than the existing system with no increase in flow. Increased flows not in compliance with 310 CMR 15.000 will rarely provide better protection than existing flows to a system designed and constructed in compliance with the 1978 Code or 310 CMR 15.000, but are more likely to constitute improvements over nonconforming or failed systems.

15.415: Provisions from Which No Variance May be Granted

- (1) No variance from the minimum requirement of four feet of naturally occurring pervious material set forth in 310 CMR 15.240(1) shall be granted for new construction.
- (2) For upgrade of systems, or increase of flow to existing systems, no variance from the minimum requirement of four feet of naturally occurring pervious material set forth in 310 CMR 15.240(1) shall be granted unless the applicant demonstrates that alternatives for siting an on-site system with four feet of naturally occurring pervious material or connection to a sanitary sewer or connection to a shared system are not feasible. Where no such alternatives are feasible, a variance to allow the repair or replacement in the disposal area with no less than two feet of naturally occurring pervious material may be considered upon the applicant's demonstration of the following:
 - (a) evidence, the result of deep observation hole testing, that the four feet requirement cannot be met anywhere on the site;
 - (b) evidence that easements to adjacent property on which a system in compliance with the four feet requirement could be installed have been requested and can not be obtained; and
 - (c) evidence that site testing to establish high ground-water elevation conducted in accordance with the procedures set forth in 310 CMR 15.103 has been conducted in conjunction with preparation of design plans and specifications for the repair or replacement of the system.

15.416: Variances for Schools

- (1) For purposes of 310 CMR 15.416, a school means any public or privately-owned elementary, middle, or secondary school. University, college or other adult educational facilities, regardless of ownership, are not considered schools for these purposes. The provisions of 310 CMR 15.413 shall apply to such variances.
- (2) The Department may vary the application of provisions of 310 CMR 15.000 as specified in 310 CMR 15.416 where a school demonstrates to the satisfaction of the Department that:
 - (a) the variance is necessary to accommodate an overriding community, regional, state or national public interest; and
 - (b) a level of environmental protection that is at least equivalent to that provided under 310 CMR 15.000 can be achieved without strict application of the provision of 310 CMR 15.000 from which a variance is sought.
- (3) The Department may vary the design flow values for elementary, middle or secondary schools set forth in 310 CMR 15.203(5), where the applicant:
 - (a) satisfies the criteria of 310 CMR 15.416(2);
 - (b) demonstrates through the use of metered maximum daily water flow readings from the facility or similar facilities in the same or surrounding communities that because of water conservation techniques or other factors flows are or will be substantially different from those contained in 310 CMR 15.203(5), including consideration of occupancy and use rates; and

15.416: continued

(c) demonstrates that system design has also accounted for any anticipated pollutant loadings and greater concentration of pollutants that result from reducing flows.

If the Department grants such a variance, it shall require determination of design flows based on 200% of the average daily water meter readings when school is in session in order to assimilate maximum daily flows.

(4) If any school with a design flow of 10,000 gpd or greater but less than 15,000 gpd is threatening public health, safety, welfare and the environment pursuant to 310 CMR 15.304(2), a groundwater discharge permit will be required unless the Department determines after consideration of the factors set forth in 310 CMR 15.304(3) that this requirement would be manifestly unjust and the owner or operator of the school has established that a level of environmental protection that is at least equivalent to that provided under 310 CMR 15.000 can be achieved without strict application of this requirement.

(5) The Department may vary the prohibition on increased flows to systems with design flows between 10,000 and 15,000 gpd set forth in 310 CMR 15.006(3), where the applicant:

(a) satisfies the criteria of 310 CMR 15.416(2) and 310 CMR 15.414(3) (increases in flow to existing facilities);

(b) demonstrates that there are no reasonable conditions or alternatives that would allow the system to be expanded in compliance with the provisions of 310 CMR 15.000 or other applicable requirements; and

(c) demonstrates that the upgraded system with the increased flow provides better protection of public health, safety, welfare and the environment than the existing system with no increase in flow.

15.421: Appeals From Determinations by Local Approving Authority

Any person aggrieved by any order, variance, issuance or denial of a Disposal System Construction Permit, Local Upgrade Approval or Certificate of Compliance issued by a Local Approving Authority may appeal to any court of competent jurisdiction as provided for by the laws of the Commonwealth.

15.422: Appeals of Departmental Determinations

(1) An applicant who is aggrieved by a shared system, recirculating sand filter or equivalent alternative technology, a remedial use, a certification for general use, or variance determination by the Department may request an adjudicatory hearing on that determination in accordance with 310 CMR 1.00 and M.G.L. c. 30A.

(2) Any person subject to an order, or any person aggrieved by a commonality determination pursuant to 310 CMR 15.011, issued by the Department, may request an adjudicatory hearing in accordance with the provisions of 310 CMR 1.00 and M.G.L. c. 30A.

SUBPART F: TRANSPORTATION AND DISPOSAL OF SEPTAGE

15.500: Purpose

The provisions of 310 CMR 15.500 through 15.505 are intended to provide for safe, efficient and economical means of collecting, transporting and disposing of septage.

15.501: Regional Abatement Districts

(1) Handling of septage through regionalized authorities or districts can promote public safety, efficient regional planning, sufficient capacity and cost-savings for individuals, the Commonwealth and its political subdivisions.

(2) One or more cities and towns, pursuant to the provisions of M.G.L. c. 21, §§ 29 and 30, and M.G.L. c. 111, §§ 31 and 31D may enter into an abatement district for the purpose of arranging for the transport and disposal of septage generated within their boundaries. A model regulation for the purposes of forming a district may be obtained from the Department.

15.502: Transportation

- (1) No person shall remove and/or transport septage through the streets of any city or town or via any state or federal highway located within any city or town in which the septage was first collected without first obtaining a permit from the board of health of such city or town in accordance with 310 CMR 15.000 and M.G.L. c. 111, § 31A. An application for such permit shall be in such form and contain such information, on oath, as such board shall require.
- (2) All such permits shall expire at the end of the calendar year in which they are issued, but may be renewed annually on application as herein provided. No permit shall be transferred except with the written approval of the said board.
- (3) All permits shall designate the treatment works, approved by the Department, where the hauler is authorized to dispose of septage and a copy of all contracts or other agreements between the hauler and the receiving facility shall be submitted to, and retained by, the Approving Authority.
- (4) A duly registered septage hauler may transport septage through the streets of a city or town in which said substances were not collected provided the hauler registers with the board of health of such city or town; and, provided further, that he or she transports said substances in accordance with such reasonable rules and regulations as may be established by such board of health.
- (5) Motor vehicles owned by the Commonwealth or any of its political subdivisions and motor vehicles engaged under contract with the Commonwealth in the transportation of septage shall be exempt from the provisions of 310 CMR 15.502. A city or town may recommend to the department of highways, in writing, an alternative route of travel for such motor vehicles whereby the noise or nuisance incident to such travel shall be minimized or abated and said department shall consider such alterations or changes in the travel routes of such motor vehicles as will result in the minimization of such noise or nuisance.
- (6) The contents of privies, cesspools, septic tanks and tight tanks shall be transported in a manner that will not create a nuisance or a health hazard.
- (7) Pumping records shall be submitted to the Approving Authority within 14 days from the pumping date in accordance with 310 CMR 15.351(1), unless the Approving Authority requires more frequent submittals.

15.503: Transfer Locations

Local Boards of Health may regulate locations for the transfer of septage from one truck, tanker or other storage container equipped with wheels sufficient for over-the-road or rail travel to another pursuant to M.G.L. c. 111, §§ 31D and 143, provided that no permanent structures for holding or storage are constructed. The Department may impose additional requirements on transfer locations pursuant to the authority of 310 CMR 15.000 and M.G.L. c. 21 §§ 26 through 53 and M.G.L. c. 83, § 6.

15.504: Disposal

- (1) Cities, towns and sewerage districts may, subject to the approval of the Department, provide treatment works for the receipt and disposal of septage and may establish such charges for the use of such facilities as may be necessary for defraying the cost of construction, operating and maintaining the same.
- (2) Disposal of septage shall be by discharge to a sanitary sewer or to a treatment works. All such treatment works shall be approved by the Department in accordance with M.G.L. c. 21, §§ 26 through 53, and applicable provisions of 314 CMR 3.00: *Surface Water Discharge Permit Program*, 4.00: *Massachusetts Surface Water Quality Standards*, 5.00: *Ground Water Discharge Permit Program*, 7.00: *Sewer System Extension and Connection Permit Program* and 12.00: *Operation and Maintenance and Pretreatment Standards for Wastewater Treatment Works and Indirect Dischargers*. If disposal is by discharge to a sanitary sewer, it shall be in a manner and at such times as may be acceptable to the authority having jurisdiction over the sewer and in accordance with any applicable regulations or permit conditions. Any other disposal is a violation of 310 CMR 15.000.

15.504: continued

(3) The Department may investigate treatment works for the receipt of septage in cities, towns and sewerage and septage districts. If the Department determines such works are inadequate for proper disposal of septage, it may recommend necessary action for the protection of the public health, safety and welfare. If after a reasonable time, the city, town or sewerage or septage district fails to act upon the Department's recommendation, the Department may issue an order requiring the provision of adequate septage receiving facilities. Nothing in 310 CMR 15.504 shall be construed to limit the authority of the Department to take any action pursuant to M.G.L. c. 21, §§ 26 through 53.

(4) Pursuant to M.G.L. c. 40, § 22F, a city, town or sewerage or septage district may establish such charges for the use of septage receiving facilities as may be necessary for defraying the cost of constructing, operating and maintaining the works.

(5) Disposal of septage at treatment works where it is dewatered and beneficially reused shall be encouraged and practiced wherever feasible.

15.505: Equipment

(1) No person shall use equipment to remove or transport the contents of privies, cesspools, septic tanks or tight tanks unless such equipment has first been inspected and approved by the Approving Authority.

(2) Mobile tanks shall be securely mounted on trucks. They shall be watertight, equipped with necessary odor controls, provided with a leak proof cover and tight discharge valves.

(3) Mobile tanks shall be provided with a vent constructed in a manner that will permit the escape of gas, but not the liquid contents of the tank.

(4) Suction or pressure hoses shall be in good repair.

(5) Pumps shall be maintained in a condition that will prevent the leakage of septage.

GRANT OF TITLE 5 COVENANT AND EASEMENT
(property served by Shared System)
310 CMR 15.290(2)(e)

This GRANT OF TITLE 5 COVENANT AND EASEMENT made as of this ___ day of _____, 20___, by _____, of _____, _____ County, Massachusetts ("Grantor").

WITNESSETH

WHEREAS, Grantor being the owner(s) in fee simple of that [those] certain parcel(s) of [vacant] land located in _____, _____ County, Massachusetts, with the buildings and improvements thereon, pursuant to a deed from _____ to Grantor, dated _____, and recorded with _____ County Registry of Deeds in Book ___, Page ___ [source of title other than by deed] and/or pursuant to Certificate of Title No. _____ issued by the Land Registration Office of the _____ County Registry District, said parcel(s) of land being more particularly bounded and described in Exhibit A, attached hereto and made a part hereof, and being shown on a plan entitled, " _____ ", dated _____, prepared by _____, recorded with _____ County Registry of deeds as Plan No. ___, in Plan Book _____ and/or registered as Land Court Plan No. ___, on file with the Land Registration Office of _____ County Registry District ("Property"); and

WHEREAS, there is appurtenant to and the Property has the benefit of a Shared System, as defined in 310 CMR 15.002, said Shared System being located on a parcel(s) of [vacant] land located in _____, _____ County, Massachusetts, with the buildings and improvements thereon, pursuant to a deed from _____ to _____ [or Grantor], dated _____, and recorded with _____ County Registry of Deeds in Book ___, Page ___ [source of title other than by deed] and/or pursuant to Certificate of Title No. _____ issued by the Land Registration Office of the _____ County Registry District, said parcel(s) of land being more particularly bounded and described in Exhibit B, attached hereto and made a part hereof, and being shown on a plan entitled, " _____ ", dated _____, prepared by _____, recorded with _____ County Registry of deeds as Plan No. ___, in Plan Book _____ and/or registered as Land Court Plan No. ___, on file with the Land Registration Office of _____ County Registry District ("Shared System Property"); and

WHEREAS, the Property has the benefit of a Shared System Easement, being more particularly bounded and described in Exhibit C, attached hereto and made a part hereof, and being shown on a plan entitled, " _____ ", dated _____, prepared by _____, recorded with _____ County Registry of Deeds as Plan No. ___, in Plan Book _____ and/or registered as Land Court Plan No. ___, on file with the Land Registration Office of _____ County Registry District [or to be recorded/filed for registration herewith] ("Shared System Easement"); and

WHEREAS, the Shared System has been approved by the Local Approving Authority, as defined in 310 CMR 15.002, in accordance with Title 5, 310 CMR 15.000, as amended ("Title 5"); said approval being based upon the agreement by Grantor to incur certain obligations regarding the construction, inspection, maintenance, upgrade and expansion of the Shared System and to grant to the Local Approving Authority a perpetual easement to construct, inspect, maintain, upgrade and expand any component of the Shared System and in connection herewith a perpetual easement to pass and repass over the Property and the Shared System Property for purposes of inspecting the Shared System to insure compliance with and fulfillment of the terms of this Covenant/Easement as hereafter set forth;

Appendix 1: continued

NOW, THEREFORE, pursuant to the provisions of 310 CMR 15.290, Grantor does hereby GRANT to the Town/City of _____, a Massachusetts municipal corporation situated in _____ County, having an address at _____, Massachusetts, acting through its Board of Health ("_____"), (also referred to herein as the Local Approving Authority), for nominal, non-monetary consideration, with QUITCLAIM COVENANTS, a TITLE 5 COVENANT AND EASEMENT ("Covenant/Easement") in, on, upon, through, over and under the Shared System Easement, the terms and conditions of which are as follows:

OBLIGATIONS AND EASEMENT

1. Inspection and Pumping. Grantor agrees to have the Shared System inspected at least every three years by a System Inspector, as defined in 310 CMR 15.002, and pumped on an as needed basis, but in no event shall the Shared System be pumped less than every three years. The System Inspector shall submit the results of the inspection on a System Inspection Report (Appendix __) to the _____ [Local Approving Authority] and to the Department of Environmental Protection (DEP) within 30 days of the Shared System's inspection. Grantor shall provide the _____ [Local Approving Authority] and DEP with a copy of the receipt obtained from the duly registered septage hauler upon pumping of the Shared System within 30 days of the Shared System's pumping.
2. Financial Assurance Mechanism. Grantor agrees to provide the _____ [Local Approving Authority] and DEP with the financial assurance mechanism, naming the _____ [Local Approving Authority] and DEP as additional beneficiaries, which shall provide for upgrade of the Shared System in the event the Shared System fails to protect public health and the environment pursuant to the criteria established in 310 CMR 15.303.
3. Maintenance. The Grantor agrees to construct the Shared System such that the Sanitary Sewage, as defined in 310 CMR 15.002, from any Facility, as defined in 310 CMR 15.002, owned by Grantor may be denied access to the Shared System in the event Grantor fails to pay its proportionate share of the construction, inspection, maintenance, upgrade and expansion costs incurred by said Shared System.
4. Easements. In creating this Covenant/Easement, Grantor hereby grants to the _____ [insert Local Approving Authority], its agents, contractors, subcontractors and employees, a perpetual EASEMENT to enter upon and the right to bring equipment onto the Shared System Easement to do any and all acts deemed necessary to construct, install, lay, operate, maintain, inspect, upgrade, repair, remove, excavate, replace, and expand any component of the Shared System, together with a right to pass and repass by foot and by vehicle over the Shared System Easement for said purposes, including the removal and trimming of crops, vegetation, trees, or shrubs therefrom, and for purposes of inspecting the Shared System Easement to insure compliance with and fulfillment of the terms of this Covenant/Easement.
5. Lien Authority of Local Approving Authority. For purposes of enforcing a lien against the Property and the Shared System Property, Grantor hereby agrees that the phrase "...land upon which the structure is or was located..." as used in the second paragraph of M.G.L. c. 111, § 127B shall include the Property and the Shared System Property, thereby authorizing the _____ [insert Local Approving Authority] to impose a lien on either or both the Property and the Shared System Property in the event the _____ [insert Local Approving Authority] has incurred debt in accordance with the provisions of M.G.L. c. 111, §127B.
6. Severability. If any court or other tribunal determines that any provision of this instrument is invalid or unenforceable, such provision shall be deemed to have been modified automatically to conform to the requirements for validity and enforceability as determined by such court or tribunal. In the event the provision invalidated is of such a nature that it cannot be so modified, the provision shall be deemed deleted from this instrument as though it had never been included herein. In either case, the remaining provisions of this instrument shall remain in full force and effect.
7. Enforcement. Grantor expressly acknowledges that a violation of the terms of this instrument could result in the following:

Appendix 1: continued

(i) upon determination by a court of competent jurisdiction, in the issuance of criminal and civil penalties, and/or equitable remedies, including, but not limited to, injunctive relief, such injunctive relief could include the issuance of an order to modify or remove any improvements constructed upon the Shared System Easement in violation of the terms of this Covenant/Easement; and

(ii) in the assessment of penalties and enforcement action by the Local Approving Authority and DEP to enforce the terms of this Covenant/Easement, pursuant to Title 5; M.G.L. c. 111, §§ 17, 31, 122, 124, 125, 125A, 127A through 127O, and 129; and M.G.L. c. 83, § 11.

8. Provisions to Run with the Land. This Covenant/Easement sets forth rights, liabilities, agreements and obligations upon and subject to which the Shared System Easement or any portion thereof, shall be improved, held, used, occupied, leased, sold, hypothecated, encumbered, or conveyed. The rights, liabilities, agreements and obligations herein set forth shall run with the Property and the Shared System Property, as applicable thereto, and any portion thereof and shall inure to the benefit of and be binding upon Grantor and all parties claiming by, through or under the Local Approving Authority or Grantor. The rights hereby granted to the Local Approving Authority, its successors and assigns, constitute the perpetual right of the Local Approving Authority to enforce this Covenant/Easement and Grantor hereby covenants for himself/herself/itself and his/her/its executors, administrators, heirs, successors and assigns, to stand seized and hold title to the Property and the Shared System Property, as applicable thereto, and any portion thereof, subject to this Covenant/Easement, provided, however, that a violation of this Covenant/Easement shall not result in a forfeiture or reversion of Grantor's title to the Property or the Shared System Property, as applicable thereto.

9. Concurrence Presumed. It being agreed that Grantor and all parties claiming by, through or under Grantor shall be deemed to be in accord with the provisions herein set forth and to agree for and among themselves and any party claiming by, through or under them, and their respective agents, contractors, sub-contractors and employees, that the Covenant/Easement herein established shall be adhered to and not violated and that their respective interests in the Property and the Shared System Property, as applicable thereto, shall be subject to the provisions herein set forth.

10. Incorporation into Deeds, Mortgages, Leases and Instruments of Transfer. Grantor hereby agrees to incorporate this Covenant/Easement, in full or by reference, into all deeds, easements, mortgages, leases, licenses, occupancy agreements or any other instrument of transfer by which an interest in and/or a right to use the Property and the Shared System Property, or any portion thereof, is conveyed.

11. Recordation. Grantor shall record and/or register this Covenant/Easement with the appropriate Registry of Deeds and/or Land Registration Office within 30 days of the latter of: receipt from the Local Approving Authority of the approved Covenant/Easement or the expiration of the 60-day constructive approval period granted to DEP pursuant to 310 CMR 15.293. Grantor shall file with the Local Approving Authority and the DEP a certified Registry copy of this Covenant/Easement as recorded and/or registered within 30 days of its date of recordation and/or registration.

12. Amendment and Release. This Covenant/Easement may be amended or released only upon approval by the Local Approving Authority and DEP. Any such amendment or release shall be recorded and/or registered with the appropriate Registry of Deeds and/or Land Registration Office.

13. Term. This Covenant/Easement shall run in perpetuity and is intended to conform to M.G.L. c. 184, § 26.

Appendix 1: continued

14. Rights Reserved. This Covenant/Easement is granted to the Local Approving Authority in connection with the approval of a Shared System pursuant to 310 CMR 15.290 through 15.293. It is expressly agreed that acceptance of this Covenant/Easement by the Local Approving Authority or constructive approval of the Shared System by DEP shall not operate to bar, diminish, or in any way affect any legal or equitable right of the Local Approving Authority or DEP to issue any future order with respect to the Property and the Shared System Property, as applicable thereto, or in any way affect any other claim, action, suit, cause of action, or demand which the Local Approving Authority or DEP may have with respect thereto. Nor shall acceptance of this Covenant/Easement serve to impose any obligations, liabilities, or any other duties upon the Local Approving Authority.

This Covenant/Easement shall become effective upon its recordation and/or registration with the appropriate Registry of Deeds and/or Land Registration Office.

WITNESS the execution hereof under seal this ___ day of _____, 20__.

Grantor

PART II: BOARD OF HEALTH PUBLIC HEARINGS

- 16.21: Alternative Use of Assigned Site
- 16.22: Modifications to and Rescissions and Suspensions of Site Assignments

PART III: APPLICATION FEE

- 16.30: Fees

PART IV: SITE SUITABILITY CRITERIA

- 16.40: Site Suitability Criteria
- 16.99: APPENDIX A

16.01: General Requirements

- (1) Purpose and General Description. The purpose of 310 CMR 16.00 is to protect public health, safety and the environment by comprehensively regulating:
 - (a) the siting of solid waste facilities; and
 - (b) operations which recycle, compost, or convert recyclable or organic materials.
- (2) Organization. 310 CMR 16.00 is composed of four parts.
 - (a) Part I identifies the activities that require a site assignment and the activities that are exempt from site assignment but remain subject to regulation by the Department.
 - (b) Part II establishes the rules for a public hearing held by the board of health for assigning a site.
 - (c) Part III describes the application fee paid by a site assignment applicant and used by a board of health for technical review of the data and for conducting a public hearing.
 - (d) Part IV establishes the site suitability criteria that are to be applied by the board of health or the Department, whichever is applicable, in determining whether a site is suitable.
- (3) Authority. Pursuant to M.G.L. c. 21A, §§ 2 and 8, c. 21H, § 7, and c. 111, §§ 150A and 150A½, the Department has the authority to:
 - (a) establish a process for a board of health and the Department to issue site assignments; and
 - (b) regulate recycling, composting and conversion operations.
- (4) Applicability. The site assignment requirements set forth at 310 CMR 16.00 shall apply to facilities that process, store, transfer, treat, or dispose of solid waste. They shall not apply to:

16.01: continued

- (a) Hazardous Waste Facilities. Facilities that manage hazardous wastes which are regulated pursuant to 310 CMR 30.000: *Hazardous Waste*;
 - (b) Waste Water Treatment Residuals Facilities. Facilities which manage waste-water treatment plant residuals subject to the siting process pursuant to M.G.L. c. 83, § 6 and regulated pursuant to 314 CMR 12.00: *Operation and Maintenance and Pretreatment Standards for Wastewater Treatment Works and Indirect Dischargers*, provided that 310 CMR 16.00 does apply to solid waste management facilities which co-dispose waste-water treatment plant residuals with solid waste;
 - (c) Small Combustion Facilities. A solid waste combustion facility that is rated by the Department at one ton per hour or less pursuant to M.G.L. c. 111, § 150A; and
 - (d) Beneficial Reuse of a Solid Waste pursuant to 310 CMR 19.060: Beneficial Use of Solid Waste. The beneficial use of a solid waste as a secondary material in compliance with the requirements set forth at 310 CMR 19.060: *Beneficial Use of Solid Waste*.
- (5) Access to Facilities and Properties.
- (a) Reasonable Access. At all reasonable times and without prior notice, personnel or authorized representatives of the Department may enter any facility or other property where solid waste or recyclable or organic material has been or is being disposed, handled, managed, placed, processed, reused, stored, transferred, treated, used or for the purposes of: assessing, preventing or remediating damage to the environment; protecting the public health, safety or the environment; determining or enforcing compliance; or preventing or abating public nuisances; provided that the personnel or authorized representatives of the Department present Department-issued identification and receive the consent of the owner, operator or person in control of said facility or property. Notwithstanding the foregoing, personnel or authorized representatives of the Department may enter a facility or property without such consent if emergency conditions require immediate entry as authorized by the conditions of any authorization, determination, modification, permit, or other approval, by the terms of any order or other enforcement document, or as otherwise authorized by law.
 - (b) During Inspection. After entry, personnel or authorized representatives of the Department may inspect, investigate, photograph, or sample any condition, equipment, operation, practice, record or property and make examinations and evaluations of a facility or other property specified in 310 CMR 16.01(5)(a), to determine and enforce compliance with M.G.L. c. 21A, §§ 2 and 8, M.G.L. c. 111, §§ 150A and 150A½ and/or 310 CMR 16.00 or take or arrange for actions authorized by M.G.L. c. 21H, § 7.
 - (c) Access to Information. Where necessary to ascertain facts relevant to compliance or to actual or potential harm to public health or safety, actual or potential public nuisances, or actual or potential damage to the environment that may be caused by the disposal, handling, management, placement, processing, reuse, storage, transfer, treatment or use of solid waste or recyclable or organic materials, the Department may request and any person shall, within a reasonable time, furnish the requested information and shall permit said Department personnel or authorized representatives to have access to and to copy, or to take images of, all records relating thereto.
 - (d) Duty to Cooperate. The owner and operator of a facility or other property and the person possessing information as specified in 310 CMR 16.01(5)(c) shall in no way restrict, impede, or delay an inspection or any request for information by personnel or authorized representatives of the Department where such inspection or request is made pursuant to a reasonable request in accordance with 310 CMR 16.01(5), or in accordance with the conditions of any authorization, determination, modification, permit, or other approval, or pursuant to the terms of any order or other enforcement document, or as otherwise authorized by law.
 - (e) Warrants. Upon denial of access or if the Department cannot locate with reasonable efforts the owner, operator or person in control of a facility or property, or upon refusal of a person to provide information requested, the Department may seek, from a court, judge, justice or magistrate, a warrant authorizing personnel or authorized representatives of the Department to conduct a reasonable search of the facility or property or to obtain the information requested. 310 CMR 16.01(5)(e) shall not preclude the Department from gaining access through other legal means, including, but not limited to, a court order or injunctive relief.

16.01: continued

(6) Joint and Several Liability. Wherever 310 CMR 16.00 states that the owner or operator shall take action or refrain from taking action, the owner and operator shall be jointly and severally liable such that the Department may take action for any violation against the owner, the operator or both.

(7) Burden of Proof. In every proceeding, the owner and operator bear the burden to persuade the Department that the activities or operations being conducted pursuant to 310 CMR 16.00 do not create public nuisance conditions and do not pose a significant threat to public health, safety or the environment.

(8) Enforcement.

(a) Violations. It shall be a violation of 310 CMR 16.00 for any person to:

1. fail to submit a certification, log, notification, permit application or modification, plan, report or any other document within the time period specified in 310 CMR 16.00 or as specified in any approval, order, or permit issued by the Department;
2. make any false, inaccurate, incomplete or misleading statements in any certification, log, notification, permit application or modification, plan, report, or any other document which that person is required to maintain and submit pursuant to 310 CMR 16.00, or as specified in any approval, order, or permit issued by the Department;
3. hold himself or herself out as a responsible official when he/she is not fully authorized to bind the corporation, company, partnership, trust, sole proprietorship or municipality in violation of 310 CMR 16.00;
4. deny the Department access, upon reasonable request pursuant to 310 CMR 16.01(5) or pursuant to an authorization, modification, permit or other approval or order or other enforcement document, or as otherwise authorized by law, to:
 - a. enter upon and inspect the site, or other property where solid waste or recyclable or organic material has been or is being disposed, handled, managed, placed, processed, reused, stored, transferred, treated or used; and
 - b. review and copy any relevant records to determine and compel compliance with applicable regulations and any permit, modification or other approval or order issued pursuant to 310 CMR 16.00;
5. maintain or operate any place as a facility unless such place has been assigned by the board of health or the Department, whichever is applicable, pursuant to M.G.L. c. 111, § 150A;
6. handle or dispose of solid waste at any location that does not have a site assignment, except as may be allowed pursuant to 310 CMR 16.03;
7. recycle, compost, convert or otherwise handle recyclable or organic materials in a manner that is not in compliance with 310 CMR 16.03, 16.04 or 16.05;
8. fail to comply fully with the applicable provisions of 310 CMR 16.00 or with any authorization, modification, permit or other approval or order or other enforcement document issued pursuant to 310 CMR 16.00 or with any certification submitted pursuant to 310 CMR 16.00;
9. act without submitting a notification or certification, whichever is applicable, in accordance with 310 CMR 16.00; or
10. violate any other provision of 310 CMR 16.00.

(b) Action by the Department. Nothing in 310 CMR 16.00, or in any order or other enforcement document issued pursuant thereto, shall be construed to limit any right of the Department to take enforcement action pursuant to any other authority. Whenever the Department has cause to believe that a violation has occurred, it may without limitation:

1. order the owner or operator, or any other person responsible for the violation, to:
 - a. cease operations until the violation is corrected to the satisfaction of the Department or until such person obtains a site assignment and solid waste management facility permit or a permit issued pursuant to 310 CMR 16.00;
 - b. cease all illegal activity immediately or at a specified date and to comply fully with 310 CMR 16.00 and 19.000: *Solid Waste Management* or with any permit or conditions pursuant to 310 CMR 16.00; or
 - c. take appropriate remedial measures immediately or by a specified date to bring the site into compliance or to protect public health, safety or the environment, including without limitation, closure of the site.

16.01: continued

2. rescind, suspend, revoke, or modify any general permit or permit issued pursuant to 310 CMR 16.00 and/or initiate an enforcement action in accordance with applicable statutes or regulations. Where a permit is rescinded, suspended or revoked, the owner or operator shall cease operations until:
 - a. the owner or operator corrects the violation to the satisfaction of the Department; or
 - b. the owner or operator applies for and obtains a site assignment and solid waste management facility permit.
3. issue a notice of non-compliance or assess a civil administrative penalty pursuant to M.G.L. c. 21A, § 16 and 310 CMR 5.00: *Administrative Penalty*; or
4. take such other action provided by 310 CMR 16.00 or 310 CMR 19.000: *Solid Waste Management* or other applicable statutory or regulatory authority as the Department deems appropriate.

(c) Right to Adjudicatory Hearing. A person who is the subject of an order issued pursuant to 310 CMR 16.01(8)(b)1. or 2. shall have the right to request an adjudicatory hearing on such order within 21 calendar days of the date of service of the order by filing a notice of claim with the Department in accordance with the procedures set forth in 310 CMR 16.01(8) and in 310 CMR 1.01: *Adjudicatory Proceeding Rules for the Department of Environmental Protection*. Any right to an adjudicatory hearing concerning assessment of a civil administrative penalty shall be determined in accordance with the provisions of 310 CMR 5.00: *Administrative Penalty*.

(d) Waiver of Right to Adjudicatory Hearing. Any person who is the subject of an order issued pursuant to 310 CMR 16.01(8)(b)1. or 2. shall be deemed to have waived the right to an adjudicatory hearing, unless, within 21 calendar days of the date of service of the order, the Department receives a request for an adjudicatory hearing with a notice of claim setting forth the basis for the request for an adjudicatory hearing, subject to and in compliance with the applicable provisions of 310 CMR 1.01: *Adjudicatory Proceeding Rules for the Department of Environmental Protection*

(e) Service of Notices and Orders. Service in all civil administrative penalty actions is governed by 310 CMR 5.00: *Administrative Penalty*. The Department may serve an order issued pursuant to 310 CMR 16.00 according to any of the following procedures except for any process, notice, or order issued in the course of an adjudicatory hearing governed by the provisions of 310 CMR 1.01: *Adjudicatory Proceeding Rules for the Department of Environmental Protection*.

1. Service of an order is complete when it is hand delivered by an employee or agent of the Department to the person to be served or to any officer, employee, responsible official or agent of the person. The fact and date of service is established by the return or affidavit of the person making service.
2. Service of an order, when made by any form of mail requiring the return of a receipt signed by the person to be served, is complete upon delivery to the person or to any officer, employee, responsible official or agent of the person. The fact and date of service is established by the returned receipt.
3. The Department may make service of an order in any other manner, including any form of electronic mail, facsimile or other electronic medium, national overnight carrier, or regular mail to the last known address, or by publication or other method of delivery reasonably calculated to give actual notice to the recipient of the order. The Department may use such alternative methods of service only when the person to be served declines to accept receipt by the service methods specified in 310 CMR 16.01(8)(e)1. and 2. The fact of service in such cases is established by such records as may be available. Service is complete upon the date on which the Department initiates electronic transmission, the date of publication, one day after the date of overnight mailing or three days after the date of regular mailing or other method of service.

16.01: continued

(9) Time.

(a) Computation of Time. Unless otherwise specifically provided by law or regulation or any determination issued pursuant to 310 CMR 16.00, any time period prescribed or referred to in 310 CMR 16.00 shall begin with the first day following the act which initiates the running of the time period, and shall include every calendar day, including the last day of the time period so computed. If the last day is a Saturday, Sunday, legal holiday, or any other day on which the Department's offices are closed, the time period shall run until the end of the next business day. If the time period prescribed or referred to is six days or less, only days when the offices of the Department are open shall be included in the computation.

(b) Timely Filing. Papers required or permitted to be filed under 310 CMR 16.00, or any provision of the applicable law, must be filed at the board of health office or such other place as the board of health, Department or 310 CMR 16.00 shall designate within the time limits for such filings as set by 310 CMR 16.00. Papers filed in the following manner shall be deemed to be filed as set forth in 310 CMR 16.01(6)(b)1. through 5.:

1. hand-delivery during business hours shall be deemed filed on the day delivered;
2. hand-delivery during non-business hours shall be deemed filed on the next regular business day;
3. mailing by placing in U.S. mail shall be deemed filed on the date so postmarked;
4. electronic delivery during regular business hours shall be deemed filed on the date received; and
5. electronic delivery after regular business hours shall be deemed filed on the business day following receipt.

(c) Papers shall show the date received by the board of health and the Department. The board of health and the Department shall cooperate in giving date receipts to any person filing papers by hand-delivery.

(10) Severability. It is hereby declared the provisions of 310 CMR 16.00 are severable, and if any provision hereof or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions of 310 CMR 16.00 and the application thereof to any person or circumstance that can be given effect without the invalid provision or application.

(11) Notwithstanding 310 CMR 19.000: *Solid Waste Management* and any solid waste management facility permit condition, the owner and operator of a solid waste management facility with a solid waste management permit issued pursuant to 310 CMR 19.000: *Solid Waste Management* may conduct any activity pursuant to 310 CMR 16.03, 16.04 or 16.05 by complying with the applicable requirements of 310 CMR 16.03, 16.04 and 16.05; provided that:

- (a) if the activity conducted pursuant to 310 CMR 16.03, 16.04 or 16.05 is conducted on the landfill footprint, then the owner and operator shall also comply with 310 CMR 19.039: *Applicant's Request to Modify a Permit*; and
- (b) the activity conducted pursuant to 310 CMR 16.03, 16.04 or 16.05 will be conducted consistently with the solid waste management facility's site assignment and will not adversely impact the solid waste management facility.

(12) Transition Provisions.

(a) Determinations of Need. An owner and operator to whom a determination of need has been issued are subject to the following requirements.

1. Operation Pursuant to Determination of Need for Transition Period. An owner and operator to whom a determination of need has been issued may continue operating in compliance with such determination of need until the date of expiration of the determination of need or the date five years after November 23, 2012, whichever is sooner, hereafter referred to as the transition deadline.
2. Requirements for Transition Notices or Filings by Transition Deadline. The owner or operator must take one of the following steps prior to the transition deadline:
 - a. at least 180 days prior to the transition deadline, file a notice with the Department demonstrating that the operation qualifies for an exemption pursuant to 310 CMR 16.03. Upon filing of such notice, the owner and operator shall continue operating only in accordance with the applicable exemption at 310 CMR 16.03, and the determination of need shall no longer be in effect.

16.01: continued

b. at least 180 days prior to the transition deadline, file a certification with the Department in accordance with 310 CMR 16.06(1) stating that the operation is in compliance with 310 CMR 16.04. Upon such filing, the owner and operator shall continue operating only in accordance with the applicable general permit at 310 CMR 16.04, and the determination of need shall no longer be in effect.

c. at least 180 days prior to the transition deadline, if 310 CMR 16.01(12)(a)1. and 2. do not apply, submit a renewal application that complies with 310 CMR 16.05 to the Department.

(b) Conditional Exemptions. An owner and operator of an operation previously exempt pursuant to the provisions of 310 CMR 16.05 in effect prior to November 23, 2012 shall comply with the applicable requirements of 310 CMR 16.00. If the operation is subject to an annual certification, the owner or operator shall submit the first certification on or before February 15, 2014. Thereafter, the owner and operator shall continue to comply with 310 CMR 16.00, including but limited to, if applicable, filing an annual certification in accordance with 310 CMR 16.06(1).

(c) Nothing in 310 CMR 16.01(12) shall be construed to limit the authority of the Department to take any enforcement action if the owner or operator fails to comply with any determination of need during its remaining term or with the requirements of 310 CMR 16.00 or 310 CMR 19.000: *Solid Waste Management* at any time.

16.02: Definitions

The following words when used in 310 CMR 16.00, except as otherwise required by the context, shall have the following meaning:

Abutter means the owner of land sharing a common boundary or corner with the site of the proposed activity in any direction, including, but not limited to, land located directly across a street, way, creek, river, stream, brook or canal.

Adjacent Area means a parcel of land contiguous to a site or in close enough proximity to be directly impacted by water, air or soil borne pollutants, not exceeding a ½ mile radius from the site.

Adjudicatory Hearing or Hearing means the portion of the adjudicatory proceeding initiated by filing a notice of claim with the Office of Administrative Appeals pursuant to 310 CMR 1.01: *Adjudicatory Proceeding Rules for the Department of Environmental Protection*, where parties may present evidence on issues of fact and argument on issues of law, and concluded by the Commissioner's issuance of a final decision pursuant to 310 CMR 1.01(14): *Decisions*.

Adjudicatory Proceeding means a proceeding under M.G.L. c. 30A that may culminate in an adjudicatory hearing and the Commissioner's issuance of a final decision pursuant to 310 CMR 1.01(14): *Decisions*. It is a proceeding before the Department in which the legal rights, duties or privileges of specifically named persons are required by constitutional right, by provisions of M.G.L. c. 30A, or by any other provision of the General Laws to be determined after opportunity for a Department hearing, but does not include the types of proceedings described in M.G.L. c. 30A, § 1(a) through (f).

Adverse Impact means an injurious impact which is significant in relation to the public health, safety, or environmental interest being protected.

Aerobic Digestion means a process of accelerated biodegradation of organic materials using microorganisms under controlled conditions in the presence of oxygen.

Aggrieved Person means any person who, because of an act or failure to act by the Department, may suffer an injury in fact which is different either in kind or magnitude from that suffered by the general public and which is within the scope of the interests protected by 310 CMR 16.00.

16.02: continued

Agricultural Material means organic materials produced from the raising and processing of plants and animals as part of agronomic, horticultural, aquacultural or silvicultural operations including, but not limited to, animal manures, animal products and by-products (including carcasses), bedding materials and plant materials.

Anaerobic Digestion means a process of accelerated biodegradation of organic materials using microorganisms under controlled conditions in the absence of oxygen.

Applicant means the person named in the application as the owner of a property interest in the site or the operator of the proposed facility or operation where the owner has entered into an agreement with an operator at the time the application is filed.

Area of Critical Environmental Concern (ACEC) means an area designated by the Secretary of the Executive Office of Environmental Affairs pursuant to 301 CMR 12.00: *Areas of Critical Environmental Concern*.

Asphalt Pavement, Brick, and Concrete Rubble means rubble that contains only weathered (cured) asphalt pavement, clay bricks and attached mortar normally used in construction, or concrete that may contain rebar. The rubble shall not be painted, coated or impregnated with any substance. The rubble shall not be mixed with or contaminated by any other wastes or debris.

Biodegradable or Biodegradation means capable of being broken down into carbon dioxide, water and humus by biological organisms including, but not limited to, microorganisms.

Biodegradable Product means a product that meets the standards of the American Society for Testing and Materials (ASTM) D6400 and D6868 as of November 23, 2012.

Board of Health or (Board) means the legally designated health authority of the municipality or other legally constituted governmental unit within the Commonwealth having the usual powers and duties of the board of health of a municipality, or its authorized agent or representative; provided that in any case in which a solid waste management facility extends into two or more municipalities, said boards may coordinate activities in effecting compliance with 310 CMR 16.00 for the management of solid waste or recycling, composting or conversion operations. Unless otherwise explicitly stated, "the board of health" means the board of health of the municipality in which the proposed activity is located.

Clean Wood means discarded material consisting of trees, stumps and brush including, but not limited to, sawdust, chips, shavings, bark, and new or used lumber. Clean wood does not include:

- (a) wood from commingled construction and demolition waste;
- (b) engineered wood products; and
- (c) wood containing or likely to contain:
 1. asbestos;
 2. chemical preservatives such as, but not limited to, chromated copper arsenate (CCA), creosote or pentachlorophenol; or
 3. paints, stains or other coatings, or adhesives.

Combustion Facility means a facility established in accordance with a valid site assignment and Department-issued permit and employing an enclosed system including, but not limited to, a refuse disposal incinerator using controlled flame combustion, the primary purpose of which is to thermally break down solid waste and producing ash that contains little or no combustible materials.

Commissioner means the Commissioner of the Department of Environmental Protection or his or her designee.

Composting or Composted means a process of accelerated biodegradation of organic materials using microorganisms under controlled conditions in the presence of oxygen using windrows or piles including, but not limited to, covered aerated piles or bays. For the purposes of 310 CMR 16.00, composting is not aerobic digestion or conversion.

16.02: continued

Construction and Demolition Waste means the waste building materials and rubble resulting from the construction, remodeling, repair or demolition of buildings, pavements, roads or other structures. Construction and demolition waste includes, but is not limited to, concrete, bricks, asphalt pavement, masonry, plaster, gypsum wallboard, metal, lumber, and wood.

Conversion means aerobic or anaerobic digestion or enzymatic, thermal or chemical degradation of organic materials. For purposes of 310 CMR 16.00, conversion does not include composting.

Department means the Department of Environmental Protection.

Department Report on Suitability means the report issued by the Department pursuant to M.G.L. c. 111, § 150A, stating whether a site proposed for a solid waste management facility in an application for a site assignment is suitable.

Disposal means the final dumping, landfilling or placement of solid waste into or on any land or water or the combustion of solid waste.

Disposal Facility means any combustion facility or any landfill.

Downgradient means:

- (a) in reference to surface water, the direction perpendicular to lines of equal elevation over a distance in which elevation continuously decreases, measured from the point or area in question; or
- (b) in reference to groundwater, the direction perpendicular to lines of equipotential over a distance in which total head continuously decreases, measured from the point or area in question.

Expand a Site means to move or expand a solid waste facility's operation to a previously unassigned site that is contiguous to the original site or to modify a solid waste facility's operations causing it to exceed any capacity or total volume limit stated in its current site assignment.

Facility means a site or works, and other appurtenances thereto, which is, has been or will be used for the handling, storage, transfer, processing, treatment or disposal of solid waste, including all land, structures and improvements which are directly related to solid waste activities.

Food Material means material produced from human or animal food production, preparation and consumption activities and which consists of, but is not limited to, fruits, vegetables, grains, and fish and animal products and byproducts.

Group of Ten Persons means a group of at least ten persons who are residents of Massachusetts.

16.02: continued

Handling means processing, storing, transferring or treating a material or solid waste.

Handling Area means an area used for the processing, storage, transfer or treatment of solid waste, excluding weigh stations or access roads.

Handling Facility means any facility that is not a disposal facility including, but not limited to, a transfer station, storage facility and any other facility used primarily for the storage, processing or treatment of solid waste.

Interim Wellhead Protection Area (IWPA) means that wellhead area established pursuant to 310 CMR 22.02: *Definitions*.

Issuance means the date on which the Department sends its permit decision to the applicant.

Land Actively Devoted to Agricultural or Horticultural Uses means that land as defined at M.G.L. c. 61A, § 3.

Landfill means a facility or part of a facility established in accordance with a valid site assignment and Department-issued permit for the disposal of solid waste into or on land.

Medical or Biological Waste means medical or biological waste as defined in 105 CMR 480.000: *Minimum Requirements for the Management of Medical or Biological Waste (State Sanitary Code Chapter VIII)*.

New Site means a parcel of land for which an applicant seeks site assignment as a solid waste facility which has not been previously assigned and is not contiguous to an existing site assigned area.

Non-potential Drinking Water Source Area means that area defined by 310 CMR 40.0006: *Terminology, Definitions and Acronyms*.

Operation means recycling, composting or conversion activities, subject to 310 CMR 16.03, 16.04 or 16.05, and the property on which any such activities take place.

Operator means any person who has care, charge or control of a facility, operation or activity subject to 310 CMR 16.00 including, without limitation, an agent or lessee of the owner or an independent contractor.

Organic Material means any of the following source-separated materials: vegetative material; food material; agricultural material; biodegradable products; biodegradable paper; clean wood; or yard waste. It does not include sanitary wastewater treatment facility residuals.

Owner means any person who alone or in conjunction with others has legal ownership, a leasehold interest, or effective control over the real property upon which a facility or operation is located, or the airspace above said real property; "owner" does not mean persons holding bare legal title for the purpose of providing security for financing.

Perennial Water Course means a stream or river that flows year round.

Person(s) means any individual, partnership, association, firm, company, corporation, department, agency, group, public body (including a city, town, district, county, authority, state, federal, or other governmental unit), trust or any other entity responsible in any way for any activity, facility or operation subject to 310 CMR 16.00.

Pollution shall have the same meaning as in 310 CMR 19.006: *Definitions*.

Post-consumer Recyclables means the following materials which have served their intended use and have been pre-sorted:

16.02: continued

- (a) containers, films and wraps and other forms of packaging made from metal, glass, plastic or paper; and
- (b) newspaper, office paper, cardboard and other grades of paper.

Potential Private Water Supply means a potable water supply as defined at 314 CMR 5.11: *Ground Water Standards*, capable of yielding water of sufficient quality and quantity which is located under a parcel of land that at the time of the earlier of the following two filings, the Site Assignment Application or, where applicable, the Massachusetts Environmental Policy Act Environmental Notification Form, is:

- (a) zoned residential or commercial;
- (b) not served by a public water supply; and
- (c) subject to a subdivision plan or a building permit application approved by the appropriate municipal authority.

Potentially Productive Aquifer means:

- (a) any aquifers delineated by the U.S. Geological Survey (USGS) as a high or medium yield aquifer; and
- (b) any aquifers located east of the Cape Cod Canal (Cape Cod), on the Elizabeth Islands, on Martha's Vineyard, or on Nantucket.

Pre-sort means to separate from solid waste and to keep separate from solid waste. Pre-sorting does not require the separation of components that are integral to that material (*e.g.* insulation or electronic components in white goods).

Private Water Supply means a well used as a source of drinking water supplying a non-public water system with any volume of groundwater from any source.

Processing means the use of any method, technique or process to alter the physical characteristics of a material or solid waste through any means, including, without limitation, separating, baling, shredding, crushing or reworking. Storage alone does not constitute processing.

Proposed Drinking Water Source Area means the preliminary Zone II or the preliminary IWPA for a proposed water supply well that has received a site exam approval by the Department and is actively pursuing source approval under the Drinking Water Regulations at 310 CMR 22.21(1): *Source Approval*.

Public Water Supply means a source of drinking water supplying a public water system as defined in 310 CMR 22.00: *Drinking Water*.

Recyclable or Recyclable Material means a material that has the potential to be recycled and which is pre-sorted. Recyclable material includes biodegradable paper, but does not include:

- (a) organic materials that will be composted or converted; or
- (b) construction and demolition waste unless it has been separated and kept separate into at least the following categories: asphalt, brick and concrete; ceiling tiles; wood; metals; plaster and wallboard; roofing materials; and carpet.

Recycle or Recycled means to recover materials or by-products which will be:

- (a) reused;
- (b) used as an ingredient or a feedstock in an industrial or manufacturing process to make a marketable product; or
- (c) used in a particular function or application as an effective substitute for a commercial product or commodity.

Recycle does not mean to recover energy from the combustion of a material or to create a fuel. Recycle does not include composting or conversion.

Recycling Drop-off Center means a location where pre-sorted post-consumer recyclables are deposited by the generators of the recyclables for collection and transfer to a facility or operation for processing or directly to a market.

Regional Disposal Facility means a solid waste facility that is a member of a regional disposal district established in accordance with M.G.L. c. 40, § 44K, or a solid waste facility that receives substantial quantities of solid waste on a regular basis from two or more municipalities.

16.02: continued

Residence or Residential means a single, multi-family, or group home, residential unit or apartment complex. For purposes of 310 CMR 16.00, a group home means an establishment, usually resembling a private home, for providing a small group of persons with special needs, such as handicapped or elderly persons or children, with lodging and supervised care.

Residual means all waste remaining after treatment or processing. Residual remaining after treatment or processing is not pre-sorted material. Air and water discharges managed in accordance with applicable regulations are not residuals.

Responsible Official means one of the following:

- (a) for a corporation: a president, secretary, treasurer, or a vice-president of the corporation in charge of a principal business function who has been duly authorized to bind the corporation pursuant to a corporate vote, or a representative of the corporation who has been duly authorized to bind the corporation pursuant to a corporate vote provided the representative is responsible for the overall operation of the facility or operation;
- (b) for a limited liability company, person authorized pursuant to M.G.L. c. 156C, § 24 and the limited liability company's operating agreement to bind the company and all the members;
- (c) for a trust: a trustee or any other natural person authorized:
 - 1. to enter into contracts regarding the trust property;
 - 2. to bind the trust; or
 - 3. to encumber or dispose of the trust property.
- (d) for a partnership: a general partner who has been duly authorized to bind the partnership;
- (e) for a sole proprietorship; the sole proprietor; or
- (f) for a municipality, state, federal, or other public agency including any legislatively created authority, board, commission, district, *etc.*: a principal executive officer or a ranking elected official who is empowered to enter into contracts on behalf of the municipality or public agency.

Restricted Area means an area specified in 310 CMR 16.40(3) and (4) from which a solid waste management facility is excluded.

Review Period means the 60 day period during which the Department shall review the Site Assignment Application and issue the Department report.

Riverfront Area means that area defined by 310 CMR 10.00: *Wetlands Protection*.

Site Assignment means a determination by a board of health or by the Department as specified in M.G.L. c. 111, § 150A which:

- (a) designates an area of land for one or more solid waste uses subject to conditions with respect to the extent, character and nature of the facility that may be imposed by the assigning agency after a public hearing in accordance with M.G.L. c. 111, § 150A; or
- (b) establishes that an area of land was utilized as a site for the disposal onto land of solid waste or as a site for a refuse disposal incinerator prior to July 25, 1955 as provided in St. 1955, c. 310, § 2. The area of land site assigned under 310 CMR 16.02: *Site Assignment* shall be limited to the lateral limits of the waste deposition area ("the footprint"), or the area occupied by the incinerator, as they existed on July 25, 1955, except as otherwise approved by the Department in approved plans. Said assignment shall apply only to uninterrupted solid waste disposal activities within the footprint or plan-approved area and shall have no legal force or effect at any time after the cessation of disposal activities except as otherwise provided at 310 CMR 16.21.

Sludge means the accumulated solids and/or semisolids deposited or removed by the processing and/or treatment of gasses, water or other fluids.

Sole Source Aquifer means an aquifer so designated by the U.S. Environmental Protection Agency, or by the Department under the authority of a state program as may be established, that supplies 50% or more of the drinking water for the aquifer service area, and the volume of water which could be supplied by alternative sources is insufficient to replace the petitioned aquifer should it become contaminated.

16.02: continued

Solid Waste or Waste means useless, unwanted or discarded solid, liquid or contained gaseous material resulting from industrial, commercial, mining, agricultural, municipal or household activities that is disposed or is stored, treated, processed or transferred pending such disposal, but does not include:

- (a) hazardous wastes as defined and regulated pursuant to 310 CMR 30.000: *Hazardous Waste*;
- (b) sludge or septage which is land applied in compliance with 310 CMR 32.00: *Land Application of Sludge and Septage*;
- (c) waste-water treatment facility residuals and sludge ash from either publicly or privately owned waste-water treatment facilities that treat only sewage and which is treated and/or disposed at a site regulated pursuant to M.G.L. c. 83, §§ 6 and 7 and/or M.G.L. c. 21, §§ 26 through 53 and the regulations promulgated thereunder, unless the waste-water treatment residuals and/or sludge ash are co-disposed with solid waste;
- (d) septage and sewage as defined and regulated pursuant to 314 CMR 5.00: *Ground Water Discharge Permit Program*, and regulated pursuant to either M.G.L. c. 21, §§ 26 through 53 or 310 CMR 15.00: *The State Environmental Code, Title 5: Standard Requirements for the Siting, Construction, Inspection, Upgrade and Expansion of On-site Sewage Treatment and Disposal Systems and for the Transport and Disposal of Septage*, provided that 310 CMR 16.00 does apply to solid waste management facilities which co-dispose septage and sewage with solid waste;
- (e) ash produced from the combustion of coal when reused as prescribed pursuant to M.G.L. c. 111, § 150A;
- (f) solid or dissolved materials in irrigation return flows;
- (g) source, special nuclear or by-product material as defined by the Atomic Energy Act of 1954;
- (h) materials and by-products generated from and reused within an original manufacturing process;
- (i) materials which are recycled, composted, or converted in compliance with 310 CMR 16.03, 16.04 or 16.05; and
- (j) organic material when handled at a Publicly Owned Treatment Works as defined in 314 CMR 12.00: *Operation and Maintenance and Pretreatment Standards for Wastewater Treatment Works and Indirect Dischargers* and as approved by the Department pursuant to 314 CMR 12.00: *Operation and Maintenance and Pretreatment Standards for Wastewater Treatment Works and Indirect Dischargers*.

Solid Waste Management Facility means Facility.

Source Separated means separated from solid waste at the point of generation and kept separate from solid waste. Source separated does not require the separation of components that are integral to that material (e.g. insulation or electronic components in white goods).

Storage means temporary containment of a material or solid waste in a manner which does not constitute disposal.

Storage Facility means a handling facility where solid waste is stored.

Suitable means a determination by the Department that a proposed site meets the Site Suitability Criteria as set forth in 310 CMR 16.00.

Transfer Station means a handling facility where solid waste is brought, stored and transferred from one vehicle or container to another vehicle or container for transport off-site to a solid waste handling or disposal facility.

Treatment means the use of any method, technique or process to change the chemical, biological character or composition of material or waste; to neutralize such material or waste; to render such material or waste safer to transport, store or dispose; or make such material or waste amenable to recovery, storage or volume reduction. Storage alone does not constitute treatment.

Upgradient means:

- (a) in reference to surface water, the direction perpendicular to lines of equal elevation over a distance in which elevation continuously increases, measured from the point or area in question; or

16.02: continued

(b) in reference to groundwater, the direction perpendicular to lines of equipotential over a distance in which total head continuously increases, measured from the point or area in question.

Vegetative Material means plant material.

Watershed means that area defined by 310 CMR 22.02: *Definitions*.

Yard Waste means deciduous and coniferous seasonal deposition (e.g., leaves), grass clippings, weeds, hedge clippings, garden materials and brush.

Zone A means that area defined by 310 CMR 22.02: *Definitions*.

Zone B means that area defined by 310 CMR 22.02: *Definitions*.

Zone C means that area defined by 310 CMR 22.02: *Definitions*.

Zone of Contribution means the recharge area that provides water to a well

Zone I means that area defined by 310 CMR 22.02: *Definitions*.

Zone II means that area defined by 310 CMR 22.02: *Definitions*.

16.03: Exemptions from Site Assignment

(1) Manufacturing or Industrial Activities. The following manufacturing or industrial operations which handle recyclable or organic materials in the manufacturing or industrial process do not require a site assignment, a facility permit pursuant to 310 CMR 19.000: *Solid Waste Management*, a general permit pursuant to 310 CMR 16.04, or a recycling, composting or conversion permit pursuant to 310 CMR 16.05, but shall handle such recyclable or organic materials in a manner that prevents an unpermitted discharge of pollutants to air, water, land or other natural resources of the Commonwealth, does not create a public nuisance, and does not present a significant threat to public health, safety or the environment:

- (a) paper mills, including de-inking plants and paperboard manufacturers;
- (b) steel mills;
- (c) aluminum smelting plants and mills;
- (d) glass manufacturing plants;
- (e) plastic manufacturing plants;
- (f) tire re-capping plants;
- (g) de-tinning plants;
- (h) cement and concrete plants;
- (i) foundries;
- (j) asphalt batching plants; and
- (k) rendering plants.

(2) The activities listed in this subsection at 310 CMR 16.03(2)(a) through (c) do not require a site assignment, a facility permit pursuant to 310 CMR 19.000: *Solid Waste Management*, a general permit pursuant to 310 CMR 16.04, or a recycling, composting or conversion permit pursuant to 310 CMR 16.05, provided that the owner and operator incorporates best management practices in a manner that prevents an unpermitted discharge of pollutants to air, water or other natural resources of the Commonwealth, does not create a public nuisance, and does not present a significant threat to public health, safety or the environment.

(a) Handling Solid Waste.

1. Temporary Solid Waste Storage. Temporary storage of solid waste in dumpsters, roll-offs, or other temporary storage containers for the collection of solid waste generated on-site.
2. Temporary Storage by a Public Works Department. Dumpsters, roll-offs, or other temporary storage containers or temporary storage areas at a location controlled by a public works department such as a municipal or state department, agency or authority of

16.03: continued

public works, transportation, public parks or recreation or similar government entity, when used exclusively for solid waste generated and collected by the government entity and when storage is appropriate for the type of waste (e.g., materials such as trash from roadside trash barrels are stored in dumpsters or roll-offs while materials such as street sweepings may be stored without containers).

3. Occasional Solid Waste Vehicle Layover. Property owned or leased by a solid waste transporter for purposes of truck storage or repair where trucks, trailers and other solid waste handling and transfer equipment containing loads of solid waste are occasionally stored for overnight or weekend layover prior to transportation to a solid waste management facility, provided that:

- a. there is no unloading or transfer of the solid waste from the container or vehicle to the ground or to another container or vehicle;
- b. the trucks or other solid waste handling and transfer equipment are sufficiently enclosed to prevent public nuisance conditions; and
- c. the zoning provisions applicable to the truck storage or repair site would not disallow such an activity or use.
- d. For purposes of 310 CMR 16.03(2)(a)3., occasionally means not a routine or scheduled activity, but the result of unexpected circumstances such as equipment breakdown or unscheduled closure of a solid waste management facility.

4. Hospital and Laboratory Medical or Biological Waste Storage Area. A hospital, medical laboratory or biotechnology company which accepts for storage, pending off-site treatment or disposal, medical or biological waste generated on-site by the hospital, medical laboratory or biotechnology company, or medical or biological waste generated off-site, provided that the hospital, medical laboratory or biotechnology company complies with the following requirements.

- a. The hospital, biotechnology company or medical laboratory has sufficient properly designed and operated medical or biological waste storage areas to accommodate on-site and off-site medical or biological waste and manages all medical or biological waste in compliance with 105 CMR 480.000: *Minimum Requirements for the Management of Medical or Biological Waste*, and any other applicable law or regulation.
- b. The hospital, medical laboratory or biotechnology company accepts and stores medical or biological waste generated off-site with medical or biological waste generated on-site in accordance with the applicable requirements below.
 - i. Hospital. A hospital collects and stores medical or biological waste generated on-site and off-site only from hospitals or clinics that the hospital owns or from hospitals, clinics or physicians with whom the hospital has a professional affiliation for the provision of medical services.
 - ii. Medical Laboratory. A medical laboratory collects and stores medical or biological waste generated on-site and only generated off-site from laboratories that it operates or generated off-site by customers to whom the laboratory provides laboratory services but only to the extent that the medical or biological waste collected and stored from such customers does not, on a daily basis, exceed the amount of medical or biological waste generated on-site from the medical laboratory's own laboratory activities.
 - iii. Biotechnology Company. A biotechnology company collects and stores medical or biological waste generated on-site and off-site only from the company's biotechnology operations conducted at buildings owned or leased by the biotechnology company.

(b) Handling Recyclable Material.

1. Recycling Drop-off Center. A recycling drop-off center.
2. One Day Collection Event. A one day collection event for recyclable materials.
3. Beverage Container Redemption Center. A redemption center which collects, stores, and processes beverage containers subject to the provisions of M.G.L. c. 94, §§ 321 through 326.
4. Paper Baling and Handling. Paper baling and handling of recyclable paper (including all grades of paper and paperboard).
5. Asphalt Pavement, Brick and Concrete Recycling Operation. An asphalt pavement, brick or concrete rubble processing (crushing) operation when:

16.03: continued

- a. the operation is located at:
 - i. an active quarry or active sand and gravel pit where any asphalt pavement, brick and concrete rubble that is transported to the operation is presorted, so it contains only asphalt pavement, brick or concrete rubble; or
 - ii. the site of a demolition and/or construction project where all the asphalt pavement, brick and concrete rubble processed is generated at the site;
 - b. the material consists solely of asphalt pavement, brick and concrete rubble that is not mixed with or contaminated by wastes;
 - c. the asphalt pavement, brick and concrete rubble is processed so the maximum length of the largest dimension of any piece of rubble is less than six inches;
 - d. all rebar is removed in the process and is recycled or disposed in an approved facility;
 - e. there is no accumulation of the asphalt pavement, brick and concrete rubble or rebar prior to or after processing whether in its as-received, in-process or processed condition for more than six months from the date of receipt;
 - f. at least 30 days prior to commencement of operation, the owner or operator notifies the Department and the board of health in writing using a form provided by the Department; and
 - g. the owner or operator maintains accurate records for at least three years to demonstrate compliance with 310 CMR 16.03(2)(b)5.
6. Tire Chipping, Shredding or Other Tire Processing. Tire chipping, shredding or other tire processing when:
- a. only tires or tires with wheel rims attached, that are not mixed with other solid waste, are processed;
 - b. the quantity of whole tires on site does not exceed the number of tires that can be processed in a 24-hour period or 1000 tires, whichever is greater;
 - c. the total quantity of processed tires (tire chips, shreds or other tire derived products) at the site does not exceed five times the weight of tires that can be processed in a 24-hour period or the equivalent of 5000 tires, whichever is greater;
 - d. whole tires and processed tires are stored in buildings, covered containers or covered to prevent the infiltration of water;
 - e. whole tires and processed tires are stored in accordance with 310 CMR 7.00: *Air Pollution Control* and local fire department requirements for storing combustible material;
 - f. there is no accumulation of tires and/or processed tires prior to or after processing whether in its as-received, in-process or processed condition for more than 30 days from the date of receipt;
 - g. the processed tires are:
 - i. used to make new synthetic polymers ("rubber");
 - ii. used in accordance with a beneficial use determination or other approval required by the Department;
 - iii. combusted in a facility that is not a solid waste facility and in accordance with a specific air quality approval issued under 310 CMR 7.00: *Air Pollution Control* that approves the combustion of tires or processed tires as an alternative fuel;
 - iv. transferred to a solid waste management facility approved by the Department; or
 - v. transferred out-of-state and managed in accordance with that state's laws; and
 - h. at least 30 days prior to commencement of operation, the owner or operator notifies the Department, the board of health, and the local fire department in writing using a form provided by the Department.
- (c) Handling or Disposal of Organic Materials.
1. Activities Located at an Agricultural Unit. Activities located at an agricultural unit as defined in 330 CMR 25.02: *Definitions*, provided that the owner and operator comply with the regulations and guidelines of the Department of Agricultural Resources. If the Department of Agricultural Resources determines that the activity at a specific agricultural unit is no longer regulated by the Department of Agricultural Resources, then the owner and operator shall be subject to 310 CMR 16.00.

16.03: continued

2. Small Composting Operations Not at a Residence. Composting (other than at a residence) provided that:
 - a. less than 20 cubic yards or less than ten tons per week of vegetative materials, food materials or animal manures that are generated on-site and then combined with the addition of bulking materials (from on- or off-site) to achieve effective composting; and
 - b. at least 30 days prior to commencement of operation, the owner or operator notifies the Department and the board of health in writing using a form provided by the Department.
3. Municipal Food Material Collection Center. A municipally owned collection center for residents to drop off food materials, provided that:

16.03: continued

- a. the center accepts only food materials from residents of the municipality;
 - b. the food material is stored in a container which is kept sealed when food material is not being added;
 - c. no more than one ton of food material is collected per day and no more than three tons are on-site at any time;
 - d. the food material is stored at the center and removed from the center in a manner that does not create public nuisance conditions, such as, but not limited to, odors or vectors. In no case shall food material be on-site for more than seven days after receipt; and
 - e. at least 30 days prior to commencement of operations, the owner or operator notifies the Department and the board of health, in writing, using a form provided by the Department.
4. Land Application of Manure. The land application or composting of manures in normal farming activities.
 5. Residential Composting. At a residence, composting of organic materials generated at the residence.
 6. Residential Disposal of Stumps, Trees and Brush. Disposal of stumps, trees and brush at a single family home or farm where the stumps, trees and brush are generated and disposed within the boundaries of such home or farm by the occupant or resident of that home or farm.
 7. Handling of Clean Wood. The handling and use of clean wood as defined in 310 CMR 16.02.
 8. Leaf and Yard Waste Transfer Operation. A leaf and yard waste transfer operation provided that all materials are transferred off-site within seven days of receipt.

16.04: General Permit for Recycling, Composting or Aerobic and Anaerobic Digestion Operations

- (1) Applicability. The following operations are eligible for a general permit and do not require a site assignment, a facility permit pursuant to 310 CMR 19.000: *Solid Waste Management*, or a recycling, composting, or conversion permit pursuant to 310 CMR 16.05, provided the operation meets the requirements of 310 CMR 16.04:
 - (a) a recycling operation that receives no more than 250 tons per day of recyclable materials, not including paper;
 - (b) a composting operation that:
 1. receives no more than 105 tons per week and no more than 30 tons per day of Group 2 organic materials, listed at 310 CMR 16.04(3)(b): *Table 1. Examples of Organic Materials*, or other organic materials with a carbon to nitrogen ratio of 30:1 or less;
 2. contains less than 5,000 cubic yards of organic materials per acre; and
 3. has less than 50,000 cubic yards of organic materials on site at any one time; or
 - (c) an aerobic or anaerobic digestion operation that receives no more than 100 tons per day of organic material from on or off site, based on a 30 day rolling average.
