(2) Any person who is required to comply with an Interim Deadline may request, in writing, an extension thereof prior to the running of any such deadline. Each such request shall state clearly and concisely the facts which are grounds for the extension and the relief sought. The Department may modify an Interim Deadline if it deems such action appropriate. Any such modification shall be made in writing.

(3) The Department shall establish Interim Deadlines in writing by means of, but not limited to, the following:

- (a) an approval of an application or work schedule;
- (b) the issuance of a permit, Request for Information, Notice of Responsibility or Notice of Response Action; or
- (c) the issuance of an order pursuant to M.G.L. c. 21E, § 9 or 10.

(4) The Department's decision to establish, modify or refuse to modify one or more Interim Deadlines in accordance with 310 CMR 40.0167 shall not be subject to M.G.L. c. 30A, or any other law, governing adjudicatory proceedings.

(5) If the person required to comply with an Interim Deadline does not make a timely application for an extension thereof in accordance with 310 CMR 40.0167(2), the Interim Deadline shall be presumed to constitute a reasonable Interim Deadline consistent with M.G.L. c. 21E and 310 CMR 40.0000. Such presumption may be rebutted by a preponderance of the evidence.

40.0168: List of Locations and Disposal Sites

(1) Commencing on or about August 1, 1993, the Department shall publish and maintain a Transition List of Sites and Locations (the "1993 Transition List"). The Department shall identify in the 1993 Transition List, and any addendum thereto, the status of disposal sites and Locations to Be Investigated ("LTBIs") to enable RPs, PRPs and Other Persons to ascertain the actions they are required by 310 CMR 40.0600 (the "Transition Provisions") to undertake to achieve or demonstrate compliance with M.G.L. c. 21E and 310 CMR 40.0000.

(2) Commencing on or about January 1, 1994, the Department shall maintain a list of Locations to be Investigated and disposal sites.

(3) Commencing on or about January 1, 1994, the Department shall publish on at least an annual basis a list of disposal sites that have been classified as Tier I in accordance with 310 CMR 40.0500, including addenda thereto. The published lists may also include, without limitation, the following:

40.0168: continued

- (a) any disposal site for which the Department has not received:
 - 1. a Permanent or Temporary Solution Statement; or
 - 2. a Tier Classification Submittal.
 - (b) any disposal site for which the Department has reason to believe that response actions have not been performed in accordance with M.G.L. c. 21E, 310 CMR 40.0000 and/or any other applicable requirement;
 - (c) any disposal site classified as Tier I for which the Department has received a Permanent or Temporary Solution Statement in compliance with the applicable deadline; and
 - (d) any confirmed disposal site included on any list published by the Department in accordance with 310 CMR 40.520(1), as effective prior to October 1, 1993, or on the 1993 Transition List, unless a No Further Action Letter is received by the Department with respect to such disposal site prior to October 1, 1993.
- (4) Any list published in accordance with 310 CMR 40.0168(3) shall not include any of the following:
- (a) any disposal site at which there has been a release of oil and/or hazardous material and for which the Department has received a Permanent or Temporary Solution Statement, except as otherwise provided by 310 CMR 40.0168(3)(b) or (c);
 - (b) any disposal site at which an RP, PRP or Other Person, excluding the Department, is performing one or more response actions in compliance with M.G.L. c. 21E, 310 CMR 40.0000 and other applicable requirements, and less than one year has passed since the earliest date computed in accordance with 310 CMR 40.0404(3);
 - (c) any disposal site:
 - 1. that has been classified as a Tier II disposal site in accordance with 310 CMR 40.0500; and
 - 2. at which an RP, PRP or Other Person, excluding authorized personnel, agents and Contractors of the Department, is performing one or more response actions in compliance with M.G.L. c. 21E, 310 CMR 40.0000 and other applicable requirements;
 - (d) any disposal site deemed adequately regulated by another program or government agency pursuant to M.G.L. c. 21E, § 3(c), and 310 CMR 40.0110, except disposal sites subject to CERCLA.
- (5) The fact that a location, site, or disposal site has not been placed on the list published pursuant to 310 CMR 40.0168(1) or 40.0168(2), shall not prevent the Department from taking or arranging for response actions at such locations, sites or disposal sites which are consistent with M.G.L. c. 21E, 310 CMR 40.0000 and any other applicable requirement; or from taking any enforcement action pursuant to M.G.L. c. 21E, 310 CMR 40.0000 or any other law which the department has the authority to enforce.
- (6) The inclusion of a site on any list published or maintained by the Department in accordance with 310 CMR 40.0168(3) shall be sufficient for purposes of M.G.L. c. 21E, § 10(b)(1)(B)(i).
- (7) The Department shall make appropriate notations to its databases and the lists published and maintained in accordance with 310 CMR 40.0168 to reflect the Department's receipt of LSP Evaluation Opinions and Permanent or Temporary Solution Statements for disposal sites and LTBI's identified therein.
- (8) Any person who has reason to believe that the Department has listed a disposal site or LTBI, or the status thereof, in error may request, in writing, that the Department make appropriate changes to the pertinent list.
- (9) The Department's listing of any disposal site or LTBI in accordance with 310 CMR 40.0168, shall not be subject to M.G.L. c. 30A, or any other law, governing adjudicatory proceedings.

40.0169: The Role of Licensed Site Professionals

- (1) RPs, PRPs and Other Persons shall engage or employ the services of one or more LSPs as necessary to meet the requirements of 310 CMR 40.0000.

40.0169: continued

(2) The Department will designate as an LSP-of-Record for a site any LSP whose signature and seal appears on any document received by the Department with respect to a site. An LSP whose engagement or employment terminates in connection with a site at which he or she is designated as an LSP-of-Record shall notify the Department in writing within 21 days of such termination.

(3) LSPs shall render Opinions only in accordance with M.G.L. c. 21A, §§ 19 through 19J, 309 CMR 4.00: *Rules of Professional Conduct* and 6.00: *Design and Use of Licensed Site Professional's Seal*, M.G.L. c. 21E, 310 CMR 40.0000 and other applicable laws.

40.0170: The Role of RPs, PRPs and Other Persons in Response Actions

(1) RPs, PRPs, and secured lenders and fiduciaries who hold title to or possession of a site or vessel, shall notify the Department of a release or threat of release of oil and/or hazardous material and of any Imminent Hazards in accordance with 310 CMR 40.0300.

(2) RPs, PRPs and Other Persons shall obtain all necessary permits and approvals before undertaking a response action.

(3) No person shall undertake any response action for which a permit or approval has been issued by the Department in any manner not in conformance with the terms and conditions thereof.

(4) RPs, PRPs and Other Persons shall perform response actions in accordance with the following:

(a) except as expressly provided by 310 CMR 40.0000, each and every response action shall be properly and promptly performed within deadlines prescribed by, or pursuant to, M.G.L. c. 21E and/or 310 CMR 40.0000, including any Interim Deadlines;

(b) each RP, PRP or Other Person, or group of RPs, PRPs or Other Persons, who is undertaking or intends to undertake one or more response actions shall participate in and/or conduct, whichever is applicable, Public Involvement Activities in accordance with M.G.L. c. 21E, § 14, 310 CMR 40.1400 and any other applicable requirements; and

(c) each RP, PRP or Other Person, or group of RPs, PRPs or Other Persons, performing a response action shall identify all permits, licenses or other approvals which may be required by any local, state or federal agency, and any agreements necessary to conduct a response action, and shall proceed to obtain the necessary permits, licenses, approvals, and agreements sufficiently far in advance of deadlines imposed by M.G.L. c. 21E, 310 CMR 40.0000 or any other applicable requirements to enable him or her to complete response actions by such deadlines.

(5) Where necessary to ensure the timely and proper performance and completion of response actions, the Department may require that a RP, PRP or Other Person undertaking response actions provide assurance to the Department that the RP, PRP or Other Person has sufficient financial resources to perform the response action or a specific portion thereof. The Department may require such persons to provide such financial assurance at any time during the performance of a response action. Examples of the financial assurance mechanisms which may be required by the Department include, but are not limited to, trust funds, stand-by trust funds, letters of credit, escrow deposits and surety bonds.

(6) In the event that a RP or PRP requests an opportunity to perform a response action at any time after the Department has commenced a response action, the Department may require that the RP or PRP either pay, or provide a financial assurance mechanism for the payment of, all Costs the Department has incurred in connection with the disposal site prior to allowing the RP or PRP to conduct the remainder of the response action.

(7) The Department may refuse to allow a RP, PRP or Other Person to perform a response action, unless the Department is persuaded that:

(a) the RP, PRP or Other Person will comply with the deadlines and time periods for taking such actions imposed by M.G.L. c. 21E, 310 CMR 40.0000 and/or any order, permit or approval issued by the Department;

40.0170: continued

- (b) the RP's, PRP's or Other Person's performance of the response action will not result in or cause a hazard, or exacerbate an existing hazard, to health, safety, public welfare or the environment;
- (c) the RP, PRP or Other Person will otherwise conduct the response action in accordance with M.G.L. c. 21E, 310 CMR 40.0000 and other applicable laws; and
- (d) the RP, PRP or Other Person has a satisfactory record of compliance with the statutes, regulations and other requirements administered or enforced by the Department.

(8) The Department may enter into a consent order with a RP, PRP or Other Person which sets forth necessary response actions, time periods and deadlines for the performance thereof and requirements for submittals to the Department. Each such consent order may include provisions regarding contribution protection, site access, cost recovery, processes for resolving disputes arising under such consent order, and any other matter.

(9) Other Persons undertaking response actions at sites may discontinue such response actions without being deemed by the Department to have acquired liability under M.G.L. c. 21E solely on the basis of having voluntarily conducted such response actions and without being deemed in noncompliance with future deadlines, provided, such persons:

- (a) notify the Department in writing of their intent to discontinue response actions at the site prior to the running of an applicable deadline and surrender or transfer the Tier I Permit they possess, if any, for the site;
- (b) submit a Status Report to the Department informing the Department of the status of the work conducted at the site at the time of providing the notice required by 310 CMR 40.0170(9); and
- (c) do not cause or contribute to the release at the disposal site or cause the release, or the disposal site, to become worse than it otherwise would have been had such response actions not been performed.

In the event an Other Person is conducting response actions at a disposal site pursuant to a Tier I or Tier II Classification, the Department will stop assessing such Other Person annual compliance assurance fees upon the Department's receipt of the notice and Status Report required by 310 CMR 40.0170(9)(a) and (b); provided, however, that payment of such fees shall be required for the billable year in which such notice and Status Report is received.

(10) No provision of 310 CMR 40.0000 shall be construed to imply that only one person may undertake response actions at a disposal site.

40.0171: Failure to Perform a Response Action

In the event that a RP, PRP or Other Person initiates a response action that is determined by the Department to be in noncompliance with M.G.L. c. 21E, 310 CMR 40.0000 or any other applicable requirement, or in the event that no person undertakes a necessary response action, the Department may take any or all of the following actions:

- (1) proceed to perform or arrange for the performance of the response action;
- (2) negotiate a consent order with the RP, PRP or Other Person for the completion of the response action;
- (3) issue an order under M.G.L. c. 21E, §§ 9 or 10, to the RP, PRP or Other Person to perform the response action; and
- (4) take any other action and seek any other relief authorized by M.G.L. c. 21E, 310 CMR 40.0000 or any other law.

40.0172: Technical, Financial and Legal Inabilities

- (1) General Requirements. Each RP and PRP, and any Other Person when such person is performing response actions under 310 CMR 40.0000, who has reason to believe that one or more necessary response actions are beyond his or her technical, financial or legal ability to perform shall promptly notify the Department in writing upon gaining knowledge of such inability. Each RP and PRP shall complete those response actions and portions of response actions which are within his or her technical, financial and legal ability to perform. Each RP and PRP shall make reasonable efforts to pursue civil and administrative procedures available to remedy each such technical, financial or legal inability.
- (2) No person may claim that any necessary response action is beyond his or her technical ability to perform unless he or she submits with such notice a Phase III Report prepared in accordance with 310 CMR 40.0850 which indicates that neither feasible Temporary Solutions, nor feasible Permanent Solutions, exist for the disposal site.
- (3) Upon obtaining reason to believe that one or more response actions are beyond his or her financial ability to perform, an RP or PRP shall undertake, to the extent that he or she has sufficient assets available, reasonable steps to:
 - (a) implement one or more Temporary Solutions on all or portions of the site that will, at a minimum, prevent the exposure of persons to oil and/or hazardous materials and otherwise reduce the risks of harm posed by the disposal site to health, safety, public welfare and the environment;
 - (b) implement one or more Temporary Solutions that will contain the further release or threat of release of oil and/or hazardous material from a structure or container; and
 - (c) implement Immediate Response Actions to abate or prevent Imminent Hazards and/or to address a Condition of Substantial Release Migration.
- (4) Content of Notice. The notice required by 310 CMR 40.0172(1) shall include all of the following:
 - (a) the name, location and Release Tracking Number(s) assigned by the Department to the site;
 - (b) the name, address and telephone number of the RP, PRP or Other Person providing the notice;
 - (c) a clear and concise statement of the facts which demonstrate such person's technical, financial or legal inability;
 - (d) a plan prepared by an LSP for implementing the measures required by 310 CMR 40.0172(3) to the extent such person has sufficient assets available; and
 - (e) a description, including but not limited to an implementation schedule, of the measures such person is taking, or intends to take, to remedy such inability.
- (5) Effect of Providing Notice. If the Department determines that:
 - (a) a response action is beyond a RP's or PRP's technical, financial or legal ability to perform; and
 - (b) such person has provided the notice required by 310 CMR 40.0172(4) in good faith, such inability shall be a defense to any civil administrative penalty that the Department seeks to assess for noncompliance arising out of such inability with any deadline or time period established pursuant to M.G.L. c. 21E, 310 CMR 40.0000 and/or any order, permit or approval issued thereunder, except a violation of any Notification Requirement, that commences after the date of the Department's receipt of such notice; provided, however, that this defense shall not be available for any violations that occur or continue after such inability ceases. The RP or PRP claiming any such inability shall have the burden of establishing such inability by a preponderance of the evidence in any such proceeding.
- (6) Submittal of the notice required by 310 CMR 40.0172(4) shall not relieve any person from any obligation for the cost of response actions related to the site for which that person is legally responsible or in any way affect any legal or equitable right of the Department to issue any future order with respect to the site that is the subject of the notice or any other claim, action, suit, cause of action or demand which the Department may have with respect to the site, except as provided by 310 CMR 40.0172(5).

40.0172: continued

(7) Effect of Failure to Provide Notice. M.G.L. c. 21E, § 5(e) provides a defense to an action by the Commonwealth for recovery of two to three times the full amount of the Department's Response Action Costs against a Responsible Party. A person who fails to provide the notice required by 310 CMR 40.0172, or provides such notice without a good faith basis, may be held liable under M.G.L. c. 21E, § 5(e), for up to three times the full amount of the Department's Response Action Costs incurred with respect to the site at issue, plus litigation costs and attorneys' fees, in an action for recovery of those Costs by the Commonwealth.

40.0173: Site Access Authorization

(1) After making reasonable efforts to obtain reasonable access to any site or other location to be investigated as a possible site not owned by him or her, a RP, PRP or Other Person who is unable to obtain such access may request, in writing, that the Department authorize him or her, or his or her employees, agents, representatives or contractors, to enter such site or location for the purpose of performing one or more necessary response actions. Each such request for authorization shall include all of the following information:

- (a) the identity of the person making the request and his or her relationship to the site or location;
- (b) the nature and location of the response action(s) that he or she intends to undertake, the anticipated duration of the response action(s) and the reason(s) such access is necessary to perform the response action(s);
- (c) the identity of the person or persons who own or operate the site or location to which the Department's authorization for access is sought;
- (d) the results of any and all attempts to obtain such access; and
- (e) certification that a copy of the request has been sent to each person or persons who own or operate such sites or locations.

(2) Any person who intends to submit such a request for authorization to the Department shall send a copy thereof to each person who owns and operates the site or location to which access is sought by certified mail, return receipt requested, and a statement informing such person that he or she may file a response thereto with the Department in accordance with 310 CMR 40.0173, prior to submitting the request to the Department. Each person to whom a copy of the request is sent may submit a response to the request, in writing, to the Department.

(3) The Department may take any of the following actions in response to a request for such authorization:

- (a) the Department may authorize any person, in writing, pursuant to its authority under M.G.L. c. 21E, § 8, to enter any site, vessel or location upon consent of the owner or operator thereof for the purpose of performing one or more response actions in accordance with any terms, conditions or requirements established by the Department;
- (b) the Department may issue to any person a Request for Information;
- (c) the Department may issue an order under M.G.L. c. 21E, §§ 9 or 10, requiring any person to perform one or more response actions;
- (d) the Department may seek and execute an administrative inspection warrant or criminal search warrant in accordance with applicable law;
- (e) the Department may take or arrange the performance of any necessary response action in accordance with M.G.L. c. 21E and 310 CMR 40.0000;
- (f) the Department may issue a Notice of Responsibility to any person who is a PRP; and
- (g) the Department may deny the request or take any other action authorized by M.G.L. c. 21E, 310 CMR 40.0000 or any other law.

(4) In addition to the actions set forth in 310 CMR 40.0173(3), the Department may designate as its authorized representative for the purpose of access one or more RPs, PRPs or Other Persons, including employees, agents and contractors of such parties. The Department may exercise the authority contained in M.G.L. c. 21E, § 8, to obtain access for its designated representative. An RP, PRP or Other Person may only be designated as the Department's authorized representative if such person has agreed to serve as the Department's designated representative and to indemnify the Department to the Department's satisfaction for any injuries or damages that occur as a result of the activities undertaken by such person pursuant to such designation.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

40.0173: continued

(5) The Department's decision in response to a request for Site Access Authorization under 310 CMR 40.0173 shall not be subject to M.G.L. c. 30A, or any other law, governing adjudicatory proceedings.

(6) The authority in 310 CMR 40.0173 is intended to be exercised at the Department's discretion. No provision in 310 CMR 40.0173 shall be construed to create in any person a right to the Department's authorization for access or to create any duty of the Department to obtain access to any site or other location for any person.

40.0180: Downgradient Property Status

310 CMR 40.0181 through 40.0189, cited collectively as 310 CMR 40.0180, sets forth the requirements and procedures for asserting and maintaining a Downgradient Property Status.

40.0181: Purpose

The purposes for enabling an owner or operator of property which comprises a portion of a disposal site and which is located downgradient of a property which is the source of the release of oil and/or hazardous material located thereon to establish Downgradient Property Status are:

- (1) to establish requirements, procedures and deadlines applicable to properties downgradient from a release of oil and/or hazardous material which comprise a portion of a disposal site;
- (2) to limit the assessment of annual compliance assurance fees under 310 CMR 4.00 while the activities required by 310 CMR 40.0185 are on-going; and
- (3) to facilitate access to properties which comprise a portion of a disposal site by persons undertaking response actions.

40.0182: Applicability

Any person who is liable or potentially liable under M.G.L. c. 21E, § 5(a)(1) or (2) for certain releases of oil and/or hazardous material on Downgradient Property, and who satisfies the requirements and procedures set forth in 310 CMR 40.0183 or 40.0187, may submit to the Department a Downgradient Property Status Submittal in accordance with 310 CMR 40.0183(3), or a Modification of a Downgradient Property Status Submittal in accordance with 310 CMR 40.0187(2).

40.0183: General Requirements and Procedures for Asserting Downgradient Property Status

- (1) General. Any person who meets the requirements of, and complies with the procedures in, 310 CMR 40.0183 and 40.0185 shall have Downgradient Property Status for purposes of 310 CMR 40.0184, unless and until such Status is terminated in accordance with 310 CMR 40.0186.
- (2) Criteria. Any present or past owner or operator of a downgradient or downstream property where a release of oil and/or hazardous material has come to be located may provide a Downgradient Property Status Submittal to the Department if all of the following are met:
 - (a) such person has notified the Department of the release if notification is required by 310 CMR 40.0300;
 - (b) the source of the release of oil and/or hazardous material at the downgradient or downstream property is or was located on one or more upgradient or upstream location(s) and oil and/or hazardous material from that location(s) has come to be located at the downgradient or downstream property as a result of migration of the oil and/or hazardous material in or on groundwater or surface water, regardless of whether the upgradient or upstream location(s) which is the source has been identified as the source of the release(s);
 - (c) no act of such person has contributed to the release described in 310 CMR 40.0183(2)(b), or caused such release to become worse than it otherwise would have been;

40.0183: continued

- (d) such person is not, and was not at any time, affiliated with any other person:
 - 1. who owned or operated the property from which the release described in 310 CMR 40.0183(2)(b) originated, or caused such release; and
 - 2. who is potentially liable under M.G.L. c. 21E for the disposal site through any direct or indirect contractual, corporate or financial relationship other than:
 - a. that established by any instrument creating such person's interest in the downgradient property; or
 - b. that established by an instrument wholly unrelated to the disposal site and which would not otherwise render such person potentially liable as a result of the relationship; and
- (e) to the extent such person has performed response actions at the disposal site, those response actions have been performed in compliance with the requirements and procedures in M.G.L. c. 21E and 310 CMR 40.0000.

(3) Content of Submittal. A Downgradient Property Status Submittal shall consist of the following:

- (a) a completed transmittal form established by the Department for such purposes;
- (b) a Downgradient Property Status Opinion prepared in accordance with 310 CMR 40.0015 and 310 CMR 40.0183(4);
- (c) the certification required by 310 CMR 40.0009; and
- (d) the fee, if applicable, required by 310 CMR 4.03: *Annual Compliance Assurance Fee*.

(4) Performance Standard for a Downgradient Property Status Opinion. A Downgradient Property Status Opinion shall be based on investigative and assessment actions of sufficient scope and level of effort to conclude that the criteria in 310 CMR 40.0183(2)(b) have been met. The Opinion shall include an explanation and documentation of the technical basis for the conclusions stated therein, and be based on the following:

- (a) an evaluation of the boundaries of the property which is the subject of the Opinion;
- (b) an evaluation of the disposal site boundaries, to the extent they have been defined by assessments conducted to date;
- (c) an evaluation of the releases of oil and/or hazardous material at the disposal site, to the extent that such releases have been identified;
- (d) an evaluation of the relevant hydrogeologic conditions, including, at a minimum, groundwater flow direction and local transport characteristics based on field data, when migration of oil and/or hazardous material has occurred via groundwater;
- (e) a plan showing the downgradient or downstream property and the disposal site boundaries (to the extent known), the locations of any known or suspected source(s) of oil and/or hazardous material(s) release(s) that have come to be located at the downgradient or downstream property, the direction of groundwater flow and/or surface water flow (as appropriate), the locations where samples were collected for analysis, and the results of the analyses; and
- (f) an evaluation of the need to conduct an Immediate Response Action, as defined in 310 CMR 40.0412.

(5) Notice to Abutters and PRPs. Prior to, or concurrent with, providing the Downgradient Property Status Submittal to the Department, the person providing such Submittal shall provide a copy of the Downgradient Property Status Opinion to each of the following persons:

- (a) the owners and operators of abutting property upgradient and downgradient from the property which is the subject of the Submittal and, where the abutting upgradient and/or downgradient property is a public way, the owners and operators of the next upgradient and/or downgradient property; and
- (b) the owners and operators of any property which is a known or suspected source of the release.

(6) Public Involvement. Public Involvement Activities shall be conducted in accordance with 310 CMR 40.1400. Public Involvement Activities required for Downgradient Property Status specifically include 310 CMR 40.1403(3)(g).

40.0184: Effect of Providing a Downgradient Property Status Submittal or a Modification of a Downgradient Property Status Submittal

(1) Any person who establishes and maintains Downgradient Property Status in accordance with the requirements and procedures in 310 CMR 40.0180 shall not be subject to the subsequent deadlines for Tier Classification and Comprehensive Response Actions in 310 CMR 40.0500, unless and until such Status is terminated in accordance with 310 CMR 40.0186.

(2) Upon receipt of a Downgradient Property Status Submittal or a Modification of a Downgradient Property Status Submittal filed in accordance with 310 CMR 40.0183 or 40.0187, respectively, the Department shall suspend the assessment of Tier I or Tier II annual compliance assurance fees, if applicable, on the person making such Submittal; provided, however, that payment of such fees shall be required for the billable year in which the Submittal is provided to the Department, except as provided in 310 CMR 4.03: *Annual Compliance Assurance Fee*.

(3) The provision of a Downgradient Property Status Submittal, or a Modification of a Downgradient Property Status Submittal, to the Department shall not relieve any person from any prospective obligation to provide notification in accordance with 310 CMR 40.0300 or to perform Immediate Response Actions required by 310 CMR 40.0410. Any person providing a Downgradient Property Status Submittal, or a Modification of a Downgradient Property Status Submittal, to the Department may perform Release Abatement Measures in accordance with 310 CMR 40.0440, Utility-related Abatement Measures in accordance with 310 CMR 40.0460, and/or a Phase I - Initial Site Investigation Activities in accordance with 310 CMR 40.0480.

(4) The provision of a Downgradient Property Status Submittal, or a Modification of a Downgradient Property Status Submittal, to the Department shall not relieve any person from any obligation for the cost of response actions related to the disposal site for which that person is legally responsible or in any way affect any legal or equitable right of the Department to issue any future order with respect to the disposal site that is the subject of the Submittal or any other claim, action, suit, cause of action or demand which the Department may have with respect to the disposal site, except as provided by 310 CMR 40.0184(1).

(5) No provision in 310 CMR 40.0180 shall be construed to relieve any person from any obligation to conduct response actions in response to any release of oil and/or hazardous material which does not meet the criteria in 310 CMR 40.0183(2)(b).

(6) The provision of a Downgradient Property Status Submittal, or a Modification of a Downgradient Property Status Submittal, to the Department pursuant to 310 CMR 40.0183 or 310 CMR 40.0187, respectively, shall not be construed as, or operate as, barring, diminishing, or in any way affecting any legal or equitable right, defense, claim, demand or cause of action that the person providing such Submittal may have under applicable law.

40.0185: Maintenance of Downgradient Property Status

(1) Each person providing a Downgradient Property Status Submittal, or a Modification of a Downgradient Property Status Submittal, to the Department shall meet the following requirements to maintain such Downgradient Property Status:

- (a) no act of such person causes the release, contributes to the release, or causes such release to become worse than it otherwise would be;
- (b) to the extent that such person has ownership or possession of the downgradient property, such person provides reasonable access to the downgradient property which is the subject of the Downgradient Property Status Submittal to employees, agents, and contractors of the Department and to other persons conducting response actions;
- (c) such person undertakes reasonable steps to prevent the exposure of human and environmental receptors to oil and/or hazardous material at the downgradient property which is the subject of the Submittal;

40.0185: continued

- (d) if such person elects to undertake response actions after providing the Submittal to the Department, conducts such response actions in compliance with M.G.L. c. 21E and 310 CMR 40.0000;
- (e) such person makes reasonable efforts to identify persons who may be responsible or potentially responsible for the release and provides the notice required by 310 CMR 40.0183(5) to such persons; and
- (f) such person avoids engaging in any activity which could prevent or impede the implementation of reasonably likely response actions in the future.

(2) Based upon site-specific circumstances, the Department may require a person who provides a Downgradient Property Status Submittal, or a Modification of a Downgradient Property Status Submittal, to the Department to develop and implement a management plan for the property in order to prevent, eliminate, or minimize danger to health, safety, public welfare and/or the environment.

40.0186: Termination of Downgradient Property Status

- (1) Downgradient Property Status shall terminate if:
 - (a) information indicates that the criteria in 310 CMR 40.0183(2) are no longer being met;
 - (b) the person providing the Downgradient Property Status Submittal fails to meet the requirements in 310 CMR 40.0185 for maintaining such Status;
 - (c) the person providing the Downgradient Property Status Submittal notifies the Department in writing that such person intends to perform Comprehensive Response Actions in accordance with 310 CMR 40.0800;
 - (d) the Department establishes Interim Deadlines in accordance with 310 CMR 40.0167 for the person providing the Downgradient Property Status Submittal; or
 - (e) the Downgradient Property Status Submittal or Modification of a Downgradient Property Status Submittal is modified to terminate Downgradient Property Status.
- (2) Any person having Downgradient Property Status who gains knowledge of information which indicates that the criteria in 310 CMR 40.0183(2) are no longer being met shall provide written notice thereof to the Department within 60 days of gaining such knowledge.
- (3) Any person having Downgradient Property Status may terminate such Status by providing the Department with written notice of his or her intent to terminate such Status. The termination shall become effective upon the Department's receipt of such notice.

40.0187: Modification of a Downgradient Property Status Submittal

- (1) General. Any present or past owner or operator of a downgradient property with Downgradient Property Status may provide a Modification of a Downgradient Property Status Submittal to the Department if all of the following are met:
 - (a) the criteria specified in 310 CMR 40.0183(2);
 - (b) if a Modification of a Downgradient Property Status Submittal has not previously been submitted to the Department, the person seeking such Status obtains the written consent thereto of the person who previously submitted the Downgradient Property Status Submittal for the subject property; and
 - (c) if a Modification of a Downgradient Property Status Submittal has previously been submitted to the Department, the person seeking such Status obtains the written consent thereto of the person who most recently submitted a Modification of a Downgradient Property Status Submittal for the subject property.
- (2) Content of Submittal. A Modification of a Downgradient Property Status Submittal shall consist of the following:
 - (a) a completed transmittal form established by the Department for such purposes;
 - (b) the certification required by 310 CMR 40.0009 by the person making such Submittal;
 - (c) the written consent required by 310 CMR 40.0187(1)(b) or (c);

40.0187: continued

- (d) certification by the person whose consent is required by 310 CMR 40.0187(1)(b) or (c) that the Downgradient Property Status has been maintained in accordance with 310 CMR 40.0185;
- (e) certification by the person making such Submittal that he or she meets the criteria in 310 CMR 40.0183(2)(a),(c),(d), and (e); and
- (f) certification by the person making such Submittal that he or she has no information contrary to the conclusion stated in 310 CMR 40.0183(2)(b).

(3) Effect of Providing a Modification of a Downgradient Property Status Submittal. Any person who submits a Modification of a Downgradient Property Status Submittal to the Department in accordance with 310 CMR 40.0187 shall have Downgradient Property Status in accordance with 310 CMR 40.0184 unless and until such Status is terminated in accordance with 310 CMR 40.0186.

(4) Notice to Abutters and PRPs. Each person submitting a Modification of a Downgradient Property Status Submittal to the Department shall concurrently provide a copy of such Submittal to the persons described in 310 CMR 40.0183(5).

(5) Public Involvement. Each person submitting a Modification of a Downgradient Property Status Submittal to the Department shall conduct Public Involvement Activities in accordance with 310 CMR 40.1400. Public Involvement Activities required for a Modification of a Downgradient Property Status Submittal specifically include 310 CMR 40.1403(3)(g).

40.0190: General Requirements for Conducting Response Actions

(1) For each release or threat of release of oil and/or hazardous materials at a disposal site, one or more Permanent Solutions to the extent feasible shall be implemented by the applicable deadline to achieve a level of No Significant Risk. No disposal site shall be deemed to have had all the necessary and required response actions taken for such site unless and until a level of No Significant Risk exists or has been achieved in compliance with M.G.L. c. 21E and 310 CMR 40.0000.

(2) Permanent Solutions shall be implemented if:

- (a) a level of No Significant Risk does not yet exist at the disposal site;
- (b) Permanent Solutions are feasible; and
- (c) immediate implementation of one or more Permanent Solutions would be more cost-effective than phased implementation of Temporary Solutions and Permanent Solutions.

(3) At each disposal site, unless a level of No Significant Risk already exists or one or more Permanent Solutions is feasible and immediate implementation of such Permanent Solutions would be more cost-effective than phased implementation of Temporary Solutions and Permanent Solutions, one or more Temporary Solutions shall be implemented to the extent feasible by the applicable deadline. Such solutions shall eliminate any substantial hazard to health, safety, public welfare or the environment which is presented by the disposal site or by any oil and/or hazardous materials at or from the disposal site in the environment.

(4) If appropriate, Permanent Solutions or Temporary Solutions may be implemented on portions of a disposal site.

(5) Where feasible, implementation of a Permanent Solution shall include a measure or measures designed to reduce to the extent possible the level of oil and/or hazardous materials in the environment to background.

(6) In determining whether a Permanent Solution will achieve a level of No Significant Risk during any foreseeable period of time, the criteria and standards set forth in 310 CMR 40.0900 and any current or reasonably foreseeable uses of the site and the surrounding environment that may be affected by oil and/or hazardous materials at the site or in the surrounding environment shall be considered.

40.0190: continued

(7) RPs, PRPs and Other Persons shall employ or engage persons having the appropriate training, and as required, currently valid licenses or certifications to conduct a response action at a disposal site.

40.0191: Response Action Performance Standard (RAPS)

(1) The Response Action Performance Standard (RAPS) is the level of diligence reasonably necessary to obtain the quantity and quality of information adequate to assess a site and evaluate remedial action alternatives, and to design and implement specific remedial actions at a disposal site to achieve a level of No Significant Risk for any foreseeable period of time and, where feasible, to reduce to the extent possible the level of oil and/or hazardous materials in the environment to background levels.

(2) RAPS shall be employed during the performance of all response actions conducted pursuant to 310 CMR 40.0000, and shall include, without limitation, the following:

- (a) consideration of relevant policies and guidelines issued by the Department and EPA;
- (b) use of accurate and up-to-date methods, standards and practices, equipment and technologies which are appropriate, available and generally accepted by the professional and trade communities conducting response actions in accordance with M.G.L. c. 21E and 310 CMR 40.0000 under similar circumstances; and
- (c) investigative practices which are scientifically defensible, and of a level of precision and accuracy commensurate with the intended use of the results of such investigations.

(3) The application of RAPS shall be protective of health, safety, public welfare and the environment and shall include, without limitation, in the context of meeting the requirements of this Contingency Plan, consideration of the following:

- (a) technologies which reuse, recycle, destroy, detoxify or treat oil and/or hazardous materials, where feasible, to minimize the need for long-term management of contamination at or from a disposal site;
- (b) containment measures as feasible Permanent Solutions only where reuse, recycling, destruction, detoxification and treatment are not feasible;
- (c) remedial actions to reduce the overall mass and volume of oil and/or hazardous material at a disposal site to the extent feasible, regardless of whether it is feasible to achieve one or more Temporary Solutions and/or Permanent Solutions or whether it is feasible to achieve background for the entire disposal site and not include the dilution of contaminated media with uncontaminated media;
- (d) response actions to restore groundwater, where feasible, to the applicable standards of quality within a reasonable period of time to protect the existing and potential uses of such resources; and
- (e) eliminating or reducing, to the extent practicable and consistent with response action requirements and objectives, total energy use, air pollutant emissions, greenhouse gases, water use, materials consumption, and ecosystem and water resources impacts, resulting from the performance of response actions through energy efficiency, renewable energy use, materials management, waste reduction, land management, and ecosystem protection.

40.0193: Technical Justification

(1) A Licensed Site Professional may provide technical justification for forgoing any specific activity required by 310 CMR 40.0000, related to Initial Site Investigation Activities performed in accordance with 310 CMR 40.0405(1), Phase I Initial Site Investigation Activities performed in accordance with 310 CMR 40.0480 through 40.0483, Phase II Comprehensive Site Investigation Activities performed in accordance with 310 CMR 40.0830, and Phase III Identification and Evaluation of Response Action Alternatives performed in accordance with 310 CMR 40.0850 through 40.0860, if in his or her professional judgment any particular requirement is unnecessary or inappropriate based upon the conditions and characteristics of a disposal site. The LSP shall employ RAPS in determining whether any such activity is unnecessary or inappropriate.

40.0193: continued

(2) When forgoing any particular activity in accordance with 310 CMR 40.0193(1), the LSP shall identify such activity, and shall set forth the basis for such technical justification, in the pertinent submittal.

SUBPART C: NOTIFICATION OF RELEASES
AND THREATS OF RELEASE OF OIL AND HAZARDOUS MATERIAL;
IDENTIFICATION AND LISTING OF OIL AND HAZARDOUS MATERIAL

40.0300: Notification of Releases and Threats of Release of Oil and Hazardous Material; Identification and Listing of Oil and Hazardous Material

310 CMR 40.0301 through 40.0399, cited collectively as 310 CMR 40.0300, contain requirements and procedures for notifying the Department of releases and threats of release of oil and/or hazardous material.

40.0301: Purpose and Scope

(1) The purpose of 310 CMR 40.0300 is to identify oil and hazardous material which are subject to the provisions of this Contingency Plan, to identify those releases and threats of release of such oil and hazardous material that require notification to the Department, to set forth the time periods and procedures for notification, and to set forth provisions to allow limited removal of such oil and hazardous material under certain circumstances.

(2) Nothing in 310 CMR 40.0300 shall relieve any person described in M.G.L. c. 21E, § 5(a)(1) through (5) from any liability which that person would otherwise possess in connection with a release or threat of release of any oil or hazardous material that is listed at 310 CMR 40.1600, identified by characteristic in 310 CMR 40.0347 or otherwise meets either the definition of oil or the definition of hazardous material, which are set forth in 310 CMR 40.0006.

(3) The Department may take response actions, seek any reimbursement or compensation to which the Commonwealth is entitled, and/or pursue enforcement actions in connection with any release or threat of release of oil and/or hazardous material, provided, however, that the Department shall not seek penalties for failure to provide notification to the Department of any release or threat of release:

- (a) unless notification is required pursuant to the provisions of 310 CMR 40.0300, or
- (b) for which notification is exempted pursuant to the provisions of 310 CMR 40.0317.

40.0302: Applicability

(1) The provisions of 310 CMR 40.0300 shall apply to all releases and threats of release of oil and/or hazardous material to the environment, except as set forth in 310 CMR 40.0302(2).

(2) The notification requirements set forth in 310 CMR 40.0300 shall only apply to:
(a) releases and threats of release that commence on or after October 1, 1993; and
(b) releases and threats of release of which knowledge is possessed or obtained on or after October 1, 1993, by any person listed at 310 CMR 40.0331.

Notwithstanding any other provision hereof, the applicable "2 Hour", "72 Hour" and "120 Day" notification time periods which arise solely as a result of 310 CMR 40.0300 shall commence no earlier than October 1, 1993.

40.0303: Role of Licensed Site Professional

Persons required to provide oral and/or written notification to the Department of releases and threats of release of oil and/or hazardous material to the environment pursuant to the provisions of 310 CMR 40.0300 may wish to retain the services of competent individuals, time permitting, or as circumstances require, to investigate, evaluate, and/or otherwise facilitate the fulfillment of that requirement, but shall not be obligated to use a Licensed Site Professional for that purpose.

40.0310: Releases and Threats of Release Which Require Notification

40.0311: Releases Which Require Notification Within Two Hours

Except as provided in 310 CMR 40.0317 or 40.0332(1) or (7), persons required to notify under 310 CMR 40.0331 shall notify the Department as soon as possible but not more than two hours after obtaining knowledge that a release meets one or more of the following sets of criteria:

(1) a sudden, continuous or intermittent release to the environment of any hazardous material that is listed at 310 CMR 40.1600 or that exhibits one or more of the characteristics described in 310 CMR 40.0347, when:

- (a) the quantity of the release is equal to or greater than the applicable Reportable Quantity specified at 310 CMR 40.0352 or 40.1600; and
- (b) it is likely that the release occurred within any period of 24 consecutive hours or less;

(2) a sudden, continuous or intermittent release to the environment of any hazardous material that is listed at 310 CMR 40.1600 or that exhibits one or more of the characteristics described in 310 CMR 40.0347, when:

- (a) the quantity of the release is unknown;
- (b) it is likely that the quantity of the release is equal to or greater than the applicable Reportable Quantity specified at 310 CMR 40.0352 or 40.1600; and
- (c) it is likely that the release occurred within any period of 24 consecutive hours or less;

(3) a sudden, continuous or intermittent release to the environment of oil that is listed at 310 CMR 40.1600 when:

- (a) the quantity of the release is equal to or greater than the applicable Reportable Quantity specified at 310 CMR 40.0351 or 40.1600; and
- (b) it is likely that the release occurred within any period of 24 consecutive hours or less;

(4) a sudden, continuous or intermittent release to the environment of oil that is listed at 310 CMR 40.1600, when:

- (a) the quantity of the release is unknown;
- (b) it is likely that the quantity of the release is equal to or greater than the applicable Reportable Quantity specified at 310 CMR 40.1600; and
- (c) it is likely that the release occurred within any period of 24 consecutive hours or less;

(5) a sudden, continuous or intermittent release to the environment of any quantity of oil or waste oil that is listed at 310 CMR 40.1600 that results in the appearance of a sheen on surface water;

(6) a release to the environment indicated by the measurement of oil and/or hazardous material in a private drinking water supply well at concentrations equal to or greater than a Category RCGW-1 Reportable Concentration, as described in 310 CMR 40.0360 through 40.0369 and listed at 310 CMR 40.1600;

(7) any release of any oil and/or hazardous material, in any quantity or concentration, that poses or could pose an Imminent Hazard, as described in 310 CMR 40.0321 and 40.0950;

(8) any release of oil and/or hazardous material described in 310 CMR 40.0311(1) through (4) or 40.0311(7) that is indirectly discharged to the environment by means of discharge to a stormwater drainage system;

(9) any release of oil and/or hazardous material described in 310 CMR 40.0311(7) that is indirectly discharged into the environment by means of discharge to a sanitary sewerage system.

40.0312: Threats of Release Which Require Notification Within Two Hours

Except as provided in 310 CMR 40.0317 or 40.0332(1) or (7), persons required to notify under 310 CMR 40.0331 shall notify the Department as soon as possible but not more than two hours after obtaining knowledge that a threat of release meets one or more of the following sets of criteria:

40.0312: continued

- (1) a threat of release to the environment of oil and/or hazardous material that is listed at 310 CMR 40.1600 or that exhibits one or more of the characteristics described in 310 CMR 40.0347, when:
 - (a) it is likely that the release threatened is about to occur; and
 - (b) it is likely that the quantity of the release, if it occurred, would be equal to or greater than the applicable Reportable Quantity specified at 310 CMR 40.0351, 40.0352 or 40.1600; or
- (2) a threat of release to the environment of oil and/or hazardous material that is listed at 310 CMR 40.1600 or that exhibits one or more of the characteristics described in 310 CMR 40.0347, which poses or could pose an Imminent Hazard, as described in 310 CMR 40.0321, irrespective of the quantity likely to be released.

40.0313: Releases Which Require Notification Within 72 Hours

Except as provided in 310 CMR 40.0317 or 40.0332(7), persons required to notify under 310 CMR 40.0331 shall notify the Department not more than 72 hours after obtaining knowledge that a release of oil and/or hazardous material(s) meets one or more of the following sets of criteria:

- (1) a release to the environment indicated by the presence of Nonaqueous Phase Liquid (NAPL) in a groundwater monitoring well, excavation, or subsurface structure in which NAPL has come to be located at a measured thickness equal to or greater than ½ inch (0.04 feet) at a location greater than 30 feet from School, Daycare or Child Care Center or occupied Residential Dwelling;
- (2) a release to the environment indicated by the presence of oil and/or hazardous material within ten feet of the exterior wall of an underground storage tank, as established by measurement of equal to or greater than 100 parts-per-million (ppm) by volume of total organic vapors "as benzene" in the headspace of a soil or groundwater sample using a headspace screening method, and where such sample was obtained:
 - (a) greater than two feet below the ground surface; and
 - (b) as part of a closure assessment required pursuant to 527 CMR 9.00: *Tanks and Containers* and 40 CFR Parts 280 and 281, or in connection with the removal or closure of an underground storage tank otherwise regulated by M.G.L. c. 148 or 527 CMR 9.00: *Tanks and Containers*;
- (3) a release to the environment indicated by the measurement of oil and/or hazardous material in the groundwater at concentrations equal to or greater than a Category RCGW-1 Reportable Concentration, as described in 310 CMR 40.0360 through 40.0369 and listed at 310 CMR 40.1600, within:
 - (a) the Zone I of a public water supply well; or
 - (b) 500 feet of a private water supply well; or
- (4) a Condition of Substantial Release Migration, where such condition is associated with a release for which notification otherwise is or has at any time in the past been required in accordance with 310 CMR 40.0300. A Condition of Substantial Release Migration means a condition at a disposal site that includes any of the following:
 - (a) releases that have resulted in the discharge of separate-phase oil and/or separate-phase hazardous material to surface waters, buildings, or underground utilities or conduits;
 - (b) releases to the ground surface or to the vadose zone that, if not promptly removed or contained, are likely to significantly impact the underlying groundwater, or significantly exacerbate an existing condition of groundwater pollution;
 - (c) releases to the groundwater that have migrated or are expected to migrate more than 200 feet per year;
 - (d) releases to the groundwater that have been or are within one year likely to be detected in a public or private water supply well;
 - (e) releases to the groundwater that have been or are within one year likely to be detected in a surface water body, wetland, or public water supply reservoir; or

40.0313: continued

(f) releases to the groundwater or to the vadose zone that have resulted or have the potential to result in the discharge of vapors into a School, Daycare or Child Care Center or occupied Residential Dwelling. Conditions that indicate a potential discharge of vapors into a School, Daycare or Child Care Center or occupied Residential Dwelling include, but are not limited to:

1. soil or soil gas impacted with one or more volatile organic compounds within six feet, measured horizontally from the wall of the structure, and within ten feet measured vertically from the basement floor or foundation at concentrations that are likely to discharge vapors into the structure;
2. one or more volatile organic compound in the groundwater exceed the applicable Groundwater Category GW-2 Standard within 30 feet of the structure, and the average annual depth to groundwater in that area is 15 feet or less;
3. volatile light non-aqueous phase liquid (LNAPL) is present in a groundwater monitoring well, excavation, or subsurface depression within 30 feet of the structure at a measured thickness equal to or greater than $\frac{1}{8}$ inch (0.01 feet); or
4. evidence of vapor migration along preferential pathways at a location that is likely to result in the discharge of vapors into the structure.

40.0314: Threats of Release Which Require Notification Within 72 Hours

Except as provided in 310 CMR 40.0317, persons required to notify under 310 CMR 40.0331 shall notify the Department not more than 72 hours after obtaining knowledge of a threat of release of oil and/or hazardous material to the environment from an Underground Storage Tank, as established by a test conducted in conformance with the methodology prescribed for that test which indicates there is a substantial likelihood of a leak equal to or greater than 0.05 gallons per hour:

- (1) in a single walled Underground Storage Tank;
- (2) in the inner wall of a double-walled Underground Storage Tank; or
- (3) in the outer wall of a double-walled Underground Storage Tank.

40.0315: Releases Which Require Notification Within 120 Days

Except as provided in 310 CMR 40.0317 or 40.0318, persons required to notify under 310 CMR 40.0331 shall notify the Department not more than 120 days after obtaining knowledge that a release meets one or more of the following sets of criteria:

- (1) a release to the environment indicated by the measurement of one or more hazardous materials in soil or groundwater in an amount equal to or greater than the applicable Reportable Concentration described in 310 CMR 40.0360 through 40.0369 and listed at 310 CMR 40.1600;
- (2) a release to the environment indicated by the measurement of oil and/or waste oil in soil in an amount equal to or greater than the applicable Reportable Concentration described in 310 CMR 40.0360 through 40.0369 and listed at 40.1600, where the total contiguous volume of the oil and/or waste oil contaminated soil is equal to or greater than two cubic yards;
- (3) a release to the environment indicated by the measurement of oil in groundwater in an amount equal to or greater than the applicable Reportable Concentration described in 310 CMR 40.0360 through 40.0369 and listed at 310 CMR 40.01600; or
- (4) a release to the environment indicated by the presence of a subsurface Nonaqueous Phase Liquid (NAPL) in a groundwater monitoring well, excavation, or other subsurface structure in which NAPL has come to be located at a measured thickness equal to or greater than $\frac{1}{8}$ inch (0.01 feet) and less than $\frac{1}{2}$ inch (0.04 feet).

40.0317: Releases and Threats of Release Which Do Not Require Notification

Notwithstanding the provisions of 310 CMR 40.0311 through 40.0315, the following releases and threats of release of oil and/or hazardous material are exempt from the notification requirements set forth in 310 CMR 40.0300:

- (1) releases of oil that occur during normal handling and transfer operations at an oil facility, if the releases are completely captured by a properly functioning oil/water separator; provided, however, that releases of oil which exceed the capacity of the oil/water separator, and that releases of oil from the oil/water separator, itself, in excess of its discharge permit limits, shall be subject to the notification requirements set forth in 310 CMR 40.0300;
- (2) releases or threats of release of gasoline or diesel fuel that result from the rupture of the fuel tank of a passenger vehicle as a result of an accident involving that vehicle;
- (3) releases of oil and/or hazardous material that are discharged or emitted from an outfall, stack or other point source, or as fugitive emissions, any of which are regulated under and have received a valid permit, license, or approval, or which are operating under a valid registration, order or guideline issued under a federal or state statute or regulation, unless the release:
 - (a) exceeds the amount allowed by the permit, license, approval, registration, order or guideline; and
 - (b) represents an Imminent Hazard to health, safety, public welfare or the environment. This provision shall not relieve any person from any other duty to notify which may exist under any other statute or regulation, nor shall it in any way limit the authority of any other agency, political subdivision or authority of the federal or state government or of any office or division of the Department to enforce or otherwise carry out the duties assigned to it by law;
- (4) releases of radionuclides regulated by EPA under 42 USC § 9602, 33 USC §§ 1321 and 1361, and 40 CFR Part 302 *et seq.*;
- (5) releases of forbidden, Class A or Class B explosives, as defined in 49 CFR §§ 173.50, 173.53 and 173.88 respectively, if the explosives are under military transport or supervision and the U.S. Army Explosive Ordnance responds to the release;
- (6) releases of methane, propane, and other component compounds associated with a release of natural gas, natural gas liquids and liquified natural gas;
- (7) sheens:
 - (a) resulting from emissions or discharges from outboard motors in recreational use; or
 - (b) associated with normal surface water runoff from roadways, driveways, and parking lots;
- (8) releases of hazardous material indicated by residues in the environment:
 - (a) emanating from a point of original application of lead-based paint;
 - (b) resulting from emissions from the exhaust of an engine; or
 - (c) resulting from the application of pesticides in a manner consistent with their labelling;
- (9) releases of oil and/or hazardous material related to coal, coal ash, or wood ash, excluding wood ash resulting from the combustion of lumber or wood products that have been treated with chemical preservatives;
- (10) releases of oil and/or hazardous material resulting from the land application, reuse, or disposal of wastewater residuals and/or dredged spoils conducted in accordance with an approval, permit or certification issued by the Department under the authority of 310 CMR 32.00: *Land Application of Sludge and Septage*, 314 CMR 9.00: *401 Water Quality Certification for Discharge of Dredged or Fill Material, Dredging, and Dredged Material Disposal in Waters of the United States Within the Commonwealth*, M.G.L. c. 21, §§ 26 through 53, M.G.L. c. 111, § 17, M.G.L. c. 83, § 6 and 7 and c. 21A, § 14 and any regulations promulgated thereunder;
- (11) releases of oil and/or hazardous material in groundwater detected by sampling conducted by Public Water Supply owners or operators under 310 CMR 22.00: *Drinking Water* as indicated by the presence of oil and/or hazardous material in a public water supply source;

40.0317: continued

- (12) releases of oil and/or hazardous material resulting or emanating from:
 - (a) the asphalt binder in bituminous pavement;
 - (b) piers, pilings and building foundation structures;
 - (c) landscaping timbers in use;
 - (d) utility poles in use; or
 - (e) building materials that are in good repair and still serving their original intended use;

- (13) releases indicated solely by the presence of oil and/or hazardous material in soils that are treated, recycled, reused or disposed of at a facility licensed, permitted or approved by the Department, provided that:
 - (a) the soil has been excavated and transported from a disposal site in compliance with 310 CMR 40.0000; and
 - (b) the facility is operated in a manner consistent with the terms and conditions of its license, permit or approval;

- (14) releases of oil and/or hazardous material that require notification solely because an RP, PRP or Other Person obtains knowledge of media concentrations and/or site conditions that meet one or more of the sets of criteria set forth in 310 CMR 40.0311 through 40.0315, when such media concentration value(s) and/or knowledge of site conditions resulted from a sampling, analytical or observational error, as established by a preponderance of the evidence and/or as verified by additional sampling, analyses, and/or observation, within the applicable time period for notification;

- (15) releases of oil and/or hazardous material that require notification solely because an RP, PRP or Other Person obtains knowledge of soil concentrations equal to or greater than one or more applicable Reportable Concentrations, as specified in 310 CMR 40.0315, where a Limited Removal Action conducted under the provisions of 310 CMR 40.0318 has reduced soil concentrations of oil and/or hazardous material at the disposal site to an amount less than the Reportable Concentration(s), within the allowable time period for notification;

- (16) releases indicated by the presence of oil and/or hazardous material in concentrations or quantities which would otherwise meet one or more of the sets of criteria set forth in 310 CMR 40.0313 through 310 CMR 40.0315 at a disposal site where:
 - (a) a response action is being undertaken in compliance with the provisions of 310 CMR 40.0000 to address such release;
 - (b) a release notification was previously provided to the Department for the disposal site on which the release has been observed or documented; and
 - (c) such presence of oil and/or hazardous material is consistent with the types, nature, exposure potential and quantities of oil and/or hazardous material for which that notification was provided to the Department;

- (17) releases indicated by the presence of oil and/or hazardous material at disposal sites for which a determination or statement as specified in 310 CMR 40.0317(17)(a) through (f) has been provided, in concentrations that would otherwise meet one or more of the sets of criteria set forth in 310 CMR 40.0313 or 40.0315, unless the presence of such oil and/or hazardous material would negate or change such determinations or statements were that presence taken into account in the preparation thereof, or changes in activities, uses, and/or exposures at the disposal site require notification to the Department pursuant to the provisions of 310 CMR 40.0020. In this context, determinations or statements include:
 - (a) a disposal site where a Permanent Solution Statement has been submitted to the Department in compliance with the provisions of 310 CMR 40.1000;
 - (b) a disposal site where a Class A or Class B Response Action Outcome Statement has been submitted to the Department in compliance with the provisions of 310 CMR 40.1000;
 - (c) a disposal site where a No Further Action Letter has been submitted to the Department in compliance with the provisions of 310 CMR 40.0600;
 - (d) a disposal site where the Department has made a written determination that no further actions are required;

40.0317: continued

- (e) a disposal site where an LSP Evaluation Opinion has been submitted to the Department in compliance with 310 CMR 40.0600 stating either that the site is not a disposal site for which notification is required pursuant to 310 CMR 40.0300 and no further response actions are required or that completed response actions meet the requirements of a Response Action Outcome; or
 - (f) a disposal site where a Waiver Completion Statement has been submitted to the Department in compliance with the provisions of 310 CMR 40.537 and/or 40.0630.
- (18) threats of release indicated by the outcome of tank tests specified in 310 CMR 40.0314, where a tank test outcome has resulted from a testing error, as documented within the allowable time period for notification by an additional test conducted on identical and unrepaired underground storage tank system elements;
- (19) releases of oil and/or hazardous material to:
- (a) an underground utility vault if such releases are completely contained within the vault; or
 - (b) the interior of a building, provided such releases are completely contained within the building;
- (20) releases of chloroform in groundwater attributable to naturally-occurring ecological processes and/or leakage or discharges from a public water supply system;
- (21) releases of oil or waste oil of less than a Reportable Quantity that result in a sheen on a surface water, provided that:
- (a) federal officials receive notice of such release pursuant to the Federal Water Pollution Control Act as amended;
 - (b) a response occurs as directed by those federal officials and according to other federal, state or local requirements applicable to such a release and response;
 - (c) the sheen does not persist for more than 24 consecutive hours; and
 - (d) the sheen does not recur at the same location within any 30 day period; and
- (22) arsenic, beryllium or nickel in Boston Blue Clay or arsenic in an area documented by the U.S. Geological Survey or in other scientific literature as an area of elevated arsenic measured in soil or groundwater that
- (a) is consistently present in the environment at and in the vicinity of the sampling location;
 - (b) is solely attributable to natural geologic or ecologic conditions; and
 - (c) has not been mobilized or transferred to another environmental medium or increased in concentration in an environmental medium as a result of anthropogenic activities.
- (23) releases of propane, provided that such releases are managed according to the Massachusetts Division of Fire Services gas leak Emergency and Reporting Procedure in 527 CMR 6.00: *Liquefied Petroleum Gas Containers and Systems*.

40.0318: Limited Removal Actions

- (1) Limited Removal Actions may be undertaken by RPs, PRPs or Other Persons prior to notification to the Department of those "120 Day Notification" releases described in 310 CMR 40.0315.
- (2) Limited Removal Actions shall not be initiated or continued:
- (a) after obtaining knowledge that a release or threat of release requires notification under the "2 Hour" or "72 Hour" notification provisions of 310 CMR 40.0311 through 40.0314, whether or not notification has been made to the Department; or
 - (b) following notification to the Department by any person listed at 310 CMR 40.0331 of any release or threat of release of oil and/or hazardous material at the disposal site which requires notification under 310 CMR 40.0315.

40.0318: continued

- (3) RPs, PRPs or Other Persons who undertake Limited Removal Actions shall conform to the Response Action Performance Standard specified in 310 CMR 40.0191.
- (4) Limited Removal Actions shall be restricted to the excavation and off-site recycling, reuse, treatment, and/or disposal of not more than the following cumulative volumes of soil removed from a disposal site with measured concentrations of oil or hazardous material equal to or greater than an applicable Reportable Concentration:
 - (a) not more than 100 cubic yards of soil contaminated solely by a release of oil, oil blends containing fuel oil additives registered in accordance with the regulations at 40 CFR 79, or waste oil; and
 - (b) not more than 20 cubic yards of soil contaminated by a release of hazardous material or a mixture of oil or waste oil and hazardous material.
- (5) All excavation activities conducted by an RP, PRP or Other Person as a Limited Removal Action shall occur within 120 days of obtaining knowledge of a release described in 310 CMR 40.0315.
- (6) All contaminated soil generated as a result of a Limited Removal Action shall be stockpiled, stored, characterized, transported, and recycled, reused, treated, or disposed of as set forth in 310 CMR 40.0030.
- (7) Records documenting:
 - (a) the concentrations of oil and/or hazardous material in soil at the disposal site following a Limited Removal Action; and
 - (b) the chemical characterization and volume of soil removed from a disposal site as part of a Limited Removal Action, shall be maintained by the RP, PRP or Other Person undertaking the Limited Removal Action for a minimum of five years or for so long as is required under 310 CMR 40.0014, whichever is longer.
- (8) Limited Removal Actions conducted in compliance with the provisions of 310 CMR 40.0318 shall not require oversight by a Licensed Site Professional, except for Limited Removal Actions that involve the use of the Bill of Lading soil management process described in 310 CMR 40.0030.
- (9) In those cases where volumes of contaminated soil encountered unexpectedly exceed initial estimates and the volumetric excavation limits specified in 310 CMR 40.0318(4), persons required to notify under 310 CMR 30.0331 shall notify the Department of the release at the disposal site within the allowable time period for notification, and the person conducting the Limited Removal Action shall either:
 - (a) cease remedial actions; or
 - (b) continue removal actions at the disposal site as a Release Abatement Measure, as specified in 310 CMR 40.0443.

40.0320: Releases and Threats of Release That Pose Imminent Hazards

40.0321: Reporting of Releases and Threats of Release That Pose or Could Pose an Imminent Hazard

- (1) For the purpose of fulfilling the "Two Hour" release notification obligations of 310 CMR 40.0311(7), the following releases shall be deemed to pose an Imminent Hazard to health, safety, public welfare and/or the environment:
 - (a) a release to the environment which results in the presence of oil and/or hazardous material vapors within buildings, structures, or underground utility conduits at a concentration equal to or greater than 10% of the Lower Explosive Limit;
 - (b) a release to the environment of reactive or explosive hazardous material, as described in 310 CMR 40.0347, which threatens human health or safety;
 - (c) a release to a roadway that endangers public safety;
 - (d) a release to the environment of oil and/or hazardous material which poses a significant risk to human health when present for even a short period of time, as specified in 310 CMR 40.0950;

40.0321: continued

- (e) a release to the environment of oil and/or hazardous material which produces immediate or acute adverse impacts to freshwater or saltwater fish populations; or
- (f) a release to the environment which produces readily apparent effects to human health, including respiratory distress or dermal irritation.

(2) For the purpose of fulfilling the "Two Hour" release notification obligations of 310 CMR 40.0311(7), the following releases could pose an Imminent Hazard to human health:

- (a) a release to the environment indicated by the measurement of oil and/or hazardous material in a private drinking water supply well at a concentration equal to or greater than ten times the Category RCGW-1 Reportable Concentration, as described in 310 CMR 40.0360 through 40.0369 and listed at 310 CMR 40.1600; or
- (b) a release to the environment indicated by the measurement of concentrations of hazardous material, equal to or greater than any of the following concentrations at the ground surface or within a depth of twelve inches below the ground surface, at any location within 500 feet of a residential dwelling, school, playground, recreation area or park, unless access by children is controlled or prevented by means of bituminous pavement, concrete, fence, or other physical barrier

Hazardous Material	CAS number	Concentration (ug/g dry wt)
Arsenic (total)	7440382	40
Cadmium (total)	7440439	60
Chromium (VI) (or Total Chromium in the absence of CrVI data)	18540299	200
Cyanide (available)	57125	100
Mercury (total)	7439976	300
Methyl Mercury	22967926	10
PCB (total)	1336363	10

or

- (c) a release to the environment for which estimated long-term risk levels associated with current exposures are greater than ten times the Cumulative Receptor Risk Limits in 310 CMR 40.0993(10). Past exposures may be included in such evaluations to the extent that it is reasonable to quantify those exposures.

(3) For the purpose of fulfilling the notification obligations of 310 CMR 40.0312(2), threats of release which pose or could pose an Imminent Hazard to health, safety, public welfare and/or the environment shall consist of any threat of release where, if the release were to occur, it is likely that that release would meet any of the criteria described in 310 CMR 40.0321(1) or (2).

(4) Notwithstanding the provisions of 310 CMR 40.0321(2) and 40.0321(3), a person required to notify under 310 CMR 40.0331 may demonstrate to the Department by a preponderance of the evidence that release or site conditions specified in 310 CMR 40.0321(2) and/or (3) do not constitute an actual Imminent Hazard to human health, in conformance with the Imminent Hazard Evaluation process described in 310 CMR 40.0426, and in consideration of the site-specific factors and the risk assessment and risk management criteria contained in 310 CMR 40.0950. No such demonstration, however, shall relieve any person of the obligation to notify the Department of a release or threat of release under the provisions of 310 CMR 40.0311 or 40.0312.

(5) No provision contained in 310 CMR 40.0321 shall limit the Department's authority to determine that an Imminent Hazard exists at any site, consistent with the provisions of 310 CMR 40.0950, nor shall any such provision limit the Department's authority to undertake response actions, seek any reimbursement or compensation due to the Commonwealth, or pursue enforcement actions in accordance with any such determination.

40.0322: Response Actions to Prevent or Abate Imminent Hazards

- (1) An Immediate Response Action, as described in 310 CMR 40.0400, shall be taken to prevent, eliminate, or abate all Imminent Hazards.

40.0322: continued

- (2) Immediate Response Actions shall not be delayed or deferred at sites where continued inaction would likely result in the development of an Imminent Hazard condition.

40.0330: Notification Requirements and Procedures

40.0331: Who Shall Notify

- (1) The following persons shall notify the Department in accordance with 310 CMR 40.0300 of a release or threat of release of oil or hazardous material:

- (a) the owner or operator of a vessel or a site from or at which there is or has been a release or threat of release of oil and/or hazardous material;
- (b) any person who at the time of storage or disposal of any hazardous material owned or operated any site at or upon which such hazardous material was stored or disposed of and from which there is or has been a release or threat of release of hazardous material;
- (c) any person who by contract, agreement, or otherwise, directly or indirectly, arranged for the transport, disposal, storage or treatment of hazardous material to or in a site or vessel from or at which there is or has been a release or threat of release of hazardous material;
- (d) any person who, directly or indirectly, transported any hazardous material to transport, disposal, storage or treatment vessels or sites from or at which there is or has been a release or threat of release of such material;
- (e) any person who otherwise caused or is legally responsible for a release or threat of release of oil and/or hazardous material from a site or vessel;
- (f) any fiduciary who holds title to or possession of a site or vessel from or at which there is or has been a release or threat of release of oil and/or hazardous material;
- (g) any secured lender who holds title to or possession of a site or vessel from or at which there is or has been a release or threat of release of oil and/or hazardous material;
- (h) any agency of the Commonwealth or any public utility company that owns a right of way that is a site from or at which there is or has been a release or threat of release of oil and/or hazardous material; and
- (i) any person otherwise required to notify the Department of a release or threat of release pursuant to M.G.L. c. 21E.

- (2) If a release to the environment has occurred or a threat of release to the environment exists at any site or vessel and there is a substantial likelihood that such release or threat of release includes or would include oil and/or hazardous material which appears at 310 CMR 40.1600 or exhibits any of the characteristics described in 310 CMR 40.0347, then any owner, operator, or fiduciary or secured lender who holds title to or possession of such site or vessel, shall determine whether such is the case, and whether any such release or threat of release requires notification to the Department under 310 CMR 40.0300.

40.0332: Timing of Notifications

- (1) Two Hour Notifications. Notification to the Department of any release or threat of release specified in 310 CMR 40.0311 and 40.0312 shall be made as soon as possible but not more than two hours after obtaining knowledge that the release or threat of release meets one or more of the sets of notification criteria, unless the person responsible for notifying establishes, by a preponderance of the evidence, that extenuating circumstances prevented notification within said two hour time period. In that event, notification to the Department shall be made as soon as possible thereafter, taking into account the extenuating circumstances. Extenuating circumstances shall include, without limitation, the following:

- (a) a lack of reasonably available communication equipment at the site of the release or threat of release;
- (b) a need to take actions prior to notification in order to mitigate or prevent an Imminent Hazard and/or threat to public safety; and/or
- (c) a physical injury to the person responsible for notifying caused by or associated with the release or threat of release, when the injury reasonably prevents that person from notifying.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

40.0332: continued

(2) 72 Hour Notifications. Notification to the Department of any release or threat of release specified in 310 CMR 40.0313 and 40.0314 shall be made not more than 72 hours after obtaining knowledge that the release or threat of release meets one or more of the sets of notification criteria.

(3) 120 Day Notifications. Notification to the Department of any release specified in 310 CMR 40.0315 shall be made not more than 120 days after obtaining knowledge that the release meets one or more of the sets of notification criteria, and prior to the commencement of any remedial actions at the site, with the exception of Limited Removal Actions, as set forth in 310 CMR 40.0318.

(4) If a release or threat of release is subject to more than one notification time period, the shorter time period shall apply.

(5) No provision of 310 CMR 40.0332 shall be construed to prevent a person responsible for notifying from implementing a response action necessary to mitigate or prevent an Imminent Hazard.

(6) No provision of 310 CMR 40.0332 shall be construed to allow an unreasonable delay in notification of the Department after obtaining knowledge of a release or threat of release that meets one or more of the sets of notification criteria specified in 310 CMR 40.0311 or 40.0312.

(7) The notification timelines specified in 310 CMR 40.0332 shall commence at the time that the person required to notify obtains knowledge, or at the time that a person who has knowledge obtains the status of a person required to notify, whichever is later.

40.0333: How to Notify

(1) Two Hour and Seventy-Two Hour Notifications. Persons described in 310 CMR 40.0331(1) shall:

(a) notify the Department of a release or threat of release specified in 310 CMR 40.0311 through 40.0314, by calling a telephone number published by the Department and designated for that purpose and orally providing to the Department the information specified in 310 CMR 40.0334; and

(b) within 60 days thereafter, submit a completed Release Notification Form, as described in 310 CMR 40.0371, to the Department office located in the DEP region in which the release or threat of release occurred. Where appropriate, the Release Notification Form may be accompanied by a Permanent or Temporary Solution Statement, as described in 310 CMR 40.1000.

(2) 120 Day Notifications. Persons described in 310 CMR 40.0331(1) shall notify the Department of a release specified in 310 CMR 40.0315 by submitting a completed Release Notification Form, as described in 310 CMR 40.0371, to the Department office located in the DEP region in which the release occurred. Where appropriate, the Release Notification Form may be accompanied by a Permanent or Temporary Solution Statement, as described in 310 CMR 40.1000.

40.0334: Content of the Notification

Oral notification to the Department pursuant to 310 CMR 40.0333(1)(a) shall consist of the following information to the extent known to the person responsible for providing the notification:

(a) the name and telephone number of the caller;

(b) the location of the release or threat of release, including, where applicable:

1. the address [street name and number, city or town, and zip code]; and

2. a narrative description of the location (*e.g.*, location aid such as mile marker, business type/name);

(c) the date and time the release occurred;

(d) the set(s) of notification criteria that is the basis for notification;

40.0334: continued

- (e) the name of the oil and/or hazardous material(s) released or of which there is a threat of release;
- (f) the approximate quantity of the oil and/or hazardous material(s) which has been released or of which there is a threat of release;
- (g) the source of the release or threat of release;
- (h) a brief description of the release or threat of release;
- (i) the name and telephone number of the owner/operator of the site or vessel where the release has occurred or at which there is a threat of release;
- (j) the name and telephone number of a contact person at the site or vessel where the release has occurred or at which there is a threat of release;
- (k) a description of Immediate Response Actions taken or proposed to be taken in response to the release or threat of release, as specified in 310 CMR 40.0420;
- (l) the names of other federal, state or local government agencies that have been notified of and/or have responded to the release or threat of release; and
- (m) any other information, including without limitation, potential environmental impacts, that is relevant to assessing the degree of hazard posed by the release or threat of release.

40.0335: Retracting a Notification

- (1) A notification of a release or threat of release of oil and/or hazardous material made by a person described in 310 CMR 40.0331(1) may be retracted in those cases where additional information obtained subsequent to such notification substantiates that:
 - (a) in the case of a reported release, no release actually occurred;
 - (b) in the case of a reported threat of release, conditions posing a threat of release did not actually exist; or
 - (c) the subject release or threat of release did not meet one or more of the sets of notification criteria specified in 310 CMR 40.0300. Retractions of this nature shall only be made by the person described at 310 CMR 40.0331(1) who originally provided notification to the Department of such release or threat of release, or, in cases where notification was made on behalf of a corporate entity, by another authorized employee or agent of that corporation.
- (2) All retractions pursuant to 310 CMR 40.0335 shall be in writing and shall include, at a minimum, the following:
 - (a) the address of the location at which the release or threat of release was initially reported;
 - (b) the Release Tracking Number assigned by the Department for the reported release or threat of release;
 - (c) an explanation of the events and site conditions that resulted in the original notification;
 - (d) a summation of facts, data, and/or other relevant information that demonstrates that the release did not actually occur or the conditions posing the threat of release did not actually exist, or that the release or threat of release did not meet one or more sets or reporting criteria; and
 - (e) the signature of the person retracting the notification, attesting to the accuracy and completeness of the information contained in the retraction submittal, as specified at 310 CMR 40.0009.
- (3) Except as provided in 310 CMR 40.0335(7), all retractions pursuant to 310 CMR 40.0335 must be received by the Department no later than 60 days after the person providing the retraction first notified the Department of the subject release or threat of release.
- (4) All retractions pursuant to 310 CMR 40.0335 shall be submitted to the Department using a transmittal form established by the Department for such purposes.
- (5) Submission of a notification retraction in conformance with the provisions of 310 CMR 40.0335 shall terminate all future response action requirements and submittals that would otherwise be necessitated by the reporting of said release or threat of release, unless written notice to the contrary is provided by the Department within 21 days of the Department's receipt of such retraction.

40.0335: continued

(6) Nothing in 310 CMR 40.0335 shall limit the Department's authority to initiate, oversee, or order the performance of any response action deemed necessary by the Department to protect health, safety, public welfare, or the environment.

(7) The deadline for retracting notifications established by 310 CMR 40.0335(3) shall be extended to the date that is 90 days after the effective date of the first revision to the definition of the term "Potentially Productive Aquifer" in 310 CMR 40.0006 and to 310 CMR 40.0932(5)(b) promulgated after December 15, 1995, provided that the following conditions are met:

- (a) the groundwater at such disposal site at the time of notification is defined as Category RCGW-1 solely pursuant to 310 CMR 40.0362(1)(a)3. (*i.e.*, such groundwater is defined as RCGW-1 solely because the groundwater is within a Potentially Productive Aquifer); and/or
- (b) the soil is defined as Category RCS-1 solely pursuant to 310 CMR 40.0361(1)(a)2. (*i.e.*, the soil is defined as RCS-1 solely due to its location above groundwater that meets the requirements of 310 CMR 40.0362(1)(a), and such groundwater is defined as Category RCGW-1 solely pursuant to the requirements of 310 CMR 40.0362(1)(a)3.).

40.0336: Notification Requirements for Persons that Receive a Notice of Responsibility

(1) Except as provided in 310 CMR 40.0336(2), persons who have not previously notified the Department of a release or threat of release in accordance with 310 CMR 40.0300, and who receive a Notice of Responsibility from the Department requiring submittal of a Release Notification Form for a release or threat of release, shall submit such Release Notification Form to the appropriate Department Regional Office within 60 days of receipt of such Notice of Responsibility.

(2) Persons who received a Notice of Responsibility pursuant to 310 CMR 40.0336(1) who believe:

- (a) they are not a person described at 310 CMR 40.0331(1);
- (b) a release of oil or hazardous material did not actually occur;
- (c) conditions posing a threat or release did not actually exist; or
- (d) a release or threat of release which did occur did not meet one or more sets of notification criteria set forth in 310 CMR 40.0300, shall submit notice of the same to the Department within 60 days of receipt of such Notice of Responsibility.

40.0340: Identification of Oil and Hazardous Material

40.0341: Purpose and Scope

310 CMR 40.0340 through 40.0347, cited collectively as 40.0340:

- (1) identify and otherwise describe those oils and hazardous materials which are subject to 310 CMR 40.0000;
- (2) set forth the criteria used by the Department to list certain oils and hazardous materials at 310 CMR 40.1600 and to identify the characteristics of unlisted hazardous materials as set forth in 310 CMR 40.0347; and
- (3) set forth the procedures for adding and deleting oil or hazardous material to or from 310 CMR 40.1600.

40.0342: Methods of Identification of Oil and Hazardous Material

(1) The Department employs three methods to identify or otherwise describe those oils and hazardous materials which are subject to M.G.L. c. 21E and 310 CMR 40.0000. These methods are:

- (a) identification of those substances which meet the definitions of oil or hazardous material set forth in 310 CMR 40.0006;
- (b) listing of specific oils and hazardous materials; and
- (c) identification of the characteristics of a material which make it hazardous.

40.0342: continued

- (2) Accordingly, a substance is an oil or hazardous material if:
- (a) the substance meets any of the definitions of oil or hazardous material set forth in 310 CMR 40.0006;
 - (b) the substance is listed at 310 CMR 40.1600; or
 - (c) the substance exhibits any of the characteristics of a hazardous material identified in 310 CMR 40.0347(1) through (5).

40.0343: Criteria for Listing Oil and Hazardous Material

In determining whether to list a substance as an oil or hazardous material, the Department shall consider whether or not the substance meets the statutory definition of oil or hazardous material. This determination by the Department shall include, but not be limited to, a consideration of the following factors:

- (1) whether or not other state or federal agencies with expertise in the regulation and management of such substances have identified or characterized that substance as hazardous to health, safety, public welfare, or to the environment;
- (2) the extent to which the substance exhibits the characteristics of acute toxicity, chronic toxicity, carcinogenicity, mutagenicity, ignitability, corrosivity, reactivity, infectivity or radioactivity; and
- (3) any substantial and relevant scientific data submitted by any person in support of adding any substance to or deleting any substance from 310 CMR 40.1600.

40.0344: Adding and Deleting Substances to or from the Massachusetts Oil and Hazardous Material List

- (1) The Department shall review the Massachusetts Oil and Hazardous Material List, which appears at 310 CMR 40.1600, at least once every five years for the purposes of adding or deleting oil and/or hazardous material.
- (2) Substances may be added to or deleted from 310 CMR 40.1600 at any time in accordance with the following procedures:
 - (a) The Department may, in accordance with the procedures set forth in M.G.L. c. 30A and other applicable laws for adopting, amending or repealing regulations:
 - 1. add substances to 310 CMR 40.1600 that meet any of the criteria set forth in 310 CMR 40.0343; or
 - 2. delete substances from 310 CMR 40.1600 that do not meet the criteria set forth in 310 CMR 40.0343.
 - (b) Any person may petition the Commissioner to add a substance to or delete a substance from 310 CMR 40.1600. Any such petition shall include scientific evidence that a material does or does not meet the criteria set forth in 310 CMR 40.0343.
- (3) Any substance that is added to or deleted from either the CERCLA List of Hazardous Substances set out at 40 CFR Part 302.4 or the List of Extremely Hazardous Substances set out at 40 CFR Part 355, Appendix A after the date of promulgation of 310 CMR 40.0300 shall be evaluated by the Department pursuant to the criteria set forth in 310 CMR 40.0343 to determine if that substance should be added to or deleted from 310 CMR 40.1600.

40.0345: The Massachusetts Oil and Hazardous Material List

The oils and hazardous materials listed at 310 CMR 40.1600 are subject to the requirements of 310 CMR 40.0000 unless specifically excluded from regulation thereunder. The Reportable Quantities and Reportable Concentrations which appear beside listed oils and hazardous materials represent those levels which, upon their release or threat of release, invoke the notification requirements of 310 CMR 40.0300.

40.0346: Criteria for Determining the Characteristics of Hazardous Material

In determining whether a substance should be identified as a hazardous material by characteristic, the Department shall first determine that the characteristic can be either:

- (1) measured by an available standardized test method that is within the capability of independent laboratories that are available to the public; or
- (2) reasonably detected by persons handling hazardous material through their knowledge of those materials.

40.0347: Characteristics of Hazardous Material

310 CMR 40.0347 describes the characteristics of materials that are hazardous materials but that may not be listed at 310 CMR 40.1600. Any material that exhibits one or more of the following characteristics is subject to 310 CMR 40.0000, unless it is specifically excluded from regulation thereunder.

(1) Ignitability:

- (a) A substance is a hazardous material if a representative sample exhibits any of the following properties:
 1. it is a liquid and has a flash point of less than 60°C [approximately 140°F]. However, an aqueous solution of ethyl alcohol which contains less than 24% alcohol by volume is not considered ignitable under 310 CMR 40.0000;
 2. it is not a liquid and is capable under standard temperature and pressure of catching fire through friction, absorption of moisture or spontaneous chemical changes and, when ignited, burns so vigorously and persistently that it creates a hazard;
 3. it is a compressed gas and ignitable; or
 4. it is an oxidizer;
- (b) The flash point of liquids shall be determined by any of the following methods:
 1. a Pensky-Martens Closed Cup Tester, using the test method specified in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods";
 2. a Setaflash Closed Cup Tester, using the test method specified in 310 CMR 30.152(1)(a); or
 3. an equivalent test method approved by the Department;
- (c) Compressed gas shall be characterized as ignitable if any of the following occurs when the gas is subjected to any of the following tests:
 1. either a mixture of 13% or less (by volume) with air forms a flammable mixture or the flammable range is wider than 12% regardless of the lower limit. These limits shall be determined at atmospheric temperature and pressure using sampling methods and test procedures acceptable to the U.S. Bureau of Explosives;
 2. using the Flame Projection Apparatus of the U.S. Bureau of Explosives, the flame projects more than 18 inches beyond the ignition source with the valve opened fully, or the flame flashes back and burns at the valve with any degree of valve opening;
 3. using the Open Drum Apparatus of the U.S. Bureau of Explosives, there is any significant propagation of flame away from the ignition source; or
 4. using the Closed Drum Apparatus of the U.S. Bureau of Explosives, there is any explosion of the vapor-air mixture in the drum.

(2) Corrosivity:

- (a) A material is a hazardous material if a representative sample exhibits any of the following properties:
 1. it is aqueous and has a pH equal to or less than 2.0 or equal to or greater than 12.5;
 2. it is a liquid and corrodes steel (Type SAE 1020) at a rate greater than 6.35 mm per year at a test temperature of 55°C; or
 3. it is a liquid or solid that causes visible destruction or irreversible alterations in mammalian skin tissue at the site of contact.
- (b) pH shall be determined by a pH meter using either method 5.2 in the "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods" or by an equivalent test method approved by the Department.

40.0347: continued

(c) The rate of corrosion of steel shall be determined by the test method specified by the National Association of Corrosion Engineers, standard TM-01-60, as standardized in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods" or by an equivalent test method approved by the Administrator of EPA or by the Department.

(3) Reactivity. A material is a hazardous material if a representative sample exhibits any of the following properties:

- (a) it is normally unstable and readily undergoes violent changes without detonating;
- (b) it reacts violently with water;
- (c) it forms potentially explosive mixtures with water;
- (d) when mixed with water, it generates toxic gases, vapors or fumes in a quantity sufficient to present a danger to health, safety, public welfare, or the environment;
- (e) it is a cyanide or sulfide-bearing material which, when exposed to a pH of between 2.0 and 12.5, can generate toxic gases, vapors or fumes in a quantity sufficient to present a danger to health, safety, public welfare, or the environment;
- (f) it is capable of detonation or explosive reaction if it is subjected to a strong initiating source or if heated under confinement;
- (g) it is readily capable of detonation or explosive decomposition or reaction at a standard temperature and pressure; or
- (h) it is a forbidden explosive, a Class A or Class B explosive, as defined in 49 CFR §§ 173.50, 173.53 and 173.88, respectively.

(4) Toxicity. A material is a hazardous material if it exhibits the characteristic of toxicity described at 310 CMR 30.125B, unless specifically excluded.

(5) Infectious Material. Infectious materials are those materials, that, because of their infectious characteristics may:

- (a) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible or incapacitating reversible illness; or
- (b) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, disposed of or otherwise managed. Infectious materials include but are not limited to those infectious wastes described in 105 CMR 130.360: *Medical Waste Disposal*. Infectious materials are hazardous materials subject to 310 CMR 40.0000, unless specifically excluded from regulation thereunder.

40.0350: Reportable Quantities for Oil and Hazardous Material

(1) The Reportable Quantities for the following substances are established in 310 CMR 40.0351 and 40.0352:

- (a) oils and hazardous materials that are listed at 310 CMR 40.1600; and
- (b) hazardous materials that exhibit one or more of the characteristics set forth in 310 CMR 40.0347(1) through (5).

(2) All releases into the environment of the same oil or hazardous material from a single facility in a 24 hour period shall be aggregated to determine if a Reportable Quantity for the respective oil or hazardous material has been reached or exceeded.

40.0351: Reportable Quantities for Oil

Reportable Quantities for oils appear at 310 CMR 40.1600.

40.0352: Reportable Quantities for Hazardous Material

(1) Listed Hazardous Material:

- (a) Reportable Quantities for listed hazardous material appear at 310 CMR 40.1600; and
- (b) the applicable Reportable Quantity for a hazardous material that is listed at 310 CMR 40.1600 and that also exhibits one or more of the characteristics described at 310 CMR 40.0347(1) through (5) shall be the Reportable Quantity listed at 310 CMR 40.1600 for that particular hazardous material.

40.0352: continued

(2) Unlisted Hazardous Materials Identified by Characteristic. The Reportable Quantity for hazardous materials that are not listed at 310 CMR 40.1600 but that exhibit one or more of the characteristics of ignitability, corrosivity or reactivity described at 310 CMR 40.0347(1) through 40.0347(3) or that are infectious materials as described in 310 CMR 40.0347(5) is ten pounds.

(3) Unlisted Hazardous Materials which are Hazardous Material Because They Exhibit the Characteristic of Toxicity:

(a) The Reportable Quantity for unlisted hazardous materials that exhibit the characteristic of toxicity under the provisions of 310 CMR 30.125B shall be the Reportable Quantity listed at 310 CMR 40.1600 for the hazardous material on which the characteristic of toxicity is based. The Reportable Quantity applies to the entire amount of the unlisted hazardous material and not merely to the listed component hazardous material. If an unlisted hazardous material exhibits the characteristic of toxicity on the basis of more than one of its component hazardous materials, the Reportable Quantity for the entire amount of the unlisted hazardous material shall be the Reportable Quantity for that component hazardous material which has the lowest Reportable Quantity in 310 CMR 40.1600.

(b) If an unlisted hazardous material exhibits the characteristic of toxicity, as described in 310 CMR 30.125B, and one or more of the other characteristics described in 310 CMR 40.0347(1) through (3), or in 310 CMR 40.0347(5), the Reportable Quantity for the entire amount of the unlisted hazardous material shall be the lowest of the applicable Reportable Quantities.

(4) Mixtures or solutions:

(a) When a mixture or solution contains one or more component materials that are hazardous materials which appear at 310 CMR 40.1600 or that exhibit one or more of the characteristics of ignitability, corrosivity, or reactivity described at 310 40.0347(1) through (3), releases or threats of release to the environment of the mixture shall be reported to the Department under 310 CMR 40.0311 through 40.0312, when any of the following conditions exist:

1. the concentrations of the component hazardous materials are known and the quantity of any of the component hazardous materials released or threatening to be released is equal to or greater than the Reportable Quantities for those component hazardous materials;

2. the mixture or solution contains at least two component hazardous materials, the concentrations of the component hazardous materials are known and the quantity of any of the component hazardous materials released or threatened to be released does not exceed their respective Reportable Quantity but the total quantity of the hazardous material in the mixture or solution released or threatened to be released is equal to or greater than 50 pounds; or

3. the concentrations of the component hazardous materials are not known, and the total quantity of the mixture or solution released or threatened to be released is equal to or greater than the Reportable Quantity for that component hazardous material which has the lowest Reportable Quantity in 310 CMR 40.1600.

(b) The Reportable Quantity for mixtures which are hazardous material because they exhibit the characteristic of toxicity, as described in 310 CMR 30.125B, shall be determined according to 310 CMR 40.0352(3).

(c) The Reportable Quantity provisions of 310 CMR 40.0352(4) do not apply to soils, sediments, residuals, surface waters and groundwaters that are being managed otherwise in compliance with all federal, state and local laws, regulations, and ordinances.

(5) Materials Containing Polychlorinated Biphenyls:

(a) Releases or threats of release to the environment of materials that contain polychlorinated biphenyls shall be reported to the Department pursuant to 310 CMR 40.0300, if:

1. the concentration of polychlorinated biphenyls in a material is either unknown or known to be less than 500 ppm, and the release or threat of release of such material is equal to or greater than ten gallons; or

2. the concentration of polychlorinated biphenyls in a material is known or likely to be equal to or greater than 500 ppm, and the release or threat of release of such material is equal to or greater than one gallon.

40.0352: continued

(b) The Reportable Quantity provisions of 310 CMR 40.0352(5) do not apply to soils, sediments, residuals, surface waters and groundwaters that are being managed otherwise in compliance with all federal, state and local laws, regulations, and ordinances.

40.0360: Reportable Concentrations for Oil and Hazardous Material

(1) A release indicated by the measurement of oil and/or hazardous material in soil and/or groundwater requires notification to the Department under the provisions of 310 CMR 40.0315 if the measured concentration of one or more listed substance in 310 CMR 40.1600 in any soil or groundwater sample is equal to or greater than the media and category-specific Reportable Concentration value listed at 310 CMR 40.1600 in effect on the date of the sample analysis.

(2) Except for gasoline, kerosene, and aviation fuel, the Reportable Concentration for the oils listed at 310 CMR 40.1600 shall be the Reportable Concentration established in 310 CMR 40.1600 for Total Petroleum Hydrocarbons (TPH) or the Reportable Concentrations established in 310 CMR 40.1600 for the Aliphatic Hydrocarbon Fractions and/or Aromatic Hydrocarbon Fractions which comprise these products. Notification shall not be required for sites solely on the basis of a measurement of TPH equal to or greater than an applicable Reportable Concentration if data exists demonstrating that concentrations of the Aliphatic and Aromatic Hydrocarbon Fractions comprising the TPH are less than the applicable Reportable Concentrations established in 310 CMR 40.1600.

(3) The Reportable Concentration for gasoline, kerosene, and aviation fuel shall be the Reportable Concentrations established in 310 CMR 40.1600 for the Aliphatic and Aromatic Hydrocarbon Fractions which comprise these products.

(4) The Reportable Concentration for Chromium shall be the Reportable Concentration established in 310 CMR 40.1600 for Total Chromium or the Reportable Concentrations established in 310 CMR 40.1600 for the specific species of chromium. Notification shall not be required for sites solely on the basis of a measurement of Total (unspeciated) Chromium equal to or greater than the Reportable Concentration for Total Chromium if data exists demonstrating that the concentrations of Hexavalent Chromium (Cr VI) and Trivalent Chromium (Cr III) are both less than their applicable Reportable Concentrations established in 310 CMR 40.1600.

(5) The Reportable Concentration values for the hazardous materials listed at 310 CMR 40.1600, including hazardous materials that may be components of oil or waste oil, shall be compared to concentrations of hazardous material in soil or groundwater that have been measured by the analytical procedures detailed in EPA Publication SW-846, *Test Methods for Evaluating Solid Waste*, the Department's Compendium of Analytical Methods or any other appropriate analytical procedure, as described in 310 CMR 40.0017.

(6) The techniques utilized for obtaining soil and groundwater samples for comparison to the Reportable Concentration values listed at 310 CMR 40.1600 shall be in conformance with generally accepted practices and procedures, consistent with the Response Action Performance Standard described in 310 CMR 40.0191, and shall not involve measures or steps that are undertaken to cause or promote the dilution of analyte values for the sole purpose of avoiding reporting obligations imposed in 310 CMR 40.0315.

(7) Persons notifying the Department of a release under the provisions of 310 CMR 40.0315 and 40.0360 through 40.0369 shall specify whether the measured concentration of one or more of the listed substances in 310 CMR 40.1600 constitutes a release of oil, hazardous material, or both oil and hazardous material. Such a determination shall be based upon:

- (a) factual evidence relating to the source and mechanism of the release;
- (b) factual evidence relating to the storage, use and disposal of oil and hazardous material at the site of the release; and/or
- (c) analytical characterization of the release.

40.0361: Reportable Concentrations of Oil and Hazardous Material in Soil

(1) For the purpose of determining whether a notification obligation exists under 310 CMR 40.0315, measured concentrations of any oil or hazardous material listed at 310 CMR 40.1600 shall be compared to the Reportable Concentration value in the reporting category that best characterizes the current use of the site under evaluation, as described below:

(a) Reporting Category RCS-1. Reporting category RCS-1 shall be applied to all soil samples obtained:

1. at or within 500 feet of a residential dwelling, a residentially-zoned property, school, playground, recreational area or park; or
2. within the geographic boundaries of a groundwater resource area categorized as RCGW-1 in 310 CMR 40.0362(1)(a).

(b) Reporting Category RCS-2. Reporting category RCS-2 shall be applied to all soil samples that are not obtained from category RCS-1 areas.

(2) Reporting category RCS-1 shall be selected whenever and wherever reasonable doubts exist over the selection of the appropriate soil Reportable Concentration category.

40.0362: Reportable Concentrations of Oil and Hazardous Material in Groundwater

(1) For the purpose of determining whether a notification obligation exists under 310 CMR 40.0315, measured dissolved concentrations of any oil or hazardous material listed at 310 CMR 40.1600 shall be compared to the Reportable Concentration value in the reporting category that best characterizes the site under evaluation, as described below:

(a) Reporting Category RCGW-1. Reporting category RCGW-1 shall be applied to all groundwater samples obtained:

1. within a Current Drinking Water Source Area; or
2. within a Potential Drinking Water Source Area.

(b) Reporting Category RCGW-2. Reporting category RCGW-2 shall be applied to all groundwater samples that are not obtained from category RCGW-1 areas.

(2) Reporting category RCGW-1 shall be selected whenever and wherever reasonable doubts exist over the selection of the appropriate groundwater Reportable Concentration category.

40.0370: Requirements for Releases of Oil and/or Hazardous Material That Do Not Require Notification

(1) Response actions shall be undertaken for releases or threats of release of oil and/or hazardous material that do not require notification under 310 CMR 40.0300 if the releases or threats of release pose a significant risk to health, safety, public welfare, or the environment, as described in 310 CMR 40.0900.

(2) Persons undertaking response actions for releases or threats of release of oil and/or hazardous material that do not require notification under 310 CMR 40.0300, unless otherwise notified by the Department, are not subject to the submittal requirements, approvals, or fees specified in 310 CMR 40.0000. All such response actions shall conform to all applicable federal, state or local laws, regulations, or ordinances.

40.0371: Release Notification Form

(1) Written notification of releases and threats of release required under 310 CMR 40.0333 shall be submitted to the Department on a form established by the Department for such purposes and shall include, without limitation, the following:

(a) the location and address where the release or threat of release occurred;

1. the street number, city or town, and zip code, where applicable; and
2. the location coordinates;

(b) the time and date when the release or threat of release occurred;

(c) the time(s) and date(s) when the person(s) required to provide the notification to the Department pursuant to 310 CMR 40.0331 obtained knowledge that the release or threat of release met one or more sets of notification criteria established in 310 CMR 40.0311 through 40.0315;

40.0371: continued

- (d) the time(s) and date(s) when oral notification of the release or threat of release was made to the Department, if applicable;
- (e) the set(s) of notification criteria met, as specified at 310 CMR 40.0311 through 40.0315;
- (f) the names and amounts of oil and/or hazardous material released or threatened to be released;
- (g) the names and mailing addresses of the owners of all properties impacted by the release or threat of release;
- (h) the name(s) and address(es) of the person(s) providing the notification of the release or threat of release;
- (i) the affiliation of the person(s) making the notification to the site of the release or threat of release, as described in 310 CMR 40.0331;
- (j) a signed and dated certification statement from the person(s) reporting the release or threat of release attesting to the truth and accuracy of the information provided, as specified at 310 CMR 40.0009; and
- (k) such other information as the Department may from time to time determine is necessary and useful in the fulfillment of its statutory obligations under M.G.L. c. 21E and 310 CMR 40.0300.

(2) Persons required to notify of releases or threats of release to the Department under 310 CMR 40.0300 shall make reasonable efforts to obtain and preserve the information required in the Release Notification Form described in 310 CMR 40.0371(1), in order to furnish same to the Department.

(3) Persons providing notification of a release(s) or threat(s) of release(s) shall also provide a copy of the Release Notification Form to the Chief Municipal Officer and the Board of Health in accordance with 310 CMR 40.1403(3)(h).

SUBPART D: PRELIMINARY RESPONSE ACTIONS
AND RISK REDUCTION MEASURES

40.0400: Preliminary Response Actions and Risk Reduction Measures

310 CMR 40.0401 through 40.0499, cited collectively as 310 CMR 40.0400, set forth requirements and procedures for Preliminary Response Actions and risk reduction measures.

40.0401: Purpose and Scope

The purpose of 310 CMR 40.0400 is to describe the nature and extent of Preliminary Response Actions that are undertaken at a site or vessel following a release or the discovery of a release or a threat of release of oil and/or hazardous material, and to prescribe standards and procedures for conducting Immediate Response Actions, Release Abatement Measures, and Utility-related Abatement Measures, whether they are conducted as part of a Preliminary Response Action or at any other time.

40.0402: Applicability

The provisions of 310 CMR 40.0400 apply to releases and threats of release of oil and/or hazardous material that require reporting to the Department under the provisions of 310 CMR 40.0300. No provision of 310 CMR 40.0400 shall limit the authority of the Department to initiate, oversee or order the performance of any response action deemed necessary by the Department to protect health, safety, public welfare or the environment.

40.0403: Responses to Releases and Threats of Release

(1) Response actions shall be taken by RPs, and may be taken by PRPs and Other Persons, to assess and, where necessary, remediate all releases and threats of release of oil and/or hazardous material to the environment.

40.0403: continued

- (2) The nature, extent and timing of response actions shall be dependent upon the type(s) and amount(s) of oil and/or hazardous material released or threatening to be released, site conditions, and the proximity and sensitivity of human and environmental receptors.
- (3) Preliminary Response Actions, as described in 310 CMR 40.0405, shall be conducted within the one year period following the earliest date specified in 310 CMR 40.0404(3). Preliminary Response Actions may be sufficient for complete evaluation and/or remediation of localized or uncomplicated releases and threats of release at some sites, and shall consist of:
 - (a) Initial Site Investigation Activities, as described in 310 CMR 40.0405(1), up to and including those activities required for preparation of a Phase I Report, if necessary, as described in 310 CMR 40.0480; and
 - (b) where required, one or more Immediate Response Actions, as described in 310 CMR 40.0410, or, where appropriate, one or more Release Abatement Measures, as described in 310 CMR 40.0440.
- (4) Comprehensive Response Actions, as described in 310 CMR 40.0800, shall be undertaken whenever a Permanent Solution, as described in 310 CMR 40.1000, is not achieved at a site based upon Preliminary Response Actions.
- (5) A Permanent Solution Statement, as described in 310 CMR 40.1000, shall be submitted to the Department at the conclusion of response actions conducted at a site pursuant to 310 CMR 40.0000. A Permanent Solution Statement may be submitted for one or more releases or threats of release at a site, disposal site, or portion of a disposal site.

40.0404: Timing of Response Actions

- (1) RPs and any other persons conducting response actions shall initiate, implement, and complete those response actions described in 310 CMR 40.0400 within the time frames specified in 310 CMR 40.0400 and/or any Interim Deadlines specified by the Department pursuant to 310 CMR 40.0167.
- (2) RPs and any other persons conducting response actions shall submit all required plans, status reports, completion reports, and other required response action documentation described in 310 CMR 40.0400 within the time frames specified in 310 CMR 40.0400 and/or any Interim Deadline specified by the Department pursuant to 310 CMR 40.0167.
- (3) Except for notifications retracted pursuant to the provisions of 310 CMR 40.0335, a Permanent Solution Statement or Tier Classification Submittal shall be received by the Department within one year of the earliest following dates:
 - (a) the date that oral notification is received by the Department from any person listed at 310 CMR 40.0331 of a release or threat of release that requires notification pursuant to the "two Hour" or "72 Hour" notification provisions of 310 CMR 40.0311 through 40.0314;
 - (b) the date that written notification is received by the Department from any person listed at 310 CMR 40.0331 of a release that requires notification pursuant to the "120 Day" notification provisions of 310 CMR 40.0315; or
 - (c) the date that the Department issues a Notice of Responsibility to any person listed at 310 CMR 40.0331 specifying that they are an RP or PRP for a release or threat of release that requires a response action pursuant to 310 CMR 40.0400.
- (4) Remedial actions shall not be undertaken or continued at any site by any person until that person provides notification to the Department of their knowledge of any releases or threats of release that meet one or more sets of notification criteria specified in 310 CMR 40.0300, except for:
 - (a) Limited Removal Actions undertaken in compliance with the provisions of 310 CMR 40.0318;
 - (b) time-critical Immediate Response Actions undertaken to address a release or threat of release of oil and/or hazardous material pursuant to the provisions of 310 CMR 40.0332 and 310 CMR 40.0421;

40.0404: continued

- (c) the limited excavation of contaminated soil associated with the closure of an Underground Storage Tank system, as specified at 310 CMR 40.0421(3); or
- (d) time-critical Utility-related Abatement Measures undertaken to prevent or abate an immediate and substantial danger to public safety, as specified in 310 CMR 40.0462(3).

(5) Releases and/or threats of release that occur at a disposal site after Tier Classification of that disposal site shall not be subject to the one year time frames specified in 310 CMR 40.0404(3), provided that response actions are being conducted at the disposal site in compliance with the provisions of 310 CMR 40.0000, including, where appropriate, the submission of all necessary Immediate Response Action Plans, Status Reports, and Completion Statements.

40.0405: Overview of Preliminary Response Actions

(1) Initial Site Investigation Activities.

(a) Initial Site Investigation Activities shall consist of limited investigative and assessment actions of sufficient scope and level of effort to make and/or guide determinations on required and appropriate response actions at a site. Initial Site Investigation Activities may include, without limitation:

1. evaluation of records relating to the release, threat of release or impacted site;
2. evaluation of underground storage tank testing results;
3. testing and/or retesting of underground storage tanks;
4. evaluation of environmental monitoring data;
5. limited sampling and analysis of soil, sediment, groundwater, surface water, soil gas, indoor air or ambient air; and
6. any other limited investigations, monitoring, surveys, testing or information gathering activities necessary to evaluate releases and threats of release of oil and/or hazardous material, excluding removal and containment actions.

(b) The objective of Initial Site Investigation Activities is to obtain preliminary information and data on a release, a threat of release and/or site in order to:

1. determine the existence, source, nature and approximate extent of the release or threat of release;
2. determine if the release or threat of release poses or could pose an Imminent Hazard, as described in 310 CMR 40.0321;
3. determine if an Immediate Response Action is necessary, as described in 310 CMR 40.0412;
4. determine if a Limited Removal Action is appropriate at the site, as described in 310 CMR 40.0318;
5. determine if a Release Abatement Measure is appropriate at the site, as described in 310 CMR 40.0440;
6. identify persons who are responsible or potentially responsible for the release or threat of release;
7. obtain, assemble and record information and data needed to evaluate the release or threat of release; and
8. determine if a demonstration can readily be made that a condition of No Significant Risk exists or has been achieved at the site, before or after the completion of a Limited Removal Action, Immediate Response Action, or Release Abatement Measure.

(c) The results of Initial Site Investigation Activities shall:

1. be used to support a Permanent Solution Statement at the conclusion of Preliminary Response Actions; or
2. be used as the basis for a Phase I Report, as described in 310 CMR 40.0480, whenever a Permanent Solution Statement is not filed for a site within one year of the initial notification to the Department of a release or threat of release at the site by any person listed at 310 CMR 40.0331.

(d) When used to support a Permanent Solution Statement, the results of Initial Site Investigation Activities shall be reported in a response action report or in a Phase I Report, pursuant to 310 CMR 40.0481, and shall contain all information, data, records and documents necessary for that purpose.

(e) Assessment activities conducted at a site prior to Tier Classification, as described in 310 CMR 40.0500, shall not require approval from the Department.

40.0405: continued

(2) Immediate Response Actions

(a) Immediate Response Actions are assessment and/or remedial actions that shall be undertaken in an expeditious manner to address sudden releases, Imminent Hazards and other time-critical release or site conditions. Immediate Response Actions shall be taken whenever and wherever timely actions are required to assess, eliminate, abate or mitigate adverse or unacceptable release, threat of release and/or site conditions, as set forth in 310 CMR 40.0412.

(b) Except as provided in 310 CMR 40.0420(12), remedial actions conducted as part of an Immediate Response Action require prior approval from the Department.

(3) Release Abatement Measures. Release Abatement Measures are remedial actions that may be voluntarily undertaken by persons conducting response actions at disposal sites. The purposes of Release Abatement Measures are to remediate limited or localized releases, and/or to mitigate the impacts of larger releases until such time as more comprehensive remedial actions can be instituted at the disposal site, in accordance with 310 CMR 40.0800.

40.0406: Possible Outcomes of Preliminary Response Actions

(1) Within the one year time period specified in 310 CMR 40.0404(3), one of the following actions shall be taken by RPs, and may be taken by PRPs or Other Persons:

(a) a Permanent Solution Statement shall be submitted to the Department, as described in 310 CMR 40.1000, indicating that assessment and/or remedial actions taken at the site have resulted in a Permanent Solution; or

(b) a Phase I Report and Tier Classification Submittal shall be submitted to the Department, in accordance with the provisions of 310 CMR 40.0500, indicating that a Comprehensive Response Action will be undertaken at the site.

(2) Permanent Solution Statements submitted to the Department at the conclusion of Preliminary Response Actions, and prior to Tier Classification, shall be accompanied by the Permanent Solution fee specified in 310 CMR 4.00: *Timely Action Schedule and Fee Provisions*, unless the Permanent Solution Statement is received by the Department within 120 days following the earliest date computed pursuant to 310 CMR 40.0404(3).

40.0410: Immediate Response Actions

310 CMR 40.0411 through 40.0429, cited collectively as 310 CMR 40.0410, set forth requirements and procedures for conducting Immediate Response Actions.

40.0411: General Provisions for Immediate Response Actions

(1) Immediate Response Actions shall assess release, threat of release and/or site conditions and, where appropriate, contain, isolate, remove or secure a release or threat of release of oil and/or hazardous material in order to:

(a) abate, prevent or eliminate an Imminent Hazard to health, safety, public welfare or the environment; and/or

(b) respond to other time-critical release, threat of release and/or site conditions.

(2) Any person who performs an Immediate Response Action shall do so in accordance with all applicable requirements and specifications prescribed in 310 CMR 40.0000. Except when specifically exempted by the Department due to the Department's level of involvement in the oversight of the Immediate Response Action, RPs, PRPs and Other Persons conducting Immediate Response Actions shall engage or employ the services of a Licensed Site Professional.

(3) The Department may make a determination that an Immediate Response Action involving assessment, containment and/or removal actions is needed at any site, consistent with the provisions of 310 CMR 40.0412. In such cases, the Department shall inform the RP or PRP of the need for, and scope of, response actions. When informing the RP or PRP would unacceptably delay the conduct of the Immediate Response Action, or when the RP or PRP is unable or unwilling to conduct the required actions, or otherwise fails to act in a timely manner, the Department may undertake the Immediate Response Action.

40.0411: continued

- (4) Immediate Response Actions shall not, to the extent practicable, prevent or impede the implementation of future response actions.
- (5) Immediate Response Actions shall be conducted in compliance with all applicable local, state and federal permitting and approval requirements.
- (6) Health and safety procedures consistent with the provisions of 310 CMR 40.0018 shall be implemented at sites where an Immediate Response Action is being conducted.
- (7) RPs, PRPs and Other Persons undertaking response actions under the provisions of 310 CMR 40.0000 shall continually assess and evaluate release and site conditions in order to determine if an Immediate Response Action is required.
- (8) RPs, PRPs or Other Persons conducting an Immediate Response Action that involves a remedial action(s) to prevent, control, or eliminate an Imminent Hazard or address a Critical Exposure Pathway shall comply with the provisions of 310 CMR 40.1403(11) for notifying Affected Individuals.

40.0412: Sites Where an Immediate Response Action is Required

Immediate Response Actions shall be conducted at the following sites:

- (1) sites or vessels where a release or threat of release of oil and/or hazardous material has occurred which requires notification to the Department under the "Two Hour" notification provisions of 310 CMR 40.0311 or 40.0312;
- (2) sites where a release or threat of release of oil and/or hazardous material has occurred which requires notification to the Department under the "72 Hour" notification provisions of 310 CMR 40.0313 or 40.0314;
- (3) sites where a release of oil and/or hazardous material has resulted in conditions which have been determined to pose an Imminent Hazard pursuant to 310 CMR 40.0950; and
- (4) any other site or vessel where the Department determines that immediate or accelerated response actions are necessary to prevent, eliminate, or minimize damage to health, safety, public welfare or the environment.

40.0414: Scope and Types of Immediate Response Actions

- (1) At a minimum, Immediate Response Actions shall involve the assessment of the release or threat of release and/or site conditions described in 310 CMR 40.0412. The nature and extent of assessment actions taken as an Immediate Response Action shall be commensurate with the type and amount of oil and/or hazardous material released or threatening to be released, site complexity, and the sensitivity of site and surrounding human and environmental receptors, and shall be adequate and sufficient for determining:
 - (a) the degree of hazard posed by the release, threat of release and/or site conditions;
 - (b) whether remedial actions are required at the site prior to the completion of a Phase IV Remedy Implementation Plan, as described in 310 CMR 40.0870; and
 - (c) where appropriate, the nature, extent, and timing of any required removal or containment actions.
- (2) Immediate Response Actions shall be presumed to require the initiation of one or more containment or removal actions. Except as provided in 310 CMR 40.0414(3) through 40.0414(5), the presumption for containment and/or removal actions may be rebutted, however, by the RP, PRP or Other Person conducting response actions, based upon a showing by a preponderance of the evidence that:
 - (a) the release, threat of release and/or site conditions do not present an Imminent Hazard, either at the present time or for the time period that is likely to be required for the implementation and/or completion of Comprehensive Response Actions; and

40.0414: continued

(b) the unmitigated migration of oil and/or hazardous material at the site, at present and for the time period that is likely to be required for the implementation and/or completion of Comprehensive Response Actions, is not likely to:

1. substantially increase the extent, area, or magnitude of environmental contamination;
2. substantially increase the degree or complexity of future remedial actions;
3. substantially increase cleanup costs; or
4. otherwise result in a substantial hazard to health, safety, public welfare or the environment.

(3) Immediate Response Actions shall be presumed to require the elimination and/or mitigation of Critical Exposure Pathways, which are defined in 310 CMR 40.0006. This presumption may be rebutted, however, by the RP, PRP or Other Person conducting response actions, based upon a showing by a preponderance of the evidence that:

- (a) the Critical Exposure Pathway(s) does not present an Imminent Hazard, either at present or for the time period that is likely to be required for the implementation and/or completion of Comprehensive Response Actions;
- (b) it is not feasible to eliminate the Critical Exposure Pathway(s); and
- (c) in cases where it is not feasible to eliminate the Critical Exposure Pathway(s), it is not feasible to mitigate the Critical Exposure Pathway(s).

(4) Immediate Response Actions shall be presumed to require the prevention and/or mitigation of Critical Exposure Pathways, which are defined in 310 CMR 40.0006. This presumption may be rebutted, however, by the RP, PRP or Other Person conducting response actions, based upon a showing by a preponderance of the evidence, that:

- (a) the Critical Exposure Pathway(s) does not present an Imminent Hazard, either at present or for the time period that is likely to be required for the implementation and/or completion of Comprehensive Response Actions;
- (b) it is not feasible to prevent the Critical Exposure Pathway(s); and
- (c) in cases where prevention is not feasible, it is not feasible to mitigate the Critical Exposure Pathway(s).

(5) Immediate Response Actions shall be presumed to require the prevention of impact(s) to public water supplies at sites where such impact is likely to occur within the time period that is likely to be required for the implementation and/or completion of Comprehensive Response Actions. This presumption may be rebutted, however, by the RP, PRP or Other Person conducting response actions, based upon a showing by a preponderance of the evidence that:

- (a) it is unlikely that the site will present impact(s) to the public water supply, for the time period that is likely to be required for the implementation and/or completion of Comprehensive Response Actions;
- (b) it is not feasible to prevent the impact(s) to the public water supply; and
- (c) in cases where prevention is not feasible, it is not feasible to mitigate the impact(s) to the public water supply.

(6) Immediate Response Actions may include:

- (a) preparation of technical reports or memoranda documenting why accelerated removal or containment actions are or are not required;
- (b) an assessment of whether an Imminent Hazard to health, safety, public welfare or the environment exists at the site;
- (c) collection and assessment of soil, sediment, surface water, groundwater, soil gas, or atmospheric or indoor air samples;
- (d) assessment of the validity of underground storage tank testing results;
- (e) assessment of the need to take timely actions to prevent releases from occurring at a site where a threat of release has been identified;
- (f) installation of fences, warning signs, including, where appropriate, multilingual and symbolic signs, and/or the institution of other security or site control measures;
- (g) installation of drainage controls;
- (h) construction or stabilization of berms, dikes or impoundments;
- (i) temporary covering or capping of contaminated soils or sludges;
- (j) installation of waste or product recovery and groundwater treatment systems or soil vapor extraction systems;

40.0414: continued

- (k) removal of contaminated soils;
- (l) removal of the contents of, or removal of, drums, barrels, tanks or other bulk containers which contain or may contain oil and/or hazardous material;
- (m) temporary evacuation or relocation of residents from the site and/or surrounding area;
- (n) provision of temporary alternative water supplies;
- (o) installation of a sub-slab soil gas depressurization system beneath an occupied structure;
- or
- (p) any other assessment, containment or removal action consistent with the purpose and scope of an Immediate Response Action or otherwise deemed necessary by the Department.

(7) A cap or engineered barrier that is constructed in accordance with the performance standards contained in 310 CMR 40.0996(5) as an Immediate Response Action will not be considered part of a Permanent Solution at a disposal site, unless and until a Phase III is performed pursuant to the provisions of 310 CMR 40.0850 demonstrating the lack of a feasible alternative.

40.0420: Requirements, Approvals, and Time Lines for Conducting Immediate Response Actions

- (1) Immediate Response Actions shall be taken by RPs, and may be taken by PRPs or Other Persons, in response to all releases and threats of release described in 310 CMR 40.0412.
- (2) Immediate Response Actions shall be conducted in compliance with all applicable provisions and time lines specified in 310 CMR 40.0400, and in compliance with any response action requirements deemed necessary by the Department and/or specified by the Department in its approval of Immediate Response Action Plans.
- (3) RPs, PRPs and Other Persons shall communicate to the Department their intentions to conduct Immediate Response Actions which are required pursuant to 310 CMR 40.0412. Such communication shall be provided orally to the Department on the earliest of the following dates:
 - (a) at the time an RP, PRP, or Other Person is providing oral notification to the Department of a "Two Hour" or "72 Hour" release or threat of release described in 310 CMR 40.0311 through 40.0314;
 - (b) at the time a person is orally informed by the Department that they are an RP or PRP for a site at which an Immediate Response Action is required pursuant to 310 CMR 40.0412;
 - (c) within 72 hours of the time a person receives a Notice of Responsibility from the Department indicating that they are an RP or PRP for a site at which an Immediate Response Action is required pursuant to 310 CMR 40.0412; or
 - (d) within an Interim Deadline specified by the Department pursuant to 310 CMR 40.0167.
- (4) When orally communicating to the Department their intentions to conduct an Immediate Response Action, RPs, PRPs or Other Persons shall inform the Department:
 - (a) whether or not the RP, PRP or Other Person intends to conduct an Immediate Response Action in the time period and manner warranted by the release, threat of release and/or site conditions, in compliance with all applicable provisions of 310 CMR 40.0400, and in compliance with any specific response action requirements which have been communicated to them by the Department;
 - (b) whether the Immediate Response Action will involve the implementation of remedial actions; and
 - (c) if remedial actions are proposed, details on the nature and extent of such actions.
- (5) Upon review and consideration of the oral communication provided by the RP, PRP or Other Person, DEP shall orally approve, deny, or conditionally approve:
 - (a) the details of remedial actions proposed at the time of such communication, in cases where the Immediate Response Action will involve removal or containment actions; or
 - (b) a recommendation that remedial actions are not required at the time of such communication, in cases where the Immediate Response Action will involve assessment actions only.

40.0420: continued

(6) Except as provided in 310 CMR 40.0421, approval from the Department shall be required prior to the implementation of an Immediate Response Action, or significant modification of a previously approved Immediate Response Action that involves remedial actions. Such approval may be granted orally by the Department in situations where there has been a sudden release of oil and/or hazardous material, where there exists a threat of release of oil and/or hazardous material, and in other cases where written approval would delay the timely implementation of an Immediate Response Action. Where time permits, and in situations where the Department declines to provide oral approval, RPs, PRPs, and Other Persons shall seek approval to conduct Immediate Response Actions by submittal to the Department of an Immediate Response Action Plan pursuant to the provisions of 310 CMR 40.0420(7) and 40.0424.

(7) Except as provided at 310 CMR 40.0420(8), and without regard to whether oral approval was given by the Department to conduct or initiate Immediate Response Actions, RPs and other persons conducting response actions shall submit to the Department an Immediate Response Action Plan, within the earliest of the following time periods:

- (a) within 60 days of providing oral notification to the Department of those "Two Hour" or "72 Hour" releases or threats of release specified in 310 CMR 40.0311 through 40.0314;
- (b) within 60 days of orally communicating to the Department knowledge of a Condition of Substantial Release Migration at a disposal site;
- (c) within 60 days of the date that the Department issues a Notice of Responsibility indicating that they are an RP or PRP for a site at which an Immediate Response Action is required pursuant to 310 CMR 40.0412; or
- (d) within a time period established by the Department as an Interim Deadline in accordance with 310 CMR 40.0167.

(8) Submission to the Department of an Immediate Response Action Plan is not required if an Immediate Response Action Completion Report, as described in 310 CMR 40.0427, or a Permanent Solution Statement, as described in 310 CMR 40.1000, is received by the Department by the due date of the Immediate Response Action Plan.

(9) All written Immediate Response Action Plans submitted to the Department shall be approved, conditionally approved, or denied by the Department in writing within 21 days of receipt. Approval of such plan shall be presumed if the Department does not issue a written approval or denial of said plan within 21 days of receipt. Immediate Response Actions that had previously been orally approved by the Department shall continue during this review period.

(10) In approving an Immediate Response Action Plan, the Department may specify conditions of approval, including, but not limited to:

- (a) the role of the Department in overseeing or conducting various elements of the Immediate Response Action;
- (b) Interim Deadlines for one or more elements of the Immediate Response Action; or
- (c) submittal requirements for one or more elements of the Immediate Response Action.

(11) RPs, PRPs and Other Persons conducting Immediate Response Actions shall do so in conformance with all conditions and deadlines of any oral or written approval granted by the Department pursuant to 310 CMR 40.0420.

(12) Approval from the Department shall not be required to conduct or initiate Immediate Response Actions that consist solely of the construction of a fence and/or the posting of signs, provided the Department is informed of such actions in the next required response action submittal.

(13) Presumptive approval of an Immediate Response Action Plan pursuant to 310 CMR 40.0420(9) means the RP, PRP or Other Person has approval to proceed with Immediate Response Actions in compliance with all applicable provisions of 310 CMR 40.0000. Such presumptive approval shall not be construed as approval by the Department of the scope or adequacy of plans or of the response actions as actually conducted, or as forgiveness of non-compliance with any provision of 310 CMR 40.0000.

40.0421: Immediate Response Actions That Do Not Require Prior Approval From the Department

(1) Except where specifically prohibited in writing by the Department, assessment activities may be conducted at any site without prior notice to or approval from the Department to conduct such activities.

(2) Prior notice to and approval from the Department shall not be required to conduct or initiate remedial actions in those cases where the delay involved in notifying and obtaining approval from the Department would substantially exacerbate release or site conditions or endanger health, safety, public welfare or the environment. Immediate Response Actions conducted or initiated under such circumstances may include, without limitation, containment and/or removal actions that are undertaken:

- (a) immediately after a sudden release of oil and/or hazardous material;
- (b) immediately after the discovery of a release to prevent, abate or eliminate an Imminent Hazard; or
- (c) immediately after the discovery of a threat of release, in order to prevent a release from occurring.

Persons conducting or initiating remedial actions under the provisions of 310 CMR 40.0421(2) shall notify the Department of those remedial actions undertaken and needed to be taken at the site as soon as possible, and not later than 24 hours after commencement thereof.

(3) Prior notice to and approval from the Department shall not be required to excavate and stockpile up to 100 cubic yards (cumulative for the disposal site of concern) of soils contaminated by a release of oil or waste oil at concentrations or quantities that meet one or more of the sets of criteria specified in 310 CMR 40.0313, and resulting from the closure of an Underground Storage Tank, provided:

- (a) site conditions do not pose an Imminent Hazard to human health, safety, public welfare, or the environment;
- (b) contaminated soils are managed in conformance with the provisions of 310 CMR 40.0030;
- (c) notification is provided to the Department within the time frames required by 310 CMR 40.0332, specifying the nature and extent of soil removal activities; and
- (e) appropriate Immediate Response Actions are initiated subsequent to notification, in conformance with all provisions of 310 CMR 40.0420.

40.0424: Immediate Response Action Plans

(1) An Immediate Response Action Plan shall contain the following:

- (a) the name, address, telephone number and relationship to the site of the person assuming responsibility for conducting the Immediate Response Action;
- (b) a description of the release or threat of release, site conditions and surrounding receptors;
- (c) a description of any Immediate Response Actions undertaken to date at the site;
- (d) the reason why an Immediate Response Action is required;
- (e) the objective(s), specific plan(s) and proposed schedule for the Immediate Response Action, including, as appropriate, plans and/or sketches of the site and any proposed investigative and/or remedial installations;
- (f) a statement as to whether Remediation Waste will be excavated, collected, stored, treated or re-used at the site;
- (g) where appropriate, a proposed environmental monitoring plan, for implementation during and/or after the Immediate Response Action;
- (h) a listing of federal, state or local permits that will likely be needed to conduct the Immediate Response Action;
- (i) except as exempted pursuant to 310 CMR 40.0411(2), the seal and signature of the Licensed Site Professional who prepared the Immediate Response Action Plan; and
- (j) such other information as the Department may deem appropriate and necessary, based on site specific conditions, in order to review and evaluate the Immediate Response Action Plan in question.

40.0424: continued

(2) An Immediate Response Action Plan shall be updated and modified, if necessary, based upon the acquisition and evaluation of significant new information and data on release, threat of release and/or site conditions. Each significant modification of an Immediate Response Action Plan shall be resubmitted to the Department for review and approval.

(3) Immediate Response Action Plans shall be submitted to the Department using a transmittal form established by the Department for such purposes.

40.0425: Immediate Response Action Status and Remedial Monitoring Reports

(1) Unless otherwise specified in writing by the Department, a person conducting Immediate Response Actions shall submit a written Status Report to the Department 120 days after the date on which that person first communicated to the Department his or her intention to conduct that Immediate Response Action.

(2) Except as provided in 310 CMR 40.0425(5), following submission of the first such Status Report, additional Status Reports shall be submitted to the Department every six months thereafter, until such time as an Immediate Response Action Completion Report is submitted to the Department, as described in 310 CMR 40.0427. Each Status Report shall document Immediate Response Action activities occurring over the period of time since the previously submitted Status Report.

(3) Immediate Response Action Status Reports shall contain, at a minimum, the following information:

- (a) the status of assessment and/or remedial actions;
- (b) any significant new site information or data;
- (c) details of and/or plans for the management of Remediation Waste, Remedial Waste-water and/or Remedial Additives;
- (d) any other information required by the Department in its approval of the Immediate Response Action Plan; and
- (e) an LSP Opinion as to whether the Immediate Response Action is being conducted in conformance with the Immediate Response Action Plan and any conditions of approval established by the Department.

(4) Status Reports shall not be required for sites where an Immediate Response Action Completion Report or a Permanent Solution Statement is received by the Department prior to the date on which the first Status Report is required pursuant to 310 CMR 40.0425(1).

(5) Where Immediate Response Actions are being undertaken solely to eliminate, mitigate, or prevent a Critical Exposure Pathway that does not pose an Imminent Hazard with the use of an Active Exposure Pathway Mitigation Measure, Status Reports shall be submitted to the Department as follows:

- (a) Status Reports shall be submitted at the frequency specified in 310 CMR 40.0425(2) unless and until a Status Report containing the following information is submitted:
 1. Results of sampling demonstrating the Active Exposure Pathway Mitigation Measure is effectively maintaining, at a minimum, a condition of No Significant Risk for the Receptors of Concern;
 2. A listing of the specific system conditions, operating parameters, and/or maintenance necessary for ensuring the ongoing effectiveness of the Active Exposure Pathway Mitigation Measure in maintaining a condition of No Significant Risk for the Receptors of Concern;
 3. A description of a monitoring program designed to ensure the ongoing effectiveness of the Active Exposure Pathway Mitigation Measure in maintaining a condition of No Significant Risk for the Receptors of Concern; and
 4. An LSP Opinion supporting a reduced reporting schedule pursuant to 310 CMR 40.0425(5)(b) as being adequate to document the ongoing Immediate Response Actions.
- (b) Once the IRA Status Report outlined in 310 CMR 40.0425(5)(a) has been submitted, the frequency at which IRA Status Reports shall be submitted to the Department may be reduced to annually thereafter, until such time as an IRA Completion Report is submitted to the Department, as outlined in 310 CMR 40.0427.

40.0425: continued

(c) Notwithstanding the provisions of 310 CMR 40.0425(5), any person conducting response actions pursuant to this section that rely on an Active Exposure Pathway Mitigation Measure, who has knowledge of the failure of the Measure to effectively maintain a condition of No Significant Risk and/or the need to substantially modify such Measure, shall provide a modified IRA Plan to the Department pursuant to 310 CMR 40.0424(2) within 30 days of obtaining such knowledge. Such IRA Plan shall include plans and a timetable to correct failures and/or to implement modifications.

(d) Notwithstanding any provision to the contrary, the Department may establish Interim Deadlines and alternate schedules for the submission of Status Reports for IRAs addressing Critical Exposure Pathways.

(6) Immediate Response Action Status Reports shall be submitted to the Department using a transmittal form established by the Department for such purposes.

(7) For a disposal site where Active Operation and Maintenance of a remedial action is being conducted as part of an Immediate Response Action, in addition to and/or in conjunction with the submittal of IRA Status Reports, a Remedial Monitoring Report shall be submitted to the Department on a form established by the Department for such purposes at the following frequency:

(a) except as provided in 310 CMR 40.0425(7)(c), when an Immediate Response Action includes Active Operation and Maintenance of a remedial action to address an Imminent Hazard or Condition of Substantial Release Migration, with the first IRA Status Report and monthly thereafter. In such cases where Active Operation and Maintenance of a remedial action is initiated after the submittal of the first IRA Status Report, the initial Remedial Monitoring Report shall be submitted on the monthly anniversary of the submittal of the first IRA Status Report;

(b) except as provided in 310 CMR 40.0425(7)(c), when an Immediate Response Action includes Active Operation and Maintenance of a remedial action to address conditions that do not pose an Imminent Hazard or Condition of Substantial Release Migration, with the first IRA Status Report and every six months thereafter. In such cases where Active Operation and Maintenance of a remedial action is initiated after the submittal of the first IRA Status Report, the initial Remedial Monitoring Report shall be submitted on the next six-month anniversary of the submittal of the first IRA Status Report.

(c) where IRA Status Reports are submitted annually pursuant to 310 CMR 40.0425(5)(b), Remedial Monitoring Reports shall be submitted with the annual IRA Status Reports.

(d) Notwithstanding any provision to the contrary, the Department may establish Interim Deadlines and alternate schedules for the submission of Remedial Monitoring Reports.

40.0426: Imminent Hazard Evaluations

(1) An Imminent Hazard Evaluation shall be performed as part of an Immediate Response Action at sites where a release or threat of release could pose an Imminent Hazard to human health, safety, public welfare, or the environment, as described in 310 CMR 40.0321(2), and may be performed at sites where a release or threat of release is deemed to pose an Imminent Hazard, as described in 310 CMR 40.0321(1).

(2) Unless otherwise specified in writing by the Department, RPs, PRPs and Other Persons conducting Immediate Response Actions at a site where a release or threat of release could pose an Imminent Hazard to human health, as described in 310 CMR 40.0321(2), shall initiate an Imminent Hazard Evaluation within 14 days of obtaining knowledge of such a condition, and shall submit to the Department, within 60 days of obtaining knowledge of such a condition:

(a) an LSP Opinion as to whether an Imminent Hazard to human health actually exists at the site, as described in 310 CMR 40.0950; or

(b) when such an Opinion cannot yet be made, an LSP Opinion:

1. describing the investigative efforts that have been made and remain to be taken in order to determine whether an Imminent Hazard to human health actually exists at the site, as well as a timetable for the remaining activities; or
2. proposing a plan to undertake removal and/or containment actions at the site to address those conditions that could pose an Imminent Hazard to human health.

40.0426: continued

(3) Unless otherwise specified in writing by the Department, RPs, PRPs, or Other Persons conducting response actions at sites where a release or threat of release could pose an Imminent Hazard to safety, public welfare, or the environment shall initiate an Imminent Hazard Evaluation within 14 days of obtaining knowledge of such a condition, and shall submit to the Department, within 60 days of obtaining knowledge of such a condition:

- (a) an LSP Opinion as to whether an Imminent Hazard to safety, public welfare, or the environment actually exists at the site; or
- (b) when such an Opinion cannot yet be made, an LSP Opinion:
 - 1. describing the investigative efforts that have been made and remain to be taken in order to determine whether an Imminent Hazard to safety, public welfare, or the environment actually exists at the site, as well as a timetable for the remaining activities; or
 - 2. proposing a plan to undertake removal and/or containment actions at the site to address those conditions that could pose an Imminent Hazard to safety, public welfare, or the environment.

(4) RPs, PRPs and Other Persons conducting Immediate Response Actions at a site where a release or threat of release poses or could pose an Imminent Hazard, as specified in 310 CMR 40.0321 and 40.0950, shall keep the Department informed as to the progress being made in addressing and/or abating the Imminent Hazard, in report submittals made as part of the Immediate Response Action Status Reports, or in accordance with a reporting frequency and procedure established by the Department as part of its approval of the Immediate Response Action Plan.

(5) Imminent Hazard Evaluations shall be submitted to the Department using a transmittal form established by the Department for such purposes.

(6) Active remedial systems and/or continuing response actions required and/or approved by the Department to address an Imminent Hazard condition at a site shall not be terminated by the RP, PRP, or Other Person conducting Immediate Response Actions until such time as response objectives and/or approval conditions have been met, and until approval to do so has been obtained from the Department. All requests to terminate such actions shall be submitted to the Department using a transmittal form established by the Department for such purposes, and shall contain data, documentation, and technical information sufficient to justify cessation of such actions. Approval to terminate such actions shall be presumed if the Department does not issue a written approval or denial of such a request within 21 days of receipt of the same.

40.0427: Immediate Response Action Completion Reports

(1) An Immediate Response Action shall be considered complete when the release, threat of release and/or site conditions which give rise to the need for that Immediate Response Action, as described in 310 CMR 40.0412, have been assessed and, where necessary, remediated in a manner and to a degree that will ensure, at a minimum:

- (a) the accomplishment of any necessary stabilization of site conditions;
- (b) the elimination or control of any Imminent Hazards to health, safety, public welfare and the environment, without the continued operation and maintenance of Active Remedial Systems or Active Exposure Pathway Mitigation Measures or the incorporation of ongoing response actions to eliminate or control the Imminent Hazard into the Phase IV Remedy Implementation Plan for the disposal site; and
- (c) the completion of time-critical measures addressing the elimination, prevention or mitigation of Critical Exposure Pathway(s) as documented with an LSP Opinion concluding that:
 - 1. the Critical Exposure Pathway(s) have been eliminated using passive measures;
 - 2. a feasibility study, as specified at 310 CMR 40.0414(3) and (4), supports the conclusion that it is not feasible to eliminate, prevent, or mitigate the Critical Exposure Pathway(s);
 - 3. a feasibility study, conducted as part of a Phase III evaluation of Comprehensive Remedial Alternatives as specified in 310 CMR 40.0860, supports the conclusion that it is not feasible to eliminate, prevent, or mitigate the Critical Exposure Pathway(s) as part of the Comprehensive Remedial Alternative; or

40.0427: continued

4. mitigation of Critical Exposure Pathway(s) is continuing by incorporation of ongoing response actions to address the Critical Exposure Pathway(s) into the Phase IV Remedy Implementation Plan for the disposal site.
- (2) Except as specified in 310 CMR 40.0427(3), an Immediate Response Action Completion Report shall be submitted to the Department within 60 days of completion of all assessment, containment and/or removal actions conducted as part of the Immediate Response Action.
- (3) An Immediate Response Action Completion Report shall not be required for sites where a Permanent Solution Statement, as described in 310 CMR 40.1000, is submitted to the Department by an RP, PRP, or Other Person within 120 days of first informing the Department of the need to conduct an Immediate Response Action at the site, as specified in 310 CMR 40.0420(3).
- (4) Immediate Response Action Completion Reports shall contain, at a minimum, the following:
 - (a) a description of the release or threat of release, site conditions and surrounding receptors;
 - (b) a description of the work completed, including work undertaken in response to any conditions of approval imposed by the Department, and any work undertaken at the site that was not included in the scope of the Immediate Response Action Plan, where submitted;
 - (c) all investigatory and monitoring data obtained during the implementation of the Immediate Response Action;
 - (d) a succinct statement on the findings and conclusions of the Immediate Response Action;
 - (e) details and documentation on the management of any Remediation Waste, Remedial Wastewater and/or Remedial Additives managed at the site as part of the Immediate Response Action;
 - (f) a description of any ongoing activities related to the Immediate Response Action that will be conducted at the site, including monitoring activities, security measures and the maintenance of fences, caps and other passive systems; and
 - (g) a description of any ongoing activities related to the Immediate Response Action that will be conducted at the site as part of Comprehensive Response Actions.
- (5) Immediate Response Action Completion Reports shall be submitted to the Department appended to a Completion Statement form established by the Department for such purposes. The Completion Statement form shall contain:
 - (a) except as exempted pursuant to 310 CMR 40.0411(2), an LSP Opinion on whether the Immediate Response Action was conducted in accordance with 310 CMR 40.0410, any approval conditions specified by the Department, and, where submitted, the Immediate Response Action Plan(s); and
 - (b) the certification of the submittal required by 310 CMR 40.0009.
- (6) Except as provided in 310 CMR 40.0427(7), an Immediate Response Action shall not be considered complete until all stockpiled/stored Remediation Waste generated as a result of the Immediate Response Action is removed from the site pursuant to the provisions of 310 CMR 40.0030.
- (7) Remediation Waste may be stored, treated, managed, disposed, recycled or reused at a site following the submission to the Department of an Immediate Response Action Completion Report and Completion Statement only if:
 - (a) such actions are conducted in conformance with the provisions of 310 CMR 40.0030; and
 - (b) a Release Abatement Measure Plan pursuant to the provisions of 310 CMR 40.0440 or a Remedy Implementation Plan pursuant to the provisions of 310 CMR 40.0870 is submitted to the Department as an attachment to the Immediate Response Action Completion Statement.
- (8) Unless otherwise directed by the Department, Immediate Response Action Completion Reports shall not require approval from the Department.

40.0428: Public Involvement

- (1) Public Involvement Activities shall be conducted in accordance with 310 CMR 40.1400 through 40.1406. Public Involvement Activities relevant to Immediate Response Actions may include, without limitation, those activities set forth at 310 CMR 40.1403(3)(b), (c), (f), (5) and (9).
- (2) If the disposal site where the Immediate Response Action is conducted is a Public Involvement Plan Site, a Public Involvement Plan that is consistent with 310 CMR 40.1405 shall be implemented by the RP, PRP or Other Person conducting response actions at that site.

40.0429: Possible Outcomes of an Immediate Response Action

One or more of the following actions shall be taken by an RP, PRP or Other Person following the completion of an Immediate Response Action:

- (1) the filing of a Permanent Solution Statement, in accordance with the provisions of 310 CMR 40.1000;
- (2) the initiation of a Release Abatement Measure, in accordance with the provisions of 310 CMR 40.0440; or
- (3) the continuation of further Preliminary or Comprehensive Response Actions, in accordance with the provisions of 310 CMR 40.0400 or 40.0800.

40.0440: Release Abatement Measures

310 CMR 40.0441 through 40.0449, cited collectively as 310 CMR 40.0440, set forth requirements and procedures for conducting Release Abatement Measures.

40.0441: General Provisions for Release Abatement Measures

- (1) Release Abatement Measures are intended to reduce risks at a disposal site and/or increase the cost effectiveness of response actions by allowing the implementation of certain accelerated remedial actions to stabilize, treat, control, minimize or eliminate releases until such time as a Permanent or Temporary Solution is achieved, as described in 310 CMR 40.1000, or until Comprehensive Remedial Actions can be implemented, as described in 310 CMR 40.0800. Release Abatement Measures may also be used to perform an additional remedial action(s) at a site for which a Permanent or Temporary Solution Statement has been submitted, in accordance with 310 CMR 40.1067.
- (2) Release Abatement Measures shall be limited in scope and complexity, as described in 310 CMR 40.0442, in order to prevent adverse impacts to health, safety, public welfare or the environment that could result from the implementation of complicated or large-scale remedial actions at disposal sites where there has not been adequate assessment, evaluation, planning and/or public involvement.
- (3) An RP, PRP or Other Person may propose to the Department to conduct a Release Abatement Measure at a disposal site at any time following notification to the Department of a release or threat of release pursuant to 310 CMR 40.0300.
- (4) Any person who conducts a Release Abatement Measure shall do so in accordance with all applicable requirements and specifications prescribed in 310 CMR 40.0000. RPs, PRPs, and Other Persons conducting Release Abatement Measures shall employ or engage a Licensed Site Professional as required by these regulations.
- (5) Release Abatement Measures shall comply with all local, state and federal permitting and approval requirements.
- (6) Health and safety procedures consistent with the provisions of 310 CMR 40.0018 shall be implemented at all sites where a Release Abatement Measure is being conducted.

40.0442: Scope and Types of Release Abatement Measures

- (1) The scope and complexity of Release Abatement Measures shall be commensurate with the amount of information known about, and the degree of risk associated with, release and disposal site conditions. A Release Abatement Measure shall not:
 - (a) be implemented without a level of understanding of disposal site conditions and surrounding receptors sufficient to support the actions taken;
 - (b) be continued at a disposal site where encountered oil and/or hazardous material, migration pathways, or exposure routes are substantially different from those anticipated;
 - (c) be conducted in a manner that is likely to result in the exposure of surrounding human or ecological receptors to levels of oil and/or hazardous material that could pose a significant risk of harm to health, safety, public welfare or the environment, as described in 310 CMR 40.0950;
 - (d) prevent or impede the implementation of likely future response actions; or
 - (e) be conducted in a manner inconsistent with the Response Action Performance Standard described in 310 CMR 40.0191.

- (2) Release Abatement Measures conducted in accordance with the provisions of 310 CMR 40.0442(1) may include, without limitation:
 - (a) the excavation and off-site disposal of up to 500 cubic yards (cumulative, for the disposal site in question) of soil contaminated by oil and/or hazardous material at concentrations equal to or greater than applicable Reportable Concentrations, in conformance with 310 CMR 40.0030;
 - (b) the excavation and on or off-site treatment, recycling or reuse of up to 1500 cubic yards (cumulative, for the disposal site in question) of soil contaminated by oil and/or hazardous material at concentrations equal to or greater than applicable Reportable Concentrations, in conformance with 310 CMR 40.0030;
 - (c) the initiation of passive or active NAPL recovery systems that discharge to a closed container, or groundwater recovery or treatment systems that discharge Remedial Wastewater and/or Remedial Additives in accordance with 310 CMR 40.0040 to a sewer system, POTW, Non-publicly Owned Treatment Works, surface water body, or to the ground surface or subsurface and/or groundwater; or
 - (d) the implementation of a soil vapor extraction system and/or groundwater sparging system, with appropriate off-gas treatment and controls, as described in 310 CMR 40.0049.

- (3) Notwithstanding 310 CMR 40.0442(1)(d), Release Abatement Measures may include construction of a structure that could prevent or impede the implementation of likely response actions in the future, provided that prior to or concurrent with conducting such activities, the following are completed for the area within and adjacent to the footprint of the proposed structure in a manner that achieves the substantive technical standards set forth in 310 CMR 40.0800 and 40.0900:
 - (a) a site assessment;
 - (b) a risk characterization;
 - (c) a feasibility evaluation;
 - (d) if the Exposure Point Concentrations of contaminants under such structure exceed applicable soil Upper Concentration Limits (UCLs) specified in 310 CMR 40.0996(6), the reduction of concentrations to levels at or below UCLs to the extent feasible pursuant to 310 CMR 40.0860(4);
 - (e) the elimination or control of any Source of OHM Contamination as specified in 310 CMR 40.1003(5);
 - (f) the management of NAPL as specified in 310 CMR 40.1003(7)(a); and
 - (g) any other remedial actions deemed necessary to ensure the eventual achievement of a level of No Significant Risk for the entire disposal site.

- (4) A cap or engineered barrier, as defined in 310 CMR 40.0996(5), that is constructed as a Release Abatement Measure will not be considered part of a Permanent Solution at a disposal site, unless and until a Phase III performed pursuant to the provisions of 310 CMR 40.0850 demonstrates the lack of a feasible alternative.

40.0442: continued

(5) Release Abatement Measures shall not involve the excavation of greater than 1500 cubic yards (cumulative, for the disposal site in question) of soil contaminated by oil and/or hazardous material at concentrations equal to or greater than applicable Reportable Concentrations, unless a statement is provided in the Release Abatement Measure Plan by the RP, PRP, or Other Person conducting response actions certifying that, based upon information and opinions provided by an LSP, such persons have sufficient financial resources to manage excavated materials in the manner and time frames specified at 310 CMR 40.0030.

40.0443: Approvals Required to Conduct Release Abatement Measures

(1) A Release Abatement Measure shall not be conducted at any disposal site until a complete Release Abatement Measure Plan, as described in 310 CMR 40.0444, has been received by the Department. A Release Abatement Measure Plan shall not be considered complete until all information described in 310 CMR 40.0444 is received in the appropriate DEP regional office, accompanied by a certification of payment, in cases where a fee is specified pursuant to 310 CMR 4.00: *Timely Action Schedule and Fee Provisions*.

(2) Subsequent to the receipt by the Department of a complete RAM Plan, unless otherwise specified by the Department in writing, approval shall not be required from the Department to conduct the Release Abatement Measure. Exemption from the need to obtain approval from the Department in these cases shall not relieve RPs, PRPs, or Other Persons of their obligation to submit to the Department all required Release Abatement Measure Plans, Status Reports and Completion Reports.

(3) Any person implementing a Release Abatement Measure shall conform to all proposals and specifications contained in the Release Abatement Measure Plan, and any conditions specified by the Department.

(4) A modified Release Abatement Measure Plan shall be submitted to the Department prior to implementing a modification of a Release Abatement Measure if:

- (a) contaminants or conditions are discovered that significantly increase the degree or change the type of exposure to nearby receptors; or
- (b) a significant change is proposed to on-site treatment processes.

All other modifications may be implemented immediately and shall be documented with the next required response action submittal pursuant to 310 CMR 40.0440.

(5) Remedial actions specified in a Release Abatement Measure Plan shall be initiated by the RP, PRP, or Other Person conducting response actions at a disposal site within one year from the date of the Department's receipt of a complete Release Abatement Measure Plan. Release Abatement Measure Plans not initiated in this manner shall be considered invalid and unapproved.

40.0444: Release Abatement Measure Plans

(1) A Release Abatement Measure Plan shall not be considered complete unless it contains, at a minimum, the following:

- (a) the name, address, telephone number and relationship to the site of the person assuming responsibility for conducting the Release Abatement Measure;
- (b) a description of the release or threat of release, site conditions and surrounding receptors;
- (c) the objective(s), specific plan(s) and proposed implementation schedule for the Release Abatement Measure, including, as appropriate, descriptions, plans and/or sketches of the site, any proposed structures to be constructed or installed in the project area, and any proposed investigative and/or remedial installations;
- (d) a statement as to whether Remediation Waste, Remedial Wastewater and/or Remedial Additives will be excavated, collected, stored, treated, discharged, applied, reused, or otherwise managed at the site;
- (e) where appropriate, a proposed environmental monitoring plan, for implementation during and/or after the Release Abatement Measure;

40.0444: continued

- (f) a listing of federal, state and/or local permits likely to be needed to conduct the Release Abatement Measure;
- (g) the seal and signature of the Licensed Site Professional who prepared the Release Abatement Measure Plan;
- (h) the certification required at 310 CMR 40.0442(5), if greater than 1500 cubic yards of Remediation Wastes are to be generated and managed at the disposal site; and
- (i) any other information that the Department, during its review and evaluation of the Release Abatement Measure Plan, determines to be necessary to complete said plan, in view of site specific circumstances and conditions.

(2) All Release Abatement Measure Plans submitted to the Department prior to Tier Classification of the disposal site shall be accompanied by the appropriate fee established in 310 CMR 4.00: *Timely Action Schedule and Fee Provisions*. No fee is required for Release Abatement Measure Plans submitted to the Department after Tier Classification of the disposal site or after submittal of a Permanent Solution Statement for the disposal site.

(3) Release Abatement Measure Plans shall be submitted to the Department using a transmittal form established by the Department for such purposes.

40.0445: Release Abatement Measure Status and Remedial Monitoring Reports

(1) Persons conducting Release Abatement Measures shall submit a Status Report 120 days following receipt by the Department of the initial Release Abatement Measure Plan, and every six months thereafter, until a Release Abatement Measure Completion Report, in accordance with the provisions of 310 CMR 40.0446, has been submitted to the Department. Each Status Report shall document Release Abatement Measure activities occurring over the period of time since the previously submitted Status Report.

(2) Release Abatement Measure Status Reports shall contain, at a minimum, the following information:

- (a) the status of response operations;
- (b) any significant new site information or data;
- (c) details of and/or plans for the management of Remediation Waste, Remedial Waste-water and/or Remedial Additives;
- (d) any other information that the Department during its review and evaluation of a Status Report determines to be necessary to complete said Status Report, in view of site specific circumstances and conditions; and
- (e) an LSP Opinion as to whether the Release Abatement Measure is being conducted in conformance with the Release Abatement Measure Plan and any conditions of approval established by the Department.

(3) Status Reports shall not be required for sites where a Release Abatement Measure Completion Report or a Permanent Solution Statement is received by the Department prior to the date on which the first Status Report is required pursuant to 310 CMR 40.0445(1). In the case of a Release Abatement Measure conducted at a site already subject to a Permanent Solution Statement in accordance with 310 CMR 40.1067, a Release Abatement Measure Status Report shall be required unless a Release Abatement Measure Completion Report or a revised Permanent Solution Statement is received by the Department prior to the date on which the first Status Report is required pursuant to 310 CMR 40.0445(1).

(4) Release Abatement Measure Status Reports shall be submitted to the Department using a transmittal form established by the Department for such purposes.

(5) For a disposal site where Active Operation and Maintenance of a remedial action is being conducted as part of a RAM, a Remedial Monitoring Report shall be submitted to the Department on a form established by the Department for such purposes at a frequency of every six months and concurrently with the submittal of the RAM Status Report. In such cases when the Active Operation and Maintenance of a remedial action is initiated after the submittal of the first RAM Status Report, the Remedial Monitoring Report shall be submitted concurrently with the next RAM Status Report.

40.0446: Release Abatement Measure Completion Report

- (1) A Release Abatement Measure Completion Report shall be submitted to the Department no later than 60 days following the completion of those remedial actions proposed in the Release Abatement Measure Plan and/or approved by the Department pursuant to 310 CMR 40.0443.
- (2) A Release Abatement Measure shall be considered complete when the objectives of the Release Abatement Measure Plan have been met, and when all active and ongoing remedial actions related to the Release Abatement Measure have been terminated.
- (3) Unless otherwise specified in writing by the Department, a Release Abatement Measure Completion Report shall not be required for sites where a Permanent Solution Statement, as described in 310 CMR 40.1000, is submitted to the Department within 120 days following receipt by the Department of the complete initial Release Abatement Measure Plan to conduct the Release Abatement Measure or in the case of a Release Abatement Measure conducted at a site already subject to a Permanent or Temporary Solution Statement in accordance with 310 CMR 40.1067, a revised Permanent or Temporary Solution Statement is submitted.
- (4) A Release Abatement Measure Completion Report shall contain, at a minimum, the following:
 - (a) a description of the release or threat of release, site conditions, and surrounding receptors;
 - (b) a description of the Release Abatement Measure completed at the disposal site, including work undertaken in response to any conditions of approval imposed by the Department;
 - (c) all investigatory and monitoring data obtained during the implementation of the Release Abatement Measure;
 - (d) a succinct statement of findings and conclusions resulting from implementation of the Release Abatement Measure, including a statement as to whether the objectives of the Release Abatement Measure have been met;
 - (e) details and documentation on the management of any Remediation Waste, Remedial Wastewater and/or Remedial Additives managed at the site as part of the Release Abatement Measure; and
 - (f) a description of any ongoing activities related to the Release Abatement Measure that will be conducted at the disposal site, including monitoring activities, and the maintenance of fences, caps, and other passive systems.
- (5) Release Abatement Measure Completion Reports shall be submitted to the Department appended to a Completion Statement form established by the Department for such purposes. The Completion Statement form shall contain:
 - (a) an LSP Opinion on whether the Release Abatement Measure was conducted in accordance with 310 CMR 40.0440, any approval conditions specified by the Department, and, where submitted, the Release Abatement Measure Plan; and
 - (b) the certification of the submittal required by 310 CMR 40.0009.
- (6) Except as provided in 310 CMR 40.0446(7), a Release Abatement Measure shall not be considered complete until all stockpiled/stored Remediation Waste generated as a result of the Release Abatement Measure is removed from the site pursuant to the provisions of 310 CMR 40.0030.
- (7) Remediation Waste may be stored, treated, managed, disposed, recycled or reused at a site following the submission to the Department of a Release Abatement Measure Completion Report and Completion Statement only if:
 - (a) such actions are conducted in conformance with the provisions of 310 CMR 40.0030; and
 - (b) a Remedy Implementation Plan pursuant to the provisions of 310 CMR 40.0870 is submitted to the Department as an attachment to the Release Abatement Measure Completion Statement.
- (8) Unless otherwise directed by the Department, Release Abatement Measure Completion Reports are not subject to approval by the Department.

40.0447: Public Involvement

(1) Public Involvement Activities shall be conducted in accordance with 310 CMR 40.1400 through 40.1406. Public Involvement Activities required for Release Abatement Measures specifically include 310 CMR 40.1403(3)(d), and may include, without limitation, those activities set forth at 40.1403(3)(f).

(2) If the disposal site where the Release Abatement Measure was conducted is a designated Public Involvement Priority site, then a Public Involvement Plan consistent with 310 CMR 40.1405 shall be implemented by the RP, PRP or Other Person conducting response actions at that site.

40.0448: Possible Outcomes of a Release Abatement Measure

One of the following actions shall be taken by an RP, PRP, or Other person following the completion of a Release Abatement Measure:

(1) the filing of a Permanent Solution Statement, in accordance with the provisions of 310 CMR 40.1000; or

(2) the continuation of further Preliminary or Comprehensive Response Actions, in accordance with the provisions of 310 CMR 40.0400 or 40.0800.

40.0460: Utility-related Abatement Measures

310 CMR 40.0461 through 40.0469, cited collectively as 310 CMR 40.0460, set forth requirements and procedures to conduct Utility-related Abatement Measures.

40.0461: General Provisions for Utility-related Abatement Measures

(1) Except as provided in 310 CMR 40.0461(3), Utility-related Abatement Measures may be taken at sites where oil and/or hazardous material is present in the soil or groundwater at levels equal to or greater than an applicable Reportable Concentration value listed at 310 CMR 40.0360 and 40.1600, by:

- (a) persons overseeing or directly responsible for utility construction activities; or
- (b) persons overseeing or directly responsible for site preparation work requested or required by a Public or Private Utility company or Public Authority prior to any utility construction activity.

(2) Except as provided in 310 CMR 40.0461(7), Utility-related Abatement Measures may be taken on public rights of way, utility easements and private property, to respond to and properly manage contamination encountered during the installation, repair, replacement or decommissioning of:

- (a) sanitary sewerage, water, or drainage systems and related appurtenances;
- (b) steam lines;
- (c) natural gas pipelines and related appurtenances; and
- (d) above ground or underground electric, telephone, telecommunication cables or other conduits, and related appurtenances.

(3) Utility-related Abatement Measures shall neither be initiated nor continued at any site where a "Two Hour" or "72 Hour" release or threat of release has been identified, as described in 310 CMR 40.0311 through 40.0314, until such time as an Immediate Response Action Completion Report has been submitted to the Department.

(4) Except as provided in 310 CMR 40.0462(4), persons conducting Utility-related Abatement Measures shall engage or employ a Licensed Site Professional as required by 310 CMR 40.0000.

(5) Utility-related Abatement Measures:

- (a) shall be limited to only those assessment, containment or removal actions that are necessary for the completion of construction activities;
- (b) shall not prevent or impede the implementation of likely future response actions; and
- (c) shall not include the construction of residential, commercial, or industrial buildings.

40.0461: continued

- (6) Utility-related Abatement Measures shall be undertaken in conformance with all applicable procedures and requirements specified in 310 CMR 40.0460.
- (7) Utility-related Abatement Measures shall not be initiated at sites where the installation of new public utilities are proposed until sufficient evaluation has been made of the nature and extent of encountered and suspected contamination, the scope and expense of necessary mitigative actions, and benefits and limitations of project alternatives.
- (8) The Department may, at its discretion, require, undertake or order the initiation of any assessment or remedial actions deemed necessary at any construction site to prevent, abate or eliminate damage or the likelihood of damage to health, safety, public welfare or the environment.

40.0462: Conducting Utility-related Abatement Measures

- (1) Except as provided in 310 CMR 40.0462(3), Utility-related Abatement Measures shall not be undertaken by a person performing construction activities until after that person has notified the Department orally or in writing of:
 - (a) any release or threat of release of oil and/or hazardous material at the construction site for which notification to the Department by any person is required under the provisions of 310 CMR 40.0315;
 - (b) their intentions to conduct a Utility-related Abatement Measure in compliance with all applicable requirements of 310 CMR 40.0460; and
 - (c) the name and license number of the Licensed Site Professional who has been engaged or employed by the person conducting the Utility-related Abatement Measure.
- (2) Persons providing oral notification to the Department pursuant to 310 CMR 40.0462(1) shall submit written confirmation of such notice to the Department within seven days, using a transmittal form established by the Department for such purposes. Such confirmation shall include submittal of a Release Notification Form as described in 310 CMR 40.0371, in cases where the person conducting the Utility-related Abatement Measure is also a person required to notify pursuant to the provisions of 310 CMR 40.0331.
- (3) Notwithstanding the provisions of 310 CMR 40.0462(1), notification to the Department of releases that require notification pursuant to 310 CMR 40.0315 shall not be required prior to the initiation of Utility-related Abatement Measures in cases where emergency actions are being undertaken to repair a damaged or defective utility installation. In such cases, notification shall be provided to the Department as soon as possible thereafter, and within 72 hours of conducting the Utility-related Abatement Measure.
- (4) Notwithstanding any other provisions of 310 CMR 40.0460 or 310 CMR 40.0030, persons conducting Utility-related Abatement Measures shall not be required to engage or employ a Licensed Site Professional for conducting Utility-related Abatement Measures that are limited to the excavation and/or handling of:
 - (a) not more than 100 cubic yards (cumulative, for any site) of soil contaminated solely by a release of oil or waste oil at concentrations equal to or greater than an applicable Reportable Concentration; or
 - (b) not more than 20 cubic yards (cumulative, for any site) of soil contaminated by a release of hazardous material or a mixture of hazardous material and oil or waste oil at concentrations equal to or greater than an applicable Reportable Concentration.
- (5) Contaminated soil removed from a construction site under the provisions of 310 CMR 40.0462(4) shall be managed in compliance with all applicable provisions of 310 CMR 40.0030, excluding 310 CMR 40.0034(4)(a).

40.0462: continued

(6) If the on-site temporary storage of Remediation Waste is precluded due to public safety or traffic concerns, such Remediation Waste may be temporarily stored at another location owned or operated by the RP, PRP or Other Person conducting the Utility-related Abatement Measure, or at a facility permitted, licensed or approved to accept such materials, provided such Remediation Waste is returned to the original site of generation for backfilling or on-site treatment within 14 days of its removal from the site, and is otherwise managed in accordance with the applicable provisions of 310 CMR 40.0460 and 40.0030.

(7) Except for those emergency repairs that occur during non-business hours, Utility-related Abatement Measures shall not be undertaken on any property until a reasonable attempt is made to notify the owner of the property of the discovery of contamination and of the scope and detail of the proposed response action. In the event of emergency repairs, the owner of the property in question shall be notified as soon as possible thereafter. Notwithstanding the foregoing, no rights to undertake any actions beyond those rights otherwise possessed by persons undertaking such actions are created by this provision.

40.0463: Approvals Required to Conduct Utility-related Abatement Measures

(1) Utility-related Abatement Measures conducted in conformance with all applicable provisions of 310 CMR 40.0460 shall not require approval from the Department under the provisions of 310 CMR 40.0400. Persons conducting Utility-related Abatement Measures shall comply with all other applicable federal, state and local laws, ordinances, regulations, rules and bylaws.

(2) Notwithstanding 310 CMR 40.0463(1), the Department shall have the right to prohibit any person from undertaking any Utility-related Abatement Measure, or to approve such measures subject to such conditions as the Department deems necessary, in order to protect and preserve health, safety, public welfare and/or the environment, based upon site specific circumstances and conditions.

40.0464: Performance Standards for Utility-related Abatement Measures

The following performance standards shall be met for all Utility-related Abatement Measures:

(1) contamination at the disposal site shall not be exacerbated as a result of Utility-related Abatement Measures or as a result of structures placed within an area of identified contamination;

(2) construction workers, surrounding human populations, and environmental receptors shall be reasonably protected from exposure to oil and/or hazardous material during and following construction activities; and

(3) contaminated soil, contaminated groundwater, and other Remediation Wastes removed from the disposal site and construction area shall be managed in compliance with the provisions of 310 CMR 40.0030 and all applicable federal, state and local laws.

40.0465: Utility-related Abatement Measures Status and Remedial Monitoring Reports

(1) Persons conducting Utility-related Abatement Measures shall submit a Status Report to the Department 120 days following notification to the Department of their intentions to conduct a Utility-related Abatement Measure pursuant to 310 CMR 40.0462(1)(b), and every six months thereafter, until a Utility-related Abatement Measure Completion Report is submitted to the Department in accordance with 310 CMR 40.0466. Each Status Report shall document Utility-related Abatement Measure activities occurring over the period of time since the previously submitted Status Report.

(2) Utility-related Abatement Measure Status Reports shall contain, at a minimum, the following information:

40.0465: continued

- (a) the status of response operations;
- (b) any significant new site information or data;
- (c) details of and/or plans for the management of Remediation Waste, Remedial Wastewater and/or Remedial Additives;
- (d) any other information required by the Department pursuant to any condition that the Department imposes on the right to conduct Utility-related Abatement Measures, pursuant to 310 CMR 40.0463(2); and
- (e) an LSP Opinion as to whether the Utility-related Abatement Measure is being conducted in conformance with the provisions of 310 CMR 40.0000 and any conditions established by the Department.

(3) Status Reports shall not be required for any Utility-related Abatement Measure completed within 120 days following notification to the Department of the intention to conduct the same, pursuant to 310 CMR 40.0462(1)(b).

(4) Utility-related Abatement Measure Status Reports shall be submitted to the Department using a transmittal form established by the Department for such purposes.

(5) For a disposal site where Active Operation and Maintenance of a remedial action is being conducted as part of a URAM, a Remedial Monitoring Report shall be submitted to the Department on a form established by the Department for such purposes at a frequency of every six months and concurrently with the submittal of the URAM Status Report. In such cases when the Active Operation and Maintenance of a remedial action is initiated after the submittal of the first URAM Status Report, the Remedial Monitoring Report shall be submitted concurrently with the next URAM Status Report.

40.0466: Utility-related Abatement Measure Completion Reports

(1) A Utility-related Abatement Measure Completion Report shall be submitted to the Department within 60 days of the completion of all response actions associated with a Utility-related Abatement Measure.

(2) A Utility-related Abatement Measure Completion Report shall contain, at a minimum, the following:

- (a) a succinct summary of information and data pertaining to the discovery, location and evaluation of encountered contamination, and of all response actions undertaken and/or completed;
- (b) documentation on the management of Remediation Waste, Remedial Additives and/or Remedial Wastewater managed at the site; and
- (c) details on any proposed or ongoing active or passive remedial systems that will remain in place at the site.

(3) Except as provided in 310 CMR 40.0466(4), a Utility-related Abatement Measure shall not be considered complete until all stockpiled/stored Remediation Waste generated as a result of the Utility-related Abatement Measure is removed from the site pursuant to the provisions of 310 CMR 40.0030.

(4) Remediation Waste may be stored, treated, managed, disposed, recycled or reused at a site following the submission to the Department of a Utility-related Abatement Measure Completion Report and Completion Statement only if:

- (a) such actions are conducted in conformance with the provisions of 310 CMR 40.0030; and
- (b) a Release Abatement Measure Plan pursuant to the provisions of 310 CMR 40.0440 or a Remedy Implementation Plan pursuant to the provisions of 310 CMR 40.0870 is submitted to the Department as an attachment to the Utility-related Abatement Measure Completion Statement.

(5) Except as provided in 310 CMR 40.0466(6), Utility-related Abatement Measure Completion Reports shall be submitted to the Department appended to a Completion Statement form established by the Department for such purposes. The Completion Statement form shall contain:

40.0466: continued

- (a) an LSP Opinion on whether the Utility-related Abatement Measure was conducted in accordance with 310 CMR 40.0460 and any approval conditions specified by the Department; and
- (b) the certification of the submittal required by 310 CMR 40.0009.

(6) Notwithstanding the provisions of 310 CMR 40.0466(5), an LSP Opinion shall not be required for Utility-related Abatement Measure Completion Reports documenting response actions at those Utility-related Abatement Measures described at 310 CMR 40.0462(4).

40.0467: Possible Outcomes of Utility-related Abatement Measures

The following actions are possible following the initiation and/or completion of Utility-related Abatement Measures:

- (1) Utility-related Abatement Measures are terminated due to the discovery of a "Two Hour" or "72 Hour" release or threat of release described in 310 CMR 40.0311 through 40.0314, and continued work on the construction project requires the implementation of an Immediate Response Action by an RP, PRP, or Other Person;
- (2) Utility-related Abatement Measures have adequately remediated the release or threat of release encountered at the site, allowing for the filing of a Permanent Solution Statement, as described in 310 CMR 40.1000; or
- (3) additional response actions are necessary at the site following the completion of Utility-related Abatement Measures, to be conducted by persons identified as Responsible Parties under M.G.L. c. 21E, § 5(a), or electively by PRPs or Other Persons.

40.0480: Phase I - Initial Site Investigation Report

310 CMR 40.0481 through 40.0489, cited collectively as 310 CMR 40.0480, set forth requirements and procedures for preparing a Phase I - Initial Site Investigation Report.

40.0481: General Provisions for Phase I Initial Site Investigation Report

- (1) A Phase I Initial Site Investigation Report (hereinafter referred to as the "Phase I Report") is a document which contains the results of Preliminary Response Actions undertaken at a disposal site pursuant to 310 CMR 40.0400. The purpose of a Phase I Report is to record information in a standardized format in order to:
 - (a) facilitate the evaluation and Tier Classification of a disposal site in those cases where Comprehensive Response Actions may need to be undertaken; or
 - (b) where appropriate, support a Permanent or Temporary Solution Statement filed prior to Tier Classification of a disposal site.
- (2) A Phase I Report shall be submitted to the Department for any disposal site undergoing Tier Classification under the provisions of 310 CMR 40.0500.
- (3) The preliminary description of hydrogeologic conditions at a disposal site required in a Phase I Report pursuant to 310 CMR 40.0483(d) shall be based upon the installation of a minimum of three groundwater monitoring wells, in locations near known or likely release or source areas. This requirement may be modified or eliminated based upon the exercise of Technical Justification by a Licensed Site Professional, as described in 310 CMR 40.0193.

40.0482: Performance Standards

A Phase I Report shall provide sufficient information to meet the requirements of the Tier Classification process described in 310 CMR 40.0500 or, where appropriate, support a Permanent or Temporary Solution Statement filed for a site prior to Tier Classification.

40.0483: Content of Phase I Report

(1) Except as provided in 310 CMR 40.0483(2) and 40.0193, the following information shall be contained in all Phase I Reports submitted to the Department, in the format established below:

(a) General Disposal Site Information. The Phase I Report shall provide general information which defines and describes the disposal site and surrounding area, including:

1. the DEP Release Tracking Number(s) applicable to the disposal site under investigation;
2. the address(es) and geographical location coordinates of the disposal site and/or properties comprising the disposal site;
3. a Disposal Site Locus Map, based upon a U.S.G.S. topographic or equivalent map, depicting 500 foot and ½ mile radii from the boundaries of the disposal site;
4. an estimate of the number of on-site workers at the disposal site;
5. an estimate of the residential population within a ½ mile radius of the disposal site;
6. a general description of land uses surrounding the disposal site;
7. the number of Institutions within 500 feet of the disposal site; and
8. a listing and description of any of the following natural resource areas located within 500 feet of the disposal site:
 - a. all surface waters, including wetlands, vernal pools, ponds, lakes, streams, rivers, and reservoirs;
 - b. drinking water supplies consisting of Zone II areas, Interim Wellhead Protection Areas, Zone A areas, Potentially Productive Aquifers, and private wells; and
 - c. Areas of Critical Environmental Concern, Sole Source Aquifers, local, state and/or federal protected open space, fish habitats, and habitats of Species of Special Concern or Threatened or Endangered Species.

(b) Disposal Site Map. Phase I Reports shall include one or more maps or plans depicting the location of the following:

1. disposal site boundaries, to the extent they have been defined by assessments conducted to date;
2. boundaries of properties located within the disposal site; and
3. the following structures, areas and monitoring points, as appropriate:
 - a. on-site buildings;
 - b. floor and storm drains;
 - c. subsurface utilities serving or transecting the disposal site;
 - d. oil and/or hazardous material storage and disposal structures and/or areas;
 - e. the location of any known oil and/or hazardous material releases and/or threats of release; and
 - f. monitoring wells, borings, test pits and other relevant sampling and screening points.

(c) Disposal Site History. The disposal site history shall be presented in the Phase I Report in reverse chronological order, beginning with the current use of the disposal site, and shall include the following:

1. Owner/Operator and Operations History.
 - a. a list of current and relevant previous owners and operators of the properties comprising the disposal site, including dates of ownership and operation; and
 - b. a description of current and historical uses of the disposal site, including residential, commercial and industrial activities and manufacturing processes, and the location of buildings and structures currently or previously located on the disposal site.
2. Release History. A description of any known and relevant releases of oil and/or hazardous material at the disposal site shall be provided. For each relevant release, the description shall include:
 - a. the source and location of the release;
 - b. the known or suspected cause of the release;
 - c. the known or approximate date and duration of the release;
 - d. the type of oil and/or hazardous material released;
 - e. the known or approximate volume of the release; and
 - f. any measures taken to assess, contain or mitigate the release.
3. Oil and/or Hazardous Material Use and Storage History. The Phase I Report shall describe all relevant current and past use and storage of oil and/or hazardous material at the disposal site, and shall include a description of the following:

40.0483: continued

- a. types of oil and/or hazardous material, including generic names, chemical names and trade names, if available;
 - b. uses of oil and/or hazardous material;
 - c. quantities used;
 - d. periods of use;
 - e. on-site storage locations, underground storage tanks, above-ground tanks, drums, lagoons, pits and piles; and
 - f. age and volume of tanks and other storage containers.
4. Waste Management History. The Phase I Report shall include a general description of all known relevant waste management practices, excluding the off-site disposal of solid waste. This description shall address the types of wastes or waste streams, and the locations of points of discharge or on-site disposal or treatment with respect to the following:
- a. land disposal, including landfills and lagoons;
 - b. subsurface disposal including drains, dry wells, septic systems and leach fields;
 - c. surface water discharges to natural and man-made water bodies;
 - d. discharges to wastewater treatment plants; and
 - e. any other relevant means of disposal or treatment.
5. Environmental Permits and Compliance History. The Phase I Report shall include a history of all relevant local, state and federal environmental permits and oil and/or hazardous material storage permits issued for the disposal site or on-site facilities, including without limitation information on any permit violations. Relevant permits may include but are not limited to:
- a. permits for M.G.L. c. 21E response actions;
 - b. oil and/or hazardous material storage permits;
 - c. wastewater discharge permits;
 - d. groundwater discharges permits;
 - e. air quality discharges permits;
 - f. wetlands alteration permits;
 - g. Resource Conservation and Recovery Act (RCRA) permits; and
 - h. National Pollution Discharge Elimination System (NPDES) permits.
6. Potentially Responsible Parties. The Phase I Report may include a list of the names and addresses of all Potentially Responsible Parties identified for the disposal site.
- (d) Site Hydrogeological Characteristics. The Phase I Report shall include details of subsurface investigations conducted at the disposal site, together with a preliminary or generalized description and depiction of site hydrogeologic conditions, including, without limitation:
1. a concise description of all relevant geologic, hydrologic, geophysical and other subsurface investigations and assessments conducted to date at the disposal site;
 2. documentation on boring advancement, well construction and well development, including copies of well drilling logs, within or appended to the Phase I Report;
 3. a characterization of general site topography, including slope, presence of bedrock outcrops and surface drainage features;
 4. a characterization of geologic and stratigraphic conditions, including:
 - a. soil type(s), stratigraphy and evidence of filling or waste disposal;
 - b. where appropriate, the known or estimated depths to, and description of, bedrock; and
 5. a description and graphical depiction of groundwater flow direction or potentiometric surface elevations, indicating the location of monitoring wells.
- (e) Nature and Extent of Contamination. The Phase I Report shall provide information on the nature and extent of contamination, as determined by Initial Site Investigation Activities and Preliminary Response Actions undertaken to date at the disposal site, including:
1. evidence of releases of oil and/or hazardous material to the environment including visual and olfactory evidence, results of field screening and laboratory analysis, and historical knowledge;
 2. the names, concentrations, and volumes (if applicable) of all released oil and hazardous material detected to date at the disposal site:

40.0483: continued

- a. volumes shall be reported in gallons, pounds, tons or cubic feet, as appropriate;
 - b. analytical results for each media sampled shall be summarized in the text and in tables in the body of the Phase I Report;
 - c. for the purpose of disposal site classification, maximum and minimum concentrations for each contaminant detected shall be identified in a summary table in the body of the Phase I Report;
 3. laboratory data sheets, included in an appendix to the Phase I Report;
 4. information and details on the approximate horizontal and vertical extent of contamination based on best available information, as obtained from site investigations of scope and detail commensurate with release and site conditions; and
 5. information and details on NAPL, if present or suspected, including NAPL stability and the approximate horizontal and vertical extent of NAPL contamination, as obtained from site investigations of scope and detail commensurate with release and site conditions.
- (f) Migration Pathways and Exposure Potential. The Phase I Report shall describe and evaluate known and potential contaminant migration pathways and exposure points, to the extent that such information is known, including:
1. evidence of and the potential for oil and/or hazardous material migration by one or more of the following pathways:
 - a. air;
 - b. soil;
 - c. groundwater;
 - d. soil gas;
 - e. preferential flow pathways such as subsurface utility lines and void spaces; and/or
 - f. surface water, including sediments;
 2. a discussion of known and potential human exposure to oil and hazardous material present at the disposal site, by inhalation, dermal contact or ingestion of contaminants; and
 3. a discussion of known and potential impacts of oil and hazardous material present at the disposal site to environmental receptors, with special attention given to the natural resource areas referenced in 310 CMR 40.0483(1)(a)8.c.
- (g) Evaluation for Immediate Response Actions. The Phase I Report shall include an evaluation of the need to conduct an Immediate Response Action, as described in 310 CMR 40.0412.
- (h) Conclusions. The Phase I Report shall include a Conclusions section containing a summary of findings and statement of conclusions with respect to the site, a preliminary Conceptual Site Model for the disposal site and the outcome of Initial Site Investigation Activities, as documented in the Phase I Report, and as described in 310 CMR 40.0486.

(2) In addition to the Phase I Report requirements set forth in 310 CMR 40.0483(1), such additional information as may be necessary to adequately and completely characterize a disposal site in accordance with the Response Action Performance Standard described in 310 CMR 40.0191, and/or as required by unique release, threat of release and/or site conditions, shall be provided in the Phase I Report. It may also be appropriate to eliminate certain information categories, or investigation or assessment elements from the Phase I Report, as may be consistent with unique release, threat of release and/or site conditions, by application of the Technical Justification standard set forth in 310 CMR 40.0193.

40.0484: Phase I Report Completion Statement

- (1) All Phase I Reports submitted to the Department in support of a Permanent or Temporary Solution Statement, or as part of Tier Classification of a disposal site pursuant to 310 CMR 40.0500, shall be appended to the appropriate transmittal form established by the Department for such purposes.
- (2) The Completion Statement form submitted with a Phase I Report shall include the following:
 - (a) an LSP Opinion as to whether the Phase I Report conforms with applicable requirements specified in 310 CMR 40.0480;

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

40.0484: continued

- (b) the outcome of the Phase I Report, as described in 310 CMR 40.0486; and
- (c) the certification of the submittal required by 310 CMR 40.0009.

40.0485: Public Involvement

Public Involvement Activities shall be conducted in accordance with 310 CMR 40.1400 through 40.1406. Public Involvement Activities relevant to Initial Site Investigation Activities specifically include those activities set forth in 310 CMR 40.1403(3)(e), and may include, but are not limited to, those activities set forth in 310 CMR 40.1403(3)(a) and (4)(f).

40.0486: Possible Outcomes of a Phase I Report

The following outcomes are possible upon completion of a Phase I Report:

- (1) Comprehensive Response Actions are necessary at the disposal site. Tier Classification of the site pursuant to the provisions of 310 CMR 40.0500 shall be undertaken by RPs, PRPs, or Other Persons, if necessary, and prior to the initiation of Comprehensive Remedial Actions; or
- (2) the requirements of a Permanent Solution have been met, pursuant to the provisions of 310 CMR 40.1000, and a Permanent or Temporary Solution Statement shall be submitted to the Department by the RP, PRP, or Other Person conducting response actions.

SUBPART E: TIER CLASSIFICATION AND RESPONSE ACTION DEADLINES

40.0500: Tier Classification and Response Action Deadlines

The regulations published at 310 CMR 40.0500 through 40.0599, cited collectively as 310 CMR 40.0500, establish requirements and procedures for Tier Classification, and deadlines for completing response actions at disposal sites. Tier Classification results are considered by the Department in determining the appropriate level of Departmental oversight for response actions conducted by RPs, PRPs and Other Persons at disposal sites.

40.0501: Scope and Applicability

(1) 310 CMR 40.0500 establishes requirements and procedures for the performance of response actions at Tier I and Tier II disposal sites, including, but not limited to, requirements for re-evaluating such disposal sites and requirements for submittals. For Tier Classified disposal sites, the specific deadlines for RPs, PRPs and Other Persons to achieve a Permanent or Temporary Solution pursuant to 310 CMR 40.1000 are determined in accordance with 310 CMR 40.0560.

(2) Except as provided in 310 CMR 40.0501(3), all sites for which the Department receives notification of a release or threat of release of oil and/or hazardous material pursuant to 310 CMR 40.0300 on or after October 1, 1993, or has discovered or discovers that a release or threat of release of oil and/or hazardous material has occurred, shall be classified by RPs, PRPs or Other Persons as either a Tier I or Tier II disposal site in accordance with 310 CMR 40.0500. An RP, PRP or Other Person shall submit a Tier Classification Submittal to the Department by the following deadlines:

- (a) within one year of the earliest date computed in accordance with 310 CMR 40.0404(3); or
- (b) as otherwise specified by the Department in an Interim Deadline pursuant to 310 CMR 40.0167 or order pertaining to such release or threat of release. In the event that multiple deadlines for Tier Classification would be established by 310 CMR 40.0501(2) with respect to any specific disposal site, the earliest of the applicable deadlines shall apply for the purposes of Tier Classification.

40.0501: continued

(3) Notwithstanding any provision of 310 CMR 40.0501(2) to the contrary, an RP, PRP or Other Person conducting response actions at a disposal site shall not be required to submit a Tier Classification Submittal if such RP, PRP or Other Person submits either a Permanent Solution Statement pursuant to 310 CMR 40.1000 or a Downgradient Property Status Submittal pursuant to 310 CMR 40.0180 to the Department within one year of the earliest date computed in accordance with 310 CMR 40.0404(3).

(4) Except as provided at 310 CMR 40.0062(1)(j) for Special Project Designations, an individual Tier Classification Submittal may be for a single discrete disposal site located on one or more parcels of land or to address multiple discrete disposal sites located on a single parcel of land.

(5) An RP, PRP or Other Person may undertake Phase II and Phase III Comprehensive Response Actions pursuant to 310 CMR 40.0800 prior to Tier Classification without the Department's prior approval, unless otherwise specified in writing by the Department.

40.0502: Tier ID Disposal Sites

(1) A disposal site shall be deemed a Tier ID ("default") disposal site if any of the following apply:

(a) an RP, PRP or Other Person for such disposal site fails to submit to the Department one of the following by the applicable deadline in 310 CMR 40.0501:

1. a Permanent Solution Statement; or
2. a Tier Classification Submittal; or

(b) the person undertaking response actions is in noncompliance with M.G.L. c. 21E, 310 CMR 40.0000 or any other applicable requirement, and the Department reclassifies the disposal site as a Tier ID disposal site pursuant to 310 CMR 40.0583.

(2) An RP, PRP or Other Person shall not conduct Comprehensive Response Actions pursuant to 310 CMR 40.0800 at a Tier ID disposal site.

(3) An RP, PRP or Other Person for any disposal site that was not previously classified and is deemed a Tier ID disposal site pursuant to 310 CMR 40.0502(1) shall Tier Classify such disposal site pursuant to the requirements at 310 CMR 40.0510.

(4) Any disposal site deemed a Tier ID disposal site pursuant to 310 CMR 40.0502(1)(b) shall be reclassified as follows:

(a) if the disposal site was previously classified pursuant to 310 CMR 40.0510, then the previous classification shall be effective when the Department determines that the RP, PRP, or Other Person has addressed the non-compliance, provided such classification has not expired;

(b) if the disposal site was not previously classified pursuant to 310 CMR 40.0510, then the RP, PRP, or Other Person shall classify the disposal site pursuant to 310 CMR 40.0510.

40.0510: Tier Classification Process

(1) The Tier Classification process consists of:

(a) the completion of a Phase I - Initial Site Investigation Report in accordance with 310 CMR 40.0480;

(b) a comparison of conditions at a disposal site with the Tier I Criteria set forth in 310 CMR 40.0520(2);

(c) the preparation and filing with the Department of a Tier Classification Submittal in accordance with 310 CMR 40.0510(2); and

(d) the public involvement activities relevant to Tier Classification, including, but not limited to, those activities set forth in 310 CMR 40.1403(3) and (6). Response actions may be initiated or continued at the disposal site during the comment period described in 310 CMR 40.1403(6)(a), unless otherwise prohibited by the Department.

40.0510: continued

- (2) A Tier I or Tier II Classification Submittal shall consist of the following:
- (a) a completed Tier Classification transmittal form using the form established by the Department for such purposes;
 - (b) an LSP Tier Classification Opinion pursuant to 310 CMR 40.0510(4);
 - (c) the certification required by 310 CMR 40.0009;
 - (d) the certification required by 310 CMR 40.0540(1);
 - (e) the compliance history required by 310 CMR 40.0540(2); and
 - (f) a conceptual Phase II Scope of Work that, at a minimum, includes:
 1. a general plan for assessing contaminants of concern, potential receptors and potential exposure pathways, identifying the likely technical approach(es) to be used; and
 2. a projected schedule that includes interim milestones.
- (3) Tier Classification Public and Written Notice Requirements.
- (a) The following actions must be taken to provide notice to the public and local officials of the Tier Classification:
 1. within seven days of filing a Tier Classification Submittal, publish a public notice pursuant to 310 CMR 40.1403(2)(b) as specified at 310 CMR 40.1403(6)(a);
 2. at least three days prior to publication of the public notice, provide a written notice pursuant to 310 CMR 40.1403(2)(a) to the Chief Municipal Officer(s) and Board(s) of Health in the community(ies) in which the disposal site is located and in any other community(ies) that is, or is likely to be, affected by the disposal site as specified at 310 CMR 40.1403(6)(b); and
 3. in the case of a Tier I Classification for a disposal site where there is evidence of groundwater contamination with oil and/or hazardous material at concentrations equal to or exceeding the applicable RCGW-1 Reportable Concentration set forth in 310 CMR 40.0360, and such groundwater is located within an Interim Wellhead Protection Area, Zone II, or Zone A of a Class A surface drinking water source, provide the owner(s) of the Public Water Supply with a written notice pursuant to 310 CMR 40.1403(2)(a) at least three days prior to publication of the public notice, that includes:
 - a. a copy of the public notice; and
 - b. a copy of the disposal site map included in the Phase I Report pursuant to 310 CMR 40.0483(1)(b).
 - (b) Publication of the public notice shall be documented to the Department as specified at 310 CMR 40.1403(2)(c)2.
 - (c) A copy of each written notice sent to local officials and, where applicable, Public Water Supply owner(s), pursuant to 310 CMR 40.0510(3)(a)2. and 3. respectively, shall be concurrently submitted to the Department as specified at 310 CMR 40.1403(2)(c)1.
- (4) An LSP Tier Classification Opinion shall consist of:
- (a) a completed Phase I Report, as described in 310 CMR 40.0480;
 - (b) on the basis of the Tier I Criteria, an LSP Opinion as to whether a disposal site should be classified as Tier I or Tier II; and
 - (c) any other information required by 310 CMR 40.0520 or 40.0530, including, but not limited to, any other Phase Reports, Status Reports and Completion Statements material to the LSP Tier Classification Opinion.
- (5) Unless otherwise specified by the Department, the Tier Classification effective date shall be the date a complete Tier Classification Submittal is received by the Department. Such Tier Classification (either Tier I or Tier II) shall apply unless and until the RP, PRP or Other Person submits a subsequent Tier Classification to the Department pursuant to 310 CMR 40.0530 that reclassifies the disposal site or the Department reclassifies the disposal site pursuant to 310 CMR 40.0583.
- (6) Reclassification of a disposal site does not change the effective date of the Tier Classification.

40.0520: Basis for Tier Classification

(1) Disposal Site Information.

(a) Any person performing Tier Classification for a disposal site shall evaluate such disposal site using the Tier Classification Criteria described in 310 CMR 40.0520(2). The evaluation shall be based upon data, facts and other information obtained during Phase I, and any other relevant data, facts or information known by the person performing Tier Classification, including, but not limited to, any data, facts or information obtained during a Phase II - Comprehensive Site Assessment, if Phase II work has been performed at such disposal site.

(b) All relevant data, facts and other information considered during Tier Classification shall be documented in the applicable Phase Report(s) and the LSP Tier Classification Opinion. LSPs shall use the Response Action Performance Standard in 310 CMR 40.0191 to develop an LSP Tier Classification Opinion.

(c) Any person performing Tier Classification may account for risk reduction measures, if any, that have been completed at the disposal site pursuant to 310 CMR 40.0400 prior to performing such Tier Classification, including Immediate Response Actions, Release Abatement Measures and Utility-related Abatement Measures.

(2) Tier I Criteria. Any disposal site which meets the following criteria at the time of Tier Classification shall be classified as Tier I:

(a) there is evidence of groundwater contamination with oil and/or hazardous material at concentrations equal to or exceeding the applicable RCGW-1 Reportable Concentration set forth in 310 CMR 40.0360, and such groundwater is located within an Interim Wellhead Protection Area, Zone II, or within 500 feet of a Private Water Supply Well;

(b) an Imminent Hazard is present;

(c) one or more remedial actions are required as part of an Immediate Response Action pursuant to 310 CMR 40.0414(2); or

(d) one or more response actions are required as part of an Immediate Response Action to eliminate or mitigate a Critical Exposure Pathway pursuant to 310 CMR 40.0414(3).

(3) Any disposal site that meets one or more of the Tier I Criteria set forth in 310 CMR 40.0520(2) and is classified as Tier I may be reclassified as Tier II pursuant to 310 CMR 40.0530 once the Tier I Criteria no longer apply at the disposal site.

(4) Tier II Classification. Any disposal site that is not Tier ID pursuant to 310 CMR 40.0502 or 40.0520(5) and does not meet the Tier I Criteria described at 310 CMR 40.0520(2) shall be classified as Tier II.

(5) Transition Provisions. Effective June 20, 2014:

(a) previously tier classified disposal sites shall have the following tier classification:

1. disposal sites with a classification of Tier IA, Tier IB, or Tier IC shall be classified as Tier I;

2. disposal sites with a classification of Tier II shall be classified as Tier II; and

3. disposal sites with a classification of Tier ID shall be classified as Tier ID; and

(b) any prior conditions of approval related to the schedule and/or manner for conducting response actions at the disposal site shall remain in effect.

40.0530: Reclassification by RPs, PRPs, or Other Persons During Response Actions

(1) Except as provided at 310 CMR 40.0530(5), an RP, PRP or Other Person performing response actions at a disposal site following Tier Classification shall re-evaluate such disposal site using the Tier I Criteria specified in 310 CMR 40.0520(2) if he or she obtains new or additional data, facts or other information which result in a finding that would cause reclassification of the disposal site from Tier II to Tier I.

(2) An RP, PRP or Other Person performing response actions at a Tier II disposal site who obtains knowledge that the disposal site meets the Tier I Criteria shall submit to the Department a Tier Classification Submittal within 60 days of obtaining such knowledge.

40.0530: continued

(3) An RP, PRP or Other Person may downgrade a Tier I disposal site classification if upon re-evaluation of the disposal site pursuant to the Tier I Criteria at 310 CMR 40.0520(2) the disposal site is determined to no longer meet one or more of the Tier I Criteria. In such case, an RP, PRP or Other Person for a Tier I disposal site shall submit a revised Tier Classification Submittal to document the reclassification from Tier I to Tier II that includes the information specified at 310 CMR 40.0510(2)(a) through (c).

(4) Except as otherwise specified by the Department, reclassification of a disposal site by an RP, PRP or Other Person who has been performing and is continuing to perform response actions at such disposal site shall not change the response action deadlines based upon the initial Tier Classification effective date of such disposal site, as detailed in 310 CMR 40.0560(1) and (2).

(5) Reclassification pursuant to 310 CMR 40.0530 shall not be required for disposal sites classified as Tier II prior to June 20, 2014 for conditions that meet the Tier I Criteria specified in 310 CMR 40.0520(2)(c) and (d) where the RP, PRP, or Other Person had knowledge of and was conducting response actions to address such conditions prior to June 20, 2014.

40.0540: Demonstration of Ability and Willingness

(1) Each person filing a Tier Classification Submittal with the Department shall include the certification required by 310 CMR 40.0009 and the following written declaration:

"I attest under the pains and penalties of perjury that (i) I/the person(s) or entity(ies) on whose behalf this submittal is made has/have personally examined and am/is familiar with the requirements of M.G.L. c. 21E and 310 CMR 40.0000; (ii) based upon my inquiry of the/those Licensed Site Professional(s) employed or engaged to render Professional Services for the disposal site which is the subject of this Transmittal Form and of the person(s) or entity(ies) on whose behalf this submittal is made, and my/that person's(s') or entity's(ies)' understanding as to the estimated costs of necessary response actions, that/those person(s) or entity(ies) has/have the technical, financial and legal ability to proceed with response actions for such site in accordance with M.G.L. c. 21E, 310 CMR 40.0000 and other applicable requirements; and (iii) that I am fully authorized to make this attestation on behalf of the person(s) or entity(ies) legally responsible for this submittal. I/the person(s) or entity(ies) on whose behalf this submittal is made is aware of the requirements in 310 CMR 40.0172 for notifying the Department in the event that I/the person(s) or entity(ies) on whose behalf this submittal is made am/is(are) unable to proceed with the necessary response actions."

(2) Each person filing a Tier Classification Submittal with the Department shall include therein a statement detailing such person's history of compliance with the Department's regulations, including, but not limited to, M.G.L. c. 21E, 310 CMR 40.0000, and other laws for the protection of health, safety, public welfare and the environment administered or enforced by the Department or other federal, state and local government agencies, that are relevant to conditions at the disposal site.

NON-TEXT PAGE

40.0560: Response Action Deadlines and Requirements for Tier Classified Disposal Sites

(1) Deadlines for Achieving a Permanent Solution, Temporary Solution or Remedy Operation Status. Except as expressly provided by 310 CMR 40.0000 or as otherwise ordered or agreed to in writing by the Department, an RP, PRP or Other Person undertaking response actions at a disposal site shall achieve a Permanent Solution, Temporary Solution, or Remedy Operation Status within five years of the effective date of initial Tier Classification. The eventual achievement of a Permanent Solution is required at all disposal sites where a Temporary Solution or Remedy Operation Status is achieved.

- (a) The Tier Classification for a disposal site pursuant to 310 CMR 40.0510 shall expire five years from the effective date of the initial Tier Classification of such disposal site; and
- (b) An RP, PRP or Other Person shall not conduct Comprehensive Response Actions pursuant to 310 CMR 40.0800 at a disposal site for which a Tier Classification has expired unless a Tier Classification Extension is obtained pursuant to 310 CMR 40.0560(7).

(2) Deadlines for Submittals. Except as provided by 310 CMR 40.0530(4), 40.0560(3), or 40.0000 or as otherwise ordered or agreed to in writing by the Department, an RP, PRP or Other Person undertaking response actions at a Tier Classified disposal site shall submit the following documents to the Department by the following deadlines:

- (a) a conceptual scope of work for a Phase II - Comprehensive Site Assessment pursuant to 310 CMR 40.0834 prior to the implementation of Phase II field work, updated as necessary to reflect material modifications from the conceptual scope of work submitted pursuant to 310 CMR 40.0510(2)(f) at the time of initial Tier Classification, unless the Phase II field work had been implemented prior to Tier Classification;
- (b) a Phase II Report within three years of the effective date of Tier Classification;
- (c) if applicable, a Phase III Remedial Action Plan within four years of the effective date of Tier Classification;
- (d) if applicable, a Phase IV Remedy Implementation Plan within four years of the effective date of Tier Classification; and
- (e) a Permanent Solution Statement, or Temporary Solution Statement pursuant to 310 CMR 40.1000, or a Remedy Operation Status Submittal pursuant to 310 CMR 40.0893, within five years of the effective date of Tier Classification.

(3) Notwithstanding any provision of 310 CMR 40.0560(2) to the contrary, submittal to the Department of those documents described in 310 CMR 40.0560(2)(a) through (d) shall not be required at any disposal site for which a Permanent Solution Statement is submitted to the Department prior to an applicable document submittal deadline.

(4) Approvals.

- (a) Except as provided in 310 CMR 40.0560(4)(b), an RP, PRP or Other Person undertaking response actions at a disposal site classified as Tier I or Tier II pursuant to 310 CMR 40.0510 may perform the response actions which are the subject of the submittals required by 310 CMR 40.0560(2) without the Department's prior approval thereof.
- (b) Notwithstanding 310 CMR 40.0560(4)(a), the Department may at any time require an RP, PRP or Other Person undertaking response actions at a Tier Classified disposal site to obtain prior Departmental approval of one or more of the submittals specified by 310 CMR 40.0560(2) or the response actions or submittals required pursuant to 310 CMR 40.0800. The Department may require such prior approval for submittals or response actions as they relate to the entire disposal site or to some portion thereof.
- (c) No person shall perform Phase IV response actions at a disposal site classified as Tier I or Tier II pursuant to 310 CMR 40.0510 unless and until 20 days have passed from the date of publication of the notice required by 310 CMR 40.0510(3).
- (d) No person shall perform Comprehensive Response Actions at Tier ID disposal sites unless and until the disposal site is classified as Tier I or Tier II pursuant to 310 CMR 40.0510.

(5) Notification of Delay in Compliance with Deadlines for Tier Classified Disposal Sites. Except as provided by 310 CMR 40.0025 or 40.0167, if any delay in compliance with any deadline or time period required by 310 CMR 40.0560(2) occurs after a disposal site is Tier Classified, the RP, PRP or Other Person performing response action shall notify the Department in writing using a transmittal form provided by the Department for such purposes prior to missing any such deadline or time period, and shall take appropriate measures to minimize such delay in compliance with any deadline or time period. Such notification of delay:

40.0560: continued

- (a) shall state the reason for such delay, the measure or measures to be taken to minimize the delay and a proposed schedule for implementing those measures;
- (b) does not forgive an RP's, PRP's or Other Person's noncompliance with deadlines for response actions in 310 CMR 40.0000.

(6) Notification of Initial Field Activities. RPs, PRPs or Other Persons conducting response actions at Tier Classified disposal sites shall notify the Department at least seven days prior to the commencement of initial field activities related to the implementation of Comprehensive Response Actions. Upon such notification, the Department may impose conditions on and/or arrange to observe the conduct of field work including, but not limited to, the installation of monitoring wells, the excavation of test pits, field sampling of environmental media, soil removal, installation of groundwater recovery systems, the start of Phase IV construction activities, and observation of Phase V monitoring activities.

(7) Tier Classification Extensions.

- (a) If a Permanent Solution Statement, Temporary Solution Statement or Remedy Operation Status Submittal has not been submitted to the Department for a Tier Classified disposal site prior to the expiration of the Tier Classification, the person undertaking response actions at such site shall extend the Tier Classification by submitting a Tier Classification Extension Submittal to the Department.
- (b) The Tier Classification Extension Submittal shall be provided to the Department at least 45 days before the date of expiration of the Tier Classification.
- (c) The Tier Classification Extension Submittal shall consist of the following:
 - 1. a completed transmittal form using a form provided by the Department for such purposes, which shall include a statement explaining why a Permanent Solution, Temporary Solution, or Remedy Operation Status has not been achieved at the site.
 - 2. a description of the status of response actions, including a plan and a proposed schedule for implementing such plan, which details the steps that will be taken in order to achieve, at a minimum, a Temporary Solution at the disposal site pursuant to 310 CMR 40.1000 within one year of the effective date of the Tier Classification Extension, and a schedule for achieving a Permanent Solution, if feasible;
 - 3. the certification required by 310 CMR 40.0009;
 - 4. the certification required by 310 CMR 40.0540(1);
 - 5. an updated compliance history required by 310 CMR 40.0540(2) since the effective date of the Tier Classification; and
 - 6. an LSP Opinion indicating that the plans and/or reports submitted are in conformance with the requirements of 310 CMR 40.0000.
- (d) Where a complete Tier Classification Extension Submittal is submitted to the Department at least 45 days before the date of expiration of the Tier Classification, the Tier Classification Extension shall take effect on the expiration date of the previous Tier Classification unless the Department issues a written denial for such Extension prior to the expiration date of the previous Tier Classification. Unless otherwise specified by the Department, the Extension shall be effective for a period of two years beyond the effective date of the Tier Classification. An RP, PRP or Other Person shall notify the Department pursuant to 310 CMR 40.0560(7) if additional extensions are required thereafter; and
- (e) The Department reserves the right to reconsider the need for Departmental oversight or to initiate enforcement actions related to any Tier Classification Extension Submittal or when any timeline for achieving a Permanent Solution, Temporary Solution, or Remedy Operation Status pursuant to 310 CMR 40.0560 is exceeded; and
- (f) A Tier Classification Extension obtained under 310 CMR 40.0560(7) does not forgive an RP's, PRP's or Other Person's noncompliance with any provisions of 310 CMR 40.0000, including but not limited to, noncompliance that resulted from the late submittal or failure to submit an IRA Plan, Status Report, Phase I Report, Tier Classification, Phase II Report, Phase III Remedial Action Plan, Phase IV Remedy Implementation Plan, and/or failure to achieve a Permanent Solution, Temporary Solution, or Remedy Operation Status. A Tier Classification Extension means the RP, PRP or Other Person has approval to continue with response actions in compliance with all applicable provisions of 310 CMR 40.0000. Such Extension shall not be construed as approval by the Department of the scope or adequacy of plans or of the response actions as actually conducted.

40.0560: continued

(8) Changes in Persons Undertaking Response Actions at Tier Classified Disposal Sites.

(a) No person other than a person who has filed a Tier Classification Submittal for a disposal site with the Department may perform Comprehensive Response Actions at such disposal site, unless that person submits a Tier Classification Transfer Submittal to the Department.

(b) A Tier Classification Transfer Submittal shall consist of the following:

1. a completed transmittal form using a form provided by the Department for such purposes, which shall include a statement and/or report explaining the reasons for the change in persons undertaking response actions and a proposed effective date for such change;
2. a listing of all Status and Phase Reports for response actions completed since the effective date of the Tier Classification;
3. the certification required by 310 CMR 40.0009 by the current RP, PRP or Other Person for such disposal site and by the transferee;
4. the certification required by 310 CMR 40.0540(1) by the transferee;
5. the compliance history required by 310 CMR 40.0540(2) for the transferee; and
6. an LSP Opinion indicating that the plans and/or reports submitted are in conformance with the requirements of 310 CMR 40.0000.

(c) A change in persons conducting response actions at a Tier Classified disposal site shall take effect 30 days after submission of a complete Tier Classification Transfer Submittal to the Department unless the Department issues a written denial of such transfer prior to the termination of such 30 day time period.

(d) The Department reserves the right to reconsider the need for Departmental oversight or to initiate enforcement actions related to any Tier Classification Transfer Submittal or when any timeline for achieving a Permanent or Temporary Solution pursuant to 310 CMR 40.0560 at a Tier Classified disposal site is not met.

40.0570: Requirements for Eligible Persons, Eligible Tenants or Other Persons Seeking to Re-establish Response Action Deadlines

(1) Notwithstanding 310 CMR 40.0560, Eligible Persons, Eligible Tenants or Other Persons who are required or intend to conduct response actions at a Tier Classified disposal site and who have not previously submitted a Tier Classification Submittal for the disposal site may seek to re-establish the deadlines for response actions by submitting a Tier Classification Submittal; provided, however, that for the purpose of re-establishing deadlines pursuant to 310 CMR 40.0570:

(a) Eligible Persons who became an owner or operator of a site or portion thereof prior to December 14, 2007 shall make such submittal within 120 days of December 14, 2007, unless the Department agrees to a later date;

(b) Eligible Persons who become an owner or operator of a site or portion thereof after December 14, 2007 shall make such submittal within 120 days of becoming such an owner or operator, unless the Department agrees to a later date;

(c) Eligible Tenants who acquire occupancy, possession or control of a site or portion thereof prior to December 14, 2007 shall make such submittal within 120 days of December 14, 2007, unless the Department agrees to a later date;

(d) Eligible Tenants who acquire occupancy, possession or control of a site or portion thereof after December 14, 2007 shall make such submittal within 120 days of acquiring such occupancy, possession or control, unless the Department agrees to a later date;

(e) Persons who became Other Persons prior to December 14, 2007 shall make such submittal within 120 days of December 14, 2007, unless the Department agrees to a later date; and

(f) Persons who became Other Persons after December 14, 2007 shall make such submittal within 120 days of becoming an Other Person, unless the Department agrees to a later date.

(2) Unless otherwise specified by the Department in writing, deadlines re-established pursuant to 310 CMR 40.0570 shall be calculated from the effective date of the Tier Classification submittal to the Department pursuant to 310 CMR 40.0570(1).

40.0570: continued

(3) An Eligible Person, Eligible Tenant, or Other Person seeking to re-establish response action deadlines pursuant to 310 CMR 40.0570 must provide with the Tier Classification Submittal a written certification pursuant to 310 CMR 40.0009 stating that:

- (a) such person, in the case of a person asserting to be an Eligible Person, is an owner or operator of the disposal site or a portion thereof who would be liable under M.G.L. c. 21E, § 5(a)(1) solely, did not cause or contribute to the release, and did not own or operate the site at the time of the release;
- (b) such person, in the case of a person asserting to be an Eligible Tenant, is a person who acquired occupancy, possession or control of the disposal site, or a portion thereof, after the release of oil or hazardous material has been reported to the department, did not cause or contribute to the release, and would not otherwise be liable pursuant to M.G.L. c. 21E, § 5(a)(2) through (5);
- (c) such person, in the case of a person asserting to be an Other Person, is not an RP or PRP, with specific facts sufficient to support this statement;
- (d) such person is not, and was not at any time, affiliated with any other person
 1. who owned or operated the property from which the release originated, or caused such release, and
 2. who is potentially liable under M.G.L. c. 21E for the disposal site through any direct or indirect contractual, corporate or financial relationship other than:
 - a. that established by any instrument creating such person's interest in property within the disposal site boundaries; or
 - b. that established by an instrument wholly unrelated to the disposal site and which would not otherwise render such person potentially liable as a result of the relationship; and
- (e) such person, if a trust, consists of trustees, members and/or beneficiaries, all of whom satisfy 310 CMR 40.0570(3)(a) through (d).

Nothing in 310 CMR 40.0570 shall preclude the Department from considering any other information relative to whether such person is an Eligible Person, Eligible Tenant or Other Person.

(4) Any person seeking to re-establish response action deadlines pursuant to 310 CMR 40.0570 may elect to rely upon a Phase I Report, conceptual Phase II Scope of Work, and Tier Classification contained in a Tier Classification Submittal previously provided to the Department, provided that the new Tier Classification Submittal includes an LSP Opinion stating that such Application or Submittal relies on such previously provided information.

(5) Provided that 310 CMR 40.0570(1) through (4) are satisfied, and unless at any time following the Department's receipt of a Tier Classification Submittal pursuant to 310 CMR 40.0570(5) the Department establishes an Interim Deadline(s) as described in 310 CMR 40.0167 for conducting response actions, the response action submittal deadlines for Eligible Persons, Eligible Tenants or Other Persons undertaking response actions pursuant to 310 CMR 40.0570 shall be re-established as follows:

- (a) a scope of work for a Phase II - Comprehensive Site Assessment pursuant to 310 CMR 40.0834 prior to the implementation of Phase II field work, unless the Phase II field work had been implemented prior to Tier Classification;
- (b) a Phase II Report within three years of the effective date of the Tier Classification;
- (c) if applicable, a Phase III Remedial Action Plan and a Phase IV Remedy Implementation Plan within four years of the effective date of Tier Classification; and
- (d) a Permanent or Temporary Solution Statement pursuant to 310 CMR 40.1000, or a Remedy Operation Status Submittal pursuant to 310 CMR 40.0893, within five years of the effective date of Tier Classification.

(6) If the person filing the certification pursuant to 310 CMR 40.0570(3) is subsequently determined not to be an Eligible Person, Eligible Tenant or Other Person, or if such certification is determined at any time to be inaccurate or untrue, the original response action deadlines for the site shall supersede the deadlines established pursuant to 310 CMR 40.0570.

(7) In establishing Interim Deadlines for response actions pursuant to 310 CMR 40.0570 and 310 CMR 40.0167, the Department may consider, without limitation, the complexity of the disposal site and the extent to which response actions have already been completed for the disposal site.

40.0570: continued

(8) Nothing in 310 CMR 40.0570 shall limit a person's ability to seek a transfer of a Tier Classification; provided, however, that any response action deadline re-established pursuant to 310 CMR 40.0570 shall apply only to the Eligible Person, Eligible Tenant or Other Person making the submittals set forth in 310 CMR 40.0570, or to any subsequent Eligible Person, Eligible Tenant or Other Person to whom the Tier Classification is transferred who also files the certification described in 310 CMR 40.0570(3) within the applicable deadline specified in 310 CMR 40.0570(1).

40.0583: Department Reclassification of a Tier Classified Disposal Site

(1) General. The Department may, on its own initiative, reclassify a Tier I, Tier ID or Tier II disposal site to a different Tier Classification pursuant to 310 CMR 40.0583.

(2) Effect of Reclassification. A Reclassification made in accordance with 310 CMR 40.0583 shall have the effect of superseding the existing site classification.

(3) Criteria. The Department shall consider the Tier Classification Criteria at 310 CMR 40.0520 when reclassifying a Tier Classified disposal site.

40.0584: Participation by the Public, RPs, PRPs, and Other Persons in Department Reclassification

(1) Within seven days of reclassifying a Tier Classified disposal site pursuant to 310 CMR 40.0583, the Department shall provide notice to the public of the Reclassification as follows:

(a) by publishing a public notice pursuant to 310 CMR 40.1403(2)(b);

(b) by mail or hand delivery of a copy of the public notice to the Chief Municipal Officer and Board of Health in the community(ies) in which the disposal site is located and in any other community(ies) which the Department believes are likely to be affected by the disposal site;

(c) by mail or hand delivery of a copy of the public notice to any person the Department reasonably believes:

1. is an RP or a PRP for the disposal site;

2. is an Other Person conducting response actions for the disposal site;

3. holds title to, or an ownership interest in any real property comprising the disposal site or portion thereof or which may be affected by the disposal site and whose name and address is known to the Department at the time the Department decides to re-classify the disposal site; and

4. is the operator of the disposal site, if different from the owner;

(d) if the disposal site is a Public Involvement Plan (PIP) site, by mail to each person whose name and address appears on the PIP mailing list established pursuant to 310 CMR 40.1400;

(2) Content of Notice. The notice required by 310 CMR 40.0584(1) shall include, but not be limited to, the following information:

(a) the name and address of the disposal site;

(b) the DEP Release Tracking Number(s);

(c) the intended Reclassification category of the disposal site; and

(d) a statement of the basis for the Reclassification.

40.0585: Right to Request an Adjudicatory Hearing

(1) Any person who is aggrieved by a decision of the Department to reclassify a disposal site pursuant to 310 CMR 40.0583 to a Tier Classification category that is higher than the previous classification may request an adjudicatory hearing before the Department in accordance with 310 CMR 40.0050.

(2) A request for adjudicatory hearing pursuant to 310 CMR 40.0585 shall:

(a) comply with 310 CMR 40.0050 and 1.00: *Adjudicatory Proceedings*; and

(b) state the reason(s) the decision to reclassify does not comply with 310 CMR 40.0000.

(3) The adjudicatory hearing shall be limited to the issue of whether the Department's decision to reclassify is in accordance with the criteria set forth in 310 CMR 40.0583(3).

40.0590: Public Involvement

Public involvement activities shall be conducted in accordance with 310 CMR 40.1400

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

through 40.1406. Public involvement requirements relevant to Tier Classification include, but are not limited to, those activities set forth at 310 CMR 40.1403(6).

SUBPART H: COMPREHENSIVE RESPONSE ACTIONS

40.0800: Comprehensive Response Actions

310 CMR 40.0801 through 40.0899, cited collectively as 310 CMR 40.0800, contain the requirements and procedures for conducting Comprehensive Response Actions at disposal sites.

40.0801: Applicability

The procedures, requirements, and standards set forth in 310 CMR 40.0800 apply to all disposal sites for which a Phase I Initial Site Investigation Report has been prepared in accordance with the provisions of 310 CMR 40.0480, and where additional response actions are necessary to assess the disposal site and/or evaluate and implement Comprehensive Remedial Actions to achieve a Permanent or Temporary Solution under 310 CMR 40.1000.

40.0810: General Provisions for Comprehensive Response Actions

(1) Comprehensive Response Actions shall be performed in sequential phases. The phases of Comprehensive Response Actions consist of:

- (a) Phase II - Comprehensive Site Assessment;
- (b) Phase III - Identification and Selection of Comprehensive Remedial Action Alternatives;
- (c) Phase IV - Implementation of the Selected Remedial Action Alternative; and
- (d) Phase V - Operation, Maintenance and/or Monitoring

(2) The results of each phase of Comprehensive Response Actions shall be documented in one or more reports, and submitted to the Department in a manner specified in 310 CMR 40.0800 and within the applicable deadlines specified in 310 CMR 40.0550 and 40.0560. Where appropriate, Comprehensive Response Action reports may be combined and submitted to the Department simultaneously.

(3) Each phase of Comprehensive Response Actions shall build upon the results of previous work, continuing until a Permanent or Temporary Solution as described in 310 CMR 40.1000 is reached for the disposal site. The Department shall not recognize receipt of a Completion Statement for a Phase unless the Completion Statement for the previous Phase has been submitted.

(4) RPs, PRPs and Other Persons conducting Comprehensive Response Actions at disposal sites shall comply with all applicable provisions of 310 CMR 40.0800 and this Contingency Plan.

(5) RPs, PRPs and Other Persons conducting Comprehensive Response Actions shall engage or employ the services of a Licensed Site Professional.

(6) The scope and level of detail of response actions taken under 310 CMR 40.0800 shall be commensurate with the nature and complexity of the specific disposal site. The investigation process described in 310 CMR 40.0800 is intended to allow for varying levels of effort from disposal site to disposal site to avoid the collection of unnecessary information and unwarranted steps that could delay remedial actions. In all cases, the scope and level of detail of response actions taken under 310 CMR 40.0800 shall be sufficient to ensure that the applicable requirements and performance standards of these regulations are met, and that the response actions are conducted in a manner consistent with the Response Action Performance Standard as described in 310 CMR 40.0191.

(7) Technical justification, as described in 310 CMR 40.0193, may be provided to limit or forego one or more of the assessment or evaluation elements of 310 CMR 40.0800. Technical justification may not be used to forgo procedural requirements, such as the submission of reports,

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

40.0810: continued

notices or documents required as part of Comprehensive Response Actions under 310 CMR 40.0800. When technical justification is used to forgo or limit an assessment or evaluation element, a description of the site-specific conditions and characteristics that make the requirement unwarranted and any documentation necessary to support any such justification shall be provided in the applicable submittal to the Department.

(8) If at any time during the conduct of response actions under 310 CMR 40.0800 an Imminent Hazard, sudden release, or other time-critical release or site condition is identified at a disposal site, as described in 310 CMR 40.0412, Immediate Response Actions shall be performed as set forth in 310 CMR 40.0400.

(9) Comprehensive Response Actions shall be conducted in a manner protective of health, safety, public welfare, and the environment, and in accordance with the Health and Safety provisions of 310 CMR 40.0018.

(10) Nothing in 310 CMR 40.0800 shall limit the ability of the Department to initiate, oversee, or order the performance of any response action deemed necessary by the Department to protect health, safety, public welfare, or the environment or impose additional requirements which are consistent with the purposes on M.G.L. c. 21E or 310 CMR 40.0000.

(11) Notwithstanding any provision to the contrary, the Department may at any time require an RP, PRP or Other Person undertaking Comprehensive Response Actions pursuant to 310 CMR 40.0800 to obtain prior Departmental approval of one or more of the response actions or submittals required pursuant to 310 CMR 40.0800. The Department may require such prior approval for submittals or response actions as they relate to the entire disposal site or to some portion thereof.

40.0830: Phase II - Comprehensive Site Assessment

310 CMR 40.0831 through 40.0849, cited collectively as 310 CMR 40.0830, contain the requirements and procedures for conducting Phase II - Comprehensive Site Assessments at disposal sites.

40.0832: General Provisions

(1) A Scope of Work, as described in 310 CMR 40.0834, shall be developed and submitted to the Department in accordance with 310 CMR 40.0510 prior to the initiation of Comprehensive Site Assessment activities at any disposal site that has been classified as Tier I or Tier II under the provisions of 310 CMR 40.0500, unless the Phase II fieldwork has been implemented prior to Tier Classification.

(2) A Phase II Report, as described in 310 CMR 40.0835, shall be prepared to document information obtained as a result of Comprehensive Site Assessment activities and support conclusions and Opinions based upon the findings of the assessment. The Phase II Report shall reference or incorporate elements of the Phase I Report, as appropriate, and may be combined with the Phase III Report described in 310 CMR 40.0850.

40.0833: Performance Standards

(1) A Phase II - Comprehensive Site Assessment shall collect, develop and evaluate sufficient information to support conclusions and Opinions regarding:

- (a) the source, nature, extent, and potential impacts of releases of oil and/or hazardous material;
- (b) the risk of harm posed by the disposal site to health, safety, public welfare and the environment; and
- (c) the need to conduct remedial actions at the disposal site.

(2) The Phase II Report shall thoroughly document, evaluate and discuss the findings and conclusions of the Phase II Comprehensive Site Assessment, and where applicable, provide the basis for identifying and evaluating remedial action alternatives.

40.0834: Conceptual Phase II Scope of Work

- (1) Except as otherwise specified by the Department, Department approval of the conceptual Phase II Scope of Work shall not be required.
- (2) Except as otherwise specified by the Department, the conceptual Phase II Scope of Work shall provide:
 - (a) the general scope and nature of investigative and sampling programs that will be undertaken to characterize the source, extent, and migration pathways of oil and/or hazardous material, and the risk of harm posed to health, safety, public welfare or the environment, based upon the initial Conceptual Site Model developed in Phase I;
 - (b) the name and license number of the LSP engaged or employed by the person conducting the Comprehensive Response Action; and
 - (c) a projected schedule for implementation of the Phase II - Comprehensive Site Assessment.

40.0835: Phase II Report

- (1) A Phase II Report shall be submitted to the Department at the conclusion of Comprehensive Site Assessment activities pursuant to the applicable deadlines set forth in 310 CMR 40.0550 or 40.0560 or at Interim Deadlines specified by the Department.
- (2) A Phase II Report shall present, contain, or append relevant information, data, findings, and Opinions related to the Comprehensive Site Assessment of the disposal site.
- (3) A Phase II Report shall set forth in narrative and, to the extent possible, in maps, graphs, and tables, the disposal site Conceptual Site Model, approach, methods and results of the Phase II - Comprehensive Site Assessment.
- (4) The information and assessment findings outlined in 310 CMR 40.0835(4) shall be provided in the Phase II Report. Depending upon specific site and release conditions, it may be necessary to provide additional information to adequately characterize the disposal site, consistent with the Response Action Performance Standard described in 310 CMR 40.0191, or it may be appropriate to forgo particular assessment or information gathering elements and provide Technical Justification as described in 310 CMR 40.0193.
 - (a) Disposal Site Name, Location and Locus Map, updated, if necessary, from what was provided in the Phase I Report;
 - (b) Detailed Disposal Site Map(s), updated, as necessary, from the base map(s) provided in the Phase I Report, and depicting all investigatory and sampling points relevant to the Comprehensive Site Assessment, the boundaries of the disposal site in plan view, and, as appropriate, the vertical extent of contamination at the disposal site;
 - (c) Disposal Site History, updated, supplemented, or modified if necessary from information provided in the Phase I Report;
 - (d) Site Hydrogeological Characteristics, including details of subsurface investigations conducted at the disposal site, together with a comprehensive description and depiction of site hydrogeologic conditions, including, without limitation:
 1. a description of all relevant geologic, hydrologic, geophysical, and other subsurface investigations and assessments conducted at the disposal site;
 2. documentation related to borings, well construction, and well development, including copies of well drilling logs, within or appended to the Phase II Report; and
 3. a detailed characterization of geologic and hydrogeologic conditions at the disposal site, including:
 - a. groundwater potentiometric surface(s), gradients, flow rates, and flow direction(s);
 - b. soil type(s), stratigraphy, and permeability;
 - c. where appropriate, bedrock type and characteristics, depths and contours; and
 - d. an evaluation and description of the potential for flooding;
 - (e) Environmental Fate and Transport of Oil and/or Hazardous Material, including, as appropriate:

40.0835: continued

1. an evaluation of the environmental fate and transport characteristics of the oil and/or hazardous material identified at the disposal site, including, without limitation, mobility, stability, volatility, persistence and bioaccumulative potential of the oil and/or hazardous material;
 2. identification and characterization of existing and potential migration pathways of the oil and/or hazardous material at and from the disposal site, including, as appropriate, air, soil, groundwater, soil gas, preferential migration pathways such as subsurface utility lines and other subsurface void spaces, surface water, sediment, and food chain pathways; and
 3. an evaluation of the potential for soil, groundwater, or NAPL to be a source of vapors of oil and/or hazardous material to indoor air of occupied structures as described in 310 CMR 40.0900;
- (f) Nature and Extent of Contamination, including a characterization of the nature, and vertical and horizontal extent of oil and/or hazardous material in the environment, including any and all source(s), the presence, distribution, and stability of any NAPL, tabulation of analytical testing results, and, where appropriate, a characterization of background concentrations of oil and/or hazardous material at the disposal site;
- (g) Exposure Assessment, including the identification and characterization of all potential human and environmental receptors that could be impacted by oil and/or hazardous material at or migrating from the disposal site, and, as appropriate, the quantification of exposure of oil and/or hazardous material to these receptors, under current and reasonably foreseeable site conditions, as described in 310 CMR 40.0900;
- (h) Risk Characterization, as set forth in 310 CMR 40.0900, for all appropriate human and environmental receptors identified at and near the disposal site; and
- (i) Conclusions, including a summary of the Phase II Comprehensive Site Assessment findings. The Conclusions section shall provide the disposal site Conceptual Site Model, the reasoning and results used to support the findings, and indicate and support the outcome of the Phase II Investigation as described in 310 CMR 40.0840.

40.0836: Phase II Completion Statement

- (1) A Phase II Completion Statement form, established by the Department for such purposes, shall be appended to and submitted with the final Phase II Report to the Department.
- (2) In cases where the Phase II Report is combined with other Comprehensive Response Action Reports, a Completion Statement form for the combined Reports shall be appended to the documents and submitted to the Department.
- (3) A Completion Statement submitted with a Phase II Report shall include the following:
 - (a) an Opinion from a Licensed Site Professional which states that the Phase II Comprehensive Site Assessment:
 1. conforms with applicable Phase II requirements and any approval conditions specified by the Department;
 2. meets the Phase II performance standards;
 3. does not disclose new or additional information which may affect the site's Tier Classification or permit category without the concurrent filing of an application for a Major Permit Modification; and
 4. specifies the Phase II outcome under 310 CMR 40.0840.
 - (b) the certification of the submittal required by 310 CMR 40.0009.

40.0839: Public Involvement

- (1) Public Involvement Activities shall be conducted in accordance with 310 CMR 40.1400 through 40.1406. Public Involvement Activities relevant to Phase II specifically include 310 CMR 40.1403(3)(e), and may include, but are not limited to those activities set forth at 40.1403(3)(a) and (f) and 310 CMR 40.1406.
- (2) If the disposal site where the Phase II is conducted is a Public Involvement Plan site, then a Public Involvement Plan that is consistent with 310 CMR 40.1405 shall be implemented.

40.0840: Possible Outcomes

- (1) The following outcomes are possible upon completion of a Phase II Comprehensive Site Assessment:
 - (a) Comprehensive Remedial Actions are necessary at the site to achieve a Permanent or Temporary Solution as described in 310 CMR 40.1000. A Phase III study for the identification, evaluation and selection of Comprehensive Remedial Action Alternatives as described in 310 CMR 40.0850 is necessary to select a remedial action alternative; or
 - (b) the requirements of a Permanent Solution under 310 CMR 40.1000 have been met, and a Permanent Solution Statement supported by information provided in the Phase II report shall be submitted to the Department.

40.0850: Phase III - Identification, Evaluation and Selection of Comprehensive Remedial Action Alternatives

310 CMR 40.0851 through 40.0869, cited collectively as 310 CMR 40.0850, contain the requirements and procedures for conducting Phase III Comprehensive Response Actions at disposal sites.

40.0852: General Provisions

- (1) A Phase III evaluation shall be conducted for any disposal site for which a Phase II Comprehensive Site Assessment has been completed and a Permanent Solution in accordance with 310 CMR 40.1000 has not yet been achieved.
- (2) A Phase III evaluation shall result in the selection of a remedial action alternative which is a likely Permanent Solution, except where it is demonstrated pursuant to 310 CMR 40.0850 that a Permanent Solution is not feasible or that the implementation of a Temporary Solution would be more cost-effective and timely than the implementation of a feasible Permanent Solution.
- (3) Except for any Temporary Solution achieved after providing a Downgradient Property Status Submittal to the Department in accordance with 310 CMR 40.0180, a Phase III evaluation shall be conducted before any Temporary Solution pursuant to 310 CMR 40.1000 may be achieved at a disposal site.
- (4) The feasibility of achieving or approaching background levels of oil and hazardous material shall be evaluated in accordance with 310 CMR 40.0860 for all disposal sites where remedial actions are or have been taken to achieve a Permanent Solution and background levels are not achieved.
- (5) The results and conclusions of the Phase III evaluation shall be documented in a Remedial Action Plan, as described in 310 CMR 40.0861. Where appropriate, the Remedial Action Plan may be provided in or appended to the Phase II Comprehensive Site Assessment Report described in 310 CMR 40.0835.

40.0853: Performance Standards

- (1) A Phase III evaluation shall result in:
 - (a) the identification and evaluation of remedial action alternatives which are reasonably likely to achieve a level of No Significant Risk considering the oil and hazardous material present, media contaminated, and site characteristics; and
 - (b) the recommendation of a remedial action alternative that is a Permanent or Temporary Solution, where a Permanent Solution includes measures that reduce, to the extent feasible, the concentrations of oil and hazardous material in the environment to levels that achieve or approach background.

40.0853: continued

- (2) A Phase III Remedial Action Plan shall describe and document the information, reasoning and results used to identify and evaluate remedial action alternatives in sufficient detail to support the selection of the proposed remedial action alternative.

40.0855: Identification and Evaluation of Remedial Action Alternatives

- (1) An identification and evaluation of remedial action alternatives shall be undertaken for all disposal sites where a Phase III evaluation is required.
- (2) The identification and evaluation of remedial action alternatives shall include:
 - (a) an initial screening to identify those remedial action alternatives that are reasonably likely to be feasible and achieve a level of No Significant Risk; and, where necessary
 - (b) a detailed evaluation of the remedial action alternatives identified by the initial screening to ascertain which alternatives will meet the performance standards and requirements set forth in 310 CMR 40.0850, 40.0900 and 40.1000, and whether these alternatives constitute Permanent or Temporary Solutions.
- (3) The identification and evaluation of remedial action alternatives:
 - (a) shall be based on information gathered and analyzed as part of previous assessment and remedial actions, and during the Phase III evaluation;
 - (b) may involve bench-scale tests or pilot studies as part of an evaluation of the effectiveness of an alternative; and
 - (c) may incorporate innovative technologies where appropriate.

40.0856: Initial Screening of Likely Remedial Action Alternatives

- (1) An initial screening of remedial technologies shall be conducted to identify remedial action alternatives for further evaluation which are reasonably likely to be feasible, based on the oil and hazardous material present, media contaminated, and site characteristics. For the purposes of 310 CMR 40.0856, remedial action alternatives are reasonably likely to be feasible if:
 - (a) the technologies to be employed by the alternative are reasonably likely to achieve a Permanent or Temporary Solution; and
 - (b) individuals with the expertise needed to effectively implement available solutions would be available, regardless of arrangements for securing their services.

40.0857: Detailed Evaluation of Remedial Action Alternatives

- (1) Except as provided in 310 CMR 40.0857(2), a detailed evaluation of the remedial action alternatives identified by the initial screening described in 310 CMR 40.0856 shall be conducted to provide the basis for the selection of the remedial action alternative. The detailed evaluation shall evaluate and compare different remedial alternatives using the criteria described in 310 CMR 40.0858.
- (2) A detailed evaluation is not required in those cases where a remedial action alternative identified during the initial screening:
 - (a) is proven to be effective in remediating the types of oil and hazardous material present at the disposal site, based upon experience gained at other disposal sites with similar site and contaminant conditions;
 - (b) results in the reuse, recycling, destruction, detoxification, treatment or any combination thereof of the oil and hazardous material present at the disposal site;
 - (c) can be implemented in a manner that will not pose a significant risk of harm to health, safety, public welfare or the environment, as described in 310 CMR 40.0900; and
 - (d) is likely to result in the reduction and/or control of oil and/or hazardous material at the disposal site to a degree and in a manner such that the requirements of a Permanent Solution as set forth in 310 CMR 40.1000 will be met.

40.0858: Detailed Evaluation Criteria

Except as provided in 310 CMR 40.0857(2), the remedial action alternatives identified by the initial screening shall be evaluated using the following criteria:

40.0858: continued

- (1) The comparative effectiveness of the alternatives in terms of:
 - (a) achieving a Permanent or Temporary Solution under 310 CMR 40.1000;
 - (b) reusing, recycling, destroying, detoxifying, or treating oil and hazardous material at the disposal site; and
 - (c) reducing levels of untreated oil and hazardous material at the site to concentrations that achieve or approach background.
- (2) The comparative short-term and long-term reliability of the alternatives, including:
 - (a) the degree of certainty that the alternative will be successful; and
 - (b) the effectiveness of any measures required to manage residues or remaining wastes or control emissions or discharges to the environment.
- (3) The comparative difficulty in implementing each alternative in terms of:
 - (a) technical complexity of the alternative;
 - (b) where applicable, the integration of the alternative with existing facility operations and other current or potential remedial actions;
 - (c) any necessary monitoring, operations, maintenance or site access requirements or limitations;
 - (d) the availability of necessary services, materials, equipment, or specialists;
 - (e) the availability, capacity and location of necessary off-site treatment, storage and disposal facilities; and
 - (f) whether the alternative meets regulatory requirements for any likely approvals, permits or licenses required by the Department, or other state, federal or local agencies.
- (4) The comparative costs of the alternatives, including:
 - (a) costs of implementing the alternative, including without limitation: design, construction, equipment, site preparation, labor, permits, disposal, operation, maintenance and monitoring costs;
 - (b) costs of environmental restoration, potential damages to natural resources, including consideration of impacts to surface waters, wetlands, wildlife, fish and shellfish habitat; and
 - (c) the relative total consumption of energy resources in the implementation and operation of the alternatives, and externalities associated with the use of those resources, including greenhouse gases and other air pollutants.
- (5) The comparative risks of the alternatives including without limitation:
 - (a) the short-term on-site and off-site risks posed during implementation of the alternative associated with any excavation, transport, disposal, containment, construction, operation or maintenance activities, or discharges to the environment from remedial systems;
 - (b) on-site and off-site risks posed over the period of time required for the alternative to attain applicable remedial standards, including risks associated with ongoing transport, disposal, containment, operation or maintenance activities, or discharges from remedial systems; and
 - (c) the potential risk of harm to health, safety, public welfare or the environment posed to human or environmental receptors by any oil and/or hazardous material remaining at the disposal site after the completion of the remedial action.
- (6) The comparative benefits of the alternatives including without limitation:
 - (a) the benefit of restoring natural resources;
 - (b) providing for the productive reuse of the site;
 - (c) the avoided costs of relocating people, businesses, or providing alternative water supplies; and
 - (d) the avoided lost value of the site.
- (7) The comparative timeliness of the alternatives in terms of eliminating any uncontrolled sources of oil and/or hazardous material and achieving of a level of No Significant Risk as described in 310 CMR 40.0900.
- (8) The relative effect of the alternatives upon non-pecuniary interests, such as aesthetic values.

40.0859: Selection of Remedial Action Alternative

- (1) Except as provided in 310 CMR 40.0857(2), remedial action alternatives shall be selected based on the detailed evaluation criteria contained in 310 CMR 40.0858 and in compliance with the provisions set forth in 310 CMR 40.0850, 40.0900 and 40.1000.
- (2) A remedial action alternative which is a Permanent Solution shall be selected if a feasible Permanent Solution has been identified and its implementation is found to be more cost-effective and timely than would be the implementation of a Temporary Solution. If there is no such feasible Permanent Solution, a Temporary Solution for the elimination of substantial hazard shall be selected and implemented and a plan shall be prepared pursuant to 310 40.0861(2)(h) for the identification and development of a Permanent Solution.
- (3) Any selected Permanent Solution shall, to the extent feasible, reduce the concentrations of oil and hazardous material in the environment to levels that achieve or approach background.
- (4) An Engineered Barrier, cap or other remedial action alternative that relies upon on-site disposal, isolation, or containment of oil and/or hazardous material shall not be selected unless and until a Phase III evaluation performed pursuant to the provisions of 310 CMR 40.0850 demonstrates the lack of a feasible alternative.

40.0860: Feasibility Evaluations

- (1) The criteria described in 310 CMR 40.0860 apply to:
 - (a) evaluating the feasibility of implementing a Permanent Solution;
 - (b) evaluating the feasibility of reducing the concentrations of oil and hazardous material in the environment to levels that achieve or approach Background;
 - (c) evaluating the feasibility of reducing the concentrations of oil and hazardous material in soil at a disposal site to levels at or below applicable soil Upper Concentrations Limits;
 - (d) evaluating the feasibility of eliminating, preventing or mitigating Critical Exposure Pathway(s); and
 - (e) evaluating the feasibility of eliminating or controlling each Source of OHM Contamination, controlling migration of OHM, and removing NAPL at a disposal site in support of a Permanent or Temporary Solution pursuant to 310 CMR 40.1003(5) through (7), respectively.
- (2) An evaluation of the feasibility of implementing a Permanent Solution shall be performed in all cases where the selected Comprehensive Remedial Alternative will achieve a Temporary Solution.
- (3) An evaluation of the feasibility of reducing the concentrations of oil and hazardous material in the environment at the disposal site or a portion of the disposal site to levels that achieve or approach Background shall be conducted in all cases where the Comprehensive Remedial Alternative is selected to achieve a Permanent Solution, unless the Permanent Solution selected is designed to achieve and achieves Background.
- (4) An evaluation of the feasibility of reducing the concentrations of oil and hazardous material in soil at the disposal site to levels at or below the applicable soil Upper Concentration Limits shall be conducted before a Comprehensive Remedial Alternative is selected as a Permanent Solution that would leave oil and/or hazardous material in soil at concentrations above the soil Upper Concentration Limits at a depth greater than 15 feet below the ground surface or beneath an engineered barrier, as that term is defined in 310 CMR 40.0996.
- (5) A Comprehensive Remedial Alternative that would achieve a Permanent Solution and other response actions listed in 310 CMR 40.0860(1) shall be considered feasible unless:
 - (a) the alternative is not technologically feasible, as specified in 310 CMR 40.0860(6);
 - (b) the costs of conducting, or the risks resulting from the alternative would not be justified by the benefits, considering such factors as potential damage to human health or the environment, cost of environmental restoration, long term operation and maintenance costs, and non-pecuniary values as determined by the benefit-cost analysis in 310 CMR 40.0860(7);

40.0860: continued

- (c) individuals with the expertise needed to effectively implement the alternative would not be available, regardless of arrangements for securing their services;
- (d) the alternative would necessitate land disposal other than at the site itself and no off-site facility is available in the Commonwealth or in other states that is in full compliance with all applicable federal and state regulatory requirements; or
- (e) an alternative is selected for a portion of a disposal site for which the source of the oil and/or hazardous material is not located thereon, and the elimination or control of such source cannot currently be achieved by the party conducting the response actions at that portion of the disposal site. In such instances, a Temporary Solution shall be implemented for that portion of the disposal site to which the selected alternative applies.

(6) Technological Feasibility. A Comprehensive Remedial Alternative and other response actions listed in 310 CMR 40.0860(1) shall be considered technologically feasible unless:

- (a) existing technology or reasonable modifications of existing technology cannot remediate the oil and hazardous material present at the disposal site to the extent necessary to attain a level of No Significant Risk or, when required to be considered, to levels that approach or achieve Background;
- (b) the reliability of the identified alternative has not been sufficiently proven at other sites or through pilot tests and a substantial uncertainty exists as to whether it will effectively reduce risk; or
- (c) the identified alternative cannot comply with or be modified to comply with applicable regulatory requirements.

(7) Benefit-cost Analysis. The benefits of implementing Comprehensive Remedial Alternatives to achieve a Permanent Solution or Temporary Solution or of implementing other response actions listed in 310 CMR 40.0860(1) shall justify the related costs unless:

- (a) the incremental cost of conducting the Comprehensive Remedial Alternative or other response action is substantial and disproportionate to the incremental benefit of risk reduction, environmental restoration, and monetary and non-pecuniary values;
- (b) the risk of harm to health, safety, public welfare or the environment posed by the implementation of the alternative cannot be adequately controlled; or
- (c) the alternative would destroy more than 5000 square feet of wetlands or wildlife habitat, or would otherwise result in a substantial deleterious impact to the environment and:
 - 1. other feasible Temporary or Permanent Solutions exist;
 - 2. the oil and/or hazardous materials, if any, that have come to be located in such resources do not bio-accumulate and are not likely to migrate; and
 - 3. the damage to such resources resulting from the implementation of the alternative would be permanent and irreparable.

40.0861: Remedial Action Plan

(1) The results of a Phase III evaluation shall be documented in a Remedial Action Plan. The Remedial Action Plan shall support the selection of the Comprehensive Remedial Alternative by providing information of sufficient detail on the process by which the recommended Comprehensive Remedial Alternative was developed and evaluated.

(2) A Remedial Action Plan shall contain:

- (a) a description of all remedial alternatives initially identified and the results of the initial screening;
- (b) where a detailed evaluation is required, a discussion of how the remedial alternatives remaining after initial screening compared with respect to each of the detailed criteria described in 310 CMR 40.0858, and how the criteria were weighted in the evaluation;
- (c) justification for the selection of the proposed Comprehensive Remedial Alternative with respect to its anticipated effectiveness and relative to all other evaluated alternatives, including a discussion of the results of any bench-scale tests or pilot studies performed as part of an evaluation of the effectiveness of an alternative;
- (d) where required, the results of the evaluation under 310 CMR 40.0860 of whether the implementation of a Permanent or Temporary Solution is feasible;

40.0861: continued

- (e) if a Permanent Solution is selected as the Comprehensive Remedial Alternative, a discussion of how the alternative is likely to achieve a level of No Significant Risk and the projected timeframe, based on available information, for meeting the requirements for a Permanent Solution as specified in 310 CMR 40.1000;
- (f) if a Temporary Solution is selected as the Comprehensive Remedial Alternative, a discussion of how the alternative is likely to eliminate any substantial hazards posed by the disposal site until a Permanent Solution is implemented and a plan and projected timeframe, based on available information, for meeting and maintaining the requirements for a Temporary Solution as specified in 310 CMR 40.1000;
- (g) if a Permanent Solution is selected, the results of the evaluation under 310 CMR 40.0860 of the feasibility of reducing the concentrations of oil and hazardous material in the environment at the disposal site to levels that achieve or approach background, unless the Remedial Action Plan otherwise includes a demonstration that the selected alternative is designed to achieve background;
- (h) if the selected Comprehensive Remedial Alternative is a Temporary Solution and a Permanent Solution is not currently feasible, except for those Temporary Solutions achieved after a Downgradient Property Status Submittal has been provided to the Department in accordance with 310 CMR 40.0180, a detailed description of definitive and enterprising steps pursuant to 310 CMR 40.1051 to identify and develop an alternative that is a likely Permanent Solution and a schedule for the implementation of such steps. Such steps may include, but are not limited to:
 - 1. performing pilot tests or bench-scale studies;
 - 2. investigating innovative ways to reduce the costs or the risks of implementing a specific alternative; and
 - 3. developing new technologies; and
- (i) a projected schedule for implementation of Phase IV activities, if applicable, pursuant to 310 CMR 40.0870 consistent with the projected timeframe for achievement of a Permanent or Temporary Solution pursuant to 310 CMR 40.0861(2)(e) or (f), as applicable.

40.0862: Phase III Completion Statement

- (1) A Phase III Completion Statement form, established by the Department for such purposes, shall be appended to and submitted with the Remedial Action Plan to the Department.
- (2) In cases where the Phase III Remedial Action Plan is combined with other Comprehensive Response Action Reports, a Completion Statement form for the combined Reports shall be appended to the documents and submitted to the Department.
- (3) A Completion Statement submitted with a Phase III Report shall include the following:
 - (a) an Opinion from a Licensed Site Professional indicating whether the selected Comprehensive Remedial Alternative is likely to achieve a Permanent or Temporary Solution, and stating that the Phase III conforms with applicable Phase III performance standards and requirements and any approval conditions specified by the Department; and
 - (b) a certification of the submittal required by 310 CMR 40.0009.

40.0863: Public Involvement

- (1) Public Involvement Activities shall be conducted in accordance with 310 CMR 40.1400 through 40.1406. Public Involvement Activities relevant to Phase III specifically include, but are not limited to, those activities set forth in 310 CMR 40.1403(3)(e).
- (2) If the disposal site where the Phase III is conducted is a Public Involvement Plan site, then a Public Involvement Plan that is consistent with 310 CMR 40.1405 shall be implemented.

40.0864: Possible Outcome

Upon completion of Phase III, the selected feasible Comprehensive Remedial Alternative shall be developed and implemented pursuant to Phase IV requirements under 310 CMR 40.0870.

40.0870: Phase IV Implementation of the Selected Comprehensive Remedial Alternative

310 CMR 40.0871 through 40.0889, cited collectively as 310 CMR 40.0870, contain the requirements and procedures for conducting Phase IV Comprehensive Remedial Response Actions at disposal sites.

40.0871: General Provisions

- (1) Phase IV contains requirements for the design, construction, and implementation of the Comprehensive Remedial Action Alternative selected as a result of the Phase III evaluation under 310 CMR 40.0850.
- (2) Phase IV activities shall include, without limitation, the following:
 - (a) preparation of a Remedy Implementation Plan (RIP) as set forth in 310 CMR 40.0874;
 - (b) documentation of the construction of the Comprehensive Remedial Alternative as described in 310 CMR 40.0875; and
 - (c) implementation and final inspection of the Comprehensive Remedial Alternative.
- (3) Where appropriate, reports and plans prepared required in Phase IV may be combined.
- (4) RPs, PRPs and Other Persons conducting Phase IV activities shall ensure that persons with the appropriate level of training, supervision and applicable licenses or certifications are engaged in the design, construction, operation and maintenance of the Comprehensive Remedial Alternative.
- (5) All federal, state and local permits, licenses or approvals and any agreements necessary for construction and operation of the Comprehensive Remedial Alternative shall be secured as early in Phase IV as possible in order to avoid delays in implementing the remedial action.
- (6) The Comprehensive Remedial Alternative shall not be implemented until a complete RIP, as described in 310 CMR 40.0874, has been received by the Department. Unless otherwise specified by the Department in writing, approval from the Department shall not be required to implement the Comprehensive Remedial Alternative. Any person implementing the Comprehensive Remedial Alternative shall conform with the proposals and specifications contained in the RIP and any conditions specified by the Department. Significant modifications to the RIP shall be submitted to the Department prior to implementation of the modifications.

40.0872: Performance Standards

- (1) The Phase IV Implementation of the Comprehensive Remedial Alternative selected in Phase III and documented in the Phase III RAP shall:
 - (a) ensure that the information, plans and reports related to the design, construction, and implementation of the selected remedial alternative are sufficiently developed and documented to support the implementation of the Comprehensive Remedial Alternative;
 - (b) ensure that following initial implementation, the Comprehensive Remedial Alternative meets design and performance specifications;
 - (c) meet the Response Action Performance Standard for the design, construction, and implementation of the Comprehensive Remedial Action, as described in 310 CMR 40.0191; and
 - (d) conform with all applicable requirements and deadlines set forth in 310 CMR 40.0000.

40.0874: Remedy Implementation Plan (RIP)

- (1) A Remedy Implementation Plan shall be developed for the selected Comprehensive Remedial Alternative.
- (2) Technical justification, as specified in 310 CMR 40.0193, may be used to limit or forgo assessment or evaluation elements of the RIP. When technical justification is used, a description of the site-specific conditions and characteristics which make a requirement unwarranted shall be provided in the applicable section of the RIP.

40.0874: continued

- (3) A RIP shall include, without limitation, the following elements:
- (a) a list of relevant contacts, including:
1. names, addresses, and telephone numbers of the RP, PRP or Other Persons responsible for submittal of the RIP;
 2. name, address, and telephone number of the LSP; and
 3. identification of those persons who will own, operate and/or maintain the selected Comprehensive Remedial Alternative during and following construction;
- (b) Engineering Design. The RIP shall document engineering concepts and design criteria to be used for the design and construction of the Comprehensive Remedial Alternative including as appropriate and without limitation:
1. goals of the remedial action, including performance requirements of the remedial systems, the requirements for achieving a Permanent or Temporary Solution (whichever is applicable) under 310 CMR 40.1000 and the projected timeframe, based on available information, for achieving such Permanent or Temporary Solution;
 2. any significant changes in or new information related to disposal site conditions which were not included in previous submittals;
 3. disposal site maps showing existing disposal site features and proposed locations of activities associated with the remedial action;
 4. a description of the characteristics, quantity, and location of environmental media or materials to be treated or otherwise managed;
 5. a description and conceptual plan of the activities, treatment units, facilities, and processes to be used to implement the selected remedial action alternative including flow diagrams;
 6. relevant design and operation parameters, including:
 - a. design criteria, assumptions and calculations;
 - b. expected treatment, destruction, immobilization, or containment efficiencies and documentation of how that degree of effectiveness was determined; and
 - c. demonstration that the selected Comprehensive Remedial Alternative will achieve the identified remedial goals (may include information from pilot or treatability tests, similar operations, or scientific literature);
 7. design features for control of oil and hazardous material spills and accidental discharge or system malfunction, including without limitation: containment structures, leak detection devices, run-off controls, pressure valves, bypass systems, or safety cutoffs;
 8. a description of the methods for management or disposal of any treatment residual, contaminated soils, and other waste materials containing oil and/or hazardous material generated as a result of the selected Comprehensive Remedial Alternative;
 9. identification of site-specific characteristics which may affect or be affected by the design, construction, or operation of the selected Comprehensive Remedial Alternative, including, but not limited to:
 - a. relationship of the selected Comprehensive Remedial Alternative to existing disposal site activities or operations;
 - b. drainage features;
 - c. natural resource areas, local planning and development issues; and
 - d. soil characteristics and groundwater characteristics;
 10. a discussion of measures to be incorporated into the design, construction and operation of the selected Comprehensive Remedial Alternative to avoid any deleterious impact on environmental receptors and natural resource areas (including any surface water or wetland), or where it is infeasible to avoid any such impact, a discussion of measures to minimize or mitigate any impact; and
 11. a general description of inspections and monitoring which will be performed to ensure adequate construction and performance of the selected Comprehensive Remedial Alternative;
- (c) Construction Plans and Specifications. Construction plans shall be prepared in conformance with appropriate engineering and construction standards and practices and regulations applicable to construction plans and activities. Information on the proposed plans for the construction of the selected Comprehensive Remedial Alternative shall be provided in the RIP and include, without limitation, the following:

40.0874: continued

1. as appropriate, plans, material specifications, and procedures related to the construction of the selected Comprehensive Remedial Alternative; and
 2. a schedule for the design and construction of the Comprehensive Remedial Alternative;
- (d) Operation, Maintenance and/or Monitoring (OMM). In cases where the Comprehensive Remedial Alternative for the disposal site requires operation, maintenance and/or monitoring activities to ensure the effective performance and integrity of the Comprehensive Remedial Alternative and/or the achievement of remedial goals identified pursuant to 310 CMR 40.0874(3)(b)1., an Operation, Maintenance and/or Monitoring plan shall be developed and included in the RIP. The OMM plan shall include measures necessary to assure effective operations of the Comprehensive Remedial Action under both normal and emergency conditions. The OMM plan shall include, as appropriate and without limitation, the following:
1. name and telephone number of the person(s) conducting operation, maintenance and/or monitoring activities;
 2. general operating procedures, including start-up, testing, maintenance, shutdown, and emergency or contingency procedures; and
 3. specification of the type, frequency and duration of monitoring, and testing or inspections to ensure and confirm that the remedial action is performing as designed. The frequency of monitoring and/or inspections shall be consistent with the Response Action Performance Standard, as described in 310 CMR 40.0191, and in conformance with applicable provisions of 310 CMR 40.0000, including 310 CMR 40.0040 through 40.0049, and the terms of applicable permits, approvals or licenses;
- (e) a health and safety plan, to be followed during the construction and implementation of the selected Comprehensive Remedial Alternative, that adheres to the procedures described in 310 CMR 40.0018;
- (f) a list of any necessary federal, state or local permits, licenses and/or approvals required for the design, construction and/or operation of the selected remedial action alternative and a description of any additional information needed to meet the requirements thereof; and
- (g) a discussion of any property access issues which are relevant to the implementation of the selected Comprehensive Remedial Alternative, and a plan and timetable for resolving property access problems.

40.0875: As-built Construction Report

- (1) As-built Construction plans shall be prepared and submitted to the Department in an As-built Construction Report for:
 - (a) any disposal site where an Engineered Barrier, cap or other on-site system for the containment and/or physical immobilization of oil and/or hazardous material is constructed as part of the Remedial Action Alternative; or
 - (b) any disposal site where the Comprehensive Remedial Alternative as actually constructed varies significantly from the description of the alternative provided in the RIP under 310 CMR 40.0874.
- (2) The As-built Construction Report shall include, without limitation, the following information:
 - (a) construction activities conducted, and techniques and materials used;
 - (b) tests and measurements performed;
 - (c) any significant modifications of the design or construction of the selected Comprehensive Remedial Alternative as described under 310 CMR 40.0874(3)(c) of the RIP; and
 - (d) as built drawings.
- (3) As-built plans for the Comprehensive Remedial Action shall be prepared in conformance with appropriate engineering and construction standards and practices, and regulations applicable to construction plans and activities.

40.0877: Phase IV Status Report and Remedial Monitoring Report

(1) For a disposal site where Active Operation and Maintenance of a remedial action is conducted prior to the submittal of a Final Inspection Report and Phase IV Completion Statement to test and monitor the initial implementation and operation of the Comprehensive Remedial Alternative, a Remedial Monitoring Report shall be submitted to the Department on a form established by the Department for such purposes at the following frequency:

- (a) when the selected Comprehensive Remedial Alternative involves Active Operation and Maintenance to address an Imminent Hazard or Condition of Substantial Release Migration, monthly; or
- (b) when the selected Comprehensive Remedial Alternative involves Active Operation and Maintenance to address conditions that do not pose an Imminent Hazard or Condition of Substantial Release Migration, every six months.

(2) For a disposal site where Active Operation and Maintenance of the selected Comprehensive Remedial Alternative is conducted prior to the submittal of a Final Inspection Report and Phase IV Completion Statement to test and monitor the initial implementation and operation of the Comprehensive Remedial Alternative, a Phase IV Status Report, as described in 310 CMR 40.0877(4) shall be submitted with the initial Remedial Monitoring Report and every six months thereafter.

(3) Unless otherwise specified by the Department, for a disposal site where Active Operation and Maintenance of the selected Comprehensive Remedial Alternative is not conducted prior to the submittal of a Final Inspection Report and Phase IV Completion Statement, a Phase IV Status Report shall not be required but may be submitted at the discretion of the person(s) conducting response actions.

(4) A Phase IV Status Report shall include, as appropriate, the following:

- (a) a description of the type and frequency of operation, maintenance and/or monitoring activities conducted;
- (b) a description of any significant modifications of the operation, maintenance and/or monitoring program made since the RIP or any preceding Phase IV Status Report;
- (c) an evaluation of the performance of the Comprehensive Remedial Alternative during the reporting period, including whether the initial implementation and operation of the Comprehensive Remedial Action indicates that the remedy is performing as designed to achieve the remedial goals of the Phase IV Remedy Implementation Plan described in 310 CMR 40.0874(3);
- (d) a description of any conditions or problems noted during the period that are or may be affecting the performance of the Comprehensive Remedial Action;
- (e) a description of any measures taken to correct conditions which are affecting the performance of the Comprehensive Remedial Action; and
- (f) the name, license number, signature and seal of the LSP.

(5) After the submittal of a Phase IV Completion Statement, the person(s) conducting the Comprehensive Remedial Action shall submit Status and Remedial Monitoring Reports for the continued Active Operation and Maintenance of a remedial action initiated during Phase IV pursuant to the requirements of 310 CMR 40.0892 or 40.0897 and 40.0898, as applicable.

40.0878: Final Inspection Report

(1) Upon completion of construction activities and initial implementation of the selected Comprehensive Remedial Alternative, a final inspection of the Comprehensive Remedial Action shall be conducted by the Licensed Site Professional providing the Opinion under 310 CMR 40.0879(2) regarding the construction and implementation of the selected Comprehensive Remedial Alternative.

(2) The final inspection shall be performed to ensure that:

- (a) the selected Comprehensive Remedial Alternative has been constructed in accordance with construction plans under 310 CMR 40.0874(3)(c) or appropriate modifications to such plans; and

40.0878: continued

(b) following initial implementation and operation and any modifications or adjustments necessary to optimize the performance of remedial systems, the selected Comprehensive Remedial Alternative is meeting projected design standards.

(3) A description of the final inspection activities and findings shall be provided in a Final Inspection Report and submitted to the Department along with the Phase IV Completion Statement described under 310 CMR 40.0879 and any other Phase IV documents that have not been submitted to the Department by the time the Phase IV Completion Statement is filed. A list of any federal, state or local permits, licenses and/or approvals obtained related to the design, construction and/or operation of the selected remedial action alternative shall be included in the Final Inspection Report.

40.0879: Phase IV Completion Statement

(1) A Phase IV Completion Statement form, established by the Department for such purposes, shall be appended to and submitted with the Final Inspection Report to the Department.

(2) A Completion Statement form submitted with a Final Inspection Report shall include the following:

- (a) an Opinion from a Licensed Site Professional as to whether the construction and implementation of the selected Comprehensive Remedial Alternative has been completed in accordance with applicable requirements of 310 CMR 40.0870, and the Phase IV performance standards as described in 310 CMR 40.0872 have been met;
- (b) a certification of the submittal required by 310 CMR 40.0009; and
- (c) an indication as to whether any activities under Phase V will be conducted as part of the implementation of the selected Comprehensive Remedial Alternative.

(3) Upon receipt of a Phase IV Completion Statement in accordance with 310 CMR 40.0879 which indicates that any Phase V activities pursuant to 310 CMR 40.0890 are required at a disposal site, the Department shall suspend the further assessment of Tier I or Tier II Annual Compliance Assurance Fees, whichever are applicable, and shall assess a Phase V - Operation Maintenance and/or Monitoring Compliance Assurance Fee pursuant to 310 CMR 4.00: *Timely Action Schedule and Fee Provisions*.

40.0880: Public Involvement

(1) Public Involvement Activities shall be conducted in accordance with 310 CMR 40.1400 through 40.1406. Public Involvement Activities relevant to Phase IV specifically include 310 CMR 40.1403(3)(a) and (e).

(2) If the disposal site where the Phase IV is conducted is a Public Involvement Plan site, then a Public Involvement Plan that is consistent with 310 CMR 40.1405 shall be implemented.

40.0881: Possible Outcomes

Upon completion of Phase IV activities the following outcomes are possible:

- (a) the requirements of a Permanent or Temporary Solution under 310 CMR 40.1000 have been met. A Permanent or Temporary Solution Statement shall be submitted to the Department;
- (b) a Permanent or Temporary Solution has not yet been achieved, and operation, maintenance and/or monitoring of the Comprehensive Remedial Action (including Remedy Operation Status) is necessary to achieve a Permanent or Temporary Solution under 310 CMR 40.1000; or
- (c) the requirements of a Temporary Solution under 310 CMR 40.1000 have been met, and Post-temporary Solution operation, maintenance and/or monitoring of the remedial action under 310 CMR 40.0897 and 40.0898 is necessary to ensure that the conditions upon which the Temporary Solution is based are maintained and/or that further progress toward a Permanent Solution is made.

40.0890: Operation, Maintenance and/or Monitoring of Comprehensive Response Actions

310 CMR 40.0891 through 40.0899, cited collectively as 310 CMR 40.0890, contain the requirements and procedures for conducting Phase V and Post-temporary Solution Operation, Maintenance and/or Monitoring activities at disposal sites.

40.0891: Phase V General Provisions

(1) The provisions of Phase V shall apply to disposal sites where Phase IV response actions have been completed and operation, maintenance and/or monitoring of the Comprehensive Remedial Action is necessary to achieve a Permanent or Temporary Solution under 310 CMR 40.1000.

(2) Phase V activities may include the following:

- (a) operation and maintenance of the Comprehensive Remedial Action;
- (b) monitoring to evaluate the performance of the remedial systems and whether the Comprehensive Remedial Action is meeting its design specifications;
- (c) monitoring of conditions at the disposal site to evaluate the effectiveness of the Comprehensive Remedial Action in reducing, treating and/or containing oil and/or hazardous material;
- (d) efforts to correct problems if performance monitoring indicates that the Comprehensive Remedial Action is not performing as designed;
and/or
- (e) documentation and submission of the results of operation, maintenance and monitoring activities to the Department, as described in 310 CMR 40.0892.

(3) Operation, maintenance and/or monitoring activities shall follow the OMM plan developed as part of the Remedy Implementation Plan in Phase IV under 310 CMR 40.0874(3)(d). The OMM plan shall be revised and updated as warranted in response to changes in site conditions, modifications to remedial systems or programs, or as otherwise necessary to ensure that the Comprehensive Remedial Action achieves design standards and remedial goals identified in the RIP pursuant to 310 CMR 40.0874(3)(b)1.

(4) Operation, maintenance and/or monitoring activities shall be documented and submitted to the Department as described in 310 CMR 40.0892.

(5) Operation, maintenance and/or monitoring activities shall be performed at a frequency which is sufficient to ensure the effective performance and the integrity of the remedial action, consistent with the Response Action Performance Standard as described in 310 CMR 40.0191, and in conformance with the terms of applicable permits, approvals, licenses or provisions in 310 CMR 40.0000.

(6) Phase V operation, maintenance and/or monitoring activities shall be documented and submitted to the Department in Phase V Status Reports, and when required, Remedial Monitoring Reports in accordance with the requirements in 310 CMR 40.0892.

40.0892: Phase V Status and Remedial Monitoring Reports

(1) At a minimum, at a disposal site where Phase V operation, maintenance and/or monitoring of Comprehensive Response Actions is being conducted, a Phase V Status Report as described in 310 CMR 40.0892(2) shall be submitted to the Department six months from the receipt by the Department of the Phase IV Completion Statement and every six months thereafter for the duration of the operation of the remedy. Each Status Report shall document activities occurring over the period of time since the previously submitted Status Report.

(2) Phase V Status Reports shall include, without limitation, the following:

- (a) a description of the type and frequency of operation, maintenance and/or monitoring activities conducted;
- (b) a description of any significant modifications of the operation, maintenance and/or monitoring program made since the submission of the preceding Phase V Status Report;

40.0892: continued

- (c) an evaluation of the performance of the remedial action during the period of time since the last Status Report, including whether the remedial action is achieving remedial goals specified in the Phase IV Remedy Implementation Plan as described in 310 CMR 40.0874(3), and a description of any conditions or problems noted during the period that are or may be affecting the performance of the remedial action;
 - (d) a description of any measures taken to correct conditions which are affecting the performance of the remedial action; and
 - (e) the name, license number, signature and seal of the LSP.
- (3) For a disposal site where Active Operation and Maintenance of a Comprehensive Remedial Action is being conducted, in addition to and/or in conjunction with the submittal of a Phase V Status Report, a Remedial Monitoring Report shall be submitted to the Department on a form established by the Department for such purposes at the following frequency:
- (a) when Phase V activities include the Active Operation and Maintenance of a Comprehensive Remedial Action to address an Imminent Hazard or Condition of Substantial Release Migration, with the first Phase V Status Report and monthly thereafter. In such cases where the Active Operation and Maintenance of a Comprehensive Remedial Action is not initiated until after the submittal of the first Phase V Status Report, the Remedial Monitoring Report shall be submitted on the monthly anniversary of the submittal of the first Phase V Status Report;
 - (b) when Phase V activities include Active Operation and Maintenance of a Comprehensive Remedial Action to address conditions that do not pose an Imminent Hazard or Condition of Substantial Release Migration, with the first Phase V Status Report and every six months thereafter. In such cases where the Active Operation and Maintenance of the Comprehensive Remedial Action is initiated after the submittal of the first Phase V Status Report, the Remedial Monitoring Report shall be submitted concurrently with the submittal of the next Phase V Status Report;
 - (c) Notwithstanding 310 CMR 40.0892(3)(a) and (b), when activities that include the Active Operation and Maintenance of a Comprehensive Remedial Action are continued in Phase V after being initiated in a previous phase of work (*i.e.*, as an Immediate Response Action, Release Abatement Measure, or during the initial implementation and operation of a remedy in Phase IV), the Status Report submittal schedule established under the previous phase of work shall be continued into Phase V.

40.0893: Remedy Operation Status

- (1) Applicability. Remedy Operation Status applies to disposal sites in Phase V where a Comprehensive Remedial Action that relies upon Active Operation and Maintenance of a remedial system or program and meets the requirements of 310 CMR 40.0893 is being conducted for the purpose of achieving a Permanent Solution.
- (2) Performance Standard for Remedy Operation Status. To achieve and maintain Remedy Operation Status for a disposal site:
- (a) Phase III and Phase IV Comprehensive Response Actions as described in 310 CMR 40.0850 and 40.0870, respectively, shall be completed;
 - (b) the remedial system or program shall be adequately designed in accordance with 310 CMR 40.0870 to achieve a Permanent Solution;
 - (c) the remedial system or program shall be operated and maintained in accordance with the requirements of 310 CMR 40.0890 and 40.0000 and any applicable permits, approvals, or licenses;
 - (d) each Source of OHM Contamination shall be eliminated or controlled in accordance with 310 CMR 40.1003(5);
 - (e) any Substantial Hazard shall be eliminated;
 - (f) where the remedy includes one or more Active Exposure Pathway Mitigation Measure(s), the requirements at 310 CMR 40.1026 are met; and
 - (g) at a minimum, information and data on operation and maintenance or monitoring shall be documented and submitted to the Department in Status and Remedial Monitoring Reports at the frequency described in 310 CMR 40.0892.

40.0893: continued

(3) Content of Submittal. Unless otherwise specified by the Department, Remedy Operation Status shall be effective upon submission of a completed Remedy Operation Status Submittal. A complete Submittal shall include:

- (a) a completed transmittal form established by the Department for such purposes;
- (b) a Remedy Operation Status Opinion prepared in accordance with 310 CMR 40.0015 that finds that each of the performance standards described in 310 CMR 40.0893(2) are met; and
- (c) the certification required by 310 CMR 40.0009.

(4) Effect of Remedy Operation Status. At any site with Remedy Operation Status, the deadline to achieve a Permanent or Temporary Solution within five years of the effective date of a Tier Classification as described in 310 CMR 40.0560 shall not apply and a Tier Classification Extension as described in 310 CMR 40.0560(7) shall not be required provided that the Remedy Operation Status is not terminated pursuant to 310 CMR 40.0893(6).

(5) Transfer or Modification of Remedy Operation Status. Remedy Operation Status may be transferred to one or more person(s) who will assume responsibility for the ongoing operation of the Comprehensive Remedial Action under Remedy Operation Status or modified to add one or more persons to those persons conducting response actions under Remedy Operation Status. Unless otherwise specified by the Department, such transfer or modification shall take effect upon the submittal of the following to the Department:

- (a) a completed transmittal form established by the Department for such purpose;
- (b) the written consent of the RP, PRP or Other Person(s) that submitted the Remedy Operation Status submittal;
- (c) for each transferee or each person to be added to those persons conducting response actions, a statement detailing that person's history of compliance with the Department's requirements, including, but not limited to, M.G.L. c. 21E, 310 CMR 40.0000 and other laws for the protection of health, safety, public welfare and the environment administered or enforced by the Department or other federal, state or local government agencies that are material to the disposal site;
- (d) in the case of a modification to add a person(s) to those persons conducting response actions or of more than one transferee, designation of a primary representative and a certification that he or she is fully authorized to act on behalf of the persons conducting response actions under Remedy Operation Status;
- (e) a statement as to why the transfer or modification is being sought; and
- (f) the certification required by 310 CMR 40.0009 for each person to be added to those conducting response actions.

(6) Termination of Remedy Operation Status.

- (a) Remedy Operation Status shall terminate if:
 - 1. the person providing the Remedy Operation Status Opinion fails to meet the requirements of 310 CMR 40.0893(2). Mechanical failure of the system and/or the need to undertake substantial system modifications shall not terminate Remedy Operation Status if written notice is provided to the Department and the operation of the remedy is resumed in accordance with 310 CMR 40.0893(6)(b); or
 - 2. the person providing the Remedy Operation Status Opinion notifies the Department in accordance with 310 CMR 40.0893(6)(c) that such person intends to terminate Remedy Operation Status;
- (b) Any person conducting response actions at a disposal site with Remedy Operation Status who obtains knowledge that the criteria in 310 CMR 40.0893(2) are no longer being met, including knowledge of a mechanical failure and/or need to substantially modify the remedial system or program, shall provide written notice to the Department in the form of a Status Report within 30 days of obtaining such knowledge. Notice shall include plans and a timetable to correct failures and/or to implement modifications of the remedial system or program. Remedy Operation Status shall terminate unless the remedial system or program is operating in accordance with 310 CMR 40.0893(2) within 120 days of providing such written notice or within an Interim Deadline established by the Department and a Status Report is submitted to the Department that documents the resumed operation of the remedy within 120 days of the notice or the Interim Deadline, whichever is applicable;

40.0893: continued

(c) Any person who intends to discontinue operation of the remedial system or program or, where applicable, an Active Exposure Pathway Mitigation Measure, on which the Remedy Operation Status is based and/or otherwise terminate Remedy Operation Status, shall provide written notice to the Department. Remedy Operation Status shall terminate upon the Department's receipt of such notice;

(d) Notwithstanding 310 CMR 40.0893(6)(c), any person who intends to discontinue operation of the remedial system, program or Active Exposure Pathway Mitigation Measure on which the Remedy Operation Status is based in order to assess whether the remedial goals have been achieved and conditions remain stable over time may maintain Remedy Operation Status provided that he or she:

1. notifies the Department of the system shut down for the purpose of such evaluation and the plans for monitoring site conditions in the next required Status Report following system shut down;
2. continues to submit Status Reports at the frequency required in 310 CMR 40.0892; and
3. notifies the Department if operation of the system is resumed in the next required Status Report following resumed operation;

(e) Any person conducting response actions at a disposal site where Remedy Operation Status has been terminated pursuant to 310 CMR 40.0893(6)(a) shall have two years from the date of the termination to achieve a Permanent or Temporary Solution. Response actions after the termination of Remedy Operation Status shall not be conducted without a valid Tier Classification or Extension thereof.

40.0894: Phase V Completion Statement

(1) Upon achievement of a Permanent or Temporary Solution after conducting Phase V operation, maintenance and/or monitoring activities, a Phase V Completion Statement form, established by the Department for such purposes, shall be submitted with the final Phase V inspection and monitoring report to the Department.

(2) The Phase V Completion Statement form shall include:

(a) an Opinion from a Licensed Site Professional:

that:

1. specifies the Phase V outcome achieved as described in 310 CMR 40.0896;
2. except where operation, maintenance and/or monitoring are continuing under 310 CMR 40.0897 and 40.0898, provides a description of residual oil and/hazardous material at the disposal site and any measures in place, including physical barriers and/or Activity and Use Limitation for preventing or limiting the exposure of human and/or environmental receptors to residual oil and hazardous material; and
3. except where operation, maintenance and/or monitoring are continuing under 310 CMR 40.0897 and 40.0898, provides justification for terminating operation, maintenance and/or monitoring activities; and

(b) a certification of the submittal required by 310 CMR 40.0009.

40.0895: Public Involvement

(1) Public Involvement Activities shall be conducted in accordance with 310 CMR 40.1400 through 40.1406. Public Involvement Activities relevant to Phase V specifically include, but are not limited to, those activities set forth in 310 CMR 40.1403(3)(e) and (f).

(2) If the disposal site where the Phase V is conducted is a Public Involvement Plan site, then a Public Involvement Plan that is consistent with 310 CMR 40.1405 shall be implemented.

40.0896: Possible Outcomes

Upon completion of operation, maintenance and monitoring activities under Phase V the following outcomes are possible:

40.0896: continued

- (1) the requirements of a Permanent Solution under 310 CMR 40.1000 have been met and no additional operation, maintenance and/or monitoring of the remedial action alternative is necessary to ensure the integrity of the Permanent Solution. A Permanent Solution Statement shall be submitted to the Department;
- (2) the requirements of a Permanent Solution under 310 CMR 40.1000 have been met but conditions apply to maintaining the Permanent Solution. A Permanent Solution with Conditions Statement shall be submitted to the Department;
- (3) the requirements of a Temporary Solution under 310 CMR 40.1000 have been met and no additional operation, maintenance and/or monitoring of the remedial action alternative is necessary to ensure the integrity of the Temporary Solution. A Temporary Solution Statement shall be submitted to the Department; or
- (4) the requirements of a Temporary Solution under 310 CMR 40.1000 have been met, a Temporary Solution Statement has been submitted to the Department, and additional Post-temporary Solution Operation, Maintenance, and/or Monitoring of the remedial action alternative under 310 CMR 40.0897 and 40.0898 is necessary to ensure that the conditions upon which the Temporary Solution is based are maintained and/or that further progress toward a Permanent Solution is made.

40.0897: Post-temporary Solution Operation, Maintenance and/or Monitoring

- (1) 310 CMR 40.0897 shall apply to any disposal site where:
 - (a) a Temporary Solution Statement for a Temporary Solution under 310 CMR 40.1000 has been submitted to the Department; and
 - (b) the operation, maintenance and/or monitoring of the Comprehensive Remedial Action is necessary to ensure that the conditions upon which the Temporary Solution is based are maintained.
- (2) Post-temporary Solution operation, maintenance and/or monitoring activities may include the following:
 - (a) operation and maintenance of the Comprehensive Remedial Action;
 - (b) monitoring to evaluate the performance of the remedial systems and whether the remedial action is meeting its design specifications;
 - (c) monitoring of conditions at the disposal site to evaluate the effectiveness of the remedial action in reducing, treating and/or containing oil and/or hazardous material;
 - (d) efforts to correct problems if performance monitoring indicates that the remedial action is not performing as designed;
 - (e) monitoring to confirm the long-term effectiveness of the remedial action in maintaining the Temporary Solution pursuant to 310 CMR 40.1000; and
 - (f) documentation and submission of the results of operation, maintenance and monitoring activities to the Department, as described in 310 CMR 40.0898.
- (3) Post-temporary Solution operation, maintenance and/or monitoring activities shall be conducted at a frequency which is sufficient to ensure the effective performance and the integrity of the remedial action, consistent with the Response Action Performance Standard as described in 310 CMR 40.0191, and in conformance with the terms of applicable permits, approvals, licenses and remedial action plan. Such plan shall be revised and updated as warranted in response to changes in site conditions, modifications to remedial systems, or as otherwise necessary to ensure that the remedial action achieves design standards and remedial goals.
- (4) Post-temporary Solution operation, maintenance and/or monitoring activities shall be documented and submitted to the Department in a Post-temporary Solution Status Report, and when required, Remedial Monitoring Reports in accordance with the requirements in 310 CMR 40.0898.

40.0898: Post-temporary Solution Status and Remedial Monitoring Reports

- (1) At a minimum, a Post-temporary Solution Status Report as described in 310 CMR 40.0898(2) shall be submitted to the Department six months from the receipt by the Department of the original plan for Post-temporary Solution operation, maintenance and/or monitoring and every six months thereafter for the duration of the operation of the remedy. Each Status Report shall document activities occurring over the period of time since the previously submitted Status Report.
- (2) Post-temporary Solution Status Reports shall include, without limitation, the following:
 - (a) a description of the type and frequency of operation, maintenance and/or monitoring activities conducted;
 - (b) a description of any significant modifications of the operation, maintenance and/or monitoring program made since the submission of the preceding Status Report;
 - (c) an evaluation of the performance of the remedial action during the period of time since the last Status Report, including whether the remedial action is achieving remedial goals specified in the applicable remedial action plan and a description of any conditions or problems noted during the period that are or may be affecting the performance of the remedial action;
 - (d) a description of any measures taken to correct conditions which are affecting the performance of the remedial action; and
 - (e) the name, license number, signature and seal of the LSP.
- (3) For a disposal site where Active Operation and Maintenance of a remedial action is being conducted, in addition to and/or in conjunction with the submittal of Post-temporary Solution Status Reports, a Remedial Monitoring Report shall be submitted to the Department on a form established by the Department for such purposes with the first Post-temporary Solution Status Report and every six months thereafter. In such cases where the Active Operation and Maintenance of a remedial action is not initiated until after the submittal of the first Post-temporary Solution Status Report, the Remedial Monitoring Report shall be submitted concurrently with the next Post-temporary Solution Status Report.

SUBPART I: RISK CHARACTERIZATION

40.0900: Procedures and Standards for the Characterization of the Risk of Harm to Health, Safety, Public Welfare and the Environment

310 CMR 40.0901 through 40.0999, cited collectively as 310 CMR 40.0900, describes the procedures for evaluating the risks posed by oil and/or hazardous material at disposal sites.

40.0901: Applicability and General Requirements

- (1) The procedures, criteria and standards of 310 CMR 40.0900 are applicable to all disposal sites for which response actions are required by M.G.L. c. 21E and/or 310 CMR 40.0000.
- (2) The general procedures and standards which apply to all Risk Characterizations are described in 310 CMR 40.0901 through 40.0939. Requirements which are specific to the type and method of Risk Characterization being performed are described in 310 CMR 40.0940 through 310 CMR 40.0999.
- (3) The characterization of risk of harm to health, safety, public welfare, and the environment is not required for a disposal site, environmental medium, or chemical for which response actions have successfully reduced concentrations to background levels, as described in 310 CMR 40.1020.
- (4) The characterization of the risk of harm to health, safety, public welfare and the environment shall be performed in a manner consistent with scientifically acceptable risk assessment practices, and shall take into consideration guidance published by the Department.

40.0902: Purpose of the Risk Characterization

A characterization of the risk of harm to health, safety, public welfare and the environment is performed at disposal sites to provide the quantitative and qualitative information used to evaluate the need for remedial actions:

- (1) Risk Characterization is used to identify and evaluate site conditions which may pose an Imminent Hazard. The methodology used in this evaluation is described in 310 CMR 40.0950.
- (2) Risk Characterization is used to establish whether a level of No Significant Risk exists or has been achieved at a disposal site. The criteria used in this determination are described in 310 CMR 40.0900, and two basic approaches to Risk Characterization are utilized:
 - (a) A chemical-specific approach, which compares site concentrations to standards in soil and groundwater, as described in 310 CMR 40.0970 through 40.0989. For the disposal sites to which they are applicable, these standards have been developed to meet the same objectives of the cumulative risk approach described in 310 CMR 40.0902(2)(b).
 - (b) A cumulative risk approach which compares site-specific information to a Cumulative Cancer Risk Limit of an Excess Lifetime Cancer Risk of one-in-one hundred thousand, a Cumulative Noncancer Risk Limit which is a Hazard Index equal to one, promulgated health, safety, public welfare and environmental standards, and site-specific conditions, as described in 310 CMR 40.0990 through 40.0999.
- (3) If the concentration of an oil and/or hazardous material at the disposal site is at or below background levels, then that oil and/or hazardous material need not be included in the disposal site Risk Characterization. Disposal sites at which all oil and hazardous material have been reduced to background levels are eligible for a Permanent Solution, as described in 310 CMR 40.1041, even if such background levels exceed one or more of the numerical standards or risk criteria published in 310 CMR 40.0900.
- (4) The results of the Risk Characterization shall be the basis for a decision whether a remedial action is necessary and to select the appropriate Permanent or Temporary Solution for the disposal site pursuant to 310 CMR 40.1000.
- (5) "Screening" Risk Characterizations may be performed using worst-case exposure assumptions to quickly demonstrate that a condition of No Significant Risk exists or has been achieved at a disposal site. If such a conclusion cannot be reached following a screening Risk Characterization, a more detailed assessment is appropriate.

40.0903 Scope of the Risk Characterization and Supporting Documentation

- (1) The scope and level of effort of the Risk Characterization shall depend on the complexity of the disposal site and the response action being performed. The Risk Characterization shall be of sufficient scope and adequately documented to demonstrate that the Response Action Performance Standard (RAPS) has been met in accordance with 310 CMR 40.0191.
- (2) The length and complexity of the documentation of the Risk Characterization shall depend upon the nature of the site and the response action being performed, as well as the method of Risk Characterization being performed. The documentation may be written as a separate report or as one or more components of another submittal required pursuant to 310 CMR 40.0000.

40.0904: Site Information Required for Risk Characterization

An adequate characterization of the disposal site is a prerequisite to the characterization of risk of harm to health, safety, public welfare and the environment, although the appropriate type and amount of information required to complete a Risk Characterization will depend on the unique characteristics of a release and/or disposal site. Particular attention shall be paid to the following site assessment parameters:

- (1) Physical Characteristics. The physical characteristics of the disposal site, including, but not limited to, the topography, geology, hydrogeology, and surface characteristics shall be evaluated as warranted by release and site conditions and described in sufficient detail to support the Risk Characterization.

40.0904: continued

(2) Extent of Release. The documentation of the Risk Characterization shall contain a description of the source and extent of the release of the oil and/or hazardous material, including, where appropriate:

- (a) the horizontal and vertical extent and concentrations of oil and/or hazardous material in all evaluated media;
- (b) background concentrations of oil and/or hazardous material in all evaluated media; and
- (c) all existing or potential Migration Pathways, including, but not limited to: soil, groundwater, soil gas, surface water, air, sediment and the food web. The potential for oil and/or hazardous material migration along preferential pathways such as utility lines or corridors must be evaluated, where applicable. Concentrations of oil and hazardous material in the sediment and/or surface water must be measured in any of the following circumstances to determine whether such material at or from the site has been or is being transported in a manner that would result in surface water or sediment concentrations of potential ecological significance, unless the need for such measurements is obviated by a technical justification consistent with 310 CMR 40.0193:
 1. Hazardous materials at or from the site, excluding VOCs, are present in groundwater within 200 feet of a surface water body;
 2. Hazardous materials at or from the site, excluding VOCs, are present in the groundwater at concentrations higher than the GW-3 standard(s) within 500 feet of a surface water body;
 3. Nonaqueous phase liquid (NAPL) at or from the site is present within 200 feet of a surface water body;
 4. Historical evidence indicates past discharge or dumping of oil or hazardous material from the site to the surface water body, unless such discharges were permitted;
 5. Evidence indicates current or past runoff of oil or hazardous material from or with site soil into the surface water body; and
 6. Site-specific conditions indicate that oil or hazardous material from the site may reasonably be expected to be present in the sediment or surface water at concentrations of potential ecological significance.

(3) Characterization of the Oil and/or Hazardous Material. The documentation of the Risk Characterization shall describe the oil and/or hazardous material at the disposal site, including, without limitation and where appropriate:

- (a) type, volume, composition, nature, physical, chemical and toxicological characteristics; and
- (b) environmental fate and transport characteristics, including mobility, stability, volatility, ability and opportunity for bioaccumulation, and persistence in the environment.

40.0920: Receptor Information Required for Risk Characterization

The identification of receptors, Site Activities and Uses, Exposure Points and Exposure Point Concentrations shall be conducted in a manner which provides a conservative estimate of the exposure to oil and/or hazardous material which a receptor may receive within the contaminated area over a period of time.

40.0921: Identification of Human Receptors

The documentation of the Risk Characterization shall identify and describe the Human Receptors who are likely to be present at the disposal site or in the surrounding environment, and who, as a result, would likely be exposed to oil and/or hazardous material.

- (1) The identification of the Human Receptors shall consider the current and reasonably foreseeable uses of the disposal site and the surrounding environment.
- (2) The Human Receptors identified shall not be specific individuals, but shall be described as groups of individuals.
- (3) Subpopulations which may be at increased risk due to increased sensitivity, particular behavior patterns or current or past exposures to chemicals in the environment shall be identified as distinct receptors.

40.0921: continued

(4) The Human Receptors shall be described in terms such as age group, occupation or other characteristics which will distinguish them from the general population. Examples of such descriptions include, without limitation:

- (a) lifelong residents at the disposal site;
- (b) trespassers;
- (c) women of childbearing age;
- (d) construction workers; and
- (e) children, ages one to eight years.

40.0922: Identification of Environmental Receptors

The documentation of the Risk Characterization shall identify and describe the Environmental Receptors which are likely to be present at the disposal site or in the surrounding environment and which, as a result, would likely be exposed to oil and/or hazardous material.

(1) Examples of such biota may include, but are not limited to:

- (a) wildlife, such as deer, squirrel and fox;
- (b) fish and shellfish; and
- (c) plants, such as grasses and trees.

(2) Examples of such habitats may include, but are not limited to:

- (a) Areas of Critical Environmental Concern;
- (b) surface water;
- (c) fresh and saltwater fisheries and fish habitat, including, but not limited to, shellfish areas; and
- (d) wetlands.

(3) Any Species of Concern, Threatened Species, or Endangered Species which is known or likely to be located at the disposal site or in the surrounding area shall be specifically identified as an Environmental Receptor.

40.0923: Identification of Site Activities and Uses

The documentation of the Risk Characterization shall identify and describe the Site Activities and Uses associated with the disposal site and the surrounding environment. These activities shall be used in combination with the criteria described in 310 CMR 40.0930 through 40.0939 to identify applicable groundwater and soil categories and to estimate the nature and, where appropriate, quantify the magnitude of exposure pursuant to 310 CMR 40.0990.

(1) The Site Activities and Uses shall include all current and reasonably foreseeable uses and activities occurring at the disposal site or in the surrounding environment which could result in exposure to oil and/or hazardous material by Human or Environmental Receptors.

- (a) The identification of Site Activities and Uses of the groundwater shall be determined independent of the activities and uses of the land itself.
- (b) The Site Activities and Uses of the land shall be identified without regard to whether the land is currently developed or undeveloped.
- (c) The selection of site-specific exposure frequency and exposure duration should be representative of the full extent of site activities consistent with the identified Site Use.

(2) The current Site Activities and Uses associated with the land itself, with structures in and on the land, and with the groundwater, surface water, soil, sediment or other medium which could result in exposure of Human or Environmental Receptors to oil and/or hazardous material shall be identified and described. This evaluation shall include consideration of activities which actually may not be occurring at the time of the evaluation, but which are consistent with the current use of the disposal site and surrounding environment and may reasonably be expected to occur, including but not limited to emergency excavation and repair of existing subsurface utilities by workers without personal protective equipment.

40.0923: continued

(3) The reasonably foreseeable Site Activities and Uses shall include any possible activity or use that could occur in the future to the extent that such activity or use could result in exposures to Human or Environmental Receptors that are greater than the exposures associated with current Site Activities and Uses, except that:

- (a) the groundwater shall not be considered a reasonably foreseeable source of drinking water unless it is considered to be in category GW-1 pursuant to the criteria listed in 310 CMR 40.0932(4);
- (b) specific Site Activities and Uses which would be reasonably foreseeable pursuant to 310 CMR 40.0923(3) may be eliminated from further consideration through the use of Activity and Use Limitations in accordance with 310 CMR 40.1012 and 310 CMR 40.1070 through 40.1089; and
- (c) specific Site Activity and Uses which would be reasonably foreseeable pursuant to 310 CMR 40.0923(3) may be eliminated from further consideration if they are consistent with the limitations, assumptions and/or conditions at 310 CMR 40.1013 and are documented in support of a Permanent Solution with Conditions pursuant to 310 CMR 40.1056(2)(j).

(4) If the Site Activities and Uses considered in the Risk Characterization will be limited in any way as described in 310 CMR 40.0923(3)(b) or (c) or by a restriction imposed by a government agency which is or will be in place, then the documentation of the Risk Characterization must clearly and concisely state the nature of any and all explicit or implied exposure limitations and describe the Site Activities and Uses which must be controlled or prohibited.

- (a) The assessment of current Site Activities and Uses shall not be limited by Activity and Use Limitations and/or government restrictions that are not in place or not effective, nor by any assumed future practices, controls or conditions; and
- (b) The results of the Risk Characterization shall not be considered valid unless and until all necessary government restrictions are in place and/or all Activity and Use Limitations have been recorded, registered or filed in accordance with 310 CMR 40.1070 through 40.1089.

(5) If the Site Activities and Uses considered in the Risk Characterization have been limited in any way by temporary risk reduction measures (*e.g.*, fences which restrict access) employed at the disposal site, or by presumed future response actions, the documentation of the Risk Characterization shall describe clearly and concisely the nature of all such limitations. The documentation of the Risk Characterization shall clearly and concisely state that:

- (a) the conclusions presented are based upon the described temporary measures and/or the implementation of described future response actions; and
- (b) the conclusions are valid only if, and as long as, the site conditions or the temporary measures are maintained and/or the presumed response actions have been implemented as described.

(6) Examples of Site Activities and Uses associated with Human Receptors include, without limitation:

- (a) the use of a building as an office, store or residence;
- (b) the use of water as drinking water, for washing floors or watering lawns;
- (c) the cultivation of fruits and vegetables destined for human consumption (*e.g.*, gardening or farming) and the cultivation of ornamental plants;
- (d) the excavation of soil;
- (e) recreational activities, such as playing baseball, swimming, fishing and hiking;
- (f) leisure activities, such as picnicking, sunbathing and entertaining.

(7) Examples of Site Activities and Uses associated with Environmental Receptors include, without limitation:

- (a) foraging by wildlife;
- (b) the support of plant or wildlife populations; and
- (c) the seasonal use of a location for nesting or mating.

40.0924: Identification of Exposure Points

(1) All potential Exposure Points shall be identified and described in the documentation of the Risk Characterization after considering the site and receptor information described in 310 CMR 40.0904 through 40.0923.

(2) The identification of an Exposure Point shall be consistent with the type and method of Risk Characterization which is being performed.

(a) Methods 1 and 2 Risk Characterizations - The Exposure Point(s) in groundwater and soil shall be identified and documented for all current and reasonably foreseeable Site Activities and Uses.

1. For groundwater, the Exposure Point(s) shall be the groundwater resource itself, as measured at each wellhead and/or nearest tap of a well screened within the horizontal and vertical distribution of the oil and/or hazardous material in the groundwater. Existing water supply wells and monitoring wells shall be used to represent current or potential groundwater Exposure Points.

2. For soil, the Exposure Point(s) shall be defined by the horizontal and vertical distribution of the contaminated soil in combination with the soil category(ies) determined to be applicable. For a contiguous volume of contaminated soil comprised of one or more soil categories as defined in 310 CMR 40.0933, a separate and distinct Exposure Point shall be represented by the soil in each category.

(b) Method 3 Risk Characterization – The Exposure Point(s) in all environmental media shall be identified for all current and reasonably foreseeable Site Activities and Uses.

1. For comparisons to Applicable or Suitably Analogous Standards, the Exposure Point shall be identified in a manner consistent with the applicable regulations.

2. Except as provided in 310 CMR 40.0924(2)(b)3., in GW-1 groundwater areas, for the comparison to drinking water standards listed in 310 CMR 22.00: *Drinking Water* and for the calculation of current and/or potential exposure to the groundwater, the Exposure Point(s) shall be the groundwater resource itself, as measured at each wellhead and/or nearest tap of a well screened within the horizontal and vertical distribution of the oil and/or hazardous material in the groundwater. Existing water supply wells and monitoring wells shall be used to represent current or potential groundwater Exposure Points.

3. In GW-1 areas that are designated GW-1 solely on the basis of being located within a Zone II or an Aquifer Protection District that overlays or is contiguous with a Zone II and where sites meet the following criteria, the Exposure Point shall be the existing Public Water Supply well(s) for the evaluation of current and future drinking water exposures and the Exposure Point Concentration shall be identified pursuant to 310 CMR 40.0926(8)

a. Contamination is limited to Oil;

b. A Phase II Report for the disposal site pursuant to 310 CMR 40.0830 has been submitted;

c. The disposal site is located at a distance greater than 1,000 feet from a Public Water Supply well;

d. It has been demonstrated that the requirements at 310 CMR 40.1003(5) and (7)(a) have been met to address any NAPL present;

e. It has been demonstrated through adequate characterization of horizontal migration that groundwater contaminant concentrations are:

i. not detected at or above analytical limits appropriate for a GW-1 area at the downgradient edge of the plume, at least 1,000 feet from the Public Water Supply well(s); and

ii. decreasing within the boundaries of the plume. Demonstration of diminishing contaminant concentrations within the plume shall consider both the spatial and temporal distribution of the contamination and other measures indicative of biodegradation of the contaminants;

f. It has been demonstrated through adequate characterization of vertical migration that contamination has not entered bedrock including the submittal of a profile sectional map showing the following information:

i. known or inferred depth to bedrock;

ii. depths to the top and bottom of the plume throughout the length of the plume; and

iii. existing well screen depths in comparison to the plume; and

40.0924: continued

- g. It has been demonstrated that there is no potential Exposure Point Concentration in accordance with the criteria specified at 310 CMR 40.0926(8).
4. For current or potential soil exposures, the following depths shall be considered with any applicable site-specific information when determining Exposure Points:
- a. zero to three feet for exposures associated with surficial activity;
 - b. zero to six feet for exposures associated with utility installation and repair; and
 - c. zero to 15 feet for exposures associated with excavation scenarios and building construction.
5. For other exposures, the Exposure Point shall be identified considering the timing of the exposure, the nature of the potential receptors and the likely frequency of exposure.
- (3) Consideration shall be given to the identification of Exposure Points which may be located at a distance from the original source of the release, particularly when the migration of oil and/or hazardous material may result in Exposure Points in addition to those identified under current site conditions.
- (4) Hot spots shall be considered distinct Exposure Points.
- (5) Examples of typical Exposure Points for disposal sites shall include, without limitation:
- (a) an existing public or private water supply;
 - (b) a future drinking water supply;
 - (c) a hot spot of contamination in a neighborhood playground;
 - (d) a volume of subsurface soil at a potential construction site;
 - (e) a distant shellfish bed.

40.0925: Identification of Exposure Pathways

- (1) For each identified receptor at each Exposure Point, the documentation of the Risk Characterization shall identify and describe all probable Exposure Pathways, based upon the media contaminated and the Site Activities and Uses.
- (2) The Exposure Pathways considered shall be consistent with the type and method of Risk Characterization which is being performed.
- (3) Examples of typical Exposure Pathways shall include, without limitation:
- (a) ingestion of soil, produce, water, or biota;
 - (b) inhalation of air or particulate matter; and
 - (c) dermal absorption from water or soil.

40.0926: Identification of Exposure Point Concentrations and Other Data Criteria

- (1) For each oil and/or hazardous material in each medium at each Exposure Point, an Exposure Point Concentration shall be identified and documented.
- (2) Exposure Point Concentrations shall be determined or estimated in a manner consistent with the type and method of Risk Characterization which is being performed.
- (3) In estimating the Exposure Point Concentration, the objective shall be to identify a conservative estimate of the average concentration contacted by a receptor at the Exposure Point over the period of exposure.
- (a) Maximum concentrations shall be used to estimate an Exposure Point Concentration under the following conditions:
1. evaluations of acute exposures;
 2. screening assessments that evaluate maximum exposure potential to streamline the assessment process; or
 3. evaluations of exposures for which the data available to characterize temporal variability or the spatial distribution of site concentration is limited, including when there is insufficient data to adequately characterize the effects of seasonal variation on groundwater contaminant concentrations.

40.0926: continued

(b) For chronic and subchronic exposures (other than for screening evaluations), the arithmetic average of site data is acceptable as an Exposure Point Concentration, provided either of the following criteria are met:

1. for discrete or composite samples, the arithmetic average is less than or equal to the applicable standard or risk-based concentration limit, 75% of the data points used in the averaging procedure are equal to or less than the applicable standard or risk-based concentration limit, and no data point used in the averaging is ten times greater than the applicable standard or risk-based concentration limit; or
2. a valid justification is provided indicating that the sample mean is unlikely to substantially underestimate the true mean of the concentration of oil or hazardous material at the Exposure Point. Such a demonstration should include, but need not be limited to, consideration of the observed distribution of the data, sampling strategy (including frequency, density, and potential biases), graphical representation of analytical results, and/or statistical analyses.

(c) For chronic and subchronic exposures (other than for screening evaluations), the use of maximum concentrations or the 95th percentile upper confidence limit on the mean, whichever is lower, shall be used to estimate an Exposure Point Concentration when the criteria specified in 310 CMR 40.0926(3)(b) are not met. In such cases, the sample size is likely to be insufficient for the simple arithmetic average to estimate the true value with reasonable confidence and there is a considerable probability of substantially underestimating the mean.

(4) In determining the concentrations to compare to Upper Concentration Limits, the objective shall be to provide a conservative estimate of the average concentration within the site, and the average concentration within any Hot Spots within the site. A conservative estimate of the average concentration should be developed in accordance with 310 CMR 40.0926(3).

(5) In determining the concentrations to evaluate Hot Spots, the objective shall be to provide a conservative estimate of the average concentration within the Hot Spot. A conservative estimate of the average concentration should be developed in accordance with 310 CMR 40.0926(3).

(6) Except as provided in 310 CMR 40.0926(7), Exposure Point Concentrations shall be developed using analytical data gathered during the site investigation at the Exposure Point as the primary line of evidence, as described in 310 CMR 40.0924.

(7) Fate and transport models generally accepted by the environmental modeling community may be used in conjunction with other site information and data and/or in cases where direct sampling of a media of concern is not possible or appropriate.

(a) For indoor air, sub-slab soil vapor data and/or conditions may be used to:

1. estimate or aid in the estimation of Exposure Point Concentrations in the event that it is not possible to distinguish disposal site-related contamination at the Exposure Point from interior sources at ongoing commercial and/or industrial operations or interior building materials contaminated by past commercial or industrial operations; or
2. where appropriate, to rule out an indoor air Exposure Pathway.

(b) For indoor air, fate and transport models shall not be used to estimate future Exposure Point Concentrations in the indoor air of buildings that have not been constructed.

(c) For groundwater, current groundwater contaminant concentrations and site hydro-geologic conditions may be used to estimate future Exposure Point Concentrations in groundwater and/or surface water.

(d) For soil, current soil concentrations and site-specific factors such as infiltration rate of precipitation and soil characteristics may be used to estimate the future leaching potential of soil contaminants.

(e) Such models shall be clearly documented and incorporate input parameters to provide a conservative estimate of the Exposure Point Concentration pursuant to 310 CMR 40.0926(3).

(8) No exposure potential exists (the Exposure Point Concentration may be set equal to zero) for those sites described at 310 CMR 40.0924(2)(b)3. if the following conditions are met and documented based on data collected at the disposal site:

40.0926: continued

- (a) Demonstration of source elimination or control at the disposal site as described in 310 CMR 40.1003(5);
- (b) Demonstration of diminishing contaminant concentrations throughout the horizontal and vertical extent of the plume;
- (c) Demonstration that contaminant concentrations are not detected at or above analytical limits appropriate for a GW-1 area at the downgradient edge of the plume, at least 1,000 feet from the Public Water Supply well; and
- (d) The demonstrations pursuant to 310 CMR 40.0926(8)(b) and (c) are confirmed by a minimum of two years of quarterly groundwater monitoring conducted after the termination of any Active Remedial System and after the achievement of such contaminant concentrations.

40.0930: Identification of Site Groundwater and Soil Categories

40.0931: Purpose

Categories of groundwater and soil have been established by the Department for use in the characterization of risk posed by disposal sites. The documentation of a Risk Characterization shall support the categorization of the groundwater and soils at the disposal site.

- (1) The groundwater and soil categories shall be used to determine the applicability of the groundwater and soil standards listed in 310 CMR 40.0974(2), 40.0975(6)(a), (b) and (c), and 40.0985(6) when Methods 1 or 2 are used to characterize risk.
- (2) The groundwater categories shall be used to identify applicable or suitably analogous standards as described in 310 CMR 40.0993(3), when Method 3 is used to characterize risk.
- (3) The groundwater and soil categories shall be considered in determining the need for Activity and Use Limitations as part of a Permanent or Temporary Solution.

40.0932: Identification of Applicable Groundwater Categories

- (1) The groundwater categories describe the potential for three different types of exposure. More than one category may apply to a single disposal site. In such cases all applicable categories shall be identified.
- (2) Groundwater at all disposal sites shall be considered a potential source of discharge to surface water and shall be categorized, at a minimum, as category GW-3. The site, receptors, and exposure information identified in 310 CMR 40.0904 through 40.0929 shall be used in conjunction with the criteria listed below to determine if the groundwater shall also be categorized as GW-1 and/or GW-2.
- (3) The appropriate groundwater category shall be identified for both:
 - (a) groundwater currently affected by the release of oil and/or hazardous materials, and
 - (b) any area to which the groundwater affected by the release is expected to migrate.
- (4) Groundwater Category GW-1 Except as provided by 310 CMR 40.0932(5), groundwater shall be defined as GW-1 if the groundwater is located:
 - (a) within a Current Drinking Water Source Area; or
 - (b) within a Potential Drinking Water Source Area.
- (5) Notwithstanding the provisions of 310 CMR 40.0932(4):
 - (a) Interim Wellhead Protection Area. Groundwater that is categorized as a Current Drinking Water Source Area, solely due to its location within an Interim Wellhead Protection Area, need not be so categorized if it is demonstrated that there is no hydrogeologic connection between the groundwater and the public water supply well on the basis of the following:

40.0932: continued

1. the groundwater is hydrogeologically downgradient of the public water supply well based on regional groundwater flow and gradient, and beyond the stagnation point. The determination of such a stagnation point shall be based on site-specific parameters and the highest daily approved pumping rate for the public water supply well; or
 2. the disposal site is cross-gradient (perpendicular) to regional groundwater flow direction and at sufficient distance from the public water supply well such that it is outside of the zone of contribution for the public water supply well. The determination of such a zone of contribution shall be based on site-specific parameters and the highest daily approved pumping rate for the public water supply well; or
 3. a hydrogeologic barrier exists between the groundwater at the disposal site and the public water supply well.
- (b) Potential Drinking Water Source Area. Groundwater that is categorized as a Potential Drinking Water Source Area solely due to its location within an area defined as a Potentially Productive Aquifer need not be so categorized if:
1. site-specific information on the types and/or transmissivity of soils shows that the groundwater is not located within the true boundary of the medium or high yield aquifer(s) which comprise(s) the Potentially Productive Aquifer; or
 2. the groundwater within the Potentially Productive Aquifer is naturally brackish, or has naturally high levels of metals, such that the development of the aquifer as a public water supply is currently technologically or economically infeasible.
- (c) Case-specific Designation of a Non-potential Drinking Water Source Area.
1. One or more municipalities or private parties may petition the Department to change the categorization of groundwater within a Potentially Productive Aquifer from a Potential Drinking Water Source Area to a Non-potential Drinking Water Source Area because:
 - a. the groundwater is categorized as a Potential Drinking Water Source Area solely due to its location within a Potentially Productive Aquifer, and is not categorized as a Current Drinking Water Source Area;
 - b. the groundwater has been contaminated by one or more releases of oil and/or hazardous materials, and:
 1. such releases exceed the reporting thresholds established by 310 CMR 40.0300; and
 2. it is not feasible to achieve GW-1 standards for such groundwater (pursuant to 310 CMR 40.0860),
 - c. the land area overlying the groundwater does not meet the criteria established in the definition of "Non-potential Drinking Water Source Area" and is at least 100 acres in size; and
 - d. the municipality(ies) overlying the groundwater and any public water systems with existing legal authority to develop new sources of drinking water in the area affected by the petition have sufficient water from other sources to meet their needs for future drinking water supplies, and to fulfill any current contractual obligations for the provision of water to other parties.
 2. The petitioner(s) shall provide a reasonable opportunity for public comment on the proposed petition. Such opportunity shall include but not be limited to:
 - a. establishment of a specific period of time in which written public comment can be submitted to the party preparing the petition. Such comment period shall not be less than 30 calendar days;
 - b. a public meeting to be held within the public comment period for the purpose of hearing comments on the proposed petition. Such meeting shall be conducted at a time and place convenient to the public;
 - c. notice of the comment period and meeting shall be provided to:
 - i. the public using a public notice pursuant to 310 CMR 40.1403(2)(b) in a newspaper of general circulation in the municipalities in the river basin in which the aquifer is located and which are hydrologically connected and downgradient to the area affected by the petition;
 - ii. the public in the *Environmental Monitor*;
 - iii. the public by posting the notice on a publicly accessible location in the municipal office and on any local access cable television station that serves the municipalities described in 310 CMR 40.0932(5)c.1.;

40.0932: continued

- iv. the Chief Municipal Official(s) of (a) the municipality(ies) located within the boundaries of the river basin in which the groundwater is located and which are hydrologically connected and downgradient to the area affected by the petition, (b) municipalities abutting the municipality containing the area proposed to be designated as a Non-potential Drinking Water Source Area; and (c) municipalities abutting the abutters;
 - v. any party with a currently effective contract with the municipality(ies) for sale or purchase of drinking water to or from the aquifer or portion thereof subject to the petition;
 - vi. any public water system providing water or operating a drinking water well within the municipality(ies) in which the groundwater is located and in downgradient municipalities in the subject aquifer; and
 - vii. any person holding a registration or permit under the Water Management Act (M.G.L. c. 21G) for withdrawal of water from the aquifer or portion thereof subject to the petition.
- d. The notice required by 310 CMR 40.0932(5)(c)2.c. shall describe the designation sought, the area to which it would apply, the basis for the petition, how to obtain a copy of the proposed petition, the location and time of the public meeting, and how to submit comments. Such notice shall be provided no later than the first day of the comment period, and not less than 14 calendar days prior to the public meeting;
- e. a summary of all comments received shall be prepared after the close of the comment period, noting which comments have been incorporated into the petition and providing an explanation of why others have not. A copy of such summary shall be provided to each person who submitted written comments, and submitted to the Department with the petition.
3. Petitions shall include:
- a. a demonstration that the petition meets the criteria for a Case-specific Designation in 310 CMR 40.0932(5)(c)1.;
 - b. a water resource budget containing:
 - i. an inventory of current water supplies and authorized water withdrawal volumes pursuant to MGL c. 21G from the aquifer or portion thereof subject to the petition;
 - ii. forecasts of water demands for the municipality(ies) in which the groundwater is located, any municipality in which the groundwater plume may be located in the future, and abutting municipalities (such forecasts shall be prepared using the methodology accepted for implementation of 310 CMR 36.00: *Massachusetts Water Resources Management Program* for forecasting future water needs, using the most current data available);
 - iii. a description of the water resources that will be used to meet the demands identified in 310 CMR 40.0932(5)(c)3.b.2., including the role of the aquifer subject to the petition in meeting such demands, and an analysis of the impact of the development of any future water supply on stream flow, fisheries and wildlife resources, agricultural and other water users;
 - iv. supporting data describing basin hydrology, land uses, existing interconnections to serve other municipalities, interconnections that have been approved but not yet developed to serve other municipalities, and population trends;
 - c. documentation of technical and legal actions to protect existing and future drinking water sources;
 - d. a map of the aquifer showing the area proposed for exclusion from a Potential Drinking Water Source Area;
 - e. in those cases where the petition addresses a portion of the aquifer, a description of the hydrogeologic relationship between that portion and the larger aquifer (*i.e.*, in terms of groundwater flow direction, presence of hydrogeologic barriers);
 - f. documentation of the public comment period and meeting, and a copy of the summary of comments received required by 310 CMR 40.0932(5)(c)2.e.;

40.0932: continued

- g. one of the following:
 - i. a certification of concurrence by the Chief Municipal Officer of the municipality(ies) in which the groundwater subject to the petition is located and/or any public water systems with existing legal authority to develop new sources of drinking water in the area affected by the petition, stating "The [municipality(ies)] [public water system(s)] [has][have] sufficient water from other sources to meet its [their] need for future drinking water supplies, including the fulfillment of any contractual obligations for the provision of water to other parties". Such certification shall also include a statement that (a) in the event that the groundwater will be used in the future as a public drinking water supply, an assessment shall be performed to determine whether additional response actions or well-head treatment are needed to achieve GW-1 standards and such assessment shall be submitted to the Department with an application for a New Source Approval in accordance with 310 CMR 22.00: *Drinking Water*; and b) that any existing contractual obligations to provide water of potable quality from the groundwater subject to the petition to other parties will not be affected by approval of the petition; or
 - ii. a written statement describing the reasons for not supplying the certification in 310 CMR 40.0932(5)(c)3.g.1. by the municipality(ies) in which the groundwater subject to the petition is located or public water systems with existing legal authority to develop new sources of drinking water in the area affected by the petition; or
 - iii. a copy of a written request for the certification in 310 CMR 40.0932(5)(c)3.g.1.; evidence that such request was received by the appropriate entity(ies); and a certification by the petition sponsor that such certification has not been provided within a period of at least ninety days from the date of the written request.
- 4. The portions of the petition described in 310 CMR 40.0932(5)(c)3.a. through e. shall be available to the public no later than the date on which the public comment period begins.
- 5. Petitions shall be submitted to the Department, which shall review the petition and determine whether it is complete. Incomplete petitions will be returned to the applicant with a request for submittal of necessary information within a specified time period. If the requested information is not supplied within the specified time period, the application will be considered to be withdrawn.
- 6. The Commissioner shall request that the Massachusetts Water Resources Commission review complete applications. Such request shall be made at least 60 days prior to issuing a determination.
- 7. The Commissioner shall issue a determination not later than 30 days following receipt of a recommendation from the Water Resources Commission as to the disposition of the petition, based on whether the petition meets the criteria established by 310 CMR 40.0932(5)(c)1., as demonstrated by:
 - a. supporting documentation provided pursuant to 310 CMR 40.0932(5)(c)3.;
 - b. comments submitted during the public comment period pursuant to 310 CMR 40.0932(5)(c)2. and the petitioner's steps taken to address public concerns; and
 - c. any other information available to the Department and the Water Resources Commission.
- 8. The Commissioner may issue a draft determination and request additional public comment and/or review by the Water Resources Commission. Such tentative decision shall establish a timeframe for the additional public comment or Water Resources Commission review, and for issuing a final determination.
- (d) Existing Private Wells. Groundwater that is categorized as a Current Drinking Water Source Area solely due to its location within 500 feet of a private water supply well need not be categorized as GW-1 if:
 - 1. the private water supply well is removed from service as a source of drinking water and the following conditions are met:
 - a. written documentation has been submitted to the Department demonstrating that the property(ies) served by the private water supply well has been connected to a public water supply system; and

40.0932: continued

b. written documentation has been submitted to the Department demonstrating the absence of any unpermitted cross-connection between the private water supply well and public water system or that the private well has been properly abandoned; and
 c. where the private well is maintained for uses other than as a private water supply, written documentation has been submitted to the Department in the risk characterization pursuant to 310 CMR 40.0900 demonstrating that such other uses are consistent with a level of No Significant Risk and a Notice of Activity and Use Limitation implemented in accordance with 310 CMR 40.1074 which identifies the use of the private well as a drinking water source as a use which is inconsistent with maintaining a level of No Significant Risk; and

d. copies of the written documentation described in 310 CMR 40.0932(5)(d)1.a. through c. are provided to the local Board of Health; or

2. it is demonstrated that there is no hydrogeologic connection between the groundwater and the private water supply well, based on an investigation and evaluation of site-specific conditions, including, but not limited to, as appropriate, the investigation and evaluation of site stratigraphic, potentiometric, and geochemical conditions, and the depth and construction of the private well. The absence of site contaminants in the private well does not, by itself, constitute such a demonstration.

3. the private water supply did not exist at the time of notification pursuant to 310 CMR 40.0300 or was not installed in conformance with applicable laws, by-laws or regulations.

(e) Zone A. Groundwater that is categorized as a Current Drinking Water Source Area solely due to its location within a Zone A need not be categorized as GW-1 if it is demonstrated that there is no hydrogeologic connection between the groundwater and the Class A surface drinking water source, based on an investigation and evaluation of site-specific conditions, including, but not limited to, as appropriate, an investigation and evaluation of site stratigraphic, potentiometric, and geochemical conditions.

(f) The provisions of 310 CMR 40.0932(5)(a) through (d) apply to specific criteria for the inclusion of an area in the GW-1 category. Nothing in 310 CMR 40.0932(5) shall limit the applicability of any other criteria described in 310 CMR 40.0932(4)(a) or (b) to the categorization of groundwater at a disposal site.

(6) Groundwater Category GW-2. Groundwater shall be defined to be in category GW-2 if it is located within 30 feet of an existing or planned building or structure that is or will be occupied, and the average annual depth to groundwater in that area is 15 feet or less. Category GW-2 groundwater is considered to be a potential source of vapors of oil and/or hazardous material to indoor air. Construction of a building in an area in which the average annual depth to groundwater is 15 feet or less will change the groundwater category at the site to include GW-2; change the activities, uses and/or exposures at the disposal site; and may negate the notification exemption described at 310 CMR 40.0317(17).

40.0933 Identification of Applicable Soil Categories

Soil shall be classified as either category S-1, S-2 or S-3. The site, receptor and exposure information identified in 310 CMR 40.0904 through 40.0929, considering both the current and reasonably foreseeable Site Activities and Uses identified in 310 CMR 40.0923, shall be used in conjunction with the criteria listed below to categorize the soil.

(1) The soil categories shall be applicable to specific volumes of soil which shall be described in written and graphic form in the documentation of the Risk Characterization.

(2) The three soil categories describe a range of the potential for exposure to that soil: Category S-1 soils are associated with the highest potential for exposure, Category S-3 soils have the lowest potential for exposure. While one and only one category is applicable to a specified volume of soil, soils in different areas of a disposal site may be classified in different categories, depending upon their exposure potential.

(3) The Table in 310 CMR 40.0933(9) contains a matrix summarizing the criteria used to categorize soil.

40.0933: continued

(4) For the purpose of soil categorization, the potential for exposure is described by a qualitative analysis of the accessibility of the soil in combination with the information about the Site Activities and Uses determined pursuant to 310 CMR 40.0923. The following definitions shall be used to describe exposure potential for the purposes of categorizing soil:

(a) Frequency of use shall indicate how often a receptor makes use of, or has access to, the disposal site. Receptor access to and use of the areas around the disposal site are often strong indicators of potential site access and thus should be considered in determining frequency of use for the site under investigation. Frequency of use shall be described as either "High", "Low" or "Not Present", using the following criteria:

1. Children's frequency of use shall be characterized as high if:
 - a. any children reside, attend school or attend day care at the disposal site; or
 - b. large numbers of children visit the disposal site, regardless of any one child's frequency of visitation.
2. Adults' frequency of use shall be characterized as high when they reside at the disposal site, or when they work at the disposal site on a continuing basis [*i.e.*, full days or shifts of eight or more hours per day on a continuing basis].
3. Children's or adults' frequency of use shall be characterized as low when they are present at the disposal site, but only as infrequent visitors; or when workers are present at the disposal site for only short periods of time [*i.e.*, less than two hours per day on a continuing basis, or for full days or shifts on a sporadic basis].
4. It shall be presumed that children may be present at the disposal site unless it can be demonstrated that access by children age 15 and younger is specifically restricted or that such children are highly unlikely to be present, in which case children may be considered to be "Not Present". Disposal sites which are residential properties shall presume the presence of children unless there is clear and convincing evidence to the contrary.
5. The frequency of use for activities not described above shall be characterized in the documentation of the Risk Characterization as either high or low.

(b) Intensity of use shall describe the nature of the Site Activities and Uses which could potentially result in exposure to the receptor. Intensity of use shall be described as either "High" or "Low", using the following criteria:

1. Site Activities and Uses which have the potential to disturb soil and thus result in either direct contact with the soil itself or inhalation of soil-derived dust shall be characterized as high intensity use. Examples of such activities include, without limitation, gardening, digging, and recreational sports.
2. Passive activities which do not disturb the soil, such as walking, shopping, and bird watching shall be characterized as low intensity use.
3. The intensity of use for each identified Site Activity and Use shall be characterized in the documentation of the Risk Characterization as either high or low with appropriate justification.

(c) Accessibility of the soil to potential receptors shall be characterized as either "accessible," "potentially accessible," or "isolated" using the following criteria:

1. Soil shall be characterized as "accessible" if it is located less than three feet below the surface, and the surface is not completely covered by pavement. For buildings having earthen floors, the floor shall be considered as the soil surface.
2. Soil shall be characterized as "potentially accessible" if it is located at a depth of three - 15 feet below the surface (with or without pavement), or if the soil is located less than three feet from the surface in an area completely paved.
3. Soil shall be characterized as "isolated" if it is located at a depth greater than 15 feet below the surface, or if the soil is covered completely by a building or other permanent structure which does not have earthen floors, regardless of depth. Soil located at a depth greater than three feet below the earthen floor of a building or other permanent structure shall also be characterized as "isolated."

(5) Category S-1. Soil shall be classified as category S-1 if either:

- (a) the soil of concern is accessible, pursuant to 310 CMR 40.0933(4)(c)1., and either:
 1. the soil is currently used for growing fruits or vegetables for human consumption, or if it is reasonably foreseeable that the soil may be put to such use; or
 2. a child's frequency or intensity of use is considered to be high pursuant to 310 CMR 40.0933(4)(a) and (b); or

40.0933: continued

3. an adult's frequency and intensity of use are both considered to be high pursuant to 310 CMR 40.0933(4)(a) and (b); or
 - (b) the soil is potentially accessible, pursuant to 310 CMR 40.0933(4)(c)2., and a child's frequency and intensity of use are both considered to be high pursuant to 310 CMR 40.0933(4)(a) and (b).
- (6) Category S-2. Soil shall be classified as category S-2 if either:
- (a) the soil is accessible, pursuant to 310 CMR 40.0933(4)(c)1.; and
 1. a child's frequency and intensity of use are both considered to be low pursuant to 310 CMR 40.0933(4)(a) and (b); or
 2. children are not present at the disposal site and either (but not both) the adults' frequency or intensity of use is considered to be high, pursuant to 310 CMR 40.0933(4)(a) and (b); or
 - (b) the soil is potentially accessible, pursuant to 310 CMR 40.0933(4)(c)2.; and
 1. either (but not both) a child's frequency or intensity of use is considered to be high pursuant to 310 CMR 40.0933(4)(a) and (b); or
 2. children are not present at the disposal site and an adult's frequency and intensity of use are both considered to be high pursuant to 310 CMR 40.0933(4)(a) and (b).
- (7) Category S-3. Soil shall be classified as category S-3 if either:
- (a) the soil is accessible, pursuant to 310 CMR 40.0933(4)(c)1., and children are not present at the disposal site and an adult's frequency and intensity of use are both considered to be low pursuant to 310 CMR 40.0933(4)(a) and (b); or
 - (b) the soil is potentially accessible pursuant to 310 CMR 40.0933(4)(c)2.; and
 1. a child's frequency and intensity of use are both considered to be low pursuant to 310 CMR 40.0933(4)(a) and (b); or
 2. a demonstration has been made that children are not present at the disposal site, and either an adult's frequency or intensity of use is considered to be low pursuant to 310 CMR 40.0933(4)(a) and (b); or
 - (c) the soil is isolated pursuant to 310 CMR 40.0933(4)(c)3., regardless of any receptor's frequency or intensity of use.
- (8) Whenever and wherever reasonable doubts exist over the selection of the appropriate soil category, the soil category associated with the highest exposure potential (among the soil categories being considered) shall be selected.
- (9) Table listed in 310 CMR 40.0933(9) contains the Soil Category Selection Matrix.

Table 40.933(9)

SOIL CATEGORY SELECTION MATRIX - HUMAN EXPOSURE POTENTIAL

Accessibility ↓ of Soil ↓	RECEPTOR CHARACTERISTICS							
	CHILDREN PRESENT				ADULTS <u>ONLY</u> PRESENT			
	<u>HIGH FREQUENCY</u>		<u>LOW FREQUENCY</u>		<u>HIGH FREQUENCY</u>		<u>LOW FREQUENCY</u>	
	High Intensity	Low Intensity	High Intensity	Low Intensity	High Intensity	Low Intensity	High Intensity	Low Intensity
ACCESSIBLE (SURFICIAL) SOIL 0 ≤ 3' (unpaved)	CATEGORY S-1		S-2		S-1	CATEGORY S-2		
POTENTIALLY ACCESSIBLE SOIL 3 ≤ 15' (unpaved) or 0 ≤ 15' (paved)	CATEGORY S-2				S-2	CATEGORY S-3		
31 CMR - 1649 ISOLATED SUB-SURFACE SOILS > 15' or under the footprint of a building or permanent structure	CATEGORY S-3							
* - Category S-1 also applies to any accessible soil where the current or reasonably foreseeable use of the soil is for growing fruits and vegetables for human consumption.								

40.0940: Methods for Characterizing Risk of Harm

40.0941: Approaches to Characterizing Risk of Harm

Several approaches may be employed to characterize the risk of harm to health, safety, public welfare and the environment. The specific Risk Characterization approach used shall depend upon the nature of the risk being assessed, the response action being performed and the nature of the disposal site.

(1) The methodology used to evaluate site conditions which may pose an Imminent Hazard is described in 310 CMR 40.0950 through 40.0959. This methodology shall be used to determine if notification is required pursuant to 310 CMR 40.0321, and if an Immediate Response Action is required by 310 CMR 40.0411 through 40.0429 to abate, prevent, or eliminate an Imminent Hazard.

(2) The methodology used to evaluate the risk of harm to safety shall be as described in 310 CMR 40.0960. A characterization of the risk of harm to safety is required at all disposal sites to determine the need for a response action or to demonstrate that a level of no significant risk of harm to safety exists or has been achieved.

(3) One of the following three options shall be used to determine the need for a remedial action or to demonstrate that a level of no significant risk of harm to health, public welfare and the environment exists or has been achieved:

- (a) the characterization of the risk through the use of promulgated standards (hereafter referred to as Method 1), described in 310 CMR 40.0970 through 40.0979; or
- (b) the characterizations of risk through the application of promulgated standards supplemented by site-specific information, described in 310 CMR 40.0980 through 40.0989 (hereafter referred to as Method 2); or
- (c) the characterizations of risk through the application of site-specific methodologies, described in 310 CMR 40.0990 through 40.0999 (hereafter referred to as Method 3).

40.0942: Selection of Method to Characterize the Risk of Harm to Health, Public Welfare and the Environment

The three Methods for Risk Characterization described in 310 CMR 40.0941(3) have been developed to provide a range of approaches which vary in detail and circumstances of use, each of which provides equivalent levels of protection to health, public welfare and the environment. Any of the three Risk Characterization Methods may be employed at a disposal site, subject only to the following limitations:

(1) Method 1 relies upon the use of numerical standards for chemicals in groundwater and soil to characterize risk of harm to health, public welfare and the environment. These standards are referred to as "MCP Method 1 Standards," and are listed in 310 CMR 40.0970 through 40.0979. Method 1 shall only be used to characterize risk at a disposal site if there is a promulgated MCP Method 1 Standard for each oil and hazardous material of concern at the disposal site.

- (a) If no MCP Method 1 Standard has been promulgated for one or more oil or hazardous material in soil or groundwater at the disposal site, then the following options are available:
 - 1. The RP, PRP or Other Person may develop such standards under Method 2. Such standards may be used alone or in combination with other MCP Method 1 Standards to characterize risk at the disposal site. A combined Method 1 and Method 2 approach shall be considered a Method 2 Risk Characterization; or
 - 2. Method 3 alone may be used to characterize risk at the disposal site.

(b) If oil or hazardous material at the disposal site is present in, or is likely to migrate at potentially significant concentrations to an environmental medium in addition to groundwater and soil (such as in sediments, within surface water, or within ambient or indoor air), then Method 1 alone shall not be used to characterize the risk at the disposal site, and the following options are available:

40.0942: continued

1. If it is demonstrated that the current or foreseeable future human exposure to the oil and/or hazardous material would occur predominantly through contact with the groundwater or soil, then the MCP Method 1 Standards may be used to characterize the risk of harm to human health posed by the disposal site. Method 3 then would be used to characterize the risk of harm to public welfare and the environment posed by the contamination in all other affected media. Such an approach shall be considered to be a combined Method 1 and Method 3 Risk Characterization; or
 2. Method 3 alone may be used to characterize risk at the disposal site.
- (c) If Environmental Receptors have been identified for the disposal site as described in 310 CMR 40.0922, and if oil and/or hazardous material known to bioaccumulate are present within two feet of the ground surface, then Method 1 alone shall not be used to characterize the risk at the disposal site, and the following options are available:
1. The MCP Method 1 Standards may be used in combination with a Method 3 Stage I Environmental Screening to characterize the risk of harm to health, public welfare and the environment. Such an approach shall be considered to be a combined Method 1 and Method 3 Risk Characterization; or
 2. Method 3 alone may be used to characterize risk at the disposal site.
- (d) If one or more Volatile Organic Compounds is present in vadose zone soil adjacent to an occupied structure (within six feet, measured horizontally from the wall of the structure, and within ten feet, measured vertically from the basement floor or foundation slab) then the soil has the potential to result in significant indoor air concentrations of OHM and Method 1 alone cannot be used to characterize the risk at the disposal site. The following options are available:
1. The MCP Method 1 Standards may be used in combination with a demonstration that the soil concentrations of Oil and Hazardous Material are not likely to be a significant contributor to the Cumulative Receptor Risk at the site by the indoor air exposure pathway.
 2. MCP Method 3 alone may be used to characterize risk at the disposal site.
- (2) Method 2 allows the consideration of limited site-specific information to supplement the use of MCP Method 1 Standards for groundwater and soil. As a result, the limitations and options described for the use of Method 1 in 310 CMR 40.0942(1) are also applicable to the use of Method 2.
- (3) Method 3 may be used at any disposal site to characterize the risk of harm to health, public welfare and the environment.

40.0950: Imminent Hazard Evaluations and Substantial Hazard Evaluations

40.0951: Purpose and Scope of Imminent Hazard Evaluations

- (1) The site shall be evaluated to determine if an Imminent Hazard exists in accordance with 310 CMR 40.0000. The decision to conduct a quantitative Imminent Hazard Evaluation shall use the Response Action Performance Standard (RAPS) described in 310 CMR 40.0191, and consider the location and nature of the oil and/or hazardous material, the Human or Environmental Receptors which may be exposed, and appropriate guidance published by the Department.
- (2) If the results of this assessment indicate that the conditions at the site pose an Imminent Hazard based upon the criteria described in 310 CMR 40.0955, the Department shall be notified in accordance with 310 CMR 40.0311(7). Subsequent assessments performed as part of an Immediate Response Action shall consider the weight of evidence indicating the potential for an Imminent Hazard when making the evaluations described in 310 CMR 40.0426.

40.0951: continued

(3) Notwithstanding the provisions of 310 CMR 40.950, the concentration of each oil or hazardous material present in a system of water supply used by a public water system, as defined in 310 CMR 22.00: *Drinking Water*, shall not pose an Imminent Hazard or Substantial Hazard for current conditions if the public water system is in compliance with all applicable provisions of 310 CMR 22.00: *Drinking Water* and any other requirements specified by the Department pursuant to its authority under M.G.L. c. 111, § 160 and 310 CMR 22.00: *Drinking Water*.

40.0953: Exposures to be Considered in Imminent Hazard Evaluations

The focus of an Imminent Hazard Evaluation shall be on actual or likely exposures to Human and Environmental Receptors under current site conditions, considering the current use(s) of the disposal site and the surrounding environment, and considering an appropriate short period of time.

(1) The short period of time considered in the evaluation shall be five years unless site circumstances indicate that a shorter time period is appropriate. The specific time period shall be selected in consideration of the nature of the hazard under investigation and the projected time until a Comprehensive Response Action could be completed, in order to determine the need for an Immediate Response Action.

(2) For the evaluation of soil-related exposures, the levels of oil and/or hazardous material at the ground surface or within twelve inches of the ground surface shall be considered in the development of the Exposure Point Concentrations.

(3) For the evaluation of drinking water exposures, the levels of oil and/or hazardous material in the groundwater or surface water which serves as the source of the drinking water shall be considered in the development of the Exposure Point Concentrations.

(4) Hot spots shall be the primary, but not exclusive, focus of an Imminent Hazard Evaluation, provided that they are located in areas of actual or likely human exposure under current site conditions.

(5) If a small subset of oil and/or hazardous material are likely to dominate the risk estimates based upon their concentration and toxicity, then the Imminent Hazard Evaluation may be limited to those chemicals.

(6) As indicated by the site conditions, the Imminent Hazard Evaluation shall consider acute, subchronic and/or chronic exposures to the oil and/or hazardous material. The Exposure Point Concentrations shall be developed to reflect the type of exposure being evaluated. The use of upper percentile or maximum concentrations may be appropriate for certain evaluations, and shall be considered as described at 310 CMR 40.0926.

(7) The Imminent Hazard Evaluation shall be conducted in a manner which results in conservative estimates of potential exposures.

(8) The documentation of the Imminent Hazard Evaluation shall clearly identify and explain the basis for exposure parameters chosen for the Risk Characterization.

40.0955: Imminent Hazard Risk Characterization and Outcome

Risk Characterizations for Imminent Hazard Evaluations shall be conducted separately for safety, human health, and the environment, depending on the type of condition that triggered the need for the evaluation, in accordance with the following methods:

(1) The characterization of the risk of harm to safety shall be conducted as described in 310 CMR 40.0960. The conditions at the disposal site pose an Imminent Hazard based on safety concerns if a condition of no significant risk to safety has not been achieved at the disposal site under conditions which actually exist or are about to occur.

40.0955: continued

- (2) The characterization of the risk of harm to human health shall be conducted using Method 3, as described in 310 CMR 40.0993.
- (a) The toxicity information used to characterize risk shall be consistent with the type and duration of exposure under evaluation, and shall be clearly identified and documented. Primary consideration shall be given to information developed by the Massachusetts Department of Environmental Protection for the purpose of conducting such risk assessments. Examples of such toxicity information include:
1. Reference Doses and Reference Concentrations; and
 2. Carcinogenic Slope Factors and Unit Risk values.
- (b) The conditions at the disposal site pose an Imminent Hazard based upon the potential for carcinogenic health effects if, for the oil and/or hazardous material evaluated and for each receptor, the estimated Excess Lifetime Cancer Risk is greater than a cancer risk limit which is an Excess Lifetime Cancer Risk equal to one-in-100,000.
- (c) The conditions at the disposal site pose an Imminent Hazard based upon the potential for non-cancer health effects if, for the oil and/or hazardous material evaluated and for each receptor, the non-cancer risk calculated is greater than a non-cancer risk limit of:
1. a Hazard Index (or equivalent ratio of exposure) equal to one for oil or hazardous materials that have the potential to cause serious effects (including, but not limited to, lethal, developmental, or neurological effects) following short-term exposures, for example lead or cyanide; and
 2. a Hazard Index equal to ten for all other oil or hazardous materials.
- (d) A release to the environment which produces readily apparent effects to human health poses an Imminent Hazard. A quantitative evaluation of such exposures is not required.
- (e) The mathematical equations used to calculate the risk estimates shall be clearly presented and documented.
- (3) The risk of harm to the environment shall be characterized based on the data collected pursuant to the response action being performed and the site, receptor, and exposure information identified in 310 CMR 40.0995. The following conditions shall constitute an Imminent Hazard to the environment:
- (a) evidence of stressed biota attributable to the release at the disposal site including, without limitation, fish kills or abiotic conditions; or
 - (b) a release to the environment of oil or hazardous material which produces immediate or acute adverse impacts to freshwater or saltwater fish populations.
- (4) The documentation of the Imminent Hazard Evaluation shall clearly state whether the conditions at the disposal site pose an Imminent Hazard based upon the criteria described in 310 CMR 40.0955(1) through (3).

40.0956: Substantial Hazard Evaluation

- (1) The focus of a Substantial Hazard Evaluation shall be on possible exposures to Human and Environmental Receptors, considering the current use(s) of the disposal site and the surrounding environment and, where applicable, any Activity and Use Limitation for the site. A Substantial Hazard Evaluation shall not include fish consumption where a fish advisory has been put in place by the Commonwealth of Massachusetts or the federal government and the public is fully informed of the advisory by signage and/or other communication media.
- (a) A condition of No Substantial Hazard to Health would exist if, for an appropriate Exposure Period, no Cumulative Receptor Cancer Risk and no Cumulative Receptor Non-cancer Risk is greater than the Cumulative Receptor Risk Limits specified at 310 CMR 40.0993(10);
- (b) The period of exposure to be considered shall be equal to or greater than the time from Notification to the date that the Substantial Hazard evaluation is conducted, plus five years; and
- (c) A quantitative evaluation of human health risk is not required if there is no current exposure to oil and/or hazardous material at the disposal site.

40.0956: continued

(2) The focus of an Ecological Substantial Hazard Evaluation shall be on any environmental resource areas, such as wetlands, aquatic and terrestrial habitats, and fisheries that exist at a site. A condition of No Substantial Hazard to the Environment would exist if steps have been taken to eliminate or mitigate the following conditions, where applicable, affecting an environmental resource at a site:

- (a) Evidence of stressed biota attributable to the release at the disposal site including, without limitation, fish and wildlife kills or abiotic conditions;
- (b) The visible presence of oil, tar or other separate phase hazardous material in soil within three feet of the ground surface over an area equal to or greater than two acres, or over an area equal to or greater than 1000 square feet in sediment within one foot of the sediment surface;
- (c) Continuing discharge of contaminated groundwater to surface water where the levels of the oil or hazardous material attributable to the release already exceed Massachusetts Surface Water standards;
- (d) Continuing discharge of contaminated groundwater to surface water where surface water and/or sediment concentrations of Oil and/or Hazardous Material attributable to the release already pose a significant risk;
- (e) Migration of oil or hazardous material to additional environmental media or resource area where resultant exposures would have the potential to pose a significant risk of harm in the future; and
- (f) Ecological risk or harm such that recovery would be substantially more difficult or would require more time if conditions were to remain unremediated for even a short period of time.

(3) No assessment of Substantial Hazard is required if a condition of No Significant Risk exists and the site meets the requirements for a Permanent Solution.

40.0960: Characterization of Risk to Safety

(1) The risk of harm to safety shall be characterized based on the data collected pursuant to the response action being performed and the site, receptor, and exposure information identified in 310 CMR 40.0904 through 40.0933.

(2) The risk of harm to safety shall be characterized by comparing current and reasonably foreseeable conditions at the disposal site and in the surrounding environment to applicable or suitably analogous safety standards.

(3) A level of no significant risk to safety exists or has been achieved if the conditions at the disposal site which are related to a release of oil and/or hazardous material do not currently and will not in the foreseeable future pose a threat of physical harm or bodily injury to people. Such release-related conditions may include, but are not limited to:

- (a) the presence of rusted or corroded drums or containers, open pits, lagoons or other dangerous structures;
- (b) any threat of fire or explosion, including the presence of explosive vapors resulting from a release of oil and/or hazardous material; and
- (c) any uncontained materials which exhibit the characteristics of corrosivity, reactivity or flammability described at 310 CMR 40.0347.

(4) The documentation of the Risk Characterization shall clearly state whether or not a condition of no significant risk of harm to safety exists or has been achieved at the disposal site.

40.0970: Method 1 Risk Characterization

40.0971: Applicability of Method 1

(1) Method 1 may be used to characterize the risk of harm to health, public welfare and the environment at disposal sites where assessments conducted in accordance with 310 CMR 40.0000 have determined that the presence of oil and/or hazardous material is limited to soil and/or groundwater.

40.0971: continued

- (2) If contamination is present in one or more environmental media other than soil or groundwater, Method 1 shall not be used, except as described in 310 CMR 40.0942(1)(b). Persistent odors in ambient or indoor air resulting from a release of oil and/or hazardous material to the environment shall prohibit the use of Method 1, except as described in 310 CMR 40.0942(1)(b)1.
- (3) If oil or hazardous material that are known to bioaccumulate are present within two feet of the ground surface, and Environmental Receptors have been identified pursuant to 310 CMR 40.0922, then Method 1 shall not be used, except as described in 310 CMR 40.0942(1)(c).
- (4) The documentation of the Risk Characterization shall affirm and document the applicability of Method 1 to the disposal site.
- (5) A Method 1 Risk Characterization shall be conducted in combination with a separate characterization of the risk of harm to safety, as described in 310 CMR 40.0960.

40.0972: General Approach to Method 1

A Method 1 Risk Characterization compares the conditions at the disposal site to promulgated MCP Method 1 Standards. Each list of groundwater and soil standards has been developed by the Department considering a defined set of exposures considered to be a conservative estimate of the potential exposures at most sites. The exposures assumed by the Department correspond to the groundwater and soil categories described in 310 CMR 40.0932 and 40.0933. The Exposure Points and Exposure Point Concentrations shall be identified in a manner consistent with those categories, such that the concentrations of oil and/or hazardous material detected in soil and groundwater shall be compared directly to the MCP Method 1 Standards.

40.0973: Method 1 Risk Characterization

Under Method 1, the risk of harm to health, public welfare and the environment shall be characterized as follows:

- (1) The Method 1 Risk Characterization shall evaluate each current and reasonably foreseeable Site Activity and Use identified pursuant to 310 CMR 40.0923.
- (2) The groundwater and soil categories determined for the site in 310 CMR 40.0932 and 40.0933 shall be identified and documented.
- (3) The Exposure Point(s) in groundwater and soil for all current and reasonably foreseeable Site Activities and Uses shall be identified and documented as described in 310 CMR 40.0924.
- (4) The MCP Method 1 Standards assume exposure to the concentrations of oil and/or hazardous material in the soil and groundwater under current or foreseeable future conditions. For the Exposure Point Concentrations to be directly comparable to the MCP Method 1 Standards, they shall:
 - (a) be determined for each oil and/or hazardous material at each Exposure Point as described in 310 CMR 40.0926; and
 - (b) be representative of the actual concentration of oil and/or hazardous material at that Exposure Point, unmodified by other exposure assumptions.
- (5) The applicable MCP Method 1 Groundwater and Soil Standards shall be identified as described in 310 CMR 40.0974 and 40.0975, and listed in the documentation of the Risk Characterization.
- (6) The Exposure Point Concentrations identified in 310 CMR 40.0973(4) shall be compared to all applicable MCP Method 1 Standards identified in 310 CMR 40.0973(5).

40.0973: continued

(7) A condition of no significant risk of harm to health, public welfare and the environment exists if no Exposure Point Concentration is greater than the applicable MCP Method 1 Soil or Groundwater Standard. If the Method 1 Soil or Groundwater Standard for Total Petroleum Hydrocarbon is exceeded, a condition of No Significant Risk shall still be considered to exist if the Exposure Point Concentrations of the Aliphatic and Aromatic Hydrocarbon Fractions comprising the TPH are less than or equal to the applicable Method 1 Soil and Groundwater Standards.

(8) The documentation of the Method 1 Risk Characterization shall clearly state whether or not a condition of no significant risk of harm to health, public welfare and the environment exists or has been achieved at the disposal site.

40.0974: Identification of Applicable Groundwater Standards in Method 1

(1) The groundwater categories (GW-1, GW-2 and/or GW-3) identified for the disposal site per 310 CMR 40.0932 shall determine which column(s) of numerical standards listed in Table 1 are applicable to the groundwater. If multiple categories apply to the groundwater at the disposal site, the lowest of the applicable MCP Method 1 Groundwater Standards shall be used to characterize the risk of harm posed by the oil and/or hazardous material at the disposal site. The applicability of groundwater standards is independent of the classification of the soil at the disposal site.

40.0974: continued

(2) Table 1 Lists the Potentially Applicable MCP Method 1 Groundwater Standards.

NA - Not Applicable

* - The Total Chromium standard is applicable in the absence of species-specific data for Chromium III and Chromium VI.

** - Cyanide expressed as Physiologically Available Cyanide (PAC). In the absence of measured Physiologically Available Cyanide, the standard is applicable to Total Cyanide.

*** - The Per- and Polyfluoroalkyl Substances (PFAS) standard for GW-1 is for the sum of the concentrations of the following PFAS compounds: perfluorodecanoic acid (PFDA), perfluoroheptanoic acid (PFHpA), perfluorohexanesulfonic acid (PFHxS), perfluorononanoic acid (PFNA), perfluorooctanesulfonic acid (PFOS), and perfluorooctanoic acid (PFOA). The listed PFAS compounds and associated CAS numbers are the acid forms of these PFAS compounds. The PFAS standards presented in Table 1 also apply to the respective anionic forms of these PFAS compounds. These anions may form salts with any of a number of cations resulting in a variety of possible chemical species, each having a unique CAS number.

† - The Total Petroleum Hydrocarbon (TPH) standard may be used as an alternative to the appropriate combinations of the Aliphatic and Aromatic Hydrocarbon Fraction standards. The use of the general TPH standard is a valid option only for C9 and greater petroleum hydrocarbons; it is not appropriate for the characterization of risks associated with lighter (gasoline-range) hydrocarbons.

†† - The Department periodically reviews the scientific basis for these Standards and amends them, as appropriate, to incorporate new scientific information.

40.0975: Identification of Applicable Soil Standards in Method 1

The MCP Method 1 Soil Standards consider both the potential risk of harm resulting from direct exposure to the oil and/or hazardous material in the soil and the potential impacts on the groundwater at the disposal site. The applicability of a specific numerical Standard is thus a function of both the soil and the groundwater category identified:

- (1) The category of soil (S-1, S-2, or S-3) at each Exposure Point determines which one of the three tables of MCP Method 1 Soil Standards is applicable.
- (2) The category of groundwater (GW-1, GW-2, and/or GW-3) at or near each Exposure Point determines which column of the applicable MCP Method 1 Soil Standards table are relevant to the soil at the Exposure Point. If more than one groundwater category is applicable at the disposal site, then multiple MCP Method 1 Soil Standards may be applicable to the soil of interest, and the lowest of those identified standards shall be selected to characterize the risk of harm.
- (3) The MCP Method 1 Soil Standards listed in Table 2 in 310 CMR 40.0975(6)(a) are applicable to soil determined to be category S-1.
- (4) The MCP Method 1 Soil Standards listed in Table 3 in 310 CMR 40.0975(6)(b) are applicable to soil determined to be category S-2.
- (5) The MCP Method 1 Soil Standards listed in Table 4 in 310 CMR 40.0975(6)(c) are applicable to soil determined to be category S-3.

NOTE: All concentrations of oil and/or hazardous material in soil are calculated and presented on a dry weight/dry weight basis.

NA- Not Applicable

* - The Total Chromium standard is applicable in the absence of species-specific data for Chromium III and Chromium VI.

** - Cyanide expressed as Physiologically Available Cyanide (PAC). In the absence of measured Physiologically Available Cyanide, the standard is applicable to Total Cyanide.

***- The listed PFAS compounds and associated CAS numbers are for the acid forms of these PFAS compounds. The PFAS standards presented in Table 4 also apply to the respective anionic forms of these PFAS compounds. These anions may form salts with any of a number of cations resulting in a variety of possible chemical species, each having a unique CAS number.

† - The Total Petroleum Hydrocarbon (TPH) standard may be used as an alternative to the appropriate combinations of the Aliphatic and Aromatic Hydrocarbon Fraction standards. The use of the general TPH standard is a valid option only for C9 and greater petroleum hydrocarbons; it is not appropriate for the characterization of risks associated with lighter (gasoline-range) hydrocarbons.

†† - The Department periodically reviews the scientific basis for these Standards and amends them, as appropriate, to incorporate new scientific information.

40.0980: Method 2 Risk Characterization

40.0981 Applicability of Method 2

Method 2 may be used to characterize the risk of harm to health, public welfare and the environment at disposal sites where site investigations conducted in accordance with 310 CMR 40.0000 have determined that the release of oil and/or hazardous material is limited to soil and/or groundwater. If contamination is present in one or more environmental media other than soil or groundwater, Method 2 shall not be used, except as described in 310 CMR 40.0942(2). A Method 2 Risk Characterization shall be conducted in combination with a separate characterization of the risk of harm to safety, as described in 310 CMR 40.0960.

40.0982 General Approach to Method 2

A Method 2 Risk Characterization supplements and modifies the MCP Method 1 Standards with site-and chemical-specific information. For the purposes of 310 CMR 40.0000, "MCP Method 2 Standards" shall refer to the MCP Method 1 Standards which have been modified to address site-specific conditions as described in 310 CMR 40.0982. Site conditions are then compared to such MCP Method 2 Standards, in the same manner that MCP Method 1 Standards are used under 310 CMR 40.0973, to characterize the risk of harm to health, public welfare and the environment.

(1) MCP Method 1 GW-1 Standards shall not be modified in Method 2. These standards are listed in 310 CMR 40.0974(2).

(2) The component of the MCP Method 1 Soil Standards which is protective of direct contact exposures to the soil shall not be modified in Method 2. These standards are listed in 310 CMR 40.0985(6).

(3) The following information may be used under Method 2 to modify the Method 1 Standards:

(a) MCP Method 2 Groundwater and Soil Standards may be developed for chemicals for which MCP Method 1 Standards have not been promulgated by the Department. This process is described in 310 CMR 40.0983 and 40.0984.

(b) Site-specific information may be used to either modify the leaching component of the MCP Method 1 Soil Standards or to demonstrate that a contaminant will not leach to groundwater. The incorporation of such site-specific information will result in MCP Method 2 Soil Standards or a determination that the leaching component of one or more Method 1 soil standard is not applicable. These site-specific modifications are described in 310 CMR 40.0985.

(c) Site-specific information may be used to either modify the MCP Method 1 GW-2 Standards, which model potential volatilization of oil and/or hazardous material to indoor air, or to demonstrate that such vapor infiltration will not occur. The incorporation of such site-specific information will result in MCP Method 2 GW-2 Standards or a determination that one or more Method 1 GW-2 standard is not applicable at this site. These site-specific modifications are described in 310 CMR 40.0986.

(d) Site-specific information may be used to either modify the MCP Method 1 GW-3 Standards, which are set to be protective of potential discharges of oil and/or hazardous material to surface water, or to demonstrate that such discharges will not occur. The incorporation of such site-specific information will result in MCP Method 2 GW-3 Standards or a determination that one or more Method 1 GW-3 standard is not applicable. These site-specific modifications are described in 310 CMR 40.0987.

(4) If the modification of a MCP Method 1 GW-2 or GW-3 Standard results in a concentration of an oil and/or hazardous material greater than the Upper Concentration Limit in Groundwater listed in 310 CMR 40.0996(6), then the Upper Concentration Limit for that chemical shall be used to characterize the risk of harm to health, public welfare and the environment in Method 2.

(5) MCP Method 1 Standards may be used in combination with one or more MCP Method 2 Standards. A Risk Characterization which uses a combination of MCP Method 1 and 2 Standards shall be considered a Method 2 Risk Characterization.

40.0982: continued

(6) The MCP Method 2 Standards developed and used or relied upon by the LSP shall be listed and suitably documented.

(7) The Department may develop and publish sets of chemical-specific concentrations which, for specific types of disposal sites, will demonstrably meet the Risk Characterization requirements described at 40.0990. Such concentrations may be used at the RP's, PRP's or Other Person's option to characterize risk at a disposal site, and the use of these sets of concentrations shall be considered a Method 2 Risk Characterization.

40.0983: Derivation of Additional Method 1 Groundwater Standards for Use in Method 2

If an MCP Method 1 Groundwater Standard has not been promulgated by the Department, the RP, PRP or Other Person may develop an MCP Method 2 Standard for that oil and/or hazardous material on the basis of the following assumptions and procedures:

(1) A site-specific background concentration in groundwater shall be identified for the oil and/or hazardous material.

(2) GW-1 Standards shall be calculated as follows:

(a) Based on non-cancer health risk, a concentration in drinking water of the oil and/or hazardous material associated with a Hazard Quotient (HQ) of 0.2 shall be identified using the following equation:

$$[\text{OHM}]_{\text{dw, non-cancer}} = \text{HQ} \times \text{RfD} \times \text{BW} \times \text{C} / (\text{IR} \times \text{RAF}_{\text{dw-oral}}).$$

Where:

$[\text{OHM}]_{\text{dw, non-cancer}}$	=	Concentration of oil and/or hazardous material consistent with a non-cancer Hazard Quotient of 0.2, in units of micro-grams per liter ($\mu\text{g/L}$ or ppb).
HQ	=	Hazard Quotient of 0.2 (dimensionless).
RfD	=	Reference Dose, in units of milligrams per kilogram-day ($\text{mg}/(\text{kg} \times \text{d})$).
BW	=	Body weight of 70 kilograms (kg).
C	=	Conversion factor of 1000 micrograms per milligram ($\mu\text{g}/\text{mg}$).
IR	=	Intake rate of 2 liters of water per day.
$\text{RAF}_{\text{dw-oral}}$	=	Relative Absorption Factor for oral drinking water exposures (dimensionless).

(b) A concentration of the oil and/or hazardous material associated with an Excess Lifetime Cancer Risk equal to one-in-one million shall be identified using the following equation:

$$[\text{OHM}]_{\text{dw, cancer}} = \text{ELCR} \times \text{C} \times \text{BW} / (\text{IR} \times \text{RAF} \times \text{CSF}).$$

Where:

$[\text{OHM}]_{\text{dw, cancer}}$	=	The concentration of oil and/or hazardous material in groundwater consistent with a cancer risk limit of one-in-one million, in units of micrograms per liter ($\mu\text{g/L}$ or ppb).
ELCR	=	The Method 1 Excess Lifetime Cancer Risk limit of one-in-one million (10^{-6}).
C	=	Conversion factor of 1000 micrograms per milligram ($\mu\text{g}/\text{mg}$).
BW	=	Body weight of 70 kilograms (kg).
IR	=	Intake rate of 2 liters of water per day.
$\text{RAF}_{\text{dw-oral}}$	=	Relative Absorption Factor for oral drinking water exposures (dimensionless).
CSF	=	Cancer Slope Factor in units of risk per milligrams per kilogram-day ($\text{mg}/(\text{kg} \times \text{day}))^{-1}$.

40.0983: continued

- (c) The concentration in water of the oil and/or hazardous material at which 50% of the population can detect its odor is identified, if available;
- (d) The lowest non-zero concentration estimated in 310 CMR 40.0983(2)(a), (b), and (c) is identified as the risk-based concentration for the oil and/or hazardous material of concern;
- (e) The site-specific groundwater background concentration identified for the oil and/or hazardous material in 310 CMR 40.0983(1) is considered;
- (f) The Practical Quantitation Limit (PQL) applicable to the oil and/or hazardous material using an appropriately sensitive analytical method for quantifying the concentration of the oil and/or hazardous material in water shall be identified; and
- (g) The highest of the three concentrations identified in 310 CMR 40.0983(2)(d), (e) and (f) is adopted as the MCP Method 2 GW-1 Standard for that oil and/or hazardous material.

(3) GW-2 Standards shall be determined as follows:

(a) A risk-based indoor air concentration shall be identified by choosing the lowest non-zero value from the following:

1. Based on a non-cancer health risk, a concentration associated with a Hazard Quotient (HQ) of 0.2 is identified when sufficient information exists using the following equation:

$$[\text{OHM}]_{\text{air, non-cancer}} = \text{HQ} \times \text{RfC} \times \text{C}.$$

Where:

- $[\text{OHM}]_{\text{air, non-cancer}}$ = The calculated indoor air concentration associated with 20% of the reference concentration, in units of micrograms per cubic meter ($\mu\text{g}/\text{m}^3$).
- HQ = Hazard Quotient of 0.2 (dimensionless).
- RfC = Reference Concentration, in units of milligrams per cubic meter (mg/m^3) at which adverse non-cancer health effects are unlikely to occur.
- C = Conversion factor of 1000 micrograms per milligram ($\mu\text{g}/\text{mg}$).

2. An indoor air concentration associated with an Excess Lifetime Cancer Risk of one-in-one million, using the following equation, when sufficient information exists:

$$[\text{OHM}]_{\text{air-cancer}} = \text{ELCR} / \text{UR}_{\text{air}}.$$

Where:

- $[\text{OHM}]_{\text{air}}$ = The calculated indoor air concentration in units of micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) associated with an Excess Lifetime Cancer Risk of one-in-one million (10^{-6}).
- ELCR = The Method 1 Excess Lifetime Cancer Risk limit of one-in-one million (10^{-6}).
- UR_{air} = The inhalation Unit Risk in air for the chemical, in units of risk per micrograms per cubic meter ($\mu\text{g}/\text{m}^3$)⁻¹.

3. The concentration in air of the oil and/or hazardous material at which 50% of the population can detect its odor is identified, if available.

(b) A background indoor air concentration for the chemical shall be identified and compared to the risk-based concentration calculated in 310 CMR 40.0983(3)(a). The higher of the two values shall be chosen as the target indoor air concentration.

(c) A source attenuation factor, α , shall be determined for the oil and/or hazardous material, assuming conservative site characteristics, including: a depth to groundwater of 213 cm (seven feet), a basement floor both 183 cm (six feet) below grade and 30 cm (one foot) above the groundwater table, a soil water-filled porosity equal to $0.06 \text{ cm}^3/\text{cm}^3$, and sandy-loam soil between the groundwater and the basement.

(d) A concentration in groundwater for the oil and/or hazardous material shall be calculated using the following equation:

$$[\text{OHM}]_{\text{gw}} = [\text{OHM}]_{\text{air}} / (\alpha \times \text{H} \times \text{C}).$$

40.0983: continued

Where:

$[\text{OHM}]_{\text{gw}}$	=	The calculated GW-2 Standard, in units of micrograms per liter ($\mu\text{g/L}$ or ppb).
$[\text{OHM}]_{\text{air}}$	=	The target indoor air concentration identified in 310 CMR 40.0983(3)(b), in units of micrograms per cubic meter ($\mu\text{g}/\text{m}^3$).
α	=	A source attenuation factor as determined at 310 CMR 40.0983(2)(c) (dimensionless).
H	=	The Henry's Law Constant for the chemical (dimensionless).
C	=	Conversion factor of 1000 liters per cubic meter (L/m^3).

(e) The site-specific groundwater background concentration shall be identified for the oil and/or hazardous material in 310 CMR 40.0983(1).

(f) The Practical Quantitation Limit (PQL) applicable to the oil and/or hazardous material using an appropriately sensitive analytical method for quantifying the concentration of the oil and/or hazardous material in water shall be identified.

(g) The highest of the three concentrations identified in 310 CMR 40.0983(2)(d), (e), and (f) shall be adopted as the MCP Method 2 GW-2 Standard for that oil and/or hazardous material.

(4) GW-3 Standards shall be determined as follows:

(a) The lowest ecologically-based Water Quality Criterion for the oil and/or hazardous material of concern shall be identified (*i.e.*, the Fresh Water Chronic Criterion, the Fresh Water Acute Criterion, the Marine Chronic Criterion, or the Marine Acute Criterion). If no such criterion exists, an analogous value from the scientific literature may be proposed.

(b) The concentration (in $\mu\text{g}/\text{liter}$, or ppb) identified in 310 CMR 40.0983(4)(a) shall be multiplied by a factor of ten.

(c) The concentration identified in 310 CMR 40.0983(4)(b) shall be multiplied by:

1. a factor of 2.5 if the Koc value for the oil or hazardous material of concern is less than 1,000;
2. a factor of 25 if the Koc value for the oil or hazardous material of concern is greater than or equal to 1,000 but less than 100,000; or
3. a factor of 100 if the Koc value for the oil or hazardous material of concern is greater than or equal to 100,000.

(d) The resulting concentration (in $\mu\text{g}/\text{L}$, or ppb) shall be the MCP Method 2 GW-3 Standard for the oil and/or hazardous material of concern.

(5) Any of the MCP Method 2 groundwater standards calculated in 310 CMR 40.0983(2) through (4) shall be adjusted to a ceiling concentration of 50,000 $\mu\text{g}/\text{liter}$ (ppb) if the calculated value is greater than 50,000 $\mu\text{g}/\text{liter}$ (ppb).

40.0984: Derivation of Additional Method 1 Soil Standards for Use in Method 2

If an MCP Method 1 Soil Standard has not been promulgated by the Department, the RP, PRP or Other Person may develop an MCP Method 2 Standard for that oil and/or hazardous material on the basis of the following assumptions and procedures:

(1) A site-specific background concentration in soil shall be identified for the oil and/or hazardous material.

(2) Based upon non-cancer health risk, a concentration of the oil and/or hazardous material associated with a Hazard Quotient (HQ) of 0.2 for each soil category shall be identified using the equations:

$$[\text{OHM}]_{\text{S1}} = (\text{HQ} \times \text{RfD}_{\text{chronic}} \times C) / ((\text{RAF}_{\text{oral}} \times \text{ADSE}_{\text{S1oral}}) + (\text{RAF}_{\text{dermal}} \times \text{ADSE}_{\text{S1dermal}}))$$

$$[\text{OHM}]_{\text{S2}} = (\text{HQ} \times \text{RfD}_{\text{chronic}} \times C) / ((\text{RAF}_{\text{oral}} \times \text{ADSE}_{\text{S2oral}}) + (\text{RAF}_{\text{dermal}} \times \text{ADSE}_{\text{S2dermal}}))$$

40.0984: continued

$$[\text{OHM}]_{\text{S3}} = (\text{HQ} \times \text{RfD}_{\text{subchronic}} \times \text{C}) / ((\text{RAF}_{\text{oral}} \times \text{ADSE}_{\text{S3oral}}) + (\text{RAF}_{\text{dermal}} \times \text{ADSE}_{\text{S3dermal}}))$$

Where:

[OHM]	=	The concentration of oil and/or hazardous material being derived, in units of milligrams per kilogram soil (mg/kg or ppm).
HQ	=	Hazard Quotient (HQ) of 0.2 (dimensionless).
RfD	=	The Reference Dose for the chemical, in units of milligrams contaminant per kilogram-day (mg/(kg x day)).
RAF _{oral}	=	The Relative Absorption Factor applicable for oral soil exposures (dimensionless).
RAF _{dermal}	=	The Relative Absorption Factor applicable for dermal soil exposures (dimensionless).
C	=	10 ⁶ mg/kg conversion factor
ADSE	=	Average daily exposure to soil by the oral or dermal pathway in units of milligrams soil per kilogram-day (mg/(kg x day)). ADSE values are: S1 oral = 2.4 mg/(kg x day) S1 dermal = 21 mg/(kg x day) S2 oral = 0.27 mg/(kg x day) S2 dermal = 0.49 mg/(kg x day) S3 oral = 1.2 mg/(kg x day) S3 dermal = 13 mg/(kg x day).

(3) A concentration of the oil and/or hazardous material associated with an Excess Lifetime Cancer Risk equal to one-in-one million shall be identified for each soil category using the following equations:

$$[\text{OHM}] = (\text{ELCR} \times \text{C}) / (\text{CSF} \times ((\text{RAF}_{\text{oral}} \times \text{LADSE}_{\text{oral}}) + (\text{RAF}_{\text{dermal}} \times \text{LADSE}_{\text{dermal}})))$$

Where:

[OHM]	=	The concentration of oil and/or hazardous material being derived, in units of milligrams OHM per kilogram soil (mg/kg or ppm).
ELCR	=	Method 1 Excess Lifetime Cancer Risk limit of one-in-one million (10 ⁻⁶).
CSF	=	The oral Carcinogenic Slope Factor in units of risk per milligram per kilogram-day (mg/(kg x day)) ⁻¹ .
RAF _{oral}	=	The Relative Absorption Factor applicable for oral soil exposures (dimensionless).
RAF _{dermal}	=	The Relative Absorption Factor applicable for dermal soil exposures (dimensionless).
C	=	10 ⁶ mg/kg conversion factor.
LADSE	=	Lifetime average daily exposure to soil by the oral or dermal pathway in units of milligrams soil per kilogram-day (mg/(kg x day)). LADSE values are: S1 oral = 0.37 mg/(kg x day) S1 dermal = 3.9 mg/(kg x day) S2 oral = 0.10 mg/(kg x day) S2 dermal = 0.19 mg/(kg x day) S3 oral = 0.0088 mg/(kg x day) S3 dermal = 0.095 mg/(kg x day).

NON-TEXT PAGE

40.0984: continued

(4) Considering the category determined for the groundwater at the disposal site per 310 CMR 40.0932 and an acceptable leaching model or test method as discussed in 310 CMR 40.0985, a concentration in soil which will not result in groundwater concentrations of the oil and/or hazardous material greater than the applicable MCP Method 2 groundwater standard derived in 310 CMR 40.0983 shall be identified.

(5) For each combination of soil and groundwater categories, the lowest non-zero concentration estimated in 310 CMR 40.0984(2) through (4) shall be the risk-based concentration for the oil and/or hazardous material of concern.

(6) The site-specific background concentration identified in 310 CMR 40.0984(1) shall be considered.

(7) The Practical Quantitation Limit (PQL) applicable to the oil and/or hazardous material using an appropriately sensitive analytical method for quantifying the concentration of the chemical in soil shall be identified.

(8) For each combination of the soil and groundwater categories, the highest of the three concentrations identified in 310 CMR 40.0984(5) through (7) shall be adopted as the MCP Method 2 soil standard for that combination of soil and groundwater categories.

(9) MCP Method 2 soil standards identified in 40.0984(8) shall be adjusted to a ceiling concentration if the calculated concentration is greater than the ceiling concentration. The ceiling concentration shall be based upon the "Odor Index" of the chemical, defined for the purposes of these regulations to be the ratio of the vapor pressure of the chemical and the 50% odor recognition level (odor threshold) for the chemical:

$$\text{Odor Index} = \text{VP} \div \text{ORL}_{50\%}$$

Where:

VP	=	The vapor pressure of the oil and/or hazardous material, in units of TORR, measured at temperatures between 20° and 30° Celsius.
ORL _{50%}	=	The concentration of the oil and/or hazardous material at which 50% of the general population would recognize its odor. In units: parts per million (ppm).

(a) S-1 Standards:

1. Chemicals having an Odor Index greater than or equal to 100 shall be assigned a ceiling concentration of 100 mg/kg (ppm).
2. Chemicals having an Odor Index greater than or equal to one but less than 100 shall be assigned a ceiling concentration of 500 mg/kg (ppm).
3. For chemicals having an Odor Index less than one or for which there is insufficient data to calculate an Odor Index, the assigned ceiling concentration shall be 1,000 mg/kg (ppm).

(b) S-2 Standards:

1. Chemicals having an Odor Index greater than or equal to 100 shall be assigned a ceiling concentration of 500 mg/kg (ppm).
2. Chemicals having an Odor Index greater than or equal to one but less than 100 shall be assigned a ceiling concentration of 1,000 mg/kg (ppm).
3. For chemicals having an Odor Index less than one or for which there is insufficient data to calculate an Odor Index, the assigned ceiling concentration shall be 2,500 mg/kg (ppm).

(c) S-3 Standards:

1. Chemicals having an Odor Index greater than or equal to 100 shall be assigned a ceiling concentration of 1,000 mg/kg (ppm).
2. Chemicals having an Odor Index greater than or equal to one but less than 100 shall be assigned a ceiling concentration of 2,500 mg/kg (ppm).
3. For chemicals having an Odor Index less than one or for which there is insufficient data to calculate an Odor Index, the assigned ceiling concentration shall be 5,000 mg/kg (ppm).

40.0985: continued

40.0985: Determination of Method 2 Soil Standards Considering Leaching Potential

MCP Method 1 Soil Standards consider both the risks associated with direct contact with the contaminated soil and the potential for the oil and/or hazardous material to leach to groundwater. The leaching component of the MCP Method 1 Soil Standards can be modified or eliminated in Method 2 considering site-specific information. The direct contact-exposure component of the standard shall not be adjusted in this Method.

(1) The development of alternative leaching-based soil concentrations or the determination that leaching-based concentrations are not applicable shall be based upon information which is scientifically justified and completely documented.

(2) When developing alternative leaching-based concentrations in soil, alternative values shall be developed for each oil and hazardous material and for each applicable groundwater category. Demonstrations that the leaching-based component of the Method 1 soil standards is not applicable may be made on a chemical-by-chemical basis or for the site as a whole, depending upon the information relevant to that determination.

(3) The following methods may be used to demonstrate that the concentrations of oil and/or hazardous material in soil at the disposal site now and in the foreseeable future will result in compliance with all applicable MCP Method 1 or 2 Groundwater Standards:

- (a) transport and fate modeling that incorporates site-specific information on source mass and subsurface hydrogeological conditions; and/or
- (b) laboratory tests that demonstrate, under site conditions, the oil and/or hazardous material in the soil will not leach to groundwater at levels which exceed the applicable MCP Method 1 or 2 Groundwater Standards.

(4) For each combination of soil category (S-1, S-2, and S-3) and groundwater category (GW-1, GW-2, and GW-3), the lower of the following is the applicable MCP Method 2 Soil Standard for the oil and/or hazardous material:

- (a) The leaching-based soil concentration identified in 310 CMR 40.0985(2) specific to the groundwater category, and
- (b) The direct contact exposure-based concentration specific to the soil category, listed in Table 5 in 310 CMR 40.0985(6). The direct contact standard is applicable when it is determined that the leaching-based component of the Method 1 standard is not applicable per 310 CMR 40.0985(2).

(5) Groundwater monitoring shall demonstrate that residual soil contamination is not and will not result in groundwater concentrations greater than the applicable MCP Method 1 or 2 Groundwater Standards. The duration of required monitoring shall depend on the source mass, the mobility of the oil and/or hazardous material, and subsurface conditions.

(6) Table 5 Lists the Direct Contact Exposure-based Soil Concentrations.

ZINC	7440-66-6	1,000	3,000	5,000

NOTE: All concentrations of oil and/or hazardous material in soil are calculated and presented on a dry weight/dry weight basis.

NA - Not Applicable

* - The Total Chromium standard is applicable in the absence of species-specific data for Chromium III and Chromium VI.

** - Cyanide expressed as Physiologically Available Cyanide (PAC). In the absence of measured Physiologically Available Cyanide, the standard is applicable to Total Cyanide.

*** - The listed PFAS compounds and associated CAS numbers are for the acid forms of these PFAS compounds. The PFAS standards presented in Table 5 also apply to the respective anionic forms of these PFAS compounds. These anions may form salts with any of a number of cations resulting in a variety of possible chemical species, each having a unique CAS number.

† - The Total Petroleum Hydrocarbon (TPH) standard may be used as an alternative to the appropriate combinations of the Aliphatic and Aromatic Hydrocarbon Fraction standards. The use of the general TPH standard is a valid option only for C9 and greater petroleum hydrocarbons; it is not appropriate for the characterization of risks associated with lighter (gasoline-range) hydrocarbons.

†† - The Department periodically reviews the scientific basis for these Standards and amends them, as appropriate, to incorporate new scientific information.

40.0986: Determination of Method 2 GW-2 Standards.

(1) MCP Method 1 GW-2 Standards consider the potential for oil and/or hazardous material to volatilize from the groundwater and migrate to indoor air. These standards may be modified under Method 2, or a determination may be made that one or more GW-2 standards are not applicable, based upon site-specific conditions. Modifications of a standard will result in a proposed MCP Method 2 GW-2 Standard. Proposed Method 2 standards or the determination that one or more GW-2 standards are not applicable shall be scientifically justified and sufficiently documented to demonstrate that the Response Action Performance Standard, described in 310 CMR 40.0191 has been met.

(2) An MCP Method 2 GW-2 Standard shall be protective of migration of oil and/or hazardous material into indoor air. The presence of oil and/or hazardous material in the groundwater at the proposed MCP Method 2 GW-2 Standard below or near a building shall not result in indoor air concentrations which pose a significant risk of harm to health, public welfare or the environment. The MCP Method 2 GW-2 Standard may be greater or less than the corresponding MCP Method 1 GW-2 Standard, or it may be determined that the Method 1 Standard is not applicable, based upon site-specific conditions. The development of such standards shall be documented by:

40.0986: continued

- (a) site-specific information on source, hydrogeological, and building conditions which demonstrates that the oil and/or hazardous material in the groundwater will not infiltrate to

indoor air and result in significant risk of harm to health, public welfare or the environment; and/or

(b) soil gas characterization data, indoor air characterization data, and other information and data resulting from field investigation conducted at and proximate to the disposal site.

40.0987: Determination of MCP Method 2 GW-3 Standards.

(1) MCP Method 1 GW-3 Standards consider potential migration of oil and/or hazardous material to surface water. These standards may be modified under Method 2 based upon site-specific conditions to develop MCP Method 2 GW-3 Standards or it may be determined that a discharge to surface water will not occur. The proposed Method 2 modification shall be scientifically justified and sufficiently documented to demonstrate that the Response Action Performance Standard, described in 310 CMR 40.0191, has been met.

(2) An MCP Method 2 GW-3 standard or determination shall be protective of migration of oil and/or hazardous material into surface waters and wetlands. The presence of an oil and/or hazardous material in the groundwater must not result in concentrations in a surface water or wetland which would pose a significant risk of harm to health, public welfare or the environment. The MCP Method 2 GW-3 Standard may be greater or less than the corresponding MCP Method 1 GW-3 Standard, or it may be determined that the Method 1 GW-3 standard is not applicable, considering site-specific conditions. The development of such standards or such a determination shall be documented by:

(a) transport and fate modeling that incorporates site-specific information on the source and subsurface hydrological conditions, and which demonstrates that the release will not result in concentrations of oil and/or hazardous material in the receiving surface water which exceed any applicable or suitably analogous standards described in 310 CMR 40.0993(3), and which do not otherwise result in a significant risk of harm to health, safety, public welfare or the environment; and/or

(b) long-term groundwater monitoring which demonstrates that the release will not result in concentrations of oil and/or hazardous material in the receiving surface water which exceed any applicable or suitably analogous standards described in 310 CMR 40.0993(3), and which do not otherwise result in a significant risk of harm to health, safety, public welfare or the environment. The duration of required monitoring would depend on the source mass, the mobility of the oil and/or hazardous material, and subsurface conditions.

40.0988: Method 2 Risk Characterization.

(1) When conducting a Method 2 Risk Characterization, the risk of harm to health, public welfare and the environment shall be characterized using the methodology described in 310 CMR 40.0970 (Risk Characterization Method 1), and any applicable MCP Method 1 Standards in combination with one or more MCP Method 2 Standards identified pursuant to 310 CMR 40.0980.

(2) A condition of no significant risk of harm to health, safety, public welfare and the environment exists if no Exposure Point Concentration is greater than the applicable MCP Method 1 and Method 2 Soil or Groundwater Standard. If the Method 1 or Method 2 Soil or Groundwater Standard for Total Petroleum Hydrocarbon is exceeded, a condition of No Significant Risk shall still be considered to exist if the Exposure Point Concentrations of the Aliphatic and Aromatic Hydrocarbon Fractions comprising the TPH are less than or equal to the applicable Method 1 or Method 2 Soil and Groundwater Standards.

(3) The documentation of the Method 2 Risk Characterization shall clearly state whether or not a condition of no significant risk of harm to health, public welfare or the environment exists or has been achieved at the disposal site.

40.0990: Risk Characterization Method 3

40.0991 Applicability of Method 3

Method 3 may be used to characterize the risk of harm to health, public welfare and the environment for any disposal site. In a Method 3 Risk Characterization, the risks of harm to health, public welfare and the environment are evaluated separately.

40.0992: General Approach to Method 3

Method 3 relies upon detailed information about the site, the oil and/or hazardous material, and potential exposures to Human and Environmental Receptors under all current and reasonably foreseeable Site Activities and Uses to characterize the risk of harm. The scope and level of effort of the Method 3 Risk Characterization shall reflect the site-specific nature of this Method, and the information used to characterize the risk shall be sufficiently documented to demonstrate that the Response Action Performance Standard, described in 310 CMR 40.0191, has been met.

(1) The Method 3 Risk Characterization shall be performed in a manner consistent with scientifically acceptable risk assessment practices, and consider guidance published by the Department and EPA.

(2) In performing a Method 3 Risk Characterization, the objective shall be to provide a conservative estimate of the impact that the oil and/or hazardous material may have on the Human and Environmental Receptors at the disposal site and in the surrounding environment.

(3) This Risk Characterization process makes use of existing standards, Upper Concentration Limits in Groundwater and Soil, quantitative estimates of cancer and noncancer health risks, and both quantitative and qualitative evaluations of risk to public welfare and the environment to determine the need for a remedial action or to demonstrate that a condition of No Significant Risk exists or has been achieved.

(a) The Method 3 characterization of the risk of harm to human health is described in 310 CMR 40.0993.

(b) The Method 3 characterization of the risk of harm to public welfare is described in 310 CMR 40.0994.

(c) The Method 3 characterization of the risk of harm to the environment is described in 310 CMR 40.0995.

(d) The list of Upper Concentration Limits in Groundwater and Soil is in 310 CMR 40.0996(6).

(4) The risk of harm to safety shall also be characterized, as described in 310 CMR 40.0960.

40.0993: Method 3 Human Health Risk Characterization

Under Method 3, the risk of harm to human health shall be characterized for all current and reasonably foreseeable Site Activities and Uses identified in 310 CMR 40.0923, as follows:

(1) The site, receptor and exposure information described in 310 CMR 40.0901 through 40.0920 shall be identified and documented.

(2) The groundwater and soil categories applicable to the disposal site shall be identified and documented, as described in 310 CMR 40.0930. The groundwater and soil categories shall be considered as general indicators of exposure potential in a Method 3 evaluation.

(3) All applicable or suitably analogous health standards shall be identified in the documentation of the Method 3 Risk Characterization. The MCP Method 1 Groundwater and Soil Standards listed in 310 CMR 40.0970 are not considered applicable or suitably analogous, as those standards represent an alternative approach to Method 3. The list of potentially applicable or suitably analogous standards includes, but is not limited to:

(a) Massachusetts Drinking Water Quality Standards promulgated in 310 CMR 22.00: *Drinking Water*, which are considered applicable to all category GW-1 groundwater;

(b) Massachusetts Air Quality Standards promulgated in 310 CMR 6.00: *Ambient Air Quality Standards for the Commonwealth of Massachusetts*; and

(c) Massachusetts Surface Water Quality Standards promulgated in 314 CMR 4.00: *Massachusetts Surface Water Quality Standards*.

40.0993: continued

(4) The frequency, duration and intensity of exposure to each oil and/or hazardous material at the disposal site for each receptor at each Exposure Point shall be determined and documented, considering the current and reasonably foreseeable Site Activities and Uses identified for the disposal site. The magnitude of each receptor's total exposure to the oil and/or hazardous material at the disposal site is calculated in a manner which provides a conservative estimate of the potential exposures. Assessments conducted using a probabilistic analysis shall identify the 95th percentile estimate of each receptor's potential exposure.

(5) For each identified Human Receptor, cumulative cancer risks and cumulative non-cancer risks shall be calculated. Chemical-specific toxicity information used to estimate the cancer and non-cancer risks shall be identified and documented, and the selection of this information shall take into account standards and guidance published by the Department. Primary consideration shall be given to information developed by the Massachusetts Department of Environmental Protection for the purpose of conducting such risk assessments. Examples of such toxicity information include:

- (a) Reference Doses and Reference Concentrations; and
- (b) Carcinogenic Slope Factors and Unit Risks values.

(6) When identifying toxicity values for use in a Method 3 Risk Characterization, the following toxicity values shall be used:

- (a) For perchlorate, a chronic and subchronic reference dose of 7E-5 mg/(kg-day);
- (b) For methyl tert-butyl ether, a chronic RfD of 1E-1 mg/(kg-day);
- (c) For methyl tert-butyl ether, a subchronic RfD of 1E0 mg/(kg-day);
- (d) For tetrachloroethylene, an oral cancer slope factor of 2E-2 per mg/(kg-day);
- (e) For tetrachloroethylene, an inhalation unit risk of 3E-6 per ug/cubic meter; and
- (f) For the sum of the following per- and polyfluoroalkyl substances (PFAS), a chronic and subchronic reference dose of 5E-6 mg/(kg-day):
 1. Perfluorodecanoic acid (PFDA);
 2. Perfluoroheptanoic acid (PFHpA);
 3. Perfluorohexanesulfonic acid (PFHxS);
 4. Perfluorononanoic acid (PFNA);
 5. Perfluorooctanesulfonic acid (PFOS); and
 6. Perfluorooctanoic acid (PFOA).

(7) If an applicable toxicity value is not listed at 310 CMR 40.0993(6), technical justification for the value selected must be provided. Preferential consideration shall be given to sources of toxicity values in accordance with the following hierarchy:

- (a) Toxicity values adopted or otherwise published by MassDEP;
- (b) Toxicity values listed in EPA's Integrated Risk Information System (IRIS) database; and
- (c) Other EPA and non-EPA sources including, but not limited to, EPA Provisional Peer Reviewed Toxicity Values (PPRTVs); Minimum Risk Levels (MRLs) published by U.S. Agency for Toxic Substances and Disease Registry (ATSDR); and values published by California Environmental Protection Agency. In selecting a source for a toxicity value pursuant to 310 CMR 40.0993(7)(c), there should be a preference for toxicity assessments that are informed by current scientific information and account for the most sensitive endpoints.

(8) For receptors who may be exposed to mixtures of oil and/or hazardous material, or through multiple Exposure Pathways at the disposal site, the cumulative risk shall reflect those multiple exposures. Risk estimates are presumed to be additive unless an alternative mechanism is demonstrated to be appropriate.

(9) Risk calculations performed using a probabilistic analysis shall identify the cumulative cancer and non-cancer risks associated with the 95th percentile estimate of exposure.

(10) The Cumulative Receptor Cancer Risks shall be compared to a Cumulative Cancer Risk Limit which is an Excess Lifetime Cancer Risk equal to one-in-one hundred thousand. Cumulative Receptor Non-cancer Risks shall be compared to a Cumulative Non-cancer Risk Limit which is a Hazard Index equal to one. Estimated Exposure Point Concentrations shall be compared to any applicable or suitably analogous standards.

40.0993: continued

- (11) A condition of no significant risk of harm to human health exists or has been achieved if:
- (a) no Exposure Point Concentration of oil and/or hazardous material is greater than an applicable or suitably analogous public health standard;
 - (b) no Cumulative Receptor Cancer Risk calculated is greater than the Cumulative Cancer Risk Limit; and
 - (c) no Cumulative Receptor Non-cancer Risk is greater than the Cumulative Receptor Non-cancer Risk Limit.
- (12) The documentation of the Method 3 human health Risk Characterization shall clearly state whether or not a condition of no significant risk of harm to human health exists or has been achieved, based upon the criteria described in 310 CMR 40.0993(11).
- (13) All mathematical equations used to calculate cumulative receptor cancer and non-cancer risks shall be clearly presented and documented.

40.0994: Method 3 Public Welfare Risk Characterization

Purpose. There are two purposes for conducting a characterization of risk to public welfare: (a) to identify and evaluate nuisance conditions which may be localized, and (b) to identify and evaluate significant community effects. The characterization of risk to public welfare shall consider effects which are or may result from the presence of residual contamination or the implementation of a proposed remedial alternative.

The characterization of risk to public welfare shall be conducted for all current and reasonably foreseeable Site Activities and Uses identified in 310 CMR 40.0923, as follows:

- (1) The characterization of the risk of harm to public welfare shall consider the site, receptor, and exposure information identified in 310 CMR 40.0901 through 40.0930, as well as data collected pursuant to the response action(s) being performed.
- (2) The characterization of the risk to public welfare shall, in addition to those factors identified in 310 CMR 40.0994(1), also consider such factors as the existence of nuisance conditions, loss of active or passive property use(s), and any non-pecuniary effects not otherwise considered in the characterization of risk of harm to health, safety, and the environment, but which may accrue due to the degradation of public resources directly attributable to the release or threat of release of oil and/or hazardous material or the remedial alternative.
- (3) The risk of harm to public welfare shall also be characterized by comparing the concentration of each oil or hazardous material to the Upper Concentration Limits in Soil and Groundwater, as described at 310 CMR 40.0996.
- (4) A level of no significant risk of harm to public welfare exists or has been achieved if:
- (a) No nuisance conditions exist or will result from the release or threat of release of oil or hazardous material, or the remedial alternative, including:
 - 1. The breathing zone of ambient and indoor air are currently and will, in the reasonably foreseeable future, remain free from persistent, noxious odors,
 - 2. There is accessible drinking water that is and will, in the reasonably foreseeable future, remain free from noxious taste and odors; and
 - 3. Livestock is and will remain, in the reasonably foreseeable future, free from harmful effects. No specific evaluation of livestock is required if it is reasonable to conclude that the human health and environmental risk characterizations conducted for the site are also protective of livestock exposures.
 - (b) No community that is currently affected and/or community for which it is reasonably foreseeable to conclude that it could be affected by the release experiences significant adverse impacts as set forth as the factors to be considered in 310 CMR 40.0994(2); and
 - (c) The requirements of 310 CMR 40.0996 concerning the Upper Concentration Limits are met.
- (5) The documentation of the Method 3 public welfare Risk Characterization shall clearly state whether or not a condition of no significant risk of harm to public welfare exists or has been achieved at the current and reasonably foreseeable Site Activities and Uses.

40.0995: Method 3 Environmental Risk Characterization

The characterization of risk of harm to the environment shall be conducted for all current and reasonably foreseeable Site Activities and Uses identified in 310 CMR 40.0923. Characterization of the risk of harm to the environment shall include an assessment of chemical data, potential contaminant migration pathways, and an evaluation of biota and habitats at and in the vicinity of the disposal site, as described in 310 CMR 40.0995(2), as well as through the application of Upper Concentration Limits, as described in 310 CMR 40.0995(5).

(1) A Method 3 characterization of the risk of harm to the environment shall be based on the site, receptor and exposure information identified in 310 CMR 40.0901 through 40.0920, as well as any relevant data collected during the response action being performed.

(2) The risk of harm to the site biota and habitats shall be characterized by evaluating ecological parameters using a two-stage approach. In Stage I, the objective is to identify and document conditions which do not warrant a Stage II Risk Characterization, either because of the absence of a potentially significant exposure pathway or because environmental harm is readily apparent and therefore additional assessment would be redundant. If a potentially significant exposure pathway is indicated by the available information per 310 CMR 40.0995(3)(a) and (c), then a Stage II Environmental Risk Characterization is required to characterize the risks posed by those exposures.

(a) A Stage I Environmental Screening shall be performed as described in 310 CMR 40.0995(3) for all disposal sites evaluated using Risk Characterization Method 3, and for those disposal sites evaluated using a Method 3 Environmental Risk Characterization in combination with Method 1 or Method 2 as described in 310 CMR 40.0942.

(b) Following a Stage I Environmental Screening and based upon the criteria described in 310 CMR 40.0995(3), it may be concluded that:

1. A Stage II Environmental Risk Characterization is not required because there are no complete exposure pathways that could result in potentially significant exposures, and a condition of no significant risk of harm to site biota and habitats clearly exists, or
2. A Stage II Environmental Risk Characterization is not required because, for each contaminated medium, harm is readily apparent; therefore a condition of no significant risk of harm to the site biota and habitats clearly "does not exist", and a Stage II Environmental Risk Characterization would be redundant, or
3. A Stage II Environmental Risk Characterization is required because, for one or more contaminated media, there is not enough information to determine whether or not a condition of no significant risk of harm exists, and therefore those media are considered to present "potentially significant exposures".

(c) The scope and nature of the Stage II Environmental Risk Characterization shall depend on the nature of the disposal site, the Environmental Receptors affected or potentially affected, and the Stage I Environmental Screening criteria which indicated the need for the Stage II Environmental Risk Characterization.

(3) Stage I Environmental Screening. Exposures of site biota and habitats shall be characterized by the Stage I Environmental Screening as follows:

(a) Available evidence shall be evaluated to determine whether there is current or potential future exposure of Environmental Receptors to contamination at or from the disposal site. Sources of such evidence shall include historical records, site data, field observations, statements by present and past residents or employees, and any other relevant source.

1. Evidence of current or potential exposure shall include, but is not limited to:
 - a. Current or past visible physical evidence that oil and/or hazardous material at or from the disposal site have come to be located in surface soil, surface water, sediment or wetlands. Examples of such evidence include, without limitation, the presence of sheens from oil and/or hazardous material, NAPL, oil, tar or other solid or semisolid hazardous material in surface soil, surface water, sediment or wetlands;
 - b. Records or other evidence of current or past impacts of oil and/or hazardous material from the disposal site on wildlife, fish, shellfish or other aquatic biota. Examples of such impacts include, without limitation, fish kills and abiotic conditions;
 - c. Analytical data indicating the presence of oil and/or hazardous material attributable to the site in question in surface water or sediment (including wetlands);

40.0995: continued

- d. The potential for the transport of oil and/or hazardous material in the groundwater or surface runoff to such receptors as surface water or sediments (including wetlands) identified as Environmental Receptors; or
 - e. The presence of oil and/or hazardous material at the disposal site within two feet of the ground surface and the potential for such contamination to result in exposure to wildlife.
2. If no current or potential future exposure is identified, then a condition of "no significant risk of harm" to the site biota and habitats exists or has been achieved, and a Stage II Environmental Risk Characterization is not required.
- (b) If any current or potential future exposure is identified, then for each such exposure, site conditions shall be evaluated to determine whether significant environmental harm is "readily apparent".
- 1. The following conditions shall represent "readily apparent harm":
 - a. Visual evidence of stressed biota attributable to the release at the disposal site, including, without limitation, fish kills or abiotic conditions;
 - b. The existence of oil and/or hazardous material attributable to the disposal site in concentrations which exceed Massachusetts Surface Water Standards promulgated in 314 CMR 4.00: *Massachusetts Surface Water Quality Standards*, which include USEPA Ambient Water Quality Criteria applied pursuant to 314 CMR 4.05(5)(e).
 - c. Visible presence of oil, tar, or other non-aqueous phase hazardous material in soil within three feet of the ground surface over an area equal to or greater than two acres, or over an area equal to or greater than 1,000 square feet in sediment within one foot of the sediment surface.
 - 2. If a condition of readily apparent harm exists in any environmental medium, then a condition of "no significant risk of harm" does not exist, and a Stage II Environmental Risk Characterization is not required to make that determination for that medium.
- (c) Each current and potential future exposure Pathway identified in 310 CMR 40.0995(3)(a) must be evaluated to determine whether it could result in potentially significant exposure.
- 1. Any potential exposure identified in 310 CMR 40.0995(3)(a) must be considered a "potentially significant exposure" unless it can be ruled out as such using:
 - a. USEPA Ambient Water Quality Criteria and Massachusetts Surface Water Standards promulgated in 314 CMR 4.00: *Massachusetts Surface Water Quality Standards*;
 - b. environmental concentrations specifically adopted by the Department as screening criteria; or
 - c. site size, location, and/or landscape characteristics specifically adopted by the Department as screening criteria.
 - 2. If, through the application of the screening criteria identified in 310 CMR 40.0995(3)(c)1., an environmental medium (such as soil, sediment or surface water) can be screened out as a source of "potentially significant exposures", then a Stage II Environmental Risk Characterization is not required for any exposure pathway for which that medium is the contaminant source.
 - 3. If current or potential future exposures to contaminants in any media are not ruled out in Stage I Screening, those exposures are considered to be "potentially significant exposures" and a Stage II Environmental Risk Characterization is required to determine whether a condition of "no significant risk of harm" exists.
- (4) Stage II Environmental Risk Characterization: A Stage II Environmental Risk Characterization shall be used to determine whether there is significant risk of environmental harm or evidence of environmental harm.
- (a) The Stage II Environmental Risk Characterization shall be conducted under the supervision of an individual trained and knowledgeable in ecological studies.
 - (b) The Stage II Environmental Risk Characterization shall identify environmental resources associated with the disposal site, such as wetlands, aquatic and terrestrial habitat, fisheries, or rare and endangered species, and shall evaluate whether the release of oil and/or hazardous material has adversely impacted, or may adversely impact the ecological functions which support those resources.
 - 1. The evaluation shall focus on ecological functions at the spatial scale of the disposal site.
 - 2. The relevance of potential impacts shall be judged at the spatial scale of the disposal site (e.g., effects on subpopulations that use the site as habitat) rather than the proportional significance of the site to regional environmental resources.

40.0995: continued

- (c) The Stage II Risk Characterization shall include, but is not limited to, the following steps:
1. Problem Formulation. The first phase of the assessment shall establish the goals, scope and focus of the Stage II Environmental Risk Characterization. A baseline site survey to identify biota and exposures of potential concern shall be conducted. Available scientific literature shall be used to identify potential adverse effects of concern.
 - a. Assessment endpoints shall be identified. The combination of assessment endpoints selected for a site must represent the ecological entities, characteristics and functions most likely to be adversely affected by the oil and/or hazardous material in each contaminated medium at the site. The assertion that the selected assessment endpoints are representative of the exposed biota on the basis of their susceptibility to harm by the contamination of concern must be justified and documented, either on a case-by-case basis or by citing DEP guidance. Assessment endpoints shall be defined in terms of ecological entities and their characteristics and functions, as follows:
 - i. An ecological entity refers to an organism, a species, a functional group of species, a community, an ecosystem, or a habitat.
 - ii. Valued characteristics include, but are not limited to, growth, reproduction, survival, nutrient cycling, and habitat functions, health of local populations or sub-populations and community diversity.
 - b. Measures of exposure shall consider the spatial and temporal distribution of oil and hazardous material, and shall represent the co-occurrence of contamination with the assessment endpoint organisms.
 - c. Measures of effects shall be selected for each assessment endpoint, such that the results of the measures will enable the detection of adverse effects of oil and hazardous material on the assessment endpoint. The relevance and validity of the proposed measures of effects shall be documented. Measures of effects may include, but are not limited to:
 - i. Comparison of environmental concentrations to ecologically based benchmarks published in the scientific literature, technical literature or government documents;
 - ii. toxicity data reported in scientific literature;
 - iii. site-specific toxicity tests to evaluate the effects of contaminated media on survival, growth, and/or reproduction of the target organisms;
 - iv. quantitative or semi-quantitative field surveys to evaluate adverse impacts on receptor subpopulations or communities exposed to oil or hazardous materials at or from the site; and
 - v. field experiments.
 2. Analysis. The second phase of the risk assessment shall characterize any actual and potential environmental exposures and associated ecological effects.
 3. Risk Characterization. In the final phase of the risk assessment, the results of the environmental exposure and effects analysis shall be used to evaluate the likelihood of adverse ecological effects. The documentation of the Risk Characterization shall include a summary of assumptions, scientific uncertainties, strengths and weaknesses of the analyses, and justification of conclusions reached concerning the ecological significance of the risks.
- (d) The Stage II Environmental Risk Characterization may also include the development of an environmental risk-based guideline for oil and/or hazardous material for which no environmental standards exists, and to the extent sufficient information concerning the environmental risks posed by the oil and/or hazardous material is available. Such guidelines shall be developed in a manner consistent with scientifically acceptable practices, taking into account guidance published by the Department or the U.S. Environmental Protection Agency, and information from the scientific literature, laboratory studies or field studies.
- (e) Conclusions. A level of no significant risk of harm to the environment exists, or has been achieved, if:
1. there is no physical evidence of a continuing release of oil and/or hazardous material at or from the disposal site to surface waters and wetlands which significantly affects Environmental Receptors; and
 2. there is no evidence of biologically significant harm (at the subpopulation, community, or system-wide level) known or believed to be associated with current or foreseeable future exposure of wildlife, fish, shellfish or other aquatic biota to oil and/or hazardous material at or from the disposal site; and

40.0995: continued

3. concentrations of oil and/or hazardous material at or from the disposal site do not and are not likely to exceed any applicable or suitably analogous environmental standards which have been formally promulgated, including Massachusetts Surface Water Quality Standards promulgated at 314 CMR 4.00: *Massachusetts Surface Water Quality Standards* at current and reasonably foreseeable Exposure Points; and
 4. there is no indication of the potential for biologically significant harm (at the subpopulation, community, or system-wide level), either currently or for any foreseeable period of time, to Environmental Receptors considering their potential exposures to oil and/or hazardous material and the toxicity of the OHM.
- (5) The risk of harm to the environment shall also be characterized by comparing the concentration of each oil or hazardous material to the Upper Concentration Limits in Soil and Groundwater, as described in 310 CMR 40.0996.
- (6) The documentation of the Method 3 environmental Risk Characterization shall clearly state whether or not a condition of no significant risk of harm to environmental resources, biota and habitats exists or has been achieved at the disposal site.

40.0996: Method 3 Upper Concentration Limits

- (1) Upper Concentration Limits in soil and groundwater are concentrations of oil and/or hazardous material which, if exceeded under the conditions specified below, indicate the potential for significant risk of harm to public welfare and the environment under future conditions. If a condition of No Significant Risk has not been achieved for future conditions, but all substantial hazards have been eliminated, then the site may be eligible for a Temporary Solution as described in 310 CMR 40.1050.
- (2) All comparisons of soil and groundwater concentrations to Upper Concentration Limits in Soil and Groundwater required under 310 CMR 40.0000 shall be made using both:
 - (a) the arithmetic average of the concentration of oil or hazardous material at a disposal site; and
 - (b) the arithmetic average of the concentration of oil or hazardous material within any Hot Spot identified at the disposal site.
- (3) The risk of harm to public welfare and the environment shall also be characterized by comparing the concentration(s) of oil or hazardous material in soil and groundwater to the Upper Concentration Limits in Soil and Groundwater listed in 310 CMR 40.0996(6) or identified pursuant to 310 CMR 40.0996(7).
 - (a) A level of No Significant Risk of harm to public welfare and to the environment exists or has been achieved for both current and future conditions if the concentration of oil and/or hazardous material does not exceed an applicable Upper Concentration Limit, as described at 310 CMR 40.0996(2). If the Upper Concentration Limit in Soil or Groundwater for Total Petroleum Hydrocarbon is exceeded, a condition of No Significant Risk shall still be considered to exist if the concentrations of the Aliphatic and Aromatic Hydrocarbon Fractions comprising the TPH are less than or equal to the applicable Upper Concentration Limits in Soil and Groundwater.
 - (b) Except as provided in 310 CMR 40.0996(4), a level of No Significant Risk of harm to public welfare and to the environment does not yet exist for future conditions if the concentration of one or more oil and/or hazardous materials exceed an applicable Upper Concentration Limit, as described at 310 CMR 40.0996(2). The disposal site may, however, pose No Significant Risk for current conditions and meet the conditions of a Temporary Solution if all other requirements for a Temporary Solution are satisfied.
- (4) For a disposal site at which the concentration of one or more oil and/or hazardous material in Soil exceeds an Upper Concentration Limit, a level of No Significant Risk of harm to public welfare and to the environment exists or has been achieved for both current and future conditions if a finding of No Significant Risk of harm to public welfare and the environment has been made pursuant to 310 CMR 40.0994 and 40.0995, respectively, an Activity and Use Limitation is implemented as required in 310 CMR 40.1012(2), and the Soil with concentrations exceeding an Upper Concentration Limit:
 - (a) has been permanently immobilized or fixated as part of a remedial action;
 - (b) is located at a depth greater than 15 feet from the ground surface; or
 - (c) is located beneath an Engineered Barrier.

40.0996: continued

(5) An Engineered Barrier means a permanent cap with or without a liner that is designed, constructed and maintained in accordance with scientific and engineering standards to achieve a level of no significant risk for any foreseeable period of time.

(a) An Engineered Barrier shall:

1. prevent direct contact with contaminated media;
2. control any vapors or dust emanating from contaminated media;
3. prevent erosion and any infiltration of precipitation or run-off that could jeopardize the integrity of the barrier or result in the potential mobilization and migration of contaminants;
4. be comprised of materials that are resistant to degradation;
5. be consistent with the technical standards of RCRA Subpart N, 40 CFR 264.300, 310 CMR 30.600: *Technical Standards for All Hazardous Waste Facilities* or equivalent standards;
6. include a defining layer that visually identifies the beginning of the barrier; and
7. be appropriately monitored and maintained to ensure the long-term integrity and performance in accordance with a monitoring and maintenance plan that shall be submitted to the Department and shall document that one or more financial assurance mechanism(s), detailed in 310 CMR 30.906: *Financial Assurance for Post-closure Care*, have been established and adequately provide for ongoing future monitoring, maintenance and any necessary replacement of the barrier;

(b) An Engineered Barrier shall not include an existing building, structure or cover material unless it is designed and constructed to serve as an Engineered Barrier pursuant to the requirements of 310 CMR 40.0996(5).

(6) Table 6 lists the Upper Concentration Limits in Groundwater and Soil.

(7) Except as specified in 310 CMR 40.0996(7)(c) for any oil or hazardous material not listed at 310 CMR 40.0996(6), either a default or chemical-specific Upper Concentration Limit must be used.

(a) The default Upper Concentration Limit in Groundwater shall be 10,000 µg/L and the default Upper Concentration Limit in Soil shall be 1,000 µg/g.

(b) The chemical-specific Upper Concentration Limits shall be calculated using the methodology presented at 310 CMR 40.0983 and 40.0984.

1. The Upper Concentration Limit in Groundwater shall be equal to ten times the highest groundwater standard calculated at 310 CMR 40.0983 or 100,000 µg/L, whichever is lower.
2. The Upper Concentration Limit in Soil shall be equal to ten times the highest soil standard calculated at 310 CMR 40.0984, or 10,000 µg/g, whichever is lower.

(c) For the following oil and/or hazardous material, the Upper Concentration Limits in Soil and Groundwater are not applicable. As a result, the comparison of site concentrations to Upper Concentration Limits pursuant to 310 CMR 40.0996(3) is not required, and the need for an Activity and Use Limitation shall not be determined by comparison to an Upper Concentration Limit in Soil, as described in 310 CMR 40.1012(2)(a)3. and (3)(b).

1. aluminum
2. asbestos
3. calcium
4. iron
5. potassium (excluding elemental potassium)
6. sodium (excluding elemental sodium)

(8) Ongoing monitoring shall be performed as necessary to ensure that a condition of No Significant Risk is maintained at any disposal site where a Permanent Solution has been achieved and the concentration of one or more oil and/or hazardous material is greater than the Upper Concentration Limit. The results of such monitoring shall be submitted to the Department.

40.0996: continued

NOTE: All concentrations of oil and/or hazardous material in soil are calculated and presented on a dry weight/dry weight basis.

NA - Not Applicable

* - The Total Chromium standard is applicable in the absence of species-specific data for Chromium III and Chromium VI.

** - Cyanide expressed as Physiologically Available Cyanide (PAC). In the absence of measured Physiologically Available Cyanide, the standard is applicable to Total Cyanide.

*** - The listed compounds and associated CAS numbers are for the acid forms of these PFAS compounds. The PFAS standards presented in Table 6 are also applicable to the respective anionic forms of these PFAS compounds. These anions may form salts with any of a number of cations resulting in a variety of possible chemical species, each having a unique CAS number.

† - The Total Petroleum Hydrocarbon (TPH) standard may be used as an alternative to the appropriate combinations of the Aliphatic and Aromatic Hydrocarbon Fraction standards. The use of the general TPH standard is a valid option only for C9 and greater petroleum hydrocarbons; it is not appropriate for the characterization of risks associated with lighter (gasoline-range) hydrocarbons.

†† - The Department periodically reviews the scientific basis for these Standards and amends them, as appropriate, to incorporate new scientific information.

SUBPART J: PERMANENT AND TEMPORARY SOLUTIONS

40.1000: Permanent and Temporary Solutions

310 CMR 40.1001 through 40.1099 shall be cited collectively as 310 CMR 40.1000.

40.1001: Purpose

- (1) 310 CMR 40.1000 establishes requirements and procedures for:
 - (a) determining when the response actions taken at a site where there has been a release or threat of release of oil and/or hazardous material to the environment are sufficient to meet the requirements of a Permanent or Temporary Solution;

40.1001: continued

- (b) implementing Activity and Use Limitations;
- (c) identifying any conditions that apply to maintaining the Permanent or Temporary Solution; and
- (d) documenting and supporting the Permanent or Temporary Solution in a Permanent Solution Statement or Temporary Solution Statement.

40.1002: Applicability

The requirements contained in 310 CMR 40.1000 are applicable to all releases and threats of release of oil and/or hazardous material which require notification to the Department under the provisions of 310 CMR 40.0300, except as specifically provided in 310 CMR 40.0110 for a site or disposal site that is adequately regulated.

40.1003: General Provisions for Permanent and Temporary Solutions

- (1) All necessary and required response actions under 310 CMR 40.0000 shall not have been conducted at a site or disposal site, unless and until a level of No Significant Risk exists or has been achieved and a Permanent Solution has been achieved in accordance with 310 CMR 40.1000.
- (2) RPs, PRPs and Other Persons conducting response actions at any site for which notification of a release or threat of release of oil and/or hazardous material is required pursuant to 310 CMR 40.0300 shall achieve a Permanent or Temporary Solution and submit a Permanent or Temporary Solution Statement to the Department in accordance with the requirements of 310 CMR 40.1000 within the deadlines established in 310 CMR 40.0500, or any other deadline established under 310 CMR 40.0000 or any determination or order issued by the Department. In such cases where a Temporary Solution is achieved, a Permanent Solution must eventually be achieved when such Permanent Solution becomes feasible.
- (3) A Permanent or Temporary Solution may be achieved, and a Permanent or Temporary Solution Statement may be submitted for an entire site, disposal site, or a portion of a disposal site.
- (4) The location of a site for which a Permanent or Temporary Solution applies shall be clearly and accurately identified in the Permanent or Temporary Solution Statement. The boundaries of a disposal site or portion of a disposal site for which a Permanent or Temporary Solution applies shall be clearly and accurately delineated and provided in documentation submitted with the Permanent or Temporary Solution Statement.
- (5) Source Elimination or Control. A Permanent or Temporary Solution shall not be achieved unless and until response actions are taken to adequately identify and address Sources of OHM Contamination at the disposal site. Such response actions shall ensure:
 - (a) for a Permanent or Temporary Solution, all unpermitted releases of OHM to the environment are eliminated;
 - (b) for a Permanent Solution, all Sources of OHM Contamination are eliminated, or if they are not eliminated, they are eliminated to the extent feasible and they are controlled;
 - (c) for a Temporary Solution, all Sources of OHM Contamination are eliminated or controlled, to the extent feasible.
- (6) Migration Control. A Permanent or Temporary Solution shall not be achieved, unless and until response actions are taken to adequately assess and control the subsurface migration of OHM remaining at a disposal site. Such response actions shall ensure:
 - (a) for a Permanent Solution, plumes of dissolved OHM in groundwater and vapor-phase OHM in the Vadose Zone are stable or contracting; and
 - (b) for a Temporary Solution, plumes of dissolved OHM in groundwater and vapor-phase OHM in the Vadose Zone are stable or contracting or otherwise controlled or mitigated to the extent feasible.

40.1003: continued

(7) NAPL. A Permanent or Temporary Solution shall not be achieved at a disposal site where NAPL is or was visibly present at levels requiring notification under the provisions of 310 CMR 40.0300 unless and until response actions are taken to adequately assess the nature, extent, and mobility of the NAPL, and, where necessary, remedial actions are taken to adequately contain or remove such NAPL. Such response actions shall ensure:

(a) for a Permanent Solution:

1. Non-stable NAPL is not present under current site conditions and for the foreseeable future; and
2. all NAPL with Micro-scale Mobility is removed if and to the extent feasible based upon consideration of CSM principles;

(b) for a Temporary Solution, all Non-Stable NAPL and NAPL with Micro-scale Mobility is removed and/or controlled if and to the extent feasible.

(8) The evaluation of feasibility referenced in 310 CMR 40.1003(5) through (7) shall be conducted using the criteria described in 310 CMR 40.0860.

40.1004: Performance Standards for Permanent and Temporary Solutions

(1) A Permanent or Temporary Solution shall be supported by assessments and evaluations conducted pursuant to 310 CMR 40.0000 which:

- (a) are of sufficient scope, detail, and level of effort to characterize the risk of harm to health, safety, public welfare and the environment posed by the site or disposal site pursuant to 310 CMR 40.0900;
- (b) are consistent with the Response Action Performance Standard described in 310 CMR 40.0191;
- (c) are commensurate with the nature and extent of the release or threat of release and complexity of site conditions;
- (d) demonstrate that all requirements of the applicable Permanent or Temporary Solution pursuant to 310 CMR 40.1000 have been met; and
- (e) conform with applicable requirements and procedures for conducting response actions specified in 310 CMR 40.0000.

40.1005: Defining "Foreseeable Period of Time" for Purposes of a Permanent Solution

(1) A Permanent Solution shall ensure a level of control of each identified substance of concern at a site or in the surrounding environment such that no such substance of concern shall present a significant risk of harm to health, safety, public welfare or the environment during any foreseeable period of time.

(2) "Any foreseeable period of time" shall mean the period of time during which the conditions for achieving and maintaining a level of No Significant Risk upon which a Permanent Solution is based will remain in effect.

(a) For Permanent Solutions with No Conditions, "any foreseeable period of time" shall be an unlimited period of time;

(b) For Permanent Solutions with Conditions, "any foreseeable period of time" shall be the shortest period of time, as applicable, that:

1. Activity and Use Limitations, where required to maintain a Permanent Solution, remain in effect;
2. Exposure Pathway Mitigation Measures, where required to maintain a Permanent Solution, remain in effect; or
3. other conditions on which the Permanent Solution with Conditions is based for which an Activity and Use Limitation is not required, as specified at 310 CMR 40.1013, remain in effect.

40.1012: Application of Activity and Use Limitations

(1) The purpose of an Activity and Use Limitation is to narrow the scope of exposure assumptions used to characterize risks to human health from a release pursuant to 310 CMR 40.0900, by specifying activities and uses that are prohibited and allowed at the disposal site in the future. 310 CMR 40.1012 establishes rules for determining when an Activity and Use Limitation must be used, when one cannot be used, and when one may be a factor to be considered in appropriately characterizing soil and groundwater at a disposal site, pursuant to 310 CMR 40.0923(3).

(2) Except as provided in 310 CMR 40.1012(3) and 40.1013, Activity and Use Limitations shall be required:

(a) at all disposal sites or portions of disposal sites for which a Permanent Solution and the risk characterization pursuant to 310 CMR 40.0900 used to support the Permanent Solution are based upon the restriction or limitation of Site Activities and Uses to achieve or maintain a level of No Significant Risk including:

1. any disposal site or portion of a disposal site for which a Permanent Solution is based on MCP Method 1 or 2 Soil Standards and the Exposure Point Concentrations of oil and/or hazardous material exceed the S-1 standards, but meet applicable S-2 or S-3 standards;
2. any disposal site or portion of a disposal site where a Method 3 Risk Characterization performed pursuant to 310 CMR 40.0990 relies on reduced exposure potential due to the assumption of limited site use; and
3. any disposal site or portion of a disposal site at which the oil and/or hazardous material in soil located at a depth greater than 15 feet from the ground surface exceeds an applicable Upper Concentration Limit in Soil listed at 310 CMR 40.0996(6) or determined at 310 CMR 40.0996(7).

(b) at all disposal sites for which a Permanent Solution relies upon an Exposure Pathway Mitigation Measure to prevent exposure to levels of oil and/or hazardous material that would otherwise pose a significant risk of harm to health, safety, public welfare or the environment, including:

1. one or more Passive Exposure Pathway Mitigation Measures; or
2. one or more Active Exposure Pathway Mitigation Measures implemented pursuant to the requirements at 310 CMR 40.1025;

(c) at all disposal sites where an existing private water supply well(s) is removed from service as a source of drinking water and maintained for uses other than as a private water supply in accordance with the provisions of 310 CMR 40.0932(5)(d); and

(d) at disposal sites for which a Permanent Solution is achieved and NAPL with Micro-scale Mobility is present.

(3) Activity and Use Limitations shall not be required, but may be used to provide notice of the existence of residual contamination to future holders of an interest(s) in property that is located within:

(a) disposal sites or portions of disposal sites where the concentrations of oil and/or hazardous material have been reduced to background or where the requirements described in 310 CMR 40.0923(3)(b) have been met;

(b) disposal sites or portions of disposal sites at which residual contamination at levels at or below the applicable Upper Concentration Limits for Soil listed or determined in 310 CMR 40.0996 is located at a depth greater than 15 feet from the ground surface;

(c) any disposal site or portion of a disposal site for which all applicable requirements of a Permanent Solution have been met based upon one or more of the limitations, assumptions or conditions specified at 310 CMR 40.1013;

(d) disposal sites or portions of a disposal site for which potential risks are characterized using Method 1 (310 CMR 40.0970) if the levels of oil and/or hazardous material in soil are at or below the applicable Method 1 category S-1 soil standards listed in 310 CMR 40.0975(6);

(e) at disposal sites or portions of a disposal site for which potential risks are characterized using Method 2 (310 CMR 40.0980) if the levels of oil and/or hazardous material are at or below the applicable category S-1 soil standards identified in 310 CMR 40.0984 and 40.0985;

40.1012: continued

(f) disposal sites or portions of a disposal site for which potential risks are characterized using Method 3 (310 CMR 40.0990) if the levels of oil and/or hazardous material pose No Significant Risk pursuant to 310 CMR 40.0990, including comparison to any applicable or suitably analogous standards, and no limitations on-site use were assumed or implied in the Risk Characterization;

(g) any disposal site or portion of a disposal site where all substantial hazards have been eliminated and where all applicable requirements for a Temporary Solution have been met pursuant to 310 CMR 40.1050; or

(h) any other disposal site or portion of a disposal site where an Activity and Use Limitation is not expressly prohibited by 310 CMR 40.1012.

(4) Activity and Use Limitations shall not be used:

(a) to change the groundwater category of groundwater categorized as GW-1 or GW-2 pursuant to 310 CMR 40.0932; or

(b) to justify a conclusion that a condition of No Significant Risk exists or has been achieved at sites characterized using Method 1 or Method 2 if an identified Exposure Point Concentration exceeds an applicable Method 1 or Method 2 standard.

(5) Activity and Use Limitations shall:

(a) provide notice to holders of any interest(s) in a property or a portion thereof (including, without limitation, owners, lessees, tenants, mortgagees, and holders of easement rights) of the existence and location of oil and/or hazardous material at such property and the Activity and Use Limitations that have been implemented in response thereto; and

(b) establish a duty to evaluate risks associated with proposed changes in Site Activities and Uses on the subject property that could increase the risk of harm to health, safety, public welfare or the environment pursuant to the requirements of 310 CMR 40.1080, to perform additional response actions prior to any such change in Site Activities and Uses, as required by 310 CMR 40.0000, and to notify the Department of any reportable condition created by a change in Site Activity and Use.

(6) Any Activity and Use Limitations applied at a disposal site pursuant to 310 CMR 40.0000 shall be instituted and maintained in accordance with 310 CMR 40.1070 through 40.1099.

40.1013: Limitations, Assumptions and Conditions on Site Activities and Uses That Do Not Require an AUL

(1) An Activity and Use Limitation may be used, but shall not be required if the Permanent Solution is based solely upon one or more of the following limitations, assumptions or conditions on Site Activities and Uses:

(a) the recommendation of Best Management Practices for non-commercial gardening in a residential setting to minimize and control potential risk qualitatively evaluated pursuant to 310 CMR 40.0923(3)(c);

(b) the concentrations of OHM at the disposal site are consistent with Anthropogenic Background levels;

(c) the location of residual contamination within a public way or within a rail right-of-way; or

(d) the absence of an occupied building or structure in an area in which the groundwater would otherwise be classified as GW-2 pursuant to 310 CMR 40.0932(6), and where the residual concentrations of OHM in the groundwater exceed the GW-2 standards published in 310 CMR 40.0974(2).

40.1020: Background Levels of Oil and Hazardous Material

(1) At any disposal site or portion of a disposal site where one or more remedial actions are undertaken to achieve a Permanent Solution, those remedial actions shall include, where feasible, one or more measures designed to reduce to the extent possible the concentrations of oil and hazardous material to levels that would exist in the absence of the disposal site of concern. Such measures shall, to the extent feasible, achieve or approach Background levels of oil and hazardous material in the environment as Background is defined in 310 CMR 40.0006.

40.1020: continued

(2) No further response actions are required at any disposal site where the concentrations of oil and hazardous material in the environment have been reduced to Background levels.

(3) The feasibility of reducing the concentrations of oil and hazardous material in the environment at a disposal site or portion of a disposal site to levels that achieve or approach Background levels shall be evaluated using the criteria described in 310 CMR 40.0860, except where it can be demonstrated that Background levels have been met.

40.1025: Requirements for Active Exposure Pathway Mitigation Measures Implemented as a Permanent Solution with Conditions

(1) Purpose and Scope. 310 CMR 40.1025 specifies requirements for an Active Exposure Pathway Mitigation Measure Implemented as part of a Permanent Solution with Conditions.

(2) Demonstration of Effectiveness. An Active Exposure Pathway Mitigation Measure implemented as part of a Permanent Solution with Conditions shall be designed and demonstrated to eliminate exposure to OHM to the extent feasible and ensure, at a minimum, that a condition of No Significant Risk is achieved and maintained for the Receptor(s) of concern. Demonstration of the effectiveness of Active Exposure Pathway Mitigation Measure shall be made prior to the achievement of a Permanent Solution with Conditions and shall be based on the measurement of Exposure Point Concentrations representative of exposures for the Receptor(s) of concern during operation of the Active Exposure Pathway Mitigation Measure under normal operating conditions and over a period of time sufficient to account for temporal variability.

(3) Operation of an Active Exposure Pathway Mitigation Measure Implemented as part of a Permanent Solution with Conditions.

(a) The necessity of operating and maintaining the Active Exposure Pathway Mitigation Measure according to the operating regimen documented in the Permanent Solution Statement shall be specified in an Activity and Use Limitation that is recorded on the deed of the property where the Active Exposure Pathway Mitigation Measure is located that includes the requirements of 310 CMR 40.1025 as terms and conditions for maintaining a Permanent Solution;

(b) The operating regimen for the Active Exposure Pathway Mitigation Measure documented in the Permanent Solution Statement shall be designed to ensure a level of No Significant Risk is maintained for the Receptor(s) of concern under normal operating conditions;

(c) The operating regimen shall document the parameters for operating the Active Exposure Pathway Mitigation Measure and the methods and frequency for monitoring such Measure to ensure that it is operating consistently within such parameters;

(d) An Active Exposure Pathway Mitigation Measure implemented as part of a Permanent Solution with Conditions shall employ remote monitoring technology that will alert the owner and operator of the building protected by the Active Exposure Pathway Mitigation Measure and the Department immediately upon failure of the system, such as loss of power, mechanical failure or other significant disruption of the effectiveness of the system;

(e) The operating regimen shall document the longest duration of a shutdown that would be consistent with:

1. a level of exposure that does not pose an Imminent Hazard; and
2. a level of exposure that poses No Significant Risk; and

(f) Following submittal of a Permanent Solution Statement, the Active Exposure Pathway Mitigation Measure shall be consistently operated and maintained at a level of effectiveness that ensures a level of No Significant Risk is maintained for the Receptor(s) of concern and in accordance with the provisions of 310 CMR 40.1025.

(4) An Active Exposure Pathway Mitigation Measure shall not be used to support a Permanent Solution with Conditions if suspension or failure of such measure lasting 60 consecutive days would result in a Receptor exposure to OHM that would pose an Imminent Hazard.

40.1025: continued

(5) An Active Exposure Pathway Mitigation Measure shall not be used to support a Permanent Solution with Conditions unless the owner of the property where the Active Exposure Pathway Mitigation Measure is located certifies at the time that the Permanent Solution with Conditions is implemented that financial resources have been made available for the immediate repair and/or replacement of components of the Active Exposure Pathway Mitigation Measure in the event that the Measure experiences failure.

(6) In the event of any suspension or failure of an Active Exposure Pathway Mitigation Measure implemented as part of a Permanent Solution with Conditions, the owner of the property where the Active Exposure Pathway Mitigation Measure is located shall undertake immediate steps to return the Active Exposure Pathway Mitigation Measure to full operating condition. If such suspension or failure of the system lasts 30 consecutive days, the owner of the property where such Measure is located shall notify both the Department and any non-transient occupants of the building protected by such Measure who may have experienced exposure to oil and/or hazardous material as the result of the system suspension or failure on the 30th day from the start of the suspension or failure period. This notice shall document the reason for the suspension or failure of the Active Exposure Pathway Mitigation Measure, any efforts made or steps to be taken to resume operation of such Measure, and the expected timeframe for resuming operation of such Measure.

(7) The owner of the property where an Active Exposure Pathway Mitigation Measure is implemented as part of a Permanent Solution with Conditions shall annually certify in response to receipt of a form provided by the Department that:

- (a) the property owner is aware of his or her obligation to operate and maintain the Active Exposure Pathway Mitigation Measure, including repairing or replacing components of the Measure to resume operation in the event the Measure experiences suspension or failure;
- (b) the property owner is aware that the Department may upon reasonable notice inspect the Active Exposure Pathway Mitigation Measure to ensure that it is operating pursuant to the regimen established at 310 CMR 40.1025;
- (c) financial resources are available to the property owner for the immediate repair and/or replacement of components of the Active Exposure Pathway Mitigation Measure in the event that the Measure experiences failure; and
- (d) the Active Exposure Pathway Mitigation Measure is operating pursuant to the regimen established at 310 CMR 40.1025.

(8) Where a Permanent Solution with Conditions is based upon the operation of an Active Exposure Pathway Mitigation Measure, the operation of such a measure may be terminated following documentation provided in a revised Permanent Solution Statement pursuant to 310 CMR 40.1000 that the measure is no longer necessary to maintain a Permanent Solution. Such documentation shall include a Risk Characterization conducted pursuant to 310 CMR 40.0900 that evaluates and documents exposure to OHM for Receptor(s) of concern in the absence of the Active Exposure Pathway Mitigation Measure over a period of time sufficient to account for temporal variability and supports a conclusion that a condition of No Significant Risk exists in the absence of such Measure.

40.1026: Requirements for Active Exposure Pathway Mitigation Measures Implemented as Part of a Temporary Solution or Remedy Operation Status

(1) Purpose and Scope. 310 CMR 40.1026 specifies requirements for an Active Exposure Pathway Mitigation Measure implemented as part of a Temporary Solution or Remedy Operation Status.

(2) Demonstration of Effectiveness. An Active Exposure Pathway Mitigation Measure implemented as part of a Temporary Solution or Remedy Operation Status shall be designed and demonstrated to eliminate exposure to OHM to the extent feasible and ensure, at a minimum, that a condition of No Significant Risk is achieved and maintained for the Receptor(s) of concern. Demonstration of the effectiveness of Active Exposure Pathway Mitigation Measure shall be based on the measurement of Exposure Point Concentrations representative of exposures for the Receptor(s) of concern during operation of the Active Exposure Pathway Mitigation Measure under normal operating conditions and over a period of time sufficient to account for temporal variability.

40.1026: continued

(3) Operation of an Active Exposure Pathway Mitigation Measure implemented as part of a Temporary Solution or Remedy Operation Status.

(a) The operating regimen for the Active Exposure Pathway Mitigation Measure implemented as part of a Temporary Solution or Remedy Operation Status shall be specified in Temporary Solution Statement or Phase IV Operation, Maintenance and Monitoring Plan developed as part of the Remedy Implementation Plan, respectively;

(b) The operating regimen for the Active Exposure Pathway Mitigation Measure shall be designed to ensure a level of No Significant Risk is maintained for the Receptor(s) of concern under normal operating conditions;

(c) The operating regimen shall document the parameters for operating the Active Exposure Pathway Mitigation Measure and the methods and frequency for monitoring such Measure to ensure that it is operating consistently within such parameters;

(d) An Active Exposure Pathway Mitigation Measure implemented as part of a Temporary Solution or Remedy Operation Status shall employ remote monitoring technology that will alert the owner and operator of the building protected by the Active Exposure Pathway Mitigation Measure and the Department immediately upon failure of the system, such as loss of power, mechanical failure or other significant disruption of the effectiveness of the system;

(e) The operating regimen shall document the longest duration of a shutdown that would be consistent with:

1. a level of exposure that does not pose an Imminent Hazard; and
2. a level of exposure that poses No Significant Risk; and

(f) Following submittal of a Temporary Solution Statement or Remedy Operation Status, the Active Exposure Pathway Mitigation Measure shall be consistently operated and maintained at a level of effectiveness that ensures a level of No Significant Risk is maintained for the Receptors of concern and in accordance with the provisions of 310 CMR 40.1026.

(4) In the event of any suspension or failure of an Active Exposure Pathway Mitigation Measure implemented as part of a Temporary Solution or Remedy Operation Status, the owner of the property where the Active Exposure Pathway Mitigation Measure is located shall undertake immediate steps to return the Active Exposure Pathway Mitigation Measure to full operating condition. If such suspension or failure of the system lasts 30 consecutive days, the owner of the property where such Measure is located shall notify both the Department and any non-transient occupants of the building protected by such Measure who may have experienced exposure to oil and/or hazardous material as the result of the system suspension or failure on the 30th day from the start of the suspension or failure period. This notice shall document the reason for the suspension or failure of the Active Exposure Pathway Mitigation Measure, any efforts made or steps to be taken to resume operation of such Measure, and the expected timeframe for resuming operation of such Measure.

40.1030: Categories of Permanent and Temporary Solutions

(1) Permanent or Temporary Solutions are categorized under 310 CMR 40.1030 through 40.1051 as Permanent Solutions with No Conditions, Permanent Solutions with Conditions and Temporary Solutions.

(2) The specific category of Permanent or Temporary Solution applicable to a site, disposal site or portion of a disposal site shall be established based upon the following factors:

(a) whether the site or disposal site poses No Significant Risk;

(b) whether all Substantial Hazards posed by the disposal site have been eliminated;

(c) whether the risk characterization depends upon assumed limitations on current or future conditions, activities or uses, including the implementation of Active or Passive Exposure Pathway Mitigation Measures;

(d) whether one or more Activity and Use Limitations are required under the provisions of 310 CMR 40.1012 to maintain a level of No Significant Risk;

(e) whether concentrations of oil and/or hazardous material at a site exceed Upper Concentration Limits in Soil and Groundwater listed at 310 CMR 40.0996(6); and

(f) whether site conditions are consistent with Natural Background or Anthropogenic Background.

40.1040: Permanent Solutions

- (1) Permanent Solutions shall apply where:
 - (a) a level of No Significant Risk, as specified in 310 CMR 40.0900, exists or has been achieved;
 - (b) all Sources of OHM Contamination have been eliminated or controlled, as specified in 310 CMR 40.1003(5)(a) and (b);
 - (c) control of plumes of dissolved OHM in groundwater and vapor-phase OHM in the Vadose Zone has been achieved as specified in 310 CMR 40.1003(6)(a);
 - (d) NAPL, if present, has been addressed as specified in 310 CMR 40.1003(7)(a);
 - (e) all threats of release have been eliminated; and
 - (f) the level of oil and/or hazardous material concentrations in the environment have been reduced to as close to Background levels as feasible as specified at 310 CMR 40.1020.
- (2) Permanent Solutions shall not apply to:
 - (a) except as provided at 310 CMR 40.1025, any disposal site or portion of a disposal site where Active Operation and Maintenance of a remedial action is required; or
 - (b) any disposal site or portion of a disposal site where groundwater or soil concentrations of oil and/or hazardous material exceed Upper Concentration Limits specified in 310 CMR 40.0996, except in those cases where the concentrations are shown to be consistent with Background, or the soil is located at a depth greater than 15 feet from the ground surface or beneath an engineered barrier, and it is not feasible pursuant to the criteria listed at 310 CMR 40.0860 to reduce such soil concentrations to less than or equal to the applicable Upper Concentration Limits in Soil listed in 310 CMR 40.0996(6); or
 - (c) any disposal site or portion of a disposal site where groundwater concentrations exceed an applicable or suitably analogous standard listed in 310 CMR 40.0993(3) where the groundwater is categorized as GW-1 pursuant to 310 CMR 40.0932.
- (3) Permanent Solutions may be achieved at any point in the response action process where the requirements of a Permanent Solution have been achieved and documented.

40.1041: Categories of Permanent Solutions

There are two categories of Permanent Solution: Permanent Solution with No Conditions and Permanent Solution with Conditions.

- (1) Permanent Solution with No Conditions shall apply to:
 - (a) disposal sites or portions of a disposal site where the requirements of 310 CMR 40.1040(1) have been achieved;
 - (b) disposal sites or portions of a disposal site where oil and/or hazardous material concentrations do not exceed an applicable Upper Concentration Limit in Soil or Groundwater listed at 310 CMR 40.0996(6), unless such levels are consistent with Natural Background;
 - (c) disposal sites or portions of a disposal site where a level of No Significant Risk exists and will be maintained for all current and foreseeable future use of the site without relying upon:
 1. assumed limitations on current or future site activities, uses or conditions, that require an Activity and Use Limitation, as specified in 310 CMR 40.1012(2); or
 2. assumed limitations on current or future site activities, uses or conditions, that do not require an Activity and Use Limitations pursuant to 310 CMR 40.1013; and
 - (d) sites where response actions have eliminated all threats of release and no release of oil and/or hazardous material to the environment has occurred.
- (2) Permanent Solution with Conditions shall apply to disposal sites or portions of a disposal site where:
 - (a) the requirements of 310 CMR 40.1040(1) have been achieved;
 - (b) oil or hazardous material concentrations do not exceed an applicable Upper Concentration Limit in soil or groundwater listed at 310 CMR 40.0996(6), unless such levels are consistent with Anthropogenic Background or oil and/or hazardous material in soil is located at a depth greater than 15 feet from the ground surface or beneath an Engineered Barrier and an evaluation conducted pursuant to 310 CMR 40.0860 indicates that it is not feasible to reduce the concentrations of oil and/or hazardous material in soil located at a depth greater than 15 feet from the ground surface or in the area beneath the Engineered Barrier to less than or equal to the applicable Upper Concentration Limits in soil; and

40.1041: continued

- (c) a level of No Significant Risk exists and will be maintained for all current and foreseeable future use of the site, relying on one or more of the following:
1. assumed limitations on future site activities or uses that require Activity and Use Limitations, as specified in 310 CMR 40.1012; or
 2. assumed limitations on current or future site activities, uses or conditions that do not require an Activity and Use Limitations pursuant to 310 CMR 40.1013.

40.1050: Temporary Solutions

- (1) Temporary Solutions shall apply to disposal sites or portions of a disposal site where:
- (a) a condition of No Substantial Hazard exists and has been documented pursuant to 310 CMR 40.0956;
 - (b) all Sources of OHM Contamination have been identified, characterized, and to the extent feasible, eliminated or controlled as specified in 310 CMR 40.1003(5)(a) and (c);
 - (c) control of plumes of dissolved OHM in groundwater and vapor-phase OHM in the Vadose Zone has been achieved to the extent feasible as specified in 310 CMR 40.1003(6)(b);
 - (d) NAPL, if present, has been addressed as specified in 310 CMR 40.1003(7)(b); and
 - (e) it is concluded, after completion of a Phase III evaluation pursuant to 310 CMR 40.0850, that:
 1. response actions to achieve a Permanent Solution are not currently feasible; or
 2. response actions to achieve a Permanent Solution are feasible and shall be continued toward a Permanent Solution.
- (2) Temporary Solutions may be achieved regardless of whether one or more remedial actions have been taken at a disposal site, but only after:
- (a) a Phase II Comprehensive Site Assessment and a Phase III Identification, Evaluation and Selection of Comprehensive Remedial Alternatives, as specified in 310 CMR 40.0830 and 310 CMR 40.0850, respectively, have been completed; or
 - (b) a Downgradient Property Status Submittal has been provided to the Department in accordance with 310 CMR 40.0180.
- (3) A Temporary Solution may be reached:
- (a) after completion of a Phase III evaluation pursuant to 310 CMR 40.0850;
 - (b) after implementation of a Phase IV Comprehensive Remedial Alternative pursuant to 310 CMR 40.0870; or
 - (c) after implementation of Phase V or Post-temporary Solution operation, maintenance and/or monitoring pursuant to 310 CMR 40.0890 or 310 CMR 40.0897, respectively.
- (4) For all Temporary Solutions where achievement of a Permanent Solution is not currently feasible as described at 310 CMR 40.1050(1)(e)1., except those achieved after a Downgradient Property Status Submittal has been provided to the Department in accordance with 310 CMR 40.0180:
- (a) a copy of the plan as specified in 310 CMR 40.0861(2)(h) that presents definitive and enterprising steps to be taken toward achieving a Permanent Solution at the disposal site or portion of a disposal site shall be submitted with the Temporary Solution Statement; and
 - (b) a Periodic Review of the Temporary Solution shall be conducted every fifth year after the date of filing the Temporary Solution Statement, until such time that a Permanent Solution Statement is submitted. Such Periodic Review Opinion shall address the following:
 1. the feasibility of implementing one or more Permanent Solutions for the disposal site pursuant to 310 CMR 40.0861(2)(h) at the time of the Periodic Review;
 2. the effectiveness of the Temporary Solution(s);
 3. the definitive and/or enterprising steps taken to identify, develop and implement a feasible permanent solution at the site;
 4. any changes in activities, uses and/or exposures that may cause an actual or potential increase in exposure for human or environmental receptors to oil and/or hazardous material;

40.1050: continued

5. if applicable, an evaluation of any Activity and Use Limitation implemented as part of the Temporary Solution, including compliance with the terms of the Activity and Use Limitation, its effectiveness in maintaining a condition of No Substantial Hazard, and identification of any response actions pursuant to 310 CMR 40.1067 necessary to maintain a condition of No Substantial Hazard;
 6. any necessary and required response actions to maintain the Temporary Solution, including a description of the type and frequency of monitoring to be conducting during the period prior to the next Periodic Review; and
 7. the certification required in 310 CMR 40.0009.
- (5) For all Temporary Solutions where achievement of a Permanent Solution is feasible and response actions toward a Permanent Solution are continuing as described in 310 CMR 40.1050(1)(e)2.:
- (a) a copy of the plan as specified in 310 CMR 40.0861(2)(h) that presents definitive and enterprising steps to be taken toward achieving a Permanent Solution at the disposal site or portion of a disposal site shall be submitted with the Temporary Solution Statement; and
 - (b) a valid Tier Classification shall be in effect at the time the Temporary Solution Statement is submitted to the Department and further response actions shall be conducted in accordance with 310 CMR40.0800.

NON-TEXT PAGE

40.1055: Transition Provisions

- (1) As of June 20, 2014, all Class A-1, A-2 and B-1 Response Action Outcomes submitted to the Department prior to June 20, 2014 shall be Permanent Solutions with No Conditions.
- (2) As of June 20, 2014, all Class A-3, A-4, B-2 and B-3 Response Action Outcomes submitted to the Department prior to June 20, 2014 shall be Permanent Solutions with Conditions.
- (3) As of June 20, 2014, all Class C-1 Response Action Outcomes submitted to the Department prior to June 20, 2014 shall be Temporary Solutions as described in 310 CMR 40.1050(1)(e)1.
- (4) As of June 20, 2014, all Class C-2 Response Action Outcomes submitted to the Department prior to June 20, 2014 shall be Temporary Solution as described in 310 CMR 40.1050(1)(e)2.

40.1056: Content of Permanent Solution Statements

- (1) A Permanent Solution Statement shall be submitted by a RP, PRP or Other Person, on a form established by the Department for such purposes, and shall include, at a minimum, the following:
 - (a) the site or disposal site name, address and DEP Release Tracking Number(s);
 - (b) whether it is a Permanent Solution with No Conditions or a Permanent Solution with Conditions;
 - (c) except where the concentrations of oil and/or hazardous material are consistent with or have been reduced to Background or where a threat of release has been abated, the Method(s) (Methods 1, 2 or 3) used to characterize the risk of harm posed by the disposal site to health, safety, public welfare and the environment, pursuant to 310 CMR 40.0900;
 - (d) the relationship of the Permanent Solution Statement to any other Permanent or Temporary Solution Statements that have been filed for the disposal site, if applicable, together with a statement as to whether any additional response actions are needed for any other portions of the disposal site;
 - (e) indication as to whether the Permanent Solution includes the implementation of an Activity and Use Limitation, and if so, the type of Activity and Use Limitation implemented at the disposal site;
 - (f) indication as to whether the Permanent Solution is based upon assumptions about the current or future site activities, uses or conditions that do not require an Activity and Use Limitation pursuant to 310 CMR 40.1013 and a description of those assumptions;
 - (g) indication as to whether the Permanent Solution is based upon the effective operation of one or more Active Exposure Pathway Mitigation Measures pursuant to 310 CMR 40.1025;
 - (h) except where specifically exempted by the Department based upon the Department's level of involvement in the oversight of response actions at the site or disposal site, an Opinion from a Licensed Site Professional as to whether the requirements of the applicable category of Permanent Solution specified in 310 CMR 40.1000 have been met;
 - (i) a certification of the Permanent Solution Statement and all documents submitted with the Permanent Solution Statement as required by 310 CMR 40.0009;
 - (j) indication as to whether oil and/or hazardous material exceed one or more applicable Upper Concentration Limits in Soil or Groundwater, as described at 310 CMR 40.0996; and
 - (k) indication as to whether the analytical data used to support the Permanent Solution was generated pursuant to the Department's Compendium of Analytical Methods.
- (2) Except where previously submitted, all documentation, plans and/or reports necessary to support the Permanent Solution shall be submitted to the Department, including, without limitation, the following:

40.1056: continued

- (a) as specified in 310 CMR 40.1003(4), a clear and accurate description of the location of the site, in the case of a threat of release, or the location and boundaries of the disposal site or portion of disposal site to which the Permanent Solution applies that includes the location of areas characterized as Background relative to the disposal site boundaries. Such description shall reference, to the extent practicable, the location of the site, or location and boundaries of the disposal site or portion thereof relative to permanent or semi-permanent landmarks, location coordinates, and/or surveyed boundaries;
- (b) a succinct summary of the Conceptual Site Model;
- (c) a demonstration that all Sources of OHM Contamination have been eliminated or controlled as specified in 310 CMR 40.1003(5)(a) and (b);
- (d) a demonstration that response actions have been taken to adequately assess and, if necessary, control the subsurface migration of OHM remaining at the disposal site as specified in 310 CMR 40.1003(6)(a);
- (e) where NAPL is or has been present, a demonstration that response actions have been taken to adequately assess and if necessary control NAPL mobility and meet the requirements of 310 CMR 40.1003(7)(a);
- (f) information supporting the conclusion that a level of No Significant Risk has been achieved or exists;
- (g) information documenting the extent to which levels of oil and/or hazardous material in the environment have been reduced to Background, and/or the results of the feasibility evaluation conducted pursuant to 310 CMR 40.0860 demonstrating that the achievement of Background is not feasible;
- (h) a copy of any and all Activity and Use Limitations which have been implemented under 310 CMR 40.1070;
- (i) for Permanent Solutions with Conditions where concentrations in Soil exceed Upper Concentration Limits in Soil at a depth greater than 15 feet from the ground surface or in an area beneath an engineered barrier, the results of the evaluation conducted pursuant to 310 CMR 40.0860 demonstrating that the achievement of Upper Concentration Limits in Soil located at a depth greater than 15 feet from the ground surface or in the area beneath an engineered barrier is not feasible;
- (j) for a Permanent Solution with Conditions based upon assumptions about the current or future site activities, uses or conditions that do not require an Activity and Use Limitation pursuant to 310 CMR 40.1013, documentation related to such assumptions and conditions, including, as applicable:
 - 1. the recommendation and description of Best Management Practices for Non-commercial Gardening in a residential setting to minimize and control potential risk qualitatively evaluated pursuant to 310 CMR 40.0923(3)(c);
 - 2. the location of OHM that are consistent with Anthropogenic Background levels;
 - 3. the location of residual contamination within a public way or within a rail right-of-way; or
 - 4. where the residual concentrations of OHM in the groundwater exceed the GW-2 standards published in 310 CMR 40.0974(2) at a disposal site or portion thereof where no occupied building or structure is present, information related to the presence of groundwater contamination and the obligation to ensure any future construction at the disposal site does not result in OHM impacts to indoor air in newly constructed buildings or structures;
- (k) a Data Usability Assessment documenting that the data relied upon is scientifically valid and defensible, and of a sufficient level of precision, accuracy, and completeness to support the Permanent Solution, and a Data Representativeness Evaluation, documenting the adequacy of the spatial and temporal data sets to support the Permanent Solution; and
- (l) a description of any operation, maintenance, and/or monitoring that will be required to confirm and/or maintain those conditions at the disposal site upon which the Permanent Solution is based.

(3) The Permanent Solution shall not be considered complete until all applicable fees are paid in accordance with 310 CMR 4.00: *Timely Action Schedule and Fee Provisions*.

40.1057: Content of Temporary Solution Statements

(1) A Temporary Solution Statement shall be submitted by a RP, PRP or Other Person on a form established by the Department for such purposes, and shall include, at a minimum, the following:

- (a) the site or disposal site name, address and DEP Release Tracking Number(s);
- (b) the Method(s) (Methods 1, 2 or 3) used to characterize the risk of harm posed by the disposal site to health, public welfare and the environment, pursuant to 310 CMR 40.0900;
- (c) the relationship of the Temporary Solution Statement to any other Permanent or Temporary Solution Statements that have been filed for the disposal site, if applicable, together with a statement as to whether any additional response actions are needed for any other portions of the disposal site;
- (d) indication as to whether achievement of a Permanent Solution is feasible at the disposal site or portion of the disposal site and whether response actions toward a Permanent Solution are continuing;
- (e) indication as to whether the Temporary Solution includes the implementation of an Activity and Use Limitation, and if so, the type of Activity and Use Limitation implemented at the disposal site;
- (f) indication as to whether the Temporary Solution includes the operation of one or more Active Exposure Pathway Mitigation Measures pursuant to 310 CMR 40.1026;
- (g) except where specifically exempted by the Department based upon the Department's level of involvement in the oversight of response actions at the site or disposal site, an Opinion from a Licensed Site Professional as to whether the requirements of the Temporary Solution specified in 310 CMR 40.1000 have been met;
- (h) a certification of the Temporary Solution Statement and all documents submitted with the Temporary Solution Statement as required by 310 CMR 40.0009;
- (i) indication as to whether oil and/or hazardous material exceed one or more applicable Upper Concentration Limits in Soil or Groundwater, as described at 310 CMR 40.0996; and
- (j) indication as to whether the analytical data used to support the Temporary Solution was generated pursuant to the Department's Compendium of Analytical Methods.

(2) Except where previously submitted, all documentation, plans and/or reports necessary to support the Temporary Solution shall be submitted to the Department, including, without limitation, the following:

- (a) as specified in 310 CMR 40.1003(4), a clear and accurate description of the location of the site or the location and boundaries of the disposal site or portion of disposal site to which the Temporary Solution applies that includes the location of areas characterized as Background relative to the disposal site boundaries. Such description shall reference, to the extent practicable, the location of the site, and location and boundaries of the disposal site or portion thereof relative to permanent or semi-permanent landmarks, location coordinates, and/or surveyed boundaries;
- (b) a succinct summary of the Conceptual Site Model;
- (c) a demonstration that all Sources of OHM Contamination have been eliminated or controlled, to the extent feasible as specified in 310 CMR 40.1003(5)(a) and (c);
- (d) a demonstration that response actions have been taken to adequately assess and control the subsurface migration of OHM remaining at the disposal site as specified in 310 CMR 40.1003(6)(b);
- (e) where NAPL is or has been present, a demonstration that response actions have been taken to adequately assess NAPL mobility and meet the requirements of 310 CMR 40.1003(7)(b);
- (f) a copy of the plan as specified in 310 CMR 40.0861(2)(h);
- (g) information supporting the conclusion that no substantial hazards remain at the disposal site;
- (h) a copy of any and all Activity and Use Limitations which have been implemented under 310 CMR 40.1070;
- (i) a description of any operation, maintenance, and/or monitoring that will be required to confirm and/or maintain those conditions at the disposal site upon which the Temporary Solution is based;
- (j) a copy of the plan, as specified in 310 CMR 40.0861(2)(h), which presents definitive and enterprising steps to be taken toward achieving a Permanent Solution at the disposal site; and

40.1057: continued

(k) a Data Usability Assessment documenting that the data relied upon is scientifically valid and defensible, and of a sufficient level of precision, accuracy, and completeness to support the Temporary Solution, and a Data Representativeness Evaluation, documenting the adequacy of the spatial and temporal data sets to support the Temporary Solution.

40.1066: Effect of Permanent or Temporary Solutions on Fees

(1) Upon receipt of a Permanent Solution Statement, the Department shall suspend the further assessment of Annual Compliance Assurance Fees; provided, however, that payment of such fees shall be required for the billable year in which the Permanent Solution is provided to the Department.

(2) Upon receipt of a Temporary Solution Statement filed in accordance with 310 CMR 40.1000, the Department shall suspend the further assessment of Tier I or Tier II Annual Compliance Assurance Fees, whichever are applicable, and shall assess a Temporary Solution Annual Compliance Assurance Fee pursuant to 310 CMR 4.03: *Annual Compliance Assurance Fee*.

40.1067: Remedial Actions After a Permanent or Temporary Solution Statement has been Submitted to the Department

(1) 310 CMR 40.1067 applies to remedial actions conducted at a disposal site after a Permanent or Temporary Solution Statement has been submitted to the Department.

(2) Nothing in 310 CMR 40.1067 shall affect any person's duty to notify the Department of a release(s) or threat of release(s) in accordance with M.G.L. c. 21E and 310 CMR 40.0000 or limit the Department's authority to establish site-specific requirements for response actions, including response actions to address a violation(s) or deficiency(ies).

(3) For remedial actions conducted after the submittal of a Permanent Solution with No Conditions the following requirements shall apply:

- (a) a Tier Classification or Extension thereof is not required;
- (b) unless otherwise specified by the Department, no documentation, including a revised Permanent Solution Statement, is required to be maintained by the person conducting response actions or submitted to the Department, but may be maintained or submitted voluntarily;
- (c) all excavated Remediation Waste is managed in accordance with the provisions of 310 CMR 40.0030; and
- (d) unless otherwise specified by the Department, public involvement activities pursuant to 310 CMR 40.1400 are not required.

(4) For remedial actions conducted within an area subject to an Activity and Use Limitation after the submittal of a Permanent Solution with Conditions to the Department, the following requirements shall apply:

- (a) Limited soil excavation may be undertaken without the need to notify the Department and public involvement activities pursuant to 310 CMR 40.1400 are not required, provided:
 1. such soil excavation is not prohibited by the Activity and Use Limitation;
 2. except as provided in 310 CMR 40.1067(4)(b), such soil excavation does not result in the excavation of more than 100 cubic yards of Remediation Waste contaminated solely by oil or waste oil, or 20 cubic yards of Remediation Waste contaminated by hazardous material or mixture of oil or waste oil and hazardous material; and
 3. all excavated Remediation Waste is managed in accordance with the provisions of 310 CMR 40.0030;
- (b) Remedial actions that exceed the scope of the limited soil excavation activities outlined in 310 CMR 40.1067(4)(a), or are being conducted to allow a change in Site Activities and Uses pursuant to 310 CMR 40.1080, shall be conducted as Release Abatement Measures, provided such remedial actions do not exceed the scope of a Release Abatement Measure as described in 310 CMR 40.0442. Such remedial actions shall not require a Tier Classification or Extension thereof, provided:

40.1067: continued

1. such remedial actions are conducted in accordance with the requirements set forth in 310 CMR 40.0440, including requirements at 40.0442 that limit the scope of Release Abatement Measures, all requirements for submittal of Plans, Status Reports, and Completion Statements;
 2. notice to local officials is provided as specified in 310 CMR 40.1403(3); and
 3. if such remedial actions are being conducted to allow a change in Site Use and/or Activities, the requirements in 310 CMR 40.1080 are met;
- (c) Remedial actions that exceed the scope of a Release Abatement Measure as described in 310 CMR 40.0442 shall be conducted as a Phase IV Comprehensive Remedial Action, as specified at 310 CMR 40.0870, provided:
1. such remedial actions are conducted under a valid Tier Classification or Extension thereof;
 2. public involvement applicable to Phase IV Comprehensive Remedial Action is conducted; and
 3. if such remedial actions are being conducted to allow a change in Site Use and Activities, the requirements in 310 CMR 40.1080 are met;
- (d) A revised Permanent Solution Statement shall be submitted upon completion of remedial actions when the terms and conditions of an Activity and Use Limitation are changed through an amendment, termination, or partial termination in accordance with 310 CMR 40.1080 and 40.1081. A revised Permanent Solution Statement, whenever submitted, may be limited to the area in which the response actions were conducted.
- (5) For remedial actions conducted after a Permanent Solution with Conditions Statement has been submitted to the Department where an Activity and Use Limitation is not required pursuant to 310 CMR 40.1013, the following requirements shall apply:
- (a) Limited soil excavation may be undertaken without the need to notify the Department or conduct public involvement activities pursuant to 310 CMR 40.1400, provided:
1. except as provided in 310 CMR 40.1067(5)(b), such soil excavation does not result in the excavation of more than 100 cubic yards of Remediation Waste contaminated solely by oil or waste oil, or 20 cubic yards of Remediation Waste contaminated by hazardous material or mixture of oil or waste oil and hazardous material; and
 2. all excavated Remediation Waste is managed in accordance with the provisions of 310 CMR 40.0030;
- (b) Remedial actions that exceed the scope of the limited soil excavation activities outlined in 310 CMR 40.1067(5)(a) shall be conducted as Release Abatement Measures and shall not require a Tier Classification or Extension thereof, provided:
1. such remedial actions are conducted in accordance with the requirements set forth in 310 CMR 40.0440, including requirements at 40.0442 that limit the scope of Release Abatement Measures; and
 2. notice to local officials is provided as specified in 310 CMR 40.1403(3);
- (c) Remedial actions that exceed the scope of a Release Abatement Measure as described in 310 CMR 40.0442 shall be conducted as a Phase IV Comprehensive Remedial Action, as specified at 310 CMR 40.0870, provided:
1. such remedial actions are conducted under a valid Tier Classification or Extension thereof; and
 2. public involvement applicable to Phase IV Comprehensive Remedial Action is conducted;
- (d) A revised Permanent Solution Statement shall be submitted upon completion of remedial actions where such remedial actions result in the elimination of one or more of the conditions associated with the Permanent Solution with Conditions specified in 310 CMR 40.1013. A revised Permanent Solution Statement, whenever submitted, may be limited to the area in which the response actions were conducted;
- (e) Notwithstanding the provisions of 310 CMR 40.1067(5), where a Permanent Solution with Conditions Statement has been submitted based upon assumptions pursuant to 310 CMR 40.1013(1)(d), future construction of a building that results in exposure to OHM from the disposal site in indoor air in the new building shall be subject to notification requirements of 310 CMR 40.0300 and, if necessary, the performance of response actions to ensure that the requirements of a Permanent Solution are met for the change in conditions and exposure that resulted from the building construction.

40.1067: continued

(6) Remedial actions conducted after a Permanent Solution with Conditions Statement has been submitted to the Department that are in or affect the area where an Engineered Barrier is located shall be conducted as a Phase IV Comprehensive Remedial Action, as specified at 310 CMR 40.0870 and shall include public involvement applicable to Phase IV Comprehensive Remedial Actions. In such cases, the person conducting response actions shall have a valid Tier Classification, or an Extension thereof. Where such remedial actions are outside of and do not affect the integrity of the Engineered Barrier or the area where an Engineered Barrier is located, the procedures at 310 CMR 40.1067(4) shall apply.

(7) Remedial actions conducted after a Temporary Solution Statement has been submitted to the Department shall be conducted as a Phase IV Comprehensive Remedial Action, as specified at 310 CMR 40.0870 or Release Abatement Measure as specified in 310 CMR 40.0440, provided:

- (a) such remedial actions are conducted under a valid Tier Classification or Extension thereof; and
- (b) public involvement applicable to Phase IV Comprehensive Remedial Action or Release Abatement Measure is conducted.

(8) The Department may specify in a Notice of Audit Findings that remedial actions are necessary at a disposal site after a Permanent Solution Statement has been submitted to the Department pursuant to 310 CMR 40.1067. Notwithstanding the provisions of 310 CMR 40.1067 to the contrary, all remedial actions conducted in response to a Notice of Audit Findings pursuant to 310 CMR 40.1067 shall be documented in the Post-Audit Completion Statement as described at 310 CMR 40.1170.

40.1070: Implementation of Activity and Use Limitations

(1) One or more of the following Activity and Use Limitations shall be implemented at each disposal site or portion of a disposal site where the Activity and Use Limitation is necessary and appropriate to meet the requirements of 310 CMR 40.1012 or 310 CMR 40.0111(8):

- (a) a Grant of Environmental Restriction, implemented in accordance with 310 CMR 40.1071;
- (b) an Environmental Restriction implemented by the Department, in accordance with 310 CMR 40.1073; or
- (c) a Notice of Activity and Use Limitation, implemented in accordance with 310 CMR 40.1074.

(2) Activity and Use Limitations imposed pursuant to 310 CMR 40.1012 shall be implemented and adhered to by the owner and holders of interest(s) in the property and/or a license to use the property subject to the Activity and Use Limitation, and/or the RP, PRP or Other Person conducting response actions at the disposal site or portion of a disposal site in accordance with the procedures established in 310 CMR 40.1070 through 310 CMR 40.1099.

(3) An Activity and Use Limitation shall be deemed implemented and shall be in effect upon its being duly recorded and/or registered with the appropriate registry of deeds and/or land registration office.

(4) Notice of Activity and Use Limitations implemented at disposal sites subject to CERCLA pursuant to 310 CMR 40.0111(8), shall be subject to the general requirements of 310 CMR 40.1074, except for the following:

- (a) the requirement to prepare a Notice of Activity and Use Limitation, Amendment of a Notice of Activity and Use Limitation, or Termination of a Notice of Activity and Use Limitation, on the specific forms set forth in 310 CMR 40.1099, and as required in 310 CMR 40.1074(1)(a), 40.1075, 40.1081(4)(a), and 40.1083(1)(e), and (3)(b);
- (b) the requirement of 310 CMR 40.1074(1)(b);
- (c) the requirement of 310 CMR 40.1074(2)(m) for a notarized signature of a Licensed Site Professional on a Notice of Activity and Use Limitation, Amendment of a Notice of Activity and Use Limitation, or Termination of a Notice of Activity and Use Limitation;

40.1070: continued

- (d) the requirements of 310 CMR 40.1080; and
- (e) the Public Involvement Activities set forth in 310 CMR 40.1400 through 40.1406, including those requirements specific to Activity and Use Limitations pursuant to 310 CMR 40.1403(7).

40.1071: Grants of Environmental Restrictions for Disposal Sites Where a RP, PRP or Other Person Conducts Response Actions

(1) General Requirements At any disposal site or portion of a disposal site where a RP, PRP or Other Person is conducting a response action(s) for which a Grant of Environmental Restriction has been selected as a form of Activity and Use Limitation pursuant to 310 CMR 40.1070, the following requirements shall be met:

- (a) the Grant of Environmental Restriction shall be prepared using Form 1072A set forth in 310 CMR 40.1099;
- (b) an Activity and Use Limitation Opinion from a Licensed Site Professional shall be submitted on a form prescribed by the Department with each Grant of Environmental Restriction as an exhibit of the Restriction and shall specify:
 - 1. why the Grant of Environmental Restriction is appropriate to:
 - a. achieve and/or maintain a level of No Significant Risk for a Permanent Solution; or
 - b. achieve a condition of No Substantial Hazard for a Temporary Solution;
 - 2. Site Activities and Uses to be prohibited and/or restricted;
 - 3. Site Activities and Uses to be permitted; and
 - 4. obligations and conditions necessary to meet the objectives of the Grant of Environmental Restriction;
- (c) the Grant of Environmental Restriction shall be submitted to the Department for the Commissioner's signature with the applicable fee pursuant to 310 CMR 4.00; and
- (d) the Grant of Environmental Restriction, signed by the Commissioner, shall be recorded and/or registered as specified in 310 CMR 40.1071(3). Acceptance of any such Restriction shall not be construed or deemed to imply Department approval of the adequacy of any response actions performed at the disposal site.

(2) Contents of a Grant of Environmental Restriction A Grant of Environmental Restriction shall contain the following information:

- (a) a description of the property and disposal site, including:
 - 1. the location of the property and its street address;
 - 2. a metes and bounds description of the parcel(s) of land which contain(s) the area that is subject to the Grant of Environmental Restriction;
 - 3. a reference to a survey plan of such parcel(s) of land, prepared by a Massachusetts Registered Land Surveyor, that has been recorded as a plan with the appropriate registry of deeds and/or to a Land Court Plan;
 - 4. if the area subject to the Grant of Environmental Restriction (*i.e.* "the Restricted Area") comprises only a portion of the property described in 310 CMR 40.1071(2)(a)2, a metes and bounds description of the Restricted Area; and:
 - a. (for registered land only) an 8½" x 11" survey plan, prepared by a Massachusetts Registered Land Surveyor, which shows the metes and bounds of the Restricted Area, attached as an exhibit to the Grant of Environmental Restriction; or
 - b. (for unregistered land only) a reference to a survey plan of the Restricted Area, prepared by a Massachusetts Registered Land Surveyor, that has been recorded as a plan with the appropriate registry of deeds;
 - 5. an 8½" x 11" sketch plan showing the location of the Restricted Area in relation to the boundaries of the disposal site to the extent that the boundaries of the disposal site have been established.
- (b) name(s) of the property owner(s);

40.1071: continued

- (c) if a person(s) signing the Grant of Environmental Restriction is not an individual signing on his or her own behalf, but rather on behalf of an entity (LLC, LLP, limited partnership, *etc.*), or as trustee, executor, or attorney in fact, documentation consistent with conveyancing standards and practices verifying that the person(s) signing the Grant of Environmental Restriction has the authority to sign such document shall be submitted as an exhibit to the Grant of Environmental Restriction verifying that the person(s) signing the grant is authorized to do so. If the property owner is a corporation, such documentation shall consist of:
1. a Clerk's Certificate of Incumbency from the clerk of the corporation certifying that the person(s) signing the Grant of Environmental Restriction on behalf of the corporation held his or her position as of the date of the Grant of Environmental Restriction; and
 2. unless the corporate person(s) signing the Grant of Environmental Restriction holds the position of both president or vice president and treasurer or assistant treasurer, a Clerk's Certificate from the clerk or secretary of the corporation certifying a corporate vote, resolution, or by-law authorizing the person(s) to do so;
- (d) the disposal site name and DEP Release Tracking Number(s);
- (e) a statement that the Grant of Environmental Restriction is a gift to the Department pursuant to M.G.L. c. 21E, § 6;
- (f) a statement that the Grant of Environmental Restriction shall be binding upon the property owner and any parties claiming by, through, or under said owner, and shall inure to the benefit of all parties claiming by, through or under the Department;
- (g) an Activity and Use Limitation Opinion that meets the requirements of 310 CMR 40.1071(1)(b);
- (h) a statement that the Grant of Environmental Restriction shall run in perpetuity or for a specified number of years, and that the Environmental Restriction conforms to M.G.L. c. 184, § 26;
- (i) a precise description of the Site Activities and Uses which in accordance with the Activity and Use Limitation Opinion are restricted on the property such as:
1. construction or placement of buildings, utilities, roadways, parking lots or other structures;
 2. excavating, dredging or otherwise removing sediments, soils, loam, peat, sand, gravel, rock or other mineral substance;
 3. planting, removal or destruction of trees, shrubs, or other vegetation;
 4. using a private well to supply groundwater for human consumption; or
 5. other Site Activities and Uses which would likely result in significant risk or a substantial hazard from exposures to oil and/or hazardous material if the Site Activity and Use were to take place on the property;
- (j) a precise description of the obligations and conditions which, in accordance with the Activity and Use Limitation Opinion, are necessary to meet the objectives of the Grant of Environmental Restriction. Such obligations may include the continued proper operation of remedial actions, specific procedures governing excavation activities to protect workers and disposal site neighbors, and the erection and maintenance of fences to prohibit access of unauthorized persons to the disposal site;
- (k) a precise description of Site Activities and Uses, which, in accordance with the Activity and Use Limitation Opinion, may be permitted on the subject property, including without limitation specific provisions for purposes of maintenance, alteration, or repair of utilities, or specific types of land uses;
- (l) except where the property to be restricted is not part of a disposal site, procedures to be followed when an emergency requires immediate excavation of contaminated soil to repair utility lines or other infrastructure on the disposal site, or to respond to other types of emergencies (*e.g.*, fire or floods) that may result in a significant risk of harm from exposure to oil and/or hazardous material at the disposal site, including:
1. notifying the Department within two hours of obtaining knowledge of such emergency condition;
 2. limiting disturbance of contaminated media to the minimum reasonably necessary to adequately respond to the emergency; and

40.1071: continued

3. undertaking specified precautions to minimize exposure of workers and neighbors of the disposal site to contaminated media (*e.g.*, the need for specific types of protective clothing for workers conducting the excavation, and procedures for minimizing the liberation of contaminated dust); and
 4. engaging the services of an LSP to prepare or supervise preparation and implementation of a written plan for restoring the site to a condition consistent with the Grant of Environmental Restriction, and to review and evaluate response actions to ensure minimal disturbance of contaminated media. A copy of such plan shall be submitted to the Department within ten days of its execution, with an Opinion that establishes whether the property subject to the Grant of Environmental Restriction has been restored to a condition consistent with the Grant of Environmental Restriction.
- (m) easements for the term of the Grant of Environmental Restriction to the Department, its agents, contractors, subcontractors, and employees for purposes of providing access to the subject property to inspect the area subject to the Grant of Environmental Restriction to ensure compliance with its terms, and to conduct response actions consistent with M.G.L. c. 21E and 310 CMR 40.0000;
 - (n) a provision that the Grant of Environmental Restriction shall run with the land;
 - (o) an agreement to incorporate either in full or by reference the Grant of Environmental Restriction into all future deeds, easements, mortgages, leases, licenses, occupancy agreements, or any other instruments conveying an interest in and/or a right to use the property;
 - (p) the procedures for amending and releasing the Grant of Environmental Restriction as described in 310 CMR 40.1080 and 40.1083;
 - (q) title reference by which the property owner(s) acquired title to the property; and
 - (r) the notarized signature(s) of the property owner(s), the notarized signature and seal of the LSP who signed the Activity and Use Limitation Opinion, and the signature of the Commissioner.
- (3) Recording/Registering Grants of Environmental Restriction. The Grant of Environmental Restriction shall be recorded and/or registered in accordance with the following:
- (a) the Grant of Environmental Restriction shall be duly recorded and/or registered by the property owner in the appropriate Registry of Deeds and/or Land Registration Office within 30 days of the property owner's receipt from the Department of the Grant of Environmental Restriction as approved; and
 - (b) within 30 days of recording and/or registering any Grant of Environmental Restriction, the property owner shall submit to the Department:
 1. a certified Registry copy of the Grant of Environmental Restriction bearing the book and page/instrument number and/or document number; and
 2. a Registry copy of the required survey plan(s) referenced in the Grant of Environmental Restriction, bearing the plan book/plan number(s);
- (4) Subordination Agreement The property owner shall obtain and record one or more Subordination Agreements, using Form 1072B set forth in 310 CMR 40.1099, to ensure that the respective interests in the property are subordinated to the Grant of Environmental Restriction. Any Subordination Agreement(s) shall be recorded and/or registered in the appropriate Registry of Deeds and/or Land Registration Office immediately after the recording and/or registration of the Grant of Environmental Restriction. Subordination Agreements shall be obtained from:
- (a) any and all holders of a prior interest in the Restricted Area, and
 - (b) from any and all holders of a prior interest in the Property insofar as such interest affects those interests created under the Grant of Environmental Restriction.

40.1072: Process for Applying for a Grant of Environmental Restriction

- (1) The Department shall review each application for a Grant of Environmental Restriction to ensure that it conforms to all requirements established herein for such instrument.
- (2) An application for a Grant of Environmental Restriction shall consist of:
 - (a) a completed Form 1072A and, if applicable, Form 1072B, set forth in 310 CMR 40.1099;

40.1072: continued

- (b) all other applicable documents set forth in 310 CMR 40.1071; and
 - (c) a certification of title issued to the Department by an insured title examiner certifying title in the Grantor, and including all encumbrances of record.
- (3) An application for a Grant of Environmental Restriction shall not be deemed complete if the Department determines that a Grant of Environmental Restriction application:
- (a) fails to contain all required information listed in 310 CMR 40.1071;
 - (b) fails to include the applicable fee established by 310 CMR 4.10(10)(g)4.; or
 - (c) is incorrectly filled out.
- (4) The Department has no obligation to accept or review an incomplete Grant of Environmental Restriction application.
- (5) Processing a Grant of Environmental Restriction Application. For purposes of 310 CMR 4.10(10)(g), the computation of time periods shall commence on the day following the day a Grant of Environmental Restriction application is received at the appropriate Department office or on the day following the day the Grant of Environmental Restriction application fee is received, whichever occurs later.
- (a) The applicant and the Department may, by written agreement, extend any schedule for timely action or individual portion thereof for a Grant of Environmental Restriction application pursuant to 310 CMR 4.00: *Timely Action Schedule and Fee Provisions* and 40.1072.
 - (b) Administrative Completeness Review. The Department shall conduct an Administrative Completeness Review of a Grant of Environmental Restriction Application in accordance with 310 CMR 4.00: *Timely Action Schedule and Fee Provisions* and 310 CMR 40.1072. The Administrative Completeness Review shall determine whether all required elements of the application have been submitted by the applicant.
 - 1. Initial Administrative Completeness Review (AC-1). The initial AC-1 review shall comply with the following requirements:
 - a. The AC-1 Review shall result in a written determination of administrative completeness or a statement of administrative deficiencies.
 - b. A determination of administrative completeness shall mean that the permit application may proceed to Technical Review.
 - c. A statement of administrative deficiencies shall end the AC-1 review period.
 - d. The Department shall send a determination of administrative completeness or a statement of administrative deficiencies to the applicant in writing within 31 days of the date a Grant of Environmental Restriction application is received at the appropriate Department office or on the day following the day the Grant of Environmental Restriction application fee is received, whichever occurs later. If the application is not complete, the Department shall identify the information necessary to complete the application in the statement of administrative deficiencies.
 - 2. Second Administrative Completeness Review (AC-2). If the Department issues a statement of administrative deficiencies, a second Administrative Completeness Review, AC-2, shall be conducted upon submittal of additional information by the applicant. Such AC-2 review shall be conducted in accordance with the following requirements:
 - a. If the Department issues a statement of administrative deficiencies, the Department shall have an additional 30 days for a second Administrative Completeness Review, AC-2, beginning the day after receipt of material submitted by the applicant in response to the statement of administrative deficiencies issued in AC-1
 - b. The Department may request additional information during the course of AC-2 review.
 - c. The AC-2 review shall result in a determination of administrative completeness or a denial of the permit application.
 - d. A denial of the permit application shall be subject to appeal in accordance with 310 CMR 40.0050, provided that in any adjudicatory hearing the issues shall be limited to the question of whether or not the application submitted was administratively complete. If the applicant prevails in such proceeding, the Department shall begin the next step of its review pursuant to the schedule for timely action.

40.1072: continued

3. Effect of Determination. A determination of administrative completeness shall not constitute any finding with respect to the technical suitability, adequacy or accuracy of the materials submitted, and shall be no bar to a request to amend, revise, replace, or supplement such materials based on technical suitability, adequacy or accuracy.
- (c) Technical Review of Grant of Environmental Restriction Applications. The Department shall conduct a Technical Review of each Grant of Environmental Restriction application to ensure that it conforms to the requirements established herein for such instruments. This review shall ensure that:
 1. the instrument provides adequate and appropriate identification of property subject to the Grant of Environmental Restriction;
 2. the person granting the Grant of Environmental Restriction is the owner of record;
 3. all prior interests in the Restricted Area have been subordinated; and
 4. the activities to be restricted, permitted, performed, and conditioned are clearly specified.
- (d) Procedures for Initial Technical Review (T-1).
 1. An Initial Technical Review shall result in a decision to approve the Grant of Environmental Restriction, or in a statement of technical deficiencies in the application and supporting materials. The Department's decision to issue a statement of deficiencies shall not be deemed to give rise to any right to an adjudicatory hearing.
 2. An initial T-1 review shall be conducted in accordance with the following requirements:
 - a. The Department may request additional information during the course of T-1 review.
 - b. A statement of technical deficiencies shall end the T-1 review period.
 - c. An applicant shall respond within 30 days of the date of issuance of a statement of technical deficiencies by submitting any additional material to support the application and address deficiencies.
 3. If the applicant fails to respond to a statement of technical deficiencies, the application shall be reviewed on the record.
 4. As established in 310 CMR 4.10(10)(g), and except as agreed pursuant to 310 CMR 40.1072(5)(a), the Department shall have 60 days to complete its T-1 review from the date of the Department's determination of administrative completeness.
- (e) Supplemental Technical Review (T-2).
 1. The purpose of a supplemental technical review (T-2) is to allow the Department to review technical information submitted by the applicant in response to a statement of technical deficiencies issued in T-1.
 2. A T-2 review shall result in a decision to approve or disapprove a Grant of Environmental Restriction.
 3. Except as agreed pursuant to 310 CMR 40.1072(5)(a), the Department shall have an additional 45 days for a T-2 review from the day after the receipt of material submitted by the applicant in response to a statement of technical deficiency.
 4. The Department may request more information at any time during the T-2 review.
- (6) Approvals of Grants of Environmental Restrictions.
 - (a) For each application for a Grant of Environmental Restriction, the Department shall prepare a statement specifying that the application is approvable, or, as appropriate, a statement describing the basis for disapproving the application.
 - (b) The Department's review shall be limited to determining whether the proposed Grant of Environmental Restriction meets the requirements of 310 CMR 40.1071.
 - (c) The Department's review shall not encompass issues concerning the adequacy of response actions at the subject disposal site (including whether the release and any associated risks have been adequately characterized, and whether the Activity and Use Limitation Opinion provides an adequate basis for a finding that a level of No Significant Risk exists or has been achieved) or that substantial hazards have been eliminated.
 - (d) The Department may disapprove an application for a Grant of Environmental Restriction if it determines that:
 1. the application does not provide adequate and appropriate identification of the property to be subject to the Grant of Environmental Restriction;

40.1072: continued

2. the person granting the Grant of Environmental Restriction is not the owner of record;
3. all prior interests in the Restricted Area have not been subordinated;
4. the activities to be restricted, permitted, performed, and conditioned are not clearly specified; or
5. the application is not completed by an applicable deadline, or contains information which the applicant reasonably knew or should have known was false or misleading.

40.1073: Environmental Restrictions for Disposal Sites Where the Department Conducts Response Actions

(1) The Department may impose Environmental Restrictions upon any disposal site for which the Department conducts a response action. Any Environmental Restriction imposed by the Department shall be recorded and/or registered in the appropriate Registry of Deeds and/or Land Registration Office.

(2) The Department may impose and record and/or register an Environmental Restriction if the property owner fails to record or register an Environmental Restriction in accordance with 310 CMR 40.1071, and may seek to recover the Costs thereof.

(3) In the event that the Department establishes an administrative record pursuant to 310 CMR 40.1300 for a response action that consists, in whole or in part, of the imposition of an Environmental Restriction by the Department, the Department shall include the Environmental Restriction in the administrative record.

(4) In the event that the Department does not establish an administrative record pursuant to 310 CMR 40.1300 for a response action that consists, in whole or in part, of the imposition of an Environmental Restriction by the Department, the Department shall provide to the following persons notice of such intent to impose an Environmental Restriction:

- (a) any owner of the property whose name and address is known to the Department;
- (b) any other person having a recorded or registered ownership interest in the property whose name and/or address is known to the Department;
- (c) any person having an unrecorded or unregistered ownership interest in the property whose interest, name and address is known to the Department; and
- (d) any person having an unrecorded or unregistered ownership interest in the property whose interest, name, and address is unknown to the Department.

(5) The notice required by 310 CMR 40.1073(4) shall include all of the following:

- (a) a statement of the Department's statutory and regulatory authority to record, register or file the Environmental Restriction;
- (b) a concise statement of the alleged factual and legal basis for the Environmental Restriction;
- (c) a statement that a person having an ownership interest in the property has a right to an adjudicatory hearing on such Environmental Restriction; and
- (d) a statement of the requirements that must be complied with by a person having an ownership interest in the property in order to avoid being deemed to have waived his or her right to an adjudicatory hearing.

(6) Each notice required by 310 CMR 40.1073(4)(a) shall be served by one or more of the following methods:

- (a) service in hand at the person's last known address or at the last known address of any officer, employee, or agent of the person authorized by appointment of the person or by law to accept service;
- (b) service in hand personally to the person, or to any officer, employee, or agent of the person authorized by appointment of the person or by law to accept service;
- (c) by certified mail, return receipt requested, addressed to the person's last known address, or to the last known address of any officer, employee, or agent of the person authorized by appointment of the person or by law to accept service; or
- (d) with respect to any person having an unrecorded or unregistered ownership interest in the property whose interest, name, or address is unknown to the Department, by publication in a newspaper of general circulation serving the community where the property is located.

40.1073: continued

(7) Subject to the provisions of 310 CMR 40.1073(8), in the event that the Department does not establish an administrative record pursuant to 310 CMR 40.1300, the following person's shall have the right to an adjudicatory hearing whenever the Department seeks to record and/or register an Environmental Restriction:

- (a) any owner of the property;
- (b) any other person having a recorded or registered ownership interest in the property; and
- (c) any person having an unrecorded or unregistered ownership interest in the property.

(8) Any person who has a right to an adjudicatory hearing pursuant to 310 CMR 40.1073(7) shall be deemed to have waived the right to an adjudicatory hearing unless the Department receives from such person a written statement that denies that the Department has a basis to record and/or register the Environmental Restriction, and does so subject to and in compliance with applicable provisions of 310 CMR 1.00: *Adjudicatory Proceedings*, within 21 days of the following:

- (a) with respect to the notice required by 310 CMR 40.1073(4)(a), (b) or (c), the date of issuance of the notice in accordance with 310 CMR 40.1073(6)(a), (b) or (c); or
- (b) with respect to the notice required by 310 CMR 40.1073(4)(d), the date of publication of the notice in accordance with 310 CMR 40.1073(6)(d).

(9) The Department shall not be required to prove any facts alleged by the Department in the notice required by 310 CMR 40.1073(4) unless such facts are expressly denied in the statement filed pursuant to 310 CMR 40.1073(8).

40.1074: Notice of Activity and Use Limitation

(1) General Requirements. At any disposal site or portion of a disposal site where a RP, PRP or Other Person is conducting a response action(s) for which a Notice of Activity and Use Limitation has been selected as a form of Activity and Use Limitation pursuant to 310 CMR 40.1070, the following requirements shall be met:

- (a) a Notice of Activity and Use Limitation shall include all of the information specified in 310 CMR 40.1074(2) and be fully documented using Form 1075 set forth in 310 CMR 40.1099;
- (b) the Activities and Uses, and obligations and conditions specified in a Notice of Activity and Use Limitation to maintain a level of No Significant Risk or No Substantial Hazard, shall be established in accordance with 310 CMR 40.0900 and 40.1012;
- (c) a Notice of Activity and Use Limitation shall be recorded and/or registered as specified in 310 CMR 40.1074(3);
- (d) Prior to the recording and/or registration of a Notice of Activity and Use Limitation pursuant to 310 CMR 40.1074(3), current holders of any record interest(s) in the area subject to the proposed Notice (including without limitation, owners, lessees, tenants, mortgagees, and holders of easements or licenses) shall be notified by certified mail, return receipt requested, of the existence and location of oil and/or hazardous material within such area and the terms of such proposed Notice. Such proposed Notice of Activity and Use Limitation shall not be recorded and/or registered until at least 30 days after such notification of current record interest holders has occurred, unless all parties receiving such notification provide a written waiver of the 30-day waiting period to the property owner;
- (e) the person(s) signing the Notice of Activity and Use Limitation shall submit a statement, on a form prescribed by the Department, certifying that:
 1. the person(s) or entity identified as the property owner(s) on the Notice owned the property at the time the Notice was recorded and/or registered pursuant to 310 CMR 40.1074(3); and
 2. record interest-holders were notified of the proposed Notice pursuant to 310 CMR 40.1074(1)(d);

(2) Contents of a Notice of Activity and Use Limitation. A Notice of Activity and Use Limitation shall be documented on Form 1075 or, in the case of CERCLA sites, on a form developed and approved by the Department, and shall contain the following information:

- (a) the location of the property, including:
 1. the property's street address;

40.1074: continued

2. a metes and bounds description of the parcel(s) of land which contain(s) the area that is subject to the Notice of Activity and Use Limitation;
 3. a reference to a survey plan of the parcel(s) of land which contain(s) the area that is subject to the Notice of Activity and Use Limitation, prepared by a Massachusetts Registered Land Surveyor, that has been recorded as a plan with the appropriate registry of deeds and/or a Land Court Plan;
 4. if the area subject to the Notice of Activity and Use Limitation comprises only a portion of the property described in 310 CMR 40.1074(2)(a)2., a metes and bounds description of the portion subject to the Notice of Activity and Use Limitation; and
 - a. (for registered land only) an 8½" x 11" survey plan, prepared by a Massachusetts Registered Land Surveyor, which shows the metes and bounds of the portion subject to the Notice of Activity and Use Limitation, attached as an exhibit to the Notice of Activity and Use Limitation; or
 - b. (for unregistered land only) a reference to a survey plan of the portion subject to the Notice of Activity and Use Limitation, prepared by a Massachusetts Registered Land Surveyor, that has been recorded as a plan with the appropriate registry of deeds; and
 5. an 8½" x 11" sketch plan, attached as an exhibit to the Notice of Activity and Use Limitation, showing the location of the portion subject to the Notice of Activity and Use Limitation in relation to the boundaries of the disposal site to the extent that the boundaries of the disposal site have been established;
- (b) name(s) of the property owner(s);
- (c) if a person(s) signing the Notice of Activity and Use Limitation is not an individual signing on his/her own behalf, but rather on behalf of an entity (LLC, LLP, limited partnership, *etc.*), or as trustee, executor, or attorney in fact, documentation consistent with conveyancing standards and practices verifying that the person(s) signing the Notice of Activity and Use Limitation has the authority to sign such document shall be attached as an exhibit to the Notice of Activity and Use Limitation. If the property owner is a corporation, such documentation shall consist of:
1. a Clerk's Certificate of Incumbency from the clerk of the corporation certifying that the person(s) signing the Notice of Activity and Use Limitation on behalf of the corporation held his or her position as of the date of the Notice of Activity and Use Limitation; or
 2. unless the person(s) signing the Notice of Activity and Use Limitation holds the position of both president or vice president and treasurer or assistant treasurer, a Clerk's Certificate from the clerk or secretary of the corporation certifying a corporate vote, resolution, or by-law authorizing the person(s) to do so;
- (d) the disposal site name and DEP Release Tracking Number(s);
- (e) a statement that specifies why the Notice of Activity and Use Limitation is appropriate to maintain a Permanent Solution and condition of No Significant Risk or maintain a Temporary Solution and condition of No Substantial Hazard;
- (f) a concise summary of the oil and/or hazardous material release event(s) or site history (*i.e.*, date of the release(s), to the extent known, release volumes(s), and response actions taken to address the release(s)) that resulted in the contaminated media subject to the Notice of Activity and Use Limitation;
- (g) a description of the contaminated media (*i.e.*, media type(s), contaminant type(s), approximate vertical and horizontal extent) subject to the Notice of Activity and Use Limitation;
- (h) a description of the Site Activities and Uses that are consistent with maintaining a Permanent Solution and condition of No Significant Risk or maintaining a Temporary Solution and condition of No Substantial Hazard with respect to exposures to oil and/or hazardous material, including but not limited to emergency excavation and repair of existing subsurface utilities, specific provisions for non-emergency excavation, and specific types of land uses and activities;
- (i) a description of the Site Activities and Uses that are inconsistent with maintaining a Permanent Solution and condition of No Significant Risk or maintaining a Temporary Solution and condition of No Substantial Hazard with respect to exposures to oil and/or hazardous material;

40.1074: continued

- (j) a description of the obligations and/or conditions that are necessary to meet the objectives of the Notice of Activity and Use Limitation, including, but not limited to the type and frequency of activities for the inspection and maintenance of, as applicable, barriers, Engineered Barriers, and Exposure Pathway Mitigation Measures, and, pursuant to 310 CMR 40.1025, the type and frequency of activities for the inspection, operation, maintenance of an Active Exposure Pathway Mitigation Measure and the requirements for remote monitoring and notification;
- (k) an agreement to reference this Notice in all future deeds, easements, mortgages, leases, licenses, occupancy agreements, or any other instruments which convey an interest in and/or a right to use the property subject to the Notice of Activity and Use Limitation;
- (l) reference to procedures to be followed to ensure that changes in the inconsistent and/or consistent activities and/or uses meet the objectives of the Notice of Activity and Use Limitation; and
- (m) the notarized signature(s) of the property owner(s), and the notarized signature and seal of the LSP of Record who certifies that in [his][her] Opinion the Notice of Activity and Use Limitation is consistent with a Permanent Solution or a Temporary Solution.

(3) Recording/Registering Notices. The property owner shall record and/or register any Notice of Activity and Use Limitation in the appropriate Registry of Deeds and/or Land Registration Office.

(4) Filing with the Department. Within 30 days of recording and/or registering any Notice of Activity and Use Limitation, the property owner shall submit the following to the Department:

- (a) a Registry copy of the Notice bearing the book and page/instrument number and/or document number; and
- (b) a Registry copy of the required survey plan(s) referenced in the Notice, bearing the plan book/plan number(s).

(5) Incorporation into Instruments of Transfer. Upon transfer of any interest in and/or a right to use the property or a portion thereof that is subject to a Notice of Activity and Use Limitation, the Notice of Activity and Use Limitation shall be incorporated either in full or by reference into all future deeds, easements, mortgages, leases, licenses, occupancy agreements or any other instrument of transfer. Within 30 days of recording or registering a deed conveying record title for a property which is subject in whole or in part to a Notice of Activity and Use Limitation, a copy of such deed containing said reference shall be submitted to the Department. This obligation shall attach both to the grantor and the grantee on such deed, provided that submission of such copy to the Department by either the grantor or the grantee shall satisfy this obligation for both of them.

40.1075: Form of Notice of Activity and Use Limitation

Any person who intends to limit the Site Activities and Uses of property through a Notice of Activity and Use Limitation shall complete Form 1075 set forth in 310 CMR 40.1099 in accordance with 310 CMR 40.1074, or, in the case of CERCLA sites, a form developed and approved by the Department.

40.1080: Changes in Site Activities and/or Uses or Other Site Conditions After an Activity and Use Limitation Has Been Filed

(1) Evaluation of Contemplated Site Activity and/or Use Changes. Where a Permanent or Temporary Solution is based upon certain restrictions, limitations and/or conditions on Site Activities and/or Uses, any contemplated Site Activity and/or Use that is not specifically permitted by an Activity and Use Limitation and that may invalidate the condition of No Significant Risk or No Substantial Hazard, whichever is applicable were it to occur, shall be evaluated by an LSP before such Site Activity and/or Use is implemented. Such evaluation shall be submitted to the Department using a transmittal form provided for such purpose and shall include:

40.1080: continued

- (a) an LSP Opinion on a form prescribed by the Department as to whether, based on an evaluation of the contemplated Site Activity and/or Use pursuant to the risk characterization process in 310 CMR 40.0900, a condition of No Significant Risk or No Substantial Hazard, whichever is applicable, will continue to exist if the contemplated changes in Site Activity and/or Use were to occur;
- (b) the risk characterization conducted pursuant to 310 CMR 40.0900 evaluating the contemplated Site Activity and/or Use on which the LSP Opinion in 310 CMR 40.1080(1)(a) is based; and
- (c) a response action plan in accordance with 310 CMR 40.1067 and 310 CMR 40.0000 that specifies any additional response actions necessary to maintain or achieve a condition of No Significant Risk or No Substantial Hazard for the contemplated Site Activity and/or Use and the objectives of the Activity and Use Limitation, if any such LSP Opinion indicates that a condition of No Significant Risk or No Substantial Hazard, whichever is applicable, would no longer be met as a result of the contemplated changes in Site Activity and/or Use.

(2) Procedures for Additional Response Actions. Additional response actions required to maintain a level of No Significant Risk or No Substantial Hazard, for the contemplated changes in Site Activities or Uses, shall be completed before the new or altered activities or uses commence in accordance with the following:

- (a) any additional response actions shall be conducted pursuant to 310 CMR 40.0000 and specifically 310 CMR 40.1067;
- (b) such response actions shall achieve a level of No Significant Risk or No Substantial Hazard, for the new/altered Site Activities or Uses contemplated for the disposal site;
- (c) the Activity and Use Limitation shall be amended or released as appropriate pursuant to 310 CMR 40.1081 to include the new or altered Site Activities or Uses identified in the LSP Opinion under 310 CMR 40.1080(1) before the new or altered Site Activities or Uses commence; and
- (d) a revised Permanent or Temporary Solution Statement, where applicable, shall be submitted to the Department to reflect any changes in conditions from the previous Permanent or Temporary Solution Statement within 60 days from completion of response actions.

(3) At any disposal site which relies, in whole or in part, upon a Grant of Environmental Restriction to maintain a level of No Significant Risk or No Substantial Hazard and where such Environmental Restriction is not granted in perpetuity, the RPs, PRPs and Other Persons liable and/or responsible for such site shall upon expiration of the Grant of Environmental Restriction either comply with the procedures set forth in 310 CMR 40.1080(1) and (2), or take any response actions required by 310 CMR 40.0000 to meet the objectives of the Grant of Environmental Restriction.

40.1081: Amendment of Activity and Use Limitations

(1) An Activity and Use Limitation shall be amended where pursuant to the LSP Opinion required by 310 CMR 40.1080 such amendment of an Activity and Use Limitation is deemed necessary to meet the objectives of the Activity and Use Limitation (*e.g.*, either to maintain a level of No Significant Risk, or No Substantial Hazard for the new or altered Site Activities and Uses).

(2) An Activity and Use Limitation may also be amended to expand or reduce the list(s) of restricted and/or permitted Site Activities and Uses, and obligations and/or conditions listed therein based on changed circumstances or other grounds.

(3) Amending a Grant of Environmental Restriction. Grant of Environmental Restriction shall be amended in accordance with the following:

- (a) an Amendment to Grant of Environmental Restriction shall be prepared using Form 1082A set forth in 310 CMR 40.1099;
- (b) if a person(s) signing the Amendment to Grant of Environmental Restriction is not an individual signing on his/her own behalf, but rather on behalf of an entity (LLC, LLP, limited partnership, etc.), or as trustee, executor, or attorney in fact, documentation of the person(s) signatory authority, as described in 310 CMR 40.1071(2)(c), shall be submitted as an exhibit to the Amendment to Grant of Environmental Restriction;

40.1081: continued

- (c) the Amendment to Grant of Environmental Restriction shall be submitted to the Department for the Commissioner's signature, with a certification of title issued to the Department certifying title in the Grantor and including all encumbrances of record, any necessary subordination agreements, the Activity and Use Limitation Opinion required by 310 CMR 40.1081(1) and the applicable fee pursuant to 310 CMR 4.00;
- (d) the Amendment to Grant of Environmental Restriction shall be recorded and/or registered by the property owner at the appropriate Registry(ies) of Deeds and/or Land Registration Office(s) within 30 days of the property owner's receipt from the Department of the amendment as approved by the Commissioner;
- (e) local officials and the public shall be informed of the Amendment to Grant of Environmental Restriction pursuant to 310 CMR 40.1403(7); and
- (f) within 30 days of recording and/or registering any Amendment to Grant of Environmental Restriction, the property owner shall submit to the Department:
 1. a certified Registry copy of the Amendment to Grant of Environmental Restriction bearing the book and page/instrument number and/or document number; and
 2. If the property subject to the Grant of Environmental Restriction is unregistered land, a Registry copy of the Grant of Environmental Restriction being amended.

(4) Amending a Notice of Activity and Use Limitation. A Notice of Activity and Use Limitation shall be amended in accordance with the following:

- (a) an Amendment to Notice of Activity and Use Limitation shall be prepared using the Form 1082B set forth in 310 CMR 40.1099;
- (b) if a person(s) signing the Amendment to Notice of Activity and Use Limitation is not an individual signing on his or her own behalf, but rather on behalf of an entity (LLC, LLP, limited partnership, *etc.*), or as trustee, executor, or attorney in fact, documentation of the person(s) signatory authority, as described in 310 CMR 40.1074(2)(c), shall be submitted as an exhibit to the Amendment to Notice of Activity and Use Limitation;
- (c) prior to the recording and/or registration of an Amendment to Notice of Activity and Use Limitation pursuant to 310 CMR 40.1081(4)(d), current holders of any record interest(s) in the area subject to the proposed Amendment to Notice of Activity and Use Limitation (including without limitation, owners, lessees, tenants, mortgagees, and holders of easements or licenses) shall be notified by the property owner by certified mail, return receipt requested, of the existence and location of oil and/or hazardous material within such area and the terms of such proposed Amendment to Notice of Activity and Use Limitation. Such proposed Amendment to Notice of Activity and Use Limitation shall not be recorded and/or registered until at least 30 days after such notification of current record interest holders has occurred, unless all parties receiving such notification provide a written waiver of the 30-day waiting period to the property owner;
- (d) the property owner shall record and/or register any Amendment to Notice of Activity and Use Limitation in the appropriate Registry of Deeds and/or Land Registration Office;
- (e) a Registry copy of the Amendment to Notice of Activity and Use Limitation shall be submitted to the Department with the LSP Opinion described in 310 CMR 40.1081(1);
- (f) the person(s) signing the Amendment to Notice of Activity and Use Limitation shall submit a statement, on a form prescribed by the Department, certifying that:
 1. the person(s) or entity identified as the property owner(s) on the Amendment to Notice of Activity and Use Limitation owned the property at the time the Amendment to Notice of Activity and Use Limitation was recorded and/or registered pursuant to 310 CMR 40.1081(4)(d); and
 2. record interest-holders were notified of the proposed Amendment to Notice of Activity and Use Limitation pursuant to 310 CMR 40.1081(4)(c);
- (g) local officials and the public shall be informed of the Amendment to Notice of Activity and Use Limitation pursuant to 310 CMR 40.1403(7); and
- (h) no later than 30 days after the recording and/or registration of the Amendment to Notice of Activity and Use Limitation, the following shall be submitted to the Department:
 1. a Registry copy of the Amendment to Notice of Activity and Use Limitation bearing the book and page/instrument number and/or document number;
 2. a Registry copy of the required survey plan(s) referenced in the Amendment to Notice of Activity and Use Limitation, bearing the plan book/plan number(s); and

40.1081: continued

3. if the property subject to the Activity and Use Limitation is unregistered land, a Registry copy of the Notice of Activity and Use Limitation being amended.

40.1082: Process for Amending Grant of Environmental Restriction

- (1) The Department shall review each application for an Amendment to a Grant of Environmental Restriction to ensure that it conforms to all requirements established herein for such instruments.
- (2) An application for an Amendment to Grant of Environmental Restriction shall consist of:
 - (a) a completed Form 1082A, set forth in 310 CMR 40.1099;
 - (b) all other applicable documents set forth in 310 CMR 40.1081; and
 - (c) a certification of title that meets the requirements of 310 CMR 40.1072(2).
- (3) An application for an Amendment to Grant of Environmental Restriction shall not be deemed complete if the Department determines that the application:
 - (a) fails to contain all required information listed in 310 CMR 40.1081;
 - (b) fails to include the applicable fee established by 310 CMR 4.10(10)(h)(4); or
 - (c) is incorrectly filled out.
- (4) The Department has no obligation to accept or review an incomplete Amendment to a Grant of Environmental Restriction application.
- (5) Processing an Application for an Amendment to Grant of Environmental Restriction. For purposes of 310 CMR 4.10(10)(h), the provisions of 310 CMR 40.1072 for computing time for reviews, conducting Administrative Completeness (AC-1 and AC-2) and Technical Reviews (T-1 and T-2), and for approving or disapproving an application shall apply to the Department's review of a proposed Amendment to Grant of Environmental Restriction.
- (6) An Amendment to Grant of Environmental Restriction shall become effective upon recording and/or registering with the appropriate Registry of Deeds and/or Land Registration Office.

40.1083: Release or Termination of Activity and Use Limitations

- (1) Release of Activity and Use Limitation.
 - (a) In cases where, as a result of additional response actions pursuant to 310 CMR 40.0000 conducted at a disposal site or a portion of a disposal site, a recorded and/or registered Activity and Use Limitation is no longer necessary to maintain a level of No Significant Risk, or No Substantial Hazard, such Activity and Use Limitation shall be released as follows:
 1. an LSP Opinion shall be provided on a form prescribed by the Department which explains why the Activity and Use Limitation is no longer necessary to maintain a level of No Significant Risk or No Substantial Hazard;
 2. the Activity and Use Limitation shall be released in accordance with 310 CMR 40.1083(1)(d) or (e), whichever is appropriate; and
 3. a revised Permanent or Temporary Solution Statement and supporting documentation pursuant to 310 CMR 40.1056 reflecting any changes in the category of Permanent or Temporary Solution as the result of additional response actions and the release or termination shall be submitted to the Department.
 - (b) In cases where the termination of a Notice of Activity and Use Limitation is required pursuant to 310 CMR 40.1085, the Notice of Activity and Use Limitation shall be terminated in accordance with 310 CMR 40.1083(1)(e). No LSP Opinion shall be required to terminate the Notice of Activity and Use Limitation, provided that the provisions of 310 CMR 40.1085 are satisfied.
 - (c) In cases where the Activity and Use Limitation is being released because additional response actions are necessary to support the conclusion that a condition of No Significant Risk or a condition of No Substantial Hazard has been achieved, the Activity and Use Limitation shall be released in accordance with 310 CMR 40.1083(1)(d) or (e), whichever is applicable.

40.1083: continued

(d) Releasing a Grant of Environmental Restriction. A Grant of Environmental Restriction shall be released in accordance with the following procedures:

1. a Release of Grant of Environmental Restriction shall be prepared using Form 1084A or form 1084E set forth in 310 CMR 40.1099, whichever is applicable, and submitted to the Department for the Commissioner's signature and accompanied by the appropriate fee as established in 310 CMR 4.00: *Timely Action Schedule and Fee Provisions*;
2. within 30 days of the date of the property owner's receipt from the Department of the approved Release of Grant of Environmental Restriction, the Release of Grant of Environmental Restriction shall be recorded and/or registered at the appropriate Registry of Deeds and/or Land Registration Office;
3. local officials and the public shall be informed of the Release of Grant of Environmental Restriction pursuant to 310 CMR 40.1403(7); and
4. within 30 days of recording and/or registering any Release of Grant of Environmental Restriction, the property owner shall submit to the Department:
 - a. a certified Registry copy of the Release of Grant of Environmental Restriction bearing the book and page/instrument number and/or document number; and
 - b. if the property subject to the Grant of Environmental Restriction is unregistered land, a Registry copy of the Grant of Environmental Restriction being released.

(e) A Notice of Activity and Use Limitation shall be terminated in accordance with the following procedures:

1. a Termination of Notice of Activity and Use Limitation shall be prepared using the appropriate form set forth in 310 CMR 40.1099;
2. if a person(s) signing the Termination of Notice of Activity and Use Limitation is not an individual signing on his or her own behalf, but rather on behalf of an entity (LLC, LLP, limited partnership, *etc.*), or as trustee, executor, or attorney in fact, documentation of the person(s) signatory authority, as described in 310 CMR 40.1074(2)(c), shall be submitted as an exhibit to the Termination of Notice of Activity and Use Limitation;
3. the Termination of Notice of Activity and Use Limitation shall be recorded and/or registered at the appropriate Registry of Deeds and/or Land Registration Office;
4. the person(s) signing the Termination of Notice of Activity and Use Limitation shall submit a statement, on a form prescribed by the Department, certifying that the person(s) or entity identified as the property owner(s) on the termination owned the property at the time the termination was recorded and/or registered pursuant to 310 CMR 40.1083(1)(e)3.;
5. local officials and the public shall be informed of the Termination of Notice of Activity and Use Limitation pursuant to 310 CMR 40.1403(7); and
6. within 30 days of recording and/or registering any Termination of Notice of Activity and Use Limitation, the property owner shall submit to the Department a certified Registry copy of the Termination of Notice of Activity and Use Limitation bearing the book and page/instrument number and/or document number.

(2) Partial Release of Grant of Environmental Restriction. In cases where, as a result of additional response actions pursuant to 310 CMR 40.0000 conducted at a disposal site or a portion of a disposal site, a recorded and/or registered Grant of Environmental Restriction is no longer necessary to maintain a level of No Significant Risk or to eliminate a substantial hazard at a portion of the property subject to the Grant of Environmental Restriction, such Grant of Environmental Restriction shall be partially released as to such portion of the property pursuant to the following procedures:

- (a) an LSP Opinion shall be provided on a form prescribed by the Department which explains why the Grant of Environmental Restriction is no longer necessary to maintain a level of No Significant Risk or to eliminate a substantial hazard at the portion of the property;
- (b) a Partial Release of Grant of Environmental Restriction shall be prepared using Form 1083A set forth in 310 CMR 40.1099 and submitted to the Department for the Commissioner's signature, accompanied by the LSP Opinion described in 310 CMR 40.1083(2)(a) and the appropriate fee established in 310 CMR 4.00: *Timely Action Schedule and Fee Provisions*;
- (c) a Partial Release of Grant of Environmental Restriction shall include a metes and bounds description of the portion of the property being released from the Grant of Environmental Restriction, and:

40.1083: continued

1. (registered land only) an 8½" x 11" survey plan, attached as an exhibit to the Partial Release of Grant of Environmental Restriction, prepared by a Massachusetts Registered Land Surveyor, which shows the metes and bounds of the portion of the property being released; or
 2. (registered land only) a reference to the Land Court Plan which shows the boundaries of the portion of the property being released; or
 3. (unregistered land only) reference to a survey plan of the portion of the property being released, prepared by a Massachusetts Registered Land Surveyor, meeting registry plan recording requirements, and recorded as a plan with the appropriate registry of deeds.
- (d) within 30 days of the date of the property owner's receipt from the Department of the approved Partial Release of Grant of Environmental Restriction, the Partial Release of Grant of Environmental Restriction shall be recorded and/or registered at the appropriate Registry of Deeds and/or Land Registration Office.
- (e) local officials and the public shall be informed of the Partial Release of Grant of Environmental Restriction pursuant to 310 CMR 40.1403(7);
- (f) a revised Response Action Outcome Statement and supporting documentation pursuant to 310 CMR 40.1056 reflecting any changes in the class of Response Action Outcome as the result of additional response actions and the Partial Release of Grant of Environmental Restriction shall be submitted to the Department; and
- (g) within 30 days of recording and/or registering any Partial Release of Grant of Environmental Restriction, the property owner shall submit to the Department:
1. a certified Registry copy of the Partial Release of Grant of Environmental Restriction bearing the book and page/instrument number and/or document number;
 2. if the property subject to the Grant of Environmental Restriction is unregistered land, a Registry copy of the Grant of Environmental Restriction being partially released; and
 3. a Registry copy of the required survey plan(s) referenced in the Partial Release of Grant of Environmental Restriction bearing the plan book/plan number(s).

(3) Partial Termination of a Notice of Activity and Use Limitation. In cases where, as a result of additional response actions pursuant to 310 CMR 40.0000 conducted at a disposal site or a portion of a disposal site, a recorded and/or registered Notice of Activity and Use Limitation is no longer necessary to maintain a level of No Significant Risk or No Substantial Hazard at a portion of the property subject to the Notice of Activity and Use Limitation, such Notice of Activity and Use Limitation shall be partially terminated as to such portion of the property pursuant to the following procedures:

- (a) an LSP Opinion shall be provided on a form prescribed by the Department which explains why the Notice of Activity and Use Limitation is no longer necessary to maintain a level of No Significant Risk or No Substantial Hazard at the portion of the property;
- (b) a Partial Termination of Notice of Activity and Use Limitation shall be prepared using Form 1083B set forth at 310 CMR 40.1099;
- (c) if a person(s) signing the Partial Termination of Notice of Activity and Use Limitation is not an individual signing on his or her own behalf, but rather on behalf of an entity (LLC, LLP, limited partnership, *etc.*), or as trustee, executor, or attorney in fact, documentation of the person(s) signatory authority, as described in 310 CMR 40.1074(2)(c), shall be submitted as an exhibit to the Partial Termination of Notice of Activity and Use Limitation;
- (d) the Partial Termination of Notice of Activity and Use Limitation shall include a metes and bounds description of the portion of the property for which the Notice of Activity and Use Limitation is no longer required, and:
 1. (registered land only) an 8½" x 11" survey plan, prepared by a Massachusetts Registered Land Surveyor, which shows the metes and bounds of the portion of the property; or
 2. (registered land only) a reference to the Land Court Plan which shows the boundaries of the portion of the property; or
 3. (unregistered land only) reference to a survey plan of the portion of the property, prepared by a Massachusetts Registered Land Surveyor, meeting registry plan recording requirements, and recorded as a plan with the appropriate registry of deeds.

40.1083: continued

- (e) the Partial Termination of Notice of Activity and Use Limitation shall be recorded and/or registered by the property owner at the appropriate Registry of Deeds and/or Land Registration Office;
- (f) the person(s) signing the Partial Termination of Notice of Activity and Use Limitation shall submit a statement, on a form prescribed by the Department, certifying that the person(s) or entity identified as the property owner(s) on the Partial Termination of Notice of Activity and Use Limitation owned the property at the time the Partial Termination of Notice of Activity and Use Limitation was recorded and/or registered pursuant to 310 CMR 40.1083(3)(e);
- (g) local officials and the public shall be informed of the Partial Termination of Notice of Activity and Use Limitation pursuant to 310 CMR 40.1403(7);
- (h) a revised Permanent or Temporary Solution Statement and supporting documentation pursuant to 310 CMR 40.1056 reflecting any changes in the category of Permanent or Temporary Solution as the result of additional response actions and the Partial Termination of Notice of Activity and Use Limitation shall be submitted to the Department; and
- (i) within 30 days of recording and/or registering any Partial Termination of Notice of Activity and Use Limitation, the property owner shall submit to the Department:
 - 1. a Registry copy of the Partial Termination of Notice of Activity and Use Limitation bearing the book and page/instrument number and/or document number;
 - 2. if the property subject to the Notice of Activity and Use Limitation is unregistered land, a Registry copy of the Notice of Activity and Use Limitation being partially terminated; and
 - 3. a Registry copy of the required survey plan(s) referenced in the Partial Termination of Notice of Activity and Use Limitation bearing the plan book/plan number(s).

40.1084: Process for Implementing a Release of Grant of Environmental Restriction or Partial Release of Grant of Environmental Restriction

- (1) The Department shall conduct a review of each application for a Release of Grant of Environmental Restriction or Partial Release of Grant of Environmental Restriction to ensure that it conforms to all legal requirements for such instruments.
- (2) An application for a Release of Grant of Environmental Restriction shall consist of a completed Form 1084A, set forth in 310 CMR 40.1099, in addition to all other applicable documents set forth in 310 CMR 40.1083.
- (3) An application for a Partial Release of Grant of Environmental Restriction shall consist of a completed Form 1083A, set forth in 310 CMR 40.1099, in addition to all other applicable documents set forth in 310 CMR 40.1083.
- (4) An application for a Release of Grant of Environmental Restriction or Partial Release of Grant of Environmental Restriction shall not be deemed complete if the Department determines that the application:
 - (a) fails to contain all required information listed in 310 CMR 40.1083;
 - (b) fails to include the applicable fee established by 310 CMR 4.10(10)(i)4.; or
 - (c) is incorrectly filled out.
- (5) The Department has no obligation to accept or review an incomplete application for a Release of Grant of Environmental Restriction or Partial Release of Grant of Environmental Restriction.
- (6) Processing a Release of Grant of Environmental Restriction Application or Partial Release of Grant of Environmental Restriction Application. For purposes of 310 CMR 4.10(10)(i), the provisions of 310 CMR 40.1072 for computing time for reviews, conducting Administrative Completeness (AC-1 and AC-2) and Technical Reviews (T-1 and T-2), and approving or disapproving of an application shall apply to the Department's review of a proposed Release of Grant of Environmental Restriction or Partial Release of Grant of Environmental Restriction.

40.1084: continued

(7) A Release of Grant of Environmental Restriction or Partial Release of Grant of Environmental Restriction shall become effective upon recordation and/or registration with the appropriate Registry of Deeds and/or Land Registration Office.

40.1085: Correction of Notices of Activity and Use Limitation

(1) Except as provided by 310 CMR 40.1085(2), scrivener's errors and other non-substantive errors or omissions in a recorded Notice of Activity and Use Limitation, or in any Amendment, Partial Termination or Termination thereof, may be corrected by implementing a Confirmatory Activity and Use Limitation in accordance with this section;

(2) A Confirmatory Activity and Use Limitation may not be used if the property subject to the Notice of Activity and Use Limitation is registered land. In such cases, the errors must be corrected by either:

- (a) terminating the Notice of Activity and Use Limitation in accordance with 310 CMR 40.1083(1)(b) and immediately implementing a new Notice of Activity and Use Limitation in substitution thereof, in accordance with 310 CMR 40.1074; or
- (b) if the instrument being corrected is an Amendment to Notice of Activity and Use Limitation, implementing a new amendment in accordance with 310 CMR 40.1081.

(3) Confirmatory Activity and Use Limitations may include any of the following:

- (a) Confirmatory Notice of Activity and Use Limitation;
- (b) Confirmatory Amendment to Notice of Activity and Use Limitation;
- (c) Confirmatory Partial Termination of Notice of Activity and Use Limitation; and
- (d) Confirmatory Termination of Notice of Activity and Use Limitation.

(4) Confirmatory Activity and Use Limitations shall be implemented in accordance with the following:

- (a) a Confirmatory Activity and Use Limitation shall be prepared using the appropriate form set forth in 310 CMR 40.1099;
- (b) if a person(s) signing the Confirmatory Activity and Use Limitation is not an individual signing on his/her own behalf, but rather on behalf of an entity (LLC, LLP, limited partnership, *etc.*), or as trustee, executor, or attorney in fact, documentation of the person(s) signatory authority, as described in 310 CMR 40.1074(2)(c), shall be submitted as an exhibit to the Confirmatory Activity and Use Limitation;
- (c) the Confirmatory Activity and Use Limitation shall be recorded in the appropriate Registry of Deeds;
- (d) the person(s) signing the Confirmatory Activity and Use Limitation shall submit a statement, on a form prescribed by the Department, certifying that the person(s) or entity identified as the property owner(s) on the Confirmatory Activity and Use Limitation owned the property at the time the Confirmatory Activity and Use Limitation was recorded and/or registered pursuant to 310 CMR 40.1085(4)(c); and
- (e) no later than 30 days after the recording of the Confirmatory Activity and Use Limitation, the following shall be submitted to the Department:
 - 1. a Registry copy of the Confirmatory Activity and Use Limitation; and
 - 2. a Registry copy of any required survey plan(s) referenced in the Confirmatory Activity and Use Limitation bearing the plan book/plan number(s).

40.1090: Public Involvement Requirements

(1) Public Involvement Activities shall be conducted in accordance with 310 CMR 40.1400 through 40.1406. Public Involvement Activities relevant to Permanent or Temporary Solution Opinions specifically include 310 CMR 40.1403(3)(f) and may include, but are not limited to, those activities set forth at 310 CMR 40.1403(7) and (8) and 40.1406.

(2) If the disposal site for which a Permanent or Temporary Solution Opinion is rendered is a Public Involvement Plan Site, then a Public Involvement Plan that is consistent with 310 CMR 40.1405 shall be implemented.

Form 1072A

GRANT OF ENVIRONMENTAL RESTRICTION
M.G.L. c. 21E, § 6 and 310 CMR 40.0000

DEP Site Name: _____
DEP Release Tracking No.(s) _____

This GRANT OF ENVIRONMENTAL RESTRICTION is made as of this ____ day of _____, 20____, by _____, of _____ (Town/City), _____ County, _____ (State) ("Grantor").

W I T N E S S E T H

WHEREAS, _____ is the owner(s) in fee simple of that [those] certain parcel(s) of [vacant] land located in _____ (Town/City), _____ County, Massachusetts [with the buildings and improvements thereon], pursuant to [a deed recorded with the _____ Registry of Deeds in Book _____, Page _____]; [source of title other than by deed]; and/or [Certificate of Title No. _____ issued by the Land Registration Office of the _____ Registry District];

WHEREAS, said parcel(s) of land, which is more particularly bounded and described in Exhibit A, attached hereto and made a part hereof ("Property") is subject to this Grant of Environmental Restriction. The Property is shown on [a plan recorded with the _____ County Registry of Deeds in Plan Book _____, Plan _____], and/or on [Land Court Plan No. _____];

[WHEREAS, a portion of the Property ("Portion of the Property") is subject to this Grant of Environmental Restriction. The Portion of the Property is more particularly bounded and described in Exhibit A-1, attached hereto and made a part hereof. The Portion of the Property is shown on [a plan recorded with the _____ Registry of Deeds in Plan Book _____, Plan _____] and/or on [a sketch plan attached hereto and filed herewith for registration];

WHEREAS, the [Property] ["Portion of the Property"] comprises [all][part of] a disposal site as the result of a release of oil and/or hazardous material. Exhibit B is a sketch plan showing the location of the [Property][Portion of the Property] subject to this Grant of Environmental Restriction in relation to the boundaries of said disposal site existing within the limits of the Property and to the extent such boundaries have been established. Exhibit B is attached hereto and made a part hereof; and

WHEREAS, one or more response actions have been selected for [the Disposal Site][Portion of the Disposal Site] in accordance with M.G.L. c. 21E ("Chapter 21E") and the Massachusetts Contingency Plan, 310 CMR 40.0000 ("MCP"). Said response actions are based upon (a) the restriction of human access to and contact with oil and/or hazardous material in soil [and/or groundwater] and/or (b) the restriction of certain activities occurring in, on, through, over or under the [Property] [Portion of the Property]. The basis for such restrictions is set forth in an Activity and Use Limitation Opinion ("AUL Opinion") dated _____, (which is attached hereto as Exhibit C and made a part hereof);

NOW, THEREFORE, in accordance with the provisions of M.G.L. c. 21E, § 6 and the MCP, I, _____ ("Grantor") hereby GRANT to the DEPARTMENT OF ENVIRONMENTAL PROTECTION, an agency established under the laws of the Commonwealth of Massachusetts, having its principal office at One Winter Street, Boston, Massachusetts 02108 ("DEP"), as a gift, with QUITCLAIM COVENANTS, an ENVIRONMENTAL RESTRICTION, ("Restriction") in, on, through, over and under the [Property] [Portion of the Property] ("Restricted Area").

Said Restriction is subject to the following terms and conditions:

1. Restricted Uses and Activities. Grantor shall not perform, suffer, allow or cause any person to perform any of the following activities in, on, upon, through, over or under the Restricted Area, or any of the following uses to be made of the Restricted Area:

(i) [List restricted uses]; and/or

Form 1072A: continued

(ii) [List restricted activities];

(iii) Except as provided in Paragraphs (2) and (4) of this Grant, there shall be no excavation or removal of any loam, peat, gravel, sand, rock or other mineral or natural resource; and

(iv) Any action or inaction which, in the Opinion of a person licensed by the Board of Registration of Waste Cleanup Professionals, or any successor agency (a holder of such license hereinafter referred to as "LSP"), is reasonably likely to:

(a) (select one) [Create a significant risk of harm to health, safety, public welfare or the environment] [Create a substantial hazard];

(b) [Where remedial action includes a surface cover, cap or sealant designed to contain or reduce exposure to the oil and/or hazardous material, disturb the structural integrity of such cover, without first obtaining the express written consent of an LSP].

2. Permitted Uses and Activities. Grantor expressly reserves the right to perform, suffer, allow or to cause any person to perform any of the following activities in, on, through, over or under the Restricted Area or any of the following uses to be made of the Restricted Area:

(i) _____;

(ii) _____;

(iii) Such other activities or uses which, in the Opinion of an LSP, shall present no greater risk of harm to health, safety, public welfare or the environment than the activities and uses set forth in this Paragraph; and

(iv) Such other activities and uses not identified in Paragraph 1 as being Restricted Uses and Activities.

3. Obligations and Conditions. Grantor affirmatively agrees to perform the following activities [and][or] to maintain the following conditions at the Restricted Area in order to (select one) [maintain a condition of No Significant Risk] [eliminate a substantial hazard] (such conditions and terms defined in 310 CMR 40.0000) as set forth in the AUL Opinion.

[Insert specific activities and conditions set forth in the AUL Opinion, if any.]

4. Emergency Excavation. If it becomes necessary to excavate as part of a response to an emergency (*e.g.*, repairing utility lines or responding to a fire or flood), and such excavation could result in a significant risk of harm from exposure to oil and/or hazardous material at the Restricted Area, the requirements of Paragraph (1) (iii) of this Grant may be suspended, provided Grantor complies with the requirements set forth in 310 CMR 40.0320, and:

(i) Notifies DEP of such emergency as soon as possible but no more than two hours after having learned of such emergency;

(ii) Limits the actual disturbance involved in such excavation to the minimum reasonably necessary to adequately respond to the emergency;

(iii) Implements all measures necessary to limit actual or potential risk to health, safety, public welfare or the environment, including the following:

1. _____;

2. _____;

3. _____; and

Form 1072A: continued

(iv) Engages an LSP to oversee the implementation of this Paragraph, and to prepare and oversee the implementation of a written plan which, in the LSP's Opinion, will restore the Restricted Area to a condition(s) that meets the objectives of the Grant of Environmental Restriction in accordance with 310 CMR 40.1071(2)(1)

5. Easements. In establishing this Restriction, Grantor hereby grants the following easements for the term of this Grant to DEP, its agents, contractors, subcontractors, and employees:

(i) To pass and repass over [the Property] [the Restricted Area] for purposes of inspecting the Restricted Area to insure compliance with the terms of this Restriction; and

(ii) In, on, through, over and under the Restricted Area for purposes of conducting subsurface investigations, installing groundwater monitoring wells, and conducting other investigations of the Restricted Area and/or remediation activities consistent with M.G.L. c. 21E and the MCP.

6. Severability. Grantor hereby agrees, in the event that a court or other tribunal determines that any provision of this instrument is invalid or unenforceable:

(i) That any such provision shall be deemed automatically modified to conform to the requirements for validity and enforceability as determined by such court or tribunal; or

(ii) That any such provision that, by its nature, cannot be so modified, shall be deemed deleted from this instrument as though it had never been included.

In either case, the remaining provisions of this instrument shall remain in full force and effect.

7. Enforcement. Grantor expressly acknowledges that a violation of the terms of this instrument could result in the following:

(i) the assessment of penalties and other action by DEP to enforce the terms of this Restriction, pursuant to M.G.L. c. 21E and the MCP; and/or

(ii) upon a determination by a court of competent jurisdiction, the issuance of criminal and civil penalties, and/or equitable remedies which could include the issuance of an order to modify or remove any improvements constructed in violation of the terms of this Restriction.

8. Provisions to Run with the Land. This Restriction establishes certain rights, liabilities, agreements and obligations for the [Property] [Restricted Area], or any portion thereof, which shall run with the [Property] [Restricted Area], or any portion thereof, for the term of this Restriction. Grantor hereby covenants for himself/herself/itself and his/her/its executors, administrators, heirs, successors and assigns, to stand seized and hold title to the [Property] [Restricted Area], or any portion thereof, subject to this Restriction.

The rights granted to DEP, its successors and assigns, do not provide, however, that a violation of this Restriction shall result in a forfeiture or reversion of Grantor's title to the Restricted Area.

9. Concurrence Presumed. It is agreed that:

(i) Grantor and all parties claiming by, through or under Grantor shall be deemed to be in accord with the provisions of this document; and

(ii) all such parties and any party claiming by, through or under them, and their respective agents, contractors, sub-contractors and employees, also agree that the Restriction herein established shall not be violated and that their respective interests in the [Property] [Restricted Area] shall be subject to the provisions herein set forth.

Form 1072A: continued

10. Incorporation into Deeds, Mortgages, Leases and Instruments of Transfer. Grantor hereby agrees to incorporate this Restriction, in full or by reference, into all future deeds, easements, mortgages, leases, licenses, occupancy agreements or any other instrument of transfer by which an interest in and/or a right to use the [Property] [Restricted Area], or any portion thereof, is conveyed.

11. Amendment and Release. This Restriction may be amended or released in accordance with M.G.L. c. 21E and the MCP (310 CMR 40.1080 *et seq.*).

12. No Dedication Intended. Nothing herein shall be construed to be a gift or dedication of the [Property] [Restricted Area] to DEP or to the general public for any purpose whatsoever.

13. Term. This Restriction shall run [in perpetuity] [for a period of ____ years] and is intended to conform to M.G.L. c. 184, § 26.

14. Rights Reserved. It is expressly agreed that acceptance of this Restriction by DEP shall not express nor imply DEP approval of the adequacy of this or any other response action affecting the [Disposal Site][Portion of Disposal Site]. Acceptance of this Restriction shall not operate to bar, diminish, nor in any way affect any legal or equitable right of DEP to issue any future order with respect to the (select one) [Disposal Site][Portion of the Disposal Site] or in any way affect any other claim, action, suit, cause of action, or demand which DEP may have with respect to the [Disposal Site][Portion of the Disposal Site].

This Restriction shall become effective upon its recordation and/or registration with the appropriate Registry of Deeds and/or Land Registration Office.

As this Restriction is a gift, no Massachusetts deed excise stamps are affixed hereto, none being required by law.

Note: Pursuant to 310 CMR 40.1074(5), upon transfer of any interest in or a right to use the property or a portion thereof that is subject to this Notice of Activity and Use Limitation, the Notice of Activity and Use Limitation shall be incorporated either in full or by reference into all future deeds, easements, mortgages, leases, licenses, occupancy agreements or any other instrument of transfer. Within 30 days of so incorporating the Notice of Activity and Use Limitation in a deed that is recorded or registered, a copy of such deed shall be submitted to the Department of Environmental Protection.

[CONFIRMATORY] NOTICE OF ACTIVITY AND USE LIMITATION

M.G.L. c. 21E, § 6 and 310 CMR 40.0000

Disposal Site Name: _____
DEP Release Tracking No.(s): _____

This [Confirmatory] Notice of Activity and Use Limitation ("Notice") is made as of this _____ day of _____, 20____, by _____ [Name and address of property owner(s)], together with his/her/its/their successors and assigns (collectively "Owner").

W I T N E S S E T H:

WHEREAS, _____ (Name of Owner(s)), [is][are] the owner(s) in fee simple of [that][those] certain parcel(s) of [vacant] land located in _____ (Town/City), _____ County, Massachusetts [with the buildings and improvements thereon], pursuant to [a deed recorded with the _____ Registry of Deeds in Book _____, Page _____]; [source of title other than by deed]; and/or [Certificate of Title No. _____ issued by the Land Registration Office of the _____ Registry District];

WHEREAS, said parcel(s) of land, which is more particularly bounded and described in Exhibit A, attached hereto and made a part hereof ("Property") is subject to this Notice of Activity and Use Limitation. The Property is shown on [a plan recorded in the _____ Registry of Deeds in Plan Book _____, Plan _____], and/or on [Land Court Plan No. _____];

[WHEREAS, a portion of the Property ("Portion of the Property") is subject to this [Notice of Activity and Use Limitation]. The Portion of the Property is more particularly bounded and described in Exhibit A-1, attached hereto and made a part hereof. The Portion of the Property is shown on [a plan recorded with the _____ Registry of Deeds in Plan Book _____, Plan _____], and/or on [a sketch plan attached hereto and filed herewith for registration];

WHEREAS, the [Property] [Portion of the Property] comprises [all][part of] a disposal site as the result of [a] release[(s)] of oil and/or hazardous material.

Exhibit B is a sketch plan showing the relationship of the [Property][Portion of the Property] subject to this Notice of Activity and Use Limitation to the boundaries of said disposal site existing within the limits of the Property and to the extent such boundaries have been established. Exhibit B is attached hereto and made a part hereof; and

WHEREAS, one or more response actions have been selected for the [Disposal Site][Portion of the Disposal Site] in accordance with M.G.L. c. 21E ("Chapter 21E") and the Massachusetts Contingency Plan, 310 CMR 40.0000 ("MCP"). Said response actions are based upon (a) the restriction of human access to and contact with oil and/or hazardous material in soil [and/or groundwater] and/or (b) the restriction of certain activities occurring in, on, through, over or under the [Property] [Portion of the Property]. A description of the basis for such restrictions, and the oil and/or hazardous material release event(s) or site history that resulted in the contaminated media subject to the Notice of Activity and Use Limitation is attached hereto as Exhibit C and made a part hereof (Provide the following information in Exhibit C: (a) a statement that specifies why the Notice of Activity and Use Limitation is appropriate to maintain a Permanent Solution and condition of No Significant Risk or maintain a Temporary Solution and condition of No Substantial Hazard; (b) a description of the oil and/or hazardous material release event(s) or site history that resulted in the contaminated media subject to the Notice of Activity and Use Limitation (*i.e.*, date of the release(s), to the extent known, release volumes(s), and response actions taken to address the release(s); and (c) a description of the contaminated media (*i.e.*, media type(s), approximate vertical and horizontal extent) subject to the Notice of Activity and Use Limitation.);

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

Form 1075: continued

NOW, THEREFORE, notice is hereby given that the activity and use limitations set forth in this Notice of Activity and Use Limitation are as follows:

1. Activities and Uses Consistent with Maintaining (select one) [No Significant Risk] [No Substantial Hazard] Conditions. The following Activities and Uses are consistent with maintaining (select one) [a Permanent Solution and a condition of No Significant Risk][a Temporary Solution and a condition of No Substantial Hazard] and, as such, may occur on the [Property][Portion of the Property] pursuant to 310 CMR 40.0000:

(i) ;

(ii) ;

(iii) Such other activities or uses which, in the Opinion of a Licensed Site Professional, shall present no greater risk of harm to health, safety, public welfare or the environment than the activities and uses set forth in this Paragraph; and

(iv) Such other activities and uses not identified in Paragraph 2 as being Activities and Uses Inconsistent with (select one)[maintaining No Significant Risk][No Substantial Hazard]Conditions.

2. Activities and Uses Inconsistent with (select one)[Maintaining No Significant Risk][No Substantial Hazard] Conditions. The following Activities and Uses are inconsistent with maintaining (select one) [a Permanent Solution and a condition of No Significant Risk][a Temporary Solution and a condition of No Substantial Hazard] pursuant to 310 CMR 40.0000, and, as such, may not occur on the[Property][Portion of the Property]:

(i) ;

(ii) ; and

(iii) .

3. Obligations and Conditions. The following obligations and/or conditions are necessary and shall be undertaken and/or maintained at the [Property] [Portion of the Property] to (select one) [maintain a Permanent Solution and a condition of No Significant Risk] [maintain a Temporary Solution and a condition of No Substantial Hazard] :

(i) ;

(ii) ; and

(iii) .

(For a Permanent Solution with Conditions that relies upon the operation and maintenance of an Active Exposure Pathway Mitigation Measure pursuant to 310 CMR 40.1025, include the following in the listed Obligations and Conditions:

[(i) The Active Exposure Pathway Mitigation Measure comprised of (insert description of the system type) located (specify where on the property the system is located) shall be operated according to the operating regimen specified in the Permanent Solution Statement submitted to the Department of Environmental Protection to ensure a level of No Significant Risk is maintained for the Receptor(s) of concern under normal operating conditions;

(ii) The Active Exposure Pathway Mitigation Measure shall employ remote monitoring technology that alerts the property owner and operator and the Department of Environmental Protection immediately upon loss of power, mechanical failure or other significant disruption of the effectiveness of the system;

(iii) In the event of any suspension or failure of the Active Exposure Pathway Mitigation Measure, immediate steps shall be taken to return the Active Exposure Pathway Mitigation Measure to full operating condition;

Form 1075: continued

- (iv) If such suspension or failure of the system lasts 30 consecutive days, written notice shall be provided to both Department of Environmental Protection and any non-transient building occupant who may have experienced exposure to oil and/or hazardous material as the result of the system failure or suspension on the 30th day from the start of the suspension or failure period; this notice shall document the reason for the suspension or failure of the system, any efforts taken to resume operation of such Measures, and the expected timeframe for resuming operation of such Measure; and
- (v) .])

4. Proposed Changes in Activities and Uses. Any proposed changes in activities and uses at the [Property] [Portion of the Property] which may result in higher levels of exposure to oil and/or hazardous material than currently exist shall be evaluated by a Licensed Site Professional who shall render an Opinion, in accordance with 310 CMR 40.1080, as to whether the proposed changes (select one) [are inconsistent with maintaining a Permanent Solution and a condition of No Significant Risk] [are inconsistent with maintaining a Temporary Solution and a condition of No Substantial Hazard]. Any and all requirements set forth in the Opinion to meet the objective of this Notice shall be satisfied before any such activity or use is commenced.

5. Violation of a Permanent or Temporary Solution. The activities, uses and/or exposures upon which this Notice is based shall not change at any time to cause a significant risk of harm to health, safety, public welfare, or the environment or to create substantial hazards due to exposure to oil and/or hazardous material without the prior evaluation by a Licensed Site Professional in accordance with 310 CMR 40.1080, and without additional response actions, if necessary, to maintain a condition of (select one) [No Significant Risk] [No Substantial Hazard].

If the activities, uses, and/or exposures upon which this Notice is based change without the prior evaluation and additional response actions determined to be necessary by a Licensed Site Professional in accordance with 310 CMR 40.1080, the owner or operator of the [Property] [Portion of the Property] subject to this Notice at the time that the activities, uses and/or exposures change, shall comply with the requirements set forth in 310 CMR 40.0020.

6. Incorporation Into Deeds, Mortgages, Leases, and Instruments of Transfer. This Notice shall be incorporated either in full or by reference into all future deeds, easements, mortgages, leases, licenses, occupancy agreements or any other instrument of transfer, whereby an interest in and/or a right to use the Property or a portion thereof is conveyed in accordance with 310 CMR 40.1074(5).

Owner hereby authorizes and consents to the filing and recordation and/or registration of this [Confirmatory] Notice, said [Confirmatory] Notice to become effective when executed under seal by the undersigned Licensed Site Professional, and recorded and/or registered with the appropriate Registry(ies) of Deeds and/or Land Registration Office(s).

[This Confirmatory Notice of Activity and Use Limitation is given to correct the inadvertent error(s) made in the Notice of Activity and Use Limitation dated _____, and recorded with the _____ Registry of Deeds in Book _____, Page _____, said error(s) being as follows:

- (i) ;
- (ii) ; and
- (iii) .

In all other respects the terms of the Notice of Activity and Use Limitation remain unchanged.]

[FIRST] AMENDMENT TO GRANT OF ENVIRONMENTAL RESTRICTION
M.G.L. c. 21E, § 6 and 310 CMR 40.0000

Disposal Site Name: _____
DEP Release Tracking No.(s): _____

WHEREAS, a Grant of Environmental Restriction from _____ of _____ (Town/City), _____ County, _____ (State), to the Department of Environmental Protection, an agency established under the laws of the Commonwealth of Massachusetts, having its principal office at One Winter Street, Boston, Massachusetts 02108 ("DEP"), dated _____, has been recorded with the _____ Registry of Deeds in Book _____, Page _____, and/or registered with the Land Registration Office of the _____ Registry District as Document No. _____; [Said Grant was previously amended by an Amendment to Grant of Environmental Restriction dated _____, recorded with the _____ Registry of Deeds in Book _____ Page _____ and/or registered with the Land Registration Office of the _____ Registry District as Document No. _____] (said Grant of Environmental Restriction and any amendments thereto are collectively referred to herein as "Grant");

WHEREAS, said Grant imposes certain restrictions on activities and uses, conditions, obligations and easements upon that certain parcel(s) of [vacant] land situated in _____ (Town/City), _____ County, Massachusetts [with the buildings and improvements thereon];

WHEREAS, said parcel of land is more particularly bounded and described in Exhibit A attached hereto and made a part hereof ("Property");

WHEREAS, said restrictions, conditions, obligations and easements are imposed upon the Property to maintain a condition of No Significant Risk (said condition being defined in 310 CMR 40.0000) in accordance with the terms of an Activity and Use Limitation Opinion ("AUL Opinion") dated _____, issued and signed by _____, holder of a valid license issued by the Board of Registration of Waste Site Cleanup Professionals pursuant to Massachusetts General Laws Chapter 21A, Sections 19-19J (the holder of such a license referred to as an "LSP") attached to said Grant of Environmental Restriction as Exhibit C and made a part thereof, in order to (select one) [maintain at the Property a condition of No Significant Risk] [eliminate a substantial hazard] (such conditions and terms being defined in 310 CMR 40.0000); and

(Select one of the following paragraphs)

[WHEREAS, the undersigned LSP, in accordance with Chapter 21E and the MCP, has issued and signed an AUL Opinion, dated _____, attached hereto as Exhibit B and made a part hereof. Said AUL Opinion explains that the implementation of the following proposed changes in Site Activity and Use at the Property will maintain a condition of No Significant Risk, as all response actions necessary to achieve such condition have been performed;]

[WHEREAS, the undersigned LSP, in accordance with Chapter 21E and the MCP, has issued and signed an AUL Opinion, dated _____, attached hereto as Exhibit B and made a part hereof. Said AUL Opinion explains that the implementation of the following proposed changes in Site Activity and Use at the Property will: (1) (select one) [maintain a condition of No Significant Risk at the Property][eliminate a substantial hazard]; and (2) that no additional response actions are necessary at the Property in connection with the implementation of said proposed changes;]

NOW, THEREFORE, in accordance with Chapter 21E and the MCP, the undersigned _____, of _____ (Town/City), _____ County, _____ (State), being the owner of the Property pursuant to [a deed recorded with the _____ Registry of Deeds in Book _____, Page _____]; [source of title other than by deed]; and/or [Certificate of Title No. _____ issued by the Land Registration Office of the _____ Registry District], hereby amends said Grant as follows:

PARTIAL RELEASE OF GRANT OF ENVIRONMENTAL RESTRICTION
M.G.L. c. 21E, § 6 and 310 CMR 40.0000

Disposal Site Name: _____
DEP Release Tracking No.(s) _____

WHEREAS, a Grant of Environmental Restriction from _____ of _____ (Town/City), _____ County, _____ (State), to the Department of Environmental Protection, an agency established under the laws of the Commonwealth of Massachusetts, having its principal office at One Winter Street, Boston, Massachusetts 02108 ("DEP"), dated _____, has been recorded with the _____ Registry of Deeds in Book _____, Page _____, and/or registered with the Land Registration Office of the _____ Registry District as Document No. _____; [as amended by an Amendment to Grant of Environmental Restriction dated _____, recorded with the _____ Registry of Deeds in Book _____, Page _____, and/or registered with the Land Registration Office of the _____ Registry District as Document No. _____;] (said Grant of Environmental Restriction and any amendments thereto are collectively referred to herein as "Grant");

WHEREAS, said Grant imposes certain restrictions on activities and uses, conditions, obligations and easements upon certain [vacant] land situated in _____, _____ County, Massachusetts [with the buildings and improvements thereon], said land being more particularly bounded and described in Exhibit A attached hereto and made a part hereof ("Property");

WHEREAS, said restrictions, conditions, obligations and easements are imposed upon the Property to (select one) [maintain a condition of No Significant Risk] [eliminate a substantial hazard] (said conditions and terms being defined in 310 CMR 40.0000) in accordance with the terms of an Activity and Use Limitation Opinion ("AUL Opinion") dated _____, issued and signed by _____, holder of a valid license issued by the Board of Registration of Waste Site Cleanup Professionals pursuant to M.G.L. c. 21A, §§ 19 through 19J (said holder being referred to as an "LSP"). Said AUL Opinion was issued and filed with DEP at its _____ Regional Office under Release Tracking No.(s) _____, a copy of which is attached to said Grant of Environmental Restriction as Exhibit C, and made a part thereof;

WHEREAS, the undersigned, _____, being an LSP, has issued an AUL Opinion in accordance with 310 CMR 40.0000, dated _____, a copy of which is attached hereto as Exhibit B and made a part hereof. Said AUL Opinion explains why the restrictions, conditions, obligations and easements created under said Grant are no longer necessary (select one) [to maintain a condition of No Significant Risk] [to eliminate a substantial hazard] at a portion of said Property, said portion being more particularly bounded and described in Exhibit C, attached hereto and made a part hereof, and being shown on [a plan recorded with the _____ Registry of Deeds in Plan Book _____, Plan _____], and/or on [a sketch plan attached hereto and filed herewith for registration] ("Portion of the Property"), and accordingly, said Grant may be released as to said Portion of the Property; and

WHEREAS, said [Name of LSP], has certified that [he][she] executed the AUL Opinion attached hereto as Exhibit B, and that in [his][her] Opinion, this Partial Release of Grant of Environmental Restriction is consistent with said AUL Opinion.

NOW THEREFORE, in accordance with M.G.L. c. 21E, § 6 and 310 CMR 40.0000, the undersigned _____, being the Commissioner of DEP, does hereby release, abandon and forever discharge the restrictions on activity and use, conditions, obligations and easements imposed upon said Portion of the Property under said Grant.

This Partial Release of Grant of Environmental Restriction shall become effective upon its recordation and/or registration with the appropriate Registry of Deeds and/or Land Registration Office.

RELEASE OF GRANT OF ENVIRONMENTAL RESTRICTION
M.G.L. c. 21E, § 6 and 310 CMR 40.0000

Disposal Site Name: _____
DEP Release Tracking No.(s) _____

WHEREAS, a Grant of Environmental Restriction from _____ of _____ (Town/City), _____ (County), _____ (State), to the Department of Environmental Protection, an agency established under the laws of the Commonwealth of Massachusetts, having its principal office at One Winter Street, Boston, Massachusetts 02108 ("DEP"), dated _____, has been recorded with the _____ Registry of Deeds in Book _____ Page _____, and/or registered with the Land Registration Office of the _____ Registry District as Document No. _____ [as amended by Amendment to a Notice of Activity and Use Limitation dated _____, recorded with the _____ Registry of Deeds in Book _____ Page _____, and/or registered with the Land Registration Office of the _____ Registry District as Document No. _____] (said Grant of Environmental Restriction and any amendments thereto are collectively referred to herein as "Grant");

WHEREAS, said Grant imposes certain restrictions on activities and uses, conditions, obligations and easements upon certain [vacant] land situated in _____ (Town/City), _____ County, Massachusetts [with the buildings and improvements thereon], said land being more particularly bounded and described in Exhibit A attached hereto and made a part hereof ("Property");

WHEREAS, said restrictions, conditions, obligations and easements were imposed upon the Property in order to [maintain a condition of No Significant Risk] [eliminate a Substantial Hazard] (said conditions and terms being defined in 310 CMR 40.0000) in accordance with the terms of an Activity and Use Limitation Opinion ("AUL Opinion") dated _____, signed and sealed by _____, holder of a valid license issued by the Board of Registration of Waste Site Cleanup Professionals, pursuant to M.G.L. c. 21A, §§ 19 through 19J (the holder being referred to as "LSP") attached to said Grant as Exhibit C and made a part thereof; and

WHEREAS, said Grant is being released because additional response actions are necessary to support the conclusion that [a condition of No Significant Risk has been achieved at the Property][all Substantial Hazards have been eliminated at the Property].

NOW, THEREFORE, in accordance with M.G.L. c. 21E, § 6 and 310 CMR 40.0000, the undersigned _____, being the Commissioner of DEP, does hereby release, abandon and forever discharge the restrictions on activity and use, conditions, obligations and easements imposed upon the Property under said Grant. This Release of Grant of Environmental Restriction shall become effective upon its recordation and/or registration with the appropriate Registry of Deeds and/or Land Registration Office.

WITNESS the execution hereof under seal this ____ day of _____, 20__.

SUBPART K: AUDITS

40.1101: Purpose, Scope and Applicability

- (1) The regulations published at 310 CMR 40.1101 through 40.1199, collectively referred to as 310 CMR 40.1100, establish procedures for the Department to audit a sufficient number of response actions not overseen or conducted by the Department to ensure that those response actions are performed in compliance with M.G.L. c. 21E, 310 CMR 40.0000, and any other requirement applicable to such response actions.
- (2) During each fiscal year, the Department shall audit a statistically significant number of all sites, as determined by the Department, for which annual compliance assurance fees are required to be paid pursuant to M.G.L. c. 21E, § 3B. The Department may establish additional audit targets for categories of persons, response actions or sites based on the level of Department oversight provided to each category.
- (3) In its audit of any response action submittal, the Department shall base its finding of any violation or assessment of a penalty on the Massachusetts Contingency Plan and Response Action Performance Standard in effect at the time of its receipt of the submittal.

40.1110: Selection of Persons, Response Actions and Sites for Audit

- (1) The Department may conduct an audit of any RP, PRP, Other Person, response action or site in accordance with 310 CMR 40.1100. The Department selects persons, response actions and sites for audit randomly (Random Audits) and by criteria-specific methods (Targeted Audits).
- (2) Except as provided in 310 CMR 40.1110(3) and (4), the Department may initiate an audit of any specific RP, PRP, Other Person, response action or site without any limitation as to time.
- (3) Except as provided in 310 CMR 40.1110(5), the Department shall not initiate a Random Audit with respect to any specific person, response action or site after two years has passed since the date of the Department's receipt of:
 - (a) a Permanent Solution Statement; or
 - (b) an LSP Evaluation Opinion stating that the requirements for a Permanent Solution have been achieved from such person and/or pertinent to such response action and/or site. Except as expressly provided by 310 CMR 40.1110(4), (3) shall not be construed to limit the Department's authority to initiate a Targeted Audit of any person, response action or site.
- (4) Except as provided in 310 CMR 40.1110(5), the Department shall not initiate a Targeted Audit of any RP, PRP, Other Person, response action or site after five years has passed since the date of the Department's receipt of a Permanent Solution Statement from such person and/or pertinent to such response action and/or site, unless the Department has reason to believe that:
 - (a) response actions taken at a site may have failed to achieve or maintain a level of No Significant Risk;
 - (b) a significant risk of harm to health, safety, public welfare or the environment may exist at a site, or in the vicinity of a site, for which a Permanent Solution Statement has been submitted to the Department;
 - (c) a response action has been taken at a site in noncompliance with M.G.L. c. 21E, 310 CMR 40.0000 or any other applicable requirement;
 - (d) the Permanent Solution Statement has failed to identify material facts, data, or other information known by the LSP who rendered the Permanent Solution Statement or by the person who undertook response actions at a site;
 - (e) the person responsible for undertaking response actions at a site has failed to fully respond to a Request for Information;
 - (f) the activities, uses and/or exposures upon which a Permanent Solution Statement is based have changed to cause human or ecological exposure, or cause an increased potential for human or environmental exposure, to oil and/or hazardous material;
 - (g) any person required by 310 CMR 40.0014 to retain documents pertinent to the Permanent Solution Statement has failed to do so;

40.1110: continued

- (h) any person required by 310 CMR 40.0800 to perform operation and maintenance and monitoring activities at the site has failed to do so;
- (i) any person undertaking, performing, managing, supervising or overseeing response actions at the site has engaged in a pattern of noncompliance, considering the criteria set forth in 310 CMR 5.13: *Pattern of Noncompliance*;
- (j) any person responsible for undertaking response actions at a disposal site has violated, suffered, allowed or caused any person to violate an Environmental Restriction; or
- (k) any change in activity, use and/or exposure upon which a Permanent Solution Statement is based occurred at a disposal site without an evaluation by an LSP in accordance with 310 CMR 40.1080 and without additional response actions, if necessary.

(5) Notwithstanding any provision in 310 CMR 40.1110(3) or (4), the Department may initiate, at any time, a Random or Targeted Audit of any site subject to an Activity and Use Limitation.

40.1120 Audit Activities

- (1) During an audit, the Department may do the following:
 - (a) examine documents within the Department's records;
 - (b) request that the person who has performed the response action provide a written explanation, or other supporting evidence, to demonstrate compliance with M.G.L. c. 21E, 310 CMR 40.0000, and other applicable requirements;
 - (c) request that the person who has performed the response action that is the subject of the audit appear at one of the Department's offices to discuss response actions and provide supporting evidence to demonstrate compliance with M.G.L. c. 21E, 310 CMR 40.0000, and other applicable requirements;
 - (d) enter and inspect a site or other location to determine whether an RP, PRP, Other Person, response action or site is in compliance with M.G.L. c. 21E, 310 CMR 40.0000, and other applicable requirements;
 - (e) investigate, take samples at a site and inspect records, conditions, equipment or practices material to the response action or property related to the site; and
 - (f) take any other actions the Department deems necessary to determine whether response actions have been performed in compliance with M.G.L. c. 21E, 310 CMR 40.0000, and other applicable requirements.
- (2) Any person requested to appear for an interview may be represented by an attorney, Licensed Site Professional or other representative.

40.1130: Initiation of Audit

Prior to undertaking an audit activity other than an examination of documents within the Department's records, or within other public records, the Department shall provide reasonable Notice of Audit to the person who has performed response actions at the site that the site has been selected for audit. Such notice shall include the following information:

- (1) the name and location of the site;
- (2) the Release Tracking Number(s);
- (3) the scope of the audit and the type of audit activities to be performed;
- (4) the location at which the audit will be conducted; and
- (5) any other notice, information or request the Department deems appropriate.

40.1131: Response Actions During Audits

Persons who have been notified of the initiation of an audit may continue to conduct response actions during the course of an audit unless otherwise ordered by the Department.

40.1140: Notice of Audit Findings

- (1) Except with respect to an audit that consists solely of an examination of documents within the Department's records or in other public records, the Department shall issue a Notice of Audit Findings at the conclusion of an audit. Such notice shall include the following information:
 - (a) the name and location of the site;
 - (b) the Release Tracking Number(s);
 - (c) a statement as to the type of audit performed;
 - (d) a statement as to whether the Department, on the basis of the information reviewed during the audit and in reliance upon the accuracy of that information, identified any violations or deficiencies;
 - (e) an Interim Deadline by which violations and/or deficiencies shall be corrected;
 - (f) an Interim Deadline by which an Audit Follow-up Plan, if such a plan is required, shall be submitted; and
 - (g) any other information or request the Department deems appropriate.
- (2) In the event the Department identifies violations of M.G.L. c. 21E, 310 CMR 40.0000 or any other applicable requirement during an audit, the Department may issue any of the following with a Notice of Audit Findings:
 - (a) a Notice of Noncompliance;
 - (b) a Notice of Intent to Assess a Civil Administrative Penalty;
 - (c) a Notice of Responsibility;
 - (d) a Notice of Response Action; and/or
 - (e) an order.
- (3) The Department shall not be required to issue a Notice of Audit Findings to any person if the Department determines that such notice could jeopardize an enforcement action.

40.1160: Audit Follow-up Plans

- (1) At or prior to the issuance of a Notice of Audit Findings, the Department may require that a RP, PRP or Other Person submit for its approval a written Audit Follow-up Plan setting forth how and when such person proposes to confirm, demonstrate or achieve compliance with M.G.L. c. 21E, 310 CMR 40.0000 and/or any applicable requirements.
- (2) Each Audit Follow-up Plan shall be submitted to the Department using a form established by the Department for such purpose, and shall include, at a minimum, the following information:
 - (a) a description of the activities that will be taken;
 - (b) the objective of, and proposed schedule for, each element of the plan;
 - (c) the name, registration number, signature and seal of the Licensed Site Professional who prepared the Audit Follow-up Plan; and
 - (d) the certification set forth in 310 CMR 40.0009.
- (3) In approving an Audit Follow-up Plan, the Department may do the following:
 - (a) establish conditions, including, but not limited to, conditions setting forth the Department's role in overseeing elements of the plan;
 - (b) establish Interim Deadlines;
 - (c) establish requirements for documentation and/or submittal of information; and
 - (d) take any other action authorized by M.G.L. c. 21E, 310 CMR 40.0000 or any other applicable law.
- (4) If the Department does not approve or disapprove of an Audit Follow-up Plan within 90 days of its receipt of such plan, an RP, PRP or Other Person shall proceed to implement such plan.
- (5) Any person who is required to comply with an Audit Follow-up Plan may request, in writing, a modification thereof prior to the running of any applicable deadline. Modifications shall be approved, conditionally approved, or denied by the Department in writing within 21 days of receipt. Approval of such modification shall be presumed if the Department does not issue a written approval or denial of said modification within 21 days of receipt.

40.1160: continued

(6) Public Involvement Activities required for Audit Follow-up Plans shall be conducted in accordance with 310 CMR 40.1400. If the disposal site where an Audit Follow-up Plan is being implemented is a designated Public Involvement Plan site, then a Public Involvement Plan shall be implemented by the person conducting response actions at that site pursuant to 310 CMR 40.1405.

40.1170: Post-audit Completion Statements

(1) Upon completion of the activities required by the Department in a Notice of Audit Findings or any approved Audit Follow-up Plan, the RP, PRP or Other Person undertaking such activities shall submit a Post-audit Completion Statement to the Department using a form established by the Department for such purpose.

(2) Each Post-Audit Completion Statement shall include the following information:

- (a) an LSP Opinion as to whether the response actions required by the Notice of Audit Findings and any approved Audit Follow-up Plan have been completed in accordance with M.G.L. c. 21E, 310 CMR 40.0000, the terms of any Department approval, and any other applicable laws and requirements;
- (b) a description of the response actions completed pursuant to the Notice of Audit Findings and any approved Audit Follow-up Plan;
- (c) the investigatory and monitoring data obtained, if any, during the implementation of such response actions;
- (d) any other information required by the Department in the Notice of Audit Findings or any approved Audit Follow-up Plan; and
- (e) a description of additional response activities, if any, necessary to confirm, demonstrate or achieve compliance with the requirements stated in the Notice of Audit Findings or any approved Audit Follow-up Plan.

40.1190: Reservation of Rights

(1) No provision of 310 CMR 40.1100 shall be construed to relieve any person from any obligation for Response Action Costs or damages related to a site or disposal site for which that person is liable under M.G.L. c. 21E or from any obligation for any administrative, civil or criminal penalty, fine, settlement, or other damages.

(2) No provision of 310 CMR 40.1100 shall be construed to limit the Department's authority to take or arrange, or to require any RP or PRP to perform, any response action authorized by M.G.L. c. 21E which the Department deems necessary to protect health, safety, public welfare or the environment.

SUBPART L: COST RECOVERY, LIEN HEARINGS AND
PETITIONS FOR REIMBURSEMENT OF INCURRED COSTS

40.1200: Cost Recovery

(1) The regulations published at 310 CMR 40.1201 through 40.1249, cited collectively as 310 CMR 40.1200, set forth procedures for recovery of Response Action Costs by or on behalf of the Commonwealth.

40.1201: Purpose, Scope and Applicability

(1) 310 CMR 40.1200 does not apply to any other compensation, recovery or reimbursement to which the Commonwealth may be entitled, or to any compensation, recovery or reimbursement to which any person other than the Commonwealth may be entitled, except as provided by M.G.L. c. 21E, § 3A(j)(2) or M.G.L. c. 21E, § 3B.

(2) The provisions of 310 CMR 40.1200 shall apply to Response Action Costs incurred on or after October 1, 1993. Nothing in 310 CMR 40.1200 shall prevent the Commonwealth from recovering Response Action Costs incurred prior to October 1, 1993.

40.1201: continued

- (3) Neither 310 CMR 40.1200 nor any other provision of this Contingency Plan is intended to provide procedures for the recovery of costs or damages by private persons.
- (4) These provisions shall not apply to a RP, PRP or Other Person who:
 - (a) has paid in full annual compliance assurance fees, including interest if and when applicable, in accordance with 310 CMR 4.00: *Timely Action Schedule and Fee Provisions*, if the Response Action Costs were incurred during the period for which such annual compliance assurance fees were required to be paid for the response action(s) at or for the site; and
 - (b) is performing response actions at the site.

40.1202: General Provisions

The Department shall collect and maintain documentation of response actions and Response Action Costs. The documentation shall form the basis for recovery of Response Action Costs. The circumstances of every release or threat of release of oil and/or hazardous material which is the subject of a response action shall be compiled and maintained in records. Such records shall contain a description of response actions taken, any RPs or PRPs identified, and an accounting of costs incurred by the Department.

40.1220: Recovery of Response Action Costs Incurred in Response Actions

The provisions set forth in 310 CMR 40.1220 and 40.1221 shall govern the Commonwealth's recovery of Response Action Costs incurred pursuant to this Contingency Plan.

- (1) Response Action Costs. Response Action Costs with regard to a specific site shall be calculated so as to reflect the actual cost of the Department's response actions. Such Costs shall be calculated as follows:
 - (a) The total number of Direct Hours expended by each employee of the Department with regard to a specific site shall be multiplied by the employee's hourly rate, and then the figures derived for each Department employee shall be added together;
 - (b) To the figure derived in 310 CMR 40.1220(1)(a) shall be added a figure derived by multiplying the total number of Direct Hours expended by all employees of the Department with regard to a specific site by the current Indirect Rate, which shall be calculated in accordance with 310 CMR 40.1221; and
 - (c) All payments made by the Department to its Contractors, grantees or agents to plan, manage, direct or perform response actions with regard to a specific site shall be added to the figure derived pursuant to 310 CMR 40.1220(1)(a) and (b).
- (2) Recovery and Demand.
 - (a) The Department may seek to recover Response Action Costs calculated pursuant to 310 CMR 40.1220(1), using any of the means described in M.G.L. c. 21E, 310 CMR 40.0000, or other applicable law. Any recovery of Costs by the Department shall not prevent the Department from incurring and recovering additional Response Action Costs.
 - (b) The Department may make written demand for Response Action Costs with regard to a specific site to all RPs, PRPs and Other Persons after such costs have been calculated pursuant to 310 CMR 40.1220(1), and periodically thereafter.
- (3) Administrative Review.
 - (a) The Department may, in its sole discretion, provide an opportunity for an informal conference to any person to whom the Department has made a demand for payment of Response Action Costs and who disputes the calculation or reasonableness of those Costs. Such review may provide an opportunity to present, at a minimum, written information regarding a disputed demand to the Department for its consideration.
 - (b) The Department may impose reasonable time limits within which any person to whom the Department has made a demand for payment may request such administrative review.

40.1220: continued

(c) An administrative review pursuant to 310 CMR 40.1220(3) shall not be construed to be an "adjudicatory proceeding" as defined by M.G.L. c. 21E or M.G.L. c. 30A and shall not be subject to 310 CMR 1.00: *Adjudicatory Proceedings*. Any conclusions reached by the Department as part of such review shall not be construed to be an order pursuant to M.G.L. c. 21E, §§ 9 or 10, unless the Department specifically and in writing states otherwise.

(4) Interest Calculation. The Department shall seek to recover interest accrued on uncollected Response Action Costs at a rate of 1% per month, or 12% per year, commencing 45 days after the Department has made written request for payment of Costs. The Department shall compound the interest annually until the debt is paid or otherwise resolved. The Department may elect not to seek interest that accrues during an administrative review pursuant to 310 CMR 40.1220(3).

(5) Treble Costs.

(a) The Department may seek to recover from RPs and/or PRPs up to three times the Response Action Costs calculated pursuant to 310 CMR 40.1220(1), in accordance with M.G.L. c. 21E, § 5(e).

(b) The Department, in its sole discretion, may elect not to seek treble costs from RPs and/or PRPs who pay Response Action Costs after demand is made pursuant to 310 CMR 40.1220(2)(b).

(6) Using Consent Orders to Set a Maximum for Response Action Costs to be Recovered. The Department may enter into an administrative consent order with RPs, PRPs or Other Persons governing response actions at a site pursuant to M.G.L. c. 21E, §§ 9 or 10. If the Department is able to estimate future Response Action Costs at a disposal site with a reasonable degree of certainty, the Department may, in its sole discretion and subject to terms and conditions, agree as a part of such consent order upon an amount which shall be the maximum Response Action Cost the Department will seek to recover from such RPs, PRPs or Other Persons for work to be performed pursuant to the provisions of that consent order.

40.1221: Calculation of Indirect Rate

(1) The Indirect Rate shall be recalculated in conformance with and on the same schedule as that utilized by 310 CMR 4.00: *Timely Action Schedule and Fee Provisions*.

(2) Commencing October 1, 1993, and continuing until the Indirect Rate is changed pursuant to 310 CMR 40.1221(1), the Indirect Rate shall be \$27.31 per Direct Hour.

40.1250: Procedures for Liens

The regulations published at 310 CMR 40.1250 through 310 CMR 40.1259, cited collectively as 310 CMR 40.1250, set forth procedures for recording, registering and filing liens authorized by M.G.L. c. 21E, § 13.

40.1251: Notice of Intent to Perfect a Lien

Whenever the Department intends to record, register or file a lien on real or personal property pursuant to M.G.L. c. 21E, § 13, the Department shall provide a notice of such intent to any owner of the property whose name and address is known to the Department as of 21 days prior to the date the Department provides such notice of intent, and also to the following persons who have a Property Interest in the property over which the Department's lien will have priority pursuant to M.G.L. c. 21E, §13:

(1) persons having a recorded or registered Property Interest in the property whose name and address is known to the Department as of 21 days prior to the date the Department provides such notice of intent;

(2) persons having an unrecorded or unregistered Property Interest in the property whose interest, name and address is known to the Department as of 21 days prior to the date the Department provides such notice of intent; and

40.1251: continued

- (3) persons having an unrecorded or unregistered Property Interest in the property whose interest, name and/or address is unknown to the Department.

40.1252: Content of Notice of Intent to Perfect a Lien

Each Lien Notice shall include all of the following:

- (1) a statement of the Department's statutory and regulatory authority to record, register or file the lien;
- (2) a concise statement of the alleged factual and legal basis for the lien, including a description of the property and any debt to the Commonwealth;
- (3) a statement that any owner of the property and any person having a Property Interest in the property over which the lien will have priority pursuant to M.G.L. c. 21E, § 13 has a right to an adjudicatory hearing on such perfection;
- (4) a statement of the requirements that must be complied with by a person having a right to an adjudicatory proceeding pursuant to 310 CMR 40.1254 in order to avoid being deemed to have waived his or her right to such adjudicatory hearing; and
- (5) a statement of how and when the debt owed must be paid to avoid perfection of the lien.

40.1253: Service of Notice of Intent to Perfect a Lien

Each Lien Notice shall be served by one or more of the following methods:

- (1) Service in hand at the person's last known address or at the last known address of any officer, employee, or agent of the person authorized by appointment of the person or by law to accept service.
- (2) Service in hand personally to the person, or to any officer, employee, or agent of the person authorized by appointment of the person or by law to accept service.
- (3) By certified mail, return receipt requested, addressed to the person's last known address, or to the last known address of any officer, employee, or agent of the person authorized by appointment of the person or by law to accept service.
- (4) With respect to any person having an unrecorded or unregistered Property Interest in the property whose name and/or address is unknown to the Department, by publication in a newspaper of general circulation serving the community where the property is located.

40.1254: Right to Adjudicatory Hearing

Subject to the provisions of 310 CMR 40.1255, whenever the Department seeks to perfect a lien on any real or personal property, the following persons shall have the right to an adjudicatory hearing:

- (1) any owner of the property;
- (2) any other person having a recorded or registered Property Interest in the property over which the lien will have priority pursuant to M.G.L. c. 21E, § 13; and/or
- (3) any person having an unrecorded or unregistered Property Interest in the property over which the lien will have priority pursuant to M.G.L. c. 21E, § 13.

40.1255: Waiver of Right to Adjudicatory Hearing

Any person who has a right to an adjudicatory hearing pursuant to 310 CMR 40.1254 shall be deemed to have waived the right to an adjudicatory hearing unless the Department receives from such person a written statement that denies that the Department has a basis to perfect the lien, and does so subject to and in compliance with applicable provisions of 310 CMR 1.00: *Adjudicatory Proceedings*, within 21 days of the following:

- (a) with respect to the notice required by 310 CMR 40.1251(1) or (2), the date of issuance of the notice in accordance with 310 CMR 40.1253(1), (2) or (3); or
- (b) with respect to the notice required by 310 CMR 40.1251(3), the date of publication of the notice in accordance with 310 CMR 40.1253(4).

40.1256: Conducting the Adjudicatory Hearing

(1) Every adjudicatory hearing conducted pursuant to M.G.L. c. 21E and 310 CMR 40.1250 shall be conducted in accordance with all applicable provisions of M.G.L. c. 30A and 310 CMR 1.00: *Adjudicatory Proceedings*, provided, however, that to the extent such provisions are inconsistent with M.G.L. c. 21E and 310 CMR 40.1250, the provisions of M.G.L. c. 21E and 310 CMR 40.1250 shall apply.

(2) The Department shall not be required to prove any facts alleged by the Department in the Lien Notice unless such facts are expressly denied in the statement filed pursuant to 310 CMR 40.1255.

(3) If, in the statement filed pursuant to 310 CMR 40.1255, the person filing such statement denies one or more facts, the Department shall demonstrate a reasonable likelihood that such fact or facts is true or exists.

(4) Damage to the environment, as defined in M.G.L. c. 214A, § 7, will not be at issue during the conduct of hearings pursuant to 310 CMR 40.1250.

40.1257: Reservation of Rights

No provision of 310 CMR 40.1250 shall be construed to limit or waive the Department's rights to commence a civil action for the purposes of obtaining an order or decree authorizing the recording, registering or filing of a lien pursuant to M.G.L. c. 21E, § 13, including, but not limited to, the commencement of an *ex parte* proceeding in the event of exigent or other circumstance that would render real or personal property unavailable to satisfy an eventual judgment.

40.1260: Petitions for Reimbursement of Incurred Costs

The regulations published at 310 CMR 40.1260 through 40.1269, cited collectively herein as 310 CMR 40.1260, set forth procedures for petitioning the Department for reimbursement for the reasonable costs of compliance with an order issued pursuant to M.G.L. c. 21E, § 10(b).

40.1261: Right to Petition for Reimbursement

Any person to whom the Department has issued an order pursuant to M.G.L. c. 21E, § 10(b), who either (1) disputes his or her liability under M.G.L. c. 21E, § 5, or (2) claims he or she was entitled to the benefits of an affirmative defense or limitation on liability set forth in M.G.L. c. 21E or in any other applicable law may petition the Department for reimbursement for the reasonable costs of compliance with such order. No order or determination issued by the Department shall be construed to be an order issued pursuant to M.G.L. c. 21E, § 10(b), unless the Department specifically and in writing provides to that effect.

40.1262: Content of Petition

Each petition for reimbursement pursuant to M.G.L. c. 21E, § 10(b)(2), and 310 CMR 40.1261 shall be in writing and shall state clearly and concisely the facts upon which the petitioner claims are grounds for reimbursement, the costs for which reimbursement is sought, the location and Release Tracking Number(s) of the disposal site, and the file number as it appears in the caption on such order.

40.1263: Timing of Petition

Each petition for reimbursement pursuant to M.G.L. c. 21E, § 10(b)(2) and 310 CMR 40.1261 shall be submitted to the Department within 90 days of the date of completion of compliance with such order.

40.1264: Grounds for Reimbursement

The Department may grant the petition, or a portion thereof, if the Department is persuaded that the person to whom the Department has issued such order has complied with the terms thereof, and:

- (1) either was not liable under M.G.L. c. 21E or was entitled to the benefits of an affirmative defense or limitation on liability set forth in M.G.L. c. 21E or in any other applicable law; and
- (2) the costs for which reimbursement are sought are for compliance with the order and were incurred reasonably and in good faith.

40.1265: Petitions not Subject to M.G.L. c. 30A

The refusal by the Department to grant all or part of a petition for reimbursement filed pursuant to M.G.L. c. 21E, § 10(b)(2), and 310 CMR 40.1261 shall not be an adjudicatory proceeding and shall not be subject to those provisions of M.G.L. c. 30A, 310 CMR 1.00: *Adjudicatory Proceedings* or any other law governing adjudicatory proceedings.

SUBPART M: ADMINISTRATIVE RECORD

40.1301: Purpose, Scope and Applicability

- (1) The regulations published at 310 CMR 40.1301 through 310 CMR 40.1399, collectively referred to as 310 CMR 40.1300, set forth procedures for the establishment of an administrative record pursuant to M.G.L. c. 21E, § 5A.
- (2) The regulations published at 310 CMR 40.1300 shall apply when the Department elects to establish an administrative record pursuant to M.G.L. c. 21E, § 5A, for any Release Abatement Measure under 310 CMR 40.0440, Comprehensive Response Action under 310 CMR 40.0800 or any other response action.
- (3) 310 CMR 40.1300 does not apply to response actions selected prior to April 25, 2014 or to Immediate Response Actions under 310 CMR 40.0410.
- (4) With respect to those response actions for which the Department does not elect to establish an administrative record in accordance with 310 CMR 40.1300, the administrative record shall consist of all items developed, relied upon, and received pursuant to procedures used by the Department for the selection of the response action, including procedures for the participation of interested parties and the public.

40.1301: continued

(5) 310 CMR 40.1300 describes when the Department may establish an administrative record pursuant to M.G.L. c. 21E, § 5A; the standards for the content of such an administrative record; the procedures by which the public, RPs and PRPs may participate in the establishment of such an administrative record; and where the Department shall locate such an administrative record.

(6) The Department's decision to establish or certify an administrative record in accordance with 310 CMR 40.1300, and the Department's selection of a response action pursuant to M.G.L. c. 21E and 310 CMR 40.0000, shall not be an adjudicatory proceeding and shall not be subject to those provisions of M.G.L. c. 30A, or any other law, governing adjudicatory proceedings.

40.1302: When the Department May Establish an Administrative Record

The Department may establish an administrative record in accordance with M.G.L. c. 21E, § 5A, and 310 CMR 40.1300, upon which the Department shall base its selection of a response action, with respect to any site at which:

- (1) the Department itself, or acting through its agents or contractors, carries out a response action; or
- (2) the Department issues an order pursuant to M.G.L. c. 21E, § 10(b).

40.1303: Participation by the Public, RPs and PRPs

(1) After the Department decides to establish an administrative record pursuant to 310 CMR 40.1300, and prior to the selection of a response action, the Department shall give notice and afford interested persons a reasonable opportunity to comment. Unless response actions must be taken earlier to control the potential for health damage, human exposure, safety hazards or environmental harm through appropriate short term measures, the Department shall give notice at least 21 days prior to its selection of a response action as follows:

- (a) by publication thereof in a newspaper(s) of general circulation in the community(ies) that the Department reasonably believes are affected by the disposal site;
- (b) by certified mail, return receipt requested, to any person who the Department reasonably believes:
 1. is an RP or a PRP; or
 2. holds title to, or an ownership interest in, any real property which comprises the disposal site or which may be affected by the response action and whose name and address is known by the Department at the time the Department elects to establish such an administrative record;
- (c) if the disposal site is a Public Involvement Plan (PIP) Site, by first-class mail or hand-delivery to each person whose name and address appears on the PIP mailing list established in accordance with 310 CMR 40.1400; and
- (d) by first-class mail or hand delivery to the Chief Municipal Official and local board of health of each community in which the disposal site is known to be located.

(2) Content of Notice. The notice required by 310 CMR 40.1303(1) shall include the following information:

- (a) a description of the location of the disposal site and activities proposed for such site;
- (b) the Department's authority to establish an administrative record for the disposal site upon which the Department will base its selection of a response action;
- (c) the times when, and location where, interested persons may inspect the administrative record, including, without limitation, remedial action alternatives under consideration;
- (d) a description of the procedure by which persons interested in commenting may submit data, views and arguments to the Department;
- (e) the deadline established by the Department for receipt of public comments; and
- (f) any additional information determined by the Department to be pertinent.

40.1303: continued

(3) Procedure.

(a) Within 21 days, or within such other time period determined by the Department in accordance with 310 CMR 40.1303(1), after providing notice as required by 310 CMR 40.1303(1)(c), (d), and (e), any interested person may submit written comments in the form of a signed letter, brief or other memorandum stating his or her views or arguments, including data in support thereof, concerning the remedial action alternatives proposed for the disposal site. Such written comments shall be submitted to the Department by first-class mail or hand-delivery during normal business hours. If the Department has expedited response actions in accordance with 310 CMR 40.1303(1) to control the potential for health damage, human exposure, safety hazards or environmental harm through appropriate short term measures, the Department may request written comments to be submitted after providing notice as required by 310 CMR 40.1303(1)(c) through (e). If such response actions have not been taken, the Department may request written comments to be submitted to the Department within 21 days of the later date of publication or notice required by 310 CMR 40.1303(1).

(b) The Department may, at its sole discretion, afford any interested person or his or her duly appointed representative an opportunity to present data, views or arguments orally before the Department during a meeting at which the remedial action alternatives will be presented.

(c) The Department shall consider and respond as it deems appropriate to significant public comments. The Department shall place a written response to any significant comments submitted in the administrative record.

(d) Upon reasonable request or on its own initiative, the Department may extend the period for submission of public comments.

(e) After the comment period, and any extension thereof, has terminated, the Department shall place written documentation in the administrative record of the basis for the Department's selection of a response action and provide written notice thereof to all persons who have submitted significant comments pursuant to 310 CMR 40.1303(1)(c) and any other persons submitting comments during the period established for public comment.

(4) The Department shall certify that the administrative record is complete:

(a) after the termination of the public comment period;

(b) after the Department's response to significant comments has been placed in the administrative record; and

(c) after the Department has issued a report documenting the basis for the Department's selection of a response action for the disposal site.

40.1304: Administrative Record Requirements After Certification

(1) The Department may reopen the administrative record after the administrative record has been certified complete in accordance with 310 CMR 40.1303(4) if:

(a) the Department intends to carry out or arrange a response action in addition to those response actions selected at the time the Department certified the administrative record complete; or

(b) the Department carries out or arranges a response action significantly different from the response action selected in the report required by 310 CMR 40.1303(3)(e).

(2) If the Department reopens the administrative record pursuant to 310 CMR 40.1304(1), the Department shall give notice thereof and afford interested persons an opportunity to present data, views or arguments, in accordance with 310 CMR 40.1303(1) through (4).

40.1305: Content of the Administrative Record

(1) The administrative record shall include those documents that form the basis for the Department's selection of a response action.

40.1305: continued

- (2) The administrative record shall contain the following types of documents when such documents are material to the Department's selection of a response action:
- (a) documents containing factual information and data, including documents containing analyses of such information and data;
 - (b) guidance documents, technical literature, and site-specific policy memoranda;
 - (c) documents received, published or made available to the public pursuant to 310 CMR 40.1400;
 - (d) documents setting forth and/or supporting determinations by the Department, including scopes of work, plans and reports; and
 - (e) copies of enforcement orders, including, but not limited to, consent orders, and Notices of Noncompliance, Notices of Responsibility and Notices of Response Action.
- (3) If the Department issues an administrative order pursuant to M.G.L. c. 21E, § 10(b)(1)(B), with respect to a disposal site for which the Department has elected to establish an administrative record in accordance with 310 CMR 40.1300, the Department shall include in the administrative record evidence of the following:
- (a) that the disposal site has been listed in accordance with M.G.L. c. 21E, § 3A(b), and 310 CMR 40.0168;
 - (b) that the Department has given the person in question the opportunity to apply voluntarily for a permit or to carry out response actions at the disposal site; and
 - (c) that the Department has determined that it would be contrary to the public interest to defer necessary response actions, or to publicly fund response actions to avoid any such deferral, with respect to the disposal site.
- (4) Documents not included in the administrative record. The Department is not required to include in the administrative record documents which do not form the basis for the selection of the response action.
- (5) Information protected from disclosure.
- (a) Any document, information or other thing which the Department determines to be a trade secret in accordance with 310 CMR 3.00: *Access to and Confidentiality of Department Records and Files* shall be maintained in the Confidential File of the administrative record and shall not be made available for public inspection, except as provided by 310 CMR 3.21: *When Trade Secrets May Be Disclosed By the Department*.
 - (b) Any document protected from disclosure under the Massachusetts Public Records Law, M.G.L. c. 66, § 10, or other applicable federal or state law may be maintained in the Confidential File of the administrative record and shall not be made available for public inspection, except as provided by 310 CMR 40.1305(6).
 - (c) Any document, or part thereof, containing privileged information, including documents subject to the attorney-client privilege, attorney work product and any other document to which a privilege attaches under applicable law, may be maintained in the Confidential File of the administrative record and shall not be made available for public inspection, except as provided by 310 CMR 40.1305(6).
- (6) Confidential File. Except as provided by 310 CMR 40.1305(5)(a), if any document, or part thereof, that forms the basis for the selection of a response action is protected from disclosure pursuant to 310 CMR 40.1305(5), such document, to the extent practicable, shall be summarized in such a way as to render the document, or the material information included therein, available to the public. The summary document shall be placed in the publicly available portion of the administrative record. If the Department determines that it is not practicable to summarize the information protected from disclosure, and any other information in such a document forms the basis or a portion of the basis for the Department's selection of a response action, the information protected from disclosure shall be deleted therefrom, and the remaining portions of the document shall be included in the publicly available portion of the administrative record. Those parts of the document determined by the Department to be impracticable to summarize shall be placed in the Confidential File of the administrative record. Information in the Confidential File shall not be disclosed to any RP, PRP or the public, unless the Department expressly waives an applicable privilege or disclosure is otherwise authorized or required by applicable law or court order.

40.1305: continued

(7) General Index. The administrative record shall contain an index describing the various files included within the administrative record, including, but not limited to, the Confidential File. The Department shall list separately each file included in the administrative record and shall include in such list a description of the documents within each file. Such files may include, without limitation, an Environmental Analyses File containing copies of the results of environmental sampling and analyses; a Correspondence File containing copies of pertinent letters and other correspondence; a Public Involvement File documenting Public Involvement Activities undertaken with respect to the disposal site; a Response Action File containing scopes of work, plans and reports regarding response actions at the disposal site; and a Contractor File containing copies of pertinent contracts, invoices and payments.

40.1306: Location of the Administrative Record

(1) Except as provided by 310 CMR 40.1306(2) and (3), the Department shall make the administrative record, and the index for the administrative record, reasonably available to RPs, PRPs and the public at the Department regional office that serves the area where the disposal site is located. The Department may keep additional copies of the administrative record and the index for the administrative record at other locations.

(2) The Department shall not be required to keep the following documents in the office of the Department to which the site is assigned, provided that the index to the administrative record indicates the locations where such documents are kept:

- (a) sampling and testing data, quality control and quality assurance documentation and chain of custody forms;
- (b) guidance and policy documents not generated specifically for the disposal site at issue;
- (c) publicly available technical literature not generated for the disposal site at issue, such as engineering textbooks, articles from technical journals and toxicological profiles; and
- (d) documents included in the Confidential File of the administrative record.

(3) If any document, or part thereof, listed in the index to the administrative record is not kept in the Department office described in 310 CMR 40.1306(1), the Department shall make such documents, or photocopies thereof, excluding documents from the Confidential File, reasonably available for public review at the location described in 310 CMR 40.1305(1), upon request.

(4) The Department may make any document included in the administrative record available in microform, microfilm or any other suitable form.

SUBPART N: PUBLIC INVOLVEMENT AND TECHNICAL ASSISTANCE GRANTS

40.1400: Public Involvement - General Approach for Response Actions

310 CMR 40.1400 through 40.1449, cited collectively as 310 CMR 40.1400, contain requirements and procedures for the conduct of Public Involvement Activities in connection with response actions.

40.1401: General Principles for Public Involvement in Response Actions

(1) Activities undertaken to foster public involvement during response actions shall serve two objectives:

- (a) for all disposal sites, Public Involvement Activities shall inform the public about the risks posed by the disposal site, the status of response actions, the availability of Technical Assistance Grants, and opportunities for public involvement; and
- (b) for Public Involvement Plan sites, Public Involvement Activities shall also solicit the concerns of the public about the disposal site and response actions, and shall consider, address and, where relevant and material to the response action, incorporate these concerns in planning response actions.

40.1401: continued

(2) Concerns, information, and comments raised during the implementation of Public Involvement Activities conducted pursuant to 310 CMR 40.1400 through 40.1449 shall be considered when making decisions regarding response actions.

40.1402: Responsibility for Performing Public Involvement Activities in Response Actions

(1) Public Involvement Activities required by this Contingency Plan shall be performed at all disposal sites regardless of whether the Department, RP, PRP or Other Person is conducting the response action.

(2) At any disposal site where the Department is performing a response action, the Department shall be responsible for all Public Involvement Activities pursuant to M.G.L. c. 21E and 310 CMR 40.0000.

(3) At any disposal site at which a RP, PRP or Other Person is conducting a response action, that RP, PRP or Other Person shall be responsible for all Public Involvement Activities pursuant to M.G.L. c. 21E and 310 CMR 40.0000.

(4) Nothing shall prohibit the Department from conducting Public Involvement Activities at any disposal site where the Department deems it is appropriate.

40.1403: Minimum Public Involvement Activities in Response Actions

(1) Public Involvement Activities undertaken at all disposal sites are those designed primarily to provide the public with information regarding the risks posed by the disposal site, status of response actions, availability of technical assistance grants, and opportunities for public involvement.

(2) At a minimum, the following procedures shall be followed for written and public notices required under 310 CMR 40.1400:

(a) written notices shall be made either by hand-delivery or first-class mail, and the date of notification shall be:

1. if served by hand, the date when delivered:
 - a. personally to the intended recipient;
 - b. personally to any officer, employee, or agent of the intended recipient authorized by appointment of the intended recipient or by law to accept service; or
 - c. to an adult member of the intended recipient's household; or
2. if served by mail, the date of the postmark;

(b) public notices shall be made in a newspaper of general circulation in the community(ies) in which the disposal site is located and in newspapers of general circulation in other communities which are, or are likely to be, affected by the disposal sites by:

1. publishing an advertisement in the local news section; or
2. publishing a legal notice, if the cost of an advertisement of comparable size in the local news section exceeds the cost of a legal notice by 20% or more, or if the newspaper refuses to publish the notices as an advertisement; and

(c) written and public notices shall be documented to the Department according to the following:

1. a copy of each written notice shall be concurrently submitted to the Department; and
2. except as provided in 310 CMR 40.0062(5), a copy of the public notice as published in each newspaper containing the date of publication and name of the newspaper, shall be submitted to the Department within 30 days of the date of publication.

(3) At any time after the Department has been notified of a release or threat of release pursuant to 310 CMR 40.0300, the Chief Municipal Officer and Board of Health in the community(ies) in which the disposal site is located and in any other communities which are, or are likely to be, affected by the disposal site shall be provided written notice by the person conducting response actions of:

40.1403: continued

- (a) the purpose, nature and expected duration of any field work related to the response action involving the implementation of Phase IV remedial actions pursuant to 310 CMR 40.0870; the use of respirators and other protective clothing (Level A, B or C as defined by "Standard Operating Safety Guides" published by the U.S. Environmental Protection Agency); or any sampling involving private drinking water supply wells, indoor air or surficial soils at any residential property at, adjacent to, or down-gradient from any contamination or suspected contamination from a release or threat of release.
 - 1. Notification shall be made at least three days prior to the commencement of such field work.
 - 2. Notification shall be based on plans for the field work, including the expected level of protection for site workers. If the level of protection for site workers is upgraded during the course of the work to Level C or above, the Chief Municipal Officer and Board of Health shall be notified of the upgrade as soon as is practicable.
 - 3. Notification of field work is not required for Immediate Response Actions undertaken to address releases of oil and/or hazardous material as defined in 310 CMR 40.0311(1) through (9), or when advance notice for these actions is provided pursuant to 310 CMR 40.1403(3)(b) and (d);
- (b) the implementation of any Immediate Response Action taken to prevent, control, abate or eliminate an Imminent Hazard as required in 310 CMR 40.0322 and 40.0426 or to address a Critical Exposure Pathway as defined in 310 CMR 40.0006.
 - 1. Notification shall include information about the purpose, nature and expected duration of the Immediate Response Action.
 - 2. Notification shall be made as soon as feasible, but in all cases notification shall be made no later than 48 hours following implementation of the Immediate Response Action;
- (c) the availability of all Completion Statements required for Immediate Response Actions taken to prevent, control, abate or eliminate Imminent Hazards pursuant to 310 CMR 40.0427.
 - 1. Notification may take the form of copies of correspondence which contain or summarize the Completion Statement, or a notice of the availability of the Completion Statement.
 - 2. Notification shall include information about how local officials may obtain a copy of the Completion Statement from the person(s) conducting response actions.
- (d) the implementation of any Release Abatement Measure.
 - 1. Notification shall include information about the purpose, nature and expected duration of the Release Abatement Measure.
 - 2. Except as provided at 310 CMR 40.1403(3)(d)3., notification shall be made within the 20 days prior to the implementation of the Release Abatement Measure Plan.
 - 3. In the event that a removal action initiated as a Limited Removal Action is continued as a Release Abatement Measure pursuant to 310 CMR 40.0318(9)(b), notification shall be made on the same date that the complete RAM Plan is submitted to the Department pursuant to 310 CMR 40.0443.
- (e) the availability of the Phase I Initial Site Investigation Report required pursuant to 310 CMR 40.0480, and each subsequent Phase Report required pursuant to 310 CMR 40.0800. Notification shall take the form of a copy of the summary of findings and statement of conclusions, as provided in 310 CMR 40.0483(h), 40.0835(4)(i), 40.0852(5), or for Phase IV, a copy of the description of the Comprehensive Remedial Action provided in the Remedy Implementation Plan pursuant to 310 CMR 40.0874(3)(b)5. and 40.0874(3)(b)10., or for Phase V, a copy of the Phase V Completion Statement Form, and shall include information about how local officials may obtain a copy of the Report from the person(s) conducting response actions.
- (f) the availability of any Permanent or Temporary Solution Statements filed pursuant to 310 CMR 40.1000.
 - 1. Notification may take the form of copies of correspondence which contain or summarize decisions regarding the Statement or a notice of the availability of the Statement.
 - 2. Notification shall include information about how local officials may obtain a copy of the Statement from the person(s) conducting response actions.

40.1403: continued

(g) the availability of any Downgradient Property Status Submittal and/or modification of Downgradient Property Status Submittal provided to the Department pursuant to 310 CMR 40.0180. Notification shall include information about how local officials may obtain a full copy of the Downgradient Property Status Submittal and/or Modification of Downgradient Property Status Submittal from the person(s) conducting response actions.

(h) the submittal of a Release Notification Form to the Department pursuant to 310 CMR 40.0371.

1. Notification shall consist of a written notice pursuant to 310 CMR 40.1403(2)(a) that includes:

- a. a copy of the Release Notification Form; and
- b. a statement of the local officials' right to request additional Public Involvement Activities under 310 CMR 40.1403(9) and upon tier classification under 310 CMR 40.1404.

2. Notification shall be provided no later than seven days after sending the Release Notification Form to the Department pursuant to 310 CMR 40.0371.

(i) additional remedial actions conducted as part of an Audit Follow-up Plan pursuant to 310 CMR 40.1160.

(4) Notifications required by 310 CMR 40.1403(3)(a), (b), and (d) may be made orally or in writing. Notifications required by 310 CMR 40.1403(3)(c), (e), (f), and (g) shall be made in writing.

(a) Oral notifications shall be followed by written notice within seven days of the oral notification.

(b) A copy of each written notice shall be submitted to the Department concurrently with its filing with the Chief Municipal Officer and Board of Health.

(5) When issues of public safety are involved at a disposal site, the Fire and Police Chief in the community(ies) in which the disposal site is located and in any other communities which are, or are likely to be, affected by the disposal site shall be notified about any threat to public safety prior to the implementation of remedial actions, unless prior notification is impracticable.

(6) Following Tier Classification or reclassification pursuant to 310 CMR 40.0510 or 310 CMR 40.0530, respectively, the person(s) conducting response actions shall undertake the following actions to inform the public about the status of the disposal site's classification:

(a) within seven days of filing a Tier Classification Submittal, a public notice pursuant to 310 CMR 40.1403(2)(b) which indicates the classification or reclassification of the disposal site shall be published in a form established by the Department for such purpose and shall include:

1. a statement of the Public Involvement Activities available under 310 CMR 40.1403(9) and 40.1404; and
2. contact information for the person(s) conducting response actions, including the person's name, address, and telephone number;

(b) at least three days prior to publication of the public notice specified in 310 CMR 40.1403(6)(a), a written notice pursuant to 310 CMR 40.1403(2)(a) shall be sent to the Chief Municipal Officer(s) and the Board(s) of Health in the community(ies) in which the disposal site is located and in any other communities which are, or are likely to be, affected by the disposal site, and shall include:

1. a copy of the public notice;
2. a copy of the disposal site map included in the Phase I Report pursuant to 310 CMR 40.0483(1)(b); and
3. information regarding the availability of the Phase I Report pursuant to 310 CMR 40.1403(3)(e).

(7) Within 30 days after recording and/or registering any original, amended, released or terminated Activity and Use Limitation pursuant to 310 CMR 40.1070 through 40.1080, the following requirements shall be met to inform local officials and the public of the limitations which apply to activities and/or uses of the property subject to the Activity and Use Limitation:

40.1403: continued

(a) a copy of the recorded and/or registered Activity and Use Limitation shall be provided to:

1. the Chief Municipal Officer;
2. the Board of Health;
3. the Zoning Official; and
4. the Building Code Enforcement Official in the community(ies) in which the property subject to such Activity and Use Restriction is located.

(b) a public notice pursuant to 310 CMR 40.1403(2)(b) which indicates the recording and/or registering of the original, amended, released or terminated Activity and Use Limitation shall be published in a newspaper that circulates in the community(ies) in which the property subject to the Activity and Use Limitation is located.

1. This notice shall be in a form established by the Department for such purpose and shall include, but not be limited to:
 - a. the name, address, and Release Tracking Number(s) of the disposal site associated with the Activity and Use Limitation;
 - b. the type of Activity and Use Limitation;
 - c. information about where the Activity and Use Limitation instrument and disposal site file can be reviewed; and
 - d. the name, address and telephone number of the person recording and/or registering the Activity and Use Limitation from whom the public can obtain additional information.
2. A copy of this public notice shall be submitted to the Department within seven days of its publication.

(8) For any disposal site where the Permanent Solution relies on the exception provided by 310 CMR 40.1013(1)(c) from requirements for an Activity and Use Limitation, a copy of the Permanent Solution Statement shall be filed with the following offices:

- (a) where a public way is part of the disposal site, the public agency(ies) owning and operating that public way;
- (b) where a rail right-of-way is part of the disposal site, the owner and operator of the rail line. For rail rights-of-way subject to the requirements of M.G.L. c. 161C, a copy of the Permanent Solution Statement shall also be filed with the Massachusetts Department of Transportation; and
- (c) the notifications required by 310 CMR 40.1403(8)(a) and (b) shall be made concurrently with the notification to local officials of the availability of Permanent Solution Statements pursuant to 310 CMR 40.1403(3)(f).

(9) Local officials or ten or more residents of a community(ies) in which a disposal site is located or in any other communities which are, or are likely to be, affected by a disposal site may request an opportunity for Public Involvement Activities related to any Immediate Response Action conducted pursuant to 310 CMR 40.0410 or Release Abatement Measure conducted pursuant to 310 CMR 40.0440. Such request shall be made in writing to the person(s) conducting the response actions and copied concurrently to the Department.

- (a) Following the receipt of such written request, the person(s) conducting response actions shall, at a minimum:
 1. contact the people making the request and appropriate local officials to identify their concerns about the response action;
 2. provide information to those making the request about the nature and extent of contamination (to the extent known at the time) and about implemented and planned response actions;
 3. provide appropriate opportunities for public comment, which may include but are not limited to, holding a public meeting or providing an opportunity for the public to submit written comments to the person(s) conducting response actions; and
 4. establish a public information repository in the community(ies) in which the disposal site is located or in any other community(ies) that is, or is likely to be, affected by the disposal site;

40.1403: continued

(b) when holding a public meeting in response to a request for Public Involvement Activities, the person(s) conducting response actions shall hold such meeting at a time and place convenient to the people requesting the opportunity for comment, and shall publicize the meeting in advance in such community and by providing written notice pursuant to 310 CMR 40.1403(2)(a) to the persons requesting the Public Involvement Activities and appropriate local officials.

(c) when providing the opportunity to the public to submit written comments, the person(s) conducting response actions shall:

1. notify the persons requesting the Public Involvement Activities and appropriate local officials using a written notice pursuant to 310 CMR 40.1403(2)(a);
2. provide a public comment period of a minimum of 20 days from the date of notification of the Immediate Response Actions or Release Abatement Measures;
3. consider and, where relevant and appropriate, incorporate comments into plans for response actions;
4. prepare a written summary of and response to relevant comments within 30 days of the last day of the public comment period, unless an alternative procedure for summarizing comments is agreed to by the person(s) conducting response action(s) and the persons requesting Public Involvement Activities; and
5. include the written summary of and response to comments in the next related response action submittal to the Department and place it in the public information repository;

(d) Notwithstanding the provisions of 310 CMR 40.1403(9), nothing shall prohibit:

1. person(s) conducting response actions and the persons who requested Public Involvement Activities from agreeing to Public Involvement Activities or procedures for providing public comment on response action submittals in addition to or in *lieu* of those specified in 310 CMR 40.1403(9)(b) or (c); or
2. persons from petitioning for the designation of the disposal site where Public Involvement Activities are being conducted pursuant to 310 CMR 40.1403(9) as a Public Involvement Plan Site pursuant to 310 CMR 40.1404;

(e) The public involvement opportunities provided pursuant to 310 CMR 40.1400 shall not unreasonably delay implementation of response actions at the disposal site;

(f) Assessment may proceed during the public comment period;

(g) Except as provided in 310 CMR 40.1403(9)(h), remedial actions that are the subject of the public comment period shall not proceed until the close of the public comment period;

(h) Time critical elements of an Immediate Response Action Plan may be conducted prior to the close of the public comment period if delaying the remedial actions would exacerbate release or site conditions or endanger health, safety, public welfare or the environment; and

(i) Unless otherwise specified by the Department, the public involvement provisions of 310 CMR 40.1403(9) shall not apply to Release Abatement Measures conducted pursuant to 310 CMR 40.1067(4) after a valid Permanent Solution Statement has been submitted to the Department.

(10) Any time environmental samples are taken at a property in the course of investigating a release for which a notification to the Department pursuant to 310 CMR 40.0300 has been made on behalf of someone other than the owner of the property, the person(s) conducting the response actions shall:

(a) provide the property owner with a written notice pursuant to 310 CMR 40.1403(2)(a) on a form established by the Department for such purpose which explains that the property owner will be provided the results of the sample analyses; such written notice shall be provided to the property owner :

1. as soon as possible, but no more than seven days after the date of sampling, when conducted as part of an Immediate Response Action to address releases defined at 310 CMR 40.0311; or
2. prior to the date of sampling when conducted as part of any other response action;

(b) within 30 days of the date the sample results are issued by the laboratory, provide the property owner with:

40.1403: continued

1. the results of the sample analyses of samples from the property owner's property and a written notice that additional documentation associated with the samples, such as that listed at 310 CMR 40.0017(3), will be provided to the property owner within 30 days of receipt of a request for such documentation. The person providing written notice shall provide such additional documentation to the property owner within 30 days of receipt of a request;
 2. a statement that public involvement opportunities are available under 310 CMR 40.1403(9) and, if the site is tier classified, under 310 CMR 40.1404;
- (c) provide to the Department with the next required MCP submittal the results of and additional documentation associated with any sampling subject to the notice requirements of 310 CMR 40.1403(10), a copy of the written notice required by 310 CMR 40.1403(10)(a), and a copy of any alternative schedule for providing sampling results established pursuant to 310 CMR 40.1403(10)(d); and
- (d) Notwithstanding the provisions at 310 CMR 40.1403(10)(b), when sampling at a property will occur on an ongoing basis, an alternative schedule may be established for providing the results of multiple sampling events to a property owner, provided that such schedule is established in writing and agreed to by the property owner. The person(s) conducting the response actions shall include with the results of the sample analyses a written notice that additional documentation associated with the samples, such as that listed at 310 CMR 40.0017(3), will be provided to the property owner within 30 days of receipt of a request for such documentation. The person providing written notice shall provide such additional documentation to the property owner within 30 days of receipt of a request.
- (11) Any person conducting a remedial action as part of an Immediate Response Action to prevent, control, or eliminate an Imminent Hazard pursuant to 310 CMR 40.0322 and 40.0426 or to address a Critical Exposure Pathway pursuant to 310 CMR 40.0414(3) through (4) shall provide notice of such remedial actions to owners and/or operators, and to other persons who may experience significant health or safety impacts from the disposal site that is being addressed by the Immediate Response Action (*i.e.*, Affected Individuals as defined in 310 CMR 40.0006).
- (a) Unless otherwise specified by the Department, notification shall be made orally or in writing as soon as possible but not later than 72 hours after commencement of the remedial action;
 - (b) Oral notifications shall be followed by a written notice pursuant to 310 CMR 40.1403(2)(a) within seven days of the oral notification;
 - (c) Written notices shall be provided on a form established by the Department for such purpose that includes information about the purpose, nature and expected duration of the remedial action, and a statement of the Public Involvement Activities available under 310 CMR 40.1403(9) and, if applicable, 310 CMR 40.1404;
 - (d) For multi-unit or industrial or commercial buildings, the person conducting the Immediate Response Action shall, in addition to notifying Affected Individuals, request that the owners and/or operators of the buildings post the notice where it will be visible to individuals who are routinely present in such building(s);
 - (e) Upon completion of the Immediate Response Action where a remedial action was conducted to prevent, control, or eliminate an Imminent Hazard or to address a Critical Exposure Pathway, the person conducting the Immediate Response Action shall, concurrently with submitting the Immediate Response Action Completion Statement to the Department, provide those same Affected Individuals for whom notification pursuant to 310 CMR 40.1403(11)(a) through (d) was required with a written notice pursuant to 310 CMR 40.1403(2)(a) that includes a copy of the Immediate Response Action Completion Statement; and
 - (f) A copy of all written notices required by 310 CMR 40.1403(11) shall be submitted to the Department with the Immediate Response Action Completion Statement.

40.1404: Public Involvement Plan Site Designation

- (1) The following disposal sites shall be eligible for PIP Site Designation:
 - (a) any disposal site that has been tier classified pursuant to 310 CMR 40.0500;
 - (b) any disposal site that is deemed a default Tier ID site pursuant to 310 CMR 40.0502;

40.1404: continued

- (c) any disposal site at which response actions are being conducted in accordance with 310 CMR 40.0112 and for which a RCRA Facility Assessment has been completed;
 - (d) any disposal site at which response actions are being conducted in accordance with 310 CMR 40.0113 and for which either a RCRA Facility Assessment or equivalent assessment in accordance with 310 CMR 30.000: *Hazardous Waste* has been completed; or
 - (e) any disposal site at which response actions are being conducted in accordance with 310 CMR 40.0114 and for which an Initial Site Assessment or equivalent assessment in accordance with 310 CMR 19.00: *Solid Waste Management* has been completed.
- (2) Except as provided in 310 CMR 40.1404(3), a disposal site shall not be eligible for designation as a PIP Site if the Department issued or received any of the following:
- (a) a No Further Action determination letter issued by the Department pursuant to 310 CMR 40.000;
 - (b) a determination by the Department that the site is exempt from the transition requirements pursuant to 310 CMR 40.0637;
 - (c) a Permanent Solution Statement pursuant to 310 CMR 40.1000;
 - (d) an LSP Evaluation Opinion, Consultant of Record No Further Action Statement or PRP No Further Action Statement pursuant to 310 CMR 40.0600; or
 - (e) a Waiver Completion Statement pursuant to 310 CMR 40.537.
- (3) Notwithstanding 310 CMR 40.1404(2), a disposal may be subject to PIP Site Designation or the continuation of PIP activities under an existing PIP Site Designation if the Department:
- (a) specifies that a new or continued PIP Designation is appropriate for remedial actions conducted pursuant to 310 CMR 40.1067; or
 - (b) finds that a determination or submittal listed in 310 CMR 40.1404(2)(a) through (e) is invalid and that further response actions are required at the disposal site to which the determination or submittal applied.
- (4) Petitions shall be submitted to the party responsible for conducting response actions at the disposal site. For disposal sites where a RP, PRP or Other Person is conducting response actions, a copy of the petition shall also be sent concurrently to the Department.
- (5) Petitions submitted shall:
- (a) identify the disposal site to be designated, by name, address, and Release Tracking Number(s) if known;
 - (b) include a request to designate the disposal site as a PIP Site pursuant to M.G.L. c. 21E, § 14(a) and the Massachusetts Contingency Plan, 310 CMR 40.1404; and
 - (c) include the signatures and addresses of at least ten persons signing the petition. These names and addresses shall also be legibly printed so that they can be used to respond to the petition.
- (6) Upon receipt of a petition for a disposal site eligible for PIP Site Designation pursuant to 310 CMR 40.1404(1) through (3) signed by ten or more residents of a municipality in which the disposal site is located, or of a municipality potentially affected by the disposal site, the disposal site shall be designated a PIP Site. Following PIP Site Designation, the person(s) conducting response action shall inform the petitioners of such Designation pursuant to 310 CMR 40.1404(7).
- (7) All petitioners shall be informed in writing by the person(s) conducting response actions as to whether or not the disposal site has been designated as a PIP Site within 20 days of receipt of such a petition. If the disposal site is ineligible for PIP Site Designation pursuant to 310 CMR 40.1404(1) through (3), then the reason why the site is ineligible for PIP Site Designation shall be stated in the response letter to the petitioners. If the Department is not conducting response actions at the disposal site, a copy of the response letter shall be concurrently sent to the Department.
- (8) While petitions to designate a disposal site as a PIP Site shall be accepted for any Tier I, Tier II or Tier ID disposal site, the submission of such a petition by itself shall not alter the classification of a disposal site pursuant to 310 CMR 40.0500.

40.1404: continued

(9) The submittal of a PIP petition shall not alter the order in which the Department initiates response actions at a disposal site.

(10) When PIP Site Designation is terminated pursuant to 310 CMR 40.1405(7), a new PIP Site Designation petition shall be required to re-designate the disposal site as a PIP Site.

(11) A new PIP Site Designation petition is not required for a disposal site that is currently a PIP Site at which a new release or threat of release for which notification is required pursuant to 310 CMR 40.0300 occurs. The person(s) conducting response actions at the disposal site shall inform the individuals on the mailing list established for the PIP Site of any such new release or threat of release using a written notice pursuant to 310 CMR 40.1403(2)(a).

(12) A PIP petition may be withdrawn prior to the development of a draft Public Involvement Plan. Withdrawals shall be submitted in writing to the person(s) conducting response actions and shall include the site name, Release Tracking Number, an explanation for the withdrawal, and the signatures of a majority of the original petitioners. Within 14 days of the date of receipt of the withdrawal request, the person(s) conducting response actions shall provide a copy of the request to the Department.

40.1405: Additional Public Involvement Activities Required for Public Involvement Plan Sites

(1) Public Involvement Activities undertaken at PIP Sites are those taken in addition to the Public Involvement Activities required for all disposal sites and are designed to involve the public in decisions regarding response actions.

(2) Public Involvement Activities conducted at PIP Sites shall focus on the community(ies) in which the disposal site is located and shall include other communities which are, or are likely to be, affected by the disposal site.

(3) Concerns, information, and comments from the public about the disposal site shall be solicited, considered, addressed and, where relevant and material to response actions, incorporated into decisions regarding response actions at the disposal site.

(4) Public Involvement Activities required at PIP Sites shall pertain to those response actions conducted after the submission of the PIP petition, except at disposal sites where response actions beyond Phase I are conducted prior to Tier Classification. At disposal sites where response actions beyond Phase I are conducted prior to Tier Classification, Public Involvement Activities shall pertain to all response actions conducted, provided that the PIP petition is received within 30 days of publication of the public notice required in 310 CMR 40.1403(6) or 40.0510(3).

(5) Upon designation of a disposal site as a PIP Site:

(a) within 80 days of receiving a PIP petition for an eligible disposal site a draft site-specific Public Involvement Plan shall be prepared, and a public meeting shall be held to present the draft Public Involvement Plan, solicit public comment on the draft Public Involvement Plan, and provide information about disposal site conditions. This public meeting shall be held at a time and location convenient to the affected public. Residents of the potentially affected community(ies) shall be informed of the public meeting by the following activities:

1. a public notice pursuant to 310 CMR 40.1403(2)(b) shall be published at least 14 days prior to the meeting; and
2. a copy of the public notice announcing the public meeting shall be mailed to each petitioner, and the Chief Municipal Officer(s) and Board(s) of Health in the community(ies) in which disposal site is located and in any other community(ies) that is, or is likely to be, affected by the disposal site;

(b) the draft Public Involvement Plan shall be made available for public review on the date of the public meeting to present it and a public comment period that runs for a minimum of 20 days from the date of the public meeting shall be provided;

40.1405: continued

- (c) the Public Involvement Plan shall be finalized within 30 days of the close of the public comment period on the draft Public Involvement Plan;
 - (d) a summary of comments received on the draft Public Involvement Plan shall be developed that contains the comments received, identifies comments that have been incorporated and provides an explanation for comments that were not incorporated into the final Public Involvement Plan. The copy of the response to comments and the final Public Involvement Plan shall be made available in the information repository(ies) established for the disposal site pursuant to 310 CMR 40.1405(6)(j);
 - (e) if the Department is not conducting response actions at the disposal site, copies of all the documents related to the public involvement process shall be submitted to the Department upon their availability; and
 - (f) the Public Involvement Plan shall be implemented throughout the response action process.
- (6) A Public Involvement Plan shall, without limitation:
- (a) identify local concerns and sources of information through interviews and other appropriate measures and ensure that the implementation of the Public Involvement Plan reflects such concerns and information and the nature and level of relevant public interest;
 - (b) inform the public about the response action(s) and public involvement processes by methods including, but not limited to, providing notification of the public of a public meeting a minimum of 14 days in advance of the meeting;
 - (c) provide the name, address and phone number of a contact person for the person(s) conducting response actions;
 - (d) provide disposal site background information, including, but not limited to, a site description and history, material environmental assessment history, and relevant public involvement history;
 - (e) provide opportunities to comment on response actions by holding a minimum 20 day comment period on all submittals for response actions occurring following PIP designation, with the following qualifications:
 1. any public comment period may be extended, if requested by the public, for a minimum of an additional 20 days;
 2. a modified Phase II Scope of Work, IRA Plan, RAM Plan, or sampling plan shall be subject to an additional comment period if such modifications substantially alter or expand the previous Phase II Scope(s) of Work, IRA Plan(s), RAM Plan(s), or previous sampling plan(s);
 3. except as provided in 310 CMR 40.1405(6)(e)4., remedial actions that are the subject of the public comment period shall not proceed until the close of the public comment period;
 4. time critical elements of an Immediate Response Action Plan may be conducted prior to the close of the public comment period if delaying the remedial actions would exacerbate release or site conditions or endanger health, safety, public welfare or the environment;
 5. a comment period is not required for a remedial action inspection and monitoring report or status report; and
 6. assessment may proceed during the public comment period;
 - (f) incorporate relevant and material public comments into the planning and implementation of response actions;
 - (g) provide a summary of all public comments received during any comment period within 60 days of the close of the comment period that contains the comments received, identifies comments that have been incorporated and provides an explanation for comments that were not incorporated into the applicable plan;
 - (h) ensure that Public Involvement Activities are undertaken throughout the response action process and that a schedule is developed for conducting these activities;
 - (i) establish a public information repository(ies) in the community(ies) in which the disposal site is located and in any other communities which are, or are likely to be, affected by the disposal site, with a location and hours that are convenient to the public; and

40.1405: continued

- (j) maintain a mailing list that includes at a minimum:
 1. all individuals who ask to receive information about the disposal site;
 2. the Chief Municipal Officer(s);
 3. the Board (s) of Health; and
 4. the Department;

(7) Public Involvement Activities shall be terminated, modified, expanded or reduced as provided below:

(a) Unless otherwise provided in a Public Involvement Plan or specified by the Department, a designation of a disposal site as a PIP Site pursuant to 310 CMR 40.1404 shall terminate following the implementation of the PIP activities applicable to the Permanent Solution Statement for the disposal site pursuant to 310 CMR 40.1000;

(b) The person(s) conducting response actions, ten or more residents of a community(ies) in which a disposal site is located or in any other community(ies) which are, or are likely to be, affected by a disposal site may propose to terminate the designation of a disposal site as a PIP Site, or to modify, expand or reduce Public Involvement Activities in a Public Involvement Plan. If such a proposal is made to terminate, expand or reduce Public Involvement Activities or terminate designation of a disposal site as a PIP Site, the person(s) conducting response actions shall provide a written notice pursuant to 310 CMR 40.1403(2)(a) to the parties on the mailing list for the disposal site, the local Board(s) of Health and Chief Municipal Officer(s) in the community(ies) in which the disposal site is located and in any other communities that are, or are likely to be, affected by the disposal site and publish a public notice pursuant to 310 CMR 40.1403(2)(b). Such written and public notices shall:

1. identify the proposed changes to the Public Involvement Activities;
2. provide a 20 day comment period for the proposed modification, expansion, reduction or termination of the Public Involvement Activities or termination of the PIP Site Designation, whichever is applicable; and
3. identify the location of the public information repository where the proposed changes have been made available for review;

(c) The person(s) conducting response actions shall review any comments received and if applicable, revise the Public Involvement Plan developed pursuant to 310 CMR 40.1404 to incorporate as appropriate proposed revisions as well as any comments received on the proposed revisions;

(d) A letter that sets forth the revised Public Involvement Activities or termination of the PIP Site Designation shall be placed in the information repository and concurrently sent to any person(s) who responded to written notice made pursuant to 310 CMR 40.1405(7)(b).

(e) Upon termination of a PIP Site Designation, the person(s) conducting response actions at the disposal site shall no longer be required to conduct Public Involvement Activities pursuant to the Public Involvement Plan or 310 CMR 40.1405.

40.1406: Notification to Owners of Property within the Boundaries of a Disposal Site

(1) Any person(s) conducting response action(s) at a disposal site shall provide written notice on a form established by the Department for such purpose and in accordance with the requirements of 310 CMR 40.1403(2)(a) to the owner(s) of property(ies) within the boundaries of the disposal site as depicted and/or described pursuant to 310 CMR 40.0835(4)(b) and/or 310 CMR 40.1056(2)(a) that said property(ies) (or a portion of the property(ies)) is within the disposal site boundaries. The person(s) conducting response actions at the disposal site shall:

(a) provide the following information in or with the written notice:

1. a copy of the disposal site map or description of disposal site boundaries prepared pursuant to 310 CMR 40.0835(4)(b) and/or 310 CMR 40.1056(2)(a) showing or describing the boundaries of the disposal site;
2. a copy of the conclusions prepared pursuant to 310 CMR 40.0835(4)(i) or 310 CMR 40.1056;
3. a statement that Public Involvement Activities are available under 310 CMR 40.1400; and

40.1406: continued

4. the name, address and telephone number of a contact person representing the person(s) conducting response actions who may be contacted for additional information on the disposal site;
 - (b) provide such written notice concurrently with submitting the Phase II Report, pursuant to 310 CMR 40.0835, or the Permanent or Temporary Solution Statement for the disposal site, pursuant to 310 CMR 40.1000, to the Department, whichever is submitted sooner:
 1. for written notice provided concurrently with submitting the Phase II Report to the Department, additional written notice of the Permanent or Temporary Solution for the disposal site shall be subsequently provided pursuant to 310 CMR 40.1406(3);
 2. for written notice provided concurrently with submitting the Permanent or Temporary Solution Statement for the disposal site to the Department, such written notice shall also include a statement explaining how to obtain additional documentation of the Permanent or Temporary Solution.
 - (c) if the number of property owners to receive the written notices exceeds 50, provide a written notice pursuant to 310 CMR 40.1403(2)(a) to property owners only after the Board(s) of Health in the community(ies) in which the properties are located and the Department receive written notice.
- (2) Any person(s) conducting response actions who provided written notice to a property owner(s) pursuant to 310 CMR 40.1406(1) who later determines as the result of an additional response action(s) that a property is not within the boundaries of the disposal site shall make written notice to said property owner(s) within 30 days of receiving the additional information upon which such a determination is based. Such written notice shall include:
- (a) the basis of the determination;
 - (b) an updated copy of the disposal site map prepared pursuant to 310 CMR 40.0835(4)(b) or 40.1056(2)(a) showing the revised boundaries of the disposal site; and
 - (c) a statement explaining how to obtain additional documentation that supports the determination.
- (3) Any person(s) conducting response action(s) who provided written notice to a property owner(s) upon submission of the Phase II Report pursuant to 310 CMR 40.1406(1) shall subsequently upon achievement of a Permanent or Temporary Solution for the disposal site provide a written notice pursuant to 310 CMR 40.1403(2)(a) of the Permanent or Temporary Solution to the owners of those properties for which notice was previously provided concurrently with submitting the Permanent or Temporary Solution to the Department. Such written notice shall include:
- (a) a copy of the conclusions prepared pursuant to 310 CMR 40.1056;
 - (b) an updated copy of the disposal site map, if the identified disposal site boundaries have changed since the previous notice;
 - (c) the name, address and telephone number of a contact person representing the person(s) conducting response actions who may be contacted for additional information on the disposal site; and
 - (d) a statement explaining how to obtain additional documentation of the Permanent or Temporary Solution.
- (4) If the number of property owners that would receive written notices pursuant to 310 CMR 40.1406 exceeds 50, alternative means of providing notice to property owners (*e.g.*, use of a public notice published in the local newspaper) may, upon approval by the Department, be used to fulfill the requirements of 310 CMR 40.1406. In such case, written notice to the Board(s) of Health in the community(ies) in which the properties are located shall be provided pursuant to 310 CMR 40.1406(1)(c) prior to providing notice to the property owners, and such written notice shall also inform the Board(s) of Health of the alternative means by which notice will be provided to the property owners.
- (5) A copy of all written notices required by 310 CMR 40.1406 shall be submitted to the Department with the corresponding Phase II Report or Permanent or Temporary Solution Statement.

(40.1407: Community Site Inspection: Reserved)

40.1450: Technical Assistance Grants

310 CMR 40.1450 through 40.1499, cited collectively as 310 CMR 40.1450, specifies terms and conditions of eligibility for, and use of, technical assistance grants.

40.1451: Purpose and Scope of Technical Assistance Grants

- (1) The Department may provide for limited grants in order to:
 - (a) provide access to expert advice and technical assistance;
 - (b) encourage more effective participation in the response action process by promoting access to and use of information; and
 - (c) allow issues of concern related to the disposal site to be addressed.

40.1452: Grant Availability

- (1) Grants shall be made available to affected persons described in 310 CMR 40.1453, subject to the provisions of 310 CMR 40.1451 through 40.1462 and to the availability of funding.
- (2) For each disposal site, there shall be no more than one grant available per funding round.
- (3) Grants may be made to single organizations for technical assistance activities at more than one disposal site. However, no applicant shall receive more than one grant in a funding round.
- (4) Grant Amounts.
 - (a) At the start of each funding round, the Department shall designate a maximum amount for any single grant.
 - (b) Any other source of funding obtained by an applicant for expert advice or technical assistance shall not be subtracted from any specified grant maximum designated by the Department provided the total of grant funds received by the grantee from all sources shall not exceed 100% of the total cost of the proposed project.
 - (c) The maximum grant amount(s) shall be set forth in the notice to be published by the Department pursuant to 310 CMR 40.1455.
- (5) Disposal sites that are eligible for Technical Assistance Grants are:
 - (a) any disposal site classified as Tier I or Tier II pursuant to 310 CMR 40.0500;
 - (b) any Massachusetts disposal site listed on the National Priority List; and
 - (c) any site deemed by the Department to be Adequately Regulated pursuant to 310 CMR 40.0110 *et. seq.*, and for which response actions have not been completed.
- (6) No Technical Assistance Grant Agreement shall be made available to a Grantee for any site for which:
 - (a) a valid Permanent Solution Statement has been submitted to the Department by the party(ies) conducting response actions at a tier classified site; or
 - (b) a Waiver Completion Statement has been submitted to the Department by the party(ies) conducting response actions.

40.1453: Eligible Applicants

- (1) The Department may provide for limited grants to be given to the following affected persons:
 - (a) any group of individuals who may be affected by oil and/or hazardous material from any eligible disposal site, or
 - (b) any city, town or agency thereof which may be affected by oil and/or hazardous material from any eligible disposal site, or
 - (c) any district or other body politic that owns or operates a public water supply system which may be affected by oil and/or hazardous material from any eligible disposal site.
- (2) Applicants who do not exist as a legal entity with legal authority to receive, disburse, and be responsible for funds at the time the grant is awarded shall be ineligible.

40.1453: continued

- (3) Any applicant which unreasonably restricts the meaningful participation and involvement of affected individuals shall be ineligible to receive a grant.
- (4) Any person liable or potentially liable pursuant to M.G.L. c. 21E, § 5 and any Other Person taking a response action at a disposal site pursuant to M.G.L. c. 21E, § 4 shall be ineligible to receive a grant for that disposal site.

40.1454: Eligible Activities

- (1) Eligible activities for grants may include, but are not limited to:
 - (a) interpretation, review or critique of technical analyses related to a disposal site as presented in reports developed by or on behalf of the Department, RPs, PRPs, Other Persons, or by other public or private entities. Such reports may include, but are not limited to:
 1. the scope of work for Phase II; the Phase II Report; the Phase III - Remedial Action Plan; the Phase IV - Remedy Implementation Plan, As-Built Construction Report, and the Final Inspection Report; the Phase V - Inspection and Monitoring Report; and
 2. sampling and analysis plans;
 - (b) observation of assessment, sampling or response action activities conducted by the Department, RP, PRP or Other Person. Such observation shall be conducted in accordance with 310 CMR 40.1454(3);
 - (c) analysis of split samples taken by the Department, RP, PRP or Other Person, provided that the grantee's consultant performs testing and analysis which is identical to that performed by the Department, RP, PRP or Other Person;
 - (d) health surveys to gather existing information through interviews with, and questionnaires answered by, individuals who may be affected by the disposal site;
 - (e) legal advice concerning the public's involvement in response actions;
 - (f) public education activities; and
 - (g) a reasonable share of funding for voluntary mediation concerning response actions for the disposal site.
- (2) The following activities shall be ineligible for grants:
 - (a) development of new environmental data;
 - (b) development of new medical data;
 - (c) organizational development or membership building, except such activities that are incidental to performance of eligible activities;
 - (d) litigation or any other adversarial legal proceeding;
 - (e) partisan political activity or any activity to further the election or defeat of any candidate for public office; and
 - (f) taking or arranging for any response actions at the disposal site.
- (3) The following conditions shall be met before initiating eligible activities:
 - (a) grantees shall obtain approval from the person(s) responsible for the conduct of the response action at the disposal site and from the owner or operator of the disposal site prior to conducting activities at the disposal site under 310 CMR 40.1454(1)(b) and (c);
 - (b) grantees shall comply with the health and safety plan and all operational protocols established for the disposal site; and
 - (c) grantees shall not interfere with the efficient, expeditious, and safe conduct of response actions at the disposal site.

40.1455: Notice Provisions

- (1) For each funding round, the Department shall publish a notice in the *Environmental Monitor* and on the Department's web site announcing the availability of grants, application procedures and deadlines. The availability of grants shall also be announced by the Department with any List of Disposal Sites published pursuant to 310 CMR 40.0168.
- (2) Information about the availability of technical assistance grants shall also be published by the person(s) responsible for the conduct of the response action at the disposal site as part of other public notices published pursuant to this Contingency Plan.

40.1456: Grant Application Process

Grant applications shall be received and evaluated by the Department in accordance with the following procedures:

- (1) The Department may establish one or more funding rounds and application periods each year. The Department may extend any application period at its discretion. Should an application period be extended, the Department shall publish notice thereof in the *Environmental Monitor* and on the Department's web site.
- (2) Applications received after the close of the application period shall not be considered for a grant in that funding round.
- (3) Grant applications shall be submitted on a Technical Assistant Grant Application Form provided by the Department, together with any other documentation required by the Department.
- (4) Any applicant applying for a grant shall submit a Technical Assistance Grant Application Form which shall include the following types of information:
 - (a) a detailed description of the applicant's proposed project and a schedule for completing the project;
 - (b) a description of the applicant's efforts to identify and include affected individuals, including the applicant's efforts to publicize its interest in applying for the grant and in soliciting interest by others in joining its efforts;
 - (c) a description of the impacts of the disposal site on health, safety, public welfare, and the environment;
 - (d) a description of the applicant's history and experience, if any, in conducting activities similar to those proposed in the application;
 - (e) a copy of the applicant's by-laws, if any;
 - (f) documentation that the applicant will meet the requirements set forth in 310 CMR 40.1453;
 - (g) information and documentation describing the background and qualifications of the types of consultants to be employed by the applicant;
 - (h) a description of the applicant's procedures for supervision and accountability of experts and for management of grant-funded activities;
 - (i) a description of the applicant's procedures for financial management and accounting of grant funds;
 - (j) an explanation and schedule indicating how the requirements of 310 CMR 40.1453(2) shall be met if a grant is awarded to the applicant;
 - (k) a description of how the grantee will measure the project's success in meeting its goals and objectives, including a list of specific performance standards that will be used in that evaluation process; and
 - (l) if the applicant has ever received a technical assistance grant or grants pursuant to this Contingency Plan, a description of the relationship between any incomplete or unfinished project or projects for which said grant funds were received and the project for which the applicant is currently applying for a grant.
- (5) Within each funding round, the Department shall designate a date by which all Applications shall be submitted to the Department.

40.1457: Grant Selection Process

- (1) Grant Applications shall be evaluated based upon the criteria set forth in the application package which shall consider without limitation: the proposal's potential to address a balance between technical education, and community outreach and participation; and the relative impact of the disposal site location on health, safety, public welfare and the environment (including consideration of whether the disposal site location is within an Economic Target Area or area designated as an Environmental Justice Community).

40.1457: continued

(2) In each funding round, the Department shall rank the applications according to a weighted value assigned for the criteria set forth in the application package. This ranking shall be used by the Department to establish a grant funding priority list that shall indicate which grants are likely to be funded during that funding round. The Department may determine the number of grants on the grant funding priority list based on the following considerations:

- (a) the Department's administrative capacity to manage the technical assistant grant program at the time the grant funding priority list is established; and
- (b) the total amount of funding available for the grant program in a given round.

(3) Upon final determination of the Department's grant funding priority list, the Department shall publish the list in the *Environmental Monitor* and on the Department's web site.

(4) Following publication of the Department's funding priority list, a copy of the applicant's evaluation sheet will be made available upon written request.

(5) Any applicant on the grant funding priority list may be bypassed for an award if the Department determines that the applicant is for any reason unable to accept or receive the grant during that funding cycle. Any application that is bypassed shall not retain its priority rating for future funding rounds. The next highest ranked application which was otherwise not likely to be funded shall be added to the grant funding priority list for each bypassed application. Each grant funding priority list shall be in effect only during the funding round in which it was established.

(6) Once the grant is awarded, the applicant shall be referred to as the grantee. A grant shall be deemed awarded when a Grant Agreement is entered into by the Department and the grantee, and the Grant Agreement has been accepted by the Office of the Comptroller. The Grant Agreement shall consist of the grant offer as executed by the Department and the grant acceptance as executed by the grantee as well as any and all terms and conditions under which the grant is being awarded to the grantee.

40.1458: Payment Method

Payment of a grant award to a grantee shall be made as reimbursement for costs incurred by the grantee and shall be subject to 310 CMR 40.1450 through 40.1462. The terms and conditions of payment, and all required supporting documentation to be submitted by the grantee prior to payment shall be set forth in the Grant Agreement.

40.1459: Fiscal Management of Grants

(1) The grantee is responsible for complying with 310 CMR 40.1451 through 40.1462 and the terms and conditions contained in the Grant Agreement. This responsibility shall not be delegated, transferred, or assigned by the grantee.

(2) The grantee shall establish for its project a separate account in a bank with insurance coverage by the Federal Deposit Insurance Corporation (FDIC). Project funds and all interest earned on such funds shall be credited to said account and all project payments shall be made from said account.

(3) The grantee shall maintain a financial management system which shall provide for effective control over and accountability for all project funds. Grantees shall safeguard all such funds and ensure that they are used solely as authorized by the Grant Agreement.

40.1460: Records to be Maintained by Grantees

(1) The grantee shall maintain books, records, documents, and supporting evidence which shall fully explain the source, amount, and disposition of all grant funds.

(2) The grantee shall require its contractors, including contractors for professional services, to maintain accurate books, documents, papers, and records which are pertinent to the project.

40.1460: continued

- (3) The grantee and contractors of the grantee shall retain all records for a period of at least three years from the date of the final grant payment, and longer if required pursuant to 310 CMR 40.1460(5).
- (4) The grantee and its contractors shall make records available to the Department at all reasonable times for inspection, copying, and auditing.
- (5) The grantee and its contractors shall retain all records relating to disputes until all appeals, litigation, claims, or exceptions arising out of the grantee's project have been fully resolved.

40.1461: Inspection of Projects

The Department may, at a reasonable time and upon reasonable notice, conduct an inspection at any location where a grantee's project is being carried out.

40.1462: Honest Practices

- (1) The award and administration of grants shall be accomplished free from bribery, graft, kickbacks and other corrupt or illegal practices. The grantee bears the primary responsibility for the prevention, detection and cooperation in the prosecution of any such conduct. State administrative or other legally available remedies shall be pursued to the extent appropriate.
- (2) The grantee shall take appropriate actions with respect to any allegations or evidence of such illegality or corrupt practices which are brought to its attention. The grantee shall advise the Department immediately when such allegations or evidence comes to the grantee's attention, and shall periodically report to the Department the status and ultimate disposition of any such matter.
- (3) The grantee shall notify the Department of any material changes to the information provided in the Technical Assistance Grant Application, established in 310 CMR 40.1456(4) and 40.1456(6), at any point after the grant is awarded.
- (4) The Department may suspend or terminate grant payments or may revoke a grant at any time if the Department becomes aware of any allegations, evidence or appearance of illegality, corruption, or fraud associated with the award of the grant, compliance or noncompliance with 310 CMR 40.1451 through 40.1462 or the Grant Agreement between the Department and the grantee, or expenditure of funds for the project. In the event that a grant is revoked, the grantee shall be responsible for returning to the Commonwealth all grant funds.
- (5) The Department may make a factual determination at any time that a project is not being carried out in accordance with 310 CMR 40.0000, M.G.L. c. 21E, or any other law or regulation. If the Department makes such a determination, then the Department shall notify the grantee of the withdrawal of all grant funds, and may demand the return of the entire amount of the grant, or at the election of the Department, the unused portion of the grant funds, which shall be due immediately, or within five days of receipt of the notice by the grantee. Failure of the grantee to comply with 310 CMR 40.1462 shall subject the grantee to all civil, criminal and administrative remedies of the Commonwealth, including interest in the amount of 12% annum which shall accrue beginning on the fifth day after notice was received by the grantee.
- (6) If the Department makes a determination that any of the grant funds are not used in accordance with the terms of the grant or any of the provisions of this Contingency Plan, M.G.L. c. 21E, or any other law or regulation, then the grantee shall be held liable to the Commonwealth for the return of the entire amount of the grant, including interest at a rate of 12% per annum from the date of such determination.
- (7) If the Department has made a determination pursuant to 310 CMR 40.1462(4), and the grantee has not returned the amount of the grant upon demand plus any accrued interest, then at the Department's election, the demanded amount shall be deducted, plus any accrued interest, from the local aid appropriation to be made to any grantee that is a city, town, agency, or any district or other body politic that owns or operates a public water supply system pursuant to M.G.L. c. 58, § 20.

40.1462: continued

(8) The grantee shall include the following provisions in all contracts with its contractors which are funded, in full or in part, by a grant award:

(a) The contractor shall not accept compensation, financial or otherwise, for his or her services pertaining to the disposal site from any person having significant conflicting or adverse interests to those of the grantee unless the circumstances are fully disclosed to, and agreed to, by the grantee and all other persons engaging the contractor with regard to the disposal site; and

(b) In the event that the contractor has, develops or acquires any business association, direct or indirect financial interest, or other circumstances which is substantial enough to create an impression of influencing his or her judgement in connection with his or her performance of services provided to the grantee, the contractor shall fully disclose in writing to the grantee the nature of the business association, financial interest or circumstance. If the grantee objects to such business association, financial interest or circumstance, the contractor shall offer to terminate, at his or her discretion, either the business association, financial interest or circumstance, or his or her engagement with regard to the grantee.

REGULATORY AUTHORITY

310 CMR 40.0000: M.G.L. c. 21E.

SUBPART P: MASSACHUSETTS OIL AND HAZARDOUS MATERIAL LIST

TABLE OF CONTENTS

TABLE 1 - MASSACHUSETTS OIL AND HAZARDOUS MATERIAL LIST (ALPHABETICAL LISTING)

NOTES:

The Massachusetts Oil and Hazardous Materials List (MOHML) contains oils and hazardous materials subject to 310 CMR 40.0000 and their reportable quantities (RQs) and reportable concentrations (RCs). These values are referred to in the notification requirements (310 CMR 40.0300). The MOHML is organized alphabetically by chemical name and includes the unique Chemical Abstracts Service Number (CAS Number) assigned to a substance. The MOHML refers to other lists on which a substance appears, each such other list identified by the following name source codes:

- ▶ Name Source 1 - The Department of Transportation (DOT) Hazardous Materials List (49 CFR Part 172.101 Hazardous Materials Table)
- ▶ Name Source 2 - The Resource Conservation and Recovery Act Appendix VIII List (40 CFR Part 261 - Appendix VIII Hazardous Constituents)
- ▶ Name Source 3 - The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Hazardous Substance and Waste Stream Lists (40 CFR Part 302 - Table 302.4)
- ▶ Name Source 4 - The Extremely Hazardous Substance List as mandated by Superfund Amendments and Reauthorization Act, Title III, Section 302 (40 CFR Part 355 Appendices A and B)
- ▶ Name Source 5 - DEP Allowable Ambient Limits (AALs) and Drinking Water Guidelines
- ▶ Name Source 6 - The Massachusetts Substance List (MSL)(105 CMR 670.000: *Right to Know* Appendix A)
- ▶ Name Source 7 - The Chemical Abstracts name, 9th collective period, 1972-1976
- ▶ Name Source 8 - The EPA Right to Know list, Section 313 of the Emergency Planning and Community Right to Know Act of 1986 (40 CFR Part 372.65).

- 42.22: Severability

42.01: Purpose

310 CMR 42.00 establishes a program for Department certification of laboratories to conduct analytical measurements for purposes of determining chemical, radiochemical, and microbiological parameters in environmental samples.

42.02: Applicability

A laboratory performing analyses shall be subject to the requirements of 310 CMR 42.00 for those analyses for which it holds Department certification and that it identifies in any issued report as having been conducted in accordance with the Department's certification standards. An analysis for which a laboratory holds Department certification is deemed to be identified in a report as having been conducted in accordance with the Department's certification standards unless the report expressly states that the analysis was not conducted in accordance with the Department's certification standards.

42.03: Definitions

As used in 310 CMR 42.00, the following terms shall have the meanings stated:

Ambient Water refers to any fresh, marine, or estuarine surface water used for recreation, propagation of fish, shellfish, or wildlife, agriculture, industry, or navigation.

Analyst means a chemist, microbiologist or technician who actually performs a test.

Analytical Batch means a group of up to 20 samples to be analyzed for chemical or radiochemical parameters, or a group of up to ten samples to be analyzed for microbiological parameters, that behave similarly with respect to the testing procedures being employed and that are processed as a unit. For quality control purposes, if the number of samples in a group to be analyzed for chemical or radiochemical parameters is greater than 20, then each group of 20 or fewer samples will be handled as a separate batch. If the number of samples in a group to be analyzed for microbiology parameters is greater than ten, then each group of ten or fewer samples will be handled as a separate batch.

42.03: continued

Category means an analyte or group of analytes for which certification is offered.

Certification Officer means the person or persons designated by the Department to inspect and evaluate environmental laboratories for compliance with the criteria set forth in 310 CMR 42.00.

Certified Thermometer means a thermometer that has documentation showing that it has been compared against a National Institute of Standards and Technology thermometer for the temperature range in which it is to be used.

Check Standard means a solution of one or more analytes that is used to check laboratory performance. It is prepared from a source of reagents different from those used to prepare the stock standards and primary dilution standard solutions.

Department means the Department of Environmental Protection of the Commonwealth of Massachusetts.

Discipline means a scientific area of expertise for testing (*e.g.*, microbiology, chemistry, radiochemistry).

EPA means the United States Environmental Protection Agency.

Field Reagent Blank means reagent water or analyte-free solvent placed in a sample container in the laboratory, taken to the sampling site and returned to the laboratory unopened. It is treated as a sample in all respects, including exposure to sampling site conditions, storage, preservation and all analytical procedures.

Holding Time means the maximum amount of time a sample may be held from collection to analysis or, where applicable, from collection to extraction (sample holding time) or the maximum amount of time a sample extract may be held from extraction to analysis (sample extract holding time).

Instrumentation Analyst means an analyst who operates an instrument including, but not limited to, an atomic absorption spectrophotometer, ion chromatograph (IC), gas chromatograph, liquid chromatograph (LC), gas chromatograph/mass spectrometer (GC/MS), inductively coupled plasma-atomic emission spectrometer (ICP), ICP/MS, or LC/MS.

Laboratory Fortified Blank means an aliquot of reagent water to which known quantities of the method analytes are added in the laboratory. The laboratory fortified blank is analyzed exactly as a sample. Its purpose is to determine whether the methodology is in control, and whether the laboratory is capable of making accurate measurements at the required method detection limit.

Laboratory Fortified Sample Matrix means an aliquot of an environmental sample to which known quantities of the method analytes are added in the laboratory. The laboratory fortified sample matrix is analyzed exactly as a sample. Its purpose is to determine whether the sample matrix contributes bias to the analytical results. The background concentrations of the analytes in the sample matrix must be determined in a separate aliquot and the measured values in the laboratory fortified sample matrix corrected by background concentrations.

Laboratory Reagent Blank means an aliquot of reagent water that is treated exactly as a sample including exposure to all glassware, equipment, solvents, reagents, internal standards, and surrogates that are used with other samples. The laboratory reagent blank is used to determine if method analytes or other interferences are present in the laboratory environment, the reagents, or the apparatus.

Matrix means the substrate of a test sample (*e.g.*, potable water, non-potable water).

Maximum Contaminant Level means the maximum permissible level of a contaminant in water that is delivered to any user of a public water system.

42.03: continued

Maximum Residual Disinfectant Level means a level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap without an unacceptable possibility of adverse health effects pursuant to the Department's Drinking Water Program.

Method Detection Limit means the minimum concentration of substance that can be identified, measured, and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix containing the analyte. The method detection limit refers to samples that have been processed through all the steps of an established analytical procedure.

Minimum Reporting Level means the minimum concentration that can be reported as a quantitated value for a target analyte in a sample following analysis.

Person means an individual, corporation, company, association, trust, partnership, the Commonwealth, a municipality, district or other subdivision or body politic of the Commonwealth, and any department, agency or instrumentality of the United States.

Primary Dilution Standard Solution means a solution of several analytes prepared in the laboratory from stock standard solutions and diluted as needed to prepare calibration solutions and other needed analyte solutions.

Proficiency Test (PT) Samples mean samples that contain known amounts of analytes and are obtained from the Department or from a third party acceptable to the Department. The composition of the sample is unknown to the laboratory performing the analysis. The PT sample is used to evaluate the ability of the laboratory and of the individual analyst to produce accurate and precise results within specified acceptance criteria. PT samples may be single blind (*i.e.*, the laboratory/analyst knows that the sample is a PT sample), or double blind (*i.e.*, the PT sample appears to be a routine sample so the laboratory/analyst is unaware that the sample is a PT sample).

Proficiency Testing means a program in which proficiency test samples are used to evaluate the analytical performance of a laboratory.

Signature means any mark, such as initials, printed or handwritten name, or equivalent electronic documentation made by a person to signify his or her responsibility for the performance of an action such as a measurement or the authentication of documentation produced internal to the laboratory analytical process. The signature must represent a unique person who can be identified with a specific action in the laboratory.

Source Water means untreated water from streams, rivers, lakes, or underground aquifers that is used to supply private wells and public drinking water.

Stock Standard Solution means a concentrated solution containing a single certified standard that is a method analyte, or a concentrated solution of a single analyte prepared in the laboratory with an assayed reference compound.

Surrogate Analyte means a pure analyte(s), which is extremely unlikely to be found in any sample, and which is added to a sample aliquot in known amount(s) before extraction and is measured with the same procedures used to measure other sample components.

Valid Data means analytical data that are:

- (a) technically sound (*i.e.*, generated in accordance with good laboratory practices and meeting the quality control criteria of approved analytical methods); and
- (b) legally defensible (*i.e.*, the laboratory's compliance with quality control criteria designed to assure the accuracy of the analysis is completely and accurately documented).

42.04: Application Procedure

- (1) Filing. An application for certification in one or more matrices, disciplines, or categories shall be submitted on forms provided by the Department.
- (2) Inspection. The applicant must submit to an inspection of the laboratory to enable the Department to determine whether the laboratory satisfies the Department's standards for certification.
- (3) Proficiency Testing. The applicant must satisfactorily analyze samples from a proficiency testing program approved by the Department for the matrices, disciplines, and categories for which certification is sought.

42.05: Certification Matrices, Disciplines and Categories

Qualified applicants may be certified in one or more of the following matrices, disciplines and categories:

(1) Potable Water. Certification in this matrix applies to analyses of drinking water supplies for purposes of, but not limited to, determining compliance with 310 CMR 22.00: *Drinking Water Regulations*. Certification in this matrix may be obtained in any or all of the following disciplines and categories:

(a) Microbiology. Certification in this discipline may be obtained in any or all of the following categories:

1. Total Coliform (Water Treatment and Distribution);
2. *Escherichia coli* (Water Treatment and Distribution);
3. Heterotrophic Plate Count;
4. Total Coliform in Source Water;
5. Fecal Coliform in Source Water;
6. *Escherichia coli* in Source Water;
7. Enterococci in Source Water.

(b) Chemistry. Certification in this discipline may be obtained in any or all of the following categories:

1. Metals:
 - a. Antimony;
 - b. Arsenic;
 - c. Barium;
 - d. Beryllium;
 - e. Cadmium;
 - f. Chromium;
 - g. Copper;
 - h. Lead;
 - i. Mercury;
 - j. Nickel;
 - k. Selenium;
 - l. Silver;
 - m. Thallium;
 - n. Aluminum;
 - o. Iron;
 - p. Manganese;
 - q. Zinc;
2. Nitrate-N;
3. Nitrite-N;
4. Fluoride;
5. Sodium;
6. Sulfate;
7. Cyanide;
8. Turbidity;
9. Residual Free Chlorine;
10. Calcium;
11. Total Alkalinity;

42.05: continued

12. Total Dissolved Solids;
 13. pH;
 14. Polychlorinated biphenyls;
 15. Herbicides:
 - a. 2,4-D;
 - b. 2,4,5-TP;
 - c. Dalapon;
 - d. Dinoseb;
 - e. Pentachlorophenol;
 - f. Picloram;
 16. Pesticides:
 - a. Alachlor;
 - b. Atrazine;
 - c. Chlordane;
 - d. Endrin;
 - e. Heptachlor;
 - f. Heptachlor epoxide;
 - g. Hexachlorobenzene;
 - h. Hexachlorocyclopentadiene;
 - i. Lindane;
 - j. Methoxychlor;
 - k. Simazine;
 - l. Toxaphene;
 17. Carbamates:
 - a. Aldicarb;
 - b. Aldicarb sulfone;
 - c. Aldicarb sulfoxide;
 - d. Carbofuran;
 - e. Vydate;
 18. Benzo-a-pyrene;
 19. Adipates/Phthalates;
 20. Trihalomethanes;
 21. Volatile Organic Compounds (including vinyl chloride);
 22. 1,2-Dibromo-3-chloropropane (DBCP) and 1,2-Dibromoethane (EDB);
 23. Asbestos;
 24. Diquat;
 25. Endothall;
 26. Glyphosate;
 27. Haloacetic Acids;
 28. Bromate;
 29. Chlorite;
 30. Perchlorate;
 31. 1,4-Dioxane;
 32. Chloride;
 33. Per-and Polyfluoroalkyl substances (PFAS).
- (c) Radiochemistry. Certification in this discipline may be obtained in any or all of the following categories:
1. Gross Alpha;
 2. Gross Beta;
 3. Strontium-89;
 4. Strontium-90;
 5. Radium-226;
 6. Radium-228;
 7. Tritium;
 8. Uranium;
 9. Iodine-131;
 10. Cesium-134;
 11. Cesium-137;
 12. Cobalt-60;
 13. Ruthenium-106

42.05: continued

(2) Non-potable Water. Certification in this matrix applies to analyses of water conducted in accordance with 40 CFR Part 136, *Guidelines Establishing Test Procedures for the Analysis of Pollutants under the Clean Water Act*. Certification in this matrix may be obtained in any or all of the following disciplines and categories:

(a) Microbiology. Certification in this discipline may be obtained in any or all of the following categories:

1. Ambient Water:
 - a. *Escherichia coli*;
 - b. Enterococci.
2. Wastewater:
 - a. Fecal Coliform;
 - b. *Escherichia coli*;
 - c. Enterococci.

(b) Chemistry. Certification in this discipline may be obtained in any or all of the following categories:

1. Metals:
 - a. Aluminum;
 - b. Antimony;
 - c. Arsenic;
 - d. Beryllium;
 - e. Cadmium;
 - f. Chromium;
 - g. Cobalt;
 - h. Copper;
 - i. Iron;
 - j. Lead;
 - k. Manganese;
 - l. Mercury;
 - m. Molybdenum;
 - n. Nickel;
 - o. Selenium;
 - p. Silver;
 - q. Strontium;
 - r. Thallium;
 - s. Titanium;
 - t. Vanadium;
 - u. Zinc;
2. Minerals:
 - a. pH;
 - b. Specific Conductivity;
 - c. Total Dissolved Solids;
 - d. Total Hardness (as Calcium carbonate);
 - e. Calcium;
 - f. Magnesium;
 - g. Sodium;
 - h. Potassium;
 - i. Total Alkalinity (as Calcium carbonate);
 - j. Chloride;
 - k. Fluoride;
 - l. Sulfate;
3. Nutrients:
 - a. Ammonia-N;
 - b. Nitrate-N;
 - c. Kjeldahl-N;
 - d. Orthophosphate;
 - e. Total Phosphorus;

42.05: continued

4. Demand:
 - a. Chemical Oxygen Demand;
 - b. Biochemical Oxygen Demand;
 - c. Total Organic Carbon;
5. Total Cyanide;
6. Residue, Non-filterable (Total Suspended Solids);
7. Total Residual Chlorine;
8. Oil and Grease;
9. Total Phenolics;
10. Volatile Organic Compounds (VOCs):
 - a. Volatile Halocarbons;
 - b. Volatile Aromatics;
11. Pesticides:
 - a. Chlordane;
 - b. Aldrin;
 - c. alpha-BHC (alpha-Hexachlorocyclohexane);
 - d. beta-BHC (beta-Hexachlorocyclohexane);
 - e. gamma-BHC (gamma-Hexachlorocyclohexane);
 - f. delta-BHC (delta-Hexachlorocyclohexane);
 - g. Dieldrin;
 - h. 4,4'-DDD;
 - i. 4,4'-DDE;
 - j. 4,4'-DDT;
 - k. Endosulfan I;
 - l. Endosulfan II;
 - m. Endosulfan sulfate;
 - n. Endrin;
 - o. Endrin aldehyde;
 - p. Heptachlor;
 - q. Heptachlor epoxide;
 - r. Toxaphene;
12. Polychlorinated biphenyls (water);
13. Polychlorinated biphenyls (oil);
14. Perchlorate;
15. Semi-Volatile Organic Compounds (SVOCs):
 - a. Acid Extractables;
 - b. Base/Neutral Extractables.

42.06: Laboratory Certification Ratings

The Department shall classify a laboratory by matrix, discipline, and category according to the following rating scheme:

- (1) Certified - the laboratory meets the Department's minimum requirements for certification and is deemed capable of producing Valid Data;
- (2) Provisionally Certified - the Department deems the laboratory capable of producing Valid Data despite minor deficiencies;
- (3) Not Certified - the laboratory fails to meet the Department's minimum requirements for certification and is deemed incapable of consistently producing Valid Data.

42.07: Criteria for Certification

- (1) Proficiency Testing. Satisfactory performance in the proficiency testing program is accomplished when the analytes in a category are correctly identified and acceptably quantified. Criteria for acceptability shall be set by the Department for each analyte in each discipline and category. Continued unsatisfactory performance in the analysis of an analyte within a category may result in revocation of certification for that analyte.

42.07: continued

(2) Inspections.

(a) The Department may conduct an inspection of each laboratory to determine whether or not the laboratory meets the Department's standards for performing analyses in the matrices, disciplines, and categories for which certification is sought or is obtained.

(b) The Department shall consider the following factors in determining whether to certify or continue certification of a laboratory:

1. Education and experience of laboratory personnel;
2. Adequacy of laboratory facilities and equipment;
3. Adherence to Department-approved methodology and quality assurance/quality control procedures;
4. Adherence to Department-approved methods of handling and reporting data;
5. Adequacy of safety equipment and training; and
6. Any other factors the Department deems relevant to the determination of the ability of a laboratory to operate in a professional manner.

(c) If the Department issues a report of deficiencies found during an inspection of a laboratory, the laboratory shall have 90 days from the date of issuance of the report to take the necessary corrective actions specified in the report and submit documentation of such corrective action to the Department.

42.08: Minimum Standards for Certification

(1) Personnel. Certified laboratories and laboratories seeking certification shall designate a laboratory director and laboratory supervisor(s), and employ a sufficient number of qualified analysts commensurate with the laboratory's workload. The designated laboratory director and laboratory supervisor may be the same individual if he or she possesses the minimum qualifications and fulfills the responsibilities of both positions as set in 310 CMR 42.08(1).

(a) The laboratory director shall have the following responsibilities:

1. Developing policies, programs, and standard operating procedures that will ensure accurate and objective analytical results;
2. Employing and ensuring the training of qualified laboratory personnel;
3. Reporting analytical results to the Department in accordance with 310 CMR 42.13; and
4. Interpreting and evaluating reports of analyses submitted by the laboratory upon request of the Department.

(b) A laboratory supervisor shall have the following responsibilities:

1. Performing analyses and/or providing personal and direct supervision and training to laboratory analysts performing analyses in the categories for which the supervisor is qualified;
2. Instruction and general supervision of all other laboratory operations including sample tracking, data validation, quality control, verification, and prompt reporting of results; and
3. Acceptance and non-acceptance of samples submitted to the laboratory for analysis.

(c) Minimum Qualifications of Laboratory Director.

1. Academic Training. The laboratory director shall possess a Bachelor's degree in biology, chemistry, or a closely related field. If chemical analyses are to be performed by the laboratory, the director must have at least 24 college credits in chemistry.
2. Experience. The laboratory director shall have a minimum of three years of experience in an environmental analysis laboratory.

(d) Minimum Qualifications of Laboratory Supervisor for Laboratories Certified in the Discipline of Chemistry or Radiochemistry.

1. Academic Training. The laboratory supervisor shall possess a Bachelor's degree in chemistry, biology, or a closely related field, and have at least 30 college credits in chemistry.
2. Experience.
 - a. Chemistry. The laboratory supervisor shall have a minimum of two years of laboratory experience in chemical analysis including one year of experience in the specific chemical methods supervised.
 - b. Radiochemistry. The laboratory supervisor shall have a minimum of two years of laboratory experience in radiochemical analyses, including one year of experience in the radiochemical methods for which the laboratory is certified.

42.08: continued

(e) Minimum Qualifications of Laboratory Supervisor for Laboratories Certified in the Discipline of Microbiology.

1. Academic Training. The laboratory supervisor shall have a minimum of a Bachelor's degree in biology, chemistry, or a closely related field with at least four college credits in microbiology.
2. Experience. The laboratory supervisor shall have a minimum of one year of experience in the microbiological methods for which the laboratory is certified.

(f) Minimum Qualifications of Instrumentation Analyst.

1. Academic Training. An instrumentation analyst shall possess a minimum of a high school diploma or equivalent and eight college credits in chemistry.
2. Experience. An instrumentation analyst shall have a minimum of one year of training or experience in the operation of the appropriate instrumentation.

(g) Minimum Qualifications of Analyst.

1. Academic Training. An analyst shall possess a minimum of a high school diploma or equivalent.
2. Training. An analyst shall receive specialized training in the methods to be performed.

(h) The Department may exempt a laboratory holding certification status on the effective date of 310 CMR 42.00 from one or more of the requirements set forth in 310 CMR 42.08(1), if the Department finds that strict compliance with such requirements would result in an undue hardship and would not serve to further the intent of 310 CMR 42.00. An exemption, when granted, shall be effective for not more than one year unless renewed by the Department.

(2) Facilities. A certified laboratory shall have:

- (a) Adequate space in which to perform the analyses and related activities in the disciplines and categories in which it is certified;
- (b) A well-lighted laboratory work bench area of ample size that is convenient to a sink, hot and cold running water, gas, suction, and electrical outlets if necessary;
- (c) Clear aisles between benches that provide adequate room for passage of personnel and equipment;
- (d) Appropriate ventilation including exhaust hoods for the handling of chemicals and samples in order to limit contamination of samples, standards, and other laboratory areas with the performance of each exhaust hood and biological safety cabinet tested by a qualified person annually and determined to be operating satisfactorily;
- (e) Appropriate facilities for the storage of volatile, corrosive, and flammable materials;
- (f) Controlled laboratory temperature and humidity at the levels required for the proper performance of the analyses and for the optimum operation of instruments that are sensitive to variations in temperature; and
- (g) A locked facility for storage of chain-of-custody samples.

(3) Equipment and Materials. Certified laboratories and laboratories seeking certification shall have readily available on the premises all equipment, supplies, reagents, glassware, and instrumentation necessary to perform the analyses for which the laboratory is certified or seeks certification and related quality control activities. Such equipment and materials shall be maintained in good working condition, meet the performance criteria of the analytical method used, and, where appropriate, meet the criteria specified in 310 CMR 42.08(3):

- (a) Refrigerator. Aqueous reagents and samples may be stored in a standard household refrigerator. A flammable materials refrigerator shall be used for storage of organics and flammable materials. The internal temperature of a refrigerator shall be maintained at $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$. Organics and flammable materials not requiring refrigeration shall be stored in a flammable storage cabinet.
- (b) Drying Oven. The drying oven shall have selectable temperature control with a range from room temperature to $180^{\circ}\text{C} \pm 2^{\circ}\text{C}$ or higher.
- (c) Source of Distilled or Deionized Water. Distilled or deionized water shall meet the minimum criteria of the methodologies employed.
- (d) Top-loader Balance. The balance pan shall be clean and free of corrosion. The balance must be capable of detecting a weight of 100 mg at a 150 g load or one mg for a load of 10 g or less.

42.08: continued

- (e) Hot Plate. The hot plate shall have selectable temperature controls for safe heating of laboratory reagents.
 - (f) Magnetic Stirrer. The magnetic stirrer shall be of variable speed with a stirring bar coated with inert material.
 - (g) Glassware. Glassware shall be made of borosilicate glass. Volumetric glassware shall be marked "Class A".
 - (h) Analytical Balance. The analytical balance shall be readable to 0.1 mg. It shall be mounted on a stable shock-proof base and protected from interference due to air currents.
 - (i) Conductivity Meter. The conductivity meter shall be readable in appropriate units, have a range from 2 ohms to 2 megohms or equivalent micromhos or Siemens, and be capable of measuring conductivity with an error not exceeding $\pm 1\%$ or one $\mu\text{S}/\text{cm}$, whichever is greater.
 - (j) pH Meter. The pH meter shall be accurate to at least ± 0.05 units and have scale readability to ± 0.01 units.
 - (k) Thermometer. The thermometer shall have 1°C or finer subdivisions and be calibrated in degrees Celsius for the temperature range in which it will be used. The column shall have no separations. An organic solvent-filled thermometer may be used in a refrigerator. The laboratory may use electronic temperature measurement devices having the appropriate accuracy and readability for their intended use.
 - (l) Water Baths. Water baths may be electric or steam heated and capable of controlling temperature to 100°C within 5°C .
 - (m) Incubators. Incubators shall have an internal temperature-monitoring device and be capable of maintaining proper temperature.
 - (n) Autoclave. The autoclave shall be equipped with an accurate thermometer, a separate pressure gauge, and an operational safety valve. It shall maintain the sterilization temperature throughout the sterilization cycle and depressurize slowly so that no air bubbles form in inverted tubes and medium does not boil over. When being used to sterilize carbohydrate-containing media, the autoclave must be capable of completing an entire cycle (*i.e.*, time when materials are exposed to heat) within 45 minutes when a 12-15 minute sterilization period is used.
 - (o) Hot-air Sterilization Oven. Hot-air sterilization ovens shall be capable of maintaining a stable sterilization temperature (170°C - 180°C).
 - (p) Muffle Furnace. Muffle furnaces shall be capable of heating glassware to 400°C for cleaning.
 - (q) Reagents, Standards, Media. Consumable supplies such as, but not limited to, reagents, standards, and media must not be used beyond their expiration date.
 - (r) Stereo Microscope. Stereo microscopes must have a magnification of 10-15x and be equipped with a fluorescent light source.
 - (s) Colony Counter. When the pour plate technique is used, a dark-field colony counter must be used to count heterotrophic plate count colonies.
- (4) Laboratory Safety Measures Affecting Laboratory Analysis Capability. Certified laboratories shall be in compliance with local, state, and federal laws to the extent that required conditions directly affect laboratory capability in providing accurate and reliable analysis and maintaining the integrity of samples and of the analytical process; or are referenced as required for environmental laboratories by the acceptable analytical method(s) employed. These conditions include, but are not limited to, safety protocols involving physical, chemical, radiochemical, and biological hazards; availability and use of fire safety equipment; protective clothing and equipment including respirators; appropriate handling of compressed gas cylinders; and appropriate storage and disposal of materials and wastes.
- (5) Quality Assurance/Quality Control.
- (a) General Requirements.
 - 1. Quality Assurance Plan. Certified laboratories shall establish, maintain, and follow a written Quality Assurance (QA) Plan acceptable to the Department. Each laboratory's QA plan shall be made available to all analysts employed by the laboratory. At a minimum, QA plans shall include:
 - a. QA organization and responsibility;
 - b. QA objectives for precision and accuracy;

42.08: continued

c. Standard operating procedures (SOPs) that accurately reflect all phases of current laboratory activities. The standard operating procedures section of a laboratory's QA plan shall include the following:

- i. Sample receipt and handling procedures including sample custody and storage procedures;
- ii. Calibration procedures and frequencies;
- iii. Analytical procedures, including any modifications to published procedures;
- iv. Data reduction, validation and reporting procedures;
- v. Internal quality control procedures (type and frequency);
- vi. Provision for performance and system audits, both internal and external, and schedules;
- vii. Preventive maintenance procedures and schedules;
- viii. Specific procedures for assessing data precision and accuracy;
- ix. Procedures for taking corrective actions;
- x. Quality assurance reporting procedures; and
- xi. Laboratory safety plans.

A standard operating procedure for an analytical method or other laboratory procedure may be a separate document. The QA plan must include a list of all such standard operating procedures. Only the laboratory director or supervisor may make changes in standard operating procedures. Such changes shall be effective only when put in writing.

d. Record Maintenance. The record maintenance procedures section of a laboratory's QA plan shall include the procedures for creating, controlling, and maintaining the following records:

- i. Raw data (including, but not limited to, laboratory notebooks, instrument printouts, and electronic records);
- ii. Chain-of-custody records;
- iii. Calculations;
- iv. Quality control data; and
- v. Reports.

2. Temperature Records.

a. A laboratory shall measure and record the temperature of each drying oven and hot-air sterilizing oven for each day of use. The temperature measurement device must be immersed in sand or other suitable material and placed on one of the shelves. A laboratory may use a temperature-measuring device that can be read from outside the oven without the need to open the door provided that it has verified the accuracy of the device.

b. A laboratory shall measure and record the temperature of each refrigerator and incubator either continuously or each day of use. The thermometers must be immersed in liquid and placed on one of the shelves. A laboratory may use a temperature-measuring device that can be read from outside the refrigerator or incubator without the need to open the door provided that it has verified the accuracy of the device.

3. Laboratory Chemicals and Reagents. Analytical reagent (AR) grade or American Chemical Society (ACS) grade chemicals or better are required for analyses, unless otherwise required by the analytical method. In addition, laboratory chemicals and reagents shall meet the following requirements:

- a. All chemicals shall be labeled with the date of receipt by the laboratory to prevent the use of outdated reagents;
- b. Stock and working standard solutions shall be compared with check standards and inspected prior to use for signs of decomposition, such as formation of precipitates, evaporation, and/or discoloration;
- c. All reagents and standards shall be labeled with identification of the compound, concentration, solvent, date of preparation, date of expiration, and the name of the analyst who prepared the solution;
- d. Preparation of all stock standards and primary dilution standards shall be documented, and the concentration of stock and working calibration standards shall be verified against a primary dilution standard prepared from a source of reagents different from those used to prepare the calibration standards; and

42.08: continued

- e. The use of the acceptable grade of reagents and compressed gases required by the analytical procedure employed shall be documented.
4. Laboratory Glassware. The laboratory must follow cleaning procedures for glassware and other labware that are specified in the analytical methods. If no specifications are given in a method, then glassware and sample containers must be cleaned prior to use by washing in a warm detergent solution, followed by thorough rinsing with tap water and several additional rinses using deionized or distilled water. The laboratory must use a detergent designed for laboratory use. Commercially prepared glassware and sample containers may be used provided the laboratory documents the source and cleaning procedures utilized. Certain analytical methods may require additional glassware preparation procedures or the maintenance of a separate dedicated set of glassware.
 5. Maintenance of Laboratory Instrumentation and Equipment. Analytical instrumentation and equipment shall be maintained in accordance with the manufacturer's instructions, analytical method requirements, and good laboratory practices. A secure record of maintenance procedures shall be maintained for each instrument and piece of equipment.
 6. Instrumentation Calibration Requirements.
 - a. General Requirements.
 - i. Unless directed otherwise by the analytical method employed, all instruments shall be calibrated immediately prior to analysis using a minimum of a blank and three calibration standards that bracket the expected concentration range.
 - ii. Unless directed otherwise by the analytical method employed, all instrument calibrations shall be verified through the analysis of a calibration check sample that has been prepared using a source of reagents different from that used to prepare the calibration standards. Unless directed otherwise by the analytical method employed, the calibration check sample shall be analyzed at the beginning and at the conclusion of the analysis session and after every 20 or fewer samples. If the result does not agree within 20% of the original value, corrective action shall be taken.
 - iii. For instruments with a calibration curve that has been set by the instrument manufacturer, the laboratory shall verify the calibration curve using a minimum of three calibration check standards that bracket the expected concentration range. The check standards shall represent low, medium, and high concentrations and include a standard at the minimum reporting level (MRL). If the result of the calibration check does not agree within 10% of the assigned value of each check standard, instrument recalibration must be performed.
 - iv. The laboratory shall keep a secure record of instrument calibration procedures.
 - b. Analytical Balance. Each analytical balance shall be checked and adjusted annually by a qualified service person. The accuracy of each analytical balance shall be checked each day it is to be used using a minimum of two ASTM Class 1 weights, or equivalent, in ranges appropriate to the laboratory's weighing needs. The laboratory shall keep a secure record of the results of accuracy checks, the date performed, and the signature of the analyst who performed the check. The non-reference weights used for this check must be calibrated annually using reference weights and the results recorded. The accuracy of reference weights must be certified every five years. The balance level shall be checked prior to each use and adjusted if necessary.
 - c. pH Meters. Each pH meter shall be calibrated daily or prior to each use with pH 7.0 and pH 4.0 or 10.0 buffer standards that bracket the expected value of the sample, medium, or reagent being tested. The buffers used shall be recorded, including the date of calibration and the name of the analyst who performed the calibration.
 - i. The laboratory must use pH buffer aliquots only once.
 - ii. The laboratory must date commercial buffer solution containers upon receipt and when opened.
 - iii. The laboratory must record the pH meter slope monthly after calibration and take corrective action if the slope falls outside the range of 95% to 105%.

42.08: continued

- d. Conductivity Meters.
 - i. The conductivity meter must be calibrated at least monthly using a certified and traceable low-level standard. Alternatively, the laboratory must determine the cell constant monthly.
 - ii. An in-line meter may be used to check reagent-grade water provided that it is calibrated annually.
 - e. Thermometers. The accuracy of all temperature measurement devices used to monitor temperatures shall be verified by comparing the reading of each device with that of a certified reference thermometer that is graduated in degree increments no larger than those of the device whose accuracy is being verified. The laboratory must discontinue use of a thermometer graduated in 0.5°C increments or less that differs from the certified thermometer by more than 1°C. The accuracy of glass and electronic thermometers must be verified annually; metal thermometers must be verified quarterly; infrared detection devices must be verified every six months; and the certified reference thermometer must be calibrated at least once every five years. The correction factor and date of verification of accuracy must be indicated on the thermometers. The laboratory shall maintain a secure record that includes:
 - i. The identification number of each thermometer;
 - ii. The temperatures displayed on both the certified thermometer and the thermometer being verified;
 - iii. Any applicable correction factor;
 - iv. The date each check was performed; and
 - v. The signature of the analyst who performed each check.
 - f. On-line Monitors and Portable Equipment. Continuous on-line monitors and portable equipment used in obtaining on-site measurements must be calibrated in accordance with the manufacturer's instructions. The calibration must be verified through analysis of an independent check sample or use of an independent monitoring technique. Verification shall be recorded.
 - g. Spectrophotometer Wavelength Verification. The wavelength setting of the spectrophotometer shall be checked annually by comparing the wavelength setting to that of colored standards or filters, such as didymium glass. The wavelength observed, date of performance, and the name of the analyst or service person that performed the check shall be recorded.
 - h. Top-loader Balance. Each top-loader balance must be checked for accuracy monthly in its range of use with ASTM Class 1 weights or equivalent.
7. Sample Collection, Preservation and Handling.
- a. Acceptable procedures, as referenced or defined in current federal regulations shall be utilized for sample collection, handling and preservation.
 - b. The laboratory may reject the sample if it is not assured of the sample identification or of the validity of the sample collection, handling and preservation procedures. The laboratory must have a written policy listing its criteria for rejection of samples. When rejecting a specific sample, the laboratory must document the reason(s) for the rejection.
 - c. Samples shall be stored in such a way that cross-contamination from other samples, standards or reagents is avoided.
 - d. The laboratory shall adhere to the sample and extract holding times prescribed in the analytical methods.
 - e. Chain-of-custody information must include:
 - i. Sample number;
 - ii. Sample description including any preservation (*e.g.*, chemical, thermal, *etc.*) used;
 - iii. Date and time of sample collection;
 - iv. Specific location of sample collection;
 - v. Name of sample collector and intermediate custodians, if any;
 - vi. Date(s) and time(s) of custody transfer to the laboratory; and
 - vii. Name(s) and signature(s) of the individual(s) receiving the sample.
 - f. A chain-of-custody form must accompany all samples including those shipped by mail or courier.
 - g. The laboratory shall maintain a system of internal sample tracking that documents sample custody from the time of receipt at the laboratory to the time of disposal.

42.08: continued

8. Analytical Methodology. The laboratory shall utilize acceptable analytical methods. The acceptable methods shall be those defined or referenced in 40 CFR parts 136, 141 and 143, and 310 CMR 22.00: *Drinking Water*, for the environmental matrix being tested.

(b) Additional Requirements for Chemical and Radiochemical Laboratories.

1. Quality Control Procedures.

a. Unless directed otherwise by the analytical method or the Department standard employed, the laboratory shall prepare and analyze a laboratory reagent blank, sample duplicate, and laboratory fortified blank for every 20 or fewer samples processed as an analytical batch. Duplicates of radiochemical samples must be prepared and analyzed for every ten or fewer samples. In addition, a laboratory fortified sample matrix shall be run if required by the Department. Corrective action shall be taken if the results of these analyses do not meet acceptance criteria developed within the laboratory according to accepted analytical procedures. The preparation of blanks, laboratory fortified sample matrices, and duplicates and the results of their analyses shall be recorded.

b. Each laboratory must establish acceptance limits for precision and accuracy and maintain and use quality control charts for each of the analytes in the matrices, disciplines, and categories in which the laboratory is certified. These limits may not be less stringent than those defined in approved analytical methods or approved by the Department.

c. Certified laboratories shall utilize surrogate analytes as required by the analytical procedure employed. Acceptance limits for surrogate analyte recoveries shall be established by the laboratory. Quality control charts must be maintained and used for each surrogate.

d. Certified laboratories shall perform and document all quality control procedures in established analytical protocols or the quality control procedures the Department requires and specifies.

e. When integrating chromatography peaks, either automatically or manually, each laboratory must ensure that integrations are performed in a correct and consistent manner for standards and samples, including quality control samples. Each laboratory must maintain documentation of manual integrations that includes the following:

- i. The laboratory's written procedure for manual integration;
- ii. The original chromatogram and the manually integrated chromatogram; and
- iii. The analyst's initials, date of manual integration, and the reason(s) for the manual integration.

2. Determination of Method Detection Limit.

a. Each laboratory shall experimentally determine the method detection limit for analysis of each analyte, except pH, for each matrix in which the laboratory is certified.

b. The laboratory must document its procedure for determining the method detection limit. The laboratory must use the procedure for determining the method detection limit that is described in the analytical method being used. If the analytical method does not include a procedure for the determination of method detection limits, then the laboratory must determine the method detection limit using the procedure described in 40 CFR Part 136: *Appendix B* or other Department- or EPA-approved procedure. For those analytes requiring pattern recognition for identification (*e.g.*, chlordane, toxaphene), the method detection limit is defined as the lowest concentration at which pattern recognition is possible.

c. Calculations and supporting documentation used in determining limits must be available for inspection.

d. Detection limits shall be expressed in appropriate units.

e. The laboratory must achieve the method detection limits required by the applicable regulations.

f. Sample preparation and analyses for the method detection limit calculation must be made over a period of at least three days.

g. Method detection limits must be determined as part of a laboratory's initial demonstration of capability to perform an analysis, when any change occurs in the laboratory that could affect the method detection limits, and as required by an analytical method.

42.08: continued

- h. Method detection limits must be determined using analysts and instruments that are representative of those used in the performance of analyses.
 - i. The laboratory must verify its capability to analyze low level samples on an ongoing basis through the analysis of low level standards or through a method detection limit determination.
 - j. The laboratory shall determine the minimum reporting level for analysis of each analyte, except pH, for each matrix in which the laboratory is certified. The laboratory shall document the procedure used to determine the minimum reporting level. The laboratory shall verify the minimum reporting level on an ongoing basis.
3. Laboratory Reagent Water. The laboratory must demonstrate that its reagent water meets the specifications required by the analytical methods it uses including that it is free of analytes of interest above their method detection limits. When the method specifies the resistance or conductivity of the source of reagent water, verification of such quality shall be made and documented each day the water is used.
- (c) Additional Requirements for Microbiology Laboratories.
- 1. Autoclaves.
 - a. For each sterilization cycle, the signature of the analyst, date, sterilization time and temperature, the materials being autoclaved and their total time in the autoclave shall be recorded.
 - b. A maximum-temperature-registering thermometer, electronic temperature read-out device, or continuous recording device must be used during each autoclave cycle. The temperature must be recorded.
 - c. Automatic timing mechanisms must be checked quarterly with an accurate timepiece, such as a stopwatch, and the results recorded.
 - d. The laboratory must check the performance of the autoclave each week during which the autoclave is used with *Geobacillus stearothermophilus* spore strips, suspensions, or capsules and record the results.
 - e. Biological waste must be autoclaved for at least 30 minutes followed by proper disposal.
 - 2. Hot Air Sterilizing Ovens. The laboratory must check the performance of the hot air sterilizing oven each week during which the oven is used with *Bacillus subtilis* or *Bacillus atrophaeus* spore strips and record the results.
 - 3. Incubators.
 - a. Incubators, both air-type and water bath, must maintain the temperature specified by the method. On days when the incubator is in use, the temperature of each incubator must be recorded continuously or at least twice per day, with each reading separated by at least four hours and the times of each reading recorded. For air-type incubators, the thermometer shall be immersed in liquid and placed on one of the shelves in use.
 - b. If an aluminum block incubator is used, culture dishes and tubes must fit snugly.
 - c. Water bath incubators must be cleaned at least monthly.
 - d. The laboratory must record the date and time at the beginning and at the end of sample incubation.
 - 4. Germicidal Ultraviolet Lamps. Germicidal ultraviolet lamps shall be tested quarterly by exposing agar spread plates containing 200 to 250 microorganisms to the light for two minutes. If such irradiation does not reduce the count of control plates by 99%, the lamps shall be replaced. Alternatively, the laboratory shall use an ultraviolet light meter to ensure that the lamp emits at least 70% of its initial output. Cleaning of germicidal ultraviolet lamps shall be done at least monthly by disconnecting the unit and cleaning the lamps with a soft cloth moistened with ethanol.
 - 5. Microscopes. The optics and stage of microscopes shall be cleaned with lens paper prior to each use.
 - 6. Sterility of Rinse/Dilution Water and Sample Bottles.
 - a. Each batch or lot of dilution/rinse water must be checked for sterility by adding 50 mL of the water to a 50 mL volume of a double strength non-selective broth (e.g., tryptic soy broth, trypticase soy broth, or tryptose broth), which is then incubated at $35^{\circ}\text{C} \pm 0.5^{\circ}\text{C}$ and checked for turbidity signifying growth at 24 and 48 hours and the results recorded.

42.08: continued

- b. After sterilization, at least one bottle per batch of sterilized sample bottles or per lot of commercially prepared sample containers shall be checked for sterility by adding approximately 25 mL of sterile non-selective broth medium to each bottle. The bottle shall be capped and rotated so that the broth comes in contact with all surfaces and shall be incubated at $35^{\circ}\text{C} \pm 0.5^{\circ}\text{C}$ and checked for growth at 24 and 48 hours and the results recorded. Prepared sample bottles from each batch or lot shall not be used unless satisfactory results are obtained from the tested bottle.
7. Residue Testing of Glassware.
- a. Inhibitory Residue Test. With the initial use of each lot of a detergent or washing product, the rinsing process using distilled or deionized water shall be demonstrated to provide glassware that is free from toxic material based on the use of the Inhibitory Residue Test, as specified in the most recent edition of *Standard Methods for the Examination of Water and Wastewater*, American Public Health Association, American Water Works Association, Water Environment Federation, Washington D.C. The results of the test must be recorded. Alternatively, the laboratory may obtain written, traceable certification from the product manufacturer that the inhibitory residue test has been performed on the lot of detergent or washing product according to the *Standard Methods* procedure. The actual test results must be included with the certification.
- b. Bromthymol Blue Test. Each batch of clean, dry glassware or plasticware shall be tested for residual alkaline or acid residue using bromthymol blue indicator and the results recorded. If the results of the indicator test are not within the desired color range of light green to dark blue, corrective action shall be taken by re-rinsing, air drying and retesting.
8. Microbiological Media - Quality Control Measures.
- a. The laboratory shall keep records that indicate the kind, amount, date received, lot number, expiration date, and date of opening of bottles of media. Media shall be stored in a desiccator or cool, dry location. If caking or discoloration of media occurs, media shall be discarded.
- b. Records shall be available for inspection on all batches of laboratory-prepared media showing lot numbers, date prepared, details of preparation, total volume prepared, sterilization time and temperatures, final pH, and the name of the individual who performed the work.
- c. Prior to first use of media, the laboratory shall test each batch of medium prepared in the laboratory and each lot of pre-prepared, ready-to-use medium with at least one pure culture of a known positive reaction.
- d. Prior to first use of media, the laboratory shall test each batch of medium prepared in the laboratory and each lot of pre-prepared, ready-to-use medium with one or more negative culture controls, *i.e.*, non-target organisms, as appropriate to the method.
- e. Prepared plates shall be refrigerated in sealed containers with a label containing the date of preparation or expiration and the name of the medium. Plates may be kept no more than two weeks following preparation. Broth media in loose-capped test tubes may be kept no more than two weeks following preparation. Broth media in tightly capped tubes may be kept three months from the date of preparation.
9. Dechlorination Sufficiency. If chlorinated water is to be analyzed, sufficient sodium thiosulfate must be added to the sample bottle before sterilization to neutralize any residual chlorine in the water sample. The laboratory may also use commercially prepared, pre-sterilized bags or bottles containing sodium thiosulfate.
10. Membrane Filter Procedure Quality Control Specifics.
- a. Only membrane filters recommended for water analysis by the manufacturer shall be used.
- b. Lot numbers of membrane filters and date of receipt shall be recorded.
- c. Procedural Contamination. A start and finish membrane filtration control test of rinse water, medium, and supplies shall be conducted for each filtration series. If sterile controls indicate contamination, all data on samples affected shall be rejected and a request made for immediate resampling of those waters affected.
- d. Verification of Membrane Filter Colonies on m-Endo medium.
Total Coliform Procedure. All sheen or borderline colonies up to ten on each membrane shall be verified in accordance with the accepted standard procedure contained in the latest edition of *Standard Methods for the Examination of Water and Wastewater (Standard Methods)*.

42.08: continued

11. Quality Control.

- a. When quality control samples are available, each analyst shall analyze at least one quality control sample per year for the categories to be certified.
- b. During the initial training of an analyst in a method requiring the identification and enumeration of colonies, the new analyst must count plates from at least ten positive samples having varying colony counts within the ideal counting range for the method. The laboratory supervisor must count the same plates. The replicate counts between the analysts must agree within 10%.
- c. For methods used for the enumeration of colonies, 10% of routine samples must be analyzed in duplicate and the range of logs determined. Corrective action shall be taken if the results of these analyses do not meet acceptance criteria developed within the laboratory according to accepted analytical procedures.

12. Laboratory Reagent Water. The laboratory shall use satisfactorily tested reagent water from a water purification system (*e.g.*, still, deionization unit, or a reverse-osmosis unit) to prepare media, reagents, and dilution/rinse water for performing microbial analyses.

- a. If the source water is chlorinated, the laboratory reagent water must be tested monthly for total chlorine residual and found to contain less than 0.1 mg/L of chlorine residual.
- b. The laboratory reagent water must be analyzed annually for the presence of lead, cadmium, chromium, copper, nickel, and zinc. The concentration of each metal must be no greater than 0.05 mg/L. The concentration of the metals collectively must be no greater than 0.1 mg/L.
- c. The conductivity of the laboratory reagent water must be monitored each day that the water is used and found to be less than 2 $\mu\text{S}/\text{cm}$ at 25°C or greater than 0.5 megohms-cm resistance at 25°C.
- d. A heterotrophic plate count must be performed on the laboratory reagent water monthly. The laboratory may use the reagent water only if the heterotrophic plate count is less than 500 CFU/mL.
- e. The test of the bacteriological quality of the laboratory reagent water must be performed annually. The ratio of the growth rate must be between 0.8 and 3.0. The test is described in Section 9020B of the 18th and 19th editions of *Standard Methods for the Examination of Water and Wastewater*. The bacteriological quality test is not required of laboratories that document that their laboratory reagent water meets the criteria for Type II water or better, as defined in *Standard Methods* (18th and 19th editions), Section 1080C or Medium quality water or better as defined in *Standard Methods* (20th edition), Section 1080C.

(6) On an annual basis, certified laboratories and laboratories seeking certification shall require all personnel to participate in a laboratory ethics training program. Training shall include the following topics: proper procedures to ensure data integrity, recognition and prevention of improper laboratory practices, the promotion of objectivity and impartiality in the generation and reporting of analytical data, and procedures for confidential reporting of data integrity concerns to a laboratory supervisor, director, or owner, as appropriate. The laboratory must document the content of the training and the date of participation in the training for each staff member and shall make this documentation and the materials used in the training available for review during an inspection.

42.09: Issuance of Certificate

(1) Upon satisfactory fulfillment of the criteria provided herein, the Department shall issue a certificate indicating the laboratory's certification rating for each matrix, discipline and category, including the acceptable analytical methods used by the laboratory. The certificate, which includes the list of certified analytes and methods, shall be conspicuously displayed at the location stated in the certificate.

(2) Certificates shall be valid for one year unless earlier downgraded or revoked in accordance with 310 CMR 42.12, or surrendered.

42.09: continued

(3) Certification status shall apply only to the laboratory located at the address stated in the certificate. Each affiliated or branch laboratory must obtain a separate certificate. Certificates are not transferable or assignable.

42.10: Requirements for Maintaining Certification Status

(1) To maintain certification status, a laboratory shall satisfactorily analyze samples from a proficiency testing program administered or approved by the Department and pass inspections conducted or approved by the Department.

(2) A laboratory must continue to meet the Department's minimum standards for certification set forth in 310 CMR 42.00 to maintain certification status.

(3) A laboratory shall not misrepresent its certification status on any document. On reports of sample analysis, the laboratory must clearly distinguish among analyses for which it is certified, analyses for which it is provisionally certified, and analyses for which it is not certified. The laboratory's certification status indicated on a report of sample analysis must be accurate as of the date of the analysis. For all other documents, including promotional materials, catalogues, advertising, Internet sites, business solicitation proposals, quotations, or other materials on which the laboratory's certification status appears, the laboratory, to the extent possible, must correct its certification status appearing on such documents within 30 calendar days of its receipt of a notice of revocation of certification or within 30 calendar days of its voluntary withdrawal from certification.

42.11: Renewal of Certificate

Filing. At least 45 calendar days prior to the expiration date noted on its certificate, a certified or provisionally certified laboratory must file an application for renewal of certification on forms provided by the Department. Timely filing of the application for renewal causes the certification to continue until the Department issues a final written decision regarding the laboratory's certification status. A laboratory that fails to file an application for renewal by the expiration date of the certification loses its certification, may not file an application for renewal, and must submit a new application for certification, including payment of the application fee, if it wishes to secure a new certification.

42.12: Denial, Downgrading, and Revocation of Certification

(1) Denial. The Department may deny a laboratory's request for certification, including a request for renewed certification, if:

- (a) the application does not meet the requirements of 310 CMR 42.00;
- (b) the laboratory's current or prior certification has been downgraded or revoked;
- (c) the laboratory or one of its owners or employees has been or currently is subject to an order issued pursuant to 310 CMR 42.17(1); or
- (d) the laboratory or one of its owners or employees has been or is currently in violation of 310 CMR 42.00.

(2) Provisional Certification. For minor deficiencies not affecting the laboratory's ability to produce Valid Data, the Department may downgrade a laboratory's certification status to provisional, in total or in part, for a period not to exceed 180 calendar days. If the Department determines that there are grounds for downgrading, the Department shall notify the laboratory in writing by certified mail.

(a) The following may be grounds for downgrading if the Department determines that the infraction is minor in nature and does not affect the laboratory's ability to produce Valid Data:

- 1. Failure to pass an inspection;
- 2. Failure to report compliance data to a public water system, the Department, or other responsible party in a manner so as to meet prescribed reporting time deadlines, or interfering with the reporting of such data produced by other entities;
- 3. Careless or inaccurate reporting of analytical measurements and supporting documentation;

42.12: continued

4. Failure to notify the Department in writing within the prescribed timelines listed in 310 CMR 42.13 regarding any change in ownership, laboratory name, laboratory location, personnel, equipment, or any other factor that could impair the analytic, reporting, or operational capability of the laboratory;
 5. Reporting sample results without indicating whether or not the laboratory is certified for that analysis;
 6. Reporting sample results for analyses for which the laboratory is certified without indicating whether or not the analyses were conducted in accordance with Department certification standards;
 7. Failure to use an approved method or to follow the approved method for sample analysis where the report issued for the analysis indicates that the analysis was conducted in accordance with Department certification standards;
 8. Handling samples in a manner so as to compromise sample integrity; and
 9. Failure to comply with any other requirement of 310 CMR 42.00.
- (b) A laboratory that has had its certification downgraded to provisional may request reinstatement within the time period prescribed in the notification of downgrading and in accordance with the requirements of 310 CMR 42.12(4). If the laboratory fails to correct the deficiencies listed in the notice of downgrading and request reinstatement within the time specified by the Department in the notification, the Department may revoke, in total or in part, the laboratory's certification, pursuant to 310 CMR 42.12(3).
- (3) Revocation. The Department may revoke a laboratory's certification, in total or in part, if the Department determines that there are grounds for revocation. The Department shall notify the laboratory in writing via certified mail in the event of a revocation.
- (a) Grounds for revocation are:
1. Failure to pass an inspection;
 2. Failure to report compliance data to a public water system, the Department, or other responsible party in a manner so as to meet prescribed reporting time deadlines or interfering with the reporting of such data produced by other entities;
 3. Failure to participate in or analyze proficiency test samples, or to meet the requirements for successful performance of such tests;
 4. Operating the laboratory in such a manner so as to endanger public health or safety;
 5. Making an intentionally false oral statement or written statement on any document issued by the laboratory or on any document associated with certification;
 6. Careless, inaccurate, or falsified reporting of analytical measurements and supporting documentation;
 7. Failure to notify the Department in writing within the prescribed timelines pursuant to 310 CMR 42.13 regarding any change in ownership, laboratory name, laboratory location, personnel, equipment, or any other factor that could impair the analytic, reporting, or operational capability of the laboratory;
 8. Unethical conduct in the operation of the laboratory;
 9. Fraudulent or deceptive practices;
 10. Reporting sample results without indicating whether or not the laboratory is certified for that analysis;
 11. Failure to use an approved method or to follow the approved method for sample analysis where the report issued for the analysis indicates that the analysis was conducted in accordance with Department certification standards;
 12. Reporting sample results for analyses for which the laboratory is certified without indicating whether or not the analyses were conducted in accordance with Department certification standards;
 13. Performing, reporting, or failing to report drinking water analyses in a manner so as to threaten public health or welfare;
 14. Failure to implement, report, or maintain corrective action related to any deficiencies found during a laboratory inspection or deficiencies otherwise identified by the Department;
 15. Failure to correct the deficiencies cited in a notice of downgrading to provisional certification and apply for reinstatement during the time frame specified by the Department;
 16. Handling samples in a manner so as to compromise sample integrity; and
 17. Failure to comply with any other requirement of 310 CMR 42.00.

42.12: continued

(b) A laboratory that has had its certification revoked must not advertise itself as certified for those matrices, disciplines, or categories for which the laboratory's certification has been revoked and, to the extent possible, must remove or replace any advertisements that indicate that the laboratory is certified within 30 calendar days of the laboratory's receipt of a notice of revocation of its certification.

(c) A laboratory that has had its certification revoked must not perform analyses in those disciplines and categories for which its certification was revoked where the Department or the laboratory's client requires that the analyses be performed by a Massachusetts-certified laboratory and/or that the Department's certification standards of analysis be used.

(d) The Department may impose a waiting period of up to three years in its notice of revocation, during which time the laboratory may not apply for recertification. After the waiting period ends, the laboratory must submit a new application for certification, including payment of the application fee, if it wishes to become recertified.

(e) A laboratory that has had its certification revoked, but no waiting period imposed, may request reinstatement within 180 days of the date of revocation in accordance with the requirements of 310 CMR 42.12(4). A laboratory that fails to request reinstatement within 180 days must submit a new application for certification, including payment of the application fee, if it wishes to become recertified.

(4) Reinstatement.

(a) A laboratory for which certification has been downgraded to provisional may request reinstatement within the time period prescribed in the notification of downgrading and in accordance with the requirements of 310 CMR 42.12(4)(c).

(b) A laboratory for which certification has been revoked and no waiting period imposed may request reinstatement within 180 days of the date of revocation and in accordance with the requirements of 310 CMR 42.12(4)(c).

(c) Laboratories seeking reinstatement shall submit a written report to the Department detailing corrective action that has been taken in regard to the deficiencies that resulted in the downgrading or revocation of the certification. At the same time, the laboratory shall submit a written request for reinstatement review by the Department. The corrective action report and the request for reinstatement must be submitted within the time frame specified in 310 CMR 42.12(4)(a) or (b), as applicable.

(d) The Department may reinstate a certification that has been downgraded or revoked if the laboratory has corrected all the deficiencies identified in the notice of downgrading or revocation to the Department's satisfaction and if the laboratory has applied for reinstatement in accordance with 310 CMR 42.12(4). The reinstatement of a laboratory's certification status following a downgrading or revocation is not effective until the Department has issued its decision in writing to the laboratory.

(e) If a laboratory's request for reinstatement after revocation is denied by the Department, the laboratory shall submit a new application for certification, including payment of the application fee, if it wishes to become recertified.

(f) A laboratory that has had its certification revoked and a waiting period imposed may not request reinstatement.

(5) Successor. The revocation of a laboratory's certification shall operate to prohibit any successor from applying for certification from the Department except in accordance with 310 CMR 42.12(4).42.13: Reporting Requirements

(1) No certified or provisionally certified laboratory shall report analytical results as a Department-certified laboratory unless:

(a) The laboratory conducted the analytical measurements at the laboratory's address as stated in its current certificate;

(b) The laboratory clearly distinguishes in the report among those analyses for which it is certified, provisionally certified, or not certified by the Department; and,

(c) For those analyses for which it is certified or provisionally certified, the laboratory clearly distinguishes in the report between those analyses that it conducted in accordance with Department certification standards and those that it did not conduct in accordance with Department certification standards.

42.13: continued

- (2) All reports of analytical measurements conducted by a Department-certified laboratory in accordance with the standards of 310 CMR 42.00 where such standards are required or otherwise specified by the laboratory's client must include the following information:
- (a) The Massachusetts Laboratory Certification identification number of each laboratory that performed the analytic measurements;
 - (b) The results of analysis of samples with the specific analytes measured by each laboratory that performed any of the analyses identified in the report;
 - (c) The results of analyses of reagent blanks, laboratory fortified blanks, laboratory fortified sample matrices, and duplicates, and surrogate analyte recovery data when requested by the Department;
 - (d) The analytical methods used to detect and quantify the analytes of interest. Sample preparation procedures, if not included in the referenced analytical procedures, must also be referenced or described; and
 - (e) The date of sample extraction, if applicable to the analytical method performed, and the date of sample analysis.
- (3) With the exception of reports submitted to the Department in a format approved by the Department, all reports of finished drinking water analyses must indicate the maximum contaminant level and/or the maximum residual disinfectant level for each analyte measured where a maximum contaminant level or maximum residual disinfectant level has been established by the EPA or by the Department. Where a maximum contaminant level or maximum residual disinfectant level has not been established, the laboratory must indicate the drinking water guideline for each analyte as published by the Department's Office of Research and Standards.
- (4) The actual format of the data submitted to the Department is left to the discretion of the laboratory unless otherwise specified. The Department encourages the use of summary tables that allow the reader to easily review and compare the data.
- (5) A certified laboratory shall be required to have current knowledge of all Federal and Massachusetts standards for all categories in which it has been certified or provisionally certified, and to report analytical results in a timely manner.
- (a) Upon obtaining Valid Data, a certified laboratory shall notify its clients of the results of all samples that exceed any EPA- or Department-established maximum contaminant level (MCL), maximum residual disinfectant level or reportable concentration, or that identify the presence of regulated microbiological organisms in potable water. Notification must clearly indicate that a regulatory limit has been exceeded. The date, time, and manner of notification must be documented and kept on file.
 - (b) A laboratory that accepts potable water samples for analysis must notify its client public water system of the results of all samples that exceed a regulatory limit. Data indicating an exceedance of a regulatory limit must be validated and the validated data reported as soon as possible, not to exceed 24 hours after the completion of sample analysis. Such notification must be given within 24 hours of the completion of the analysis of the sample whether or not the laboratory accepting the sample subcontracted the analysis to another laboratory.
 - (c) Laboratories must identify, in writing, those samples needing special reports (*e.g.*, MCL exceedance) when the laboratory subcontracts with another laboratory.
 - (d) Laboratories accepting samples to be analyzed for the purpose of determining regulatory compliance must ensure that analytical data are reported in a timely manner to meet their clients' reporting requirements. A laboratory that has had regulatory compliance samples subcontracted to it by another laboratory must release analytical data to the client laboratory within the timeline arranged by the laboratories.
 - (e) Laboratories must have written standard operating procedures in place which are designed to ensure that the requirements of 310 CMR 42.13(5)(a) through (d) are met.
 - (f) If preliminary data or data for which data quality objectives were not achieved are reported, they must be accompanied by a case narrative describing quality control outliers or any other factors affecting data usability.

42.13: continued

- (6) A laboratory shall notify the Department in writing upon any change in ownership, laboratory name, laboratory location, personnel, equipment, or any factor that could impair the analytic capability of the laboratory. Personnel changes must be reported within ten calendar days and shall be limited to loss or replacement of the Laboratory Director, Laboratory Supervisor, or any other personnel that results in the unavailability of trained and experienced analysts necessary to perform the analyses for which the laboratory has been certified. Changes affecting the availability of properly operating equipment to perform analyses for which the laboratory is certified, where the equipment has been, or will be, unavailable for a period of 14 calendar days or more, must be reported in writing to the Department within 14 calendar days of the onset of the change to the instrument's operational status.
- (7) The present owners of a certified or provisionally certified laboratory shall notify the Department in writing of a sale or change in ownership of the laboratory within ten calendar days of the same.
- (8) The owner of a certified or provisionally certified laboratory seeking to maintain its certification status while changing the laboratory location shall notify the Department in writing at least 30 calendar days prior to any such change. The Department may issue an amended certificate for the new location indicating the laboratory's certification rating for each matrix, discipline and category if it finds that the laboratory meets the Department's criteria for certification.
- (9) A laboratory that has been certified by EPA or by its resident state shall notify the Department upon receipt of notice from EPA or the resident state that its certification has been downgraded, suspended, or revoked.
- (10) A laboratory shall submit to the Department a copy of the following kinds of documents:
- (a) within 30 calendar days of receipt by a Department-certified laboratory of a citation, settlement agreement, judgment, order, enforcement notice or report, or inspection report that is issued by any local, state, or federal government agency that cites violations of that laboratory's conditions, equipment, or operations.
 - (b) a Department-certified laboratory must supply a copy within 30 calendar days of receipt of documents from its director, supervisor, and owner holding greater than 5% equity. The documents include a citation of violations or settlement agreement issued by any local, state, or federal government agency naming the individual and documents evidencing a civil or criminal conviction of that individual involving operations of any other environmental laboratory certified or accredited by EPA or any state. The Department-certified laboratory must ensure that its director, supervisor, and owner are required to submit a copy to it within 30 calendar days of receipt of such documents by the individual.
 - (c) a laboratory applicant for certification shall provide a copy pursuant to 310 CMR 42.13(10)(a) of documents received within the last five years, and pursuant to 310 CMR 42.13(10)(b) of documents received by a current owner, director, and/or supervisor within the past five years.

42.14: Maintenance of Records

- (1) Certified laboratories shall maintain copies of all analytical reports, logs, charts and records created in accordance with 310 CMR 42.00 for a minimum of ten years or as otherwise specified by the Department. Records related to performance on proficiency tests shall be maintained for a minimum of five years. Records shall include the results and supporting documentation of analyses of samples including proficiency test samples, reagent blanks, laboratory fortified blanks, laboratory fortified sample matrices and duplicates, and surrogate analyte recovery data. Records of analysis of samples shall include documentation of sample preparation procedures, including, but not limited to, pH adjustments, distillations, digestions, extractions, and turbidity measurements.
- (2) Certified laboratories shall record observations, data, and calculations at the time they are made. Handwritten records must be made in ink, not pencil. Mistakes in records shall be crossed out with a single line such that the original entry is still legible and the correct value entered. All alterations to records must be signed by the person making the correction. In the case of records stored electronically, equivalent measures must be taken to avoid loss or change of original data.

42.14: continued

(3) Certified laboratories shall maintain current records of personnel, including a resume documenting education, training, experience, description of duties and dates of relevant employment for each employee.

(4) Certified laboratories shall maintain all records in accordance with the Department approved QA plan for the laboratory. The laboratory must ensure that all records, including those stored electronically, are readable throughout the required retention time of the records.

42.15: Right of Entry

Agents and employees of the Department may make such inspections of laboratory property, facilities, or operations as the Department deems necessary to carry out its responsibilities under and ensure compliance with 310 CMR 42.00. The owner or operator of any laboratory subject to 310 CMR 42.00 shall allow such agent(s) or employee(s) free and unrestricted access at reasonable times to examine any property, facility, operation, equipment, or activity for determining compliance with 310 CMR 42.00. Such agent(s) and employee(s) may also inspect, conduct tests, and review books, papers, electronic documentation, data packages, and records relevant to the enforcement of 310 CMR 42.00.

42.16: Reciprocity

Certificates may be issued in a comparable classification without an inspection to any laboratory that holds a certification from the EPA or from its resident state if, in the opinion of the Department, the standards for certification under which such laboratory's certificate was issued are at least as stringent as those set forth in 310 CMR 42.00.

42.17: Orders, Violations, and Penalties

(1) Without limitation, the Department may issue orders or downgrade or revoke a certification as necessary to aid in the implementation and enforcement of M.G.L. c. 21, §§ 26 through 53; c. 21A, § 2(28); c. 21C, § 4; c. 21E, § 3; c. 111, §§ 142A through 142E, 150A, 160, or 310 CMR 42.00. Such orders may include, but shall not be limited to, orders requiring persons to cease any activity which is in violation of the aforementioned statutes or 310 CMR 42.00 or to carry out activities necessary to bring such persons into compliance. The Department may also require any person to submit such information as the Department may reasonably require to evaluate whether that person is subject to, in compliance with, or in violation of the aforementioned statutes or 310 CMR 42.00.

(2) Violations. Without limitation, it shall be a violation of 310 CMR 42.00 for any person to:

- (a) Fail to comply with any order of the Department;
- (b) Engage in any activity that is contrary to the terms and conditions of 310 CMR 42.00, or of any certificate or order issued pursuant to 310 CMR 42.00;
- (c) Make any false, inaccurate, incomplete, or misleading statement in any application, record, report, plan, file, data package, log, register, or other document submitted to the Department or required to be kept by 310 CMR 42.00 or the terms of a certificate; or
- (d) Make any false, inaccurate, incomplete, or misleading statement in any record, report, plan, file, data package, log, register, or other document issued by or on behalf of a laboratory; or
- (e) Fail to provide any information requested by the Department, in a timeframe the Department specifies, pursuant to 310 CMR 42.00.

(3) Penalties. Any person violating 310 CMR 42.00 shall be subject to the full range of legal actions authorized by M.G.L. c. 21, § 42; c. 21A, § 16; c. 111, §§ 142A and 150A, 310 CMR 5.00: *Administrative Penalty*, and any other applicable law or regulation including, without limitation, criminal fines, imprisonment, and civil and administrative orders and penalties.

42.18: Right to Appeal

Any person who has been denied certification or whose certification has been revoked may make a written request for an adjudicatory hearing before the Department pursuant to M.G.L. c. 30A and 310 CMR 1.01: *Adjudicatory Proceeding Rules for the Department of Environmental Protection*. The request for a hearing must be sent by certified mail or hand-delivered, and received by the Department within 21 calendar days of the date of receipt of the decision being appealed. The request for hearing shall state specifically, clearly, and concisely the facts which are the grounds for the appeal, the relief sought, and any additional information required by 310 CMR 1.01(6)(b) or other applicable law or regulation. In every proceeding the burden shall be on the applicant for, or the holder of, a certification to demonstrate compliance with 310 CMR 42.00.

42.19: List of Certified Laboratories

The Department shall publish or cause to be published at least annually a list of certified laboratories. This list shall include the name and location of the laboratory, the name of the director, and categories of analysis in which the laboratory has been granted certification.

42.20: Potable Water

(1) To receive certification to conduct analyses for antimony, arsenic, asbestos, barium, beryllium, cadmium, chromium, cyanide, fluoride, mercury, nickel, nitrate, nitrite, selenium, and thallium the laboratory must:

- (a) Analyze Proficiency Test samples provided by EPA, the Department, or by a Department-approved third party; and
- (b) Achieve quantitative results on the analyses that are within the following acceptance limits:

<u>Contaminant</u>	<u>Acceptance Limit</u>
Antimony	$\pm 30\%$ at ≥ 0.006 mg/L
Arsenic	$\pm 30\%$ at ≥ 0.003 mg/L
Asbestos	2 standard deviations based on study statistics
Barium	$\pm 15\%$ at ≥ 0.15 mg/L
Beryllium	$\pm 15\%$ at ≥ 0.001 mg/L
Cadmium	$\pm 20\%$ at ≥ 0.002 mg/L
Chromium	$\pm 15\%$ at ≥ 0.01 mg/L
Cyanide	$\pm 25\%$ at ≥ 0.1 mg/L
Fluoride	$\pm 10\%$ at 1 to 10 mg/L
Mercury	$\pm 30\%$ at ≥ 0.0005 mg/L
Nickel	$\pm 15\%$ at ≥ 0.01 mg/L
Nitrate	$\pm 10\%$ at ≥ 0.4 mg/L
Nitrite	$\pm 15\%$ at ≥ 0.4 mg/L
Selenium	$\pm 20\%$ at ≥ 0.01 mg/L
Thallium	$\pm 30\%$ at ≥ 0.002 mg/L

(2) To receive certification to conduct analyses for the contaminants in 310 CMR 42.20(2)(b), the laboratory must:

- (a) Analyze Proficiency Test samples provided by EPA, the Department, or by a third party with the approval of the Department; and
- (b) Achieve quantitative results on the analyses that are within the following acceptance limits:

<u>Contaminant</u>	<u>Acceptance Limit (percent)</u>
1,2-Dibromo-3-chloropropane (DBCP)	± 40
1,2-Dibromoethane (EDB)	± 40
Alachlor	± 45
Atrazine	± 45
Benzo[a]pyrene	2 standard deviations
Carbofuran	± 45
Chlordane	± 45

42.20: continued

Dalapon	2 standard deviations
Di(2-ethylhexyl)adipate	2 standard deviations
Di(2-ethylhexyl)phthalate	2 standard deviations
Dinoseb	2 standard deviations
Diquat	2 standard deviations
Endothall	2 standard deviations
Endrin	+ 30
Glyphosate	2 standard deviations
Heptachlor	+ 45
Heptachlor epoxide	+ 45
Hexachlorobenzene	2 standard deviations
Hexachlorocyclopentadiene	2 standard deviations
Lindane	+ 45
Methoxychlor	+ 45
Oxamyl(Vydate)	2 standard deviations
Polychlorinated biphenyls (as decachlorobiphenyl)	0-200
Picloram	2 standard deviations
Simazine	2 standard deviations
Toxaphene	+ 45
Aldicarb	2 standard deviations
Aldicarb sulfoxide	2 standard deviations
Aldicarb sulfone	2 standard deviations
Pentachlorophenol	+ 50
2,4-Dichlorophenoxyacetic acid (2,4-D)	+ 50
2-(2,4,5-Trichlorophenoxy)propionic acid (2,4,5-TP) (Silvex)	+ 50

(3) To receive certification to conduct analyses for benzene, carbon tetrachloride, 1,2-dichloroethane, 1,1-dichloroethylene, p-dichlorobenzene, 1,1,1-trichloroethane, trichloroethylene, o-dichlorobenzene, cis-1,2-dichloroethylene, trans-1,2-dichloroethylene, 1,2-dichloropropane, ethylbenzene, monochlorobenzene, styrene, tetrachloroethylene, toluene, xylenes (total), dichloromethane, 1,2,4-trichlorobenzene, and 1,1,2-trichloroethane, the laboratory must:

- (a) Analyze Proficiency Test (PT) samples provided by EPA, the Department, or by a Department-approved third party;
- (b) Achieve the quantitative acceptance limits on the analyses performed under 310 CMR 42.20(3)(a) for at least 80% of the regulated organic chemicals listed at 310 CMR 42.20(3);
- (c) Achieve quantitative results on the analyses performed under 310 CMR 42.20(3)(a) that are within $\pm 20\%$ of the actual amount of the substances in the PT sample when the actual amount is greater than or equal to 0.010 mg/L;
- (d) Achieve quantitative results on the analyses performed under 310 CMR 42.20(3)(a) that are within $\pm 40\%$ of the actual amount of the substances in the PT sample when the actual amount is less than 0.010 mg/L; and
- (e) Achieve a method detection limit of 0.0005 mg/L according to the procedures in Appendix B of 40 CFR Part 136.

(4) To receive certification for vinyl chloride, the laboratory must:

- (a) Analyze Proficiency Test (PT) samples provided by EPA, the Department, or by a Department-approved third party;
- (b) Achieve quantitative results on the analyses performed under 310 CMR 42.20(4)(a) that are within $\pm 40\%$ of the actual amount of vinyl chloride in the PT sample;
- (c) Achieve a method detection limit of 0.0005 mg/L according to procedures in 40 CFR Part 136: *Appendix B*; and
- (d) Obtain certification for the contaminants listed in 310 CMR 42.20(3).

42.20: continued

- (5) To receive certification for total trihalomethanes (chloroform, bromodichloromethane, dibromochloromethane, and bromoform), haloacetic acids (monochloroacetic acid, dichloroacetic acid, trichloroacetic acid, monobromoacetic acid, and dibromoacetic acid, known collectively as HAA5), bromate, and chlorite, the laboratory must:
- (a) Analyze Proficiency Test (PT) samples approved by the Department at least once each calendar year by each method for which the laboratory desires certification;
 - (b) Achieve quantitative results within the acceptable limit for each analyte included in each PT sample and, for haloacetic acids, on a minimum of 80% of the analytes included in each PT sample. The acceptance limit is defined as $\pm 20\%$ of the true value for each of the trihalomethanes; $\pm 40\%$ of the true value for each of the haloacetic acids; $\pm 30\%$ of the true value for chlorite; and $\pm 30\%$ of the true value for bromate;
 - (c) Report quantitative data for concentrations at least as low as the regulatory minimum reporting level of 0.0010 mg/L for each of the trihalomethanes, 0.0020 mg/L for monochloroacetic acid, 0.0010 mg/L for dichloroacetic acid, trichloroacetic acid, monobromoacetic acid, and dibromoacetic acid, 0.020 mg/L for chlorite, and 0.0050 mg/L for bromate (0.0010 mg/L for laboratories using EPA Methods 317 Revision 2.0, 326.0 or 321.8);
 - (d) Use calibration curves for the analysis of trihalomethanes, haloacetic acids, bromate, and chlorite that encompass the regulatory minimum reporting level (MRL) concentration. Data may be reported for concentrations lower than the regulatory MRL as long as the precision and accuracy criteria are met by analyzing an MRL check standard at the lowest reporting limit chosen by the laboratory. The laboratory must verify the accuracy of the calibration curve at the MRL concentration by analyzing an MRL check standard with a concentration less than or equal to 110% of the MRL with each batch of samples. The measured concentration for the MRL check standard must be $\pm 50\%$ of the expected value if any field sample in the batch has a concentration less than five times the regulatory MRL. Method requirements to analyze higher concentration check standards and meet tighter acceptance criteria for them must be met in addition to the MRL check standard requirement; and
 - (e) When adding the individual trihalomethane or haloacetic acid concentrations in order to calculate the total trihalomethane or HAA5 concentrations, respectively, use a zero for any analytical result that is less than the MRL concentration for that particular analyte.
- (6) To receive certification to conduct analyses for perchlorate, the laboratory must:
- (a) Analyze PT samples approved by the Department;
 - (b) Achieve quantitative results within the acceptable limit for this analyte in each PT sample. The acceptance limit is defined as the 95% confidence interval calculated around the mean of the PT study data;
 - (c) Use analytical methods acceptable to the Department; and
 - (d) Comply with specific Department policies regarding quality assurance/quality control and data reporting procedures for this analyte.
- (7) To receive certification to conduct analyses for 1,4-dioxane, the laboratory must:
- (a) Analyze PT samples approved by the Department;
 - (b) Achieve quantitative results within the acceptable limit for this analyte in each PT sample. The acceptance limit is defined as the 95% confidence interval calculated around the mean of the PT study data; and
 - (c) Use analytical methods, quality assurance/quality control protocols, and data reporting procedures acceptable to the Department.

42.21: Non-potable Water: (Reserved)

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

42.22: Severability

If any provision of 310 CMR 42.00, or its application to any person, is held invalid, such invalidity shall not affect other provisions or applications of 310 CMR 42.00 which can be given effect without the invalid provision or application, and to this end the provisions of 310 CMR 42.00 are declared to be severable.

REGULATORY AUTHORITY

310 CMR 42.00: M.G.L. c. 21, §§ 26 through 53; c. 21A, § 2(28); c. 21C, § 4; c. 21E, § 3; c. 111, §§ 142A through 142E, 150A and 160.

- 43.71: Specific Guidance for the Application of Particular Conditions For Detailed Site Characterization
- 43.72: Quality Assurance Requirements

43.01: Purpose and Authority

(1) Purpose. 310 CMR 43.00 is composed of criteria for the selection of a superior site for a low-level radioactive waste management facility; guidelines for the application of the criteria; and procedures for conducting selection of a superior site. 310 CMR 43.00 shall be interpreted so as to be compatible with the federal regulatory program for the management of low-level radioactive waste and shall as a primary consideration be protective of the public health, safety and the environment.

310 CMR 43.01 through 43.09 establishes the Department's purpose and authority and the regulations' general applicability. 310 CMR 43.10 through 43.39 establishes location criteria for identifying a superior site for a low-level radioactive waste facility. The criteria are intended to identify site characteristics which will contribute to the isolation of the waste, minimize the likelihood of exposure to the public or the environment in the event of a release and mitigate the incidental adverse impacts from waste management activities at the site.

43.01: continued

310 CMR 43.40 through 43.72 specifies the procedures for selecting a superior site and guidelines for the collection, analysis and presentation of data necessary to evaluate and characterize a potential site at each stage of the site selection process specified by the Massachusetts Low-Level Radioactive Waste Management Act (M.G.L. c. 111H, §§ 19 through 24). 310 CMR 43.40 through 43.72 is intended to ensure that the characterization of a potential site is based on accurate, verifiable, comprehensive and well documented data and analytical procedures. 310 CMR 43.40 through 43.72 is also intended to ensure that the scope of data collection and site characterization is compatible with the level of decision making to be applied at each stage of the site selection process.

(2) Authority. 310 CMR 43.00 is promulgated by the Department of Environmental Protection pursuant to M.G.L. c. 111H, § 14.

43.02: Definitions

The following words and phrases when used herein shall have the following meaning:

Adverse Effect means an injurious impact which is reasonably significant in relation to the public health, safety, or environmental interest being protected.

Aquifer means a geologic formation, group of formations, or part of a formation that is capable of yielding significant quantities of ground water to wells or springs.

Board means the Low-Level Radioactive Waste Management Board established in M.G.L. c. 111H, § 2.

Buffer Zone means a parcel of land which is an integral part of a facility that is controlled by the facility licensee and acts as a surrounding boundary to the facility.

Chief Municipal Official means the city manager in any city having a city manager, the mayor in any other city, the town manager in any town having a town manager or the chairperson of the Board of Selectmen in any other town.

Coastal High Hazard Zone means coastal zones identified by the Office of Coastal Zone Management which are subject to any inundation caused by coastal storms up to and including that caused by the 100 year storm, surge of record or storm of record which ever is greater including coastal beaches, coastal dunes, barrier beaches, coastal banks and rocky intertidal shores as those terms are defined in 310 CMR 10.27 through 10.31.

Community means a city or town of the Commonwealth.

Community Water System means a public water system which serves at least 15 service connections used by year round residents or regularly serves at least 25 year round residents.

Department means the Department of Environmental Protection.

Detailed Site Characterization means the on-site investigatory and analytical step of site selection established in M.G.L. c. 111H, § 23 and conducted prior to the selection of any superior site.

DPH Performance Objectives means the performance objectives contained in regulations promulgated by the Department of Public Health at 105 CMR 120.811 through 120.814.

Dissolution means a space or cavity in or between rocks, formed by the solution of part of the rock material.

43.02: continued

Disposal means the isolation of low-level radioactive waste from the biosphere inhabited by human beings and their food chain.

Downgradient means in a direction exactly opposite to upgradient (q.v.).

DPH means the Department of Public Health.

Economically Recoverable Resources means oil, gas, fossil fuels, sulphur, metals, ores, minerals, rock, soil, sand and gravel which because of their high quality, economic superiority or quantity are being exploited or are likely to be exploited in the reasonably foreseeable future.

Engineered Barrier means a man-made structure or device that is intended to improve a facility's ability to meet DPH performance objectives.

Environmental Monitoring Program means a monitoring program established by DPH, after consultation with the Department and the board of health of each site community, pursuant to M.G.L. c. 111H, § 36 for the purpose of collecting and analyzing environmental data prior to construction and throughout the construction, operation, closure, post-closure observation and maintenance and institutional control of a facility.

Facility means a parcel of land, together with the structures, equipment and improvements thereon or appurtenant thereto, which pursuant to M.G.L. c. 111H, is being developed, is used, or has been used for the treatment, storage or disposal of low-level radioactive waste; but does not include any property used for temporary storage of low-level radioactive waste in sealed containers by a broker.

Fault means a fracture or a zone of fractures in any material along which strata on one side have been displaced with respect to that on the other side.

500 Year Floodplain means the estimated maximum lateral extent of flood water rising from creeks, rivers, streams, ponds, or lakes as result of a flood discharge of a magnitude likely to occur on the average of once every 500 years or, more properly, has a 0.2% chance of being exceeded in any year.

Flammable Liquid means a liquid whose flash point is less than 100°F.

Geographic Information System [GIS] means a computer based information handling program maintained by the Commonwealth that can store and manipulate both map-based information and associated tabular data such as zip codes or population density.

Ground Water means all the water below the land surface in soils or geologic formations, specifically that part of the subsurface water in the saturated zone except as otherwise defined by 310 CMR 22.00.

Hazardous Waste means a waste or combination of wastes, which because of its quantity, concentration or physical, chemical or infectious characteristics may cause, or significantly contribute to an increase in serious irreversible or incapacitating reversible illness or pose a substantial present or potential hazard to human health, safety, public welfare or the environment when improperly treated, stored, transported, used or disposed of or otherwise managed, however not to include solid or dissolved materials in irrigation return flows or industrial discharges which are point sources subject to permits under section 402 of the Federal Water Pollution Control Act of 1967 as amended, or source, special nuclear or by-product material as defined by the Atomic Energy Act of 1954, as further described in 310 CMR 30.000.

53.02: continued

Holocene means the most recent epoch of the Quaternary period extending from the end of the Pleistocene Epoch to the present.

Horizontal Gradient means the change in static head per unit of distance along a flow path.

Hydraulic Conductivity means a characteristic property of a porous medium that measures the ability of water to move through it under a difference in hydraulic potential or head. If a porous medium is isotropic and the fluid is homogeneous, the hydraulic conductivity of the medium is the volume of water at the existing cinematic viscosity that will move in unit time under a unit hydraulic gradient through a unit area measured at right angles to the direction of flow.

Hydrogeologic unit means any soil or rock unit or zone which, by virtue of its porosity and permeability, or lack thereof, has a distinct influence on the storage or movement of groundwater.

Important to the Safety means those engineered structures, systems and components essential to the isolation of waste and prevention of a release of radioactivity which would result in an exposure in excess of DPH performance objectives.

Institutional Control means the continued observation, monitoring and care of a facility following transfer of the facility license from the operator to the Board.

Interim Wellhead Protection Area (IWPA) means:

- (a) with respect to public water supplies and well fields whose pumping rate is 100,000 gallons per day or greater and for which the Department has not approved a hydrologically delineated Zone II, the ½ mile radius surrounding such well or well field; and
- (b) with respect to public water supplies and well fields whose pumping rate is less than 100,000 gallons per day and for which the Department has not approved an hydrologically delineated Zone II, the radius calculated by multiplying the maximum pumping rate in gallons per minute for such well and well field by 32 and adding 400 feet thereto (*i.e.* IWPA = (32) X (y) + (400); where y = pumping rate in gallons per minute.

Liquefaction means the potential of certain soils to be transformed from a solid to liquid state as a result of increased pore pressure and reduced effective stress, such as might result from certain seismic loading conditions.

Lithified Earth Material means all rock, including all naturally occurring and naturally formed aggregates or masses of minerals or small particles of older rock formed by crystallization of magma or by induration of loose sediments. This term does not include man-made materials, such as fill, concrete, and asphalt, or unconsolidated earth materials, soil or regolith lying at or near the earth surface.

Low-Level Radioactive Waste means radioactive material that:

- (a) is neither high-level waste nor spent nuclear fuel, nor by-product material as defined in section 11(e)(2) of the Atomic Energy Act of 1954, as amended, 42 USC 2014(e); and
- (b) is classified by the Federal Government as low-level radioactive waste, but not including waste which remains a federal responsibility, as designated in section 3(b) of the Low-Level Radioactive Waste Policy Act, as amended, 42 USC 2021c(b), as in effect on the effective date of the Act.

Management means the storage, packaging, treatment, transportation or disposal, where applicable of low-level radioactive waste.

43.02: continued

Mass Wasting means the movement of rock or soil material under the influence of gravity either as the movement of the product of weathering down a slope or as mass movement of rock or soil along joint planes or bedding planes. Mass wasting includes but is not limited to creep, mud flows, earth flow, soil flow, rock avalanche, landslide, landslip and slumping.

Maximum Horizontal Acceleration in Lithified Earth Material means the maximum expected horizontal acceleration depicted on a seismic hazard map, with a 90% or greater probability that the acceleration will not be exceeded in 250 years, or the maximum expected horizontal acceleration based on a site-specific seismic risk assessment.

Mixed Waste means low-level radioactive waste containing material that either:

- (a) is listed in 310 CMR 30.131 through 30.136; or
- (b) causes the waste to exhibit any of the characteristics identified in 310 CMR 30.120.

Model means a conceptual description and the associated mathematical, graphical and/or analogous representation of a system, subsystem, component or condition that is used to predict changes from a baseline state as a function of internal and/or external stimuli and as a function of time and space.

Monitoring means observing and making measurements to provide data on a facility, its site, its surrounding environment, and its health, safety and environmental impacts.

Outstanding Resource Waters means waters in the Commonwealth given a protected status due to their ecological, socioeconomic, recreational and/or aesthetic value pursuant to 314 CMR 4.04(3).

Non-Community Water System means a public water system that is not a community system.

100 Year Floodplain means the estimated maximum lateral extent of flood water rising from creeks, rivers, streams, ponds, or lakes as the result of a flood discharge of a magnitude likely to occur on the average of once every 100 years or, more properly, has a 1% chance of being exceeded in any year.

Overburden means all material that lies between the ground surface and bedrock.

Performance Assessment means a comprehensive analysis that:

- (a) identifies the processes and events that might affect the site, and, if practicable, the waste management area or facility;
- (b) examines the effects of these processes and events on the performance of the site, and, if practicable the waste management area and facility; and
- (c) estimates the cumulative releases of radionuclides, considering the associated uncertainties caused by all the significant processes and events. These estimates shall be incorporated into an overall probability distribution of the projected cumulative distributions to the greatest extent practicable.

Population Density means the number of people residing in one square mile, as averaged over an area designated by the U.S. Bureau of Census.

Possible Location means a location, identified in accordance with the procedures established in M.G.L. c. 111H, § 20, which will be the subject of a preliminary characterization.

Potential Non-Community Water System means a Class I aquifer, as defined in 314 CMR 6.03(1), capable of yielding water of sufficient quality and quantity for a non-community water system and which is located under a parcel of land that at the time of the issuance of the statewide mapping and screening report pursuant to M.G.L. c. 111H, § 20(a) is:

43.02: continued

- (a) capable of being developed as a non-community water system under applicable community land use controls; and
- (b) within the boundaries established by state regulations and guidelines for the location of a non-community water system.

Potential Private Ground Water Source means a Class I aquifer, as defined in 314 CMR 6.03(1), capable of yielding water of sufficient quality and quantity for a drinking water supply and which is located under a parcel of land that at the time of the issuance of the statewide mapping and screening report pursuant to M.G.L. c. 111H, § 20(a) is:

- (a) capable of being developed for residential use under applicable community land use controls; and
- (b) within the boundaries established by state regulations and guidelines for the location of private wells; and
- (c) not within an area being served by a public water system.

Potential Productive Aquifer means all aquifers delineated by the U.S. Geological Survey (USGS) as a high or medium yield aquifer, and all aquifers located east of the Cape Cod Canal (Cape Cod), on Martha's Vineyard, on Nantucket and on the Elizabeth Islands.

Preliminary Characterization means the investigatory and analytical step established in M.G.L. c. 111H, § 20, and conducted prior to the identification of candidate sites.

Protected Area means land or resources which have been restricted from siting a facility pursuant to state or federal laws or regulations in order to promote, protect or preserve its ecological, wilderness, historic, recreational, archeological, cultural or scenic value including, without limitation, the state and federal areas listed at Appendix A, provided that the designation of land as a protected area herein is not intended to expand, diminish or otherwise modify the scope of protection provided by said statutes or regulations in relation to the exercise of authority to acquire land or interests therein pursuant to M.G.L. c. 111H, § 23(g). Protected areas do not include lands or resources restricted from development pursuant to municipal by-laws, ordinances or regulations.

Public Water Supply means a source of ground water or surface water supplying a public water system.

Public Water System means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily for at least 60 days of the year.

Qualified for Development means a potential productive aquifer which the Department determines is capable of being developed into a public water system based upon the following demonstrations:

- (a) Geologic and hydrogeologic maps and, if available, local subsurface or hydrogeologic reports demonstrate that the aquifer meets the definition of a potential productive aquifer; provided, however, approved pump tests may be conducted to demonstrate that the source is incapable of yielding sufficient volumes of water to economically supply a public water system and is capable of yielding a quality which meets drinking water quality standards or can be cost efficiently treated;
- (b) The source is necessary to supply one or more communities with sufficient water based on a minimum 20 year planning criteria used by the Department in the event that, after appropriate water quality testing, the largest current ground water sources in each community in the affected water basin is shut down.
- (c) A site specific land use survey within the Interim Wellhead Protection Area demonstrates that existing or historical land uses will not preclude the use of the aquifer as a source.

43.02: continued

Radioactive Material means any solid, liquid or gas which emits radiation spontaneously.

Radioactivity means the transformation of unstable atomic nuclei by the emission of radiation.

Radionuclide means an isotope that eventually undergoes spontaneous disintegration, with the emission of radiation.

Saturated Zone means any portion of the earth below the land surface where every available opening (pore, fissure, joint, or solution cavity) is filled with water under pressure equal to or greater than atmosphere, except as otherwise defined by 310 CMR 22.00.

Seismic Impact Zone means an area with a 10% or greater probability that the maximum horizontal acceleration in lithified earth material, expressed as a percentage of the earth's gravitational pull, will exceed 0.10g within 250 years or such extended time period in which projections can be made within reasonably conservative confidence limits.

Sensitive Populations means persons who because of their age, health status or physical characteristics have a significantly higher probability of suffering an adverse effect to health than a member of the general public if exposed to a release of radioactivity or associated toxic materials managed at the facility. Examples of such sensitive populations may include, but are not limited to, children, infirm persons, pregnant women and persons who have experienced acute or chronic exposures to higher than normal doses of radioactivity due to occupational or geographic circumstances.

Sensitive Population Locations means structures or areas which are principally designated or designed to serve sensitive populations or which are predominantly used by sensitive populations for extended periods of time. Examples of such places may include: day care facilities, grammar and secondary schools, playgrounds, bedded hospitals or radiation or prenatal clinics.

Shallow Land Burial means a land disposal method that relies on the site's natural characteristics as the primary barrier for isolation of the waste.

Significantly Higher Than Normal Risk means a significantly greater degree of risk of an adverse effect to health than the degree of risk which the general population would be exposed to in the event of a release of radioactive or hazardous waste managed at the facility.

Site means a parcel of land which, pursuant to M.G.L. c. 111H, is being considered, developed or used or has been used as a location for a facility.

Slumping means landsliding characterized by movement of a generally independent mass of rock or earth along a slip surface and about an axis parallel to the slope rim which it descends and by backward tilting of the mass with respect to that slope so that the slump surface often exhibits a reversed slope facing uphill.

Sole Source Aquifer means an aquifer so designated by the U.S. Environmental Protection Agency, or by the Department under the authority of a state program as may be established, that supplies 50% or more of the drinking water for the aquifer service area, and the volume of water which could be supplied by alternative sources is insufficient to replace said aquifer should it become contaminated.

Storage means the holding of low-level radioactive waste for treatment or disposal.

Subsidence means the process by which the earth's surface sinks, either rapidly or slowly, with little or no horizontal motion.

43.02: continued

Subsurface Dissolution means a process of chemical weathering by which minerals and rocks are dissolved in groundwater; evidenced by subsidence, widened fractures, sinkholes, caverns and/or underground streams.

Suitable Technology means a management technology which is qualified by the Board pursuant to regulations promulgated pursuant to M.G.L. c. 111H, § 12 as being suitable to manage low level radioactive waste within the Commonwealth.

Superior site means any site selected by the Board, after detailed site characterization, pursuant to M.G.L. c. 111H, § 23.

Transient population means people who do not reside within an area, but do pass through or spend a limited amount of time within an area, including, but not limited to, tourists, seasonal workers or sportsmen.

Tributary means a body of running water, including a river, stream, brook and creek, which moves in a definite channel in the ground due to a hydraulic gradient and which flows ultimately into a free flowing surface water supply. A tributary shall include the land over which the water runs and the banks thereto.

Upgradient means:

- (a) in reference to surface water, the direction perpendicular to lines of equal water surface elevation over a distance in which elevation continuously increases, measured from the point or area in question; or
- (b) in reference to ground water, the direction perpendicular to lines of equal total hydraulic head over a distance in which total head continuously increases, measured at the water table.

Upland Drainage Area means areas or drainage basins that could discharge surface runoff to or through portions of the site, either by overland flow or by means of streams, rivers, and well defined drainage courses.

Urban Area means an area designated as such by the U.S. Census in accordance with its detailed published criteria.

Waste means low-level radioactive waste unless otherwise specifically designated herein.

Waste Management Area means that portion of a facility where low-level radioactive wastes has been, is being, or will be treated, stored or disposed of.

Watershed means a region or area measured in a horizontal topographic divide which directs surface runoff from precipitation, normally by gravity, into a stream or a body of impounded surface water, except as otherwise defined by 310 CMR 22.00.

Water Table means that surface in an unconfined water body at which the pressure is atmospheric. It is defined by the levels at which water stands in wells that penetrate the water body just far enough to hold standing water. In wells which penetrate to greater depths, the water level will stand above or below the water table if an upward or downward component of groundwater flow exists. For purposes of 310 CMR 43.00, unless otherwise stated, the elevation of the water table shall be taken to refer to its seasonal high level, which generally occurs in late winter or early spring.

Zone I means the protective radius required around a public supply well or well field.

43.02: continued

Zone II means that area of an aquifer which contributes water to a well under the most severe recharge and pumping conditions that can be realistically anticipated (*i.e.*, pumping at the approved safe yield of the well for 180 days without any natural recharge occurring); it is bounded by the groundwater divides which result from pumping the well and by contact of the edge of the aquifer with less permeable materials such as till and bedrock. In some locations, streams and lakes may form recharge boundaries. The Zone II shall extend up gradient to its point of intersection with prevailing hydrogeologic boundaries (a ground water flow divide, a contact with till or bedrock or a recharge boundary.) For the purposes of 310 CMR 43.00, a Zone II area is one which has been defined and delineated in accordance with the Department's Division of Water Supply *Guidelines and Policies for Public Water Systems*, November 1993 Addendum to the October 1991 edition or the most recent version thereof.

Zone III means that land area beyond the area of a Zone II from which surface water and groundwater drain into a Zone II. The surface drainage area as determined by the topography is commonly coincident with the groundwater drainage area and will be used to delineate the Zone III. In some locations, where surface and groundwater drainage are not coincident, the Zone III shall consist of both the surface drainage and the groundwater drainage area.

Zone of Contribution means the land area which provides recharge to the well.

43.03: Applicability.

The requirements of 310 CMR 43.01 through 43.09 applies to the selection of a superior site for a low-level radioactive waste facility in accordance with M.G.L. c. 111H.

43.10: Modeling Capability

(1) Exclusion Criteria. Exclude sites not capable of being adequately modeled, characterized, analyzed and monitored with respect to hydrogeology, geologic features and ground water flow characteristics as reasonably necessary to demonstrate compliance with DPH performance objectives and those provisions of applicable state and federal regulations governing environmental monitoring.

(2) Conditional Consideration Criteria.

Bedrock Structure. Consider sites containing bedrock structural features and lithologies that may provide significant pathways for groundwater flow or present very complex hydrologic conditions on compliance with 310 CMR 43.40(3).

(3) Preference Criteria. Prefer sites that can be modeled and characterized with a greater degree of certainty, over sites which can be characterized with a lesser degree of certainty.

43.20: Groundwater Drinking Supplies and Resource Protection

(1) Exclusion Criteria.

(a) Existing Public Water Systems Pumping More Than 100,000 Gallons per Day. Exclude sites located within the Zone III of an existing public water supply with a maximum approved pump rate of 100,000 gallons per day (gpd) or more.

(b) Existing Public Water Systems. Exclude sites located within the Zone II of an existing public water supply.

(c) Potential Productive Aquifer. Exclude sites located over a potential productive aquifer (PPA) which has been determined by the Department to be qualified for development as a public drinking water system prior to the issuance of the draft candidate site identification report pursuant to M.G.L. c. 111H, § 20(c). Notwithstanding this exclusion, a site may be located within a PPA qualified for development where the site is proposed to be located outside of the Zone II of any system and outside of the Zone III for systems pumping 100,000 gpd or more.

43.20: continued

- (d) Existing Private Ground Water Source or Non Community Water System. Exclude sites located within the Zone of Contribution of an existing private groundwater source or non-community system unless the source/system is located on the parcel of land that is designated to be acquired pursuant to M.G.L. c. 111H, § 23(g) and the source/system is secured from any use other than uses related to the construction, operation or environmental monitoring of the facility.
 - (e) Potential Private Groundwater Source or Non-Community Water System. Exclude sites located within the projected Zone of Contribution of a potential private groundwater source or non-community water system unless the source/system is located on the parcel of land to be acquired pursuant to M.G.L. c. 111H, § 23(g) and is secured from any use other than uses related to the construction, operation or environmental monitoring of the facility.
 - (f) Sole Source Aquifer. Exclude sites which are located over the areal extent of a sole source aquifer.
 - (g) Minimum Depth to Water Table. Exclude sites where the minimum depth to the water table is insufficient to prevent the intrusion of groundwater, perennial or otherwise, into the waste.
 - (h) Minimum Depth and Overburden to Bedrock Water Table. Exclude sites where the water table is below the bedrock surface and where between the bedrock and the bottom of the waste management unit there is less than a minimum total thickness of ten feet of (unsaturated) soil units (natural or placed) with a maximum saturated hydraulic conductivity of 1×10^{-4} cm/sec.
 - (i) Maximum Horizontal Gradient. Exclude sites where the average horizontal gradient in the uppermost aquifer underlying the site is more than 0.01.
- (2) Conditional Consideration Criteria.
- (a) Depth to Water Table. Consider sites where the minimum depth to the water table is ten feet or less from the ground surface or from the bottom of the waste management area, if the waste management area is below the ground surface, on compliance with 310 CMR 43.40(3).
 - (b) Horizontal Gradient. Consider sites where the average horizontal gradient in the uppermost aquifer underlying the site is 0.01. to 0.005 on compliance with 310 CMR 43.40(3).
 - (c) Below Bedrock Water Table. Consider sites where the water table extends below the bedrock surface on compliance with 310 CMR 43.40(3).
- (3) Preference Criteria.
- (a) Horizontal Gradient. Prefer sites with a lower average hydraulic gradient in the uppermost aquifer underlying the site, over sites with a higher average hydraulic gradient in the uppermost aquifer underlying the site.
 - (b) Depth to Water Table. Prefer sites with greater minimum depths to the water table below the ground surface, over sites with lesser minimum depths to the water table below the ground surface.
 - (c) Hydraulic Conductivity. Prefer sites with an average hydraulic conductivity in the saturated soil of 1×10^{-4} cm/sec. or less, over sites with an average hydraulic conductivity in the saturated soil of greater than 1×10^{-4} cm/sec.
 - (d) Groundwater Travel Time. Prefer sites with a predicted longer average travel time of ground water beneath the waste management area, over sites with a shorter predicted average travel time of ground water beneath the waste management area.

43.21: Surface Water Drinking Supplies and Resource Protection

- (1) Exclusion Criteria.
- (a) Class A Water Supplies. Exclude any site where the probable waste management area would be located within the watershed of a Class A public surface drinking water supply as defined in 314 CMR 4.05(3)(a).

43.21: continued

- (b) Class B Public Drinking Water Supplies. Exclude any site where the probable waste management area will be located within any of the following area of a Class B public surface drinking water supply as defined in 314 CMR 4.05(3)(b): 400 feet from the 100 year flood plain elevation extending ½ mile upgradient from the supply intake and extending 200 feet downgradient from the supply intake or to the physical spillway, whichever downgradient distance is less.
 - (c) Flood Plain, 100 year. Exclude any site in which the probable waste management area would be within any 100 year flood plain.
 - (d) Wetlands. Exclude sites where the probable waste management area would be located within 100 feet of a resource area protected by the Wetlands Protection Act, M.G.L. c.131, § 40 and 310 CMR 10.00.
 - (e) Poor Draining Areas. Exclude from the site any land that does not drain well and is subject to periodic flooding or frequent ponding.
 - (f) Runoff Retention. Exclude from the site upland drainage areas which, due to their size, geometry, and surface characteristics, are unable by natural drainage patterns and normal engineering drainage controls to reliably channel the surface runoff expected from a statistical 100 year precipitation event without significantly eroding or inundating the probable waste management area.
 - (g) Coastal High Hazard Zones. Exclude sites in coastal high hazard zones.
 - (h) Dams. Exclude sites in areas subject to inundation by the failure of an existing dam.
 - (i) Surface Water Discharges. Exclude sites in which a hydrogeologic unit within the probable waste management area discharges groundwater to the surface within the site.
- (2) Conditional Consideration Criteria.
500 Year Floodplain. Consider sites in which the probable waste management area would be located inside any 500 year flood plain on compliance with the provisions of 310 CMR 43.40(3).
- (3) Preference Criteria.
- (a) Minimizing Impact to Water Resources.
 1. Prefer sites with a lower potential for radioactive substances to impact tributaries and surface water bodies resulting in harm to human, animal or aquatic life or the most sensitive designated use, over sites with a higher potential for such impact.
 2. Prefer sites with a lower potential for radioactive substances to impact tributaries or surface water bodies resulting in radionuclides in aquatic life exceeding the recommended limits for consumption by humans, over sites with a higher potential for such impact.
 3. Prefer sites with a lower potential for radioactive substances to impact tributaries or surface water bodies resulting in exceeding Massachusetts drinking water standards, 310 CMR 22.09, over sites with a higher potential for such an impact.
 - (b) Distance from Environmentally Sensitive Surface Waters. Prefer sites further away from intakes and tributaries of free flowing surface water supplies, lakes, rivers not including intermittent streams, outstanding resource waters and resource areas protected by the Wetlands Protection Act (M.G.L. c. 131, § 40), over sites closer to such surface waters.

43.22: Tectonic Processes

- (1) Exclusion Criteria.
Tectonic Processes. Exclude sites where tectonic processes in the vicinity, such as faulting, folding, seismic activity or volcanism are reasonably likely to adversely affect the ability of the probable waste management area to meet DPH performance objectives or preclude adequate modeling and prediction of long term impacts.
- (2) Preference Criteria.
- (a) Earthquake History. Prefer sites further away than three miles from the epicenter of an earthquake which occurred within the last 300 years and which would measure four or more on the Richter magnitude or equivalent scale or Modified Mercalli Intensity V, over sites which are closer to such epicenter.

43.22: continued

(b) Minimizing Potential Tectonic Effects. Prefer sites with a lower potential for adverse effects from local or regional tectonic activity, over sites with a higher potential.

43.23: Surface Geologic Processes

(1) Exclusion Criteria.

(a) Surface Geologic Process. Exclude sites where the probable waste management area would be located in the vicinity of surface geologic processes such as mass wasting, erosion, slumping, landsliding, which occur with such frequency and extent that such events would be reasonably likely to adversely affect the ability of the site to meet any DPH performance objectives or preclude adequate modeling and prediction of long term impacts.

(b) Slope. Exclude sites where the probable waste management area would have an average slope greater than 20%.

(2) Conditional Consideration Criteria.

(a) Contaminant Migration. Consider sites with surficial deposits unlikely to substantially retard groundwater flow and radionuclide migration beneath the facility on compliance with 310 CMR 43.40(3).

(b) Seismic Impact Zone. Consider sites located in a seismic impact zone on the condition that it can be reasonably demonstrated that the engineered structures, systems and components important to waste isolation and release containment functions of suitable facilities are sufficiently capable of resisting the maximum horizontal acceleration in lithified earth material to prevent a release of radiation which results in a dose exposure in excess of DPH performance objectives.

(3) Preference Criteria.

(a) Liquefaction Performance Standard. Prefer sites with less potential to subject the probable waste management area to potential liquefaction, over sites with greater potential for liquefaction.

(b) Soil Stability. Prefer sites that provide a more stable foundation for engineered containment structures, over sites with a less stable foundation.

(c) Subsurface Dissolution. Prefer sites that demonstrate less significant past or active dissolution, over sites which demonstrate more dissolution.

(d) Overburden Deposition Process. Prefer sites where the overburden is composed of lesser amounts of varved clay or holocene lacustrine deposits, over sites with greater amounts of such materials. Prefer sites in which the overburden is composed of greater amounts of glacial till, over sites with lesser amounts of till.

(e) Overburden Composition and Depth. Prefer sites with thicker unconsolidated units and with a higher clay or silt content, over sites with thinner units or lower clay/silt content for facilities located above the ground or near to the surface.

(f) Seismic Impact Zone. Prefer sites that have a lower predicted maximum horizontal ground acceleration, expressed as a percentage of the earth gravitation pull (percent g), over sites with a higher percent g.

(g) Complexity and Uniformity. Prefer sites that have a less complex tectonic history and geologic structure, over sites that have a more complex tectonic history and geologic structure.

(h) Retarding Migration. Prefer sites where natural characteristics, including but not limited to the permeability and the sorptive potential of the subsurface materials, provide greater potential to retard the movement of radionuclides, over sites with less retardation capability.

(i) Erosion. Prefer sites exhibiting less potential erosion characteristics, over sites exhibiting greater potential erosion characteristics.

43.24: Demography

(1) Exclusion Criteria.

(a) Effect on Facility Performance. Exclude sites where the existing population density, projected population growth or future development in the vicinity of the site is reasonably likely to interfere with the ability of the facility to meet DPH performance objectives.

(b) Proximity to Sensitive Population Locations. Exclude sites where the probable waste management area would be located in proximity to sensitive population locations as a result of which:

1. It is reasonably likely that the site will not be able to meet the DPH performance objectives; or
2. The exposure to radiation or toxic materials, if mixed waste is to be accepted at the site, which a member of the affected sensitive population is reasonably likely to receive in the event of a release of radiation or hazardous waste from the site would result in a significantly higher than normal risk of adverse effect on the health of the sensitive population.

(2) Conditional Consideration Criteria.

(a) Proximity to Residences. Consider sites where, due to the proximity of the probable waste management area to residences, it is reasonably likely that the site will not be able to meet the DPH performance objectives on the condition that the land on which the residences are located is acquired and no further residential use of said land is permitted for such period of time as said performance objectives have a reasonable likelihood to be exceeded.

(b) Proximity to Population Centers. Consider sites where the probable waste management area would be within 1½ miles of the property limits of an urban area zoned to exclude industrial and commercial development on compliance with the provisions of 310 CMR 43.40(3).

(c) Proximity to Sensitive Population Location. Consider sites where the distance from the edge of the probable buffer zone to a sensitive population location is within ¼ of a mile on compliance with the provisions of 310 CMR 43.40(3).

(3) Preference Criteria.

(a) General Population Density. Prefer sites located in areas of lower population density, over sites located in areas of higher population density.

(b) General and Sensitive Populations. Prefer sites that are projected to release less radiation to the public and environment over sites that are projected to release radiation at higher levels.

(c) Population Growth. Prefer sites located where significant development or population growth is less likely to occur in surrounding areas, over sites located where development or population growth is more likely to occur in surrounding areas.

(d) Transient Populations. Prefer sites located in areas where smaller increases in transient population density occur on a regular basis, over sites located in areas subject to greater transient population increases.

43.25: Site Size and Facility Compatibility

(1) Exclusion Criteria.

(a) DPH Regulations. Exclude sites that are insufficient in size to contain a waste management area, a buffer zone and other facility components.

(b) Management Board Determination. Exclude sites that are insufficient in size to meet the minimum land areas determined by the Board to be required for suitable facilities.

(2) Preference Criteria.

Compatibility. Prefer sites with characteristics most compatible with suitable facilities, over less compatible sites.

43.26: Compliance with Department of Public Health Performance Objectives

Exclusion Criteria. Exclude sites which are not reasonably likely to meet DPH performance objectives based on a performance assessment that, at a minimum, incorporates the facility design standards of probable suitable technologies set forth at 105 CMR 120.815.

43.27: Meteorology and Climatology

Preference Criteria.

Weather Patterns. Prefer sites which are less likely to be subject to climatic and meteorological conditions which would adversely affect the ability of the site to meet DPH performance objectives over sites which are more likely to be subject to adverse weather conditions.

43.28: Transportation.

(1) Conditional Consideration Criteria.

(a) Quality of Mode. Consider sites that are not serviced by highways or rail lines that meet applicable state and federal low-level radioactive waste transportation laws and regulations on condition that the mode to be used for delivery of waste to the site is able to be constructed or otherwise upgraded to come into compliance with said laws or regulations prior to construction of the facility.

(b) Accidents and Congestion. Consider sites that are not serviced by sufficiently safe or uncongested highways or rail lines on the condition that the mode to be used for delivery of waste to the site is able to be constructed or otherwise upgraded to achieve reductions to a level of safety and lack of congestion necessary to adequately protect the public health and safety prior to construction of the facility.

(2) Preference Criteria.

(a) Distance from Major Routes. Prefer sites at shorter distances from the interstate highway system, other multi-lane, limited access roadways or existing rail lines, over sites at greater distances from such transportation routes.

(b) Congestion. Prefer sites served by routes which are not currently congested, over more congested routes.

(c) Multiple Modes. Prefer sites that are accessible by more modes of transportation, over sites with fewer available modes.

(d) Housing Density. Prefer sites that have primary access routes from the interstate highway system, other than multi-laned limited access roadways or existing rail lines, with a lower average number of residential dwellings per route mile, over sites having primary access roads with a higher average number of dwellings per route mile.

(e) Public Places Density. Prefer sites where the primary access routes to the facility from the entrance of an interstate or limited access highway has fewer public facilities such as schools, parks, or hospitals, over sites where the primary access roads abut more such facilities.

(f) Accident Rates. Prefer sites for which the access routes exhibit lower accident rates as measured by the actual number of accidents, resulting property damage, and lives lost over sites with higher accident rates.

43.29: General Land Use

(1) Exclusion Criteria.

(a) Incompatible Nearby Activities. Exclude sites where the probable location of the waste management area in relation to nearby activities is reasonably likely to adversely affect the ability of the site to meet DPH performance objectives.

(b) Interference with Monitoring. Exclude sites where the probable location of the waste management area in relation to nearby past or present activities is reasonably likely to significantly impair the environmental monitoring program including, without limitation, existing or past activities or natural sources that emit radioactivity or release non-radioactive material into the environment to the extent that it is reasonably likely to adversely affect the ability of the environmental monitoring program to detect or monitor the existence or magnitude of emissions or releases from the facility or the site.

43.29: continued

(c) Agricultural Land. Exclude sites located on prime agricultural land based on soil classification established by the U.S. Soil Conservation Services or on land designated as an agricultural incentive area pursuant to M.G.L. c. 40L, § 1 *et seq.* on or before December 31, 1992.

(d) Acquisition Potential. Exclude sites to which the Commonwealth cannot obtain title.

(2) Conditional Consideration Criteria.

Resource Exploitation. Consider sites which contain economically recoverable resources on the condition that the exploitation is reasonably likely not to adversely affect the ability of the site to meet DPH performance standards or significantly impair the environmental monitoring program.

(3) Preference Criteria.

(a) Incompatible Development. Prefer sites located farther away from areas where incompatible development is imminent, over sites in close proximity to areas subject to imminent development.

(b) Upstream Land Alterations. Prefer sites located in areas having less upstream land available for future development, over areas having more land upstream of the site which is suitable for development.

(c) Subsurface Exploitation. Prefer sites that contain areas which have undergone lesser subsurface resource exploitation, over sites which contain areas subjected to greater subsurface resource exploitation.

(d) Resource Exploitation. Prefer sites with less economically recoverable resource potential, over sites with greater resource exploitation potential.

(e) Local Planning and Zoning. Prefer sites at which a facility would be more compatible with existing local zoning restrictions or local or regional plans, over sites at which a facility would be less compatible with such restrictions or plans.

(f) State Land. Prefer land owned by the Commonwealth that has not been excluded from consideration by other criteria, over land owned by other public or private parties.

43.30: Air Quality

Preference Criteria.

Adverse Impact Potential. Prefer sites which have a lower potential for emissions from the construction or operation of a facility, over sites which have a higher potential to cause adverse impacts to air quality.

43.31: Protected Lands, Species and Resources

(1) Exclusion Criteria.

(a) Areas of Critical Environmental Concern. Exclude sites located in any area of critical environmental concern designated pursuant to M.G.L. c. 21A, § 2(7), St. 1974, c. 808, § 401(e) and 301 CMR 11.15.

(b) Scenic Rivers and Streams. Exclude sites located in scenic and recreational rivers and streams of the commonwealth" designated pursuant to 302 CMR 3.00;

(c) Federally Protected Resources. Exclude sites that are reasonably likely to adversely affect any national park, monument, lake shore, habitat of endangered species, or area protected by the Wilderness Act, 16 USC §§ 1131 through 1136, the Wild and Scenic Rivers Act, 16 USC §§ 1771 through 1287, and the Fish and Wildlife Coordination Act, USC §§ 661 through 666c; or the National Historic Preservation Act, 16 USC §§ 470 through 470m.

(2) Conditional Consideration Criteria.

(a) Consider sites located on any lands or resources which have been taken by the General Court pursuant to its authority set forth in Article 97 of the Constitution of Massachusetts, as amended prior to the date on which the Board affirmatively votes to initiate site selection pursuant to M.G.L. c. 111H, § 17, on the condition that, prior to the construction of the facility, a law is enacted by a $\frac{2}{3}$ vote, taken by yeas and nays, of each branch of the General Court, allowing such land or resource to be used for such purpose.

43.31: continued

(b) Consider sites located on protected areas provided that the area is not excluded under 310 CMR 43.31(1) and further provided that prior to the construction of the facility:

1. the laws or regulations establishing or controlling activities in protected areas do not expressly or by necessary implication preclude the siting of a low-level radioactive management facility; and
2. all applicable conditions contained in said laws or regulations that would continue to be applicable to the site if it were acquired pursuant to M.G.L. c. 111H, § 23(g) are satisfied; and
3. all applicable permits, licenses, approvals, notifications or waivers required for a facility on state-owned land are obtained.

(c) Consider sites located in proximity to protected areas on the condition that locating a facility in proximity to the protected area is not reasonably likely to adversely affect the protected area.

(3) Preference Criteria.

Adverse Impacts. Prefer sites which are less likely to have an adverse effect on a protected area over sites which are more likely to have an adverse effect.

43.40: Application of Criteria Categories

(1) General. There are three criteria categories under which a site characteristic may be evaluated: exclusion, conditional consideration and preference. A site characteristic may be included under more than one category in which case it is evaluated based upon the standards of review set forth at 310 CMR 43.40(2) through (4).

(2) Exclusion. An exclusion characteristic eliminates a site from further consideration. A superior site may not exhibit an exclusion characteristic.

(3) Conditional Consideration. A conditional consideration characteristic does not necessarily eliminate a site from consideration. A superior site may exhibit a conditional consideration characteristic where the site meets the conditions applicable to the criterion as follows:

- (a) The standards and/or modification required as a pre-condition for consideration of the site either are able to be satisfied at the time of site selection or are determined at the time of site selection to be reasonably likely to be able to be satisfied before facility construction commences; or
- (b) A site specific analysis demonstrates that the potential adverse effect of off-site migration or of public exposure to radioactivity which the criterion was intended to protect against will not reasonably affect the ability of the site to meet DPH performance objectives or that the criterion is inapplicable to the waste isolation capability of the site or the facility.

(4) Preference. A site exhibiting a preference characteristic is advantageous in that aspect as compared to a site which does not exhibit the preferred aspect. A site exhibiting a greater degree of a preferred characteristic is more advantageous in that aspect as compared to a site exhibiting less of the characteristic.

(5) Additional Preference Criteria. The listing of the preference criteria in 310 CMR 43.10 through 43.39 is not intended to prohibit the Board from applying additional preference criteria in accordance with the provisions of M.G.L. c. 111H provided that such criteria do not contravene the criteria contained in 310 CMR 43.00.

(5) Scaling Preference Criteria and Objectives. In order to assist in evaluating and comparing potential sites the Board may develop scaling methods that rank or weight preference criteria by, for example, assigning numerical or other quantitative or qualitative values to measure the relative degrees of importance among the different criteria and to measure the extent to which a particular site satisfies a specific criterion. If the Board determines to apply any method to compare among preference criteria the Board shall adopt

43.40: continued

said method prior to the issuance of the draft candidate site report and in accordance with the provisions in M.G.L. c. 111H. Nothing herein shall require the Board to base a site selection decision on a comparison of the relative advantages or disadvantages of preference criteria exhibited among technically superior sites.

43.41: Requirements for a Technically Superior Site

(1) A site shall be considered to meet the minimum qualifications to be selected as a superior site if, after detailed site characterization conducted in accordance with 310 CMR 43.00 and the applicable provisions of M.G.L. c. 111H, it satisfies all of the following requirements:

- (a) The site does not exhibit any exclusion criterion;
- (b) The site does not exhibit any conditional criterion unless the requirements set forth at 310 CMR 43.40(3) are satisfied; and
- (c) A performance assessment conducted in accordance with protocols approved by the Department of Public Health, or other applicable state or federal regulatory agency having jurisdiction over the licensing of a facility at the site demonstrates that the site will meet DPH performance objectives.

(2) The Board shall comply with the provisions set forth in 310 CMR 43.41 through 43.43 in the selection of a superior site provided that nothing herein is intended to prevent the Board from adopting standards that are intended to provide additional protection of the public health, safety and the environment or adopt procedures that supplement the data analysis or quality assurance procedures set forth herein.

(3) The provisions set forth in 310 CMR 43.44 through 43.72 are intended as recommended guidance for the Board in regard to the collection and analysis of data. No failure to comply with 310 CMR 43.44 through 43.72 shall be deemed a basis for the Department to disapprove the Board's selection of a superior site pursuant to 310 CMR 43.00 unless such failure:

- (a) constitutes a significant violation of a provision of any regulations of the Department or the Department of Public Health referenced in 310 CMR 43.00 in effect at the time the violation occurred; or
- (b) precludes a finding, based on substantial evidence, that the site satisfies the requirements of 310 CMR 43.43.

43.42: General Guidance in Site Selection and Characterization Methodology

(1) Except as may be otherwise expressly provided in M.G.L. c. 111H or 310 CMR 43.00 the Board should apply the standards, protocols, and procedures set forth in the most recent applicable guidance documents on low-level radioactive waste management facility site selection and characterization issued by or under the authority of the Nuclear Regulatory Commission [NRC], the Department of Energy, the Environmental Protection Agency or the Department of Public Health.

(2) Notwithstanding the provision of 310 CMR 43.42(1)(a), the Board may choose not to apply any standard, protocol or procedure as set forth in the federal documents (federal measure) described in said subsection provided the Board makes a finding and documents that:

- (a) the federal measure is not applicable to a site or waste management technology under consideration due to conditions particular to Massachusetts or the site and substitute measures will provide accurate and verifiable data necessary to determine that a superior site meets the requirements of 310 CMR 43.41; or
- (b) a standard, protocol, or procedure proposed as a substitute for the federal measure will provide accurate and verifiable data which is equivalent or superior to the data or analysis intended to be provided by the federal measure.

43.42: continued

(3) Data shall be collected, analyzed and applied in accordance with generally accepted practices in the fields of geology, soil science and soil engineering, hydrology, land use studies, transportation, meteorology, environmental engineering, civil engineering, performance assessment, air modeling and monitoring and such other related disciplines as are necessary to select a superior site. The Board shall apply the written guidance, protocols and procedures established by the Department for the investigation, characterization and modeling of water resources, wetlands and air quality except where the provisions of said documents contravene a Nuclear Regulatory Commission regulation in which case the NRC regulation shall govern.

(4) Except as otherwise provided in applicable state or federal regulations, where site compliance with a criterion is based upon its ability to meet DPH performance objectives or to avoid or minimize an adverse effect and it is accepted professional custom or practice to utilize assumptions or estimate probabilities in conducting an evaluation to determine a site characteristic or parameter, the Board shall at a minimum apply reasonable but conservative assumptions and probabilities to assess the site's performance and compliance. In applying the reasonably likely standard contained in the criteria the Board shall adopt reasonable but conservative confidence limits for statistically defined measures. Where compliance with a performance standard is evaluated, the evaluation may consider the performance of the waste containers and the facility in isolating the waste from the environment. In evaluating the long term waste isolation capability of the containers and the facility the Board shall incorporate design and performance requirements set forth in applicable federal and state laws and regulations including, without limitation 105 CMR 120.800.

(5) In determining whether or not a site meets a criterion which is based upon the site achieving a certain level of performance or compliance with DPH performance objectives, the Board may, in the preliminary screening phases set forth herein, adopt reasonable factors to eliminate, or set aside for later possible consideration, areas that the Board does not believe are likely to meet the criterion including, without limitation, minimum distances from the site or the waste management area to potential human or environmental receptors.

(6) If at any time during the course of the site selection process the chief executive officer of a municipality requests that the Board consider the suitability of land within the municipality's jurisdiction, the Board may at its discretion advance the assessment of the volunteered location(s) and defer or delay evaluation of other sites as it deems appropriate.

(7) If at any time during the course of evaluation of a particular site a determination is made that the site will not meet an exclusion or conditional consideration criterion the Board may terminate or suspend further evaluation of the site as it deems appropriate.

(8) The Board shall employ the Massachusetts Geographic Information System [GIS] or, at a minimum, an equivalent computerized mapping system in the evaluation and presentation of mappable data.

(9) The Board shall employ other relevant mapped or tabular data which is publicly available and obtained from its own investigation but may not be currently maintained within the GIS (*e.g.*, U.S. Geological Survey geologic maps and seismic, flood plain, soil and land conservation maps). The Board should make reasonable efforts to incorporate said data layers into the GIS commensurate with the applicable stage of site screening.

(10) Notwithstanding the provision of 310 CMR 43.45, 43.51 and 43.61, where during any preliminary stage of site characterization it is infeasible for a site characteristic to be adequately evaluated to determine if the site should be screened out, the Board may continue to collect data on and analyze the site in order to make the screening decision at a later stage of site characterization.

43.43: General Guidance in Quality Assurance

- (1) At each stage of the site evaluation process the Board shall develop and implement a quality assurance [QA] program designed to ensure data reliability, validity, traceability, retrievability, completeness and technical accuracy. The requirements set forth at 310 CMR 43.42(1) and (2) regarding the application of Nuclear Regulatory Commission and Department of Energy guidance, shall also apply to development and implementation of a quality assurance program. The scope of the quality assurance program shall be commensurate with the type of data being collected, the scope of the data collection and the analysis required by the Act and the regulations at each respective stage of the site screening process (4.63).
- (2) The analytical map work performed in the course of site selection shall be conducted by qualified professionals experienced in the use of the GIS, or equivalent system if applicable, and knowledgeable in the field of cartography. The collection and analysis of data performed in support of the site screening and site characterization required shall be conducted by qualified professionals experienced in the respective fields of geology, soil science and soil engineering, hydrology, land use studies, transportation, meteorology environmental engineering, civil engineering, performance assessment, air modeling and monitoring and such other related disciplines as are necessary to select a superior site. All field mapping and surveying shall be conducted by a registered surveyor.
- (3) The GIS and map work performed shall be done in substantial accordance with professional standards or generally accepted protocols and uniform procedures for the collection, analysis and presentation of mappable data. A detailed procedure for digitizing map data shall be developed to assure uniform performance and documentation of digitizing activities. Software quality assurance plans shall be developed and implemented to control verification and validation of the software packages being utilized for GIS or equivalent activities. Where data are entered into the GIS or equivalent system after the decision to initiate site selection, the Board shall ensure that records be maintained that, at a minimum, contain the name of person entering the data, the type and source of the data and the date the data were entered.
- (4) Records of qualifications should be obtained for all persons employed in data gathering and analysis, and said statements of qualifications should be maintained in the Board's files.

43.44: Application Guidelines and Procedures for Use in Preparation of the Statewide Mapping and Screening Report

- (1) Objective. The objective of the Statewide Mapping and Screening Report required to be issued under Section 20 of the Act is to exclude at the outset of the site selection process any areas of the Commonwealth that are obviously unable to satisfy the site selection criteria contained in 310 CMR 43.00. The purpose of 310 CMR 43.44 is to provide guidance on how, at a minimum, the requirements for a technically superior site pursuant to 310 CMR 43.41 are to be interpreted and applied for the purposes of this report.
- (2) Date Collection and Evaluation.
 - (a) The Statewide Mapping and Screening Report should identify those locations the Board determines are obviously unsuitable as a superior site. The Statewide Mapping and Screening Report should be prepared on the basis of data reasonably available on the date the Board votes to initiate site selection, pursuant to M.G.L. c. 111H, § 17, as may be obtained from public agencies, private not-for-profit land conservation associations and the published open literature.
 - (b) Lack of uniform coverage of the Commonwealth with respect to certain data should not be a cause to fail to use data that are available.
 - (c) The data collection and presentation should be limited to factors relevant to the exclusion criteria. The factors to be applied may reflect land areas that are of sufficient size and extent to be mapped on a statewide basis.
 - (d) The specific mapping accuracy should be commensurate with the map scales employed and the accuracy of the data sets. As a general matter the scale of the map should be consistent with the scale at which the data were entered. The map scales employed should be in the range of 1:100,000 to 1:250,000.

43.44: continued

(e) The Board shall not be responsible to verify the accuracy of data provided by federal and state agencies but it should identify the sources of all the data and discuss the estimated quality of data and the sensitivity of the results to data uncertainty and data gaps. The Board should specify that the boundaries of included areas are defined with an accuracy that is commensurate with the map scales and data sets used and may be subject to revision on the basis of more detailed characterization.

43.45: Specific Guidance for the Application of Particular Conditions

(1) General. 310 CMR 43.45 provides guidance on the application of particular conditions as part of the preparation of the Statewide Mapping and Screening Report.

(2) Modeling Capability-310 CMR 43.10. Hydrogeologic units containing faults, deeply weathered bedrock, buried river channels and sand lenses if capable of delineation at this stage should be screened out.

(3) Large Existing Community Water Systems-310 CMR 43.20(1)(a). In determining the Zone III of the supply, the drainage sub-basin of the area in which the well is located shall be delineated and screened out.

(4) Existing Community Water Systems-310 CMR 43.20(1)(b) and 2(a). In the absence of approved delineated Zone IIs, sites within the Interim Wellhead Protection Area [IWPA] of public water supplies shall be delineated and screened out.

(5) Potential Productive Aquifers-310 CMR 43.20(1)(c). The Board may choose to screen out sites located over potential productive aquifers without considering the likelihood that they will be determined to be qualified for development.

(6) Class A Public Drinking Water Supplies-310 CMR 43.21(1)(a). In determining the watershed of an impounded surface water supply the drainage sub-basin of the supply shall be delineated and screened out.

(7) 100 Year Flood Plains 310 CMR 43.21(1)(c). The evaluation of flood plains should be determined by reference to the most recently available flood profile data prepared under the National Flood Insurance Program (NFIP), currently administered by the Federal Emergency Management Agency. The boundary, as determined, shall be presumed accurate. This presumption may be overcome only by reliable evidence from a registered professional engineer or other professional competent in such matters.

(8) Coastal High Hazard Zones 310 CMR 43.21(1)(g). In determining the coastal high hazard zones the coastal areas within the 100 year flood plain as delineated in the most recently available profile data prepared under the NFIP and all barrier beaches should be delineated and screened out.

(9) Dams-310 CMR 43.21(1)(f). Sites located in an area which would be affected by the failure of a dam with a Hazard Classification Class I or Class II, as determined in accordance with 302 CMR 10.09(3), which are capable of delineation at this stage should be screened out. The downstream inundation flood zone may be determined on the basis of records maintained by the Dam Safety Division of the Department of Environmental Management.

(10) Interference with Monitoring 310 CMR 43.29(1)(b). Places where National Priority List sites, Resource Conservation and Recovery Act facilities, any locations of releases or sites as defined pursuant to M.G.L. c. 21E and the regulations promulgated thereunder, any solid waste disposal sites as defined pursuant to M.G.L. c. 111, § 150A and the regulations promulgated thereunder or Leaking Underground Storage Tanks as defined in M.G.L. c. 148, § 38B are identified and that are capable of delineation at this stage should be evaluated if there is reason to believe radioactive materials or mixed waste were used or disposed of at

43.45: continued

those locations. The Board may choose to defer elimination of an area described herein on the basis of further data on the extent to which existing potential contamination of the site will affect the performance of the site and its ability to be adequately monitored.

43.50: Application Guidelines and Procedures for Use in Preparation of the Report Identifying Possible Locations

- (1) Objective. The objective of the Report Identifying Possible Locations is to identify those areas of the Commonwealth where there is a reasonable likelihood, based on the data available to the Board at the time the report is issued, of identifying one or more sites that will meet the criterion at 310 CMR 43.41(1)(a) and (b).
- (2) Data Collection and Evaluation Protocols.
 - (a) The Report Identifying Possible Locations may be prepared on the basis of data available from any credible public or private source as well as data obtained by the Board on the basis of its own investigation. Such information may include, without limitation, the sources set forth at 310 CMR 43.44, municipal sources, aerial photography, windshield surveys, walkovers or other surficial field investigation to identify apparent exclusion factors not shown on existing maps. Installation of ground water wells is not required.
 - (b) Exclusion factors which were not applied in the Statewide Mapping and Screening Report because of size consideration, data availability or qualifications or interpretation of regulatory requirements should be applied to the extent those restrictions have been overcome by further investigation by the Board. In addition, conditional consideration criteria should also be evaluated to the extent that data is available and can be analyzed in accordance with the procedures established herein within the time limit established by M.G.L. c. 111H. The Board may include any site as a possible site even though it exhibits a conditional consideration criterion if the Board determines that further characterization of the site is advisable based on the likelihood that the condition will be satisfied upon further characterization.
 - (c) Lack of uniform coverage of the State with respect to certain data requirements shall not be a cause to fail to use data that are available provided that the Board should use reasonable efforts to obtain statewide data on criteria which form the basis of a decision to screen out a site. The further specific guidelines of 310 CMR 43.51 shall also be observed.
 - (d) Although the Report should reflect the data and analysis of only the exclusion and conditional consideration criteria the Board may collect and analyze preference data for future use.
 - (e) The factors to be applied may reflect land areas that are of sufficient size and extent to be mapped on a statewide or regional basis as deemed appropriate to most accurate delineation. The specific mapping accuracy should be commensurate with the map scales employed and the accuracy of the data sets. As a general matter the scale of the map should be consistent with the scale at which the data was entered. Mapping scales down to 1:24,000 may be utilized.
 - (f) The Board shall not be responsible to verify the accuracy of data provided through federal and state agencies but it should identify the sources of all the data and discuss the estimated quality of data and the sensitivity of the results to data uncertainty and data gaps. The Board should be responsible to verify through implementation of the quality assurance program all data collected through its own investigation.

43.51: Specific Guidance for the Application of Particular Conditions

- (1) General. 310 CMR 43.51 provides guidance on the application of particular conditions as part of the preparation of the Report Identifying Possible Locations.
- (2) Potential Productive Aquifer-310CMR 43.20(1)(c) The Board shall not consider for siting locations within the Zone II or Zone III, as applicable, of future community water systems which have received Department approval as a new source or have submitted the appropriate documentation to the Department for a new source approval in accordance with Department guidelines.

43.51: continued

- (3) Depth to Water Table-310 CMR 43.20(1)(g). Depth to the water table may be inferred by considering, but not limited to, any of the following: frequency and distribution of wetlands, location of surface water bodies, elevation and topography, soil types and relevant well drillers logs so long as:
- (a) the rationale for the method of inference is developed by responsible professionals experienced in the hydrogeology and geology of Massachusetts; and
 - (b) the rationale is explained in the report.
- (4) Distance from Surface Water Supplies-310 CMR 43.21(1)(a) and (b). Upgradient and down-gradient directions for groundwater flow may be inferred from surface topography in the absence of readily available subsurface data.
- (5) Site Size-310 CMR 43.25. In applying this condition, consideration should be taken of the substantial variability in natural environments and geologic conditions. The possible locations identified in the subject report must be large enough to allow the evaluation of a range of candidate sites during the subsequent phase of site investigation, including the preparation of the Candidate Site Identification Report. Consideration should also be given to the minimum land area determined by the Board to be required for suitable facilities.

43.60: Guidelines and Procedures for Use in Preparation of the Candidate Site Identification Report

- (1) Objective. The principal objective of the Candidate Site Identification Report is to identify at least two, but not more than five, candidate sites that have a high likelihood of satisfying the requirements of 310 CMR 43.41(1). In addition, the report is intended to present the results of a preliminary characterization of the meteorology, surface and ground water, geology, tectonics, geomechanics, air quality, ecology, land use, cultural resources and social and economic characteristics of each such candidate site; a description of the procedure used to identify the candidate sites based on such preliminary characterization; and draft plans for detailed site characterization of each candidate site. Installation of ground water wells is not required for sites which are not selected as candidate sites. The purpose of 310 CMR 43.60 is to provide guidance on how, at a minimum, the requirements for technically superior sites should be interpreted and applied in the preparation of this report.
- (2) Data Collection and Evaluation Protocols.
- (a) The Candidate Site Identification report should be prepared on the basis of the types of data sources described at 310 CMR 43.40 and 43.50, additional published and unpublished data and maps and additional field data obtained and technical analysis carried out during this or previous phases of the siting process.
 - (b) All exclusion, conditional consideration and, in the Board's discretion, preference criteria should be applied and evaluated in the preparation of the Candidate Site Identification Report.
 - (c) The Board may continue to use the GIS for data analysis and comparative evaluations of siting factors. Map scales should be employed, if reasonably available, which most accurately depict the characteristic being evaluated. Mapping accuracy should be commensurate with the map scales employed and the accuracy of the data sets.
 - (d) Computer modeling may be used in the site evaluation process for those factors for which computer models are determined to be reliable and valid in prediction, including, but not limited to, generally accepted performance assessment, hydrogeologic and hydraulic models. It is not required that the computer code be specifically developed for low-level radioactive waste management siting provided the code is applicable to the site/facility and the parameter being investigated. Where a code is not generally accepted a determination of reliability and validity should include, but not be limited to the following factors:
 - 1. The model should have supporting documentation that establishes its ability to represent the factors under investigation and any history of its previous applications;
 - 2. The set of equations representing the factor under investigation must be theoretically proven and must be well documented;

43.60: continued

3. The numerical solutions must be based on sound mathematical principles and supported by verification and checking techniques;
 4. The model must be calibrated against site specific field data developed in accordance with 310 CMR 43.00; and
 5. A sensitivity analysis should be conducted to measure the model's response to changes in the values assigned to major parameters, specified error tolerances and numerically assigned space and time discretizations.
- (e) Conceptual model uncertainty should be addressed by identifying a broad range of conceptual models, and using each in performance assessments. Revisions of these models should be made by accounting for progressive data collected that can be used to eliminate some models from consideration. Uncertainties about the future of the site should be addressed by projecting alternative future site conditions. Parameter uncertainty may be addressed by using Monte Carlo analysis in combination with other techniques (such as Latin Hypercube Sampling) to reduce the computation effort.
- (f) Despite the efforts to validate models, substantial uncertainties are likely to be encountered in making predictions. Sole reliance on these numerical predictions to determine compliance may not be appropriate; the Board may choose to supplement such predictions with qualitative judgments as well.
- (g) Any ground water wells that are installed to collect data and evaluate the extent to which the site meets the criteria for a superior site should be installed and maintained in accordance with Department guidance document, Standard Reference for Monitoring Wells, WSC-31-91.
- (h) In the absence of specific Department policy/guidance documents, the analysis of hydraulic factors necessary to calculate saturated and unsaturated groundwater flow paths including, without limitation, horizontal gradient, hydraulic conductivity, transmissivity, hydraulic head, porosity, geometry, boundary conditions and the time of travel of the flow shall be conducted in accordance with generally accepted standards, principles and protocols, including, without limitation, a pump test performed in accordance with generally accepted methods, if appropriate. Where an evaluation of these parameters is dependent upon measurement of soil or water samples the measurement may be done by direct measurement in situ or by the testing of laboratory samples. The use of both methods is highly desirable, but more extensive investigations may be deferred to the Detailed Site Characterization stage.
- (i) The site characterization activities should be consistent with the guidance set forth at 310 CMR 43.42(1) to the extent that the detail set forth in said guidance is consistent with and applicable to the scope of a site investigation necessary to conduct a valid preliminary site characterization. The Board should indicate in its report where further site characterizations are to be deferred to the Detailed Site Characterization stage. In addition to these guidelines the further guidelines of 310 CMR 43.61 and 43.62 should be applied.
- (j) Where the Board determines that adequate data exists and/or reasonable assumptions can be made on site characteristics, waste characterization and probable facility design, a preliminary performance assessment on likely sites may be conducted. The purpose of the assessments is to assist in the evaluation of how the site will perform by itself and in conjunction with suitable technologies to meet DPH performance objectives. The preliminary performance assessments should be used to estimate factors including, but not limited to:
1. The potential release of radioactivity from waste packages into the facility;
 2. The potential release of radioactivity through the engineered barriers into the ambient or geologic environment;
 3. The movement of radioactive materials through the environment to humans by ingestion or direct contact;
 4. The resulting exposure to humans in comparison to DPH performance objectives and among the sites.
- (k) Performance assessments need not provide complete assurance that DPH performance objectives will be met. Because of the long time periods which may be involved and the nature of the events and processes of interest, there will inevitably be substantial uncertainties in projecting site and facility performance. What is required is a reasonable expectation based on reasonably conservative assumptions in relation to the record before the Board that compliance with DPH dose performance objectives is reasonably likely to be achieved.

43.61: Specific Guidance for the Application of Particular Conditions

(1) General. 310 CMR 43.61 provides guidance on the application of particular conditions as part of the preparation of the Candidate Site Information Report.

(2) Modeling Capability-310 CMR 43.10.

(a) The depth to bedrock and the types of soils at the surface and in the subsurface should be determined according to accepted methods and principles. Hydrogeologic units should be delineated and the direction and rate of groundwater movement should be estimated on the basis of field data and quantitative models. Hydraulic conductivities should be estimated on the basis of lithologic classifications and direct measurement. Other characteristics, such as ground water discharge points, water table fluctuation, moisture potential, moisture content, hydraulic conductivity, porosity, geometry, boundary conditions and the physical and chemical properties of the water should be evaluated on the basis of field surveys or available data. The evaluation should also consider the results of hydrogeologic modeling. In evaluating this criterion the following factors should, at a minimum, be reviewed:

1. The presence and extent of permeable and impermeable anomalies, variability and complexity in the stratigraphic relationships and lithology of the site, including, but not limited to, significantly fractured bedrock, faults, or sand/gravel lenses/layers or buried river channels, which would complicate monitoring.
2. The extent to which the lateral flow of groundwater can be confidently predicted to flow to a defined discharge point rather than to multiple surface water bodies or down through bedrock;
3. The ability of the site to be adequately described with a reasonable number of monitoring points;
4. The presence or absence of upgradient, potentially leachable radioactive material.

(b) The feasibility of monitoring for the release of radionuclides via groundwater pathways should be analyzed. In evaluating the feasibility of monitoring the Board should consider, at a minimum, the amenability of the site to modeling by available and applicable computer codes including, without limitation, the ability to reproduce natural and steady state conditions in response to precipitation and pumping stresses.

(3) Existing Public Water Systems-310 CMR 43.20(1)(b) and (2)(a). A conceptual Zone II of all existing public systems within 15,000 feet upgradient of the site, which do not have Department approved Zone IIs, should be calculated in accordance with Department approved procedures.

(4) Potential Productive Aquifer-310 CMR 43.20(1)(c). Except as otherwise provided in regulations or written policy adopted by the Department subsequent to the effective date of 310 CMR 43.00, the following evaluation should be conducted to determine if a site is a potential productive aquifer (PPA):

(a) All of the following documents shall be reviewed:

1. Department Aquifer Information Overlays
2. USES Hydrologic Atlases-HA
3. USES Surficial Geologic Maps-GQ
4. USES Bedrock Geologic Maps-GQ
5. The Massachusetts 2°
6. The Bedrock Geologic Map of Massachusetts (Ean Zen)
7. Hydrogeologic or geophysical reports addressing local subsurface conditions and or hydrogeology located within the Department's files.

(b) In the event of discrepancies between the data in 310 CMR 43.61(4)(a)1. through 6. and 43.61(4)(a)7. the Department may review the data and make a determination on whether the site overlies a PPA.

(c) Where the site overlies a PPA the Board may proceed to determine if the PPA is qualified for development. In conducting the land use sanitary survey portion of the qualified for development evaluation the site boundary shall be considered the potential wellhead in demonstrating whether existing or historical land uses preclude the use of the aquifer as a public water system. The survey should include the presence or absence of the uses set forth at 310 CMR 22.21(2)(a) and (b), sewer lines and underground or above

43.61: continued

ground storage tanks. Where the majority of a high or medium yield aquifer is located in a municipality with a population density equal to or greater than 4,400 person per square mile (based on the most recent U.S. Census) the Board may presume the aquifer is not qualified for development. The Board may also install a well and conduct a pump test to confirm that the aquifer is actually capable of a high or medium yield.

(d) In the event that the source is qualified for development, the Board may proceed to determine if the site is located outside of the Zone II or Zone III, as applicable. Sites located within either the Zone II or Zone III of public water supplies that have either received Department approval as a new source or have submitted the appropriate documentation to the Department for a new source approval in accordance with Department guidelines shall be excluded. In the event that the Board desires to install a well to determine the Zone II or Zone III of a future water supply system it should do so in accordance with established Department procedures.

(5) Existing and Potential Private Drinking Water Sources-310 CMR 43.20(1)(d) and (e).

(a) An inventory of existing and potential ground water users should be conducted within a minimum 1½ miles of the waste management area. The inventory should be based on either existing documentation or field surveys or both and should provide information on all of the following: the location, type and amounts of use; the hydrogeologic unit used, typical well construction details and the identity of downgradient users within 1000 feet of the site.

(b) The Zone of Contribution (ZOC) should be calculated for the existing private wells within a minimum of 500 feet from of the site which are hydraulically connected to hydrogeologic units under the site except where substantial evidence demonstrates that a smaller radius will adequately protect the users. Zone of Contributions are not required to be calculated for private wells beyond 1000 feet from the site except where substantial evidence exists to indicate that a well beyond that point would be adversely affected by a release from the site.

(c) The Zone of Contribution should be calculated by determining the land area which is necessary to receive precipitation in sufficient quantity to meet the reasonable gallon per day yield of the well.

(6) Water Table Depth and Relation to Bedrock-310 CMR 43.21(1)(g),(h) and 43.21(2)(b).

(a) All significant hydrogeologic units underlying the proposed waste management area should be identified to a depth of 90 feet. The depth to the water table should be estimated by the installation of at least two monitoring wells at appropriate locations (on or off site) which shall be monitored through as many months of seasonal water table fluctuation as feasible consistent with the time limit established by M.G.L. c. 111H, § 20(c) in order for the Board to issue the draft candidate site identification report. Data available from existing regional water table information may also be used.

(b) The depth to bedrock should be determined according to accepted standards, protocols, and principles. Hydraulic conductivities shall be estimated on the basis of lithologic classifications, transmissivity correlations and direct measurement.

(7) Horizontal Gradient-310 CMR 43.20(1)(c). The number of wells to be installed to determine horizontal hydraulic gradient should be based on an evaluation of the complexity of the site, provided that a minimum of one upgradient and two downgradient wells should be used to determine the gradient.

(8) Groundwater Travel Time-310 CMR 43.20(3)(d). In assessing a site's capability to retard migration of contaminants, the travel time of groundwater should be compared to groundwater travel of less than 100 years along a 100-ft flow path from a point of potential release to the edge of the waste management area. The potential adverse effect relative to the projected travel time should be estimated consistent with the likely source term of the waste.

43.61: continued

(9) Surface Water Impact Evaluations. In assessing the surface water regime of a site the following parameters should, at a minimum, be preliminarily characterized on a site specific basis and within five miles of the site: the hydrologic system; past, present and projected surface water usage; flood studies; drought studies; precipitation and infiltration; runoff; discharge; channel characteristics; flow velocity; erosion; and sedimentation. In addition, if a sufficient number of site specific samples are obtained or adequate regional data are available, then chemical and physical properties of the waters should be evaluated.

(10) 100 and 500 Year Flood Plains-310 CMR 43.21(1)(c) and (2)(a). When NFIP profile data is unavailable, the extent of this zone should be calculated by methods described in 310 CMR 10.57(2)(a)3. adjusting, as necessary, for the appropriately designed storm event.

(11) Runoff Retention-310 CMR 43.21(1)(f). In assessing the sites the following factors should, at a minimum, be investigated:

- (a) The presence and extent of poor runoff characteristics such as depressions, swampy areas, ponded water, or evidence of frequent flooding; and
- (b) The extent to which engineered structures are required to protect from ponding or flooding.

(12) Dams-310 CMR 43.21(1)(h)- Sites downstream from dams which were not excluded in the previous report shall be evaluated for potential risk of inundation based upon the probable maximum flood as defined in 302 CMR 10.06. The area subject to inundation should be based on published analysis from the U.S. Army Corps of Engineers or the Dam Safety Division of the Department of Environmental Management. When such analyses are not available, they should be carried out by generally accepted engineering methods.

(13) Surface Water Discharges-310 CMR 43.21(1)(a). Sites with surface water features sustained by groundwater discharges such as perennial and ephemeral streams, springs, seeps, swamps, marshes, and bogs within the potential waste management area should be delineated and screened out.

(14) Distances from Significant Surface Waters-310 CMR 43.21(3)(b). Class A, Class SA and Outstanding Resource Waters as defined and delineated in 314 CMR 4.04 and vernal pool habitats certified by the Division of Fisheries and Wildlife on or near sites should be delineated. The decision on the location and extent of a tributary should be made by reference to the most recent edition of maps generated by the Massachusetts geographic information service based on the United States Geological Survey 1:25,000 scale quadrangle maps unless more accurate maps are adopted by the Department pursuant to notice and public hearing as provided in M.G.L. c. 30A.

(15) Tectonic Processes-310 CMR 43.22(1)(a) and (2). In assessing the geologic regime of a site the following parameters should be investigated on a site specific and regional basis: geomorphology, stratigraphy, lithology, structure, tectonics, seismology and geologic hazards. Geologic hazards include, without limitation, landslides, collapse, liquefaction, significant alteration by surficial processes in last 500-1000 years and other unstable elements in near-surface stratigraphic units and soils.

(16) Slope-310 CMR 43.23(1)(b). The slope should be estimated on the basis of USGS 7.5 minute quadrangles using a scale of 1:24,000 with a contour interval of either ten feet or 20 feet.

(17) Surface Geologic Process-310 CMR 43.23(1)(a). Areas mapped on the USGS maps of Landslides and Related features should be delineated and screened out. The estimation of past rates of occurrence of geologic processes and events may be carried out primarily on the basis of general regional understanding of the evolution of the geologic environment over the past thousand years, in combination with limited site or locality-specific field data for confirmation of important uncertainties. Issues that may require more extensive field investigation may be deferred to the site characterization phase.

43.61: continued

(18) Seismic Impact Zone-310 CMR 43.23(3)(c).

(a) Seismic impact zones should be delineated based on a review of the most recent and relevant seismic acceleration maps maintained by Department of the Interior, U.S. Geological Survey and other reasonably available public or private seismic impact investigations that are considered reliable and relevant conducted on locations in Massachusetts or other areas in the Northeast region including, without limitation, sites analysis conducted in relation to the siting of nuclear power plants or radioactive waste storage or disposal facilities. Geotechnical stability may be determined by the use of computer models to approximate the dynamic vertical and horizontal forces caused by bedrock acceleration taking into account local soil conditions. In considering estimating seismic impacts beyond 250 years the Board should consider the source term of the disposed waste and the time period during which its potential release would likely result in dose exposures in excess of DPH performance objectives.

(b) Where sufficient information is available to project the suitable technology which may be located at a site, a preliminary performance assessment of the facility's ability to meet the performance standard of this criterion should be conducted. The performance standard is met if, based on reasonable but conservative assumptions of the estimated useful life of the engineered structures, systems and components important to the safety of suitable facilities and foundation engineering, said engineered barriers are projected to be capable of complying with the standards for earthquake resistance set forth in the State Building Code at 780 CMR 1113.0, *et seq.* In projecting the potential seismic impact the preliminary assessment may consider the applicable NEHRP Recommended Provisions for the Development of Seismic Regulations for New Buildings.

(19) Contaminant Migration-310 CMR 43.23(2)(a). In evaluating the ability of a site to retard contaminant migration the extent of unconsolidated stratigraphic units that have a high clay or silt content should be determined through published sources, regional boring logs and site specific field investigations.

(20) Liquefaction Resistance and Soil Stability-310 CMR 43.23(3)(b)(1) and (2). In evaluating the ability of the site to resist liquefaction and provide suitable soil for engineered barriers, site soil samples may be correlated to standards provided in the State Building Code at 780 CMR 1113.0, *et seq.* Available testing may be conducted in accordance with the guidance documents on geotechnical investigation referred to at 310 CMR 43.42(1) if appropriate site specific data is available.

(21) Erosion-310 CMR 43.23(3)(j). General assessment of the erosional process should be accomplished by reviewing published soil maps, evaluating topography, assessing regional geomorphology, evaluating meteorological conditions and assessing local slope conditions.

(22) Dissolution-310 CMR 43.23(3). In evaluating sites, the existence and extent of significant past or present subsurface dissolution areas including, but not limited to, sinkholes, caverns, or underground streams should be investigated.

(23) Demographic Effect on Site Performance-310 CMR 43.24(a). In evaluating the potential for current or changing residential, commercial or industrial patterns in the area that affect a site's performance the following parameters should, at a minimum, be evaluated and considered: current land use, land use and subdivision plans, zoning restrictions, utility land uses, proximity to industrially developed areas and recreational areas that are reasonably likely to experience future growth, agricultural areas and the documented existence of mineral resources at the site. The survey should be conducted within a minimum five mile radius of the site. Estimates on future impacts should be based on time periods coinciding with the expected first year of operating life of the facility through the operation lifetime of the facility.

(24) Proximity to Population Centers-310 CMR 43.24(2)(b). Population size and boundary locations of population places should be defined in accordance with the U.S. Census Bureau published definitions.

43.61: continued

(25) Proximity to Residences and Sensitive Population Locations-310 CMR 43.24(b) and (c). The survey should be conducted within a minimum of a one mile radius of the site.

(26) Site Size and Facility Compatibility-310 CMR 43.25.

(a) The candidate sites should be drawn and labelled so as to delineate between the waste management area and that portion of the site to be designated as a buffer zone. There is considerable flexibility in how such a site may be subdivided into distinct zones and utilized, and this process can affect the suitability of the site. For the purpose of characterization the site should include the estimated waste management area and the buffer zone. The designations chosen during this phase of site identification should not be regarded as final or irrevocable, but should be intended to make best use of a site in terms of satisfying the siting requirements.

(b) In assessing the compatibility of the site with suitable facilities the following parameters should, at a minimum, be based upon:

1. SCS soil classification maps,
2. surficial and bedrock geology maps and topographic maps
3. presence of a well defined (granular) surface layer,
4. the degree of the slope,
5. allowable bearing pressure of foundation soils and clearly defined surface drainage; and, if available, from on-site wells,
6. soil thickness, and water table depth.

(27) Meteorology-310 CMR 43.27. In evaluating the frequency, probability and potential consequences for severe weather conditions affecting the site's performance, existing historical records should be reviewed and an on-site environmental monitoring program may be established to obtain preliminary data. The parameters to be analyzed should, at a minimum, include temperature, severe weather incidents such as heavy snowfalls, hurricanes and tornadoes and the annual amount of precipitation. Additional parameters which may be required to establish the site's water budget, facility design loads and airborne release of contaminants may be deferred to the Detailed Site Characterization stage pursuant to 310 CMR 43.71.

(28) Transportation-310 CMR 43.28.

(a) Existing and projected access routes from sites to the point of exit off existing interstate or limited access highways or rail lines should be identified, described and evaluated with respect to:

1. Total travel distance from the site to the point of exit from the highway and/or commercial railway station/siding.
2. The current volume to capacity [V/C] ratio of the access routes(s) and whether the additional projected traffic from the construction or operation of the facility would cause the V/C ratio to exceed 1.0.
3. The current structural status of the access route(s) relative to applicable state and federal transportation laws and regulation governing the transportation of low-level radioactive waste;
4. The need for and the level of effort required to bring the access route into compliance with said law or regulations;
5. The average number of dwellings and public places per mile determined by dividing the total number of occupied permanent residential dwellings and public places on the primary access route by the total distance in route miles from the projected facility entrance to the access point of the interstate or limited access highway or commercial railway station/siding.
6. The yearly average number of serious traffic accidents on the access route(s) in comparison to the statewide yearly average as determined by records maintained by state and local public safety/highway departments.
7. The average number of intersections per mile maintained by local or state highway departments and railroad crossings per mile determined by dividing the total number of said intersection on the primary access route from the projected facility entrance to the access point of the interstate or limited access highway or commercial railway station/siding.

43.61: continued

(b) In addition to the field measurement described at 310 CMR 43.61 (28)(a), the Board may assess the level of transportation risk on the basis of the relevant data contained in the NRC guidance document, *The Final Environmental Statement on the Transportation of Radioactive Material by Air and Other Modes*, NUREG-0170 or subsequent updated transportation risk analysis.

(29) Inconsistent Land Uses-310 CMR 43.29(1)(a) and (b).

(a) In assessing the potential adverse effect of inconsistent land uses, the following land uses in existence or having received a permit to construct in effect within six miles of the site from the governing state or federal agency should, at a minimum, be evaluated:

1. Airports. Sites and/or waste management areas within one mile from an airport runway should be delineated and may be screened out considering the size of the aircraft accommodated, frequency of use and flight paths.
 2. Operations storing large quantities of flammable liquids. Sites within one half mile from any single aboveground storage tank regularly used for the storage of flammable liquids and having a capacity of at least 500,000 gallons, or from any aboveground storage tank or vessel for liquefied natural gas (LNG) or liquefied petroleum gas (LPG) and having a capacity of at least 25,000 gallons should be delineated and may be screened out;
- (b) Measurements of gamma rays emitted by radionuclides in the surface and subsurface soil should be conducted in situ or in the laboratory by generally accepted techniques in assessing the potential of the site to interfere with monitoring.

(30) Protected Lands and Environments-310 CMR 43.31.

(a) Protected resources, lands and species located within a one mile radius of the site should be described and evaluated to determine the nature, extent and likelihood of potential adverse effects from facility construction, operation and maintenance.

(b) All applicable state and federal statutes and regulations that govern the protected resources, lands and species should be reviewed to determine the likelihood that the construction, operation and maintenance of a facility can proceed in light of restrictions or permit requirements contained in said laws or regulations, including, but not limited to, those statutes and regulations listed in Appendix A of 310 CMR 43.00. In evaluating potential adverse effect the following factors may be relevant:

1. The type and size of the facility as it relates to disruption and/or permanent or temporary alteration of the original conditions of the area that contains the protected resource, lands or species from construction and operation;
2. The abundance and characteristics of potentially affected species, lands and resources;
3. The importance of the protected species, land or resources relative to its commercial or recreational value, including but not limited to, its status as threatened or endangered;
4. The importance of the protected resource, land or species to other protected resources, lands or species;
5. The importance of the protected resource, land or species to the structure and functioning of the ecological system;
6. The importance of the protected resource, land or species as a biological indicator of radiological and non-radiological constituents in the environment;
7. Seasonal and migratory patterns of species within the area; and
8. Existing natural and human induced effects such as farming, logging or recreational uses.

43.62: Quality Assurance Requirements

(1) In addition to the general requirements set forth at 310 CMR 43.43, the Candidate Site Identification Report should be prepared in accordance with the following quality assurance requirements:

43.62: continued

- (a) The quality assurance program should specify the structure of the organization performing the work, the division of responsibilities, and the location of project personnel within the organization. Persons responsible for the implementation or oversight of the quality assurance program and for technical oversight, review and approval should also be indicated on the organization chart.
- (b) The quality assurance program should include procedures to ensure quality in both the data acquisition and analysis program (*e.g.*, sampling and testing methods, equipment calibration, sample custody, verification and validation of models) and information management (*e.g.*, data management, tracking of changes, protection against transcription error). In general, procedures should be included for every phase of work whose output has the potential to affect the results of the investigations or the conclusions to be drawn from the investigations.
- (c) The quality assurance program should provide for independent technical review, verification, and approval by persons not directly involved in the performance of the work.
- (d) The quality assurance program should provide for the ability to trace and audit all calculations, analyses, deductions, inferences, and project data.
- (e) The quality assurance program should provide for internal reviews and audits to verify that the program is functioning according to the written description.
- (f) The quality assurance program should provide a method for initiating corrective actions and verifying that they have been implemented.
- (g) The quality assurance requirements of 310 CMR 41.63 should apply to all data and analyses used in the Candidate Site Identification Report, irrespective of whether such data and analysis have been previously applied or accepted in connection with the Statewide Mapping and Screening Report or the Report Identifying Possible Locations.

43.70: Application Guidelines and Procedures for Use in Preparation of the Detailed Site Characterization Report

- (1) Objective. The objective of a Detailed Site Characterization Report is to provide a definitive evaluation of the merits of a candidate site with respect to the requirements for a technically superior site, as defined in 310 CMR 43.10, and to provide such additional site data as may be required for any and all of the following: design of the facility, evaluation of the facility with respect to the performance objectives of the Department of Public Health, and provision of baseline environmental data for subsequent comparisons with monitoring data, and use for related purposes. The Site Characterization Report will be developed in response to a detailed site characterization plan as specified in M.G.L. c. 111H, § 23. The purpose of 310 CMR 43.70 is to provide guidance on how the requirements for a technically superior site are to be applied during this phase of investigation and evaluation.
- (2) Data Collection and Evaluation Protocols.
 - (a) The Report should be prepared in compliance with the provision of 310 CMR 43.42 regarding conformity with relevant Nuclear Regulatory Commission and Department of Energy guidance documents governing the characterization of low-level radioactive waste sites and the site-related issues of the facility. Nothing herein should prevent the Board from conducting further investigations and assessments as a result of the plan developed in accordance with M.G.L. c. 111H, § 20.
 - (b) The Report should be prepared in compliance with the provisions of 310 CMR 43.60(2) except to the extent that said provisions are limited to the preliminary aspect of the prior stage of data collection and analysis. Preliminary evaluations which were commenced in connection with prior stages should be expanded in scope and level of detail and accuracy, as necessary to comply with the regulations herein, and completed.
 - (c) The Board may adopt a reasonable but conservative sensitivity factor in conducting performance assessments of the candidate sites for the purpose of determining whether a candidate site can meet the DPH performance objectives and for comparing the relative performance of candidate sites.

43.71: Specific Guidance for the Application of Particular Conditions

- (1) Potential Productive Aquifers-310 CMR 43.20(1)(c). Sites located over potential productive aquifers should be eliminated unless the Department has determined that the potential source is not qualified for development.
- (2) Existing and Potential Private Drinking Water Sources-310 CMR 43.20(1)(d) and (e). Based on a complete characterization of the site and the surrounding existing and potential water uses, Zones of Contribution studies should be conducted on private drinking water sources with a reasonable potential to be adversely affected by the siting of a low-level radioactive waste facility.
- (3) Water Table Depth-310 CMR 43.20(2)(b). Final determination on depth to the water table should be based on a minimum of a full year of quarterly sampling data.
- (4) Minimizing Violations of Water Quality Standards 310 CMR 43.21(3)(a). Compliance with this criterion will be determined based on the results of the analytical and numerical hydraulic and hydrologic modeling of surface water of surface water flow and transport.
- (5) Transportation-310 CMR 43.28. In addition to the analysis previously conducted to assess the potential transportation risk, the Board may use a computer-based transportation risk analysis. The analysis should consider reliance on the risk-based guidelines for selecting preferred highway routes set forth in the Code of Federal Regulations at 49 CFR 177.825.
- (6) Air Quality 310 CMR 43.30. The potential adverse effects from construction shall be evaluated in accordance with 310 CMR 7.00. The potential impacts from operation of the facility should be evaluated as part of the performance assessment conducted in accordance with 310 CMR 43.00.

43.72: Quality Assurance Requirements

The quality assurance requirements for the development of a Site Characterization Report are the same as the requirements applicable to the development of the Candidate Site Identification Report, as set forth at 310 CMR 43.63.

REGULATORY AUTHORITY

310 CMR 43.00: M.G.L. c. 111H, § 14.

APPENDIX A

- (1) MONUMENTS, HISTORIC SITES and CONSERVATION AREAS.
 - (a) NATIONAL AND INTERNATIONAL MONUMENTS AND MEMORIALS, 16 USC §431, and all applicable regulations.
 - (b) HISTORIC SITES ACT, 16 USC § 461, including, but not limited to, 36 CFR Parts 61, 1205, 1212; § 470h-2.(b) *et. seq.*
 - (c) NATIONAL HISTORIC PRESERVATION ACT, 16 USC § 470, including, but not limited to, 36 CFR Ch.I § 60.00 *et. seq.*
 - (d) ARCHAEOLOGICAL RESOURCE PROTECTION ACT, 16 USC § 470aa, including, but not limited to, 43 CFR Subtitle A § 7.1 *et. seq.* Uniform Regulations and 36 CFR Ch. II Part 296 *et. seq.*
 - (e) THE ANTIQUITIES ACT, 16 USC § 432-33, including, but not limited to, 25 CFR 261.
 - (f) CEMETERY ACT, M.G.L. c. 114, § 17 and M.G.L. c. 79, § 79, including, but not limited to, 950 CMR 71.05.
 - (g) MASSACHUSETTS ENVIRONMENTAL POLICY ACT (MEPA), M.G.L. c. 30, §§ 61 and 62, and any applicable regulations.
 - (h) HISTORIC DISTRICTS ACT, M.G.L. c. 40C, and any applicable regulations.
 - (i) STATE HIGHWAYS ACT, M.G.L. c. 81 § 7M, and any applicable regulations..
 - (j) GENERAL PROVISIONS RELATIVE TO REAL PROPERTY, M.G.L. c. 184, §§ 31 and 32, and any applicable regulations.
 - (k) MASSACHUSETTS HISTORICAL COMMISSION ACT, M.G.L. c. 9 §§26 through 28, including, but not limited to, 950 CMR 71.00 *et. seq.*
 - (l) WATERWAYS ACT, M.G.L. c. 91, § 63 and M.G.L. c. 6, § 179 *et. seq.*, including, but not limited to, applicable 312 CMR 2.00 *et. seq.*

- (2) NATIONAL PARKS; WILDERNESS
 - (a) NATIONAL FORESTS, 16 USC § 471; MULTIPLE USE SUSTAINED YIELD ACT (National Forests), 16 USC §§ 528-531; and FOREST AND RANGELAND RENEWABLE RESOURCES PLANNING ACT, 16 USC § 1600, and 84 USC § 31, and any applicable regulations.
 - (b) NATIONAL WILDERNESS PRESERVATION SYSTEM ACT, 16 USC § 1131, including, but not limited to, 36 CFR Part 251 (Land uses), 36 CFR Part 293 (Wilderness/Primitive Areas), 43 CFR Part 19, 50 CFR Part 35 (Wilderness Preservation).
 - (c) NATIONAL TRAILS SYSTEM ACT, 16 USC §§ 1241 *et. seq.* and M.G.L. c. 132A, § 12, and any applicable regulations.
 - (d) HISTORIC PARKS, 16 USC § 410 *et. seq.*, and any applicable regulations.
 - (e) STATE RECREATION AREAS, M.G.L. c. 132A, §§ 11A *et. seq.* and M.G.L. c. 184, § 31, and any applicable regulations.
 - (f) PUBLIC PARKS ACT, M.G.L. c. 45, § 7, and any applicable regulations
 - (g) FORESTRY ACT, M.G.L. c. 132, and any applicable regulations.
 - (h) STATE RECREATION AREAS, M.G.L. c. 132A, §§ 2A, 2B, and any applicable regulations.
 - (i) PLAYGROUNDS ACT, M.G.L. c. 45, §§ 14 *et. seq.*, and any applicable regulations.
 - (j) SHADE TREE ACT, M.G.L. c. 87, and any applicable regulations.
 - (k) PROTECTION OF WATERSHED RESOURCES AND PRESERVATION OF NATURAL SCENERY IN THE BERKSHIRE MOUNTAINS, M.G.L. c. 131, § 39A, and any applicable regulations.
 - (l) MONUMENTS AND MARKS, M.G.L. c. 41, §§ 79, 81C, 81D, and any applicable regulations.
 - (m) EMINENT DOMAIN ACT, M.G.L. c. 79 *et. seq.*, and any applicable regulations.
 - (n) DESIGNATION OF SCENIC ROADS, M.G.L. c. 40, § 15C, and any applicable regulations.

- (3) ENDANGERED SPECIES, PROTECTION OF FISH AND WILDLIFE.
- (a) FISH AND WILDLIFE COORDINATION ACT, 16 USC § 661-666C, and any applicable regulations.
 - (b) BALD AND GOLDEN EAGLE PROTECTION ACT, 16 USC § 668-668(d), and any applicable regulations.
 - (c) ENDANGERED SPECIES OF FISH AND WILDLIFE (including Migratory Birds), 16 USC § 668dd *et. seq.*; M.G.L. c. 131 §§ 74 through 76, and any applicable regulations.
 - (d) ENDANGERED SPECIES ACT, 16 USC § 1531-43, including, but not limited to, 50 CFR Part 17 (endangered and threatened wildlife and plants); 50 CFR Part 23 (endangered species convention); 50 CFR Part 81, 50 CFR Part 225 (conservation of endangered and threatened species of fish, wildlife, and plants -- cooperation with the states); 50 CFR Part 424 (listing endangered and threatened species and designating critical habitat), and M.G.L. c. 131A, §§ 1 through 6.
 - (e) NATIONAL ESTUARY PROGRAM, 33 USC §§ 1330 *et. seq.*, and any applicable regulations.
 - (f) FISH AND GAME LAW, M.G.L. c. 131, § 1 *et. seq.*, and any applicable regulations.
 - (g) WILDLIFE SANCTUARIES, M.G.L. c. 131, §§ 7 through 10, including, but not limited to, 321 CMR 7.01.
 - (h) PROTECTION OF INLAND WETLANDS, M.G.L. c. 131, § 40A, and any applicable regulations.
 - (i) DIVISION OF FISHERIES AND WILDLIFE, M.G.L. c. 21, §7 *et. seq.*, including, but not limited to, 321 CMR 2.01 *et. seq.*
- (4) WILD AND SCENIC RIVERS, LAKES.
- (a) WILD AND SCENIC RIVERS ACT, 16 USC § 1271, and any applicable regulations.
 - (b) COASTAL ZONE MANAGEMENT ACT, 16 USC § 1451, and any applicable regulations.
 - (c) EXECUTIVE ORDER 11990, PROTECTION OF WETLANDS, 42 USC § 4321, and any applicable regulations.
 - (d) CAPE COD NATIONAL SEASHORE PROTECTION, 16 USC § 459b, and any applicable regulations.
 - (e) COASTAL WETLANDS PROTECTION, M.G.L. c. 130, § 105, including, but not limited to, 310 CMR 10.01 *et. seq.*
 - (f) STATE RECREATION AREAS, M.G.L. c. 132A, including, but not limited to, 302 CMR 5.00 *et. seq.*
 - (g) WETLANDS PROTECTION ACT, M.G.L. c. 131, § 40 *et. seq.*, including, but not limited to, 310 CMR 10.00.
 - (h) SCENIC & RECREATIONAL RIVERS, M.G.L. c. 21, § 17B, and any applicable regulations.
 - (i) WATER AND WATERWAYS, M.G.L. c. 91, §§1 through 59, and any applicable regulations.
 - (j) WATER MANAGEMENT ACT, M.G.L. c. 21G, and any applicable regulations.
 - (k) MASSACHUSETTS CLEAN LAKES AND GREAT POND PROGRAM, M.G.L. c. 21, § 30A, and any applicable regulations.
 - (l) LOWLANDS AND SWAMPS, M.G.L. c. 252, § 1 *et. seq.*, and any applicable regulations.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

310 CMR 44.00: DEP SELECTION, APPROVAL AND REGULATION OF WATER POLLUTION ABATEMENT PROJECTS RECEIVING FINANCIAL ASSISTANCE FROM THE STATE REVOLVING FUND

Section

- 44.01: Introduction
- 44.02: Purpose
- 44.03: Definitions
- 44.04: Eligible Projects
- 44.05: Priority System
- 44.06: Project Selection Criteria
- 44.07: Financing Criteria
- 44.08: Eligible Project Costs
- 44.09: Planning Requirements
- 44.10: Environmental Review and Federal Cross-cutter Requirements
- 44.11: Affirmative Action and Disadvantaged Business Enterprise Requirements
- 44.12: Project Approval and Regulation

44.01: Introduction

The federal Clean Water Act amendments of 1987 authorized the Clean Water State Revolving Fund program to finance protection and improvement of water quality. The Massachusetts Clean Water State Revolving Fund (CWSRF) Program is a federal-state partnership that provides below-market-rate financing to assist municipalities in complying with federal and state water quality requirements. The CWSRF Program is jointly administered through the Clean Water Trust by the Commissioner of the Department of Environmental Protection (Department), the State Treasurer, and the Secretary of Energy and Environmental Affairs pursuant to M.G.L. c. 29C, § 2. Every summer, the Department solicits projects from Massachusetts municipalities and wastewater districts for consideration for subsidized State Revolving Fund (SRF) loans. The current standard subsidy is provided *via* a 2% interest, 20-year loan, but there are opportunities for some projects to receive 30 year loans, or lower interest rates. The SRF Program continues to emphasize public health needs and watershed management priorities. A major goal is to provide incentives to communities to undertake projects with meaningful water quality and public health benefits and which address the needs of the communities and the watersheds. After evaluating the project requests submitted in response to the annual solicitation, the Department develops a list of projects eligible to receive financial assistance. From this annual list, and on the basis of projects' readiness to proceed and priority rating, the Department assigns projects to a fundable list called the Intended Use Plan Project Listing (IUP). Projects placed on the IUP are eligible to apply for financing in the coming year, with the total cost of all projects on the IUP not to exceed the amount of funding available for that year. To qualify for placement on the IUP, a project must have a high enough ranking, have received a local funding appropriation or be scheduled for funding appropriation by June 30th of the coming year, and the applicant must be able to file a complete loan application no later than October 15th of the coming year.

44.02: Purpose

310 CMR 44.00 implements the CWSRF Program. Under federal and state law, the primary purpose of the CWSRF Program is to provide financing for eligible projects to protect and promote the health, safety, and welfare of the inhabitants of the state. 310 CMR 44.00 sets forth the Department's authority and responsibilities to select, approve and regulate water pollution abatement projects receiving financial assistance under the SRF Program. The Department may issue supplemental policies, guidelines, guidance documents and/or administrative procedures to assist in the implementation and administration of 310 CMR 44.00.

44.03: Definitions

For the purposes of 310 CMR 44.00, the following terms shall have the meaning set forth in 310 CMR 44.00 unless the context clearly requires otherwise.

208 Plan. An Areawide Waste Treatment Management Plan certified by the Governor or his or her designee and approved by EPA pursuant to § 208 of the Clean Water Act (CWA), 33 U.S.C. § 1288.

44.03: continued

Best Management Practices (BMPs). A method, measure or practice in water management, or a combination thereof, established and published by the Trust pursuant to St. 2014, c. 259, § 55. The Trust's BMPs can be found on the Official Website of the Treasurer and Receiver General of Massachusetts.

Clean Water Act (CWA). The Federal Water Pollution Control Act, Public Law 92-500, 33 USC § 1251, *et seq.*

Collection System Projects. Projects for the construction of a collection system or its related components. Collection systems generally consist of each and all of the common lateral sewers and appurtenances of publicly owned treatment works which are primarily installed to receive wastewaters from individual structures or from private property, and which include service connection "Y" fittings and service connections within the boundary of the public way or easement.

Community Septic Management Program. As authorized by St. 1996, c. 15, § 2, or by any other applicable law, a loan program to Local Governmental Units administered within the Fund and under 310 CMR 44.00 to assist eligible homeowners to upgrade failed septic systems in compliance with 310 CMR 15.000: *The State Environmental Code, Title 5: Standard Requirements for the Siting, Construction, Inspection, Upgrade and Expansion of On-site Sewage Treatment and Disposal Systems and for the Transport and Disposal of Septage* through underlying betterment agreements between the Local Governmental Unit and such homeowners pursuant to M.G.L. c. 111, § 127B½.

Comprehensive Water Resource Management Plan (CWMP). In accordance with the Department's *Guide to Water Resource Management Planning*, a CWMP identifies all of a community's needs/problems in one sector of its water resource structure, evaluates alternative means of meeting those needs, selects the most cost-effective and environmentally appropriate remedy, and proposes an implementation plan and schedule. There are three types of CWMPs: Comprehensive Wastewater Management Plans that evaluate a community's wastewater infrastructure/management needs, Comprehensive Water Supply Management Plans that focus on the community's water supply infrastructure and management issues, and Comprehensive Stormwater Management Plans that focus on the community's stormwater management needs.

Cost. As applied to any water pollution abatement project, any or all costs, whenever incurred, approved by the Department in accordance with M.G.L. c. 21, § 27A, of carrying out a project including, without limiting the generality of the foregoing: costs for planning, preparation of studies and surveys, design, construction, expansion, facilities, improvement and rehabilitation, acquisition of real property, personal property, materials, machinery or equipment, start-up costs, demolitions and relocations, reasonable reserves and working capital, interest on loans, local governmental obligations and notes in anticipation thereof prior to and during construction of such project or prior to the date of such loan, if later, administrative, legal and financing expenses, and other expenses necessary or incidental to the aforesaid.

Department. The Massachusetts Department of Environmental Protection.

District. Any county, regional or local district, commission, board or other political subdivision or instrumentality of the Commonwealth, howsoever named, which is authorized to provide itself or through an officer, board, department or division thereof local water pollution abatement, sewer or stormwater services, or public water supply services, whether established under general law or special act.

EPA. The U.S. Environmental Protection Agency.

Federal Cross-cutters. Federal laws and authorities that apply by their own terms to projects receiving federal financial assistance such as the federal SRF. Such federal cross-cutters include, but are not limited to, environmental laws and authorities such as the Clean Air Act, Safe Drinking Water Act, Endangered Species Act, Coastal Zone Management Act, Wild and Scenic Rivers Act and the National Historic Preservation Act of 1966, and economic and miscellaneous authorities such as the procurement and contractor requirements associated with financial assistance programs under the CWA and Clean Air Act.

44.03: continued

Fiscal Sustainability Plan. A plan prepared in compliance with § 603(d)(1)(E) of the CWA, 33 U.S.C. § 1383, for treatment works proposed for repair, replacement, or expansion, that includes at a minimum the following four items:

- (a) inventory of critical assets that are part of the treatment works;
- (b) evaluation of the condition and performance of inventoried assets or asset groupings;
- (c) certification that the applicant has evaluated and will be implementing water and energy conservation efforts as part of the plan; and
- (d) a plan for maintaining, repairing, funding, and as necessary, replacing the treatment works.

Green Infrastructure Projects. Products, technologies, and practices that use natural systems or processes, or engineered systems that use natural systems or processes, to enhance overall environmental quality. Such projects include, but are not limited to, decentralized wastewater systems that infiltrate treated water; water reuse for beneficial purposes; low impact development projects; the conservation, enhancement and restoration of natural upland, wetland and submerged landscape features that naturally filter and remove silt, nutrients and pollution from surface waters, maintain or restore natural hydrologic cycles, minimize imperviousness in a watershed through preservation and restoration of natural landscape buffers such as forests, floodplains, wetlands and other natural systems and restoration of natural stream channels and submerged habitat; land acquisition and restoration projects that protect and filter drinking water supplies and buffer reservoirs or support ecological restoration in fresh or marine waters; and the mitigation of risks of flooding and erosion using the restoration of saltmarsh, oyster reefs and eelgrass beds from sea-level rise, storm surges and extreme weather events, including the protection and restoration of natural coastal landscapes; provided, that Green Infrastructure Projects may be stand-alone and may also be used to complement built water management infrastructure technologies such as pipes, dikes and treatment facilities; and provided, further, that Green Infrastructure Projects may include innovative technologies that further achievement of the mandates under the CWA.

Indirect Discharge. Means the introduction of pollutants into a POTW from any non-domestic source regulated under § 307(b), (c) or (d) of the CWA.

Infiltration. Water other than wastewater that enters a sewer system (including sewer service connections and foundation drains) from the ground through means which include, but are not limited to, defective pipes, pipe joints connections, or manholes. Infiltration does not include, and is distinguished from, inflow.

Infiltration/Inflow Projects. Projects which remove infiltration and inflow (*i.e.* water other than wastewater) from a sewer system, including construction associated with infiltration/inflow rehabilitation.

Infiltration/Inflow Rehabilitation. Construction associated with the rehabilitation of a sewer system to remove or reduce infiltration/inflow.

Inflow. Water other than wastewater that enters a sewer system (including sewer service connections) from sources which include but are not limited to, roof leaders, cellar drains, yard drains, area drains, drains from springs and swampy areas, manhole covers, cross connections between storm sewers and sanitary sewers catch basins, cooling towers, storm waters, surface runoff, street wash waters or drainage. Inflow does not include, and is distinguished from infiltration.

Innovative Technologies. New products and processes, and significant technological changes of products and processes, which have not been commercially deployed or are in limited deployment.

44.03: continued

Integrated Water Resources Management Plan. In accordance with the Department's *Guide to Water Resource Management Planning*, an Integrated Water Resource Management Plan is a plan that identifies all of a community's/(ies') water resource infrastructure and management needs/problems including wastewater, water supply and stormwater, evaluates alternative means of meeting those needs, selects the most environmentally appropriate and cost-effective remedy, and proposes an implementation plan and schedule.

Intended Use Plan. An annual plan submitted by the Trust to EPA pursuant to § 606(c) of the CWA which identifies the intended use of the amounts available to the Fund as determined by the Trust and derived from the federal capitalization grant, state match amounts, loan repayments, investment earnings and any other moneys deposited by the Trust available to fund projects eligible for funding under Title VI of the CWA. The Intended Use Plan includes a project listing, a description of short and long term goals for the use of the funds, information on the activities to be supported, assurances for meeting certain Title VI requirements, and the criteria and method for the distribution of funds.

Intended Use Plan Project Listing. Those projects identified by the Department for inclusion on the fundable portion of the calendar year priority list pursuant to 310 CMR 44.05(2).

Land Use Controls. Local and regional government zoning ordinances and by-laws and health and sewer use regulations for wastewater.

Loan. Any form of financial assistance subject to repayment, in whole or in part, which is provided by the Trust to a Local Governmental Unit for all or any part of the cost of a water pollution abatement project.

Loan Agreement. Any agreement entered into between the Trust and a Local Governmental Unit pertaining to a loan or local governmental obligations.

Loan Commitment. A written commitment by the Trust to make a loan to a Local Governmental Unit to finance a project approved by the Department on terms consistent with the Department's Project Approval Certificate.

Local Government Unit or Local Governmental Unit. Any town, city, district, commission, agency, authority, board or other instrumentality of the commonwealth or of any of its political subdivisions, including any regional local governmental unit defined in M.G.L. c. 29C, which is responsible for the ownership or operation of a water pollution abatement project and is authorized by a bond act to finance all or any part of the cost thereof through the issue of bonds.

MEPA. The Massachusetts Environmental Policy Act, M.G.L. c. 30, §§ 61 through 62H.

NEPA. The National Environmental Policy Act, 42 U.S.C. 4321 *et seq.*

Nonpoint Source Project. Projects which implement or are consistent with the Nonpoint Source Management Plan, developed and updated by the Department pursuant to § 319 of the CWA, which may include, but are not limited to, the repair, replacement and/or upgrading of subsurface sewage disposal systems regulated under 310 CMR 15.000: *The State Environmental Code, Title 5: Standard Requirements for the Siting, Construction, Inspection, Upgrade and Expansion of On-site Sewage Treatment and Disposal Systems and for the Transport and Disposal of Septage*, landfill capping and closure, remediation of leaking underground storage tanks, erosion control, the control of stormwater runoff, brownfields remediation projects, and other water pollution prevention projects.

Nutrient Removal Project. A water pollution abatement project that is being undertaken by a Local Governmental Unit primarily to remediate or prevent nutrient enrichment of a surface water body or a source of water supply to comply with effluent limitations established under a NPDES permit or an EPA-approved TMDL or to otherwise implement a nutrient management plan approved by the Department. Nutrient Removal Projects include those portions of such projects approved by the Department as reasonably necessary for cost-effective nutrient removal or recovery, and as evidenced by the Local Governmental Unit's CWMP or a corresponding engineering report or a 208 Plan or watershed restoration plan that is consistent therewith, as determined by the designated areawide planning agency that prepared the 208 Plan.

44.03: continued

Nutrient Sensitive Watershed. Any watershed or sub-watershed containing a water body impaired by nutrients that has been listed, accordingly, on Massachusetts' list of impaired waterbodies under § 303(d) of the CWA or that has been designated as nutrient sensitive by the Department.

Policy on Eligible Project Costs. The Department's document entitled *Policy on Eligible Project Costs*, which identifies the specific types of project costs determined by the Department to be generally within the eligible project categories identified in 310 CMR 44.08(1) and (2).

POTW Treatment Plant. That portion of a POTW which is designed to provide treatment (including recycling and reclamation) of municipal sewage and industrial waste.

Project Approval Certificate. A certificate issued by the Department to the Trust certifying that a project is approved for financing by the Trust and that the costs of the project are eligible for financial assistance pursuant to M.G.L. c. 29C, § 6.

Project Regulatory Agreement. An agreement between the Department and a Local Governmental Unit, executed and delivered to the Trust on or prior to the date of a loan from the Trust to the Local Governmental Unit to finance a project approved by the Department, which includes a disbursement schedule, procedures for approval and payment of requisitions, conditions related to the borrower's compliance with the Department's regulations and other federal and state statutes and regulations applicable to the construction and operation of the project, and provision for the Department's supervision of the project in accordance with 310 CMR 44.00.

Publicly Owned Treatment Works (POTW). A treatment works as defined by § 212 of the CWA, 33 U.S.C. § 1292, which is owned by a State or municipality (as defined by § 502(4) of the CWA, 33 U.S.C. § 1362(4)). Publicly Owned Treatment Works (POTW) includes any devices and systems used in the storage, treatment, recycling and reclamation of municipal sewage or industrial wastes of a liquid nature. Publicly Owned Treatment Works (POTW) also includes sewers, pipes and other conveyances only if they convey wastewater to a POTW Treatment Plant. Publicly Owned Treatment Works (POTW) also means the municipality as defined in § 502(4) of the CWA, 33 U.S.C. § 1362(4), which has jurisdiction over the Indirect Discharges to and the discharges from such a treatment works.

Regional Land Use Planning Agency. Any one of the public bodies corporate established as a regional planning district commission pursuant to M.G.L. c. 40B, § 3.

Regional Local Government Unit. Any Local Government Unit which is responsible for the ownership or operation of a Regional System.

Regional System. Any District serving two or more municipalities, any private water system serving two or more municipalities, and any other entity established by mutual agreement of two or more municipalities, or by a county in which all municipalities of the county have an agreement to provide public water supply or wastewater services, or both, through shared facilities, sources or distribution networks, and which has authority to set rates and charges for the consumers of such services.

State Revolving Fund (SRF) Program. The financial assistance program for water pollution abatement projects authorized under M.G.L. c. 21, § 27A, and the CWA, including the Clean Water State Revolving Fund Program established pursuant to M.G.L. c. 29C, the Department's related authority and responsibilities set forth in M.G.L. c. 21, § 27A, and elsewhere in M.G.L. c. 21, and the Water Pollution Abatement Revolving Fund established pursuant to M.G.L. c. 29, § 2L.

Title 5. 310 CMR 15.000: *The State Environmental Code, Title 5: Standard Requirements for the Siting, Construction, Inspection, Upgrade and Expansion of On-site Sewage Treatment and Disposal Systems and for the Transport and Disposal of Septage.*

44.03: continued

Trust. The Massachusetts Clean Water Trust established by M.G.L. c. 29C. The Trust administers the Commonwealth's SRF programs, which are authorized by federal legislation - the Water Quality Act of 1987 for the clean water SRF and the Safe Drinking Water Act of 1996 for the drinking water SRF - to provide financial assistance to borrowers for wastewater projects and drinking water projects.

Wastewater. Sewage, industrial waste, other wastes or any combination of the three, as defined in 314 CMR 3.00: *Surface Water Discharge Permit Program* and 5.00: *Ground Water Discharge Permit Program*.

Wastewater Treatment Project. Abatement facilities eligible for SRF assistance under the CWA providing, or being upgraded or rehabilitated to provide, secondary or more stringent wastewater treatment (or any cost effective alternatives), including conveyance components (such as interceptors) and appurtenances related to such facilities as well as the correction of combined sewer overflows. Wastewater treatment project does not, however, include activities and/or facilities within the definitions of an Infiltration and Inflow Project or a Collection System Project under 310 CMR 44.03.

Water Pollution Abatement Project. Any abatement facilities, including without limitation rehabilitation of abatement facilities to remove, curtail or otherwise mitigate infiltration and inflow, collection system, treatment works and treatment facilities as defined in M.G.L. c. 21, § 26A, and any eligible facilities for implementation of a nonpoint source pollution control management program or estuary conservation and management plan pursuant to the CWA.

Watershed Benchmark Flow. The existing wastewater facility total flow amount in a planning area, including flow amounts from on-site subsurface disposal systems, collection systems, and wastewater treatment plants, as set forth in a Local Governmental Unit's Department-approved CWMP.

Watershed Management Plans. Plans developed, updated and/or approved by the Department to assess and manage the water resources of any watershed or subwatershed, including plans which implement or are consistent with the Department's Nonpoint Source Management Plan. Watershed Management Plans may include watershed related plans developed and updated by other parties which, as approved by the Department, implement or are consistent with the Department's Nonpoint Source Management Plan.

44.04: Eligible Projects

(1) Any water pollution abatement project, as defined in 310 CMR 44.03, is eligible to receive financial assistance from the Trust pursuant to 310 CMR 44.00. More specifically, eligible projects fall into the following categories:

- (a) Wastewater Treatment Projects, as defined in 310 CMR 44.03;
- (b) Infiltration Inflow (I/I) Projects, as defined in 310 CMR 44.03;
- (c) Collection System Projects, as defined in 310 CMR 44.03, provided, however, that at least 85% of the expected wastewater flow into the proposed collection system will be for wastewater flows in existence as of July 1, 1995, except, subject to the approval of the Department, in areas designated as city or town centers, rural village districts, or brownfields redevelopment areas, areas designated under M.G.L. c. 40R as "smart growth districts" or projects in Growth Districts designated by the Executive Office of Housing and Economic Development with the concurrence of the Executive Office of Energy and Environmental Affairs;
- (d) Nonpoint Source Projects, as defined in 310 CMR 44.03, including but not limited to projects financed under the Community Septic Management Program within the Fund to assist eligible homeowners to upgrade failed septic systems in compliance with 310 CMR 15.000: *The State Environmental Code, Title 5: Standard Requirements for the Siting, Construction, Inspection, Upgrade and Expansion of On-site Sewage Treatment and Disposal Systems and for the Transport and Disposal of Septage* through underlying betterment agreements between a Local Governmental Unit and such homeowners;

44.04: continued

- (e) The planning and/or design for any one of the project categories identified in 310 CMR 44.04(1)(a) through (d), including but not limited to comprehensive wastewater management planning under 310 CMR 44.09(2) and (3) and planning projects which implement the Nonpoint Source Management Plan, as developed and updated by the Department pursuant to § 319 of the CWA, provided that the total funding allocated for planning and/or design projects shall not exceed 10% of the total financial assistance authorized on the calendar year Intended Use Plan Project Listing portion of the priority list. The Department may modify the allocation of funds consistent with its identification of planning and/or design projects as a funding priority in a particular calendar year pursuant to 310 CMR 44.06(3);
- (f) Any project in the categories identified in 310 CMR 44.04(1)(a) through (d) which utilizes a single contractor to design, build and/or operate the project facilities, provided the procurement and use of such contractor is authorized by law, the project conforms with the state constitutional requirements governing the use of Commonwealth funds for public purposes, and the project otherwise meets the requirements of 310 CMR 44.00. The operational costs of such projects shall be ineligible for SRF assistance;
- (g) Projects for the development and implementation of a conservation and management plan under § 320 of the CWA, 33 U.S.C. § 1330;
- (h) The construction, repair, or replacement of publicly- or privately-owned decentralized wastewater treatment systems that treat municipal wastewater or domestic sewage;
- (i) Publicly and privately owned, permitted and unpermitted projects that manage, reduce, treat, or recapture stormwater or subsurface drainage water;
- (j) Projects that reduce the demand for POTW capacity through water conservation, efficiency, or reuse, regardless of whether the activity takes place at publicly or privately owned properties;
- (k) Projects that develop and implement a watershed pilot project related to at least one of the six areas identified in § 122 of the CWA, 33 U.S.C. § 1274: watershed management of wet weather discharges, stormwater best management practices, watershed partnerships, integrated water resource planning, municipality-wide stormwater management planning, or increased resilience of treatment works;
- (l) Projects that reduce energy consumption needs for POTWs and related planning activities, such as energy audits and optimization studies;
- (m) Projects that include the equipment and piping required to reuse or recycle wastewater, stormwater, or subsurface drainage water;
- (n) Projects that provide financial assistance to any qualified nonprofit entity to provide assistance to small- and medium-sized POTWs for training activities, planning, design, and associated preconstruction activities and to assist POTWs in achieving compliance with the CWA. Ongoing operation and maintenance activities are not eligible;
- (o) Acquisition of land that is an integral part of the treatment system (*e.g.*, land for spray irrigation or subsurface disposal) and that is necessary for construction of POTWs, including surface and subsurface easements, a place to store equipment and material during construction, land needed to locate eligible projects (*e.g.*, pumping stations), and land integral to the treatment process;
- (p) Projects that increase the security of POTWs; and
- (q) Projects that use regional water resources to offset, by at least 100%, the impact of water withdrawals on local water resources in the watershed basin of the receiving community.

44.05: Priority System

- (1) Establishment of Calendar Year Priority List.
 - (a) Prior to the beginning of each calendar year, the Department shall establish a single, annual list of projects prioritized to receive financial assistance pursuant to 310 CMR 44.00. The Department will prioritize projects in the order of their numerical rating, as determined by the Department based on the proponent's responses to questions in the Project Evaluation Form. For the purpose of prioritizing projects financed under the Community Septic Management Program, which has its own legislatively dedicated funding allotment, the Department may distinguish the priority and the funding status of Community Septic Management Program projects from other projects on the priority list.

44.05: continued

(b) In establishing the priority list, the Department may require Local Governmental Units to submit a Project Evaluation Form containing information deemed necessary by the Department for project evaluation, including but not limited to, information which addresses the proposed project's compliance with the Intended Use Plan Project Listing criteria in 310 CMR 44.03(2) and the Project Selection Criteria in 310 CMR 44.06. The Department may establish a reasonable deadline for its receipt of such information, and may decline to evaluate and prioritize a project if the Department determines that the Local Governmental Unit has failed to provide sufficient information.

(c) Prior to adopting the priority list, the Department shall conduct a public hearing to receive and consider public comment on the proposed list. The Department will ensure that notice of the public hearing will be published in one or more newspapers of general circulation 30 days prior to the date of the hearing.

(2) Intended Use Plan Project Listing.

(a) Eligible projects which the Department finds are ready to proceed and for which funds are available in the calendar year in which the priority list is established shall be placed on the Intended Use Plan Project Listing portion of the priority list. The Department reserves the right to expand the Intended Use Plan Project Listing during the course of the relevant calendar year based on an additional allocation of available funding.

(b) The Local Governmental Unit proposing the project must show that its project meets each of the following criteria in order for the Department to place the project on the Intended Use Plan Project Listing:

1. As determined by the Department, the project's environmental, and/or public health benefits, as evidenced by its ranking on the priority list, are sufficiently high to warrant its funding as a priority in the relevant calendar year;
2. As determined by the Department, based on a review of reliable and relevant information, the project's environmental and/or public health benefits outweigh any expected negative impacts to water quality or water quantity or to the public health which are directly attributable to the project;
3. The Local Governmental Unit has already obtained its local funding authorization for the project, or has committed to a specific schedule to obtain such funding authorization by June 30th of the relevant calendar year; and
4. The Local Governmental Unit demonstrates to the Department's satisfaction that its project is sufficiently advanced in its implementation such that the Local Governmental Unit will file a complete loan application with the Department for the project by October 15th of the relevant calendar year.

A complete application includes, as applicable, approvable plans and specifications for the project and evidence that the Local Governmental Unit has, at a minimum, filed applications for any permits or environmental reviews applicable to the project. As provided in 310 CMR 44.12(1)(b), the Department may deny any application which it determines to be incomplete.

(c) In the event that a project placed on Intended Use Plan Project Listing fails during the course of the calendar year to meet one or more of the criteria in 310 CMR 44.05(2)(b), the project may be removed from the Intended Use Plan Project Listing. In such event, the Department reserves the right to raise one or more project(s) which are determined by the Department to be of the highest priority and which meet the criteria in 310 CMR 44.05(2)(b), consistent with available funding, to the Intended Use Plan Project Listing. Subject to the availability of funding and the project's priority, the Department further reserves the right to restore any project removed from the Intended Use Plan Project Listing for failure to meet the criteria in 310 CMR 44.05(2)(b) if the project thereafter meets those criteria prior to the end of the relevant calendar year.

(d) The implementation of some projects on the Intended Use Plan Project Listing will take place over two years or more. For such multi-year projects, the Department will limit the amount of actual funding reserved for the project on each annual Intended Use Plan Project Listing to the amount needed to fund the project for two years. In the event that a multi-year project receives a project approval certificate from the Department by the end of the relevant calendar year, the Department will reserve another annual increment(s) of funding for the project on subsequent calendar year Intended Use Plan Project Listings, subject to the

44.05: continued

availability of funding, and provided the project is implemented in accordance with the schedule in the project approval certificate, as determined by the Department. The limitation on financial assistance in 310 CMR 44.05(3) shall apply to any amounts reserved as annual increments of funding for a multi-year project on subsequent calendar year Intended Use Plan Project Listings.

(3) Limitation on Financial Assistance.

(a) No Local Governmental Unit shall receive Department approval for financial assistance from the Trust for a project or projects in a calendar year in any amount in excess of 33% of the total financial assistance authorized on the Intended Use Plan Project Listing portion of the priority list in that calendar year, including any amounts reserved as annual increments of funding for a multi-year project on subsequent calendar year Intended Use Plan Project Listings.

(b) The Department reserves the right to waive the borrower limitation on financial assistance set forth in 310 CMR 44.05(3)(a) if the Department determines that one or more projects on the Intended Use Plan Project Listing portion of the applicable priority list has failed or will fail to meet the criteria in 310 CMR 44.05(2)(b) by October 15th in the relevant calendar year, or if the Department allocates additional available funding to the Intended Use Plan Project Listing during the course of the relevant calendar year.

(c) The Trust reserves the right to call due the unpaid loan balance of any loan and/or other form of financial assistance at the financial equivalent of a loan made at an interest rate at zero per cent if the Local Governmental Unit awarded such loan amends, or suffers the amendment of, any Land Use Control upon which approval of such loan and/or other form of financial assistance was based, unless the Local Governmental Unit demonstrates to the Department's satisfaction that such amended Land Use Controls will ensure that overall wastewater flow in the community will not increase as a result of sewerage beyond the flow authorized under the Land Use Controls that were in effect on the date the Secretary issued a MEPA certificate for the CWMP or the date of a 208 Plan.

44.06: Project Selection Criteria

(1) Except as provided for in 310 CMR 44.06(2) through (4), the Department will use the evaluation criteria in 310 CMR 44.06(1)(a) and (b) to determine a project's priority and ranking on the calendar year priority list. The Department, through written guidance, will assign a numerical point range to each of the evaluation criteria in 310 CMR 44.06(1) which will be used to further determine a project's ranking on the priority list.

(a) Environmental Criteria.

1. The extent to which the project will eliminate or mitigate a risk to public health. Relevant factors to consider may include but are not limited to:

- a. The extent to which the project is needed to improve, restore or protect a public or private drinking water supply.
- b. The size and character of the population threatened or negatively impacted by the identified risk to public health (*e.g.*, users of a community public water system, owners of private wells, the number of children, the elderly, persons with pre-existing health risks), and the extent to which the project will eliminate or mitigate the public health risk to the identified population.
- c. The extent to which the project will eliminate or mitigate a public health hazard or public nuisance, as determined by the local health authority and/or the Department (*e.g.*, sewerage surcharging; failed 310 CMR 15.000: *The State Environmental Code, Title 5: Standard Requirements for the Siting, Construction, Inspection, Upgrade and Expansion of On-site Sewage Treatment and Disposal Systems and for the Transport and Disposal of Septage* systems).

2. The severity of the environmental problem which the project is intended to address. Relevant factors to consider may include but are not limited to:

- a. The severity of the specific water quality or sediment parameter problems in the relevant water body (*e.g.*, biochemical oxygen demand, suspended solids, pH, temperature, nitrogen, phosphorus, metals).
- b. Whether the relevant water body has been identified on the Commonwealth's § 303(d) list as failing to meet water quality standards for specific parameters.

44.06: continued

- c. Whether the relevant water body currently meets water quality standards and its designated water quality uses under 314 CMR 4.00: *Massachusetts Surface Water Quality Standards*, including any Total Maximum Daily Load (TMDL) established by the Department for the relevant water body.
 - d. Whether the relevant water body is a significant public recreation resource, a state Area of Critical Environmental Concern, an outstanding resource water as determined by the Commonwealth, a federally designated river, *etc.*
 - e. Whether there are adverse impacts to living resources such as commercial or recreational fisheries, or endangered or wildlife species and their habitats.
 - f. The extent to which there are other sensitive environmental resources (such as wetlands, Zones I and II of public water supplies, shellfish or cold water fisheries) or water dependent recreational uses which are threatened or negatively impacted by the identified environmental problem.
3. The extent to which the project will have demonstrable water quality benefits which will effectively address the identified environmental problems. Relevant factors to consider may include, but are not limited to, the extent to which the Local Governmental Unit's jurisdiction and the project's objectives, scope and proposed implementation demonstrate the project's capability to eliminate or significantly mitigate the identified environmental problems.
 4. The extent to which the project is needed to come into or maintain compliance with applicable federal and/or state discharge permit(s) or other federal and/or state water pollution control requirements, and the effect of compliance on water quality and/or public health. Relevant factors to consider may include but are not limited to:
 - a. The extent to which the project is needed to ensure compliance with an existing federal or state court or administrative order.
 - b. The extent to which the project is needed to ensure compliance with a federal or state discharge permit (*e.g.*, NPDES permit limits) or federal or state water pollution control regulations and requirements (*e.g.*, 310 CMR 15.000: *The State Environmental Code, Title 5: Standard Requirements for the Siting, Construction, Inspection, Upgrade and Expansion of On-site Sewage Treatment and Disposal Systems and for the Transport and Disposal of Septage* control of stormwater discharges, compliance with Total Maximum Daily Load Limitations).
 - c. The extent to which the project's maintenance of compliance with an order, discharge permit or regulation demonstrably benefits or protects the water quality and/or public health (*e.g.*, projects which rehabilitate or upgrade existing facilities and are designed to keep a facility in compliance and/or to prevent water resource degradations).
- (b) Program and Implementation Criteria.
1. The extent to which the project implements or is consistent with one or more current watershed management plans (*e.g.*, DEP basin plans) and/or watershed protection plans (*e.g.*, local Zone II land use controls, comprehensive conservation management plans), or otherwise effectively addresses a watershed priority, as determined by the Department.
 2. The extent to which the capacity provided by the project is needed, including, more specifically, whether the project will duplicate existing treatment or disposal capacity available at an economic cost within the relevant region.
 3. The extent to which, as determined by the Department based on a review of reliable and relevant information, the project's environmental and/or public health benefits outweigh any expected negative impacts to water quality, water quantity or to the public health which are directly attributable to the project.
 4. The extent to which the project is consistent with local and regional growth and/or infrastructure plans, and promotes the rehabilitation and revitalization of infrastructure, structures, sites, and areas previously developed and still suitable for economic (re)use.
 5. Whether the project constitutes or is a component of a multi-community or regional approach to addressing the identified environmental problem.
 6. The extent to which the project utilizes Department-approved innovative/alternative technology to effectively address the identified environmental problem.
 7. Whether the Local Governmental Unit has implemented a pricing system for sewer services in accordance with the provisions of M.G.L. c. 40, § 39J and St. 1985, c. 275.

44.06: continued

8. The extent to which the Local Governmental Unit has implemented the guidelines for best management practices in water management established by the board of the Trust.
- (2) Certain of the project selection criteria in 310 CMR 44.06(1) do not apply to planning projects (e.g., the extent to which the project will have demonstrable water quality benefits which will effectively address the identified problem). The Department will limit its evaluation of planning projects to the relevant criteria.
 - (3) In establishing the calendar year priority list pursuant to 310 CMR 44.05(1), the Department may:
 - (a) identify project categories and/or watersheds as funding priorities warranting a high priority status in a particular calendar year, consistent with the Project Selection Criteria in 310 CMR 44.06(1); and
 - (b) modify and/or further specify the factors or point system to be used to evaluate the extent to which a project meets the Project Selection Criteria in 310 CMR 44.06(1), including any project or program priorities identified by the Department as a funding priority in a particular calendar year pursuant to 310 CMR 44.06(3) and (4).
 - (4) Before finally adopting substantial modifications to the Project Selection Criteria and/or the related point system, the Department will notice such modifications in the *Environmental Monitor* and provide an opportunity for public comment for a period of not less than 30 days, including conducting a minimum of one public hearing.

44.07: Financing Criteria

- (1) In general, the Trust is authorized to structure the debt service costs on loans and other forms of financial assistance for Eligible Projects that provide the financial equivalent of a loan made at an interest rate equal to 2%. Notwithstanding the foregoing, subject to the limits on contract assistance provided in M.G.L. c. 29C, § 6, the Trust may provide additional financial assistance that is the financial equivalent of a loan made at an interest rate equal to 0%, as provided in 310 CMR 44.07(1)(a) for Nutrient Removal Projects in communities that have established Flow Neutral Land Use Controls, as provided in 310 CMR 44.07(2). Notwithstanding the foregoing, subject to the limits on contract assistance provided in M.G.L. c. 29C, § 6, the Trust may provide additional financial assistance that is the financial equivalent of a loan made at an interest rate less than 2%, which may include principal forgiveness, as determined by the Trust, for Qualifying Designated Projects, as provided in 310 CMR 44.07(4).
- (2) Nutrient Removal Projects. Subject to the limits on contract assistance provided in M.G.L. c. 29C, § 6, a Local Governmental Unit applying for financial assistance for a Nutrient Removal Project, as defined in 310 CMR 44.03, on the Intended Use Plan for calendar year 2009 to calendar year 2069, is eligible for loans and other forms of financial assistance at the financial equivalent of a loan made at an interest rate at 0% if the Local Governmental Unit demonstrates to the Department's satisfaction that it meets all of the following criteria:
 - (a) the Local Governmental Unit is not currently subject, due to a violation of a nutrient-related total maximum daily load standard or other nutrient based standard, to a Department enforcement order, administrative consent order or unilateral administrative order, enforcement action by the EPA or subject to a state or federal court order relative to the proposed project, excluding any such order or action establishing a schedule for coming into compliance with more stringent effluent limitations contained in a NPDES renewal permit or permit modification;
 - (b) the Local Governmental Unit has a CWMP that has been approved by the Department or the Department determines that the project is consistent with a 208 Plan;
 - (c) the project is consistent with the regional water resources management plan including, but not limited to, a 208 Plan, if such a plan exists, as evidenced by written notice of such by the Regional Land Use Planning Agency for the region where the Local Governmental Unit is located; and

44.07: continued

(d) the Local Governmental Unit demonstrates in accordance with 310 CMR 44.07(3) to the Department's satisfaction, in consultation with the Massachusetts Department of Housing and Community Development and, where applicable, the Regional Land Use Planning Agency for the region where the Local Governmental Unit is located, that it has adopted Land Use Controls that ensure the overall wastewater flow amount in the community will not increase as a result of sewerage beyond the flow amount authorized under the Land Use Controls that were in effect on the date the Secretary issued a MEPA certificate for the CWMP or, if none exists, the date of a 208 Plan, if such a plan exists.

(3) Flow Neutral Land Use Controls. To demonstrate that it has adopted adequate Land Use Controls to ensure that the overall wastewater flow in the community will be "flow neutral", as required by M.G.L. c. 29C, § 6, and 310 CMR 44.07(2)(d), a Local Governmental Unit must estimate wastewater flow volume to demonstrate that overall wastewater flow in the sewerage watershed will not increase as a result of the project for which a zero rate of interest is sought. A Local Governmental Unit will be deemed to have established such "flow neutral" Land Use Controls if the Local Governmental Unit has a Department-approved CWMP or 208 Plan that includes a watershed benchmark flow, and the Local Governmental Unit has established Land Use Controls that limit future wastewater flow volume to the watershed benchmark flow contained in the Department-approved CWMP or 208 Plan. Such Land Use Controls must be in effect prior to closing to receive zero rate of interest loans. In demonstrating that it has established such "flow neutral" Land Use Controls, a Local Governmental Unit may use either one of the two methods in 310 CMR 44.07(3)(a) or (b). In doing so, the Local Governmental Unit should express all flow volumes as an annual average in gallons per day per acre.

(a) Method 1: Presumptive Determination of Flow Neutrality. To demonstrate that the Local Governmental Unit has established Land Use Controls that limit future wastewater flow volume to the watershed benchmark flow, the Local Governmental Unit shall establish as the watershed benchmark flow the total flow volume for all parcels of land within the nutrient sensitive watershed subject to the Local Governmental Unit's jurisdiction, as identified in the CWMP or 208 Plan, excluding only those parcels whose owners have been allowed to opt out in accordance with M.G.L. c. 83, § 1B, calculated as follows:

1. Flow Volume for the Developed Residential Parcels. The Local Governmental Unit shall utilize actual water meter flow data to establish the annual average flow volume for the developed residential parcels. If no actual water meter flow data exists to establish an annual average residential flow, then the Local Governmental Unit shall utilize actual water meter flow data for comparable developed residential parcels in the same or similarly-sized city or town or watershed to estimate the annual average flow volume for the developed residential parcels.

2. Flow Volume for the Undeveloped Residential Parcels. The Local Governmental Unit shall utilize actual water meter flow data for comparable developed residential properties in the same city or town or watershed to estimate the annual average flow volume for the undeveloped residential properties under the local Land Use Controls in effect as of the date the Secretary issued a MEPA certificate for the CWMP or the date of a 208 Plan.

3. Flow Volume for the Developed Non-residential Parcels. The Local Governmental Unit shall utilize actual water meter flow data to establish the annual average flow volume for the developed non-residential parcels. If no actual water meter flow data exists to establish such annual average flow volumes, then the Local Governmental Unit shall utilize actual water meter flow data for comparable developed non-residential parcels in the same city or town or watershed to estimate the annual average flow volume for the developed non-residential parcels under the local Land Use Controls in effect as of the date the Secretary issued a MEPA certificate for the CWMP or the date of a 208 Plan.

4. Flow Volume for the Undeveloped Non-residential Parcels. The Local Governmental Unit shall utilize actual water meter flow data for comparable developed non-residential parcels in the same city or town or watershed to estimate an annual average flow volume for the undeveloped non-residential properties under the local Land Use Controls in effect as of the date the Secretary issued a MEPA certificate for the CWMP or the date of a 208 Plan.

44.07: continued

(b) Method 2: Non-presumptive Determination of Flow Neutrality. As an alternative to Method 1, a Local Governmental Unit may elect to establish flow neutrality by demonstrating that future total wastewater flow volume under full build-out conditions will not exceed the total wastewater flow volume under full build-out conditions in effect as of the date the Secretary issued a MEPA certificate for the CWMP or the date of a 208 Plan. Under this alternative, the watershed benchmark flow is considered the total wastewater flow volume under full build-out conditions in effect as of the date the Secretary issued the MEPA certificate for the CWMP or the date of a 208 Plan. To demonstrate that the Local Governmental Unit has established Land Use Controls that limit future wastewater flow volume to the watershed benchmark flow, the Local Governmental Unit shall prepare two separate build-out analyses for all parcels of land within the nutrient sensitive watershed subject to the Local Governmental Unit's jurisdiction, as identified in the CWMP or the 208 Plan, excluding only those parcels whose owners have been allowed to opt out in accordance with M.G.L. c. 83, § 1B, as follows:

1. The first build-out analysis shall establish wastewater flows based on a full build-out under the local Land Use Controls in effect as of the date the Secretary issued a MEPA certificate for the CWMP or the date of a 208 Plan (*i.e.*, the "pre-sewer build-out").
2. The second build-out analysis shall establish wastewater flows based on a full build-out under the local Land Use Controls in effect at the time construction of the project for which a zero rate of interest is sought is expected to be completed (*i.e.*, the "post-sewer build-out").
3. For both the pre-sewer and post-sewer build-out analyses, the residential and non-residential flows must be calculated utilizing actual water meter flow data to establish the annual average flow volume. For the pre-sewer build-out analyses, if no actual water meter flow data exists, then the Local Governmental Unit shall utilize actual water meter flow data for comparable parcels in the same city or town or watershed to estimate the annual average flow volume or the flow volume allowable under local Land Use Controls in effect as of the date the Secretary issued a MEPA certificate for the CWMP or the date of the 208 Plan, whichever is less. For the post-sewer build-out analysis, if no actual water use data exists, then the Local Governmental Unit shall utilize actual water meter flow data for comparable parcels in the same city or town or watershed or the flow volume allowable under local Land Use Controls at the time construction of the project for which a zero rate of interest is sought is expected to be completed, whichever is less.
4. Each build-out analysis shall include an analysis of all built and buildable parcels, including redevelopment potential, and a rigorous analysis of typical exceptions to Land Use Controls, such as use/dimensional variances, special permits, waivers, expansion and change of use in preexisting nonconforming uses, M.G.L. c. 40A, § 3, exempt uses, municipal uses and vested rights.
5. All assumptions made in the build-out analyses shall be clearly identified and explained. Future infrastructure needs, such as parking, wastewater infrastructure, landscape, and driveways, shall be factored into the build-out analyses and include the source and rationale for any ratios, multipliers or variables used in calculating such needs.

(4) Qualifying Designated Projects.

(a) Subject to the limits on contract assistance provided in M.G.L. c. 29C, § 6, a Local Governmental Unit applying for financial assistance for a Qualifying Designated Project, as set forth in 310 CMR 44.07(4), on the Intended Use Plan for calendar year 2017 or later, unless otherwise authorized by the Legislature, is eligible for additional financial assistance in accordance with 310 CMR 44.07(4)(b) that may include loans and other forms of subsidies at the financial equivalent of a loan made at an interest rate less than 2% or other additional subsidies such as principal forgiveness, as determined by the Trust, if the Local Governmental Unit demonstrates to the Department's satisfaction that it meets all of the following criteria:

1. the project is consistent with the current priorities established by the Trust, as set forth in the Department's annual project solicitation;
2. the project implements Best Management Practices; and

44.07: continued

3. the Local Governmental Unit meets the Trust's affordability criteria established pursuant to the CWA § 603(i), and 33 U.S.C. § 1383(i), but only to the extent required by federal law.
- (b) Projects considered for the additional subsidies described in 310 CMR 44.07(4)(a) may include the following:
1. projects developed pursuant to a regional water resources management plan including, but not limited to, a 208 Plan, if such a plan exists, as evidenced by written notice of such by the Regional Land Use Planning Agency for the region where the Local Governmental Unit is located;
 2. projects that are necessary to connect a local or Regional Local Governmental Unit to a facility of the Massachusetts Water Resources Authority, if the local or regional Local Governmental Unit has paid or committed to pay the entry fee of that authority;
 3. Green Infrastructure Projects;
 4. projects that are a direct result of a disaster affecting the service area that is the subject of a declaration of emergency by the governor; or
 5. innovative water projects that utilize new technology and which improve environmental or treatment quality, reduce costs, increase access and availability of water, conserve water or energy or improve management in the areas of wastewater, storm water, groundwater or coastal resources; provided, that the technology has not been commercially deployed, other than as a pilot project, previously in the Commonwealth.

44.08: Eligible Project Costs

- (1) Costs which the Department determines are necessary for the completion of the project are eligible for financing in the loan and to receive a subsidy under the loan.
- (2) Costs which the Department determines are not necessary for completion of the project are ineligible for financing in the loan.
- (3) The Department will base its eligible project cost determinations on its "Policy on Eligible Project Costs", which identifies the specific types of costs that are within the two categories under 310 CMR 44.08(1) and (2).
- (4) Project costs incurred by an applicant prior to the date of issuance of the Department's project approval certificate are not eligible for a subsidy under the loan, except as follows:
 - (a) Preliminary engineering, comprehensive wastewater management planning, design or related professional services and construction work, may be approved by the Department prior to the issuance of a project approval certificate as project costs eligible for subsidy if:
 1. the applicant has submitted a written and adequately substantiated request for approval;
 2. written approval by the Department is obtained before initiation of the project and award of any loan for the project; and
 3. the project is included and maintains its status on the current calendar year priority list.
 - (b) The Department's prior approval of costs in accordance with 310 CMR 44.08(4)(a) does not constitute a commitment to approve financial assistance for any project. Instead, such costs will be considered eligible project costs only if a loan is made by the Trust for the project. Accordingly, an applicant receiving the Department's prior approval of costs in accordance with 310 CMR 44.08(4)(a) proceeds at its own risk.
- (5) Costs incurred in excess of the approved project costs are not eligible for financing by the loan, unless the project approval certificate and the loan are both amended to include the cost increase.
- (6) A loan recipient shall exercise its best efforts to accomplish the work program set forth in the loan within the loan amount. Whenever a loan recipient reasonably believes that its project costs will exceed or be substantially less than the approved loan amount, it must promptly notify the Department in writing. The loan recipient must submit revised cost estimates for the project to the Department as soon thereafter as practicable. Neither the Department, nor the Trust, is under any obligation to approve costs in excess of the amount previously approved in the project approval certificate and loan.

44.08: continued

(7) The final eligible project costs shall be the eligible costs approved by the Department upon completion of the project, unless audited. If such project costs are audited, the final eligible costs shall be the eligible costs approved by the Department at the completion of the audit.

44.09: Planning Requirements

(1) Introduction. 310 CMR 44.09 addresses requirements related to planning. 310 CMR 44.09 requires a Local Governmental Unit to demonstrate that its proposed SRF project is consistent with existing state, regional and local water resource and wastewater planning requirements. The Department's *Guide to Water Resource Management Planning* identifies three levels of planning (Project Evaluation or Engineering Reports, CWMPs and Integrated Water Resource Management Plans) which may be used to evaluate different types of SRF projects. Unless determined otherwise by the Department, Comprehensive Wastewater Management Plans or Integrated Water Resource Management Plans are required only for controversial or complex wastewater projects. Unless otherwise determined by the Department, a less comprehensive report, the Project Evaluation Report or Engineering Report, is required for all other wastewater projects eligible for financial assistance from the SRF.

(2) Consistency of SRF Projects with Water Resource and Wastewater Planning Requirements.

(a) As provided in M.G.L. c. 21, § 27A(d), a Local Governmental Unit applying for assistance from the Trust must demonstrate that its project is consistent with existing state, regional and local water resource and wastewater planning requirements, including but not limited to:

1. river basin water quality plans pursuant to § 303(e) of the CWA, 33 U.S.C. § 1313;
2. nonpoint source management plans pursuant to § 319 of the CWA, 33 U.S.C. § 1329;
3. estuaries management plans pursuant to § 320 of the CWA, 33 U.S.C. § 1330;
4. local water resource management plans pursuant to policies of the Water Resources Commission;
5. water emergency planning pursuant to M.G.L. c. 21G; and
6. areawide waste treatment management plans approved by EPA pursuant to § 208 of the CWA, 33 U.S.C. § 1288.

(b) Applicants shall also certify that land use and other controls in place (*e.g.*, zoning bylaws) are consistent with the wastewater system service populations projected in any CWMP of the applicant. An applicant's certification shall include a description of all such land use and other controls in place as supporting documentation for its certification.

(3) Planning Required for SRF Projects.

(a) Comprehensive Wastewater and Integrated Water Resource Management Planning. Unless otherwise determined by the Department, major, complicated or controversial wastewater projects shall be the result of a CWMP or an Integrated Water Resource Management Plan that systematically:

1. assesses the need for the project;
2. examines alternatives to the project;
3. proposes a plan and schedule for the project;
4. evaluates all the environmental impacts of the project including without limitation secondary growth impacts and impacts of the overall water balance in the watershed or subwatershed;
5. identifies means of mitigating those impacts;
6. demonstrates that the project is not only environmentally appropriate and cost-effective, but also implementable from a legal, institutional, financial and management standpoint. The Department will determine the scope of work for any CWMP or Integrated Water Resource Management Plan used to fulfill the requirements in accordance with the Department's *Guide to Water Resource Management Planning*. The Scope of Work for all CWMPs and Integrated Water Resource Management Plans must provide for a public participation program that includes at a minimum one public meeting to discuss the alternatives to the project and their environmental impacts and a public hearing on the environmental impacts, plan, and schedule of the project.

44.09: continued

(b) Project Evaluation or Engineering Report. Unless otherwise determined by the Department, planning for projects other than the project categories identified in 310 CMR 44.09(3)(a) shall be limited to the development of a Project Evaluation or Engineering Report. Based on the nature and duration of the proposed project, the Department will determine the required scope of the Project Evaluation or Engineering Report in accordance with the Guide to Water Resource Management Planning. Unless otherwise determined by the Department, a complete Project Evaluation or Engineering Report for a wastewater project shall include:

1. A description of the proposed project;
2. An analysis of the cost-effectiveness of the project and the alternatives considered;
3. For the selected alternative, a concise description at an appropriate level of detail, of at least the following:
 - a. the relevant design parameters for the project;
 - b. the estimated capital construction and operation and maintenance costs of the project;
 - c. the cost impacts on system users and non-users, or where the project is not user-based, cost impacts on the Local Governmental Unit budget; and
 - d. the institutional, financial, legal and management arrangements necessary for successful implementation of the project.
4. A public participation program that includes, at a minimum, one public meeting on the proposed project.

(c) Targeted Watershed Management Plans. Notwithstanding 310 CMR 44.09(3)(a), an applicant may submit to the Department for approval a targeted watershed management plan that is consistent with a 208 Plan, as determined by the designated areawide planning agency under § 208 of the CWA, in lieu of a CWMP or an Integrated Water Resource Management Plan for projects that will be carried out under a watershed-based permit issued by the Department.

(d) Fiscal Sustainability Plan. Starting October 1, 2015 the Department will require all applicants to submit a FSP for projects that involve the repair, replacement, or expansion of a treatment works. 310 CMR 44.09(3)(d) does not apply to a loan if, prior to this date, the project was listed on a CWSRF Intended Use Plan or the loan recipient has submitted an application for CWSRF funding assistance.

(e) Cost Effectiveness Study. Starting October 1, 2015, the Department will require all applicants to certify that they have studied and evaluated the cost and effectiveness of the processes, materials, techniques, and technologies for the funded project and that they have selected, to the maximum extent practicable, a project that maximizes the potential for efficient water and energy conservation, taking into consideration capital cost, operation and maintenance, and replacement cost. 310 CMR 44.09(3)(e) does not apply to a loan if, prior to October 1, 2015, the project was listed on a CWSRF Intended Use Plan or the loan recipient submitted an application for CWSRF funding assistance. Prior to October 1, 2015, the Department will be finalizing the cost and effectiveness analysis requirements and guidance and will post them on the Department's CWSRF website at www.mass.gov/eea/agencies/massdep/water/grants/clean-water-state-revolving-fund.html.

44.10: Environmental Review and Federal Cross-cutter Requirements(1) Environmental Review Requirements.

(a) All projects approved by the Department to receive a loan from the Trust shall, at a minimum, comply with the requirements of MEPA and 301 CMR 11.00: *MEPA Regulations*. In addition, a public hearing shall be held on the project if the Department determines that the project is controversial, or if the Department otherwise determines that a hearing is in the public interest. The Department may also require the Local Governmental Unit to consider project alternatives and to provide the public an opportunity to comment on such alternatives.

(b) Projects required to be the result of comprehensive wastewater management planning, as provided in 310 CMR 44.09(2)(a) and (3), shall also comply with the environmental review and process requirements in the Department's Guide to Water Resource Management Planning.

44.10: continued

(2) Federal Cross-cutter Requirements. All projects to be funded by funds directly made available by federal capitalization grants shall comply with all federal cross-cutters applicable to the project, as determined by the Department. The Department may require any other project to comply with one or more of the federal cross-cutters deemed applicable to the project by the Department.

44.11: Affirmative Action and Disadvantaged Business Enterprise Requirements

(1) Local Governmental Units receiving financial assistance from the Trust shall comply with applicable federal and state anti-discrimination laws and requirements, including the Department's requirements in the areas of Affirmative Action in employment and Disadvantaged Business Enterprise (DBE) utilization in contracting.

(a) In the area of Affirmative Action, such Local Governmental Units shall adopt, for use in all contracts for \$50,000 or more, an adapted version of the Commonwealth of Massachusetts' "Supplemental Equal Employment Opportunity Anti-discrimination and Affirmative Action Program." The contracts may include minority workforce percentages greater than those required for the geographical locations of the construction project as set forth in the Supplemental Program.

(b) In the area of DBE utilization, such Local Governmental Units shall make positive efforts to use DBEs for use in all construction, service and supply subagreements for the project financed by the loan. Such efforts should achieve the applicable federal and/or state goals established for DBE participation, but, at a minimum, should allow DBEs the maximum feasible opportunity to compete for project subagreements.

(2) A Local Governmental Unit receiving a loan from the Trust shall promptly notify the Department in writing when it has good reason to believe that its positive efforts to use DBEs in the subagreements for the project will not achieve one or both of the applicable DBE utilization goals.

44.12: Project Approval and Regulation

(1) Application.

(a) A Local Governmental Unit whose project is on the Intended Use Plan Project Listing portion of the calendar year priority list must first apply to the Department to receive a loan from the Trust to finance costs of the project. The Local Governmental Unit must file a complete application with the Department containing the following information and documentation:

1. General Information which must include evidence of a funding authorization by the Local Governmental Unit sufficient to cover the project cost, and certification of the authority of the Local Governmental Unit to file the application.
2. Financial Information pertinent to the Trust's evaluation of the applicant's ability to repay the loan.
3. Project Information which demonstrates to the Department's satisfaction that the project is sufficiently advanced in its implementation, including, as applicable:
 - a. approvable plans and specifications for the project;
 - b. evidence that the Local Governmental Unit has, at a minimum, filed applications for any permits or environmental reviews applicable to the project;
 - c. the project scope of work, project evaluation report or the comprehensive wastewater management planning for the project; and
 - d. the project schedule that demonstrates to the Department's satisfaction that the project will commence no later than six months from the expected date of issuance of a project approval certificate, assuming the Department determines that the project is approvable.
4. Supplemental Information such as title to project site or evidence of some other appropriate property interest in the project site, any necessary inter-municipal agreements, documentation related to the user charge system, *etc.*
5. Applicant Certification as to the completeness of the application in accordance with the Department's application form and requirements, and as to the accuracy and completeness of the information provided by the applicant in its application.

44.12: continued

(b) The Department may deny any application which it determines to be incomplete. Prior to taking final action on an application, the Department may request the applicant to clarify and/or supplement information contained in its application, or to attend an informal conference(s) with the Department to discuss the application.

(2) Project Approval Certificate.

(a) The Department's approval of an applicant's project shall be contained in a Project Approval Certificate issued to the Trust. As provided in the Act, the Department's issuance of a Project Approval Certificate is a prior necessary condition to the award of a loan by the Trust to finance the costs of a project.

(b) The Department shall not approve a project for a loan from the Trust unless the Local Governmental Unit:

1. demonstrates that its project is consistent with existing state, regional and local water resource and wastewater planning requirements as described in 310 CMR 44.09(2) ("Consistency of SRF Projects with Water Resource and Wastewater Planning Requirements"); and
2. adopts a user charge system in accordance with the Department guidance which is designed to provide adequate revenues required for operation and maintenance, including replacement, of the project.

The Department reserves the discretion to determine that the user charge system requirement does not apply to certain Nonpoint Source Projects (*e.g.*, a stormwater control project that is not providing ongoing service to an identified set of users).

(c) In addition to approving the project, the Project Approval Certificate shall certify those costs of the project determined by the Department to be eligible for assistance from a loan, and those costs determined to be eligible for a subsidy or interest rate under the loan. The Project Approval Certificate shall also identify the level of subsidy applicable to the project in accordance with M.G.L. c. 29C and, as applicable, any additional subsidy applicable to the project authorized by special law. Subsidy is expressed as an interest rate in the Project Approval Certificate.

(d) The Project Approval Certificate may also contain such other conditions and limitations as the Department deems necessary to ensure compliance by a Local Governmental Unit with 310 CMR 44.00 and with all other federal and state statutes and regulations applicable to the construction and operation of the project. Such conditions shall include, but are not limited to, a project completion schedule which shall require the Local Governmental Unit to initiate the project, as determined by the Department, no later than six months from the date of the Department's issuance of the Project Approval Certificate. The Department, at its sole discretion, may extend this six-month deadline based on evidence demonstrating to the Department's satisfaction that the delay is beyond the reasonable control of and without the fault of the Local Governmental Unit or its contractors or other agents.

(e) The Department shall issue the Project Approval Certificate to the Trust for its action and forward a copy of such certificate to the Local Governmental Unit concurrently. The Trust shall thereafter enter into a loan commitment with a Local Governmental Unit consistent with the terms of the Project Approval Certificate. Following entry into a binding loan commitment, the Trust shall prepare and deliver a loan agreement for execution by the Local Governmental Unit, consistent with the terms of the Project Approval Certificate as incorporated into the Department's Project Regulatory Agreement.

(3) Project Regulatory Agreement.

(a) On or prior to the date of a loan from the Trust for a project approved by the Department, the Local Governmental Unit and the Department shall execute and deliver to the Trust a Project Regulatory Agreement relating to the Department's regulation and supervision of the project in accordance with 310 CMR 44.00. The Project Regulatory Agreement shall be in form and substance satisfactory to the Department. The Project Regulatory Agreement shall be incorporated by reference in the Trust loan agreement and failure by the Local Governmental Unit to comply with the Project Regulatory Agreement shall constitute an event of default under the loan agreement.

44.12: continued

(b) The Project Regulatory Agreement shall contain provisions consistent with the Project Approval Certificate. In addition to incorporating pertinent conditions in the Project Approval Certificate, the Project Regulatory Agreement may also contain such other conditions and limitations as the Department deems necessary for its regulation and supervision of the project in accordance with 310 CMR 44.00, including but not limited to:

1. the schedule for disbursement of loan proceeds;
2. the payment requisition requirements and procedures;
3. the requirements and procedures for the Department's audit of payment requisitions;
4. covenants by the Local Governmental Unit related to the project, including a covenant to comply with all federal and state statutes and regulations applicable to the Local Governmental Unit's construction and operation of the project;
5. the measures available to the Department to remedy a default by the Local Governmental Unit under the Project Regulatory Agreement;
6. any requirements regarding certification of a project's performance in accordance with the Department's approval;
7. compliance with the Department's guidance on the use of and requirements for professional subagreements.

45.01: Introduction

The federal Safe Drinking Water Act amendments of 1996 authorized a Drinking Water State Revolving Fund program to assist eligible public water systems to finance the cost of the infrastructure needed to achieve or maintain compliance with the SDWA requirements and protect public health. The Massachusetts Drinking Water State Revolving Fund (DWSRF) Program is a federal-state partnership that provides low-cost financing to help community public water suppliers. The DWSRF Program is jointly administered through the Clean Water Trust by the Commissioner of the Department of Environmental Protection (Department), the State Treasurer, and the Secretary of Energy and Environmental Affairs pursuant to M.G.L. c. 29C, § 2. Financial assistance is available for engineering, design, and construction of drinking water projects. Every summer, the Department solicits projects from Massachusetts municipalities and community water systems (with at least 15 residential connections) to be considered for subsidized loans for infrastructure projects. After evaluating the project requests submitted in response to the annual solicitation, the Department develops a list of projects eligible to receive financial assistance. From this annual list, and on the basis of projects' readiness to proceed and priority rating, the Department assigns projects to a fundable list called the Intended Use Plan Project Listing (IUP). Projects placed on the IUP are eligible to apply for financing in the coming year, with the total cost of all projects on the IUP not to exceed the amount of funding available for that year. To qualify for placement on the IUP, a project must have a high enough ranking, have received a local funding appropriation or be scheduled for funding appropriation by June 30th of the coming year, and the applicant must be able to file a complete loan application no later than October 15th of the coming year.

45.02: Purpose and Applicability

310 CMR 45.00 implements the DWSRF Program. Under federal and state law, the DWSRF Program's goals are to protect public health and strengthen compliance with drinking water requirements, while addressing the Commonwealth's drinking water needs. The DWSRF Program incorporates affordability and watershed management priorities. 310 CMR 45.00 sets forth the Department's authority and responsibilities to select, approve and regulate drinking water projects receiving financial assistance from the DWSRF.

310 CMR 45.00 does not apply to the use of set-asides by the Department and the Trust, which is addressed in the pertinent portion of the IUP submitted by the Department and the Trust to EPA on an annual basis after public review and comment. In the event that the set-aside portion of the IUP allocates funding for loans to systems to acquire land or conservation easements or to implement source water protection measures or to implement recommendations in source water quality protection partnership petitions submitted to the Department, the project selection criteria for such loans will also be subject to public review and comment as a component of the IUP. The Department reserves the right to use relevant requirements and procedures contained in 310 CMR 45.00 in its selection, approval and administration of projects receiving loans pursuant to the set-aside portion of the IUP.

The Department may issue supplemental policies, guidelines, guidance documents and/or administrative procedures to assist in its implementation and administration of 310 CMR 45.00 and its use of set-asides.

45.03: Definitions

For the purposes of 310 CMR 45.00, the following terms shall have the meaning set forth in 310 CMR 45.00 unless the context clearly requires otherwise.

310 CMR 22.00: *Drinking Water*. The Department's regulations governing the approval, use and operation of drinking water sources and public water systems.

Best Management Practices (BMPs). A method, measure or practice in water management, or a combination thereof, established and published by the Trust pursuant to St. 2014, c. 259, § 55. The Trust's BMPs can be found on the Official Website of the Treasurer and Receiver General of Massachusetts.

Community Water System. A community water system is a Public Water System as defined in 310 CMR 22.02: *Definitions*, which serves at least 15 service connections used by year-round residents or regularly serves at least 25 year-round residents.

Cost. Any or all costs, whenever incurred, approved by the Department in accordance with M.G.L. c. 21, § 27A, of carrying out a drinking water project, including, without limiting the generality of the foregoing: the costs for planning, preparation of studies and surveys, design, construction, facilities, improvement and rehabilitation, acquisition of real property, personal property, materials, machinery or equipment, start-up costs, demolitions and relocations, reasonable reserves and working capital, interest on loans, local governmental obligations and notes in anticipation of thereof prior to and during construction of such project or prior to the date of such loan, if later, administrative, legal and financing expenses, and other expenses necessary or incidental to the aforesaid.

Department. The Massachusetts Department of Environmental Protection.

Drinking Water Project. Any project of a type or category which the Department has determined, consistent with guidance issued by EPA in accordance with the SDWA, will facilitate compliance with national primary drinking water regulations under § 1412 of the SDWA, 42 U.S.C. § 300g-1 or otherwise significantly further the health protection objectives of the SDWA or 310 CMR 22.00: *Drinking Water*.

Eligible Borrower. Any LGU or other community water system which is authorized to own, operate, finance or otherwise implement a drinking water project.

EPA. The U.S. Environmental Protection Agency.

Federal Cross-cutters. Federal laws and authorities that apply by their own terms to projects receiving federal financial assistance such as the federal SRF. Such federal cross-cutters include, but are not limited to, environmental laws and authorities such as the Clean Air Act, Safe Drinking Water Act, Clean Water Act, Endangered Species Act, Coastal Zone Management Act, Wild and Scenic Rivers Act and the National Historic Preservation Act of 1966, and economic and miscellaneous authorities such as the procurement and contractor requirements associated with financial assistance programs under the Safe Drinking Water Act, Clean Water Act and Clean Air Act.

Grant Equivalency or Financial Equivalent of a Grant. The standard measure used by the Department and the Trust to determine the amount of subsidy applicable to the eligible costs of a project under the loan in accordance with St. 1998, c. 78.

Intended Use Plan or IUP. An annual plan submitted by the Trust to EPA pursuant to § 1452(b) of the SDWA, 42 U.S.C. § 300j-12(b), which identifies the intended use of the amounts available to the Fund as determined from time to time by the Trust and derived from the federal capitalization grant, state match amounts, loan repayments, investment earnings and any other moneys deposited by the Trust available to fund projects eligible for funding under St. 1998, c. 78. The IUP includes a listing of projects to receive financial assistance from the Fund, the distribution and use of the funds for set-aside activities, and a description of the short and long term goals for the use of project and set-aside funds.

45.03: continued

Intended Use Plan Project Listing. Those projects identified by the Department for inclusion on the fundable portion of the calendar year priority list pursuant to 310 CMR 45.05(2).

Loan. Any form of financial assistance subject to repayment, in whole or in part, which is provided by the Trust to an eligible borrower for all or any part of the cost of a drinking water project. A loan may provide for planning, construction, bridge or permanent financing.

Loan Agreement. Any agreement entered into between the Trust and an eligible borrower pertaining to a loan or the purchase and delivery of local governmental obligations or other instruments evidencing or securing a loan.

Loan Commitment. A written commitment by the Trust to make a loan to a LGU or public water system to finance a project approved by the Department on terms consistent with the Department's Project Approval Certificate.

Local Government Unit (LGU). Any town, city, district, commission, agency, authority, board or other instrumentality of the Commonwealth or of any of its political subdivisions, including any regional local governmental unit as defined in M.G.L. c. 29C, § 1, which is responsible for the ownership or operation of a drinking water project and is authorized by a bond act to finance all or any part of the cost thereof through the issue of bonds.

Maximum Contaminant Level (MCL). The maximum permissible level of a contaminant in water which is delivered to any user of a public water system, as published in 310 CMR 22.00: *Drinking Water*.

MEPA. The Massachusetts Environmental Policy Act, M.G.L. c. 30, §§ 61 through 62H.

Project Approval Certificate. A certificate issued by the Department to the Trust certifying that a project is approved for financing by the Trust and that the costs of the project are eligible for financial assistance pursuant to M.G.L. c. 29C, § 6.

Project Regulatory Agreement. An agreement between the Department and an eligible borrower, executed and delivered to the Trust on or prior to the date of a loan from the Trust to the eligible borrower to finance a drinking water project approved by the Department, which includes a disbursement schedule, procedures for approval and payment of requisitions, conditions related to the borrower's compliance with the Department's regulations and other federal and state statutes and regulations applicable to the construction and operation of the project, and provision for the Department's supervision of the project in accordance with 310 CMR 45.00.

Public Water System. A system for the provision to the public of water for human consumption, through pipes or other constructed conveyances, if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days of the year, as further defined in 310 CMR 22.02: *Definitions*.

Safe Drinking Water Act or SDWA. Title XIV of the Federal Public Health Service Act, commonly known as the Safe Drinking Water Act, 42 U.S.C. 300f *et seq.*

Set-asides. The use of DWSRF federal capitalization grant funds and matching state funds, as applicable, for a range of specific activities identified in § 1452 of the SDWA to encourage source water protection and other Department drinking water program activities.

Small System. A public water system which regularly serves fewer than 10,000 persons.

Trust. The Massachusetts Clean Water Trust established by M.G.L. c. 29C. The Trust administers the Commonwealth's SRF programs, which are authorized by federal legislation, the Water Quality Act of 1987 for the clean water SRF and the Safe Drinking Water Act of 1996 for the drinking water SRF, to provide financial assistance to borrowers for wastewater projects and drinking water projects.

45.04: Eligible Projects

(1) Any drinking water project of an eligible borrower is eligible to receive financial assistance from the Trust pursuant to M.G.L. c. 29C, § 18 and 310 CMR 45.00. The Department has determined that such eligible projects include, but are not limited to:

- (a) Projects to address or prevent violations of the public health standards in 310 CMR 22.00: *Drinking Water* and the SDWA, including projects to come into or maintain compliance with MCLs and other requirements for contaminants with acute health effects (e.g., the Surface Water Treatment Rule, the Total Coliform Rule, and nitrate standards) and for contaminants with chronic health effects (e.g., the Lead and Copper Rule and the Disinfection Byproducts Rule), including the costs of system activities determined by the Department to constitute an effective alternative to providing treatment to come into or maintain compliance with 310 CMR 22.00: *Drinking Water* and the SDWA;
- (b) Projects to replace aging infrastructure, if such projects are needed to maintain compliance or further the public health goals and requirements in 310 CMR 22.00: *Drinking Water* and the SDWA, including projects to rehabilitate or develop sources to replace contaminated sources, install or upgrade treatment or storage facilities, and install or replace transmission and distribution pipes to prevent contamination or improve water pressure to safe levels;
- (c) Projects to consolidate and/or restructure a public water system (e.g., to address a system with contaminated water supply or when a system is in noncompliance or lacks adequate technical, managerial and financial capability to maintain compliance);
- (d) Land acquisition, but only if the Department determines that such land is integral to a project and necessary to meet or maintain compliance and further the protection of public health (e.g., land needed to locate eligible treatment or distribution projects);
- (e) The planning and/or design for any eligible project;
- (f) Any eligible project which uses a single contractor to design, build and/or operate the project facilities, provided the procurement and use of such contractor is authorized by law, the project conforms with the state constitutional requirements governing the use of Commonwealth funds for public purposes, and the project otherwise meets the requirements of 310 CMR 45.00. The operation and maintenance costs of such projects shall be ineligible for DWSRF assistance;
- (g) Projects that use regional water resources to offset, by at least 100%, the impact of water withdrawals on local water resources in the watershed basin of the receiving community;
- (h) Projects that are intended to provide public water supply to consumers whose groundwater or public or private wells are impacted by contamination that poses an unacceptable health risk, as determined by the Department;
- (i) Innovative water projects that utilize new technology and which improve environmental or treatment quality, reduce costs, increase access and availability of water, conserve water or energy or improve management of drinking water; provided, that the technology has not been commercially deployed, other than as a pilot project, previously in the Commonwealth;
- (j) Projects that are necessary to connect an LGU to a facility of the Massachusetts Water Resources Authority, if the LGU has paid or committed to pay the entry fee; and
- (k) Projects that are a direct result of a disaster affecting the service area that is the subject of a declaration of emergency by the Governor.

(2) Unless otherwise determined by the Department consistent with 310 CMR 45.03: Drinking Water Project, the following projects and activities are not eligible to receive financial assistance pursuant to 310 CMR 45.00:

- (a) The construction, rehabilitation or maintenance of dams;
- (b) The purchase of water rights, unless the water rights are owned by a public water system that is being purchased by an eligible borrower through consolidation as part of the eligible borrower's capacity development strategy;
- (c) Reservoirs, except for finished water reservoirs and those reservoirs that are part of the treatment process and are located on the treatment facility property;
- (d) Laboratory fees for monitoring;
- (e) Operation and maintenance costs;
- (f) Projects needed primarily for fire protection;
- (g) Projects for systems which the Department determines lack adequate technical, managerial and financial capability, unless the Department determines that financial assistance from the DWSRF will ensure compliance over the long term;

45.04: continued

- (h) Projects for systems in significant noncompliance, as determined by the Department, unless the Department determines that the project will enable the system to return to compliance and that the system will maintain an adequate level of technical, managerial and financial capability to maintain compliance; and
- (i) Projects primarily intended solely to serve future growth.

45.05: Priority System

(1) Establishment of Calendar Year Priority List.

- (a) Prior to the beginning of each calendar year, the Department shall establish a single, annual list of projects prioritized to receive financial assistance pursuant to 310 CMR 45.00.
- (b) In establishing the priority list, the Department may require eligible borrowers to submit any information deemed necessary by the Department for project evaluation, including but not limited to, information which addresses the proposed project's compliance with the IUP Project Listing criteria in 310 CMR 45.05(2) and the Project Selection Criteria in 310 CMR 45.06. The Department may establish a reasonable deadline for its receipt of such information, and may decline to evaluate and prioritize a project if the Department determines that the eligible borrower has failed to provide sufficient information.
- (c) Prior to adopting the priority list, the Department shall conduct a public hearing to receive and consider public comment on the proposed list. The Department will ensure that notice of the public hearing will be published in one or more newspapers of general circulation 30 days prior to the date of the hearing.

(2) Intended Use Plan Project Listing.

- (a) Eligible projects which the Department finds are ready to proceed and for which funds are available in the calendar year in which the priority list is established shall be placed on the IUP Project Listing portion of the priority list. The Department reserves the right to establish an IUP Project Listing that contains fewer projects than would use the total amount of funding available in the relevant calendar year, or, alternatively, to expand the IUP Project Listing during the course of the relevant calendar year based on an additional allocation of available funding.
- (b) The eligible borrower proposing the project must show in its application that its project meets each of the following criteria in order for the Department to place the project on the IUP Project Listing:
 - 1. As determined by the Department, the project's benefits to public health and/or drinking water quality, as evidenced by its ranking on the priority list, are sufficiently high to warrant its funding as a priority in the relevant calendar year;
 - 2. The eligible borrower has already obtained its local funding authorization or otherwise committed funding for the project, or has provided a specific schedule to obtain such funding authorization or funding commitment by June 30th of the relevant calendar year; and
 - 3. The eligible borrower demonstrates to the Department's satisfaction that its project is sufficiently advanced in its implementation such that the LGU or public water system will file a complete loan application with the Department for the project by October 15th of the relevant calendar year.

A complete application includes, as applicable, approvable plans and specifications for the project and evidence that the eligible borrower has, at a minimum, filed applications for any permits or environmental reviews applicable to the project. As provided in 310 CMR 45.12(1)(b), the Department may deny any application which it determines to be incomplete.

- (c) In the event that a project placed on an IUP Project Listing fails during the course of the calendar year to meet one or more of the criteria in 310 CMR 45.05(2)(b), the project may be removed from the IUP Project Listing and returned to the applicable priority level on the priority list. In such event, the Department reserves the right to raise one or more project(s) which are determined by the Department to be of the highest priority and which meet the criteria in 310 CMR 45.05(2)(b), consistent with available funding, to the IUP Project Listing, provided the Department shall raise a small system project which meets the criteria in 310 CMR 45.05(2)(b) before an otherwise higher ranked project if the funding of such

45.05: continued

small system project is needed to meet the 15% allocation of funds for small systems, as provided in the SDWA. Subject to the availability of funding and the project's priority, the Department further reserves the right to restore any project removed from the IUP Project Listing for failure to meet the criteria in 310 CMR 45.05(2)(b) if the project thereafter meets those criteria prior to the end of the relevant calendar year.

(d) The implementation of some projects on the IUP Project Listing will take place over two years or more. For such multi-year projects, the Department will limit the amount of actual funding reserved for the project on each annual IUP Project Listing to the amount needed to fund the project for one year. In the event that a multi-year project receives a project approval certificate from the Department by the end of the relevant calendar year, the Department will reserve another annual increment(s) of funding for the project on subsequent calendar year IUP Project Listings, subject to the availability of funding, and provided the project is implemented in accordance with the schedule in the project approval certificate, as determined by the Department. The limitation on financial assistance in 310 CMR 45.05(3) shall apply to any amounts reserved as annual increments of funding for a multi-year project on subsequent calendar year IUP Project Listings.

(3) Limitation on Financial Assistance.

(a) No eligible borrower shall receive Department approval for financial assistance from the Trust for a project or projects in a calendar year in any amount in excess of 25% of the total financial assistance authorized on the IUP Project Listing portion of the priority list in that calendar year, including any amounts reserved as annual increments of funding for a multi-year project on subsequent calendar year IUP Project Listings.

(b) The Department reserves the right to waive the limitation on financial assistance set forth in 310 CMR 45.05(3)(a), in whole or in part, if the Department determines that one or more projects on the IUP Project Listing portion of the applicable priority list has failed or will fail to meet the criteria in 310 CMR 45.05(2)(b) by October 15th in the relevant calendar year, or if the Department allocates additional available funding to the IUP Project Listing during the course of the relevant calendar year.

45.06: Project Selection Criteria

(1) Except as provided in 310 CMR 45.06(2) through (4), the Department will use the evaluation criteria set forth in 310 CMR 45.06(1)(a) through (d) to determine a project's placement on the calendar year priority list. The Department, through written guidance, will assign a numerical point range to each of the evaluation criteria in 310 CMR 45.06(a) which will be used to further determine a project's placement on the priority list. Such Department guidance may also address tie breakers for projects with the same point score rating.

(a) Public Health Criteria.

1. The extent to which the project will eliminate or mitigate a serious risk to public health. Relevant factors to consider may include but are not limited to:

- a. The severity of the public health problem the project is intended to address (*e.g.*, the nature and frequency of MCL violations).
- b. The size and character of the population threatened or negatively impacted by the identified risk to public health (*e.g.*, the number of children, the elderly or persons with pre-existing health risks served by the system), and the extent to which the project will eliminate or mitigate the public health risk to the identified population.
- c. The extent to which the project demonstrably eliminates or mitigates the identified serious risk to public health in an effective and timely manner.

(b) Compliance Criteria.

1. The extent to which the project is needed to come into or maintain compliance with 310 CMR 22.00: *Drinking Water*, the SDWA or other required or related federal and/or state permit(s), approvals, regulations and requirements, and the effect of compliance on public health and drinking water quality. Relevant factors to consider may include but are not limited to:

- a. The extent to which the project is needed to ensure compliance with an existing federal or state court or administrative order.
- b. The extent to which the project is needed to come into or maintain compliance with 310 CMR 22.00: *Drinking Water*, the SWDA, or other required or related federal or state permit or approval, including the Department's approval of a new drinking water source.

45.06: continued

c. The extent to which the project's maintenance of compliance with 310 CMR 22.00: *Drinking Water*, the SDWA, or other required or related federal or state order, permit, approval demonstrably benefits or protects drinking water quality and/or public health (e.g., projects which upgrade or rehabilitate water treatment or distribution facilities and are designed to keep a system in compliance on an ongoing basis).

(c) Affordability Criteria.

1. The extent to which DWSRF financial assistance for the project will assist systems whose service area consists of users with median household income (MHI) of 80% or less of the state median household income for non-metropolitan areas or as otherwise established by the Trust.

2. The extent to which the cost of the project will result in increased water rates to users of the system of an eligible borrower. Relevant factors to consider may include, but are not limited to, whether the annual user charges will fall within a range of 1% to 1.75% of such users' MHI.

(d) Other Program and Implementation Criteria.

1. Whether the project is to consolidate and/or restructure a public water system (e.g., to address a system with a contaminated water supply or when a system is in noncompliance or lacks adequate technical, managerial and financial capability to maintain compliance).

2. The extent to which the project implements or is consistent with one or more current watershed management plans (e.g., DEP basin plans) and/or watershed protection plans (e.g., local Zone II land use controls, comprehensive conservation management plans), or otherwise effectively addresses a watershed priority, as determined by the Department.

3. The extent to which the project is consistent with local and regional growth and/or infrastructure plans, and promotes the rehabilitation and revitalization of infrastructure, structures, sites, and areas previously developed and still suitable for economic (re)use, as provided in Executive Order 385: *Growth Planning*.

4. Whether the project constitutes or is a component of a multi-community or regional approach to addressing the identified public health or drinking water quality problem.

(2) Since certain of the Project Selection Criteria in 310 CMR 45.06(1) do not apply to eligible planning and/or design projects, the Department will limit its evaluation of such projects to the relevant criteria.

(3) In establishing the calendar year priority list pursuant to 310 CMR 45.04(1), the Department may:

(a) identify project categories and/or watersheds as funding priorities in a particular calendar year, consistent with the Project Selection Criteria in 310 CMR 45.06(1); and

(b) modify and/or further specify the factors or point system to be used to evaluate the extent to which a project meets the Project Selection Criteria in 310 CMR 45.06(1), including any project or program priorities identified by the Department as a funding priority in a particular calendar year pursuant to 310 CMR 45.06(3) and (4).

(4) Before finally adopting any substantial modification to the Project Selection Criteria and/or the related point system, the Department will notice such modifications in the Environmental Monitor and to the regulated community and provide an opportunity for public comment for a period of not less than 30 days, including conducting a minimum of one public hearing.

45.07: Financing Criteria

(1) In General. The Trust is authorized to structure the debt service costs on loans and other forms of financial assistance for Eligible Projects that provide the financial equivalent of a loan made at an interest rate equal to 2%, which may include principal forgiveness. Notwithstanding the foregoing, subject to the limits on contract assistance provided in M.G.L. c. 29C, § 6, the Trust may provide additional financial assistance that is the financial equivalent of a loan made at an interest rate less than 2%, which may include principal forgiveness, as determined by the Trust, for Qualifying Designated Projects, as provided in 310 CMR 45.07(2).

45.07: continued

(2) Qualifying Designated Projects.

(a) Subject to the limits on contract assistance provided in M.G.L. c. 29C, § 6, a LGU applying for financial assistance for a Qualifying Designated Project on the IUP for calendar year 2017 or later, unless otherwise authorized by the Legislature, is eligible for additional financial assistance in accordance with 310 CMR 45.07(2) that may include loans and other forms of subsidies at the financial equivalent of a loan made at an interest rate less than 2% or other additional subsidies such as principal forgiveness, as determined by the Trust, if the LGU demonstrates to the Department's satisfaction that it meets all of the following criteria:

1. the project is consistent with the current priorities established by the Trust, as set forth in the Department's annual project solicitation;
2. the project implements Best Management Practices; and
3. the LGU meets the Trust's affordability criteria established pursuant to § 1452(d) of the SDWA, 42 U.S.C. § 300j-12(d), but only to the extent required by federal law.

(b) Projects considered for the additional subsidies described in 310 CMR 45.07(2)(a) may include eligible projects described in 310 CMR 45.04(1)(g) through (k).

45.08: Eligible Project Costs

(1) Costs which the Department determines are necessary for the completion of the project are eligible for financing in the loan and to receive a subsidy under the loan.

(2) Costs which the Department determines are not necessary for completion of the project are ineligible for financing in the loan.

(3) Project costs incurred by an eligible borrower prior to the date of issuance of the Department's project approval certificate are not eligible for a subsidy under the loan, except as follows:

(a) project design, including preliminary engineering and a project evaluation report, project construction or related professional services may be approved by the Department prior to the issuance of a project approval certificate as project costs eligible for subsidy if:

1. The eligible borrower has submitted a written and adequately substantiated request for approval;
2. The Department's written approval is obtained before initiation of the project and award of any loan for the project; and
3. The project is included and maintains its status on the current calendar year Intended Use Plan Project Listing.

(b) The Department's prior approval of costs in accordance with 310 CMR 45.08(3)(a) does not constitute a commitment to approve financial assistance for any project. Instead, such costs will be considered eligible project costs only if a loan is made by the Trust for the project. Accordingly, an eligible borrower receiving the Department's prior approval of costs in accordance with 310 CMR 45.08(3)(a) proceeds at its own risk.

(4) Costs incurred in excess of the approved project costs are not eligible for financing by the loan unless the project approval certificate and the loan are both amended to include the cost increase.

(5) As a loan recipient, an eligible borrower shall exercise its best efforts to accomplish the work program set forth in the loan within the loan amount. Whenever a loan recipient reasonably believes that its project costs will exceed or be substantially less than the approved loan amount, it must promptly notify the Department in writing. The loan recipient must submit revised cost estimates for the project to the Department as soon thereafter as practicable. Neither the Department nor the Trust is under any obligation to approve costs in excess of the amount previously approved in the project approval certificate and loan.

(6) The final eligible project costs shall be the eligible costs approved by the Department upon completion of the project, unless audited. If such project costs are audited, the final eligible costs shall be the eligible costs approved by the Department at the completion of the audit.

45.09: Project Evaluation Report

- (1) Unless otherwise determined by the Department, the planning information required for projects receiving financial assistance pursuant to 310 CMR 45.00 shall be contained in a Project Evaluation Report.
- (2) The Department will determine the required scope of a Project Evaluation Report based on the nature and duration of the proposed project. Unless otherwise determined by the Department, a complete Project Evaluation Report generally must include:
 - (a) A description of the proposed project;
 - (b) An analysis of the cost-effectiveness of the project and the alternatives considered;
 - (c) For the selected alternative, a concise description which addresses, at a minimum, the following areas:
 1. the relevant design parameters for the project;
 2. the estimated capital construction and operation and maintenance costs of the project (identifying possible federal, state, local, and other shares), and a description of the manner in which costs will be financed;
 3. the cost impacts on users of the system; and
 4. the institutional, financial, legal and management arrangements necessary for successful implementation of the project.
 - (d) A public participation program that includes, at a minimum:
 1. a public informational meeting to discuss the project alternatives and their environmental impact; and
 2. a subsequent public hearing on the selected proposed project, including its environmental impact.

45.10: Environmental Review and Federal Cross-cutter Requirements

- (1) Environmental Review Requirements. All projects approved by the Department to receive a loan from the Trust shall, at a minimum, comply with the requirements of MEPA and 301 CMR 11.00: *MEPA Regulations*. In addition, a public hearing shall be held on the project if the Department determines that the project is controversial, or if the Department otherwise determines that a hearing is in the public interest. The Department may also require the eligible borrower to consider project alternatives and to provide the public an opportunity to comment on such alternatives.
- (2) Federal Cross-cutter Requirements. All projects to be funded by funds directly made available by federal capitalization grants shall comply with all federal cross-cutters applicable to the project, as determined by the Department. The Department may require any other project to comply with one or more of the federal cross-cutters deemed applicable to the project by the Department.

45.11: Affirmative Action and Disadvantaged Business Enterprise Requirements

- (1) Eligible borrowers receiving financial assistance from the Trust shall comply with applicable federal and state anti-discrimination laws and requirements, including the Department's requirements in the areas of Affirmative Action in employment and Disadvantaged Business Enterprise (DBE) use in contracting.
 - (a) In the area of Affirmative Action, such eligible borrowers shall adopt, for use in all contracts for \$50,000 or more, an adapted version of the Commonwealth of Massachusetts' *Supplemental Equal Employment Opportunity Anti-discrimination and Affirmative Action Program*. The contracts may include minority workforce percentages greater than those required for the geographical locations of the construction project as set forth in the Supplemental Program.
 - (b) In the area of DBE utilization, eligible borrowers shall make positive efforts to use DBEs for use in all construction, service and supply subagreements for the project financed by the loan.

Such efforts should achieve the applicable federal and/or state goals established for DBE participation, but, at a minimum, should allow DBEs the maximum feasible opportunity to compete for project subagreements.

45.11: continued

(2) An eligible borrower receiving a loan from the Trust shall promptly notify the Department in writing when it has good reason to believe that its positive efforts to use DBEs in the subagreements for the project will not achieve one or both of the applicable DBE utilization goals.

45.12: Project Approval and Regulation

(1) Application.

(a) An eligible borrower whose project is on the IUP Project Listing portion of the calendar year priority list must first apply to the Department to receive a loan from the Trust to finance costs of the project. The eligible borrower must file a complete application with the Department containing the following information and documentation:

1. General Information which must include evidence of a funding authorization or commitment by the eligible borrower sufficient to cover the project cost, and, as applicable, certification of the authority of the eligible borrower to file the application.
2. Financial Information pertinent to the Trust's evaluation of the eligible borrower's ability to repay the loan.
3. Project Information which demonstrates to the Department's satisfaction that the project is sufficiently advanced in its implementation, including, as applicable:
 - a. approvable plans and specifications for the project;
 - b. evidence that the eligible borrower has, at a minimum, filed applications for any permits or environmental reviews applicable to the project; and
 - c. a project schedule that demonstrates to the Department's satisfaction that the project will commence no later than six months from the expected date of issuance of a project approval certificate, assuming the Department determines that the project is approvable.
4. Supplemental Information such as title to the project site or evidence of some other appropriate property interest in the project site, any necessary intermunicipal agreements, documentation related to the user charge system, *etc.*
5. Applicant Certification as to the completeness of the application in accordance with the Department's application form and requirements, and as to the accuracy and completeness of the information provided by the eligible borrower in its application.

(b) The Department may deny any application which it determines to be incomplete. Prior to taking final action on an application, the Department may request the eligible borrower to clarify and/or supplement information contained in its application, or to attend an informal conference(s) with the Department to discuss the application.

(2) Project Approval Certificate.

(a) The Department's approval of an applicant's project shall be contained in a Project Approval Certificate issued to the Trust. The Department's issuance of a Project Approval Certificate is a necessary prior condition to the award of a loan by the Trust to finance the costs of a project.

(b) The Department shall not approve a project for a loan from the Trust unless the eligible borrower adopts a user charge system which is designed to provide adequate revenues required for operation and maintenance, including replacement, of the project, and is based on a flat or on an ascending unit rate per volume. This requirement does not apply to any project for which a user charge system is inapplicable, as determined by the Department.

(c) In addition to approving the project, the Project Approval Certificate shall certify those costs of the project determined by the Department to be eligible for assistance from a loan, and those costs determined to be eligible for a subsidy under the loan. The Project Approval Certificate shall also identify the level of subsidy applicable to the project in accordance with M.G.L. c. 29C and, as applicable, any additional subsidy applicable to the project authorized by special law. Subsidy is expressed as a grant equivalency percentage in the Project Approval Certificate.

(d) The Project Approval Certificate may also contain such other conditions and limitations as the Department deems necessary to ensure compliance by an eligible borrower with 310 CMR 45.00 and with all other federal and state statutes and regulations applicable to the construction and operation of the project. Such conditions shall include, but are not limited to, a project completion schedule which shall require the eligible borrower to initiate the project, as determined by the Department, no later than six months from the date of the Department's issuance of the Project Approval Certificate.

45.12: continued

(e) The Department shall issue the Project Approval Certificate to the Trust for its action and concurrently forward a copy of such certificate to the eligible borrower. The Trust shall thereafter enter into a loan commitment with an eligible borrower consistent with the terms of the Project Approval Certificate. Following entry into a binding loan commitment, the Trust shall prepare and deliver a loan agreement for execution by the eligible borrower, consistent with the terms of the Project Approval Certificate as incorporated into the Department's Project Regulatory Agreement.

(3) Project Regulatory Agreement.

(a) On or prior to the date of a loan from the Trust for a project approved by the Department, the eligible borrower and the Department shall execute and deliver to the Trust a Project Regulatory Agreement relating to the Department's regulation and supervision of the project in accordance with 310 CMR 45.00. The Project Regulatory Agreement shall be in form and substance satisfactory to the Department. The Project Regulatory Agreement shall be incorporated by reference in the Trust loan agreement and failure by the LGU or public water system to comply with the Project Regulatory Agreement shall constitute an event of default under the loan agreement.

(b) The Project Regulatory Agreement shall contain provisions consistent with the Project Approval Certificate. In addition to incorporating pertinent conditions in the Project Approval Certificate, the Project Regulatory Agreement may also contain such other conditions and limitations as the Department deems necessary for its regulation and supervision of the project in accordance with 310 CMR 45.00, including but not limited to:

1. the schedule for disbursement of loan proceeds;
2. the payment requisition requirements and procedures;
3. the requirements and procedures for the Department's audit of payment requisitions;
4. covenants by the eligible borrower related to the project, including a covenant to comply with all federal and state statutes and regulations applicable to the eligible borrower's construction and operation of the project;
5. the measures available to the Department to remedy a default by the eligible borrower under the Project Regulatory Agreement;
6. any requirements regarding certification of a project's performance in accordance with the Department's approval; and
7. compliance with the Department's guidance on the use of and requirements for professional subagreements.

REGULATORY AUTHORITY

310 CMR 45.00: M.G.L. c. 29C, § 18.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

310 CMR 46.00: CERTIFICATION OF WELL DRILLERS AND FILING OF WELL COMPLETION REPORTS

Section

46.01: General

46.02: Certification Requirements

46.03: Certification Contents and Responsibilities

46.04: Criteria for Suspension or Revocation of Certification, Penalties and Other Actions

46.05: Severability

46.01: General

(1) Authority and Purpose. The Department of Environmental Protection (Department) promulgates 310 CMR 46.00 pursuant to the authority granted to it under M.G.L. c. 21G, §§ 14 and 20. 310 CMR 46.00, among other things, establish the qualifications for certification, information to be filed upon well completion, certification responsibilities, and criteria whereby a certification can be revoked.

(2) Definitions.

Abandoned Well means productive or non productive well, use of which has been permanently discontinued or has been out of service at least three years, is no longer suitable or used for monitoring purposes, or is a potential hazard to public health or safety and the situation cannot be corrected, such as well construction terminated before completion.

Alteration means changing the structural or hydraulic characteristics of a well, including well deepening, hydrofracturing, well casing extension, replacement, or repair.

Business of Well Drilling means charging a fee or advertising for hire the availability to drill productive or nonproductive wells in Massachusetts. The term drilling shall include both digging and drilling.

Casing means impervious durable pipe placed in a boring to prevent the walls from caving and to serve as a vertical conduit for water in the well.

Certified Well Driller means an individual authorized by certification with the Department, or under the predecessor regulations, 313 CMR 3.00, by registration with the Department of Conservation and Recreation, to engage in the business and supervise the drilling, altering, or decommissioning of wells in Massachusetts, and who signs and submits the well completion report to the Department and the municipal board of health.

Commissioner means the Commissioner of the Department of Environmental Protection.

Decommissioning means plugging of an abandoned well so that it will not serve as a conduit for movement of water to or from the well or between water bearing zones.

Department means the Department of Environmental Protection.

Drawdown means extent of lowering of the water surface in a well resulting from discharge of water in the well.

Engage in the Business means having a principal financial interest in the firm doing business.

Hydrofracturing means the science of entering a dry or low yield water well with special mechanical or inflatable well packers, used in conjunction with high pressure volume pumps to inject water for cleaning out existing seams and breaking into new aquifers.

46.01: continued

Immediate Field Supervision means providing sufficient onsite direction to the drilling crew and oversight of the drilling operation to ensure compliance with state regulations, municipal codes, and permit requirements on well location, drilling operation, use of equipment, materials, personnel, and quality of workmanship. For productive wells, this includes making certain that any required municipal permit has been obtained and state dig-safe regulations are complied with before starting the drilling operation, as well as performing onsite supervision of drilling startup, setting of casing, installing the protective well seal, and testing for well yield. For nonproductive wells, this includes the certified well driller inquiring with the municipality about regulations, and either obtaining or ensuring that any required municipal permit is obtained before starting the drilling operation, making certain that state dig-safe regulations are complied with, and providing sufficient technical oversight to ensure that guidelines contained in the Department's Standard References for Monitoring Wells are followed.

Municipal Board of Health means the municipal board established in compliance with M.G.L. c. 41, § 21 and M.G.L. c. 111, § 26. For purposes of 310 CMR 46.00, board of health includes a department of health established pursuant to M.G.L. c. 111, §§ 26A through 26E.

Nonproductive Well means either a well not having sufficient water available for its intended use or a well used for groundwater monitoring purposes or any well installation tool which is left in the ground for more than 48 hours after the installation. Guidelines for locating, drilling, installing, sampling, and decommissioning monitoring wells are contained in the Department's Standard References for Monitoring Wells.

Productive Well means a well having sufficient water available for its intended use.

Protective Well Seal means device or arrangement which seals the annular space between casing and rock, or between casing and unconsolidated formations, to prevent pollutants from entering the well.

Recovery means the time required after well pumping ceases for the water level in the well to rise to pre-pumping level.

Static Water Level means the distance from established ground surface to the stabilized water surface in a well which is neither being pumped nor under the influence of pumping.

Well or Waterwell means any hole or shaft constructed into the ground for the purpose of injecting or extracting water and other fluids, or to monitor groundwater levels and water quality. Not included are wells used on a temporary basis for the purpose of dewatering excavations, stabilizing hillsides or earth embankments, sampling soil vapors, or sampling groundwater if the installation tool is left in the ground less than 48 hours.

Well Completion means a well for which well data required for the well completion report has been obtained and the drilling rig is moved off the site at the end of the drilling operation.

Well Driller means any individual, corporation, company, association, trust, or partnership that drills, constructs, alters, or decommissions a well for a fee, or advertises for hire to provide such services in Massachusetts.

Well Drilling Rig means any power driven, percussion, rotary, digging, jetting, direct push, vibrating, hydrofracturing, or augering machine used in the construction, alteration or decommissioning of a well.

Well Yield means the smaller of two well test measurements to determine:

- (a) gallons per minute of water discharged while being pumped over a four hour period; and
- (b) gallons per minute of water discharged after a minimum of 1½ hours of well recovery.

46.02: Certification Requirements

- (1) Certification Required. Unless a holder of a certificate in accordance with 310 CMR 46.02, or a registration in accordance with the predecessor regulations, 313 CMR 3.00, no person shall engage in the business of well drilling in the Commonwealth. This certification requirement does not include wells used on a temporary basis for the purpose of dewatering excavations, stabilizing hillsides or earth embankments, sampling soil gases, or sampling groundwater if the installation tool is left in the ground less than 48 hours.
- (2) Requirements for Certification. To obtain a certificate, an applicant must show satisfactory evidence that the applicant has attained:
 - (a) experience in drilling wells in Massachusetts by being actively engaged in drilling of productive wells in Massachusetts under the immediate field supervision of a Massachusetts certified well driller for at least 36 months prior to application date;
 - (b) knowledge of well drilling by passing a written general examination, prepared and administered by the National Ground Water Association (NGWA), or by the Department; and
 - (c) competency in the drilling of wells sufficient to assume the function and duties of a certified well driller, attested to in a sworn affidavit by a Massachusetts certified well driller who supervised the applicant's work.
- (3) Waiver. The Department may waive certain requirements set forth in 310 CMR 46.02(2) when the Department receives satisfactory evidence under one of the following options that the applicant:
 - (a) is certified in another state with comparable certification requirements and well drilling conditions, has been certified in that state for a period of at least three years, and is in good standing. If certification requirements are not comparable, the Department shall require at least one year additional experience of being actively engaged in the drilling of productive wells in Massachusetts under the immediate field supervision of a Massachusetts certified well driller.
 - (b) was previously certified in Massachusetts within two years of receipt of application for reinstatement, and submits payment of fees in arrears as determined by the Department.
 - (c) is certified by NGWA as a Certified Well Driller, and beyond NGWA certification requirement, has at least one year additional experience of being actively engaged in drilling productive wells in Massachusetts under the immediate field supervision of a Massachusetts certified well driller.
- (4) Special Certification for Drilling Monitoring Wells Only. An applicant may apply for a special certificate for drilling monitoring wells only if the applicant has either:
 - (a) certification as a NGWA Certified Well Driller, including having passed the specialty examination on monitoring well construction; or
 - (b) equivalent certification from National Drilling Contractors Association (NDCA) and meets equivalent qualification requirements.
- (5) Temporary Certification. The Department may issue a temporary certificate for administrative purposes, provided the applicant has met qualifications set forth in 310 CMR 46.02(2), 310 CMR 46.02(3) or 310 CMR 46.02(4). A temporary certificate shall be valid for up to 90 days. The fee for a temporary certificate shall be the same as for an annual certification.

46.03: Certification Contents and Responsibilities

- (1) Certified Well Driller Identification.
 - (a) Certificate. To provide documentation of valid well driller certification, following the applicant's payment of the applicable fee, the Department will issue a Certificate to qualified applicants containing the name, address, and certification number of the certified well driller, type of well drilling for which the certification is valid, annual period of validation, and the signature of the Commissioner, or the Commissioner's designee. The Certificate is nontransferable, and the certification number shall not be re-assigned if a certification is not renewed.

46.03: continued

(b) Advertisement. Any advertising of availability for hire to drill wells in Massachusetts shall include the name and certification number of the certified well driller engaged in the business being advertised.

(c) Rig Permit and Rig Markings for Field Identification. For each well drilling rig used to engage in the well drilling business in Massachusetts, a certified well driller shall apply to the Department for a rig permit. Following the applicant's payment of the applicable fee, the Department will issue a rig decal designating the annual period for which the permit is valid. The decal shall be affixed to the well drilling rig for which it is issued; in no case shall a well drilling rig be operated without the decal affixed. For field identification, the certified well driller shall display in a conspicuous location on both sides of each well drilling rig the words "Massachusetts Certified Well Driller" or "Massachusetts Certified Monitoring Well Driller" (as specified on the Certificate), as well as the certification number. Letters in these words shall be at least two inches high. If a certification is not renewed or is suspended or revoked, or if a well drilling rig is no longer used by the certified driller, all rig markings referring to Massachusetts certification shall be removed.

(2) Immediate Field Supervision. A certified well driller engaged in, or assigned to the business of drilling a well, shall provide immediate field supervision as defined in 310 CMR 46.01(2), and as specified by the municipal board of health.

(3) Well Completion Report. The certified well driller who provided immediate field supervision on drilling of a well shall submit a report to the Department, with a copy to the municipal board of health, within 30 days of well completion. The report shall be on a form furnished by the Department, and shall contain information on, at minimum, well location; well owner name and address; municipal board of health permit; well use; well completion date; casing type, size, length, and depth into bedrock; protective well seal; well depth; depth to bedrock and water bearing zones; well screen and setting; static water level; well yield from productive wells, including drawdown, recovery, and testing method used; drilling log describing materials penetrated; hydrofracturing; well abandonment; and well driller business. The certified well driller who provided immediate field supervision shall sign the report, thereby attesting to information accuracy and completeness. For installation of groups of monitoring wells, the certified well driller shall submit one well completion report containing data on a typical well and noting the number of wells installed in the group, unless individual well completion reports are required by the municipality.

(4) Annual Renewal. A certified well driller shall submit annually to the Department an application for certification and rig permit renewal at least 30 days prior to the expiration of the certification, accompanied by the applicable certification fee. The application shall contain, at minimum, the applicant's current address, name of the business for which the applicant is engaged in drilling wells, number of wells drilled under the applicant's supervision during the current certification period, and the applicant's signature. If a certification renewal application is received subsequent to expiration of the annual certification period, the certification fee shall then be twice the established certification fee. Subsequent to renewal, a certified well driller shall notify the Department of any changes in address or business entity.

46.04: Criteria for Suspension or Revocation of Certification, Penalties and Other Actions

(1) Any failure to comply with 310 CMR 46.00, or any act or failure to act which endangers public health or safety, shall be considered sufficient criterion for the suspension or revocation of certification and for other action by the Department and the Commonwealth, pursuant to applicable law, including, but not limited to, civil, administrative and other penalties and fines.

(2) Any well driller who fails to certify with the Department and offers services for hire, or any certified well driller who either fails to submit a well completion report in accordance with 310 CMR 46.03(3), submits a report that includes false, misleading or inaccurate statements, or falsifies a certification application, is subject to suspension or revocation of certification by the Department and to other action by the Department and the Commonwealth, pursuant to applicable law, including, but not limited to, civil, administrative and other penalties and fines.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

46.04: continued

(3) The Department may require any person to provide information as the Department deems necessary to determine whether such person is subject to, in violation of, or has violated M.G.L. c. 21G, § 14, M.G.L. c. 21G, § 20 or 310 CMR 46.00.

46.05: Severability

If any provision of 310 CMR 46.00 or its application is held to be invalid, such invalidity shall not affect any provisions of 310 CMR 46.00 not specifically held invalid.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

50.01: Authority

The Department of Environmental Protection adopts 310 CMR 50.00 pursuant to M.G.L. c. 21I, §§ 3, 10, 11 and 12.

50.02: Purpose

(1) The Department of Environmental Protection promulgates 310 CMR 50.00 to carry out its authority and responsibility:

- (a) to promote toxics use reduction as the preferred means for preventing risks associated with the production and use of toxic substances, including risks to workers, consumers, the public and the environment;
- (b) to promote toxics use reduction as the preferred means for achieving compliance with any state or federal law or regulation pertaining to toxics production and use, hazardous waste, industrial hygiene, worker safety, public exposure to toxics, or releases of toxics into the environment;
- (c) to promote resource conservation and implementation of environmental management systems;
- (d) to promote the coordination and enforcement of federal and state laws and regulations pertaining to chemical production and use, hazardous waste, industrial hygiene, worker safety, public exposure to toxics and the release of toxics into the environment;
- (e) to coordinate state programs in order to promote most effectively toxics use reduction in the commonwealth;
- (f) to minimize unnecessary duplication of reporting requirements concerning chemical or hazardous substance production, use, release, disposal, and worker exposure;
- (g) to provide up-to-date and consistent information about manufacturing, worker exposure, distribution, process, sale, storage, release or other use of chemicals on a facility, regional and statewide basis;
- (h) to protect the public health, safety and welfare;
- (i) to provide for the proper administration of and to otherwise effectuate the purposes of M.G.L. c. 21I.

50.03: Severability

It is hereby declared that the provisions of 310 CMR 50.00 are severable, and if any provisions hereof or the application thereof to any person or any circumstance is held invalid, such invalidity shall not affect other provisions hereof or applications thereof which can be given effect without the invalid provision or application.

50.04: Noncompliance with 310 CMR 50.00

Any noncompliance with, failure to comply with, or violation of any provision of 310 CMR 50.00 shall constitute a violation of 310 CMR 50.00 for which the Department may take an enforcement action pursuant to M.G.L. c. 21A, § 16 and 310 CMR 50.00.

50.05: Computation of Time

Unless otherwise specifically provided by law, 310 CMR 50.00, or any determination issued pursuant to 310 CMR 50.00, any time period prescribed or referred to in 310 CMR 50.00 or in any determination issued pursuant to 310 CMR 50.00 shall begin with the first day following the act which initiates the running of the time period, and shall include every calendar day, including the last day of the time period so computed. If the last day is Saturday, Sunday, legal holiday, or any other day in which the offices of the Department are closed, the deadline shall run until the end of the next business day. If the time period prescribed or referred to is less than seven days, only days when the offices of the Department are open shall be included in the computation.

50.10: Definitions

As used in 310 CMR 50.00, the following terms shall have the following meanings, unless the context otherwise clearly requires.

Agency means state agency.

Appellant means an individual or organization who requests an adjudicatory hearing pursuant to M.G.L. c. 21I and 310 CMR 50.00.

Applicant means an individual who submits an application for certification as a toxics use reduction planner in accordance with 310 CMR 50.50.

Article means a manufactured item, other than an item which is manufactured at the facility:

- (a) which is formed to a specific shape or design during manufacture;
- (b) which has end use functions dependent in whole or in part upon its shape or design during end use; and
- (c) which does not release a toxic substance under normal conditions of processing or use of that item at the facility or establishments.

Board means the Science Advisory Board of the Toxics Use Reduction Institute at the University of Massachusetts Lowell.

Byproduct means nonproduct outputs of toxic or hazardous substances generated by a production unit, before handling, transfer, treatment or release. "Otherwise used" substances shall be counted as byproduct when they leave a production unit.

CERCLA means the Comprehensive Environmental Response, Compensation and Liability Act, 42 U.S.C. 9601 *et seq.* (Public Law 92-500).

Commissioner means the Commissioner of the Department of Environmental Protection (pursuant to St. 1989, c. 240, § 101, "... the Department of Environmental Quality Engineering shall be known as the Department of Environmental Protection") or his designee.

Council means the Administrative Council on Toxics Use Reduction as established by M.G.L. c. 21I, § 4.

Covered Toxic means:

- (a) a toxic substance that is manufactured, processed, or otherwise used at a facility in amounts, determined in accordance with 310 CMR 50.20, equal to or greater than the applicable threshold amount.
- (b) A "covered toxic" also means a toxic substance manufactured, processed, or otherwise used by a toxic user within a priority user segment designated pursuant to M.G.L. c. 21I, § 14 for which the Department requires reporting or planning pursuant to M.G.L. c. 21I, §§ 14 and 10 or 11.

Customs Territory of the United States means the 50 States, the District of Columbia, and Puerto Rico.

Department means the Department of Environmental Protection (pursuant to St. 1989, c. 240, § 101, "... the Department of Environmental Quality Engineering shall be known as the Department of Environmental Protection").

Emission means a release of a toxic or hazardous substance to the environment or a transfer of a toxic or hazardous substance in waste to an off-site location.

Environmental Aspect means an element of a facility's products, activities, or services that can interact with the environment.

Environmental Impact means any change in the environment resulting from a facility's products, activities, or services.

50.10: continued

Environmental Management System (EMS) means a quality-based management system that effectively integrates environmental considerations into an organization's day-to-day operations and management culture. In order to be eligible to be an alternative to toxic use reduction planning, the environmental management system shall, at a minimum, meet the following criteria:

- (a) include all production units that use Toxics Use Reduction Act (TURA)-listed chemicals used in reportable quantities as part of the environmental management system;
- (b) identify all TURA-listed chemicals used in reportable quantities as significant aspects;
- (c) consider toxics use reduction when identifying significant aspects and developing associated objectives and targets;
- (d) emphasize source reduction in achieving objectives; and
- (e) incorporate appropriate environmental performance metrics when developing objectives and targets.

Environmental Management System Professional or EMS Professional means a person accredited or certified under a national, international or other recognized EMS standard or a person who has at least two years of experience in developing or auditing EMSs.

EPCRA means the Emergency Planning and Community Right-to-know Act, 42 U.S.C. § 11001 *et seq.* (Public Law 99-499).

Establishment means an economic unit, generally at a single physical location, where business is conducted or where services or industrial operations are performed.

Facility means all buildings, equipment, structures, and other stationary items which are located on a single site or on contiguous or adjacent sites and which are owned or operated by the same person, or by any person who controls, is controlled by, or is under common control with, such person. A facility may consist of more than one establishment if the establishments are operated by persons who have a common corporate or business interest (including, without limitation, common ownership or control) in the establishments. If the facility consists of more than one establishment where the establishments are operated by persons who do not have a common corporate or business interest (including, without limitation, common ownership or control) in the establishments, then each such person shall treat the establishments it operates as a facility.

For purposes of 310 CMR 50.10: Facility, a "common corporate or business interest" includes ownership, partnership, joint ventures, ownership of a controlling interest in one person by the other, or ownership of a controlling interest in both persons by a third person.

Form A means the report authorized by 40 CFR, part 372.27 and containing the data elements specified in 40 CFR, part 372.95.

Form R means the report required by Section 313 of EPCRA and 40 CFR part 372.

Form S means the form required by M.G.L. c. 21I and 310 CMR 50.30.

Full-time Employee means each 2,000 hours worked per year by an employee or combination of employees.

Full-time Individual Employed or Full-time Equivalent means each 2,000 hours worked per year by an employee or combination of employees.

Full-time Work Experience means experience during full-time employment which extends over an uninterrupted period of three months or more with a minimum of 37.5 hours per week.

General Practice Toxics Use Reduction Planner means an individual who has a valid certification issued by the Department pursuant to 310 CMR 50.54 to certify toxics use reduction plans for any toxics user.

Higher Hazard Substance means a substance designated by the Council as a higher hazard substance pursuant to M.G.L. c. 21I, § 9 and 301 CMR 41.00.

50.10: continued

Import means to cause a toxic substance (including a mixture containing a toxic substance) to be imported into the customs territory of the United States. For purposes of 310 CMR 50.10: Import, "to cause" means to intend that the toxic substance be imported and to control the identity of the imported toxic substance and the amount to be imported. For purposes of 310 CMR 50.10: Import, "to cause" includes, without limitation situations where a person orders a toxic substance from a foreign supplier, and situations where the person uses an import brokerage firm as an agent to obtain the toxic substance.

Independent Auditor means a person qualified by experience and/or training to audit an EMS. This person may be a third-party auditor or an employee of a facility provided that the employee is not the person who has responsibility for implementing the EMS.

Institute means the Toxics Use Reduction Institute at the University of Massachusetts Lowell.

Intermediate Product means

- (a) in chemical manufacturing, any chemical substance that is consumed, in whole or in part, in chemical reactions used for the intentional manufacture of another chemical substance or mixture, or that is intentionally present for the purpose of altering the rate of chemical reactions, other than a non-isolated intermediate as defined in M.G.L. c. 21I;
- (b) in any other setting, any manufactured substance, compound, or product that is consumed, in whole or in part, in a chemical or physical process for the intentional manufacture of another product, or that is intentionally present for the purpose of aiding the manufacture of another product, other than a non-isolated intermediate as defined in M.G.L. c. 21I and 310 CMR 50.00.

Large Quantity Toxics User means any toxics user who manufactures, processes or otherwise uses any toxic or hazardous substance in an amount, determined in accordance with 310 CMR 50.20, the same as or greater than the applicable threshold amount in a calendar year at a facility. When more than one threshold applies to a facility's manufacturing, processing, or other use of a toxic substance, the toxics user is a large quantity toxics user if the facility exceeds any applicable threshold.

Limited Practice Toxics Use Reduction Planner means an individual who has a valid certification issued by the Department pursuant to 310 CMR 50.54 or 50.55 to certify toxics use reduction plans for facilities owned or operated by his or her employer.

Lower Hazard Substance means a substance designated by the Council as a lower hazard substance pursuant to M.G.L. c. 21I, § 9 and 301 CMR 41.00.

Manufacture means to produce, prepare, import or compound a toxic or hazardous substance. Manufacture shall also mean to produce a toxic or hazardous substance coincidentally during the manufacture, processing, use or disposal of another substance or mixture of substances, including a toxic substance that is separated from such other substance or mixture of substances as a byproduct, and a toxic substance that remains in such other substance or mixture of substances as an impurity.

Mixture means any combination of two or more chemicals, if the combination is not, in whole or in part, the result of a chemical reaction. However, if the combination was produced by a chemical reaction but could have been produced without a chemical reaction, it is also treated as a mixture. A mixture also includes any combination which consists of a chemical and associated impurities.

Multi-media means having to do with all environmental media including, but not limited to, water, land and air and workplaces within facilities.

NAICS means the North American Industry Classification System developed under the auspices of the United States Office of Management and Budget.

50.10: continued

Natural Asset or Asset means the natural resource or toxic substance targeted in a resource conservation plan pursuant to 310 CMR 50.90.

Non-isolated Intermediate means any intermediate which is not intentionally removed from the equipment in which it is manufactured, including any reaction vessel in which it is manufactured, equipment which is ancillary to the reaction vessel or similar equipment, and any equipment through which the intermediate passes during a continuous flow process, but not including tanks or other vessels or equipment in which the substance or product is stored after manufacture.

Office means Office of Technical Assistance and Technology within the Executive Office of Environmental Affairs.

Operation means a process or activity including, but not limited to, production processes, administrative activities, maintenance activities, food service, and other facility based activities performed at a facility.

Otherwise Use or Other Use means any use of a toxic substance that is not covered by the terms "manufacture" or "process" and includes use of a toxic substance contained in a mixture or trade name product. Relabeling or redistributing a container of a toxic substance where no repackaging of the toxic substance occurs does not constitute use or processing of the toxic substance.

Person means any individual, trust, firm, joint stock company, corporation, partnership, or association engaged in business or in providing service, excluding the Commonwealth of Massachusetts, and any authority, district, municipality or political subdivision of the Commonwealth of Massachusetts.

Plan Summary or Summary means the plan summary that a toxics user is required to submit to the Department pursuant to M.G.L. c. 21I, § 11(F) and 310 CMR 50.40.

POTW (Publicly-owned Treatment Works) Operators means holders of discharge permits for any devices and systems owned by the Commonwealth or any of its political subdivisions and used in the storage, treatment, recycling and reclamation of municipal sewage or industrial wastes of a liquid nature to implement 33 U.S.C. § 1281, or necessary to recycle or reuse water at the most economical cost under the estimated life of the works, including intercepting sewers, outfall sewers, sewage collection systems, pumping, power, and other equipment, and the appurtenances; extensions, improvements, remodeling, additions, and alterations thereof; elements essential to provide a reliable recycled supply such as standby treatment units and clear well facilities; any works, including the land that will be an integral part of the treatment process (including the land used for the storage of treated wastewater in land treatment systems prior to land application) or is used for ultimate disposal of residues resulting from such treatment; any other method or system for preventing, abating, reducing, storing, treating, separating, or disposing of municipal waste, including storm water runoff, or industrial waste, including waste in combined storm water and sanitary sewer systems.

Process means the preparation of a toxic or hazardous substance, including, without limitation, a toxic substance contained in a mixture or trade name product, after its manufacture, for distribution in commerce:

- (a) in the same form or physical state, or in a different form or physical state from, that in which it was received by the toxics user so preparing such substance; or
- (b) as part of an article containing the toxic or hazardous substance.

Product means a product, a family of products, an intermediate product, a family of intermediate products, or a desired result or a family of results. "Product" also means a byproduct that is used as a raw material without treatment. If a byproduct is treated before it is used as a raw material, then it is not a product.

Production Unit means a process, line, method, activity, or technique, or a combination or series thereof, used to produce a product.

50.10: continued

Resource Conservation means an action that decreases the use or consumption of a natural asset such as water, energy, or raw materials, or increases the efficiency of the use of the asset, without increasing the risk to the public, including workers and consumers, or the environment and without increasing the amount of waste generated.

Resource Conservation Plan means the plan a toxics user may develop as an alternative to a toxics use reduction plan pursuant to M.G.L. c. 21I, § 11(D) and 310 CMR 50.90.

Senior Management Official means an official who has management responsibility for the person or persons completing the report or plan, and who has authority to act as an agent for the toxics user.

SIC Code or Standard Industrial Classification Code means a specific identification code, within the identification code system developed by the United States Chamber of Commerce, assigned to a facility.

Small Quantity Toxics User means any toxics user who is not a large quantity toxics user.

Source Reduction means any change in the design, manufacture, purchase, or use of materials, products, or energy to reduce their amount or toxicity before they become a waste (*i.e.*, before recycling, treatment, release or disposal). Source reduction includes toxics use reduction.

State Agency means any agency or authority of the Commonwealth as defined in M.G.L. c. 30A, § 1.

Thresholds Amounts or Threshold Amount mean the following:

- (a) for those toxics users that manufacture or process a toxic or hazardous substance, as the terms "manufacture" and "process" are defined in 310 CMR 50.10, the threshold amount for a toxic or hazardous substance shall be 25,000 pounds each year at any one facility, except the threshold will be 1,000 pounds each year at any one facility for a higher hazard substance; and
- (b) for those toxics users that otherwise use a toxic or hazardous substance, the threshold amount for a toxic or hazardous substance shall be 10,000 pounds each year at any one facility, except the threshold will be 1,000 pounds each year at any one facility for a higher hazard substance;
- (c) if the administrator of the United States Environmental Protection Agency sets a threshold quantity for facility reporting on a toxic or hazardous substance under Section 313 of EPCRA which is lower than a corresponding threshold amount specified in 310 CMR 50.10: Thresholds Amounts or Threshold Amount(a) or (b), then the corresponding threshold for that substance pursuant to M.G.L. c. 21I and 310 CMR 50.00 shall be the same as the federal threshold.
- (d) if the Council sets a threshold amount in 301 CMR 41.00 for a higher hazard substance below that which is specified in 310 CMR 50.10: Thresholds Amounts or Threshold Amount(a) and (b), that lower threshold shall apply for that higher hazard substance.

Toxic means toxic or hazardous.

Toxic or Hazardous Substance means a substance in a gaseous, liquid, solid or other form which is identified on the toxic or hazardous substance list established pursuant to M.G.L. c. 21I, § 9 and 301 CMR 41.00, but which will not include any substance when it is:

- (a) present in an article;
- (b) used as a structural component of a facility;
- (c) present in a product used for routine janitorial or facility grounds maintenance;
- (d) present in foods, drugs, cosmetics or other personal items used by employees or other toxics users at a facility;
- (e) present in a product used for the purpose of maintaining motor vehicles operated by a facility;

50.10: continued

- (f) present in process water or non-contact cooling water as drawn from the environment or from municipal sources, or present in air used either as compressed air or as part of combustion;
- (g) present in a pesticide or herbicide when used in agricultural applications;
- (h) present in crude, lubricating or fuel oils or other petroleum materials being held for direct wholesale or retail sale; or
- (i) present in crude or fuel oils used in combustion to produce electricity, steam or heat except when production of electricity, steam or heat is the primary business of a facility.

Toxic or Hazardous Substance List means the list of toxic or hazardous substances in 301 CMR 41.00 and established pursuant to M.G.L. c. 21I, § 9.

Toxics means toxic or hazardous substances.

Toxics Use Fee means the fee in 301 CMR 40.00 established under, and assessed pursuant to, M.G.L. c. 21I, § 19.

Toxics User means the following:

- (a) a person who owns or operates a facility that manufactures, processes or otherwise uses any toxic or hazardous substance that is classified in SIC Codes 10 through 14, 20 through 40, 44 through 51, 72, 73, 75 or 76, or the corresponding NAICS codes.
- (b) If a person owns a facility, and that person's only interest in the facility is ownership of the real estate upon which the facility is operated, then, with respect to that facility, that person is not a toxics user. This includes, without limitation, owners of facilities such as industrial parks, all or part of which are leased to persons who operate establishments within SIC codes 10 through 14, 20 through 40, 44 through 51, 72, 73, 75 or 76, or the corresponding NAICS codes where the owner has no other business interest in the operation of the facility or establishment.

Toxics Use Reduction means in-plant changes in production processes or raw material that reduce, avoid, or eliminate the use of toxic or hazardous substances or generation of hazardous byproducts per unit of product, so as to reduce risks to the health of workers, consumers, or the environment, without shifting risks between workers, consumers, or parts of the environment. Toxics use reduction shall be achieved through any of the following techniques:

- (a) Input substitution, which refers to replacing a toxic or hazardous substance or raw material used in a production unit with a non-toxic or less toxic substance;
- (b) Product reformulation, which refers to substituting for an existing end-product an end product which is non-toxic or less toxic upon use, release or disposal;
- (c) Production unit redesign or modification, which refers to developing and using production units of a different design than those currently used;
- (d) Production unit modernization, which refers to upgrading or replacing existing production unit equipment and methods with other equipment and methods, based on the same production unit;
- (e) Improved operation and maintenance of production unit equipment and methods, which refers to modifying or adding to existing equipment or methods including, but not limited to, such techniques as improved housekeeping practices, system adjustments, product and process inspections, or production unit control equipment or methods; or
- (f) Recycling, reuse, or extended use of toxics by using equipment or methods which become an integral part of the production unit of concern, including but not limited to filtration and other closed loop methods.

However, toxics use reduction shall not include or in any way be inferred to promote or require incineration, transfer from one medium of release or discharge to other media, off-site or out-of-production unit waste recycling, or methods of and-of-pipe treatment of toxics as waste.

Toxics Use Reduction Institute or Institute mean the Toxics Use Reduction Institute established pursuant to M.G.L. c. 21I, § 6.

50.10: continued

Toxics Use Reduction Plan or Plan means the plan or update to the plan that a toxics user is required to develop in accordance with M.G.L. c. 21I, § 11 and 310 CMR 50.40.

Toxics Use Reduction Planner or Planner means an individual certified by the Department in accordance with 310 CMR 50.50.

Toxics Use Report means the report that a toxics user is required to submit to the Department pursuant to M.G.L. c. 21I, § 10 and 310 CMR 50.30.

Toxics Use Reduction Planning Program means an educational program in toxics use reduction developed by the Institute in accordance with M.G.L. c. 21I, § 6(E).

Trade Secret means any formula, plan, pattern, process, production data, device, information, or compilation of information which is used in a toxics user's business, and which gives said toxics user an opportunity to obtain an advantage over competitors who do not know or use it.

TURA Toxic Use Reduction Act, M.G.L. c. 211.

Uniform Certification Examination, Examination or Exam means an examination prepared by the Department pursuant to M.G.L. c. 21I, § 12.

Unit of Product means a measure that reflects the level of production or activity associated with the use of the toxic or the generation of the toxic as byproduct.

User Segment means a set of no fewer than five toxics users who employ a similar production unit, classified by the department pursuant to 310 CMR 50.70. Production units grouped into a user segment must contain similar products and processes.

50.20: Rules for Determining Amount of Toxic Substance Manufactured, Processed, or Otherwise Used

(1) Toxics users shall follow the rules set forth in 310 CMR 50.20 for purposes of determining the amount or quantity of a toxic substance manufactured, processed, or otherwise used at a facility. This includes, without limitation, the following purposes:

- (a) to determine whether the toxics user is a large quantity toxics user or a small quantity toxics user, or,
- (b) to determine the amount of a covered toxic manufactured, processed, or otherwise used at a facility.

(2) When a facility manufactures, processes, or otherwise uses more than one member of a chemical category listed in 40 CFR Part 372.65(c), the toxics user shall add together each member of the chemical category in order to determine the total amount of the toxic substance manufactured, processed, or otherwise used at the facility.

(3) A facility may process or otherwise use a toxic substance in a recycle/reuse operation. To determine the amount of such toxic substances, the toxics user shall count the amount of the toxic substance added to the recycle/reuse operation during the calendar year. In particular, if the facility starts up such an operation during a calendar year, or in the event that the contents of the whole recycle/reuse operation are replaced in a calendar year, the toxics user shall also count the amount of the toxic substance placed into the system at these times.

(4) A toxic substance may be listed in 40 CFR Part 372.65 with the notation that only persons who manufacture the toxic substance, or manufacture it by a certain method, are required to report. In that case, in determining the quantity of the toxic substance manufactured at the facility, the toxics user shall consider only the amount of the toxic substance as described in 40 CFR Part 372.65.

50.20: continued

(5) A toxic substance may be listed in 40 CFR Part 372.65 with the notation that it is in a specific form (*e.g.*, fume or dust, solution, or friable) or of a specific color (*e.g.* yellow or white). In that case, in determining the amount of the toxic substance manufactured, processed, or otherwise used at the facility, the toxics user shall consider only the amount of such toxic substances that the facility manufactures, processes, or otherwise uses in the form or of the color specified in 40 CFR Part 372.65.

(6) Metal compound categories are listed in 40 CFR Part 372.65(c). For purposes of determining the amount of the metal compound category manufactured, processed, or otherwise used at the facility, the toxics user shall consider the total amount of all members of the metal compound category manufactured, processed, or otherwise used at the facility.

(7) With respect to toxic substances present as a component of a mixture or trade name product, toxics users shall consider the quantity of the toxic substance if the toxics user knows that the toxic substance is present as a component of the mixture or a trade name product. In determining the amount or quantity of a toxic substance manufactured, processed, or otherwise used at a facility, the toxics user shall not consider the amount of the toxic substance if it is present in a mixture in concentrations equal to or below the *de minimus* concentration for that toxic substance set forth in 40 CFR Part 372.38(a); provided, however, that this *de minimis* exemption shall not apply for any toxic or hazardous substance specified as a chemical of special concern in 40 CFR Part 372.28.

(a) The toxics user knows that a toxic substance is present as a component of a mixture or trade name product

1. if the toxics user knows or has been told the chemical identity or Chemical Abstracts Service Registry Number of the substance and the identity or number corresponds to an identity or number in 40 CFR Part 372.65, or
2. if the toxics user knows or has been told by the supplier of the mixture or trade name product, that the mixture or trade name product contains a toxic substance subject to M.G.L. c. 21I, § 313 of EPCRA or 40 CFR Part 372.65, or Sections 101(14) or 102 of CERCLA.

(b) To determine whether a toxic substance which is a component of a mixture or trade name product has been imported, processed, or otherwise used in excess of an applicable threshold at the facility, the toxics user shall consider only the portion of the mixture or trade name product that consists of the toxic substance and that is imported, processed, or otherwise used at the facility as follows:

1. If the toxics user knows the specific chemical identity of the toxic substance and the specific concentration at which it is present in the mixture or trade name product, the toxics user shall determine the weight of the toxic substance imported, processed, or otherwise used as part of the mixture or trade name product at the facility and shall combine that with the weight of the toxic substance manufactured (including imported) processed, or otherwise used at the facility other than as part of the mixture or trade name product.
2. If the toxics user knows the specific chemical identity of the toxic substance and does not know the specific concentration at which the toxic substance is present in the mixture or trade name product, but has been told the upper bound concentration in the mixture or trade name product, the toxics user shall assume that the toxic substance is present in the mixture or trade name product at the upper bound concentration, and shall determine the quantity of the toxic substance manufactured, processed, or otherwise used at the facility in accordance with 310 CMR 50.20(7)(b)1.
3. If the toxics user knows the specific chemical identity of the toxic substance, does not know the specific concentration at which the toxic substance is present in the mixture or trade name product, has not been told the upper bound concentration of the toxic substance in the mixture or trade name product, and has not otherwise developed information on the composition of the toxic substance in the mixture or trade name product, then the toxics user need not consider that toxic substance in that mixture or trade name product in determining the amount of the toxic substance manufactured, processed, or otherwise used at the facility.

50.20: continued

4. If the toxics user has been told that a mixture or trade name product contains a toxic substance, does not know the specific chemical identity of the toxic substance and knows the specific concentration at which it is present in the mixture or trade name product, the toxics user shall determine the weight of the toxic substance imported, processed, or otherwise used as part of the mixture or trade name product at the facility. Since the toxics user does not know the specific identity of the toxic substance, with respect to that toxic substance, the toxics user shall determine whether the facility is a large quantity toxics user or a small quantity toxics user based on the weight of that toxic substance present in the mixture or trade name product.

5. If the toxics user has been told that a mixture or trade name product contains a toxic substance, does not know the specific chemical identity of the toxic substance, and does not know the specific concentration at which the toxic substance is present in the mixture or trade name product, but has been told the upper bound concentration of the toxic substance in the mixture or trade name product, the toxics user shall assume that the toxic substance is present in the mixture or trade name product at the upper bound concentration, and shall determine the quantity of the toxic substance manufactured, processed, or otherwise used at the facility in 310 CMR 50.20(7)(b)1.

6. If the toxics user has been told that a mixture or trade name product contains a toxic substance, does not know the specific chemical identity of the toxic substance, does not know the specific concentration at which the toxic substance is present in the mixture or trade name product, including information they have themselves developed, and has not been told the upper bound concentration of the toxic substance in the mixture or trade name product, the toxics user need not consider such toxic substance for purposes of determining quantities of toxic substances manufactured, processed, or otherwise used at the facility.

(8) A facility may consist of more than one establishment. In determining the amount of a toxic substance manufactured, processed, or otherwise used at a facility, the toxics user shall consider the amount of the toxic substance manufactured, processed, or otherwise used at each establishment within the facility.

(9) In determining the amount of a toxic substance manufactured, processed, or otherwise used in a laboratory at a facility, the toxic user need not consider the quantity of such toxic substances if, pursuant to 40 CFR Part 372.38(d), the toxic substance is manufactured, processed, or otherwise used in a laboratory at a facility under the supervision of a technically qualified individual as defined in 40 CFR Part 720.3(ee). This exemption does not apply in the following circumstances:

- (a) Specialty chemical production;
- (b) Manufacture, processing, or use of toxic substances in pilot plant scale operations;
- (c) Activities conducted outside the laboratory.

50.21: Duty to Provide Information

(1) A toxics user shall provide to the Department, within a reasonable time, any information the Department may request and that is deemed by the Department to be relevant in determining whether the toxics user is subject to the requirements of 310 CMR 50.00 or is in compliance with 310 CMR 50.00.

(2) A toxics user shall allow personnel or authorized agents of the Department, upon presentation of credentials or other documents as may be required by law, to, without a warrant:

- (a) Enter at all reasonable times any premises, public or private, for the purpose of investigating, sampling, or inspecting any records, condition, equipment, practice, or property relating to activities subject to M.G.L. c. 21I;
- (b) Enter at any time such premises for the purpose of protecting the public health, safety, or welfare, or to prevent damage to the environment;
- (c) Have access to and copy at all reasonable times all records that are required to be kept pursuant to the requirements of 310 CMR 50.00.

50.30: Toxics Use Reports

310 CMR 50.30 - 50.39, cited collectively as 310 CMR 50.30, establishes reporting requirements for toxics users.

50.31: Applicability

- (1) For facilities that are classified by SIC codes 20 through 39, large quantity toxics users shall submit to the Department a toxics use report in accordance with 310 CMR 50.32(1) on or before July 1, 1991.
- (2) For facilities that are classified by SIC codes 10 through 14, 40, 44 through 51, 72, 73, 75 and 76, large quantity toxics users shall submit to the Department a toxics use report in accordance with 310 CMR 30.31(2) on or before July 1, 1992.
- (3) Toxics users need not submit reports for facilities that have less than ten full-time employees unless:
 - (a) the facility is within a priority user segment pursuant to M.G.L. c. 21I, § 14, and
 - (b) the Department requires the toxics user to submit a report for the facility in accordance with M.G.L. c. 21I, §§ 10 and 14.
- (4) Small quantity toxics users need not submit reports for facilities unless:
 - (a) the facility is within a priority user segment pursuant to M.G.L. c. 21I, § 14, and
 - (b) the Department requires the toxics user to submit a report for the facility in accordance with M.G.L. c. 21I, §§ 10 and 14.

50.32: Reporting Requirements

- (1) On or before July 1st of each year, toxics users shall submit a toxics use report including information associated with each covered toxic manufactured, processed, or otherwise used at a facility in accordance with 310 CMR 50.00.
- (2) For facilities that consist of more than one establishment, and that manufacture, process, or otherwise use a covered toxic, the toxics user may submit a separate report for each establishment or for each group of establishments, provided that information associated with the manufacturing, processing, or other use of that covered toxic at all the establishments within the facility is reported in accordance with 310 CMR 50.00, including, without limitation, 310 CMR 50.20 and 310 CMR 50.30. If each establishment or group of establishments files separate reports then for all other covered toxics at that facility they must also submit separate reports.
- (3) With respect to activities at a facility involving a covered toxic, when more than one threshold amount applies to the activities, the report shall include information associated with all activities involving that covered toxic at the facility. Such information shall be reported in accordance with 310 CMR 30.50, including, without limitation, 310 CMR 50.20 and 310 CMR 50.30.
- (4) With respect to metal compounds that are covered toxics, the toxics user need only include in the report information associated with the parent metal, and need not include in the report information associated with other components of the metal compound in the metal compound category.
- (5) A senior management official of the facility shall certify the accuracy and completeness of the report by signing a certification statement that accurately identifies the report. Falsification of information in the report, including the certification statement, shall be a violation of 310 CMR 50.00 for which the Department may take an enforcement action.
- (6) A toxics use report shall include information based on the quantity of each covered toxic manufactured, processed, or otherwise used at the facility during the calendar year preceding the date on which the toxics use report is due.

50.32: continued

(7) In calculating, measuring, or estimating quantities of a toxic or hazardous substance to be reported pursuant to 310 CMR 50.30, toxic users shall report with the maximum accuracy that is feasible and practicable. Toxics users shall report quantities with accuracy to two significant digits.

(8) If a toxics user discovers, after submitting a report, that there is a gross error in any or all of the information contained in the report, the toxics user shall, in writing, so notify the Department within 14 days of the date of discovery. The toxics user shall submit corrections to the report within 30 days of such notification. Nothing in 310 CMR 50.32(8) shall preclude the Department from taking any other appropriate action, including, without limitation, an enforcement action.

(9) The Department may require the toxics user to amend or supplement any report submitted prior to the current reporting year if the toxics user changes any of the following:

- (a) the unit of product;
- (b) an estimating method used to determine information in the toxics use report if using the new method would significantly alter information in a previously submitted report.

Nothing in 310 CMR 50.32(9) shall preclude the Department from taking any other appropriate action, including, without limitation, an enforcement action.

(10) Each toxics use report shall contain the information set forth in 310 CMR 50.33, and shall be submitted on forms prescribed by the Department.

(11) Each toxics use report shall consist of one completed Form R and one completed Form S for each covered toxic. A Form A may be submitted in *lieu* of a Form R if the requirements of 40 CFR Part 372.27 are met and the Form A includes a production ratio or activity index. A Form A may not be submitted in *lieu* of a Form R for a higher hazard substance.

(12)(a) With respect to the information required pursuant to 310 CMR 50.33(3) to be reported on the Form S, toxic users need not report information associated with the following entities.

1. pilot plants
2. pilot production units
3. start-up production units for a time period equal to the shorter of either the time period from the date of initial operation until required operational efficiency is achieved, or two years from the date of initial operation.

(b) With respect to all other information required pursuant to 310 CMR 50.33 to be reported on the Form S, toxics users shall include information associated with the entities set forth in 310 CMR 50.32(12)(a)1., 2. and 3.

50.33: Content of Report

Each toxics use report shall contain the following information:

(1) the information required to be submitted under regulations promulgated pursuant to section 313 of EPCRA;

(2) the quantities of the toxic or hazardous substance at the facility which are: manufactured; processed; otherwise used; generated as byproduct prior to any handling, transfer, treatment or release; and shipped as or in products from the facility; and,

(3) if the sum of the quantities of the toxic or hazardous substance which are manufactured, processed and otherwise used are not approximately equal to the sum of the quantities shipped in product and generated as byproduct, a general explanation of why there is not an approximate materials balance.

(4) whether anything non-routine occurred at the facility that affected the data reported and an explanation of how it affected the data.

50.33: continued

- (5) whether the toxic or hazardous substance is used to treat waste or control pollution and, if so, the amounts used.
- (6) for each production unit at the facility in which the toxic or hazardous substance is manufactured, processed or otherwise used, each toxics use report shall also include the following information:
 - (a) the information necessary to identify the toxics user, the facility, the toxic or hazardous substance, and the production unit. The production unit shall be identified by providing a description of the process, the product, the unit of product, and the SIC code or corresponding NAICS code that best describes the product.
 - (b) whether the toxic or hazardous substance was used in the production unit in amounts:
 1. greater than zero pounds but less than or equal to 5,000 pounds;
 2. greater than 5,000 pounds but less than or equal to 10,000 pounds;
 3. greater than 10,000 pounds, but less than or equal to 100,000 pounds;
 4. greater than 100,000 pounds, but less than or equal to 500,000 pounds; or
 5. greater than 500,000 pounds.
 - (c) Amounts used in waste treatment shall not be included in determining the amount used in the production unit.
 - (d) whether the use of any toxic substance or the generation of byproduct increased or decreased by more than 10% compared to the previous reporting year and/or the toxics user implemented toxics use reduction, and, if so, identification of where in the process the change and/or toxics use reduction occurred and an explanation for the change and/or toxics use reduction, including any toxics use reduction techniques implemented.
- (7) Each report shall also indicate any of the following changes:
 - (a) a change in a unit of product;
 - (b) a change in the estimating method used to determine information in the toxics use report if using the new method would significantly alter information in a previously submitted report; and
 - (c) whether or not the production unit was included in the report due on the previous July 1st.

50.34: Toxics Use Fee Worksheet

With each report submitted pursuant to 310 CMR 50.32, the toxics user shall also submit to the Department a Toxics Use Fee Worksheet on forms prescribed by the Department.

(50.35: Other: Reserved)

50.36: Recordkeeping Requirements

- (1) The toxics user shall establish and maintain at the facility documentation which is necessary to substantiate all information submitted in each report, including, but not limited to, the following:
 - (a) documentation required by 40 CFR Part 372.10;
 - (b) documentation supporting the toxics user's determination of the quantity of the toxic substance manufactured, processed, or otherwise used at the facility. If, in determining the quantity of the toxic substance manufactured, processed or otherwise used at the facility, the toxics user does not consider any or all of a toxic substance pursuant to 310 CMR 50.20, the toxics user shall maintain documentation necessary to support the exclusion;
 - (c) documentation supporting the toxics user's determination of the quantity of the covered toxic generated as byproduct, prior to any handling, treatment, transfer, or release, by the facility;
 - (d) documentation supporting the toxics user's determination of the quantity of the covered toxic shipped from the facility as or in product;
 - (e) documentation supporting the toxics user's determination of the amount of the covered toxic manufactured, processed, or otherwise used in each production unit at the facility;
 - (f) documentation supporting the toxics user's determination of the quantity of the covered toxic generated as byproduct by each production unit;

50.36: continued

- (g) documentation supporting the toxics user's determination of the quantity of the covered toxic used to treat waste or control pollution;
- (h) for each production unit included in the report, documentation supporting and explaining the toxics user's designation of the production unit;
- (i) documentation supporting the toxics user's determination of the number of units of product produced by each production unit and documentation that describes and defines the unit of product.
- (j) for each production unit in which the use of a toxic substance or generation of byproduct increased or decreased by more than 10% from the previous reporting year the following documentation:
 - 1. documentation supporting the toxics user's determination that implementation of a specific toxics use reduction technique, management technique, combination of techniques, or other factors resulted in the change in toxics use or byproduct generation for a specific production operation;
 - 2. an explanation and description of each toxics use reduction technique, management technique, combination of techniques, or other factors that resulted in the change in toxics use or byproduct generation, including a description of how the toxics use reduction technique, management technique, or combination of techniques was used on the production operation.

(2) If a toxics user claims that the facility has less than ten full-time employees and is exempt from the reporting requirements of 310 CMR 50.30 pursuant to 310 CMR 50.31(3), the toxics user shall maintain documentation at the facility supporting such claim.

(3) If a toxics user does not include in the toxics use report information associated with a pilot plant, a pilot production unit, or a start-up production unit pursuant to 310 CMR 50.32(12)(a)1., 2., or 3., the toxics user shall maintain documentation necessary to support the determination that the pilot plant, pilot production unit, or start-up production unit is excluded pursuant to 310 CMR 50.32(12)(a)1., 2. or 3. The toxics user shall also maintain documentation necessary to explain any discrepancy between the total quantity of the covered toxic manufactured, processed, or otherwise used by the facility as reported in the report and the aggregate quantity of the covered toxic manufactured, processed, or otherwise used by all production units for which information is included in the report attributable to the pilot plant, pilot production unit, or start-up production unit for which information is not included in the report.

(4) The toxics user shall maintain at the facility a copy of each toxics use report, and supporting documentation, for a period of at least five years after the date that the report was due.

(5) All records and documentation established or maintained pursuant to 310 CMR 50.36 shall be readily available for purposes of inspection and copying by the Department.

50.40: Toxics Use Reduction Plans

310 CMR 50.40 through 50.49, cited collectively as 310 CMR 50.40, establishes requirements for developing toxics use reduction plans.

50.41: Applicability and Schedule

(1) Large quantity toxics users shall prepare and complete a toxics use reduction plan for each facility by July 1st of each even-numbered calendar year in which they are required to file a toxics use report pursuant to 310 CMR 50.30, provided the even-numbered year is not the same year in which a toxics user first files a toxics use report.

(2) Toxics users need not prepare plans for facilities that have less than ten full-time employees unless:

- (a) the facility is within a priority user segment pursuant to M.G.L. c. 21I, § 14, and
- (b) the Department requires the toxics user to submit a report for the facility in accordance with M.G.L. c. 21I, §§ 11 and 14.

50.41: continued

- (3) Small quantity toxics users need not prepare plans for facilities unless:
 - (a) the facility is within a priority user segment pursuant to M.G.L. c 21I, § 14, and
 - (b) the Department requires the toxics user to submit a report for the facility in accordance with M.G.L. c. 21I, §§ 11 and 14.
- (4) On or before the date that a plan must be complete pursuant to 310 CMR 50.41(1), toxics users shall submit to the Department a plan summary in accordance with 310 CMR 50.47.
- (5) Toxics users shall complete plan updates every two years beginning with the date on which the initial plan is due pursuant to 310 CMR 50.41(1) by July 1st of the applicable year in accordance with 310 CMR 50.48.
- (6) After a toxics user has completed one toxics use reduction plan and two plan updates, the toxics user may choose to implement an environmental management system pursuant to 310 CMR 50.80 or prepare a resource conservation plan pursuant to 310 CMR 50.90.
- (7) A toxics user who has chosen to implement an environmental management system shall submit an EMS progress report to the Department by July 1st of the applicable year in *lieu* of a toxics use reduction plan summary in accordance with 310 CMR 50.83.
- (8) A toxics user who has chosen to develop a resource conservation plan shall submit a resource conservation plan summary to the Department by July 1st of the applicable year in *lieu* of a toxics use reduction plan summary in accordance with 310 CMR 50.97. A toxics user may only substitute a resource conservation plan for a toxics use reduction plan every other planning year.

50.42: General Plan Requirements

- (1) All plans and plan summaries shall include each covered toxic required, pursuant to 310 CMR 50.30, to be included in the facility's toxics use report due on the same date that the plan summary is due.
- (2) All plans and plan summaries shall include each production unit required, pursuant to 310 CMR 50.30, to be included in the facility's toxics use report due on the same date that the plan summary is due.
- (3) Each plan shall include the following written statement signed by a certified toxics use reduction planner: "Based on my independent professional judgment as a toxics use reduction planner, I certify under penalty of law that the following is true:
 - (a) I have examined and am familiar with this toxics use reduction plan;
 - (b) the plan satisfies the requirements of 310 CMR 50.40; and
 - (c) the plan demonstrates a good faith and reasonable effort to identify and evaluate toxics use reduction options."Notwithstanding any professional designation held by a certified toxics use reduction planner or any trade organization of which that planner is a member by way of license, registration, certification, or similar qualification, the signed certification statement shall not mean that such planner signs in the capacity of anything other than a toxics use reduction planner.
- (4) Each plan shall include the following written statement signed by the senior management official of the facility: "I certify under penalty of law that the following is true:
 - (a) I have personally examined and am familiar with this toxics use reduction plan;
 - (b) I am satisfied that any supporting documentation used in the development of the plan exists and is consistent with the plan;
 - (c) based on my inquiry of those individuals immediately responsible for the development of this plan, I believe that the information in the plan and any supporting documentation used in the development of the plan is true, accurate, and complete;
 - (d) the plan, to the best of my knowledge and belief, meets the requirements of 310 CMR 50.40;
 - (e) I am aware that there are penalties for submitting false information, including possible fines and imprisonment."

50.42: continued

- (5) Six months prior to the date when the plan must be complete, the toxics user shall notify all of its employees of the requirements of the plan, identify the toxics and production units for which a plan will be submitted, provide the criteria for plans, and solicit in the notice comments or suggestions from all employees on toxics use reduction options. The plan shall include a description of the steps taken by the toxics user in order to comply with 310 CMR 50.42(5).
- (6) In determining the amounts pursuant to 310 CMR 50.43(3), 50.44(2), 50.44(5), 50.44(6), 50.46(1)(b), and 50.46(4)(c), the plan shall:
- (a) refer to documents or other information used to determine these amounts, and shall specify the location of such documents or information;
 - (b) include calculations of the amounts; and,
 - (c) state any assumptions made by the toxics user.
- (7) Toxics users shall maintain plans for a facility on the premises of that facility, and shall make plans available to the Department upon request. Toxics users shall also make supporting documentation referred to in 310 CMR 50.42(6) available to the Department upon request. Toxics users shall maintain plans and supporting documentation for at least five years after the date that the plan summary is due.
- (8) Toxics users shall develop information required by 310 CMR 50.40 in accordance with standard accounting practices;
- (9) Toxics users shall develop information required by 310 CMR 50.40 in accordance with standard engineering practices;
- (10) Toxics users shall develop information required by 310 CMR 50.40 in good faith.
- (11) Toxics users shall demonstrate a good faith and reasonable effort to identify and evaluate toxics use reduction options.

50.43: Facility-wide Information Required in Each Plan

Toxics users shall develop and include in the plan the following facility-wide information:

- (1) a statement of the management policy of the facility regarding toxics use reduction. This statement shall include, but not be limited to, a description of the ways in which the toxics user encourages toxics use reduction and a description of any policy applicable to the facility that encourages or discourages toxics use reduction. This statement may include, without limitation, the following information:
- (a) a description of how toxics use reduction affects the facility's policy or decisions concerning research and development;
 - (b) a description of how toxics use reduction affects the facility's policy or decisions concerning financial investments or capital investments;
 - (c) a description of how toxics use reduction affects the facility's policy or decisions concerning hiring, promotions or bonuses, or other incentives, for facility employees;
 - (d) any other policy applicable to the facility that encourages or discourages toxics use reduction.
- (2) a statement of the scope of the plan. This statement shall include but not be limited to the following:
- (a) a description of each production unit included in the plan. The description of each production unit shall include the following information as reported in the facility's toxics use report due on the same date that the plan summary is due:
 1. the number assigned to the production unit;
 2. the process or processes associated with the production unit;
 3. the product produced by the production unit; and,
 4. the chemical name and CAS number of each covered toxic manufactured, processed, or otherwise used in the production unit.
 - (b) a summary of the identification process pursuant to 310 CMR 50.45(1);
 - (c) a brief description of the technologies, procedures, or training programs identified pursuant to 310 CMR 50.46(3), (4) and (5).

50.43: continued

- (3) the expected change in the use of each covered toxic and in the amount of each covered toxic generated as byproduct. The expected change shall be based on toxics use reduction techniques chosen to be implemented as identified in the plan, and shall be stated as:
 - (a) the amount in pounds by which the toxics user plans to increase or decrease the use of the toxic; and,
 - (b) the amount in pounds by which the toxics user plans to increase or decrease the amount of the toxic generated as byproduct.

50.44: Production Unit Information Required in Each Plan

For each production unit, toxics users shall determine or develop, and include in the plan, the following information:

- (1) a process flow diagram in accordance with the following:
 - (a) The process flow diagram shall be a visual representation of the movement of covered toxics through the process or processes within the production unit, including, but not limited to, covered toxics that flow into the process or processes and covered toxics that flow out of the process or processes as byproducts or products and covered toxics that are released to the environment as emissions or transferred off-site as emissions. The process flow diagram shall account for each manufacturing or process step in the production unit, and shall include waste treatment activities, and recycling activities that are not integral to the production unit, associated with the production unit. The process flow diagram may represent the movement of substances or other materials that are not covered toxics through the process or processes within the production unit.
 - (b) The number assigned to the production unit as reported in the facility's toxics use report due on the same date that the plan summary is due shall appear on the process flow diagram.
 - (c) The process flow diagram shall present the movement of each covered toxic through the production unit, including, but not limited to, each general location at which the covered toxic enters the production unit and each general location at which the covered toxic exits the production unit as a byproduct, emission, or product.
- (2) the following amounts, and a statement of the estimation methods used to determine these amounts:
 - (a) the total amount, and the amount per unit of product, of each covered toxic manufactured, processed, or otherwise used;
 - (b) the total amount, and the amount per unit of product, of each covered toxic generated as a byproduct;
 - (c) the total amount, and the amount per unit of product, of each covered toxic released or transferred off-site as an emission.
- (3) the unit of product associated with the production unit as reported in the toxics use report due on the date that the plan summary is due.
- (4) for each toxic, a statement explaining the purpose that the toxic serves in the production unit;
- (5) for each byproduct identified on the process flow diagram developed pursuant to 310 CMR 50.44(1), toxics users shall determine the amount of byproduct treated on-site, treated off-site, recycled on-site, recycled off-site, disposed of on-site, disposed of off-site, or released.
- (6) for each emission identified in the process flow diagram developed pursuant to 310 CMR 50.44(1), toxics users shall determine, for each environmental media, the amount of emissions released to the environment or transferred off-site, and the amount of emissions treated off-site treatment, recycled off-site, disposed of on-site or disposed of off-site.
- (7) the cost of the use of each covered toxic calculated in accordance with 310 CMR 50.46A.

50.45: Procedures for Identifying Potential Toxic Use Reduction Techniques

- (1) Toxics users shall describe the procedure used by the toxics user to identify technologies, procedures, or training programs for potentially achieving toxics use reduction in each production unit. This procedure shall include, but not be limited to, a consideration of each type of toxics use reduction technique specified in the definition of “toxics use reduction” set forth in 310 CMR 50.10 and M.G.L. c. 21I, a list of personnel involved in the procedure, a description of information sources consulted, and a description of information gathering techniques.
- (2) Toxics users shall list technologies, procedures, and training programs identified as potentially achieving toxics use reduction in each production unit pursuant to 310 CMR 50.45(1).

50.46: Technical Evaluation of Toxics Use Reduction Techniques

- (1) Toxics users shall evaluate the technical feasibility of each technology, procedure, or training program listed in the plan pursuant to 310 CMR 50.45(1) and (2) in accordance with the following requirements:
 - (a) Toxics users shall evaluate whether the technology, procedure, or training program constitutes toxics use reduction as defined in 310 CMR 50.10 and M.G.L. c. 21I, § 2.
 - (b) Toxics users shall calculate the expected reductions resulting from implementation of the technology, procedure, or training program in accordance with 310 CMR 50.46(1)(b)1. through 4.:
 1. toxics users shall calculate expected reductions in the amount of toxics used in each production unit;
 2. toxics users shall calculate expected reductions in the amount of toxics used per unit of product for each production unit;
 3. toxics users shall calculate expected reductions in the amount of toxics generated by each production unit;
 4. toxics users shall calculate expected reductions in the amount of toxics generated as byproduct per unit of product for each production unit.
 - (c) Toxics users shall evaluate the relationship between the technology, procedure, or training program being evaluated, and other applicable laws and regulations, including but not limited to, whether implementation of the technology, procedure, or training program will violate any other law or regulation.
- (2) Toxics users need not complete the evaluation of a particular technology, procedure, or training program if, during the evaluation, the toxics user determines that the technology, procedure, or training program being evaluated is not appropriate for any of the following reasons:
 - (a) the technique is clearly technically infeasible;
 - (b) the technique is clearly economically infeasible, as determined pursuant to 310 CMR 50.46A;
 - (c) implementation of the technology, procedure, or training program is not likely to result in a decrease in the amount of toxics used per unit of product or the amount of toxics generated as byproduct per unit of product.
- (3) For technologies, procedures, or training programs that the toxics user decides not to implement, the plan shall include:
 - (a) a description of the technology, procedure, or training program; and,
 - (b) the reason for deciding not to implement the technology, procedure, or training program.
- (4) For technologies, procedures, or training programs that the toxics user decides to implement, the plan shall include:
 - (a) a description of the technology, procedure, or training to be implemented;
 - (b) the anticipated costs and savings associated with the technology, procedure, or training program, as determined pursuant to 310 CMR 50.46A;
 - (c) the expected reductions in the amount of toxics and the amount of toxics generated as byproduct resulting from implementation of the technology, procedure, or training program calculated pursuant to 310 CMR 50.46(1)(b).
 - (d) an implementation schedule.

50.46: continued

- (5) If the evaluation required for a particular technology, procedure, or training program identified pursuant to 310 CMR 50.45(1) cannot be completed by the date that the plan is due, the plan shall include the following:
- (a) a description of the technology, procedure, or training program;
 - (b) a description of steps to be taken in order to further evaluate the technique and a schedule for taking these steps;
 - (c) an explanation as to why the evaluation cannot be complete by the date that the plan is due.

50.46A: Economic Evaluation of Potential Toxics Use Reduction Techniques

- (1) Toxics users shall evaluate the economic feasibility of each technology, procedure, or training program identified as technically feasible pursuant to 310 CMR 50.46 as compared to the current operations involving the toxic. In that analysis, the following items must be considered if they are relevant:
- (a) indirect and direct labor and materials costs (which shall be stated in the plan);
 - (b) purchase or manufacturing cost of the toxic and its alternative chemical;
 - (c) capital and equipment costs;
 - (d) storage, accumulation, treatment, disposal, and handling costs associated with toxics and byproducts;
 - (e) costs associated with activities required to comply with local, state, or federal laws or regulations, including but not limited to, fees, taxes, and costs associated with treatment, disposal, reporting and labeling;
 - (f) worker health or safety costs associated with the toxic and its alternative chemical, including but not limited to, protective equipment, and lost employee time due to accidents or routine exposure to the toxic;
 - (g) insurance;
 - (h) potential liability costs that may arise from intentional, unintentional, or accidental activities or occurrences; and
 - (i) loss of community goodwill and product sales lost to competing non-toxic products.
- (2) In determining costs and savings, toxics users shall consider items other than those set forth in 310 CMR 50.46A(1) if such other items are relevant and shall describe such items in the plan.
- (3) Toxics users shall determine the total cost per year and the cost per unit of product associated with the use of the toxic in the toxics user's current operations. Toxics users shall determine such costs for the calendar year preceding the date on which the plan is due. Toxics users shall include these total costs and the calculations in the plan.
- (4) Toxics users shall explain in the plan how costs associated with the use of the covered toxic were allocated to the production unit. The allocation of such costs to the production unit shall be accurate to the extent possible.
- (5) Toxics users shall state in the plan costs set forth in 310 CMR 50.46A(1) that are not relevant in determining the cost associated the covered toxic or cannot be reliably quantified. The toxics users shall explain in the plan why such costs are not relevant or cannot be quantified and shall state in the plan an estimated impact of the unquantified cost.
- (6) In evaluating the costs and savings associated with the technology, procedure, or training program identified as technically feasible pursuant to 310 CMR 50.46, toxics users shall state in the plan the discount rate, cost of capital, depreciation rate, or payback period, if any, used in each analysis. The discount method, depreciation rate, and payback period shall be consistent with the toxics user's current capital budgeting procedures. The decision concerning the economic feasibility of a technology, procedure, or training program shall be made at least consistent with the toxics user's current business decision making practices; provided, however, that a user may modify those practices to adopt a technology, procedure, or training program.
- (7) If no technologies, procedures, or training programs are identified pursuant to 310 CMR 50.45, or if these techniques are determined to be technically infeasible pursuant to 310 CMR 50.46, the toxics user shall identify, but is not required to quantify, the costs of using the toxic chemical in each production unit.

50.47: Plan Summary

- (1) Toxics users shall submit to the Department a plan summary on or before July 1st of the applicable year. Such summary shall include:
 - (a) a copy of the certification statement required pursuant to 310 CMR 50.42(3);
 - (b) the information required pursuant to 310 CMR 50.43(3) and 310 CMR 50.44(8); and
 - (c) toxics use reduction techniques considered and techniques selected to be implemented.
- (2) Toxics users may include other information in the summary, including, but not limited to, the information required pursuant to 310 CMR 50.43(2).
- (3) The Department may require that the plan summary be submitted on a form prescribed by the Department.

50.48: Plan Updates

- (1) Toxics users shall complete plan updates every two years beginning with the date on which the initial plan is due pursuant to 310 CMR 50.41(1) by July 1st of the applicable year.
- (2) Plan updates shall include an explanation as to why the toxics user failed to implement a technology, procedure, or training program identified pursuant to 310 CMR 50.46(4) or failed to meet the schedule developed pursuant to 310 CMR 50.46(4)(d) or 310 CMR 50.46(5)(b).

50.50: Toxics Use Reduction Planners

310 CMR 50.50 through 50.63, cited collectively as 310 CMR 50.50, set forth the requirements for toxics use reduction planners.

50.51: Required Skills for Certification as a Toxics Use Reduction Planner

- (1) In order to become certified as a toxics use reduction planner, an applicant shall demonstrate to the Department that he or she possesses sufficient skills and knowledge to evaluate whether a plan was developed in accordance with 310 CMR 50.40. An applicant shall do so by complying with either 310 CMR 50.54 or 310 CMR 50.55.
- (2) In determining whether an applicant possesses sufficient skills and knowledge to evaluate whether a plan was developed in accordance with 310 CMR 50.40, the Department may consider, without limitation, whether the applicant has sufficient skills or knowledge to evaluate whether the following analyses were conducted in accordance with 310 CMR 50.40:
 - (a) analysis of toxic chemical use, byproduct generation, and emissions in a process or method of producing a product or service, including but not limited to analysis of whether a process flow diagram developed pursuant to 310 CMR 50.44(1) reflects actual facility operations;
 - (b) analysis of the technical feasibility and potential impacts of a change to an existing process or method of producing a product or service;
 - (c) analysis of the economic feasibility and potential impacts of a change to an existing process or method of producing a product or service;
 - (d) analysis of the potential effects on the facility's operation, function, and business activities due to a change to an existing process or method of producing a product or service;
 - (e) analysis of the potential effects on worker health and safety at the facility due to a change to an existing process or method of producing a product or service;
 - (f) analysis of the potential effects on toxic chemical use, byproduct generation and emissions to all environmental media due to a change to an existing process or method of producing a product or service;
 - (g) analysis of the potential effects of a change to an existing process or method of producing a product or service on compliance with other applicable laws and regulations; and,
 - (h) evaluation of whether a potential change to an existing process or method of producing a product or service constitutes toxics use reduction.

50.52: Work Experience Requirements for All Toxics Use Reduction Planners

- (1) Except as provided in 310 CMR 50.52(2),(3) and (4), an applicant shall have seven years of full-time work experience in any or all of the following areas:
 - (a) engineering or process control;
 - (b) manufacturing, production, or quality control;
 - (c) environmental compliance or worker health and safety;
 - (d) planning, industrial design, or research and development;
 - (e) accounting, business administration, or product marketing; or
 - (f) managerial or legal.
- (2) Part-time work experience in the areas set forth in 310 CMR 50.52(1) may count, on pro-rated basis, toward the requirements set forth in 310 CMR 50.52(1).
- (3) Education may substitute for up to five years of the work experience required in 310 CMR 50.52(1) as follows, provided that the degree or certificate is from an accredited educational institution:
 - (a) certificate from a technical or vocational school may substitute for up to one year of work experience;
 - (b) a degree, concentration program, or major directly related to the work experience categories set forth in 310 CMR 50.52(1)(a) through (c), including, without limitation, a degree, concentration program, or major in biology, chemistry, or physics may substitute for experience as follows:
 1. an associate's degree may substitute for up to two years of work experience;
 2. a bachelor's degree may substitute for up to four years of work experience;
 3. a master's or doctorate degree may substitute for up to five years of work experience;
 - (c) a degree, concentration program, or major directly related to the work experience categories set forth in 310 CMR 50.52(1)(d) through (f), may substitute for experience as follows:
 1. a bachelor's degree may substitute for up to three years of work experience;
 2. a master's or doctorate degree may substitute for up to four years of work experience;
 - (d) a bachelor's, master's, or doctorate in a degree, concentration program, or major not directly related to the work experience categories set forth in 310 CMR 50.52(1)(a) through (f) may, at the Department's discretion, substitute for up to two years of work experience.
- (4) The Department may, at its discretion, allow work experience in areas other than those set forth in 310 CMR 50.52(1) to count toward work experience required by 310 CMR 50.52(1) if the applicant demonstrates to the Department that such work experience is related to the skills or knowledge required pursuant to 310 CMR 50.51(2).
- (5) Work experience, acquired by an applicant while he or she is enrolled as a full-time student in an accredited educational institution, for which the applicant receives educational course credit shall not contribute to the work experience required by 310 CMR 50.52(1).

50.53: General Application Requirements and Procedures

- (1) The Department may require applicants to apply for certification on a form specified by the Department.
- (2) The Department may certify an applicant as a toxics use reduction planner for no more than two years. Toxics use reduction planners seeking recertification shall apply for recertification in accordance with 310 CMR 50.58. Failure to meet recertification requirements shall constitute grounds for denial of an application.
- (3) Upon submission of an application, each applicant shall pay to the Department an application fee determined as follows:
 - (a) The fee for an applicant that applies for certification pursuant to 310 CMR 50.54 and intends to certify plans for toxics users other than his or her employer shall be \$500.
 - (b) Applicants employed by any authority, district, municipality, or political subdivision of the Commonwealth of Massachusetts whose job duties are related to toxics use reduction shall be exempt from paying the fee.
 - (c) The fee for applicants other than those set forth in 310 CMR 50.53(3)(a) or (b) shall be \$100.

50.53: continued

(4) The schedule for timely action on an application shall be as set forth in 310 CMR 50.53(4). The schedule shall be applied in accordance with 310 CMR 4.00. As used in 310 CMR 50.00, the terms "administrative completeness review" and "technical review" shall be defined and applied as set forth in 310 CMR 4.00.

(a) Within 30 days of receipt of an application and payment of the application fee, the Department shall complete an administrative completeness review.

(b) Within 180 days of making a determination of administrative completeness, the Department shall complete a technical review.

(5) Following the technical review, the Department shall issue a written decision granting or denying certification. A decision denying certification shall state the grounds for denial. An applicant whose certification is denied may request an adjudicatory hearing in accordance with M.G.L. c. 30A and 310 CMR 1.00, 310 CMR 4.00, and 310 CMR 50.60.

50.54: Exam-track Application Procedure

(1) An applicant may become certified as a toxics use reduction planner if he or she meets the following requirements:

(a) no more than two years before applying for certification, he or she completes, to the satisfaction of the educational institution presenting the program, a toxics use reduction planning program; and,

(b) no more than two years before applying for certification, he or she obtains a passing score on the uniform certification examination.

(2) An applicant certified pursuant to 310 CMR 50.54, who paid the application fee required by 310 CMR 50.52(3)(c), shall be considered a limited practice toxics use reduction planner and may certify toxics use reduction plans in accordance with 310 CMR 50.00 for facilities owned or operated by his or her employer. The word "employer", as it is used in 310 CMR 50.54(2), shall be defined in accordance with 310 CMR 50.55(6).

(3) An applicant who becomes certified pursuant to 310 CMR 50.54, who paid the application fee required by 310 CMR 50.53(3)(a), shall be considered a general practice toxics use reduction planner and may certify toxics use reduction plans in accordance with 310 CMR 50.00 for any toxics user or other person.

(4) An applicant certified pursuant to 310 CMR 50.54, who paid the application fee required by 310 CMR 50.52(3)(c), may, upon payment of \$400 to the Department, certify toxics use reduction plans in accordance with 310 CMR 50.54(3).

50.55: Certification through Experience in Toxics Use Reduction Activities

(1) The Department may certify an applicant as a limited practice toxics use reduction planner if he or she has at least two years of full-time work experience in toxics use reduction activities. Part-time work experience in toxics use reduction activities may be pro-rated in accordance with 310 CMR 50.52(2) and (4).

(2) As used in 310 CMR 50.00, "toxics use reduction activities" include, but are not limited to, activities in which the individual uses the skills or knowledge necessary to conduct the analyses set forth in 310 CMR 50.51(2) or activities in which the individual uses the skills or knowledge necessary to evaluate whether the analyses set forth in 310 CMR 50.51(2) were conducted in accordance with 310 CMR 50.40. Successful completion of the toxics use reduction planner certification course shall also constitute a toxics use reduction activity, and shall count for six months of the two years of work experience required pursuant to 310 CMR 50.55(1).

(3) In order to become certified under 310 CMR 50.55, an applicant shall demonstrate to the Department that he or she understands how the skills or knowledge referred to in 310 CMR 50.51(2) relate to toxics use reduction plans.

50.55: continued

(4) In determining whether an applicant satisfies 310 CMR 50.55(1) and (3), the Department may consider, without limitation, whether, through work experience, the applicant used or gained skills or knowledge that enable the applicant to conduct or evaluate the analyses set forth in 310 CMR 50.51(2).

(5) A planner certified pursuant to 310 CMR 50.55 may certify plans for any facility owned or operated by his or her employer, provided that he or she demonstrates to the Department that at least one year of his or her experience in toxics use reduction activities is related to the operations of the facility. In determining whether the planner's experience in toxics use reduction activities is related to the operations of the facility at which the planner seeks to certify a plan, the Department may consider, without limitation, the similarity of the production units, products, or processes at facilities where the planner received his or her experience in toxics use reduction activities to those at the facility at which the planner seeks to certify a plan.

(6) As it is used in 310 CMR 50.50, "employer" means an individual or organization for whom the planner works and receives wages on a regular basis. For purposes of 310 CMR 50.50, a planner may not have more than one employer within the same time period. If a planner is an independent contractor and performs work for an individual or organization under a contract, for purposes of 310 CMR 50.50, the individual or organization is not the planner's employer.

50.56: Certification of Toxics Use Reduction and Resource Conservation Plans

(1) A toxics use reduction planner shall certify a toxics use reduction plan or a resource conservation plan only if, in his or her independent professional judgment, the plan satisfies the requirements of 310 CMR 50.40 or 310 CMR 50.90, as applicable, and demonstrates a good faith and reasonable effort to identify and evaluate toxics use reduction and/or resource conservation options.

(2) In certifying a plan, a toxics use reduction planner shall make a good faith and reasonable effort to identify and obtain relevant data or other information needed to comply with 310 CMR 50.56(1).

(3) In certifying a plan, a toxics use reduction planner shall maintain records of the procedures used to review the plan. The planner shall maintain such records for at least five years from the date that the planner certifies the plan.

50.57: Disclosure Requirements

A toxics use reduction planner shall disclose the following to his or her client or employer:

(1) any financial interest he or she has in any technique or equipment evaluated in the toxics use reduction plan; and,

(2) any business association, affiliation, or other relationship he or she has with a direct competitor of the client or employer.

50.58: Recertification Renewal

(1) A toxics use reduction planner may apply to the Department for recertification in accordance with 310 CMR 50.58. A toxics use reduction planner seeking recertification shall apply prior to the date on which his or her certification expires. Failure to do so shall result in the expiration of his or her certification, unless the Department extends the planner's certification pursuant to 310 CMR 50.58(4)(d). Timely submittal of an application for recertification shall extend the planner's certification until the Department issues a final decision denying recertification, or a final decision suspending or revoking the planner's certification pursuant to 310 CMR 50.50.

50.58: continued

(2) In order to be recertified, a general practice toxics use reduction planner shall, during the time period of his or her first certification, complete at least 30 continuing education credits. For each subsequent recertification, such a planner shall complete 24 continuing education credits. In order to be recertified, a limited practice toxics use reduction planner shall, during the time period of his or her first certification, complete at least 24 continuing education credits. For each subsequent recertification, such a planner shall complete 20 continuing education credits. Recertification credits may include credits related to environmental management systems and resource conservation planning as defined in 310 CMR 50.62 and 50.63. The Department shall grant continuing education credits for completion of courses, seminars, or other educational or professional programs in the following areas:

- (a) toxics use reduction activities as defined in 310 CMR 50.55(2);
- (b) environmental management systems as specified in 310 CMR 50.80;
- (c) resource conservation planning as specified in 310 CMR 50.90; or
- (b) other environmental laws or regulations, or laws of regulations pertaining to worker health or safety, except that such education may not count for more than four credits.

(3) Professional activities related to toxics use reduction, including but not limited to presenting or publishing papers, teaching, participation in professional or trade associations, or participation in advisory committees for government agencies, may, at the Department's discretion, count toward up to eight credits of the coursework required in 310 CMR 50.58(2).

(4) The Department shall determine whether to recertify a planner in accordance with 310 CMR 50.58 and the following:

- (a) Courses, seminars, or any other educational or professional programs relating to toxics use reduction activities sponsored by the Department, the Office of Technical Assistance, the Toxics Use Reduction Institute, other state or federal pollution prevention agencies, or the Environmental Protection Agency shall be considered "approved by the Department" for the purposes of 310 CMR 50.58(2).
- (b) Individuals, sponsors or presenters of courses, seminars, or programs, or planners who wish to count courses, seminars, or any other educational or professional programs other than those set forth in 310 CMR 50.58(4) toward the recertification requirements of 310 CMR 50.58 may apply to the Department for approval of such courses, seminars, or other educational or professional programs. The Department may approve such courses, seminars, or other educational or professional programs at its discretion.
- (c) In general, one hour of coursework in topics specified in 310 CMR 50.58(2) shall equal one credit. In unusual cases, the Department may, at its discretion, specify that one hour of coursework in topics specified in 310 CMR 50.58(2) equals more than one credit, not to exceed two credits, if the Department determines that a particular course, seminar or other program, or a particular topic, is especially relevant or important to the responsibilities of toxics use reduction planners.
- (d) If the Department disapproves a course, seminar, or other educational or professional program, the Department may, at its discretion, extend a planner's certification so that the planner may attend other courses, seminars or programs.
- (e) Topics in pollution treatment or control shall not count toward the coursework required pursuant to 310 CMR 50.58(2)(a).
- (f) The Department may deny recertification for any of the reasons set forth in 310 CMR 50.59(1).

(5) Following review of an application for recertification, the Department shall issue a written decision granting or denying recertification. A decision denying certification shall state the grounds for such denial. An planner whose application for recertification is denied may request an adjudicatory hearing in accordance with M.G.L. c. 30A and 310 CMR 1.00, and 310 CMR 50.60.

(6) If the Department decides to deny recertification, the Department may, at its discretion, specify conditions that the applicant shall fulfill in order to be certified or recertified. Such conditions may include, without limitation, the following:

- (a) satisfactory completion of coursework pursuant to 310 CMR 50.58(2);

50.58: continued

- (b) satisfactory completion of remedial education in accordance with 310 CMR 50.59(4);
- (c) a deadline for satisfying any conditions imposed by the Department pursuant to 310 CMR 50.58(6);
- (d) a time period, not to exceed three years, during which the individual may not apply to the Department for certification as a toxics use reduction planner.

(7) A planner may apply to the Department for modification of the requirements set forth in 310 CMR 50.58. The Department may, at its discretion, modify the requirements of 310 CMR 50.58 for a planner. In determining whether to do so, the Department may consider, without limitation, whether satisfying the requirements set forth in 310 CMR 50.58 constitute undue hardship for the planner, or whether the nature of toxics use at the facility warrants modification of the requirements set forth in 310 CMR 50.58.

(8) The Department may establish a fee for recertification.

(9) The Department may establish a deadline for recertification.

(10) The Department may require applicants for recertification to apply on a form specified by the Department.

(11) The Department may suspend or revoke a toxics use reduction planner's certification for failure to meet the recertification requirements set forth in 310 CMR 50.58. The Department may preclude such individuals from reapplying for certification for up to three years. In determining whether to suspend or revoke a toxics use reduction planner's certification for failure to meet the recertification requirements set forth in 310 CMR 50.58, the Department may consider whether the failure was due to serious illness or other circumstances beyond the planner's control.

50.59: Procedure Governing Disciplinary Proceedings

(1) The Department may suspend, deny, or revoke a planner's certification, or deny recertification for any good cause, including, but not limited to:

- (a) gross negligence in complying with 310 CMR 50.50;
- (b) fraud or misrepresentation in complying with 310 CMR 50.50;
- (c) unethical conduct in complying with 310 CMR 50.50;
- (d) failure to meet the recertification requirements set forth in 310 CMR 50.58;
- (e) noncompliance with any provision of M.G.L. c. 21I or 310 CMR 50.00.

(2) As part of an action taken by the Department pursuant to 310 CMR 50.59(1) to deny, suspend or revoke certification or recertification, the Department may specify a time period, not to exceed three years, during which the planner may not apply to the Department for certification as a toxics use reduction planner.

(3) A planner may appeal a decision by the Department to suspend or revoke that planner's certification in accordance with M.G.L. c. 30A and 310 CMR 1.00, 310 CMR 4.00, and 310 CMR 50.60.

(4) Nothing in 310 CMR 50.59(1) shall constitute or be construed as limiting the Department's authority to take enforcement actions pursuant to other applicable laws and regulations.

(5) The Department may request that the toxics use reduction planner who is potentially the subject of an enforcement action pursuant to 310 CMR 50.59(1) or (2) to attend an informal conference.

(6) Whenever the Department determines that a planner has violated any provision of 310 CMR 50.50, the Department may require that the toxics use reduction planner attend and successfully complete a course of remedial education proscribed by the Department. Failure to successfully complete such a course of remedial education may be grounds for the Department to suspend or revoke certification, or to deny recertification.

50.60: Appeal Rights and Procedures

(1) Within 21 days of the date of issuance of the Department's decision pursuant to 310 CMR 50.53(5), 310 CMR 50.55(5), 310 CMR 50.58(5), or 310 CMR 50.59(1), an appellant may request, in writing, an adjudicatory hearing in accordance with M.G.L. c. 30A, 310 CMR 1.00, and 310 CMR 4.00. In an adjudicatory hearing, the appellant bears the burden of persuading the Department that its decision was in error. Each request for an adjudicatory hearing filed pursuant to 310 CMR 50.60 shall state all reasons why the appellant believes that the Department's decision is erroneous. If the Department does not receive the appellant's request within 21 days of the date of issuance of the Department's decision, the appellant shall be deemed to have waived his or her rights to an adjudicatory appeal.

(2) If the Department denies an application for certification, the grounds upon which the appellant may claim that the Department's decision was in error shall be based on the information submitted to the Department by the applicant during the application process, and shall be limited to the following:

- (a) The applicant possesses the skills and knowledge required by 310 CMR 50.51.
- (b) The applicant possesses work experience required by 310 CMR 50.52.
- (c) The applicant satisfactorily completed the toxics use reduction planning program as required by 310 CMR 50.54.
- (d) The applicant possesses at least two years of work experience in toxics use reduction activities in accordance with 310 CMR 50.55.
- (e) The applicant's experience in toxics use reduction activities is related to the operations of the facility at which he or she seeks to certify a plan.

(3) If an applicant is denied certification because he or she fails to obtain a passing score on the uniform certification examination, the procedures set forth in 310 CMR 50.61 shall apply.

50.61: Procedures for Reviewing the Uniform Certification Examination

(1) If an applicant is denied certification because he or she fails to obtain a passing score on the uniform certification examination, the applicant may, within 21 days of the date of issuance of a notice containing the applicant's exam score, submit to the Department a written request to review his or her exam. If the Department does not receive the appellant's request within 21 days of the date of issuance of the Department's notice containing the applicant's exam score, the appellant shall be deemed to have waived his or her rights pursuant to 310 CMR 50.61.

(2) If, after reviewing his or her exam, the applicant believes that it was scored incorrectly, he or she may, within 42 days of the date of issuance of a notice containing the applicant's exam score, submit to the Department a written request for an informal conference with the Department for purposes of reviewing the scoring. If the Department does not receive the appellant's request within 21 days of the date of issuance of the Department's notice containing the applicant's exam score, the appellant shall be deemed to have waived his or her rights pursuant to 310 CMR 50.61. The request shall state all reasons why the applicant believes that the scoring was incorrect. Such reasons shall be limited to the following:

- (a) the score is incorrect due to a mistake in arithmetic.
- (b) the score is incorrect because an answer deemed incorrect is, in fact, correct.
- (c) the score is incorrect because question(s) deemed to have been answered incorrectly do not test whether the applicant possesses the skills required by 310 CMR 50.51.

(3) If a request pursuant to 310 CMR 50.61 is based on 310 CMR 50.61(2)(c), the request shall identify the specific questions being challenged and state reasons why the applicant believes that each question does not test whether the applicant possesses the skills required by 310 CMR 50.51.

(4) If the Department believes that the applicant's examination was scored incorrectly, the Department shall either recalculate the applicant's score, or require the applicant to answer a substitute question, as the Department deems appropriate.

(5) A request pursuant to 310 CMR 50.61 shall not constitute a request for an adjudicatory hearing pursuant to 310 CMR 50.60, and the Department's determination pursuant to 310 CMR 50.61 shall not be appealable pursuant to M.G.L. c. 30A or 310 CMR 50.60.

50.62: Requirements for Toxics Use Reduction Planners to Certify Environmental Management Systems

- (1) In order for a general practice toxics use reduction planner to certify an environmental management system for any facility, the planner shall:
 - (a) complete an initial 16 continuing education credits in environmental management systems, including auditing such systems, as approved by the Department; or
 - (b) be accredited or certified under a national, international or other recognized EMS standard.
- (2) In order for a limited practice toxics use reduction planner to certify an environmental management system for a facility owned by his or her employer, the planner shall:
 - (b) complete an initial 16 continuing education credits in environmental management systems, including auditing such systems, as approved by the Department; or
 - (b) have at least two years of experience in implementing environmental management systems, including auditing environmental management systems; or
 - (c) be accredited or certified under a national, international or other recognized EMS standard.
- (3) Each planner shall submit documentation to the Department that he or she meets the requirements of 310 CMR 50.62(2) with the first EMS Progress Report that the planner certifies.
- (4) Each planner who certifies an environmental management system shall, for a period of three years, maintain documentation of his or her efforts to obtain knowledge of current EMS practices and techniques that are generally accepted by the professional and trade communities implementing and auditing EMSs and shall provide such documentation upon request to the Department or to any facility for which the planner has certified or intends to certify an EMS.

50.63: Requirements for Toxics Use Reduction Planners to Certify Resource Conservation Plans

- (1) Except as provided in 310 CMR 50.63(2), in order for a toxics use reduction planner to certify a resource conservation plan, the planner shall demonstrate to the Department that:
 - (a) The planner has completed 12 initial continuing education credits in resource conservation planning, including at least six credits in applying toxics use reduction planning methods to resource conservation planning, as approved by the Department; and
 - (b) Every four years thereafter, the planner has completed nine additional credits in resource conservation planning, including at least three credits each in energy conservation, water conservation, and solid waste reduction.
- (2) A planner may certify a resource conservation plan that only focuses on the asset listed in 310 CMR 50.92(2)(d) or (e) without meeting the requirements of 310 CMR 50.63(1).
- (3) For resource conservation plans developed by July 1, 2008, toxics use reduction planners shall submit documentation of resource conservation continuing education credits as specified in 310 CMR 50.63(1) with the resource conservation plan summary. The Department shall grant continuing education credits in resource conservation for any applicable course completed in the two years prior to July 1, 2008.
- (4) For resource conservation plans developed by July 1, 2010 and thereafter, planners shall submit documentation of continuing education credits in resource conservation with their application for recertification submitted pursuant to 310 CMR 50.58.

50.70: User Segments

310 CMR 50.70 through 50.72, cited collectively as 310 CMR 50.70, set forth the criteria for classifying production units into user segments and designate user segments.

50.71: Criteria for Establishing User Segments

- (1) Production units grouped into a user segment must contain similar products and processes.

50.71: continued

(2) For purposes of grouping similar products and processes into user segments, the department may consider, without limitation, the following criteria:

- (a) transferability or potential applicability of toxics use reduction techniques;
- (b) chemical use, byproduct, or emission;
- (c) potential health or environmental impact;
- (d) potential for improvement in environmental performance; or
- (e) type of equipment used.

(3) User segments may be designated according to process codes set by the department and their associated products, or by other groupings of processes (*e.g.*, Clean Water Act categories, processes subject to MACT standards under the Clean Air Act) and their associated products. For purposes of 310 CMR 50.70, the department may, consistent with the definition of “product” in 310 CMR 50.10, designate the result of the process as the “product.”

50.72: List of User Segments

User Segment Name	Process Code* or Process Description	Product
(1) power generation	JJ-01	Electricity or Steam
(2) electroplating (barrell and rack)	AA12, AA13	plated part
(3) deionization, demineralization	HH-01	treated water
(4) forging	CC-03	forged metal part
(5) smelting	DD-07	smelted metal
(6) welding	CC-09	welded metal part
(7) heat treating of metal	CC-04	metal part
(8) refrigeration material	II-01	chilled fluid
(9) pH adjustment solution	EE-08, HH-03	treated water
(10) jet printing	AA-11	printed material
(11) screen printing	AA-08	printed material
(12) pad printing	AA-09	printed material
(13) printing (letterpress, flexographic, lithographic)	AA-05, AA-06, AA-07	printed material
(14) equipment cleaning	FF-01, FF-02, FF-03	clean equipment
(15) parts cleaning	BB-01, BB-02, BB-03	clean part
(16) casting/molding plastic	CC-01	plastic part
(17) casting molding	CC-01	metal part
(18) adhesives or sealant blending, mixing, compounding	GG-01	adhesive or sealant products produced by toxics users classified by sic code 2891

*DEP’S instructions for completing toxics use reports contains a list of process codes.

50.80: Environmental Management Systems

310 CMR 50.80 through 50.84, cited collectively as 310 CMR 50.80, establish the requirements for implementing environmental management systems (EMSs) as an alternative to developing toxics use reduction plans.

50.81: Applicability and Schedule

- (1) Large quantity toxics users and other toxics users may implement an environmental management system in *lieu* of a toxics use reduction plan once they have completed one toxics use reduction plan and two plan updates.
- (2) An EMS shall be considered suitable if it was developed in conformance with the standards of ISO 14001, US EPA's Performance Track Program, or other EMS standard adopted by a trade association or other standard-setting organization, provided that the EMS shall:
 - (a) contain the elements specified in 310 CMR 50.82;
 - (b) cover all the production units identified in the most recent toxics use report;
 - (c) consider toxics use reduction when identifying significant aspects and establishing associated objectives and targets;
 - (d) emphasize source reduction as the means of achieving objectives and targets; and
 - (e) have been in place for at least one full EMS cycle (*i.e.*, plan-do-check-act) and have undergone an independent EMS audit.
- (3) If the Department determines that an environmental management system developed pursuant to 310 CMR 50.80 has not proven to be effective as evidenced by significant noncompliance with any of the Department's regulations or permit conditions, the Department may, in addition to any enforcement action it takes with respect to such non-compliance with any of the Department's regulations or permit conditions, require that the toxics user take any or all of the following actions:
 - (a) provide information to the Department about any apparent deficiencies in the environmental management system;
 - (b) modify the environmental management system to prevent future deficiencies and non-compliance;
 - (c) audit the environmental management system; and/or
 - (d) prepare a toxics use reduction plan for all covered toxics and production units.

50.82: Requirements for an Environmental Management System

An environmental management system developed in *lieu* of a toxics use reduction plan shall contain the following elements:

- (1) A written environmental policy that expresses management for, and makes a commitment to:
 - (a) compliance with environmental legal requirements;
 - (b) pollution prevention through source reduction and toxics use reduction; and
 - (c) continual improvement of the EMS and environmental performance.
- (2) A process for identifying significant environmental aspects and impacts from current and future activities at the facility. All covered toxics shall be identified as significant environmental aspects.
- (3) Identification of environmental legal requirements, including a system for tracking compliance and learning about and integrating changes to legal requirements into the EMS.
- (4) A process for establishing measurable objectives and targets that address significant environmental aspects and other EMS commitments and that emphasize preventing pollution at its source.
- (5) Environmental management programs designed to make progress toward achieving objectives, targets, and commitments in the EMS, including the means and time-frames for their completion.

50.82: continued

- (6) Established roles and responsibilities of the facility's staff and management, on-site service providers, and contractors for meeting objectives and targets and complying with legal requirements, including a senior management representative with authority and responsibility for the EMS.
- (7) Environmental and compliance training for employees and contractors whose jobs and responsibilities involve activities directly related to significant aspects, achieving objectives and targets and compliance with legal requirements, and initiation training for new personnel.
- (8) Procedures for communicating environmental and EMS information throughout the facility, including EMS awareness programs for all employees.
- (9) Operational controls to ensure that equipment and other operations comply with legal requirements and address significant environmental aspects.
- (10) Documentation of key EMS elements and procedures for document control and records management.
- (11) Emergency preparedness and response procedures.
- (12) Procedures for monitoring and measuring key operations and activities to assess environmental performance.
- (13) Procedures for preventing and detecting non-conformance with legal and other requirements of the EMS, including an established compliance audit program and an EMS audit program, and procedures for corrective actions to ensure timely compliance and commitment to continual improvement. The EMS audit program shall require independent auditing on at least a two-year cycle and senior management review of audit results.
- (14) Documented management review of performance against objectives and targets and the effectiveness of the EMS in meeting policy commitments.

50.83: EMS Progress Report

- (1) A toxics user who has chosen to implement an EMS in *lieu* of a toxics use reduction plan shall submit to the Department an EMS progress report by July 1st of every even-numbered calendar year.
- (2) The EMS progress report shall include a brief description of:
 - (a) objectives and targets that have been established for covered toxics,
 - (b) measures being taken to incorporate source reduction into compliance and other activities; and
 - (c) information on the progress made toward meeting objectives and targets relative to covered toxics; if applicable, an explanation of why anticipated progress was not achieved, and, if applicable, the actions that have or will be taken to ensure that facility operations conform to the EMS.
- (3) The Department may require that the EMS progress report be submitted on a form prescribed by the Department.

50.84: Certification of an EMS Progress Report

- (1) Each EMS progress report shall include the certification statements set forth in 310 CMR 50.84.
- (2) The certification statement shall be signed by a toxics use reduction planner who meets the requirements of 310 CMR 50.62 or an EMS professional who meets the following requirements:
 - (a) An EMS professional may certify an EMS progress report for any toxics user or other person if the professional has completed 16 hours of toxics use reduction training, and has maintained documentation of such training.

50.84: continued

(b) An EMS professional may certify an EMS progress report for a facility owned or operated by his or her employer if the professional has two years of documented experience in toxics use reduction.

(c) After meeting the requirements in 310 CMR 50.84(2)(a) and (b), all EMS professionals who continue to certify EMSs pursuant to 310 CMR 50.80 shall complete at least 16 hours of toxics use reduction continuing education training every six years.

(d) An EMS professional shall submit documentation to the Department that he or she meets the requirements of 310 CMR 50.84 with the first EMS Progress Report that the EMS professional certifies.

(e) Any EMS professional who certifies an EMS progress report shall, for a period of three years, maintain documentation of having met the continuing education requirements in 310 CMR 50.84(2)(c) and shall provide such documentation, upon request, to the Department or to any facility for which the professional has certified or intends to certify an EMS.

(3) Each EMS progress report shall include the following written statement signed by either an EMS professional who meets the requirements of 310 CMR 50.84(2) or a toxics use reduction planner who meets the requirements of 310 CMR 50.62: "Based on my independent professional judgment, I certify under penalty of law that the following is true:

(a) I have examined and am familiar with this EMS;

(b) The EMS satisfies the requirements of 310 CMR 50.80; and

(c) The EMS demonstrates a good faith and reasonable effort to integrate toxics use reduction planning into the EMS."

(4) The EMS progress report shall include the following written statement signed by a senior management official of the facility: "I certify under penalty of law that the following is true:

(a) I have examined and am familiar with this EMS;

(b) The EMS meets the requirements of 310 CMR 50.82 and the elements specified therein are being implemented;

(c) The EMS is actively addressing environmental compliance issues;

(d) The individual who has certified the EMS pursuant to 310 CMR 50.84(3) has provided me with documentation that he or she meets the requirements of 310 CMR 50.84(2).

(e) These statements are based upon answers to queries made by me to individuals who have been designated to implement the EMS, and I have made my best effort to ensure that they are being held accountable for implementing the system in good faith. I understand that by choosing to implement an EMS in *lieu* of a toxics use reduction plan, I am responsible for maintaining documentation to evidence a good faith effort to implement all elements of the EMS.

(f) I am aware that there are penalties for submitting false information, including possible fines and imprisonment."

50.90: Resource Conservation Plans

310 CMR 50.90 through 310 CMR 50.99, cited collectively as 310 CMR 50.90, establishes requirements for developing a resource conservation plan as an alternative to developing a toxic use reduction plan.

50.91: Applicability and Schedule

(1) Large quantity toxics users and other toxics users may prepare a resource conservation plan in accordance with 310 CMR 50.90 in *lieu* of a toxics use reduction plan once the toxics user has completed one toxics use reduction plan and two plan updates.

(2) By July 1st of the applicable even-numbered calendar year, a toxics user that elects to prepare a resource conservation plan must complete a resource conservation plan and submit a resource conservation plan summary to the Department.

(3) Toxics users who choose to prepare a resource conservation plan pursuant to 310 CMR 50.90 shall:

(a) by July 1st of the following even-numbered calendar year, prepare a toxics use reduction plan pursuant to 310 CMR 50.40 and submit a toxics use reduction plan summary to the Department; and

50.91: continued

(b) Include with the plan summary a progress report on the resource conservation plan on a form prescribed by the Department.

(4) After completing a resource conservation plan, toxics users may elect to prepare another resource conservation plan four years later, after meeting the requirements of 310 CMR 50.91(3).

50.92: General Resource Conservation Plan Requirements

(1) All toxics users that prepare a resource conservation plan shall select at least one natural asset listed in 310 CMR 50.92(2) as the focus of the plan.

(2) Natural assets shall include at least one of the following:

- (a) Energy use;
- (b) Water use;
- (c) Other materials and products that contribute to solid waste;
- (d) Toxic substances that are identified on the list of toxic or hazardous substances established pursuant to 301 CMR 41.00 but are used below threshold amounts as defined in 310 CMR 50.10;
- (e) Chemical substances that are exempt from reporting under TURA, including toxic substances in articles or janitorial products used at a facility.

(3) Resource conservation plans may cover existing operations or products under development.

(4) Each resource conservation plan shall include the following written statement signed by a certified toxics use reduction planner who meets the requirements of 310 CMR 50.63: "Based on my independent professional judgment as a toxics use reduction planner, I certify under penalty of law that the following is true:

- (a) I have examined and am familiar with this resource conservation plan;
- (b) the resource conservation plan satisfies the requirements of 310 CMR 50.90; and
- (c) the resource conservation plan demonstrates a good faith and reasonable effort to identify and evaluate resource conservation options."

Notwithstanding any professional designation held by a certified toxics use reduction planner or any trade organization of which that planner is a member by way of license, registration, certification, or similar qualification, the signed certification statement shall not mean that such planner signs in the capacity of anything other than a toxics use reduction planner.

(5) Each resource conservation plan shall include the following written statement signed by the senior management official of the facility: "I certify under penalty of law that the following is true:

- (a) I have personally examined and am familiar with this resource conservation plan;
- (b) I am satisfied that any supporting documentation used in the development of the resource conservation plan exists and is consistent with the plan;
- (c) based on my inquiry of those individuals immediately responsible for the development of this resource conservation plan, I believe that the information in the resource conservation plan and any supporting documentation used in the development of the resource conservation plan is true, accurate, and complete;
- (d) the resource conservation plan, to the best of my knowledge and belief, meets the requirements of 310 CMR 50.90;
- (e) I am aware that there are penalties for submitting false information, including possible fines and imprisonment."

(6) At least six months prior to the date when the resource conservation plan must be complete, the toxics user shall notify all of its employees of the requirements of the resource conservation plan, identify the natural asset being considered as the focus of the resource conservation plan, and solicit in the notice comments or suggestions from all employees on resource conservation options for that asset. The resource conservation plan shall include a description of the steps taken by the toxics user in order to comply with this provision.

(7) In determining the amounts pursuant to 310 CMR 50.93(3), 50.94(2), 50.96(1)(b), and 50.96(4)(c), the resource conservation plan shall:

50.92: continued

- (a) refer to documents or other information used to determine these amounts, and shall specify the location of such documents or information;
- (b) include calculations of the amounts; and
- (c) state any assumptions made by the toxics user.

(8) Toxics users shall maintain resource conservation plans for a facility on the premises of that facility, and shall make resource conservation plans available to the Department upon request. Toxics users shall also make supporting documentation referred to in 310 CMR 50.92(5) available to the Department upon request. Toxics users shall maintain resource conservation plans and supporting documentation for at least five years after the date that the plan is due.

(9) Toxics users shall develop information required by 310 CMR 50.90 in accordance with standard accounting practices;

(10) Toxics users shall develop information required by 310 CMR 50.90 in accordance with standard engineering practices;

(11) Toxics users shall develop information required by 310 CMR 50.90 in good faith.

(12) Toxics users shall demonstrate a good faith and reasonable effort to identify and evaluate resource conservation options.

50.93: Facility-wide Information Required in Each Resource Conservation Plan

Toxics users shall develop and include in the resource conservation plan the following facility-wide information:

(1) a statement of the management policy of the facility regarding resource conservation. This statement shall include, but not be limited to, a description of the ways in which the toxics user encourages resource conservation and a description of any policy applicable to the facility that encourages or discourages resource conservation. This statement shall include the following information, as applicable:

- (a) a description of resource conservation in the facility's policy or decisions concerning research and development;
- (b) a description of how resource conservation affects the facility's policy or decisions concerning financial investments or capital investments;
- (c) a description of how resource conservation affects the facility's policy or decisions concerning hiring, promotions or bonuses, or other incentives, for facility employees; and
- (d) any other policy applicable to the facility that encourages or discourages resource conservation.

(2) a statement of the scope of the plan. This statement shall include, but not be limited to, the following:

- (a) a description of the natural asset selected as the focus of the resource conservation plan;
- (b) a summary of the facility's use of the selected natural asset, including a description of all the facility operations in which the selected asset is used;
- (c) a statement identifying and ranking opportunities for resource conservation regarding the selected natural asset;
- (d) a description of which operations were selected for more detailed evaluation pursuant to 310 CMR 50.94;
- (e) a summary of the identification process pursuant to 310 CMR 50.95(1); and
- (f) a brief description of the technologies, procedures, or training programs identified pursuant to 310 CMR 50.96(3), (4) and (5) and those selected for implementation.

(3) the expected change in the amount of use of the selected natural asset by July 1st of the next even-numbered calendar year pursuant to 310 CMR 50.94.

50.94: Information Required for Selected Operations in Each Resource Conservation Plan

Toxics users shall determine or develop, and include in the resource conservation plan, the following information specific to the chosen natural asset and selected operations:

- (1) a process flow diagram in accordance with the following: The process flow diagram shall be a visual representation of the movement of the asset through selected operations, including, but not limited to, how assets flow into and out of operations and where assets are lost or become waste. The process flow diagram also may represent the movement of substances or other materials that are not assets through the operations;
- (2) the total amount of each asset used, which may be reported as an absolute amount or an amount per unit of product, and a statement of the estimation methods used to determine amounts;
- (3) the unit of product associated with selected operations, if applicable;
- (4) a statement explaining the purpose that the asset serves in the operations;
- (5) the cost of the use of each asset calculated in accordance with 310 CMR 50.96A; and
- (6) goals for reducing the use of the asset.

50.95: Procedures for Identifying Resource Conservation Techniques

- (1) Toxics users shall describe the procedure used by the toxics user to identify technologies, procedures, or training programs for achieving resource conservation for the selected asset and the selected operations. This procedure shall include, but not be limited to, a list of personnel involved in the procedure, a description of information sources consulted, and a description of information gathering techniques.
- (2) Toxics users shall list technologies, procedures, and training programs identified as potentially achieving resource conservation for the asset pursuant to 310 CMR 50.95(1).

50.96: Technical Evaluation of Resource Conservation Techniques

- (1) Toxics users shall evaluate the technical feasibility of each technology, procedure, or training program listed in the resource conservation plan pursuant to 310 CMR 50.95(2) in accordance with the following requirements:
 - (a) Toxics users shall evaluate whether the technology, procedure, or training program constitutes resource conservation as defined in 310 CMR 50.10.
 - (b) Toxics users shall calculate the expected reductions resulting from implementation of the technology, procedure, or training program in accordance with 310 CMR 50.96(1)(b)1. and 2.:
 1. toxics users shall calculate expected reductions in the amount of the asset used in each operation;
 2. toxics users shall evaluate the relationship between the technology, procedure, or training program being evaluated, and other applicable laws and regulations, including but not limited to, whether implementation of the technology, procedure, or training program will violate any other law or regulation.
- (2) Toxics users need not complete the evaluation of a particular technology, procedure, or training program if, during the evaluation, the toxics user determines that the technology, procedure, or training program being evaluated is not appropriate for any of the following reasons:
 - (a) the technique is clearly technically infeasible;
 - (b) the technique is clearly economically infeasible, as determined pursuant to 310 CMR 50.96A;
 - (c) implementation of the technology, procedure, or training program is not likely to result in a decrease in the use of the natural asset or has adverse environmental impacts.

50.96: continued

- (3) For technologies, procedures, or training programs that the toxics user decides not to implement, the plan shall include:
 - (a) a description of the technology, procedure, or training program; and,
 - (b) the reason for deciding not to implement the technology, procedure, or training program.

- (4) For technologies, procedures, or training programs that the toxics user decides to implement, the plan shall include:
 - (a) a description of the technology, procedure, or training to be implemented;
 - (b) the anticipated costs and savings associated with the technology, procedure, or training program, as determined pursuant to 310 CMR 50.46A;
 - (c) the expected reductions in the amount of the asset resulting from implementation of the technology, procedure, or training program calculated pursuant to 310 CMR 50.96(1)(b). The amounts determined pursuant to 310 CMR 50.96(1)(b) and stated in the plan pursuant to 310 CMR 50.96(4)(b) shall be projected for two years from the date the plan is due; and
 - (d) an implementation schedule.

- (5) If the evaluation required for a particular technology, procedure, or training program identified pursuant to 310 CMR 50.95(2) cannot be completed by the date that the plan is due, the plan shall include the following:
 - (a) a description of the technology, procedure, or training program;
 - (b) a description of steps to be taken in order to further evaluate the technique and a schedule for taking these steps; and
 - (c) an explanation as to why the evaluation cannot be complete by the date that the plan is due.

50.96A: Economic Evaluation of Potential Resource Conservation Techniques

- (1) Toxics users shall evaluate the economic feasibility of each technology, procedure, or training program listed in the resource conservation plan and calculate the:
 - (a) cost to implement each technology, procedure, or training program;
 - (b) all associated savings for each technology, procedure, or training program.

- (2) If no technologies, procedures, or training programs are identified pursuant to 310 CMR 50.95, or if these techniques are determined to be technically infeasible pursuant to 310 CMR 50.96, the toxics user is not required to quantify the costs or savings of these techniques.

50.97: Resource Conservation Plan Summary

- (1) Toxics users shall submit to the Department a resource conservation plan summary on or before July 1st of the applicable year. Such summary shall include:
 - (a) a copy of the certification statements required pursuant to 310 CMR 50.92(4) and (5);
 - (b) the natural asset identified in 310 CMR 50.93(2)(a);
 - (c) the resource conservation techniques identified pursuant to 310 CMR 50.95(2);
 - (d) the resource conservation techniques identified to be implemented pursuant to 310 CMR 50.96(4)(a);
 - (e) the plan goals identified in 310 CMR 50.94(6);
 - (f) the baseline amount of the asset used identified in 310 CMR 50.94(2);
 - (g) the expected change in the amount of the asset used identified in 310 CMR 50.93(3)

- (2) The Department may require that the summary be submitted on a form prescribed by the Department.

REGULATORY AUTHORITY

310 CMR 50.00: M.G.L. c. 21I, §§ 3, 10, 11 and 12.

310 CMR 60.00: AIR POLLUTION CONTROL FOR MOBILE SOURCES

Section

- 60.01: General Regulations to Prevent Air Pollution
- 60.02: Massachusetts Motor Vehicle Emissions Inspection and Maintenance Program
- 60.03: U Conformity to the State Implementation Plans of Transportation Plans, Programs, and Projects Developed, Funded or Approved Under Title 23 U.S.C. or the Federal Transit Act
- 60.04: MB City of Cambridge Vehicle Trip Reduction
- 60.05: Global Warming Solutions Act Requirements for Transportation
- 60.06: CO₂ Emission Limits for State Fleet Passenger Vehicles

60.01: General Regulations to Prevent Air Pollution

(1) No person owning, leasing, or controlling the operation of any air contamination source shall willfully, negligently, or through failure to provide necessary equipment or to take necessary precautions, permit any emission from said air contamination source or sources of such quantities of air contaminants which will cause, by themselves or in conjunction with other air contaminants, a condition of air pollution.

(2) (a) Accurate Submittal to the Department No person shall make any false, inaccurate, incomplete, or misleading statements in any application, record, report, plan, design, statement or document which that person submits to the Department pursuant to M.G.L. c. 111, §§ 142A through 142M, 150A, c. 21H, or 310 CMR 60.00.

(b) Accurate and Complete Record Keeping No person shall make any false, inaccurate, incomplete, or misleading statements in any record, report, plan, file, log, or register which that person is required to keep pursuant to M.G.L. c. 111, §§ 142A through 142M, 150A, c. 21H, or 310 CMR 60.00. Such records shall be made available to the Department for inspection upon request.

(c) Certification Any person providing information required to be submitted to the Department pursuant to M.G.L. c. 111, §§ 142A through 142M, 150A, c. 21H, or 310 CMR 60.00 shall make the following certification: "I certify that I have personally examined the foregoing and am familiar with the information contained in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including possible fines and imprisonment."

60.02: Massachusetts Motor Vehicle Emissions Inspection and Maintenance Program

(1) Introduction.

(a) Authority. 310 CMR 60.02 is promulgated by the Commissioner of the Department of Environmental Protection pursuant to M.G.L. c. 111, § 142M and c. 21A, §§ 2(28) and 16.

(b) Headings are for convenience only and do not affect the substance of 310 CMR 60.02.

(c) Purpose. 310 CMR 60.02 establishes a program to inspect the emissions of motor vehicles and to ensure that a vehicle that fails an emissions inspection is repaired properly in a reasonable time period, the motorist obtains a waiver for the vehicle, or the vehicle's registration is suspended in accordance with 540 CMR 4.00: *Annual Safety and Combined Safety and Emissions Inspection of All Motor Vehicles, Trailers, Semi-trailers and Converter Dollies.*

(d) Severability. Each subsection of 310 CMR 60.02 shall be deemed severable, and in the event that any subsection of 310 CMR 60.02 is held invalid, the remainder shall continue in full force and effect.

(2) Definitions. The following words and phrases when used in 310 CMR 60.00, except as otherwise required by the context, have the following meanings.

All Wheel Drive Vehicle means a motor vehicle in which all four wheels are constantly and automatically connected to the drive train.

Assembled Vehicle means a unique vehicle constructed from parts of other motor vehicles.

60.02: continued

Certified Configuration means the constituent parts of a motor vehicle necessary to maintain the vehicle in conformance with any approval or order issued by the U.S. Environmental Protection Agency or the California Air Resources Board certifying the vehicle as meeting applicable emissions standards.

Commissioner means the commissioner of the Department of Environmental Protection or his or her designee.

Custom Vehicle means a motor vehicle for which the year of manufacture is after 1948, for which the model year is at least 25 years old and that has been altered from the manufacturer's original design or has a body constructed, in whole or in part, from non-original materials.

Cutpoint means the motor vehicle emissions level above which a vehicle fails an emissions inspection and at or below which a vehicle passes an emissions inspection.

Data Link Connector means the connector where diagnostic scan tools interface with the vehicle's on-board diagnostic system.

Department means the Massachusetts Department of Environmental Protection.

Diagnostic Trouble Code means a code stored in the On-board Diagnostics (OBD) system indicating the reason the malfunction indicator light is (or was) illuminated.

Diesel Engine means an engine using a compression ignition thermodynamic cycle.

Diesel Vehicle means a vehicle powered by a diesel engine.

Dynamometer means a device which applies a load to a vehicle's drive wheels during an emissions inspection while the vehicle is being operated in a stationary and secure position to simulate actual driving conditions.

Emission Control System means any device or combination of parts designed by the manufacturer to control the emissions of a motor vehicle.

Emissions Certification Category means the category of vehicles certified to the same emissions standard within a vehicle class.

Emissions Inspection or Inspection means the procedures specified by the Department that determine whether a vehicle meets emissions inspection standards provided in 310 CMR 60.02(12).

Emission Repair means repair of a motor vehicle for the purpose of such vehicle passing or attempting to pass an emissions inspection.

Glider Kit means a vehicle body, including cab, which is placed upon the chassis with its original drive train, of a vehicle with a Gross Vehicle Weight Rating (GVWR) of more than 10,000 pounds that changes the function or capacity of the original chassis, and which creates a need for a change to the Vehicle Identification Number (VIN) because the cab has been replaced. Modifications to the original chassis may be necessary to allow installation of the glider kit.

Gross Vehicle Weight Rating (GVWR) means the maximum loaded weight for which the vehicle is designed, as specified by the vehicle manufacturer.

Heavy Duty Diesel Vehicle means a motor vehicle with a GVWR greater than 14,000 pounds, equipped with a diesel engine, and operating on any fuel or combination of fuels.

Heavy Duty Nondiesel Vehicle means a motor vehicle with a GVWR greater than 14,000 pounds, not equipped with a diesel engine, and operating on any fuel or combination of fuels.

60.02: continued

Initial Inspection means the first inspection of a vehicle under 310 CMR 60.02 or any subsequent inspection where the vehicle passed the previous inspection, received a waiver, or received an economic hardship failure repair extension.

Inspection See definition for emissions inspection.

Inspection Certificate means a written statement indicating:

- (a) that the required inspection for a motor vehicle has been performed and the motor vehicle inspected has passed or failed said inspection; or
- (b) that the motor vehicle is exempt from the inspection.

Said certificate shall be in a form prescribed by the Registrar and the Commissioner.

Inspection Fee means the fee established by the Commonwealth and paid by the motorist for a motor vehicle inspection pursuant M.G.L. c. 7, § 3B.

Inspection Station means a facility that is licensed by the Registry to conduct motor vehicle safety and emissions inspections.

Inspector means any properly trained person with a valid certification from the Department and licensed by the Registry to perform motor vehicle safety and emissions inspections.

Kit Vehicle means a specially-constructed vehicle or a replica vehicle, the production volume of which is less than 500 vehicles per year.

Light-duty Diesel Vehicle means a vehicle with a GVWR of 8,500 pounds or less, equipped with a diesel engine, and operating on any fuel or combination of fuels.

Light-duty Nondiesel Vehicle means a vehicle with a GVWR of 8,500 pounds or less, not equipped with a diesel engine, and operating on any fuel or combination of fuels.

Malfunction Indicator Light means the instrument panel light used by the OBD system to notify the vehicle operator of an emissions related problem.

Medium-duty Diesel Vehicle means a vehicle with a GVWR greater than 8,500 and less than or equal to 14,000 pounds, equipped with a diesel engine, and operating on any fuel or combination of fuels.

Medium-duty Nondiesel Vehicle means a vehicle with a GVWR greater than 8,500 and less than or equal to 14,000 pounds, not equipped with a diesel engine, and operating on any fuel or combination of fuels.

Model-year means the vehicle manufacturer's annual production period for each engine family which includes January 1st of a calendar year or, if the manufacturer has no annual production period for the engine family, the year in which the vehicle was manufactured. If a motor vehicle is manufactured in two or more states, the model-year shall be determined by the date on which the chassis is completed.

Motor Vehicle or Vehicle means any equipment or mechanical device propelled primarily on land by power other than muscular power, including passenger vehicles and trucks operating on any fuel type. "Motor vehicle" or "vehicle" does not mean railroad or railway engines or cars, vehicles operated by the system known as trolley motor or trackless trolley, vehicles used primarily for off roadway use such as construction and farm equipment, or devices used for domestic purposes such as a lawnmower or snowblower.

Motor Vehicle Inspection and Maintenance Program means the program for the inspection and repair of motor vehicles conducted in accordance with the combined emissions and safety regulations established by the Department and the Registry pursuant to 310 CMR 60.02 and 540 CMR 4.00: *Annual Safety and Combined Safety and Emissions Inspection of All Motor Vehicles, Trailers, Semi-trailers and Converter Dollies*, respectively.

60.02: continued

Motorist means the person in control of a vehicle subject to the motor vehicle inspection and maintenance program.

New Vehicle means a motor vehicle to which the equitable or legal title has never been transferred to an ultimate purchaser.

Non-manufacturer means a person constructing or assembling a specially-constructed vehicle or a replica vehicle for personal use and not for resale.

On-board Diagnostics System (OBD System) means a system, as installed and programmed by the original equipment manufacturer or its designee, or by a vendor recognized or authorized by the U.S. Environmental Protection Agency or the California Air Resources Board or the original equipment manufacturer to install or program such system according to the requirements of the U.S. Environmental Protection Agency or the California Air Resources Board of vehicle components and condition monitors and sensors controlled by an on-board computer running software designed to signal the motorist when a problem is detected with an emissions control system or component, or with the on-board diagnostic system.

On-board Diagnostics Test (OBD Test) means an assessment of the condition of a vehicle's emissions control system, including the vehicle's OBD system, pursuant to Department inspection procedures established pursuant to 310 CMR 60.02, including workstation software prompts.

Opacity Test means an emissions test of a diesel vehicle's exhaust performed by measuring the density of the smoke that the vehicle emits. Such test may be performed while the vehicle is under load on a dynamometer according to Department-approved inspection procedures.

Original Equipment Manufacturer means the entity that originally manufactured the motor vehicle or motor vehicle engine prior to sale to the ultimate purchaser.

Person means an individual, agency or other government entity, corporation, partnership, association, or similar entity.

Readiness Codes means the codes stored by a vehicle's OBD system that indicate whether a vehicle's OBD system has been able to complete its checks for proper functioning of the vehicle's emissions-related components and systems.

Registered Repair Technician means any person registered with the Department who meets the Department's standards for registration.

Registrant means the person to whom a certification of registration is issued pursuant to 540 CMR 2.00: *Motor Vehicle Regulations*.

Registrar means the Registrar of the Registry of Motor Vehicles.

Registry means the Registry of Motor Vehicles.

Reinspection means any emissions inspection performed on a motor vehicle after it has failed an emissions inspection and repair has been attempted.

Repair Form means the form provided by the inspector to the motorist whose vehicle has failed the emissions inspection to record the type and cost of emissions repairs performed on the vehicle.

Replica Vehicle means a motor vehicle constructed or assembled by a non-manufacturer from new or used parts that, when assembled, replicates an earlier year, make and model vehicle.

SAE JI667 Opacity Test means *The Snap-Acceleration Smoke Test Procedure for Heavy-Duty Diesel Powered Vehicle*, 1996-02, issued by the Society of Automotive Engineers (SAE), as modified by the Department.

60.02: continued

Specially Constructed Vehicle means a motor vehicle reconstructed or assembled by a non-manufacturer from new or used parts, the exterior of which does not replicate or resemble any other manufactured vehicle.

Street Rod means a motor vehicle for which the year of manufacture is prior to 1949, and which has been altered from the manufacturer's original design or has a body constructed from non-original materials.

Tampering means the act of a person to remove or render inoperative any device or element of design installed on or in a motor vehicle in compliance with regulations under § 203(a) of the federal Clean Air Act, or to cause a vehicle to operate using a fuel which the vehicle is not certified to use, or to operate on a fuel not approved or certified by the U.S. Environmental Protection Agency or the California Air Resources Board.

Transient Loaded-mode Test means the portion of the emissions inspection administered while the vehicle is operating on a dynamometer.

Two-speed Idle Test means an emissions measurement taken while a vehicle is operating first at idle, then while the engine is operating at 2500 revolutions per minute with the transmission in neutral, and a final time when the vehicle is again operating at idle.

Ultimate Purchaser means, with respect to a motor vehicle or motor vehicle engine, the first person who in good faith purchases or leases the motor vehicle or motor vehicle engine for purposes other than resale.

Used Motor Vehicle means a motor vehicle owned or leased by any person other than the ultimate purchaser for purposes other than resale.

Vehicle Class means a category to which a vehicle is assigned by the U.S. Environmental Protection Agency or the California Air Resources Board pursuant to their requirements for certifying the vehicle as meeting applicable emissions standards.

Vehicle Identification Number or VIN means a unique number assigned to each vehicle by the vehicle manufacturer or the Registry.

Workstation means the complete set of inspection equipment approved by the Department and required by the Registrar by or pursuant to 540 CMR 4.00: *Annual Safety and Combined Safety and Emissions Inspection of All Motor Vehicles, Trailers, Semi-trailers and Converter Dollies* for an inspection station.

(3) Applicability.

(a) The following motor vehicles are subject to emissions inspection except as otherwise provided at 310 CMR 60.02(3)(b):

1. all motor vehicles registered in Massachusetts;
2. any motor vehicle owned or operated by a federal agency in Massachusetts (regardless of whether such vehicles are registered in Massachusetts); and
3. diesel vehicles with a GVWR greater than 10,000 pounds operating on Commonwealth roads but not registered in Massachusetts.

(b) The following motor vehicles are exempt from the emissions inspection:

1. any diesel vehicle with a model year earlier than 1984;
2. any light duty diesel vehicle with a model year earlier than 1997 or 15 or more model years old;
3. any medium duty diesel vehicle with a GVWR of not more than 10,000 pounds and with a model year earlier than 2007 or 15 or more model years old;
4. any light duty nondiesel vehicle with a model year earlier than 1996 or 15 or more model years old;
5. any medium duty nondiesel vehicle with a model year earlier than 2008 or 15 or more model years old;

60.02: continued

6. any heavy duty nondiesel vehicle not equipped with an OBD system or 15 or more model years old;
7. any new vehicle registered first in Massachusetts for the motor vehicle inspection upon its initial registration to the ultimate purchaser, except a kit vehicle;
8. tactical military vehicles;
9. any motor vehicle or class of motor vehicles determined by the Department to present prohibitive emissions inspection problems or to be inappropriate for emissions inspection;
10. any motor vehicle operated exclusively by electric power;
11. any vehicle that has been granted a waiver or exemption by the U.S. Environmental Protection Agency or the California Air Resources Board from emissions standards or equipment requirements to the extent of said waiver or exemption;
12. any motorcycle or moped;
13. any vehicle registered with the Registry on or before April 30, 2012, as a replica vehicle or as a specially-constructed vehicle pursuant to M.G.L. c. 90, § 2H; and
14. any vehicle registered with the Registry as a street rod or custom vehicle pursuant to M.G.L. c. 90, § 2H.

(4) Scheduling of Emissions Inspections Prior to October 1, 2008 (Reserved).

(5) Scheduling of Emissions Inspections.

(a) Motor Vehicles Registered in Massachusetts. The registrant of each motor vehicle shall obtain an emissions inspection every time the vehicle is submitted for a motor vehicle inspection in accordance with 310 CMR 60.02. Registrants shall submit their vehicles for inspection no later than the last day of the month and year of expiration on the previously issued inspection certificate.

(b) Initial Inspection of New Kit Vehicles. When any kit vehicle is first registered in Massachusetts, including upon sale or lease to the ultimate purchaser or completion of assembly, the registrant shall obtain a visual inspection in accordance with 310 CMR 60.02(12)(c). If the certified configuration installed in the kit vehicle is from a model year vehicle subject to an OBD test, the kit vehicle shall also receive an OBD test for the model year of the certified configuration installed in the kit vehicle.

(c) Initial Registration of Motor Vehicles. A motorist shall obtain an emissions inspection as part of the motor vehicle inspection for the vehicle within seven days from the date the vehicle is first registered in Massachusetts unless exempt under 310 CMR 60.02(3)(b).

(d) Inspections upon Transfer. For any used motor vehicle, the motorist shall obtain an emissions inspection as part of his or her motor vehicle inspection for the vehicle within seven days of the date on which the motor vehicle is registered in Massachusetts to the new owner unless exempt in accordance with 310 CMR 60.02(3)(b).

(e) Massachusetts Vehicles not Located in State. For any motor vehicle which is not garaged or operated in Massachusetts at the time that vehicle's emissions inspection was due, a motorist may operate the vehicle for 15 days after the vehicle's return to Massachusetts, provided said motor vehicle bears proof satisfactory to the Department of an adequate emissions inspection from another jurisdiction. The motorist shall obtain the vehicle's initial emissions inspection within said 15 days.

(f) Diesel Vehicles with a GVWR Greater Than 10,000 Pounds. Diesel vehicles with a GVWR greater than 10,000 pounds registered in Massachusetts are subject to 310 CMR 60.02(5)(a) through (e), (g) and (h). In addition, all diesel vehicles with a GVWR greater than 10,000 pounds operating on Massachusetts roads are subject to emissions testing during roadside inspections, and emissions inspection standards are applicable to emissions testing conducted during roadside inspections.

(g) Inspections for Program Evaluation. The Department may require a registrant to have his or her vehicle inspected upon notice from the Department for program evaluation. If the vehicle fails such inspection, the registrant may choose not to have the vehicle repaired and present the vehicle for inspection as provided at 310 CMR 60.02(5)(a).

(h) A motorist may obtain an initial inspection at any time prior to the month and year of expiration on the inspection certificate previously issued where the vehicle passed the previous inspection, received a waiver, or received an economic hardship failure repair extension.

60.02: continued

(6) Motorist Requirements.

(a) Inspection Documents. When presenting a motor vehicle for an inspection, a motorist shall provide the following documents to the inspector to identify the vehicle by make, model-year, vehicle identification number, and license plate number:

1. a valid certificate of registration; and
2. if the inspection is a reinspection, a valid and completed emissions repair form.

(b) Inspection Fee. The motorist shall pay the inspection fee when presenting a motor vehicle for an inspection. No fee is required for an inspection that is not completed.

(c) Inspection Failure. If a vehicle fails an initial inspection, the motorist either shall repair the vehicle such that it passes a reinspection, or shall obtain a waiver or an economic hardship repair extension within 60 days.

(d) Referrals. The motorist shall present the vehicle to a location as instructed by the Registry, the Department, or via printed instructions from a workstation, for purposes related to emissions inspection.

(7) Emission Test Applicability Prior to October 1, 2008 (Reserved).(8) Emission Test Applicability.

(a) On-board Diagnostics Test. Unless exempt pursuant to 310 CMR 60.02(3)(c), the following motor vehicles are subject to the on-board diagnostic test in accordance with Department-approved inspection procedures:

1. all light-duty nondiesel motor vehicles model year 1996 or newer;
2. all light-duty diesel motor vehicles model year 1997 or newer;
3. all medium-duty diesel motor vehicles model year 2007 or newer;
4. all medium-duty nondiesel motor vehicles model year 2008 or newer; and
5. all heavy-duty diesel and nondiesel motor vehicles equipped with OBD systems.

(b) SAE J1667¹ Opacity Test. Unless exempt pursuant to 310 CMR 60.02(3)(b), diesel vehicles with a GVWR greater than 10,000 pounds and not otherwise subject to an OBD test are subject to the SAE J1667 opacity test. The Department may exempt from roadside emissions inspection such vehicles if the vehicle has been tested in another state or jurisdiction.

(c) Engine Switching. A motor vehicle with an exchanged or replaced engine shall be subject to the engine switching requirements in 310 CMR 60.02(12)(d).

(d) Assembled Vehicles. An assembled or reconstructed vehicle, including a vehicle with a prefabricated body, is subject to the emissions inspection applicable to the fuel type, model year, and type of vehicle chassis indicated on the vehicle's certificate of registration.

(e) Kit Vehicles. Unless exempt pursuant to 310 CMR 60.02(3)(b), kit vehicles are subject to an emissions test based on the year of the certified configuration installed in the kit vehicle:

1. if the certified configuration installed in the kit vehicle is from a model year vehicle subject to an OBD test, then the kit vehicle shall be subject to the kit vehicle visual test upon initial registration and to annual OBD testing requirements for the model year of the certified configuration installed in the kit vehicle, including any exclusions or exemptions otherwise granted to that certified configuration; or
2. if the certified configuration installed in the kit vehicle is from a model year vehicle not subject to an OBD test, then the kit vehicle shall be subject to the kit vehicle visual test upon initial registration and transfer of ownership.

(f) Glider Kits. Vehicles with glider kits are subject to an emissions test based on the year of the chassis on which the glider kit is installed:

1. if the chassis is subject to an OBD test, then the vehicle shall be subject to a visual inspection upon initial registration to verify that the OBD system is properly installed and to OBD testing requirements for the model year of the chassis, or
2. if the chassis is not subject to an OBD test, then the vehicle shall be subject to an opacity test if the year of the chassis and fuel type of the engine are subject to an opacity test.

¹ Copies of SAE J1667 may be obtained from the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001.

60.02: continued

(9) Advisory Scan of New Motor Vehicles. For any vehicle required to be equipped with an OBD system and registered first in Massachusetts after sale or lease to the ultimate purchaser, except a kit vehicle, the registrant shall obtain an advisory scan of the vehicle's OBD system. The advisory scan is not an emissions inspection. The scan may be performed as part of the pre-delivery motor vehicle inspection performed by the seller if the seller is so authorized by the Registry. The items or characteristics to be scanned and the properties that constitute a problem shall be established by the Department. The items or characteristics to be scanned and the properties that constitute a problem shall be based on: the type of vehicle, the vehicle fuel type(s), the model year of the vehicle, vehicle certification requirements of the U.S. Environmental Protection Agency or the California Air Resources Board, and the vehicle's OBD system design. A list of the items or characteristics to be scanned and the properties that constitute a problem shall be published by the Department on the web site for the Enhanced Emissions and Safety Test Program. Upon completion of the advisory scan of a new motor vehicle, the inspector, or a person authorized by the Registry if the seller is authorized to perform the advisory scan as part of the pre-delivery motor vehicle inspection, shall provide to the motorist a printed report of the vehicle's advisory scan results in the format required by the Department.

(10) Inspector Procedures.

(a) The inspector shall perform emissions inspections in accordance with 310 CMR 60.02 and all Department-approved inspection procedures, including all workstation software prompts, at inspection stations licensed by the Registry.

(b) The inspector shall perform emissions inspections using Department-approved equipment and shall perform all Department-required quality control and maintenance procedures on the equipment and adhere to all safety procedures as provided in the Department-approved inspection procedures.

(c) The inspector shall record the information identified as provided in the Department's emissions inspection procedures and the workstation software prompts.

(d) Once initiated, the inspector shall complete an emissions inspection. The inspector shall terminate the inspection if an unsafe condition or workstation error or inspector error arises during the inspection process.

(e) The inspector shall refuse to perform an emissions inspection on a motor vehicle if:

1. the motorist fails to present the documentation specified at 310 CMR 60.02(6)(a)1.;
2. the vehicle is carrying explosives or other materials considered to be a safety hazard by the inspector;
3. fuel, oil, or other leaks are observed by the inspector that are considered a safety hazard by the inspector; or
4. the inspector observes any other hazard that would compromise the safe conduct of the inspection.

(f) Upon completion of the emissions inspection, the inspector shall provide to the motorist a printed inspection report of the vehicle's inspection results in the format required by the Department.

(g) Upon completion of the motor vehicle inspection, the inspector shall affix an inspection certificate to the windshield of the vehicle inspected indicating the proper results of the inspection.

(11) Emissions Inspection Standards Prior to October 1, 2008. (Reserved)

(12) Emissions Inspection Standards. A motor vehicle shall fail the emissions inspection if it does not meet the applicable standards established in 310 CMR 60.02(12).

(a) Opacity Standards for Diesel Vehicles. Any vehicle subject to an opacity test shall have emissions opacity no greater than the cutpoints in Table A as indicated for that vehicle's class and model year.

60.02: continued

TABLE A
Opacity Test Cutpoints

	Percent Opacity
Diesel trucks greater than 10,000 pounds GVWR	
1984 – 1990 model years	40%
1991 – 1996 model years	30%
1997 and newer model years	20%
Diesel buses greater than 10,000 pounds GVWR	
1984 – 1987 model years	40%
1988 – 1993 model years	30%
1994 and newer model years	20%

- (b) On-board Diagnostics Test. A vehicle shall fail the on-board diagnostics test if:
1. the data link connector is missing, has been tampered with, or malfunctions, or the OBD system has been altered in such a way as to make OBD system testing impossible;
 2. the malfunction indicator light is commanded by the OBD system to be illuminated;
 3. the malfunction indicator light does not illuminate properly when commanded on by the OBD system;
 4. the vehicle's OBD system reveals insufficient readiness codes, for light-duty nondiesel vehicles as prescribed in 40 CFR 85.2222 or as otherwise determined by the Department in consultation with the U.S. Environmental Protection Agency, and as determined by the Department for all other vehicles, are set for the components of the OBD system except as provided for reinspections at 310 CMR 60.02(14)(b); or
 5. the vehicle's OBD system reveals other OBD system malfunctions or conditions as identified by the Department.
- (c) Kit Vehicle Visual Test. A kit vehicle shall be registered with the Registry as a replica vehicle or a specially-constructed vehicle and subject to a visual test to verify compliance with the following emissions requirements; and kit vehicle registrants shall supply any documentation required by the inspector, the Department, or the Registry:
1. The engine installed in the kit vehicle shall meet one of the following requirements. For purposes of this subdivision, "used" means the component has been in a vehicle that has been titled to an ultimate purchaser, a "rebuilt component" means a used component which has been refurbished with new or other used parts, and a "new engine" means an engine that has not been previously installed in a vehicle.
 - a. The engine block and cylinder head(s) shall be used; other components of the engine may be new.
 - b. The engine may be a new engine of the same or newer model year of a vehicle that has been permanently retired and its engine destroyed, provided the following criteria are met:
 - i. the vehicle shall be permanently retired and the engine of that vehicle destroyed solely for the purpose of compliance with 310 CMR 60.00;
 - ii. both the destroyed engine and the new engine are of the same fuel type and made for either a passenger car or light duty truck;
 - iii. the permanently retired vehicle has been registered in Massachusetts for at least one year within five years of the year in which the kit vehicle is first registered in Massachusetts; and

60.02: continued

iv. the displacement of the new engine is in the same or smaller Nominal Displacement Group as the destroyed engine, as specified in 310 CMR 60.02(12)(c)1.a.iv.: *Table B*:

TABLE B	
Nominal Displacement Groups	
<u>Destroyed and New Engine</u> Number of Cylinders	<u>Nominal Displacement Group</u>
3- or 4-cylinder	up to 3.0 liters
5- or 6-cylinder	3.0- 5.0 liters (up to 302 cu in)
8-cylinder	Small - 4.0-5.4 liters (up to 327)
8-cylinder	Medium - 5.5-6.7 liters (up to 409)
8-cylinder	Large - 6.8 liters or more (over 409)
The destroyed engine or the new engine may have more than 8 cylinders provided both engines are in the same 8-cylinder nominal displacement group.	

c. The engine may be a new engine if it is part of a certified configuration that is certified by the California Air Resources Board, the model year of which is no more than one model year older than the year in which the kit vehicle is first registered.

2. If the certified configuration installed in the kit vehicle is for a model year vehicle subject to the OBD test, then the transmission installed in the vehicle shall be monitored by the OBD system consistent with the OBD system for the certified configuration;
3. All emissions-related components and settings shall conform in all material respects to those of the certified configuration applicable to the engine model year (*i.e.*, all emissions-related components shall match or be traceable to only one certified configuration);
4. All catalytic converters, oxygen sensors, and charcoal canisters shall be new, original equipment parts, or replacement parts equivalent to the original equipment parts;
5. If the originally certified configuration required unleaded fuel, then the vehicles shall have fuel filler neck restrictors which meet the requirements of 40 CFR 80.24;
6. The vehicle weight of the kit configuration can be no more than 500 pounds greater than the weight of the originally certified configuration; and
7. Each vehicle's accompanying documentation shall also include the make, model year, chassis year, engine year, engine family, subfamily, and tune-up specifications for the certified configuration applicable to the engine model year.

(d) Engine Switching Requirements. A motor vehicle with an exchanged or replaced engine shall be subject to the following requirements:

1. the vehicle configuration following the engine switch shall be a certified configuration;
2. the certified configuration shall be of the same emissions certification category, as established by the U.S. Environmental Protection Agency or the California Air Resources Board;
3. engine switching between vehicle California-certified and federally-certified vehicles is prohibited;
4. engine switching between vehicle classes is prohibited; and
5. for heavy-duty vehicles, the engine switched into a heavy duty truck shall be of a certified configuration of the same model year or newer as the year of the engine originally installed in the vehicle.

(13) Reinspections Prior to October 1, 2008. (Reserved)

60.02: continued

(14) Reinspections.

(a) The inspector shall inspect every vehicle presented for reinspection in accordance with the emissions inspection requirements of 310 CMR 60.02, Department-approved inspection procedures, and workstation software prompts.

(b) If a vehicle failed the on-board diagnostics test during the most recent initial inspection and does not meet readiness criteria as prescribed by 310 CMR 60.02(12)(b)4. at the reinspection, the vehicle shall be turned away consistent with Department-approved inspection procedures. A vehicle not meeting readiness criteria as prescribed by 310 CMR 60.02(12)(b)4. upon reinspection is not considered to have received an emissions reinspection.

(c) If the vehicle passes reinspection, the vehicle shall receive an emissions inspection certificate indicating compliance with emissions inspection requirements.

(d) Unless a vehicle that has failed an emissions inspection passes a reinspection within 60 days, obtains a waiver, or obtains an economic hardship failure repair extension, the vehicle shall not be operated on a public road and the registration of any such Massachusetts-registered motor vehicle shall be suspended in accordance with 540 CMR 4.00: *Annual Safety and Combined Safety and Emissions Inspection of All Motor Vehicles, Trailers, Semi-trailers and Converter Dollies.*

(15) Challenge Inspections.

(a) A motorist may challenge the results of an emissions inspection or reinspection. To challenge the results of an emissions inspection or reinspection, a motorist shall notify the Registry, in a form and manner as specified by the Registry, within two days (excluding Sundays, Commonwealth and federal holidays) of the inspection being challenged, and shall submit his or her vehicle for another emissions inspection or other facility as at an inspection station or other facility as designated by the Registry or the Department.

(b) If the vehicle fails a challenge inspection or reinspection, the motorist shall pay the inspection station or other facility for the cost of the inspection. If the vehicle passes the challenge inspection, the inspector shall issue the appropriate inspection certificate and report but shall not charge any inspection fee to the motorist.

(16) Waivers Prior to October 1, 2008. (Reserved)(17) Waivers.

(a) A motorist may apply for a waiver of emission inspection standards if the following conditions are met:

1. the vehicle failed a reinspection; and
2. emissions-related repairs appropriate for the diagnostic trouble code(s) that caused the malfunction indicator light to be commanded on by the OBD system were performed on the vehicle by a registered repair technician.

(b) The motorist shall present the vehicle to a location designated by the Registry or the Department along with the following documentation when applying for a waiver:

1. receipts for all emissions-related repairs completed by a registered repair technician since the vehicle's most recent initial inspection indicating the problem(s) diagnosed and the problem(s) to which the repairs are applicable; and
2. any other documents required by the Department.

(c) An emissions waiver certificate shall be granted if all of the following requirements are met:

1. all safety inspection requirements are met;
2. the vehicle is registered with the Registry as a private passenger motor vehicle or auto home pursuant to 540 CMR 2.05: *Vehicle Registrations Requirements*;
3. the emission control system is present and there is no evidence of tampering;
4. the malfunction indicator light is not commanded on by the OBD system for any diagnostic trouble code(s) for misfire, catalytic converter efficiency, particulate filter efficiency, or for equipment related to energy storage in a hybrid vehicle;
5. the malfunction indicator light is functioning properly;
6. repairs were performed that were appropriate for the diagnostic trouble code(s) that caused the malfunction indicator light to be commanded on by the OBD system;
7. the motorist has used all relevant manufacturer warranty coverage including recalls to repair the vehicle;

60.02: continued

8. repair expenditures exceed the following limits:
 - a. \$750 for vehicles five model years old or newer;
 - b. \$650 for vehicles over five but not exceeding ten model years old; and
 - c. \$550 for vehicles over ten model years old.

Beginning January 1, 2010, the expenditure limits in 310 CMR 60.02(17)(c) shall be subject to automatic annual adjustment. On January 1, 2010, the expenditure limit in 310 CMR 60.02(17)(c)8.a. shall be adjusted by the percentage, if any, by which the Consumer Price Index ("CPI") for the preceding calendar year differs from the CPI of 1989 and the adjusted expenditure limit shall be rounded to the nearest \$5.00.² The expenditure limit in 310 CMR 60.02(17)(c)8.b. shall then be adjusted by subtracting \$100 from the adjusted expenditure limit in 310 CMR 60.02(17)(c)8.a. The expenditure limit in 310 CMR 60.02(17)(c)8.c. shall then be adjusted by subtracting \$200 from the adjusted expenditure limit in 310 CMR 60.02(17)(c)8.a. The Department will publish these adjusted expenditure limits on the web site for the Enhanced Emissions and Safety Test Program.

(d) Costs associated with the following repairs are not eligible for consideration toward the waiver cost limit:

1. tampering-related repairs to the emissions control system except where it can be verified that the part in question or one similar to it is no longer available for sale;
2. repairs to an emissions control system which has been dismantled or rendered inoperable, except where it can be verified that the part in question or one similar to it is no longer available for sale;
3. repairs to a vehicle to correct an engine switch that does not meet the requirements of 310 CMR 60.02(12)(d);
4. repairs to an OBD system to correct its failure to communicate with emission inspection equipment;
5. repairs to an OBD system to return the malfunction indicator light to proper operation;
6. repairs to an OBD system to meet minimum test criteria for readiness, except that if it was necessary to replace the vehicle's powertrain control module to meet minimum test criteria for readiness and the vehicle failed upon reinspection because the malfunction indicator light was commanded by the OBD system to be illuminated, then ½ of the cost for such replacement may be combined with the repairs appropriate for the diagnostic trouble code(s) that caused the malfunction indicator light to be commanded on by the OBD system to meet the applicable waiver cost limit;
7. repairs under any warranty;
8. repairs that are subject to a manufacturer's recall;
9. repairs unrelated to emissions performance or inappropriate for the diagnostic trouble code(s) that caused the malfunction indicator light to be commanded on by the OBD system;
10. repairs performed prior to the most recent initial inspection failure; and
11. repairs not performed by a registered repair technician, except where the Department has determined that specialty repairs not typically performed by a registered repair technician are necessary.

(e) An emissions waiver certificate is valid until the vehicle's next emissions inspection.

(f) An emissions waiver certificate is not transferable upon the sale of the vehicle or transfer of the vehicle's registration.

(g) Diesel vehicles with a GVWR greater than 10,000 pounds are not eligible for a waiver from opacity standards.

²

The CPI for any calendar year is the average of the CPI for all-urban consumers published by the Department of Labor, as of the close of the 12 month period ending August 31st of each calendar year, as prescribed by 40 C.F.R. § 51.360(a)(7)(i). The revision of the CPI that is most consistent with the CPI for calendar year 1989 shall be used, as prescribed by 40 C.F.R. § 51.360(a)(7)(ii).

60.02: continued

- (18) Diagnostic Waivers Prior to October 1, 2008. (Reserved)
- (19) Economic Hardship Failure Repair Extensions.
- (a) A motorist may apply for an economic hardship failure repair extension if the following conditions are met:
1. the vehicle failed its most recent reinspection;
 2. the vehicle does not qualify for a waiver pursuant to 310 CMR 60.02(17);
 3. the economic hardship failure repair extension is not for any emissions inspection or reinspection required by 310 CMR 60.02(5)(c) associated with initial registration in Massachusetts or by 310 CMR 60.02(5)(d) associated with a transfer of ownership;
 4. documentation of the malfunction(s) causing the economic hardship failure(s) and an estimate of related repairs is provided by a registered repair technician;
 5. each diagnostic trouble code recorded during the most recent reinspection qualifies as an economic hardship failure;
 6. the motorist has used all relevant warranty coverage including recalls to repair the vehicle.
- (b) The motorist shall present the vehicle to a location designated by the Registry or the Department along with the following documentation when applying for an economic hardship repair extension:
1. an estimate provided by a registered repair technician of the cost of repairs related to the emissions failure;
 2. the vehicle's current registration; and
 3. any other documents required by the Registry or the Department.
- (c) An economic hardship failure repair extension shall be granted after an OBD emissions inspection failure if all of the following requirements are met:
1. the cost of a single component repair or replacement to correct a diagnostic trouble code for the component is more than 1.5 times the repair expenditure limit applicable for the model year of the vehicle specified in 310 CMR 60.02(17)(c)8.a., b., or c., including any adjustment for CPI;
 2. the vehicle does not qualify for a waiver pursuant to 310 CMR 60.02(17);
 3. the economic hardship failure repair extension is not for any emissions inspection or reinspection required by 310 CMR 60.02(5)(c) associated with initial registration in Massachusetts or by 310 CMR 60.02(5)(d) associated with a transfer of ownership;
 4. the Department or its designee agrees with the findings of the registered repair technician regarding the cause of the economic hardship failure, that the repair estimate is related to repairs appropriate for the economic hardship failure, and that the repair estimate provided by the registered repair technician is reasonable;
 5. each diagnostic trouble code recorded during the most recent reinspection qualifies as an economic hardship failure;
 6. the motorist has used all relevant warranty coverage including recalls to repair the vehicle;
 7. all safety inspection requirements are met;
 8. the vehicle is registered with the Registry as a private passenger motor vehicle or auto home pursuant to 540 CMR 2.05;
 9. the emission control system is present and there is no evidence of tampering; and
 10. the repair estimate is related to repairs appropriate for the economic hardship failure.
- (d) An economic hardship repair extension is valid until the vehicle's next emissions inspection.
- (e) A vehicle granted an economic hardship failure repair extension may not be issued a waiver or an economic hardship failure repair extension in *lieu* of passing its next emissions inspection or reinspection.
- (20) Inspector Training and Certification.
- (a) No person shall perform an emissions inspection unless such persons are certified by the Department or its designee and licensed by the Registry.
- (b) To become an inspector a person shall receive Department-approved training, be certified by the Department, and licensed by the Registry to perform inspections.
- (c) To meet the certification requirement, a person shall:
1. pass the Department-approved exam;

60.02: continued

2. demonstrate to the satisfaction of the Department or its designee, the ability to conduct a proper inspection, and perform proper quality control and workstation maintenance procedures; and
 3. not have a pattern of noncompliance with respect to performing motor vehicle inspections.
- (d) Certification. The Department shall certify a person who meets the requirements at 310 CMR 60.02(20)(c).
- (e) The Department may require inspectors to obtain additional training and pass additional exams prior to renewing their certifications if the Department determines that such training and examinations are appropriate to accommodate changes in the test equipment, changes in test procedures, or other changes in the motor vehicle inspection and maintenance program. The Department shall make any such determination in writing. An emissions inspector certificate shall renew automatically upon renewal of the emissions inspector license unless the Department makes such determination prior to the inspector's license renewal.
- (21) Repair Technician Registration Prior to October 1, 2008. (Reserved)
- (22) Repair Technician Registration.
- (a) To become a registered repair technician for nondiesel vehicles, an applicant shall complete any Department-required repair technician training, and meet at least one of the following requirements:
1. Hold a currently valid L1 certification from the Institute for Automotive Service Excellence (ASE);
 2. have equivalent certification from a motor vehicle or engine manufacturer, as determined by the Department or its designee (registered repair technicians qualifying under this provision would be registered repair technicians only for the motor vehicle or engine manufacturer's vehicles to which the equivalent certification applies), and be employed by a dealership for that manufacturer or by a repair facility recognized or authorized by the engine manufacturer; or
 3. have equivalent certification from another certification organization, as determined by the Department or its designee.
- (b) To become a registered repair technician specializing in the repair of diesel vehicles, an applicant shall complete the Department-approved repair technician training module and meet at least one of the following requirements:
1. Hold a currently valid L2 certification from the Institute for Automotive Service Excellence (ASE); or
 2. Hold currently valid L1 and A9 certifications from the Institute for Automotive Service Excellence (ASE); or
 3. have equivalent certification from a motor vehicle or engine manufacturer, as determined by the Department or its designee (registered repair technicians qualifying under this provision would be registered repair technicians only for the motor vehicle or engine manufacturer's vehicles to which the equivalent certification applies), and be employed by a dealership for that manufacturer or by a repair facility recognized or authorized by the engine manufacturer; or
 4. have equivalent certification from another certification organization, as determined by the Department or its designee.
- (c) The Department may remove a registered repair technician's registration if:
1. any requirement for qualification as a registered repairer is not met or maintained;
 2. the registered repair technician provides false documentation to the Department or its designee, the Registry, or a motorist, of repairs performed on a vehicle;
 3. the registered repair technician provides false documentation to the Department or its designee, the Registry, or the motorist, of the cost of repairs performed on a vehicle;
- or

60.02: continued

4. the Department, the Registry, or any state or federal agency or court of competent jurisdiction determines that the registered repairer has performed or been a party to fraudulent or deceptive business practices, including, but not limited to: charging motorists for repairs not performed; or, recommending or performing repairs unrelated to the cause of an emissions inspection failure and representing those repairs as related to the cause of an emissions inspection failure, or has violated any laws, rules, regulations, or other requirements or orders related to the protection of the environment.
- (d) Any automotive repair facility listed by the Department as employing a registered repair technician may be removed from the Department's list of such automotive repair facilities if:
1. the listed automotive repair facility no longer employs a registered repair technician;
 2. the listed automotive repair facility provides false documentation to the Department or its designee, the Registry, or a motorist of repairs performed on a vehicle;
 3. the listed automotive repair facility provides false documentation to the Department or its designee, the Registry, or the motorist of the cost of repairs performed on a vehicle;
- or
4. the Department, the Registry, or any state or federal agency or court of competent jurisdiction determines that any owner, operator, or employee of the listed automotive repair facility, while in the exercise of his or her responsibilities or duties related to the automotive repair facility, has performed or been a party to fraudulent or deceptive business practices, including, but not limited to, charging motorists for repairs not performed, recommending or performing repairs unrelated to the cause of an emissions inspection failure and representing those repairs as related to the cause of an emissions inspection failure, or has violated any laws, rules, regulations, or other requirements or orders related to the protection of the environment.

(23) Prohibition Against Tampering. All persons are prohibited from tampering with any vehicle emissions control device or system. No person or entity shall take any action or fail to take any action that causes a motor vehicle to no longer comply with federal or state law, with standards for the motor vehicle emissions inspection, or with requirements for motor vehicle registration. 310 CMR 60.02(23) shall not be construed as preventing the temporary alteration of equipment for the purpose of motor vehicle repair or quality assurance by the Department, Registry, or their designees.

(24) Enforcement.

- (a) No motorist may operate any vehicle without a valid inspection certificate.
- (b) No motorist may operate any motor vehicle in violation of 310 CMR 60.02.
- (c) Registration Suspension. A motor vehicle which does not comply with the applicable emissions inspection requirements shall be subject to registration suspension pursuant to 540 CMR 4.00: *Annual Safety and Combined Safety and Emissions Inspection of All Motor Vehicles, Trailers, Semi-trailers and Converter Dollies* until the vehicle passes the applicable emissions inspection or obtains a waiver.
- (d) No person shall give false information to an inspection station, an inspector, the Registry, or the Department or its designee concerning any repairs or associated expenditures to be considered for determining eligibility for a waiver or economic hardship repair extension waiver.
- (e) Inspection Certificates.
 1. No person shall issue an inspection certificate indicating compliance with 310 CMR 60.02 for a motor vehicle that has not been inspected or reinspected in accordance with, or is not in compliance with, the standards for the applicable motor vehicle emissions inspection pursuant to 310 CMR 60.02.
 2. An inspector shall issue an inspection certificate indicating compliance only for a motor vehicle that he or she has inspected and determined to comply with the applicable standards for motor vehicle emissions inspections pursuant to 310 CMR 60.02.
 3. An inspector shall issue a certificate indicating failure of the emissions inspection to any motor vehicle that he or she has inspected and determined does not comply with the applicable standards for motor vehicle emissions inspection pursuant to 310 CMR 60.02.
 4. No person or entity may alter, falsify, or counterfeit an inspection certificate, waiver certificate, or diagnostic waiver certificate.

60.02: continued

5. No person shall affix an inspection certificate, waiver certificate, or diagnostic waiver certificate to a motor vehicle other than the motor vehicle for which the certificate was issued.

(f) Penalty Provisions.

1. The Department may impose a penalty against an inspection station for any violation of 310 CMR 60.02 at that inspection station. The Department may impose a penalty against any person for any violation of 310 CMR 60.02.

2. Any person who violates any provision of M.G.L. c. 111, § 142M or 310 CMR 60.02 shall be subject to a civil or administrative penalty or fine or imprisonment pursuant to M.G.L. c. 111, § 142M and M.G.L. c. 21A, § 16.

3. Each day or portion thereof on which a violation occurs or continues shall be deemed a separate violation.

4. Whenever the Department seeks to assess a civil administrative penalty pursuant to M.G.L. c. 21A, § 16, M.G.L. c. 111, § 142M and 310 CMR 60.02, the person who would be assessed the penalty shall have the right to an adjudicatory hearing. Any request for an adjudicatory hearing thereon shall be made in accordance with M.G.L. c. 21A, § 16, and 310 CMR 5.00: *Administrative Penalty*.

(PAGES 2317 THROUGH 2324 ARE RESERVED FOR FUTURE USE.)

60.03: U Conformity to the State Implementation Plans of Transportation Plans, Programs, and Projects Developed, Funded or Approved Under Title 23 U.S.C. or the Federal Transit Act

(1) Purpose. The purpose of 310 CMR 60.00 is to implement §176(c) of the Clean Air Act, as amended and the related requirements of 23 U.S.C. 109(j), with respect to the conformity of transportation plans, programs and projects which are developed, funded or approved by the U.S. Department of Transportation, and by metropolitan planning organizations or other recipients of funds under 23 U.S.C. or the Federal Transit Act (49 U.S.C. 1601 *et seq.*). 310 CMR 60.00 sets forth policy, criteria and procedures for demonstrating and assuring conformity of such activities to the Massachusetts State Implementation Plan developed pursuant to § 110 and Part D of the Clean Air Act.

(2) Definitions. Terms but not defined in 310 CMR 60.03 shall have the meaning given to them by the CAA, titles 23 and 49 U.S.C., Environmental Protection Agency regulations or U.S. Department of Transportation regulations, in that order of priority.

CAA means the Clean Air Act, as amended (42 U.S.C 7401 *et seq.* as amended by PL 101-549, November 15, 1990).

Cause or contribute to a new violation for a project means:

- (a) To cause or contribute to a new violation of a standard in the area affected by a project or over a region which would otherwise not be in violation of the standard during the future period in question, if the project were not implemented, or
- (b) To contribute to a new violation in a manner that would increase the frequency or severity of a new violation of a standard in such area.

CMAQ means the congestion mitigation and air quality improvement program established under the Intermodal Surface Transportation and Efficiency Act of 1991.

Consultation means that one party confers with another identified party, provides all appropriate information to that party needed for meaningful input, and, prior to taking any action, considers the views of that party and responds to those views in a timely, substantive written manner prior to any final decision on such action. Such views and written response shall be made part of the record of any decision or action.

Control strategy SIP revision is the revision to the SIP which contains specific strategies for controlling the emissions of and reducing ambient levels of pollutants in order to satisfy CAA requirements for demonstrations of reasonable further progress and attainment (CAA §§ 182(b)(1), 182(c)(2)(A), 182(c)(2)(B), 187(a)(7), 189(a)(1)(B), 189(b)(1)(A) and 192(a)&(b) for nitrogen dioxide (NO₂)).

Control strategy period with respect to carbon monoxide (CO), particulate matter less than ten microns in diameter (PM₁₀), nitrogen dioxide and/or ozone precursors (volatile organic compounds and oxides of nitrogen), means that period of time after EPA approves control strategy SIP containing strategies for controlling CO, and/or ozone, as appropriate. This period ends when a request under § 107(d) of the CAA for redesignation to an attainment area is submitted to and approved by EPA.

Department means the Department of Environmental Protection.

Design concept means the type of facility identified by a project, *e.g.*, freeway, expressway, arterial highway, grade-separated highway, reserved right-of-way rail transit, mixed-traffic rail transit, exclusive busway, *etc.*

Design scope means the design aspects which will affect a proposed facility's impact on regional emissions, usually as they relate to vehicle or person carrying capacity and control, *e.g.*, number of lanes or tracks to be constructed or added, length of project, signalization, access control including approximate number and location of interchanges, preferential treatment for high-occupancy vehicles, *etc.*

DOT means the United States Department of Transportation.

60.03: continued

EOTC means the Massachusetts Executive Office of Transportation and Construction.

EPA means the United States Environmental Protection Agency.

FHWA means the Federal Highway Administration of DOT.

FHWA/FTA project is any highway or transit project which is proposed to receive funding assistance and approval through the Federal-Aid Highway program or the Federal mass transit program, or requires Federal Highway Administration (FHWA) or Federal Transit Administration (FTA) approval for some aspect of the project, such as connection to an interstate highway or deviation from applicable design standards on the interstate system.

FTA means the Federal Transit Administration of DOT.

Forecast period with respect to a transportation plan is the period covered by the transportation plan pursuant to 23 CFR part 450.

Highway project is an undertaking to implement or modify a highway facility or highway-related program and consists of all required phases necessary for implementation. For analytical purposes, it shall be defined sufficiently to:

- (a) connect logical termini and be of sufficient length to address environmental matters on a broad scope;
- (b) have independent utility or significance, i.e., be usable and be a reasonable expenditure even if no additional transportation improvements in the area are made; and
- (c) not restrict consideration of alternatives for other reasonably foreseeable transportation improvements.

Horizon year is a year for which the transportation plan describes the envisioned transportation system pursuant to 310 CMR 60.03(7).

Hot-spot analysis is an estimation of likely future localized CO and PM₁₀ pollutant concentrations and a comparison of those concentrations to the national ambient air quality standards. Pollutant concentrations to be estimated should be based on the total emissions burden which may result from the implementation of a single, specific project, summed together with future background concentrations (which can be estimated using the ratio of future to current traffic multiplied by the ratio of future to current emission factors and then applying the ratio to the background value) expected in the area. The total concentration shall be estimated and analyzed at appropriate receptor locations in the area substantially affected by the project. Hot-spot analysis assesses impacts on a scale smaller than the entire nonattainment or maintenance area, including, for example, congested roadway intersections and highways or transit terminals, and uses an air quality dispersion model to determine the effects of emissions on air quality.

Increase the frequency or severity means to cause a location or region to exceed a standard more often or to cause a violation at a greater concentration than previously existed and/or would otherwise exist during the future period in question, if the project were not implemented.

Interim Period with respect to a pollutant or pollutant precursor means that period of time lasting until the earlier of the following:

- (a) submission to EPA of the relevant control strategy SIP revisions which have been endorsed by the Governor and has been subject to a public hearing, or
- (b) the date that the Clean Air Act requires relevant control strategy SIP to be submitted to EPA, provided EPA has notified the Commonwealth, MPO, and DOT of the Commonwealth's failure to submit any such plans. The precise end of the interim period is defined in 310 CMR 60.03(24).

ISTEA means the Intermodal Surface Transportation Efficiency Act of 1991.

60.03: continued

Maintenance area means any geographic region previously designated nonattainment pursuant to the CAA Amendments of 1990 and subsequently redesignated to attainment subject to the requirement to develop a maintenance plan under §175A of the CAA, as amended.

Maintenance period with respect to a pollutant or pollutant precursor means that period of time beginning when EPA approves a request under § 107(d) of the CAA for redesignation to an attainment area, and lasting for 20 years, unless the SIP specifies that the maintenance period shall last for more than 20 years.

MEPA means the Massachusetts Environmental Policy Act (M.G.L. c. 30, § 61 through 62H, and regulations at 301 CMR 11.00: *MEPA Regulations*).

Metropolitan planning organization (MPO) is that organization designated as being responsible, together with the Commonwealth, for conducting the continuing, cooperative, and comprehensive planning process under 23 U.S.C. 134 and 49 U.S.C. 1607. It is the forum for cooperative transportation decision-making. For the purposes of 310 CMR 60.03, Regional Planning Agencies (RPA) in the Commonwealth of Massachusetts which have not been formally designated as MPOs under 23 U.S.C. 134 and 49 U.S.C. 1607 shall be subject to the same requirements as MPOs.

Milestone means an emissions level and the date on which it is required to be achieved under § 182(g)(1) and § 189(c) of the CAA.

Motor vehicle emissions budget is that portion of the total allowable emissions defined in a SIP revision (or in a SIP revision which was endorsed by the Governor or his or her designee, subject to a public hearing) and submitted to EPA but not yet approved by EPA for a certain date for the purpose of meeting reasonable further progress milestones or attainment or maintenance demonstrations, for any criteria pollutant or its precursors, allocated by the SIP to highway and transit vehicles. The SIP for an ozone nonattainment area shall include a NO_x motor vehicle emissions budget if NO_x reductions are being substituted for reductions in volatile organic compounds in milestone years required for reasonable further progress.

National ambient air quality standards (NAAQS) are those standards established pursuant to section 109 of the Clean Air Act and include standards for carbon monoxide (CO), lead (Pb), nitrogen dioxide (NO₂), ozone, particulate matter (PM-10), and sulfur dioxide (SO₂).

NEPA means the National Environmental Policy Act of 1969, as amended (42 U.S.C. 4321 *et seq.*).

NEPA process completion with respect to FHWA or FTA, means the point at which there is a specific action to make a determination that a project is categorically excluded, to make a Finding of No Significant Impact, or to issue a record of decision on a Final Environmental Impact Statement under NEPA.

Nonattainment area means any geographic region which has been designated as nonattainment under § 107 of the CAA for any pollutant for which a national ambient air quality standard exists.

Not classified area means any carbon monoxide nonattainment area which EPA has not classified as either moderate or serious.

Project means a highway project or transit project.

Recipient of funds designated under title 23 U.S.C. or the Federal Transit Act means any agency at any level of Commonwealth, county, city, or regional government that routinely receives title 23 U.S.C. or Federal Transit Act funds to construct FHWA/FTA projects, operate FHWA/FTA projects or equipment, purchase equipment, or undertake other services or operations via contracts or agreements. This definition does not include private landowners or developers, or contractors or entities that are only paid for services or products created by their own employees.

60.03: continued

Regionally significant project means a transportation project (other than an exempt project) which serves regional transportation needs (such as access to and from the area outside of the region, major activity centers in the region, major planned developments such as new retail malls, sports complexes, *etc.*, or transportation terminals as well as most terminals themselves) and would normally be included in the modeling of a metropolitan area's transportation network, including at a minimum all principal arterial highways and all fixed guideway transit facilities that offer an alternative to regional highway travel. Regionally significant projects include, but are not limited to, (a) any project that adds a lane (other than a turning lane in the vicinity of an intersection) to a minor arterial or greater classification highway; and (b) any project for the construction of a new facility that is a minor arterial or greater classification highway.

SIP is the portion (or portions) of the implementation plan, or most recent revision thereof, which has been approved under § 110, or promulgated under § 110(c), or promulgated under § 301(d) and which implements the relevant requirements of the CAA.

Standard means a national ambient air quality standard.

Transit is mass transportation by bus, rail, or other conveyance which provides general or special service to the public on a regular and continuing basis. It does not include school buses or charter or sightseeing services.

Transit project is an undertaking to implement or modify a transit facility or transit-related program; purchase transit vehicles or equipment; or provide financial assistance for transit operations. It does not include actions that are solely within the jurisdiction of local transit agencies, such as changes in routes, schedules, or fares. It may consist of several phases. For analytical purposes, it shall be defined inclusively enough to: (a) connect logical termini and be of sufficient length to address environmental matters on a broad scope; (b) have independent utility or independent significance, *i.e.*, be a reasonable expenditure even if no additional transportation improvements in the area are made; and (c) not restrict consideration of alternatives for other reasonably foreseeable transportation improvements.

Transitional period with respect to a pollutant or pollutant precursor means that period of time which begins after submission to EPA of the relevant control strategy SIP which has been endorsed by the Governor (or his or her designee) and has been subject to a public hearing. The transitional period lasts until EPA takes final approval action on the control strategy SIP submission.

Transportation control measure (TCM) is any measure that is specifically identified and committed to in the SIP or a SIP revision submitted to EPA that is either one of the types listed in §108 of the CAA or any other measure with the purpose of reducing emissions or concentrations of air pollutants from transportation sources by reducing vehicle use or changing traffic flow or congestion conditions. Notwithstanding the above, vehicle technology-based, fuel-based, and maintenance-based measures which control the emissions from vehicles under fixed traffic conditions are not TCMs.

Transportation improvement program (TIP) means a staged, multiyear, intermodal program of transportation projects covering a metropolitan planning area which is consistent with the metropolitan transportation plan, and developed pursuant to 23 CFR part 450.

Transportation plan means the official intermodal metropolitan transportation plan that is developed through the metropolitan planning process for the metropolitan planning area, developed pursuant to 23 CFR part 450.

Transportation project is a highway project or a transit project.

(3) Applicability.

(a) Action applicability.

1. Except as provided for in 310 CMR 60.03(3)(c) or 310 CMR 60.03(30), conformity determinations are required for:

60.03: continued

- a. The adoption, acceptance, approval, funding or support of transportation plans by an MPO or DOT;
 - b. The adoption, acceptance, approval, funding or support of TIPs by an MPO or DOT; and
 - c. The approval, funding, or implementation of FHWA/FTA projects.
2. Conformity determinations are not required for projects which are not FHWA/FTA projects. However, 310 CMR 60.03(25) applies for regionally significant non FHWA/FTA projects.
- (b) Geographic Applicability.
1. The provisions of this subpart shall apply in all nonattainment and maintenance areas for transportation-related criteria pollutants.
 2. The provisions of this subpart apply with respect to emissions of the following criteria pollutants: ozone, carbon monoxide (CO), nitrogen dioxide (NO₂) and particles with an aerodynamic diameter less than or equal to a nominal 10 micrometers (PM₁₀).
 3. The provisions of this subpart apply with respect to emissions of the following precursor pollutants:
 - a. volatile organic compounds (VOC) and nitrogen oxides (NO_x) in ozone areas (unless the EPA Administrator determines under §182 of the CAA that additional reductions would not contribute to attainment);
 - b. NO_x in NO₂ areas; and
 - c. VOC, NO_x and PM₁₀ in PM₁₀ areas if:
 - i. During the interim period, The EPA Regional Administrator or the director of the state air agency has made a finding that transportation-related precursor emissions within the nonattainment area are a significant contributor to the PM₁₀ nonattainment problem and has so notified the MPOs and DOT; or
 - ii. During the transitional, control strategy and maintenance periods, the applicable implementation plan (or implementation plan submission) established a budget for such emissions as part of the reasonable further progress, attainment or maintenance strategy.
- (c) Limitations.
1. Projects subject to 310 CMR 60.00 for which the NEPA process and a conformity determination have been completed by FHWA or FTA may proceed toward implementation without further conformity determinations if one of the following major steps has occurred within the most recent three year period: NEPA process completion; start of final design; acquisition of a significant portion of the right-of-way; or approval of the plans, specifications and estimates. All phases of such projects which were considered in the conformity determination are also included, if those phases were for the purpose of funding, final design, right-of-way acquisition, construction, or any combination of these phases.
 2. A new conformity determination for a project will be required if there is a significant change in project design concept and scope, if a supplemental environmental document for air quality purposes is initiated, or if no major steps to advance the project have occurred within the most recent three year period.
- (4) Priority. When assisting, funding or approving any action with air quality-related consequences, FHWA and FTA shall give priority to the implementation of the transportation-related portions of the SIP. This priority shall be consistent with statutory requirements for allocation of funds among States or other jurisdictions.
- (5) Frequency of conformity determinations.
- (a) Conformity determinations and conformity redeterminations for transportation plans, TIPs and FHWA/FTA projects must be made according to the requirements of 310 CMR 60.05 and the SIP.
 - (b) Transportation plans.
 1. Each new transportation plan shall be found to conform before the transportation plan is approved by the MPO or accepted by DOT.

60.03: continued

2. All transportation plan revisions shall be found to conform before the transportation plan revisions are approved by the MPO or accepted by DOT, unless the revision merely adds or deletes exempt projects listed in 310 CMR 60.03(30). The conformity determination shall be based on the transportation plan and the revision taken as a whole.
 3. Conformity of existing transportation plans shall be redetermined within 18 months of the following, or the existing conformity determination will lapse:
 - a. November 24, 1993; (May 24, 1995)
 - b. EPA approval of a SIP revision which:
 - i. Establishes or revises a transportation-related emissions budget (as required by CAA sections 175A(a), 182(b)(1), 182(c)(2)(A), 182(c)(2)(B), 187(a)(7), 189(a)(1)(B) and 189(b)(1)(A).
 - ii. Adds, deletes, or changes TCMs.
 - c. EPA promulgation of a SIP which establishes or revises a transportation-related emissions budget, or adds, deletes or changes TCMs.
 4. Conformity determinations shall be made no less frequently than every three years and shall lapse within three years of a determination.
- (c) Transportation improvement programs.
1. A new TIP shall be found to conform before the TIP is approved by the MPO or accepted by DOT.
 2. TIP amendment requires a new conformity determination for the entire TIP before the amendment is approved by the MPO or accepted by DOT, unless the amendment merely adds or deletes exempt projects listed in 310 CMR 60.03(30).
 3. After an MPO adopts a new or revised transportation plan, conformity shall be redetermined by the MPO and DOT within six months from the date of adoption of the plan, unless the new or revised plan merely adds or deletes exempt projects listed in 310 CMR 60.03(30). Otherwise, the existing conformity determination for the TIP will lapse.
 4. Conformity determinations shall be made no less frequently than every three years and shall lapse within three years of a determination.
- (d) Projects. FHWA/FTA projects shall be found to conform before they are adopted, accepted, approved, or funded. Conformity shall be redetermined for any FHWA/FTA project if none of the following major steps has occurred within the past three years: NEPA process completion; start of final design; acquisition of a significant portion of the right-of-way; or approval of the plans, specifications and estimates.
- (6) Consultation.
- (a) Agency Responsibilities.
1. Executive Office of Transportation and Construction (EOTC)
 - a. coordinates overall consultation process for conformity findings of transportation plans and TIPs;
 - b. provides guidance and assistance to MPOs in determining conformity of transportation plans, TIPs and projects, as appropriate;
 - c. reviews MPO transportation plans, TIPs and project air quality conformity determinations for acceptability and content and coordinates submittal to the Department, EPA and DOT;
 - d. performs project-level conformity determinations during the environmental review process under NEPA and MEPA;
 - e. provides the Department with traffic-related parameters for calculating mobile source emissions of the SIP;
 - f. serves as the lead agency, in consultation with other MPO members, in SIP planning and implementation for transportation initiatives pursuant to section 174(a) of the Clean Air Act.
 2. Metropolitan Planning Organizations (MPOs)
 - a. develops transportation plans and TIPs;
 - b. performs regional emissions analysis of transportation plans and TIPs;
 - c. makes conformity findings on transportation plans and TIPs;
 - d. develops public consultation procedures in accordance with 23 CFR Part 450;

60.03: continued

3. Department of Environmental Protection (DEP)
 - a. serves as lead agency in overall SIP development, coordination and implementation;
 - b. coordinates overall consultation process for the SIP;
 - c. coordinates with EPA on SIP-related issues;
 - d. provides EOTC and the MPOs with mobile source inputs for air quality modeling of transportation plans, TIPs and projects;
 - e. conducts conformity reviews of transportation plans, TIPs and projects and issues findings of concurrence or non-concurrence.
 4. Environmental Protection Agency (EPA)
 - a. provides input and guidance, as needed, on analysis procedures for air quality estimates, SIP preparation, conformity analyses and interpretation of EPA rules and guidance;
 - b. consults with the U.S. DOT on review of conformity determinations.
 4. U.S. Department of Transportation (DOT)
 - a. provides input and guidance, as needed, on the transportation planning process and issues that arise during the conformity process;
 - b. makes final conformity findings;
 - c. sends copies of conformity determinations to EPA for input.
- (b) The MPO shall make conformity determinations according to 310 CMR 60.03(6) and with the SIP and in accordance with the public involvement procedures established by the MPO in compliance with 23 CFR part 450. This criterion applies during all periods.
- (c) State and Federal Agency Consultation.
1. Prior to such time that conformity analyses on transportation plans, TIPs and projects are performed, or at the request of an involved agency, EOTC shall convene a consultation meeting(s) with representatives from the MPOs, the Department, EPA and DOT. Prior to a consultation meeting(s), EOTC shall circulate a meeting agenda to the involved agencies. The specific purposes of the state and federal agency consultation meeting are to:
 - a. select CO and PM₁₀ hotspot modeling procedures;
 - b. select regional emissions analysis models including consulting on model development and assessing project design factors for modeling;
 - c. identify analysis methods to estimate vehicle miles travelled (VMT) and emissions from non-regionally significant projects as required by 310 CMR 60.03(26)(b).
 - d. select inputs to the most recent EPA-approved emissions factor model;
 - e. identify regionally significant projects to be included in the regional emissions analysis including non-federally funded projects;
 - f. identify projects which have changed in design and scope from the transportation plan or TIP;
 - g. identify exempt projects;
 - h. identify exempt projects and categories of exempt projects which should be treated as non-exempt because they may have adverse air quality impacts and determining appropriate air quality analysis methodologies for analyzing such projects;
 - i. identify transportation plan and TIP revisions which add or delete exempt projects;
 - j. identify the latest planning assumptions and determining consistency with SIP assumptions;
 - k. determine if the transportation plan and TIP are fiscally constrained; and
 - l. develop factors to reconcile Highway Performance Monitoring System (HPMS) VMT estimates with network-based model VMT estimates pursuant to 310 CMR 60.03(25)(b)2.
 2. EOTC shall document the outcome(s) of the consultation meeting(s) and shall circulate said documentation to the MPOs, the Department, EPA and DOT.

60.03: continued

(d) State Agency Consultation.

1. Prior to such time that conformity analyses on transportation plans, TIPs and projects are performed, or at the request of an involved agency, EOTC shall convene a consultation meeting(s) with representatives from the MPOs and the Department. EOTC shall circulate a meeting agenda to involved agencies. The specific purpose of the state agency consultation meeting are to:
 - a. identify which events trigger conformity in addition to events listed in 310 CMR 60.03(6);
 - b. consult on emissions analyses for transportation activities which cross the borders of MPO or nonattainment areas; and
 - c. consult on conformity determinations outside MPO and nonattainment or maintenance areas.
2. EOTC shall document the outcome(s) of the consultation meeting(s) and shall circulate said documentation to the MPOs and the Department.

(e) CMAQ Consultation.

1. Prior to the time that the MPOs perform required conformity analyses on transportation plans, TIPs and projects, EOTC shall convene a consultation meeting(s) with representatives from the MPOs and the Department for the purpose of:
 - a. determining and establishing criteria and procedures for projects to be selected under the CMAQ program. Criteria to select projects shall include, but shall not be limited to, whether or not the project is a TCM in the SIP or listed as TCM under § 108(f) of the CAA, quantity of potential emissions reductions, timing of air quality benefits, impact on multiple pollutants, potential to reduce VMT, potential to alleviate congestion, the intermodal aspects of the projects, cost effectiveness, regional applicability, public awareness, promotion of technology, educational value, innovation and potential to reduce emissions from heavy duty vehicles; and
 - b. determining air quality analysis procedures for CMAQ projects.
2. Prior to performing the required conformity analyses on transportation plans, TIPs and projects, the MPOs shall:
 - a. develop a list of potential projects to be funded under the CMAQ program;
 - b. convene a consultation meeting which includes representatives from the MPO and the Department for the purpose of selecting CMAQ projects using the criteria developed pursuant to 310 CMR 60.03(6)(d)1.a.

(f) Transportation Control Measures.

1. Prior to making conformity determinations for a transportation plan, TIP or project, the MPOs and EOTC shall submit a list and status report of SIP TCMs, including TCMs contained in the SIP prior to passage of the Clean Air Act Amendments of 1990, to the Department for review and approval.
2. In the event that a SIP TCM has not been implemented or is behind the schedule required by the SIP, the MPO and/or EOTC shall submit to the Department, in writing:
 - a. the reasons why the SIP TCM has not been implemented or has been delayed;
 - b. the steps being taken to get the SIP TCM on schedule;
 - c. the funding source to be used to fund and implement the SIP TCM; and
 - d. an assessment of whether the SIP TCM may need to be replaced with substitute SIP TCM and SIP revision in order to create the expected emissions reductions.

(g) Concurrence.

1. After a final conformity determination has been made by an MPO, EOTC and the MPOs shall submit MPO-endorsed transportation plans, TIPs or projects within 30 days of endorsement to the Department for concurrence with the conformity determination.
2. The Department shall review the conformity determinations of transportation plans, TIPs or projects and shall issue a finding of concurrence or non-concurrence with the conformity determination, in writing, within 30 days. If the Department has not issued a finding of concurrence or non-concurrence within 30 days, the transportation plan, TIP or project shall be presumed to conform to the SIP by the Department.

60.03: continued

3. If the Department issues a finding of non-concurrence with the conformity determination, EOTC and the MPO shall have 30 days to resolve any issues which resulted in the finding of non-concurrence. If the issues which resulted in the finding of non-concurrence are not resolved to the Department's satisfaction, the state air agency shall issue a finding, in writing, of non-conformance with the SIP to EPA and DOT for further action.
- (h) Public consultation procedures. Prior to making conformity determinations on transportation plans, TIPs and projects, EOTC and MPOs shall comply with the public review processes required under 23 CFR Part 450 planning regulations and provide an opportunity for public review and comment. All public comments regarding plans for regionally significant projects not receiving FHWA or FTA funding or approval which were not reflected in the emissions analysis shall be specifically addressed in writing.
- (i) Circulation of documents.
 1. Draft Transportation Plans, TIPs and projects shall be circulated to the Department, EPA, FHWA and FTA and shall be available for public review by each MPO at each Regional Planning Agency.
 2. Transportation Plans, TIPs and projects which have received a final conformity determination by an MPO and have been approved by DOT shall be circulated to the Department, EPA, FHWA and FTA and shall be available for public review by each MPO at each Regional Planning Agency.
- (7) Content of Transportation Plans.
 - (a) Transportation plans adopted after January 1, 1995 shall specifically describe the transportation system envisioned for certain horizon years.
 1. The agency or organization developing the transportation plan may choose any years to be horizon years, subject to the following restrictions:
 - a. Horizon years shall be no more than ten years apart.
 - b. The first horizon year shall be no more than ten years from the base year used to validate the transportation demand planning model.
 - c. If the attainment year is in the time span of the transportation plan, the attainment year shall be a horizon year.
 - d. The last horizon year shall be the last year of the transportation plan's forecast period.
 2. For these horizon years:
 - a. The transportation plan shall quantify and document the demographic and employment factors influencing expected transportation demand, including land use forecasts, in accordance with the SIP and consultation procedures in 310 CMR 60.03(6);
 - b. The highway and transit system shall be described in terms of the regionally significant additions or modifications to the existing transportation network which the transportation plan envisions to be operational in the horizon years. Additions and modifications to the highway network shall be sufficiently identified to indicate intersections with existing regionally significant facilities, and to determine their effects on route options between transportation analysis zones. Each added or modified highway segment shall also be sufficiently identified in terms of its design concept and design scope to allow modeling of travel times under various traffic volumes, consistent with the modeling methods for area-wide transportation analysis in use by the MPO. Transit facilities, equipment, and services envisioned for the future shall be identified in terms of design concept, design scope, and operating policies sufficient to allow modeling of their transit ridership. The description of additions and modifications to the transportation network shall also be sufficiently specific to show that there is a reasonable relationship between expected land use and the envisioned transportation system; and
 - c. Other future transportation policies, requirements, services, and activities, including intermodal activities, shall be described.
 - (b) Savings The requirements of 310 CMR 60.03 supplement other requirements of applicable law or regulation governing the format or content of transportation plans.

60.03: continued

(8) Relationship of Transportation Plan and TIP Conformity with the NEPA and MEPA Processes. The degree of specificity required in the transportation plan and the specific travel network assumed for air quality modeling do not preclude the consideration of alternatives in the NEPA process, the MEPA process or other project development studies. Should the NEPA process or MEPA process result in a project with design concept and scope significantly different from that in the transportation plan or TIP, the project shall meet the criteria in 310 CMR 60.03(11) through (23) for projects not from a TIP before NEPA process or MEPA completion.

(9) Fiscal Constraints for Transportation Plans and TIP. Transportation plans and TIPs shall be fiscally constrained consistent with DOT's metropolitan planning regulations at 23 CFR part 450.322(b)(11) and 450.324(e) as in effect on the date of adoption of this rule in order to be found in conformity. The determinations that a transportation plan or TIP is fiscally constrained shall be subject to the consultation procedures in 310 CMR 60.03(6).

(10) Criteria and Procedures for Determining Conformity of Transportation Plans, Programs and Projects: General

(a) In order to be found to conform, each transportation plan, program and FHWA/FTA project shall satisfy the applicable criteria and procedures in 310 CMR 60.03(11) through (23) as listed in 310 CMR 60.03(10)(b)Table 1 and shall comply with all applicable conformity requirements of the SIP and of court orders for the area which pertain specifically to the conformity determination requirements. The criteria for making conformity determinations differ based on the action under review (transportation plans, TIPs and FHWA/FTA projects), the time period which the determination is made and the relevant pollutant.

(b) The following table indicates the criteria and procedures in 310 CMR 60.03(11) through (23) which shall apply for each action in each time period.

Table 1. - Conformity Criteria

ALL PERIODS	
Transportation Plan	<ul style="list-style-type: none"> • latest planning assumptions 310 CMR 60.03(11) • latest emissions model 310 CMR 60.03(12) • conformity in accordance with consultation procedures 310 CMR 60.03(6) • timely implementation of TCMs 310 CMR 60.03(13)(b)
TIP	<ul style="list-style-type: none"> • latest planning assumptions 310 CMR 60.03(11) • latest emissions model 310 CMR 60.03(12) • conformity in accordance with consultation procedures 310 CMR 60.03(6) • timely implementation of TCMs 310 CMR 60.03(13)(c)
Project (from a conforming plan and TIP)	<ul style="list-style-type: none"> • latest planning assumptions 310 CMR 60.03(11) • latest emissions model 310 CMR 60.03(12) • conformity in accordance with consultation procedures 310 CMR 60.03(6) • currently conforming plan/TIP 310 CMR 60.03(14) • project from conforming plan/TIP 310 CMR 60.03(15) • no causing/contributing to/increasing severity of CO or PM₁₀ violations in nonattainment and maintenance areas 310 CMR 60.03(16)
Project (not from a conforming plan and TIP)	<ul style="list-style-type: none"> • latest planning assumptions 310 CMR 60.03(11) • latest emissions model 310 CMR 60.03(12) • conformity in accordance with consultation 310 CMR 60.03(6) • timely implementation of TCMs 310 CMR 60.03(13)(d) • currently conforming plan/TIP 310 CMR 60.03(14) • no causing/contributing to/increasing severity of CO or PM₁₀ violations in nonattainment and maintenance areas 310 CMR 60.03(16) • FHWA/FTA projects shall comply with PM₁₀ control measures in the SIP 310 CMR 60.03(33)

60.03: continued

(11) Latest Planning Assumptions.

- (a) During all periods, conformity determinations, with respect to all other applicable criteria in 310 CMR 60.03(12) through (23), shall be based upon the most recent planning assumptions in force at the time of the conformity determination. The conformity determination shall satisfy the requirements of 310 CMR 60.03(11)(b) through (f).
- (b) Assumptions including but not limited to VMT per capita or per household, trip generation per household, vehicle occupancy, household size, vehicle fleet mix, vehicle ownership, and the geographic distribution of population growth shall be derived from the estimates of current and future population, employment, travel, and congestion most recently developed by the MPO or other agency authorized to make such estimates and approved by the MPO. The conformity determination shall also be based on the latest assumptions about current and future background concentrations. Any revisions to these estimates used as part of the conformity determination, including projected shifts in geographic location or level of population, employment, travel, and congestion shall be approved by the MPO or other agency authorized to make such estimates for the area after consultation with the Department.
- (c) The conformity determination for each transportation plan and TIP shall discuss how transit operating policies (including fares and service levels) and assumed transit ridership have changed since the previous conformity determination.
- (d) The conformity determination shall include reasonable assumptions about transit service and increases in transit fares and road and bridge tolls over time.
- (e) The conformity determination shall use the latest existing information regarding the effectiveness of the TCMs which have already been implemented.
- (f) Key assumptions shall be specified and included in the draft documents and supporting materials used for the interagency and public consultation required by 310 CMR 60.03(6).

(12) Latest Emissions Model.

- (a) During all periods, conformity determinations shall be based on the latest emission estimation model available. This requirement is satisfied if the most current version of the motor vehicle emissions model specified by EPA and used in the preparation or revision of the SIP is used for the conformity analysis and the consultation requirements in 310 CMR 60.03(6) are met.
- (b) EPA shall consult with DOT to establish a grace period following the specification of any new model.
 - 1. The grace period shall be no less than three months and no more than 24 months after notice of availability is published in the *Federal Register*.
 - 2. The length of the grace period shall depend on the degree of change in the model and the scope of re-planning likely to be necessary by MPOs in order to assure conformity. If the grace period will be longer than three months, EPA shall announce the appropriate grace period in the *Federal Register*.
- (c) Conformity analyses for which the emissions analysis was begun before the *Federal Register* notice of availability of the latest emission model or during the period which allows the use of the previous emissions model as defined in the *Federal Register* and known as the "grace period" may continue to use the previous version of the model for transportation plans and TIPs. The previous model may also be used for projects if the analysis was begun during the grace period or before the *Federal Register* notice of availability, provided no more than three years have passed since the draft environmental document was issued.

(13) Timely Implementation of TCMs.

- (a) During all periods, the transportation plan and TIP shall provide for the timely implementation of TCMs in the SIP and in SIP revisions submitted to EPA. An FHWA/FTA project which is not from a conforming plan and TIP shall provide for the timely implementation of TCMs in the SIP and in SIP revisions submitted to EPA.
- (b) For transportation plans, this criterion is satisfied if the following two conditions are met:

60.03: continued

1. The transportation plan, in describing the envisioned future transportation system, provides for the timely completion or implementation of all TCMs in the SIP and in SIP revisions submitted to EPA including, but not limited to those which are eligible for funding under title 23 U.S.C. or the Federal Transit Act, and is consistent with schedules included in the SIP and in SIP revisions submitted to EPA.
 2. Nothing in the transportation plan interferes with the implementation of any TCM in the SIP and in SIP revisions submitted to EPA.
- (c) For TIPs, this criterion is satisfied if the following conditions are met:
1. An examination of the specific steps and funding source(s) needed to fully implement each TCM indicates that TCMs, including but not limited to those which are eligible for funding under title 23 U.S.C. or the Federal Transit Act are on or ahead of the schedule established in the SIP in SIP revisions submitted to EPA, or, if such TCMs are behind the schedule established in the SIP or in SIP revisions submitted to EPA, the MPO and DOT have determined that past obstacles to implementation of the TCMs have been identified and have been or are being overcome, and that all State and local agencies with influence over approvals or funding for TCMs are giving maximum priority to approval or funding of TCMs over other projects within their control, including projects in locations outside a nonattainment or maintenance area. Maximum priority to approval or funding of the TCMs shall include demonstrations with respect to funding acceleration, commitment of staff or other agency resources, diligent efforts to seek approvals and similar actions.
 2. If TCMs in the SIP and in SIP revisions submitted to EPA have previously been programmed for Federal funding but the funds have not been obligated and the TCMs are behind the schedule in the SIP and in SIP revisions submitted to EPA, then the TIP cannot be found to conform if the funds intended for those TCMs are reallocated to projects in the TIP other than TCMs, or if there are no other TCMs in the TIP, if the funds are reallocated to projects in the TIP other than projects which are eligible for Federal funding under ISTEA's Congestion Mitigation and Air Quality Improvement Program.
 3. Nothing in the TIP may interfere with the implementation of any TCM in the SIP and in SIP revisions submitted to EPA.
- (d) For FHWA/FTA projects which are not from a conforming transportation plan and TIP, this criterion is satisfied if the project does not interfere with the implementation of any TCM in the SIP and in SIP revisions submitted to EPA.

(14) Project Approval: Currently Conforming Transportation Plan and TIP. During all periods, there shall be a currently conforming transportation plan and currently conforming TIP at the time of project approval. This requirement is satisfied if the current transportation plan and TIP have been found to conform to the SIP by the MPO and DOT according to the procedures and criteria of 310 CMR 60.03 and the Department has concurred with the conformity determination. Only one conforming transportation plan or TIP may exist in an area at any time; conformity determinations of a previous transportation plan or TIP expire once the current plan or TIP is found to conform by DOT. The conformity determination on a transportation plan or TIP shall also lapse if conformity is not determined according to the frequency requirements of 310 CMR 60.03(5).

(15) Projects from a Transportation Plan and TIP.

- (a) During all periods, transportation projects shall come from a conforming transportation plan and TIP. If this criterion is not satisfied, the project shall satisfy all criteria for a project not from a conforming transportation plan and TIP referenced in 310 CMR 60.03(10)Table 1. A project is considered to be from a conforming transportation plan if it meets the requirements of 310 CMR 60.03(15)(b) and from a conforming TIP if it meets the requirements of 310 CMR 60.03(15)(c).
- (b) A project is considered to be from a conforming transportation plan if one of the following conditions applies:

60.03: continued

1. For projects which are required to be identified in the transportation plan in order to satisfy 310 CMR 60.03(7), the project is specifically included in the conforming transportation plan and the project's design concept and scope have not changed significantly from those which were described in the transportation plan, or in a manner which would significantly impact use of the facility; or
 2. For projects which are not required to be specifically identified in the transportation plan, the project is identified in the conforming transportation plan, or is consistent with the policies and purpose of the transportation plan and will not interfere with other projects specifically included in the transportation plan.
- (c) A project is considered to be from a conforming TIP if the following conditions are met:
1. The project is included in the conforming TIP and the design concept and scope of the project were adequate at the time of the TIP conformity determination to determine its contribution to the TIP's regional emissions and have not changed significantly from those which were described in the TIP, or in a manner which would significantly impact use of the facility; and
 2. If the TIP describes a project design concept and scope which includes project-level emissions mitigation or control measures, enforceable written commitments to implement such measures shall be obtained from the project sponsor and/or operator as required by 310 CMR 60.03(29)(a) in order for the project to be considered to come from a conforming program. Any change in these mitigation or control measures that would significantly reduce their effectiveness constitutes a change in the design concept and scope of the project.
- (16) Localized CO and PM₁₀ Violations (Hot Spots).
- (a) During all periods FHWA/FTA projects shall not cause or contribute to any new localized CO or PM₁₀ violations or increase the frequency or severity of any existing CO or PM₁₀ violations in CO or PM₁₀ nonattainment and maintenance areas. This criterion is satisfied if it is demonstrated that no new local violations will be created and the severity or number of existing violations will not be increased as a result of the project.
 - (b) The demonstration shall be performed according to the requirements of 310 CMR 60.03(6)(c)1.a. and (27).
 - (c) For projects which are not of the type identified by 310 CMR 60.03(27)(a) or (d), this criterion may be satisfied if consideration of local factors clearly demonstrates that no local violations presently exist and no new local violations will be created as a result of the project. Otherwise, in CO nonattainment and maintenance areas, a quantitative demonstration shall be performed according to the requirements of 310 CMR 60.03(27)(b).
- (17) Motor Vehicle Emissions Budget (Transportation Plan).
- (a) In order to be found in conformity, the transportation plan shall be found consistent with the motor vehicle emissions budget(s) in the SIP or SIP package submitted to EPA through a quantitative demonstration. This criterion applies during the transitional period and the control strategy and maintenance periods, except as provided in 310 CMR 60.03(31). This criterion may be satisfied if the requirements in 310 CMR 60.03(17)(b) and (c) are met:
 - (b) A regional emissions analysis shall be performed as follows:
 1. The regional analysis shall estimate emissions of the following pollutants and pollutant precursors for which the SIP or SIP package submitted to EPA establishes an emissions budget:
 - a. VOC as an ozone precursor;
 - b. NO_x as an ozone precursor, unless the EPA Administrator determines that additional reductions of NO_x would not contribute to attainment;
 - c. CO;
 - d. PM₁₀ (and its precursors VOC and/or NO_x, if the SIP or SIP package submitted to EPA identifies transportation-related precursor emissions within the nonattainment area as a significant contributor to the PM₁₀ nonattainment problem or establishes a budget for such emissions); or
 - e. NO_x (in NO₂ nonattainment or maintenance areas).

60.03: continued

2. The regional emissions analysis shall estimate emissions from the entire transportation system, including all regionally significant projects contained in the transportation plan and all other regionally significant highway and transit projects expected in the nonattainment or maintenance area in the timeframe of the transportation plan;
 3. The emissions analysis methodology shall meet the requirements of 310 CMR 60.03(26);
 4. For areas with a transportation plan that meets the content requirements of 310 CMR 60.03(7)(a), the emissions analysis shall be performed for each horizon year. Emissions in milestone years which are between the horizon years may be determined by interpolation; and
 5. For areas with a transportation plan that does not meet the content requirements of 310 CMR 60.03(7)(a), the emissions analysis shall be performed for any years in the time span of the transportation plan provided they are not more than ten years apart and provided the analysis is performed for the last year of the plan's forecast period. If the attainment year is in the time span of the transportation plan, the emissions analysis shall also be performed for the attainment year. Emissions in milestone years which are between these analysis years may be determined by interpolation.
- (c) The regional emissions analysis shall demonstrate that for each of the applicable pollutants or pollutant precursors in 310 CMR 60.03(17)(b)1. the emissions are less than or equal to the motor vehicle emissions budget as established in the SIP or SIP package submitted to EPA as follows:
1. If the SIP or SIP package submitted to EPA establishes emissions budgets for milestone years, emissions in each milestone year are less than or equal to the motor vehicle emissions budget established for that year;
 2. For nonattainment areas, emissions in the attainment year are less than or equal to the motor vehicle emissions budget established in the SIP or SIP package submitted to EPA for that year;
 3. For nonattainment areas, emissions in each analysis or horizon year after the attainment year are less than or equal to the motor vehicle emissions budget established by the SIP or SIP submission for the attainment year. If emissions budgets are established for years after the attainment year, emissions in each analysis year or horizon year shall be less than or equal to the motor vehicle emissions budget for that year, if any, or the motor vehicle emissions budget for the most recent budget year prior to the analysis year or horizon year; and
 4. For maintenance areas, emissions in each analysis or horizon year are less than or equal to the motor vehicle emissions budget established by the maintenance plan for that year, if any, or the emissions budget for the most recent budget year prior to the analysis or horizon year.
- (18) Motor Vehicle Emissions Budget (TIP).
- (a) In order to be found in conformity, the TIP shall be found consistent with the motor vehicle emissions budget(s) in the SIP or SIP package submitted to EPA through a quantitative demonstration. This criterion applies during the transitional period and the control strategy and maintenance periods. This criterion may be satisfied if the requirements in 310 CMR 60.03(18)(b) and (c) are met:
 - (b) For areas with a conforming transportation plan that fully meets the content requirements of 310 CMR 60.03(7)(a), this criterion may be satisfied without additional regional analysis if:
 1. Each program year of the TIP is consistent with the Federal funding which may be reasonably expected for that year, and required State/local matching funds and funds for State/local funding-only projects are consistent with the revenue sources expected over the same period; and
 2. The TIP is consistent with the conforming transportation plan such that the regional emissions analysis already performed for the plan applies to the TIP also. This requires a demonstration that:
 - a. The TIP contains all projects which shall be started in the TIP's timeframe in order to achieve the highway and transit system envisioned by the transportation plan in each of its horizon years;

60.03: continued

- b. All TIP projects which are regionally significant are part of the specific highway or transit system envisioned in the transportation plan's horizon years; and
 - c. The design concept and scope of each regionally significant project in the TIP is not significantly different from that described in the transportation plan.
3. If the requirements in 310 CMR 60.03(18)(b)1. and 2. are not met, then:
 - a. The TIP may be modified to meet those requirements; or
 - b. The transportation plan shall be revised so that the requirements in 310 CMR 60.03(18)(b)1. and 2. are met. Once the revised plan has been found to conform, this criterion is met for the TIP with no additional analysis required except a demonstration that the TIP meets the requirements of 310 CMR 60.03(18)(b)1. and 2.
- (c) For areas with a transportation plan that does not meet the content requirements of 310 CMR 60.03(7)(a), a regional emissions analysis shall meet all of the following requirements:
1. The regional emissions analysis shall estimate emissions from the entire transportation system, including all projects contained in the proposed TIP, the transportation plan, and all other regionally significant highway and transit projects expected in the nonattainment or maintenance area in the timeframe of the transportation plan;
 2. The analysis methodology shall meet the requirements of 310 CMR 60.03(26)(c); and
 3. The regional analysis shall satisfy the requirements of 310 CMR 60.03(17)(b)1., 5., and (c).
- (19) Motor Vehicle Emissions Budget (Project not from a Plan and TIP).
- (a) In order to be found in conformity, a project which is not from a conforming transportation plan and a conforming TIP shall be found consistent with the motor vehicle emissions budget(s) in the SIP or SIP package submitted to EPA through a quantitative demonstration. This criterion applies during the transitional period and the control strategy and maintenance periods. It is satisfied if emissions from the implementation of the project, when considered with the emissions from the projects in the conforming transportation plan and TIP and all other regionally significant projects expected in the area, do not exceed the motor vehicle emissions budget(s) in the SIP or SIP package submitted to EPA.
 - (b) For areas with a conforming transportation plan that meets the content requirements of 310 CMR 60.03(7)(a):
 1. This criterion may be satisfied without additional regional analysis if the project is included in the conforming transportation plan, even if it is not specifically included in the latest conforming TIP. This requires a demonstration that:
 - a. Allocating funds to the project will not delay the implementation of projects in the transportation plan or TIP which are necessary to achieve the highway and transit system envisioned by the transportation plan in each of its horizon years;
 - b. The project is not regionally significant or is part of the specific highway or transit system envisioned in the transportation plan's horizon years; and
 - c. The design concept and scope of the project is not significantly different from that described in the transportation plan.
 2. If the requirements in 310 CMR 60.03(19)(b)1. are not met, a regional emissions analysis shall be performed as follows:
 - a. The analysis methodology shall meet the requirements of 310 CMR 60.03(26);
 - b. The analysis shall estimate emissions from the transportation system, including the proposed project and all other regionally significant projects expected in the nonattainment or maintenance area in the timeframe of the transportation plan. The analysis shall include emissions from all previously approved projects which were not from a transportation plan and TIP; and
 - c. The emissions analysis shall meet the requirements of 310 CMR 60.03(17)(b)1., 4., and (c).

60.03: continued

(c) For areas with a transportation plan that does not meet the content requirements of 310 CMR 60.03(7)(a), a regional emissions analysis shall be performed for the project together with the conforming TIP and all other regionally significant projects expected in the nonattainment or maintenance area. This criterion may be satisfied if:

1. The analysis methodology meets the requirements of 310 CMR 60.03(26)(c);
2. The analysis estimates emissions from the transportation system, including the proposed project, and all other regionally significant projects expected in the nonattainment or maintenance area in the timeframe of the transportation plan; and
3. The regional analysis satisfies the requirements of 310 CMR 60.03(17)(b)1., 5., and (c).

(20) Localized CO Violations (Hot Spots) in the Interim and Transitional Periods.

(a) Each FHWA/FTA project shall eliminate or reduce the severity and number of localized CO violations in the area substantially affected by the project in CO nonattainment areas. This criterion applies during the interim and transitional periods only. This criterion is satisfied with respect to existing localized CO violations if it is demonstrated that existing localized CO violations will be eliminated or reduced in severity and number as a result of the project.

(b) The demonstration shall be performed according to the requirements of 310 CMR 60.03(6)(c)1.a. and (27).

(c) For projects which are not of the type identified by 310 CMR 60.03(27)(a), this criterion may be satisfied if consideration of local factors clearly demonstrates that existing CO violations will be eliminated or reduced in severity and number. Otherwise, a quantitative demonstration shall be performed according to the requirements of 310 CMR 60.03(27)(b).

(d) The requirements of 310 CMR 60.03(20) shall lapse upon EPA approval of the control strategy SIP revision.

(21) Reductions in Ozone and CO Areas in the Interim and Transitional Periods (Transportation Plan).

(a) A transportation plan shall contribute to emissions reductions in ozone and CO nonattainment areas. This criterion applies during the interim and transitional periods only. It applies to the net effect on emissions of all projects contained in a new or revised transportation plan. This criterion may be satisfied if a regional emissions analysis is performed as described in 310 CMR 60.03(21)(b) through (f).

(b) The analysis years for which emissions are to be estimated shall be no more than ten years apart. The first analysis year shall be no later than the first SIP milestone year (1995 for CO nonattainment areas and 1996 for ozone nonattainment areas). The second analysis year shall be either the attainment year for the area (1996 for moderate CO nonattainment areas and 1999 for serious ozone nonattainment areas), or if the attainment year is the same as the first analysis year or earlier, the second analysis year shall be at least five years beyond the first analysis year. The last year of the transportation plan's forecast period shall also be an analysis year.

(c) The "Baseline" scenario for each of the analysis years is defined to be the future transportation system that would result from current programs, composed of the following (except that projects listed in 310 CMR 60.03(30) and (31) need not be explicitly considered):

1. All in-place regionally significant highway and transit facilities, services and activities;
2. All ongoing travel demand management or transportation system management activities; and

60.03: continued

3. Completion of all regionally significant projects, regardless of funding source, which are currently under construction or are undergoing right-of-way acquisition (except for hardship acquisition and protective buying); come from the first three years of the previously conforming transportation plan and/or TIP; or have completed the NEPA process. (For the first conformity determination on the transportation plan after November 24, 1993, a project may not be included in the "Baseline" scenario if one of the following major steps has not occurred within the past three years: NEPA process completion; start of final design; acquisition of a significant portion of the right-of-way; or approval of the plans, specifications and estimates. Such a project shall be included in the "Action" scenario, as described in 310 CMR 60.03(21)(d).)
- (d) The "Action" scenario for each of the analysis years shall be defined as the transportation system that will result in that year from the implementation of the proposed transportation plan, TIPs adopted under it, and other expected regionally significant projects in the nonattainment area. It will include the following (except that projects listed in 310 CMR 60.03(30) and (31) need not be explicitly considered):
1. All facilities, services, and activities in the "Baseline" scenario;
 2. Completion of all TCMs and regionally significant projects (including facilities, services, and activities) specifically identified in the proposed transportation plan which will be operational or in effect in the analysis year, except that regulatory TCMs may not be assumed to begin at a future time unless the regulation is already adopted by the enforcing jurisdiction or the TCM is identified in the SIP;
 3. All travel demand management programs and transportation system management activities known to the MPO, but not included in the SIP or utilizing any Federal funding or approval, which have been fully adopted and/or funded by the enforcing jurisdiction or sponsoring agency since the last conformity determination on the transportation plan;
 4. The incremental effects of any travel demand management programs and transportation system management activities known to the MPO, but not included in the SIP or utilizing any Federal funding or approval, which were adopted and/or funded prior to the date of the last conformity determination on the transportation plan, but which have been modified since then to be more stringent or effective;
 5. Completion of all expected regionally significant highway and transit projects which are not from a conforming transportation plan and TIP; and
 6. Completion of all expected regionally significant non-FHWA/FTA highway and transit projects that have clear funding sources and commitments leading toward their implementation and completion by the analysis year.
- (e) Estimate the emissions predicted to result in each analysis year from travel on the transportation systems defined by the "Baseline" and "Action" scenarios and determine the difference in regional VOC and NO_x emissions (unless the Administrator determines that additional reductions of NO_x would not contribute to attainment) between the two scenarios for ozone nonattainment areas and the difference in CO emissions between the two scenarios for CO nonattainment areas. The analysis shall be performed for each of the analysis years according to the requirements of 310 CMR 60.03(26). Emissions in milestone years which are between the analysis years may be determined by interpolation.
- (f) This criterion is met if the regional VOC and NO_x emissions (for ozone nonattainment areas) and CO emissions (for CO nonattainment areas) predicted in the "Action" scenario are less than the emissions predicted from the "Baseline" scenario in each analysis year, and if this can reasonably be expected to be true in the periods between the first milestone year and the analysis years. The regional analysis shall show that the "Action" scenario contributes to a reduction in emissions from the 1990 emissions by any nonzero amount.
- (g) The requirements of 310 CMR 60.03(21) shall lapse upon EPA approval of the control strategy SIP revision.
- (22) Reductions in Ozone and CO Areas in the Interim and Transitional Periods (TIP).
- (a) A TIP shall contribute to emissions reductions in ozone and CO nonattainment areas. This criterion applies during the interim and transitional periods only. It applies to the net effect on emissions of all projects contained in a new or revised TIP. This criterion may be satisfied if a regional emissions analysis is performed as described in 310 CMR 60.03(22)(b) through (f).

60.03: continued

(b) Determine the analysis years for which emissions are to be estimated. The first analysis year shall be no later than the first milestone year (1995 in CO nonattainment areas and 1996 in ozone nonattainment areas). The analysis years shall be no more than ten years apart. The second analysis year shall be either the attainment year for the area (1996 for moderate CO nonattainment areas and 1999 for serious ozone nonattainment areas), or if the attainment year is the same as the first analysis year or earlier, the second analysis year shall be at least five years beyond the first analysis year. The last year of the transportation plan's forecast period shall also be an analysis year.

(c) The "Baseline" scenario is defined as the future transportation system that would result from current programs, composed of the following (except that projects listed in 310 CMR 60.03(30) and (31) need not be explicitly considered):

1. All in-place regionally significant highway and transit facilities, services and activities;
2. All ongoing travel demand management or transportation system management activities; and
3. Completion of all regionally significant projects, regardless of funding source, which are currently under construction or are undergoing right-of-way acquisition (except for hardship acquisition and protective buying); come from the first three years of the previously conforming TIP; or have completed the NEPA process. (For the first conformity determination on the TIP after November 24, 1993, a project may not be included in the "Baseline" scenario if one of the following major steps has not occurred within the past three years: NEPA process completion; start of final design; acquisition of a significant portion of the right-of-way; or approval of the plans, specifications and estimates. Such a project shall be included in the "Action" scenario, as described in 310 CMR 60.03(22)(d).)

(d) Define the "Action" scenario as the future transportation system that will result from the implementation of the proposed TIP and other expected regionally significant projects in the nonattainment area in the timeframe of the transportation plan. It will include the following (except that projects listed in 310 CMR 60.03(30) and (31) need not be explicitly considered):

1. All facilities, services, and activities in the "Baseline" scenario;
2. Completion of all TCMs and regionally significant projects (including facilities, services, and activities) included in the proposed TIP, except that regulatory TCMs may not be assumed to begin at a future time unless the regulation is already adopted by the enforcing jurisdiction or the TCM is contained in the SIP;
3. All travel demand management programs and transportation system management activities known to the MPO, but not included in the SIP or utilizing any Federal funding or approval, which have been fully adopted and/or funded by the enforcing jurisdiction or sponsoring agency since the last conformity determination on the TIP;
4. The incremental effects of any travel demand management programs and transportation system management activities known to the MPO, but not included in the SIP or utilizing any Federal funding or approval, which were adopted and/or funded prior to the date of the last conformity determination on the TIP, but which have been modified since then to be more stringent or effective;
5. Completion of all expected regionally significant highway and transit projects which are not from a conforming transportation plan and TIP; and
6. Completion of all expected regionally significant non-FHWA/FTA highway and transit projects that have clear funding sources and commitments leading toward their implementation and completion by the analysis year.

(e) Estimate the emissions predicted to result in each analysis year from travel on the transportation systems defined by the "Baseline" and "Action" scenarios, and determine the difference in regional VOC and NO_x emissions (unless the Administrator determines that additional reductions of NO_x would not contribute to attainment) between the two scenarios for ozone nonattainment areas and the difference in CO emissions between the two scenarios for CO nonattainment areas. The analysis shall be performed for each of the analysis years according to the requirements of 310 CMR 60.03(26). Emissions in milestone years which are between analysis years may be determined by interpolation.

60.03: continued

(f) This criterion is met if the regional VOC and NO_x emissions in ozone nonattainment areas and CO emissions in CO nonattainment areas predicted in the "Action" scenario are less than the emissions predicted from the "Baseline" scenario in each analysis year, and if this can reasonably be expected to be true in the period between the analysis years. The regional analysis shall show that the "Action" scenario contributes to a reduction in emissions from the 1990 emissions by any nonzero amount.

(g) The requirements of 310 CMR 60.03(22) shall lapse upon EPA approval of the control strategy SIP revision.

(23) Reductions for Ozone and CO Areas in the Interim and Transitional Periods (Project not from a Plan and TIP).

(a) A Transportation project which is not from a conforming transportation plan and TIP shall contribute to emissions reductions in ozone and CO nonattainment areas. This criterion applies during the interim and transitional periods only. This criterion is satisfied if a regional emissions analysis is performed which meets the requirements of 310 CMR 60.03(21) and which includes the transportation plan and project in the "Action" scenario. If the project which is not from a conforming transportation plan and TIP is a modification of a project currently in the plan or TIP, the "Baseline" scenario shall include the project with its original design concept and scope, and the "Action" scenario shall include the project with its new design concept and scope.

(b) The requirements of 310 CMR 60.03(23)(b) shall lapse upon EPA approval of the control strategy SIP revision.

(24) Transition from the Interim Period and Transitional Periods to the Control Strategy Period.

(a) Areas which submit a control strategy SIP revision after November 24, 1993.

1. The transportation plan and TIP shall be demonstrated to conform according to transitional period criteria and procedures by one year from the date the Clean Air Act requires submission of such control strategy SIP revision. Otherwise, the conformity status of the transportation plan and TIP will lapse, and no new project-level conformity determinations may be made.

a. The conformity of new transportation plans and TIPs may be demonstrated according to interim period criteria and procedures for 90 days following submission of the control strategy SIP revision, provided the conformity of such transportation plans and TIPs is redetermined according to transitional period criteria and procedures as required in 310 CMR 60.03(24)(a)1.

b. Beginning 90 days after submission of the control strategy SIP revision, new transportation plans and TIPs shall demonstrate conformity according to transitional period criteria and procedures.

2. If EPA disapproves the submitted control strategy SIP revision and so notifies the Commonwealth, MPO, and DOT, which initiates the sanction process under Clean Air Act §§ 179 or 110(m), the conformity status of the transportation plan and TIP shall lapse 120 days after EPA's disapproval, and no new project-level conformity determinations may be made. No new transportation plan, TIP, or project may be found to conform until another control strategy SIP revision is submitted and conformity is demonstrated according to transitional period criteria and procedures.

3. Notwithstanding 310 CMR 60.03(24)(a)2., if EPA disapproves the submitted control strategy SIP revision but determines that the control strategy contained in the revision would have been considered approvable with respect to requirements for emission reductions if all committed measures had been submitted in enforceable form as required by Clean Air Act § 110(a)(2)(A), the provisions of 310 CMR 60.03(24)(a)1. shall apply for 12 months following the date of disapproval. The conformity status of the transportation plan and TIP shall lapse 12 months following the date of disapproval unless another control strategy SIP revision is submitted to EPA and found to be complete.

(b) Areas which have not submitted a control strategy SIP revision.

1. For areas whose Clean Air Act deadline for submission of the control strategy SIP revision is after November 25, 1993 and EPA has notified the Commonwealth, MPO, and DOT of a failure to submit a control strategy SIP revision, which initiates the sanction process under Clean Air Act sections 179 or 110(m):

60.03: continued

- a. No new transportation plans or TIPs may be found to conform beginning 120 days after the Clean Air Act deadline; and
 - b. The conformity status of the transportation plan and TIP shall lapse one year after the Clean Air Act deadline, and no new project-level conformity determinations may be made.
2. For areas whose Clean Air Act deadline for submission of the control strategy SIP was before November 24, 1993 and EPA has made a finding of failure to submit a control strategy implementation plan revision, which initiates the sanction process under Clean Air Act §§ 179 or 110(m), the following applies unless the failure has been remedied and acknowledged by a letter from the EPA Regional Administrator:
 - a. No new transportation plans or TIPs may be found to conform beginning March 24, 1994; and
 - b. The conformity status of the transportation plan and TIP shall lapse November 25, 1994, and no new project-level conformity determinations may be made.
- (c) Areas Which Have not Submitted a Complete Control Strategy SIP Revision.
1. For areas where EPA notifies the Commonwealth, MPO, and DOT after November 24, 1993 that the control strategy SIP revision submitted by the State is incomplete, which initiates the sanction process under Clean Air Act sections 179 or 110(m), the following applies unless the failure has been remedied and acknowledged by a letter from the EPA Regional Administrator:
 - a. No new transportation plans or TIPs may be found to conform beginning 120 days after EPA's incompleteness finding; and
 - b. The conformity status of the transportation plan and TIP shall lapse one year after the Clean Air Act deadline, and no new project-level conformity determinations may be made.
 - c. Notwithstanding 310 CMR 60.03(24)(c)1.a. and b., if EPA notes in its incompleteness finding that the submittal would have been considered complete with respect to requirements for emission reductions if all committed measures had been submitted in enforceable form as required by Clean Air Act §110(a)(2)(A), the provisions of 310 CMR 60.03(24)(a)1. shall apply for a period of 12 months following the date of the incompleteness determination. The conformity status of the transportation plan and TIP shall lapse 12 months following the date of the incompleteness determination unless another control strategy SIP revision is submitted to EPA and found to be complete.
 2. For areas where EPA has determined before November 24, 1993 that the control strategy SIP revision is incomplete, which initiates the sanction process under Clean Air Act sections 179 or 110(m), the following apply unless the failure has been remedied and acknowledged by a letter from the EPA Regional Administrator:
 - a. No new transportation plans or TIPs may be found to conform beginning March 24, 1994; and
 - b. The conformity status of the transportation plan and TIP shall lapse November 24, 1994, and no new project-level conformity determinations may be made.
 - c. Notwithstanding 310 CMR 60.03(24)(c)2.i. and ii., if EPA notes in its incompleteness finding that the submittal would have been considered complete with respect to requirements for emission reductions if all committed measures had been submitted in enforceable form as required by Clean Air Act § 110(a)(2)(A), the provisions of 310 CMR 60.03(24)(d)1. shall apply for a period of 12 months following the date of the incompleteness determination. The conformity status of the transportation plan and TIP shall lapse 12 months following the date of the incompleteness determination unless another control strategy SIP revision is submitted to EPA and found to be complete.
- (d) Areas which submitted a control strategy SIP before November 24, 1993.
1. The transportation plan and TIP shall be demonstrated to conform according to transitional period criteria and procedures by November 24, 1994. Otherwise, their conformity status will lapse, and no new project-level conformity determinations may be made.

60.03: continued

- a. The conformity of new transportation plans and TIPs may be demonstrated according to interim period criteria and procedures until February 22, 1994, provided the conformity of such transportation plans and TIPs is redetermined according to transitional period criteria and procedures as required in 310 CMR 60.03(24)(d)1.
 - b. Beginning February 22, 1994, new transportation plans and TIPs shall demonstrate conformity according to transitional period criteria and procedures.
2. If EPA has disapproved the most recent control strategy SIP submission, the conformity status of the transportation plan and TIP shall lapse March 24, 1994, and no new project-level conformity determinations may be made. No new transportation plans, TIPs, or projects may be found to conform until another control strategy SIP revision is submitted and conformity is demonstrated according to transitional period criteria and procedures.
 3. Notwithstanding 310 CMR 60.03(24)(d)2., if EPA has disapproved the submitted control strategy SIP revision but determines that the control strategy contained in the revision would have been considered approvable with respect to requirements for emission reductions if all committed measures had been submitted in enforceable form as required by Clean Air Act § 110(a)(2)(A), the provisions of 310 CMR 60.03(24)(d)1. shall apply for 12 months following November 24, 1993. The conformity status of the transportation plan and TIP shall lapse 12 months following November 24, 1993 unless another control strategy SIP revision is submitted to EPA and found to be complete.
- (e) Projects. If the currently conforming transportation plan and TIP have not been demonstrated to conform according to transitional period criteria and procedures, the requirements of 310 CMR 60.03(24)(e)1. and 2. shall be met.
1. Before a FHWA/FTA project which is regionally significant and increases single-occupant vehicle capacity (a new general purpose highway on a new location or adding general purpose lanes) may be found to conform, the Department shall be consulted in accordance with 310 CMR 60.03(6) on how the emissions which the existing transportation plan and TIP's conformity determination estimates for the "Action" scenario (as required by 310 CMR 60.03(21) through (23) and 310 CMR 60.03(34) through (36) compare to the motor vehicle emissions budget in the SIP submission or the projected motor vehicle emissions budget in the SIP under development.
 2. In the event of unresolved issues on project-level conformity determinations, the Department shall make a project-level finding of non-concurrence with the SIP in writing to EPA and DOT for further action.
- (f) Redetermination of Conformity of the Existing Transportation Plan and TIP According to the Transitional Period Criteria and Procedures.
1. The redetermination of the conformity of the existing transportation plan and TIP according to transitional period criteria and procedures (as required by 310 CMR 60.03(24)(a)1. and (d)1.) does not require new emissions analysis and does not have to satisfy the requirements of 310 CMR 60.03(11) and (12) if:
 - a. The control strategy SIP revision submitted to EPA uses the MPO's modeling of the existing transportation plan and TIP for its projections of motor vehicle emissions; and
 - b. The control strategy SIP does not include any transportation projects which are not included in the transportation plan and TIP.
 2. A redetermination of conformity as described in 310 CMR 60.03(f)1. is not considered a conformity determination for the purposes of 310 CMR 60.03(5)(c)4. or (d)4. regarding the maximum intervals between conformity determinations. Conformity shall be determined according to all the applicable criteria and procedures of 310 CMR 60.00 within three years of the last determination which did not rely on 310 CMR 60.03(24)(f)1.
- (g) Ozone nonattainment areas.
1. The requirements of 310 CMR 60.03(24)(b)1. apply if a serious or above ozone nonattainment area has not submitted the SIP revision required to be submitted to EPA by November 15, 1994 under §§ 182(c)(2)(A) and 182(c)(2)(B) of the Clean Air Act is not submitted, even if the area has submitted the SIP revision which CAA § 182(b)(1) requires to be submitted to EPA November 15, 1993.

60.03: continued

2. The requirements of 310 CMR 60.03(24)(b)1. apply if a moderate ozone nonattainment area which is using photochemical dispersion modeling to demonstrate the "specific annual reductions as necessary to attain" required by the CAA § 182(b)(1), and which has permission from EPA to delay submission of such demonstration until November 15, 1994, does not submit such demonstrations by that date. The requirements of 310 CMR 60.03(24)(b)1. apply in this case even if the area has submitted the 15% emission reduction demonstration required by the CAA § 182(b)(1).

3. The requirements of 310 CMR 60.03(24)(a) apply when the SIP revisions required by CAA §§ 182(c)(2)(A) and 182(c)(2)(B) are submitted.

(h) Maintenance plans. If a control strategy SIP revision is not submitted to EPA but a maintenance plan required by Clean Air Act § 175A is submitted to EPA, the requirements of 310 CMR 60.03(24)(a) or (d) apply, with the maintenance plan submission treated as a "control strategy SIP revision" for the purposes of those requirements.

(25) Requirements for Adoption or Approval of Projects by Recipients of Funds Designated under Title 23 U.S.C. or the Federal Transit Act. No recipient of federal funds designated under Title 23 U.S.C. or the Federal Transit Act shall adopt or approve a regionally significant highway or transit project, regardless of funding source, unless there is a currently conforming transportation plan and TIP consistent with the requirements of 310 CMR 60.03(14) and the requirements of 310 CMR 60.03(25)(a) through (e) are met (Adopt or approve, for the purposes of 310 CMR 60.03(25), shall mean the point after which the review of project alternatives has been completed and the project has been defined by the final NEPA document or by the final MEPA environmental document and after which the final project alternative for final design and construction have been determined):

(a) The project comes from a conforming transportation plan and TIP consistent with the requirements of 310 CMR 60.03(15);

(b) The project is included in the regional emissions analysis supporting the currently conforming TIP's conformity determination, even if the project is not strictly "included" in the TIP for the purposes of MPO project selection or endorsement, and the project's design concept and scope have not changed significantly from those which were included in the regional emissions analysis, or in a manner which would significantly impact use of the facility;

(c) During the control strategy or maintenance period, the project is consistent with the motor vehicle emissions budget(s) in the SIP consistent with the requirements of 310 CMR 60.03(19);

(d) During the interim period, the project contributes to emissions reductions or does not increase emissions consistent with the requirements of 310 CMR 60.03(23) (in ozone and CO nonattainment areas) or 310 CMR 60.03(36) in PM₁₀ and NO₂ nonattainment areas); or

(e) During the transitional period, the project satisfies the requirements of both 310 CMR 60.03(25)(c) and (d).

(26) Procedures for Determining Regional Transportation-Related Emissions.

(a) General requirements.

1. The regional emissions analysis for the transportation plan, TIP, or project not from a conforming plan and TIP shall include all regionally significant projects expected in the nonattainment or maintenance area, including FHWA/FTA projects proposed in the transportation plan and TIP and all other regionally significant projects which are disclosed to the MPO as required by 310 CMR 60.03(6). Projects which are not regionally significant are not required to be explicitly modeled using the network-based transportation demand model, but VMT and emissions from such projects shall be estimated by the MPO in accordance with reasonable professional practice. The effects of TCMs and similar projects that are not regionally significant may also be estimated in accordance with reasonable professional practice.

60.03: continued

2. The emissions analysis shall not include for emissions reduction credit any TCMs which have been delayed beyond the scheduled date(s) until such time as implementation has been assured. If the TCM has been partially implemented and it can be demonstrated that it is providing quantifiable emission reduction benefits, the emissions analysis may include that emissions reduction credit.

3. Emissions reduction credit from projects, programs, or activities which require a regulation in order to be implemented shall not be included in the emissions analysis unless the regulation is already adopted by the enforcing jurisdiction. Adopted regulations are required for demand management strategies for reducing emissions which are not specifically identified in the SIP, and for control programs which are external to the transportation system itself, such as tailpipe or evaporative emission standards, limits on gasoline volatility, inspection and maintenance programs, and oxygenated or reformulated gasoline or diesel fuel. A regulatory program may also be considered to be adopted if an opt-in to a Federally enforced program has been approved by EPA, if EPA has promulgated the program (if the control program is a Federal responsibility, such as tailpipe standards), or if the Clean Air Act requires the program without need for individual State action and without any discretionary authority for EPA to set its stringency, delay its effective date, or not implement the program.

4. Notwithstanding 310 CMR 60.03(26)(a)3., during the transitional period, control measures or programs which are committed to in a SIP as described in 310 CMR 60.03(17) through (19), but which has not received final EPA action in the form of a finding of incompleteness, approval, or disapproval may be assumed for emission reduction credit for the purpose of demonstrating that the requirements of 310 CMR 60.03(17) through (19) are satisfied.

5. A regional emissions analysis for the purpose of satisfying the requirements of 310 CMR 60.03(21) through (23) may account for the programs in 310 CMR 60.03(26)(a)4., but the same assumptions about these programs shall be used for both the "Baseline" and "Action" scenarios.

(b) Serious, Severe and extreme ozone nonattainment areas and serious carbon monoxide areas after January 1, 1995, estimates of regional transportation-related emissions used to support conformity determinations shall be made according to procedures which meet the requirements in 310 CMR 60.03(26)(b)1. through 5.

1. A network-based transportation demand model or models relating travel demand and transportation system performance to land-use patterns, population demographics, employment, transportation infrastructure, and transportation policies shall be used to estimate travel within the metropolitan planning area of the nonattainment area. Such a model shall possess the following attributes:

- a. The modeling methods and the functional relationships used in the model(s) shall in all respects be in accordance with acceptable professional practice, and reasonable for purposes of emission estimation;
- b. The network-based model(s) shall be validated against ground counts for a base year that is not more than ten years prior to the date of the conformity determination. Land use, population, and other inputs shall be based on the best available information and appropriate to the validation base year;
- c. For peak-hour or peak-period traffic assignments, a capacity sensitive assignment methodology shall be used;
- d. Zone-to-zone travel times used to distribute trips between origin and destination pairs shall be in reasonable agreement with the travel times which result from the process of assignment of trips to network links. Where use of transit currently is anticipated to be a significant factor in satisfying transportation demand, these times should also be used for modeling mode splits;
- e. Free-flow speeds on network links shall be based on empirical observations;
- f. Peak and off-peak travel demand and travel times shall be provided;
- g. Trip distribution and mode choice shall be sensitive to pricing, where pricing is a significant factor, if the network model is capable of such determinations and the necessary information is available;

60.03: continued

- h. The model(s) shall utilize and document a logical correspondence between the assumed scenario of land development and use and the future transportation system for which emissions are being estimated. Reliance on a formal land-use model is not specifically required but is encouraged;
 - i. A dependence of trip generation on the accessibility of destinations via the transportation network (including pricing) is specifically required as soon as possible as the use of such a network model becomes feasible and practicable. Such a model would assess the impact of proposed transportation infrastructure changes on land use pattern, and incorporate feedback from that assessment in calculating trip generation rates, trip distribution and mode splits, and vehicle miles of travel.
 - j. A dependence of regional economic and population growth on the accessibility of destinations via the transportation system is strongly encouraged but not specifically required, unless the network model is capable of such determinations and the necessary information is available; and
 - k. Consideration of emissions increases from construction-related congestion is not specifically required.
2. Highway Performance Monitoring System (HPMS) estimates of vehicle miles traveled shall be considered the primary measure of vehicle miles traveled within the portion of the nonattainment or maintenance area and for the functional classes of roadways included in HPMS, for urban areas which are sampled on a separate urban area basis. A factor (or factors) shall be developed to reconcile and calibrate the network-based model estimates of vehicle miles traveled in the base year of its validation to the HPMS estimates for the same period, and these factors shall be applied to model estimates of future vehicle miles traveled. In this factoring process, consideration will be given to differences in the facility coverage of the HPMS and the modeled network description. Departure from these procedures is permitted with the concurrence of DOT and EPA.
 3. Reasonable methods shall be used to estimate nonattainment area vehicle travel on off-network roadways within the urban transportation planning area, and on roadways outside the urban transportation planning area.
 4. Reasonable methods in accordance with good practice shall be used to estimate VMT and emissions from exempt projects not included in the network-based model in accordance with 310 CMR 60.03(6)(c)1.g.
 5. Reasonable methods in accordance with good practice shall be used to estimate VMT and emissions from federal actions reported to EOTC and the MPO in accordance with 310 CMR 60.04, "Criteria for Determining Conformity of General Federal Actions".
 6. Reasonable methods in accordance with good practice shall be used to estimate traffic speeds and delays in a manner that is sensitive to the estimated volume of travel on each roadway segment represented in the network model.
 7. Ambient temperatures shall be consistent with those used to establish the motor vehicle emissions budget in the SIP. Factors other than temperatures, for example the fraction of travel in a hot stabilized engine mode, may be modified after interagency consultation according to 310 CMR 60.03(6) if the newer estimates incorporate additional or more geographically specific information or represent a logically estimated trend in such factors beyond the period considered in the SIP.
- (c) Areas Which are not Serious, Severe, or Extreme Ozone Nonattainment Areas or Serious Carbon Monoxide Areas, or Before January 1, 1995.
1. Procedures which satisfy some or all of the requirements of 310 CMR 60.03(26)(a) shall be used in all areas not subject to 310 CMR 60.03(26)(a) in which those procedures have been the previous practice of the MPO.
 2. Regional emissions may be estimated by methods which do not explicitly or comprehensively account for the influence of land use and transportation infrastructure on vehicle miles traveled and traffic speeds and congestion. Such methods must account for VMT growth by extrapolating historical VMT or projecting future VMT by considering growth in population and historical growth trends for vehicle miles travelled per person. These methods must also consider future economic activity, transit alternatives, and transportation system policies.

60.03: continued

(d) Projects Not From a Conforming Plan and TIP in Isolated Nonattainment and Maintenance Areas. 310 CMR 60.03(26)(d) applies to any nonattainment or maintenance area or any portion thereof which does not have a metropolitan transportation plan or TIP and whose projects are not part of the emissions analysis of any MPO's metropolitan transportation plan or TIP (because the nonattainment or maintenance area or portion thereof does not contain a metropolitan planning area or portion of a metropolitan planning area and is not part of a Metropolitan Statistical Area or Consolidated Metropolitan Statistical Area which is or contains a nonattainment or maintenance area).

1. Conformity demonstrations for projects in these areas may satisfy the requirements of 310 CMR 60.03(19), (23) and (36) with one regional emissions analysis which includes all the regionally significant projects in the nonattainment or maintenance area (or portion thereof).

2. The requirements of 310 CMR 60.03(19) shall be satisfied according to the procedures in 310 CMR 60.03(19)(c), with references to the "transportation plan" taken to mean the statewide transportation plan.

3. The requirements of 310 CMR 60.03(23) and (36) which reference "transportation plan" or "TIP" shall be taken to mean those projects in the statewide transportation plan or statewide TIP which are in the nonattainment or maintenance area (or portion thereof).

4. The requirement of 310 CMR 60.03(25)(b) shall be satisfied if:

a. The project is included in the regional emissions analysis which includes all regionally significant highway and transportation projects in the nonattainment or maintenance area (or portion thereof) and supports the most recent conformity determination made according to the requirements of 310 CMR 60.03(19) or (23) or (36) (as modified by 310 CMR 60.03(26)(d)2. and 3.), as appropriate for the time period and pollutant; and

b. The project's design concept and scope have not changed significantly from those which were included in the regional emissions analysis, or in a manner which would significantly impact use of the facility.

(e) PM₁₀ From Construction-Related Fugitive Dust.

1. For areas in which the SIP does not identify construction-related fugitive PM₁₀ as a contributor to the nonattainment problem, the fugitive PM₁₀ emissions associated with highway and transit project construction are not required to be considered in the regional emissions analysis.

2. In PM₁₀ nonattainment and maintenance areas with SIPs which identify construction-related fugitive PM₁₀ emissions as a contributor to the nonattainment problem, the regional PM₁₀ emissions analysis shall consider construction-related fugitive PM₁₀ and shall account for the level of construction activity, the fugitive PM₁₀ control measures in the SIP and the dust-producing capacity of the proposed activities.

(27) Procedures for Determining Localized CO Concentrations (Hot-Spot Analysis).

(a) In the following cases, CO hot-spot analyses shall be based on the applicable air quality models, data bases, and other requirements specified in 40 CFR part 51 Appendix W ("Guideline on Air Quality Models (Revised)" (1988), supplement A (1987) and supplement B (1993), EPA publication no. 450/2-78-027R), unless, after the interagency consultation process described in 310 CMR 60.03(6) and with the approval of the EPA Regional Administrator, these models, data bases, and other requirements are determined to be inappropriate:

1. For projects in or affecting locations, areas, or categories of sites which are identified in the SIP as sites of current violation or possible current violation;

2. For those intersections at Level-of-Service D, E, or F, or those that will change to Level-of-Service D, E, or F because of increased traffic volumes related to a new project in the vicinity;

3. For any project involving or affecting any of the intersections which the SIP identifies as the top three intersections in the nonattainment or maintenance area based on the highest traffic volumes;

4. For any project involving or affecting any of the intersections which the SIP identifies as the top three intersections in the nonattainment or maintenance area based on the worst Level-of-Service; and

60.03: continued

5. Where use of the "Guideline" models is practicable and reasonable given the potential for violations.
- (b) In cases other than those described in 310 CMR 60.03(27)(a), other quantitative methods may be used if they represent reasonable and common professional practice.
- (c) CO hot-spot analyses shall include the entire project, and may be performed only after the major design features which will significantly impact CO concentrations have been identified. The background concentration can be estimated using the ratio of future to current traffic multiplied by the ratio of future to current emission factors and then applying the ratio to the background value.
- (d) PM₁₀ hot-spot analysis must be performed for projects which are located at sites at which violations have been verified by monitoring, and at sites which have essentially identical vehicle and roadway emission and dispersion characteristics (including sites near one at which a violation has been monitored). The projects which require PM₁₀ hot-spot analysis shall be determined through the interagency consultation process required in 310 CMR 60.03(6). In PM₁₀ nonattainment and maintenance areas, new or expanded bus and rail terminals and transfer points which increase the number of diesel vehicles congregating at a single location require hot-spot analysis. DOT may choose to make a categorical conformity determination on bus and rail terminals or transfer points based on appropriate modeling of various terminal sizes, configurations and activity levels. The requirements of 310 CMR 60.03(27)(d) for quantitative hot-spot analysis will not take effect until EPA releases modeling guidance on this subject and announces that these requirements are in effect in the *Federal Register*.
- (e) Hot-spot analysis assumptions shall be consistent with those in the regional emissions analysis for those inputs which are required for both analyses.
- (f) CO and PM₁₀ mitigation or control measures shall be assumed in the hot-spot analysis only where there are written commitments from the project sponsor and/or operator to the implementation of such measures, as required by 310 CMR 60.03(29)(a).
- (g) CO and PM₁₀ hot-spot analyses are not required to consider construction-related activities which cause temporary increases in emissions. Each site which is affected by construction-related activities shall be considered separately, using established "Guideline" methods. Temporary increases are defined as those which occur only during the construction phase and last five years or less at any individual site.
- (28) Using the Motor Vehicle Emissions Budget in the SIP.
- (a) In interpreting a SIP motor vehicle emissions budget(s), the MPO and DOT may not infer additions to the budget(s) that are not explicitly intended by the SIP or SIP submission. Unless the SIP explicitly quantifies the amount by which motor vehicle emissions could be higher while still allowing a demonstration of compliance with the milestone, attainment or maintenance requirement and explicitly states an intent that some or all of this additional amount should be available to the MPO and DOT in the emission budget for conformity purposes, the MPO may not interpret the budget to be higher than the SIP's estimate of future emissions. This applies in particular to the SIP which demonstrate that after implementation of control measures in the SIP:
1. Emissions from all sources will be less than the total emissions that would be consistent with a required demonstration of an emissions reduction milestone;
 2. Emissions from all sources will result in achieving attainment prior to the attainment deadline and/or ambient concentrations in the attainment deadline year will be lower than needed to demonstrate attainment; or
 3. Emissions will be lower than needed to provide for continued maintenance.
- (b) A conformity demonstration shall not trade emissions among budgets which the SIP allocates for different pollutants or precursors, or among budgets allocated to motor vehicles and other sources, without a SIP revision or a SIP which establishes mechanisms for such trades.
- (c) If the SIP estimates future emissions by geographic subarea of the nonattainment area, the MPO and DOT are not required to consider this to establish subarea budgets, unless the SIP explicitly indicates an intent to create such subarea budgets for the purposes of conformity.
- (d) If a nonattainment area includes more than one MPO, the SIP may establish motor vehicle emissions budgets for each MPO, or else the MPOs shall collectively make a conformity determination for the entire nonattainment area.

60.03: continued

(29) Enforceability of Design Concept and Scope and Project-Level Mitigation and Control Measures.

(a) Prior to determining that a transportation project is in conformity, the MPO, other recipient of funds designated under title 23 U.S.C. or the Federal Transit Act, FHWA, or FTA shall obtain from the project sponsor and/or operator written commitments to implement in the construction of the project and operation of the resulting facility or service any project-level mitigation or control measures which are identified as conditions for NEPA process completion with respect to local CO or PM₁₀ impacts. Before making conformity determinations written commitments shall also be obtained for project-level mitigation or control measures which are conditions for making conformity determinations for a transportation plan or TIP and included in the project design concept and scope which is used in the regional emissions analysis required by 310 CMR 60.03(17) through (19) and (21) through (23) or used in the project-level hot-spot analysis required by 310 CMR 60.03(16) and (20).

(b) Project sponsors voluntarily committing to mitigation measures to facilitate positive conformity determinations shall comply with the obligations of such commitments.

(c) During the control strategy and maintenance periods, if the MPO or project sponsor believes the mitigation or control measure is no longer necessary for conformity, the project sponsor or operator may be relieved of its obligation to implement the mitigation or control measure if it can demonstrate that the requirements of 310 CMR 60.03(16), (17), and (18) are satisfied without the mitigation or control measure, and so notifies the agencies involved in the interagency consultation process required under 310 CMR 60.03(6). The MPO and DOT shall confirm that the transportation plan and TIP still satisfy the requirements of 310 CMR 60.03(17) and (18) and that the project still satisfies the requirements of 310 CMR 60.03(16), and therefore that the conformity determinations for the transportation plan, TIP, and project are still valid.

(30) Exempt Projects. Notwithstanding the other requirements of 310 CMR 60.03, highway and transit projects of the types listed in Table 2 are exempt from the requirement that a conformity determination be made. Such projects may proceed toward implementation even in the absence of a conforming transportation plan and TIP. A particular action of the type listed in Table 2 is not exempt if the MPO in consultation with other agencies (*see* 310 CMR 60.03(6)(c)1.(viii), the EPA, the Department and the FHWA (in the case of a highway project) or the FTA (in the case of a transit project) concur that it has potentially adverse emissions impacts for any reason. States and MPOs shall ensure that exempt projects do not interfere with TCM implementation.

Table 2. - Exempt Projects

SAFETY
Railroad/highway crossing
Hazard elimination program
Safer non-federal-aid system roads
Shoulder improvements
Increasing sight distance
Safety improvement program
Traffic control devices and operating assistance other than signalization projects
Railroad/highway crossing warning devices
Guardrails, median barriers and crash cushions
Pavement resurfacing and/or rehabilitation
Pavement marking demonstration
Emergency relief (23 U.S.C. 125)
Fencing

60.03: continued

Table 2. - Exempt Projects (continued)

Skid treatments
Safety roadside rest areas
Adding medians
Truck climbing lanes outside the urbanized area
Lighting improvements
Widening narrow pavements or reconstructing bridges (no additional travel lanes)
Emergency Truck pullovers
MASS TRANSIT
Operating assistance to transit agencies
Purchase of support vehicles
Rehabilitation of transit vehicles ³
Purchase of office, shop and operating equipment for existing facilities
Purchase of operating equipment for vehicles (e.g. radios, fareboxes, lifts, etc.)
Construction or renovation of power, signal and communications systems
Construction of small passenger shelters and information kiosks
Reconstruction or renovation of transit buildings and structures (e.g., rail or bus buildings, storage and maintenance facilities, stations terminals, and ancillary structures)
Rehabilitation or reconstruction of track structures, track and trackbed in existing rights-of-way
Purchase of new buses and rail cars to replace existing vehicles or for minor expansions of the fleet ¹
Construction of new bus or rail storage/maintenance facilities categorically excluded in 23 CFR 771
AIR QUALITY
Continuation of ridesharing and vanpooling promotion activities at current levels
Bicycle and pedestrian facilities
OTHER
Specific activities which do not involve or lead directly to construction, such as: planning and technical studies grants for training and research programs planning activities conducted pursuant to titles 23 and 49 U.S.C. federal-aid systems revisions
Engineering to assess social, economic and environmental effects of the proposed action or alternatives to that action
Noise attenuation
Advance land acquisitions (23 CFR 712 or 23 CFR 771)
Acquisition of scenic easements
Plantings, landscaping, etc.
Sign removal
Directional and informational signs

³PM₁₀ nonattainment or maintenance areas, such projects are exempt only if they are in compliance with control measures in the SIP.

60.03: continued

Table 2. - Exempt Projects (continued)

Transportation enhancement activities (except rehabilitation and operation of historic transportation buildings, structures or facilities)
Repair of damage caused by natural disasters, civil unrest, or terrorist acts, except projects involving substantial functional, locational or capacity changes

(31) Projects Exempt From Regional Emissions Analyses. Notwithstanding the other requirements of 310 CMR 60.03(31), highway and transit projects of the types listed in Table 3 are exempt from regional emissions analysis requirements. The local effects of these projects with respect to CO or PM₁₀ concentrations shall be considered to determine if a hot-spot analysis is required prior to making a project-level conformity determination. These projects may then proceed to the project development process even in the absence of a conforming transportation plan and TIP. A particular action of the type listed in Table 3 is not exempt from regional emissions analysis if the MPO in consultation with other agencies (*see* 310 CMR 60.03(31)(6)(c)1.h., the EPA, the Department and the FHWA (in the case of a highway project) or the FTA (in the case of a transit project) concur that it has potential regional impacts for any reason.

Table 3. - Projects Exempt From Regional Emissions Analyses

Intersection channelization projects
Intersection signalization projects at individual intersections
Interchange reconfiguration projects
Changes in vertical and horizontal alignment
Truck size and weight inspection stations
Bus terminals and transfer points

(32) Criteria and Procedures for PM₁₀ and NO₂ Nonattainment Areas. The requirements of 310 CMR 60.03(33) through (36) shall be applicable only at such time that the Commonwealth of Massachusetts is redesignated by EPA from a PM₁₀ or NO₂ attainment area to a PM₁₀ or NO₂ nonattainment area.

(33) Compliance With PM₁₀ Control Measures. The FHWA/FTA project shall comply with PM₁₀ control measures in the SIP. This criterion applies during all periods. It is satisfied if control measures (for the purpose of limiting PM₁₀ emissions from the construction activities and/or normal use and operation associated with the project) contained in the SIP are included in the final plans, specifications, and estimates for the project.

(34) Reductions in PM₁₀ and NO₂ Areas in the Interim and Transitional Periods (Transportation Plan).

(a) A transportation plan shall contribute to emission reductions or shall not increase emissions in PM₁₀ and NO₂ nonattainment areas. This criterion applies only during the interim and transitional periods. It applies to the net effect on emissions of all projects contained in a new or revised transportation plan. This criterion may be satisfied if the requirements of either 310 CMR 60.03(34)(b) or (c) are met.

60.03: continued

(b) Demonstrate that implementation of the plan and all other regionally significant projects expected in the nonattainment area will contribute to reductions in emissions of PM₁₀ in a PM₁₀ nonattainment area (and of each transportation-related precursor of PM₁₀ in PM₁₀ nonattainment areas if the EPA Regional Administrator or the director of the State air agency has made a finding that such precursor emissions from within the nonattainment area are a significant contributor to the PM₁₀ nonattainment problem and has so notified the MPO and DOT) and of NO_x in an NO₂ nonattainment area, by performing a regional emissions analysis as follows:

1. Determine the analysis years for which emissions are to be estimated. Analysis years shall be no more than ten years apart. The first analysis year shall be no later than 1996 (for NO₂ areas) or four years and six months following the date of designation (for PM₁₀ areas). The second analysis year shall be either the attainment year for the area, or if the attainment year is the same as the first analysis year or earlier, the second analysis year shall be at least five years beyond the first analysis year. The last year of the transportation plan's forecast period shall also be an analysis year.
2. Define for each of the analysis years the "Baseline" scenario, as defined in 310 CMR 60.03(21)(c), and the "Action" scenario, as defined in 310 CMR 60.03(21)(d).
3. Estimate the emissions predicted to result in each analysis year from travel on the transportation systems defined by the "Baseline" and "Action" scenarios and determine the difference between the two scenarios in regional PM₁₀ emissions in a PM₁₀ nonattainment area (and transportation-related precursors of PM₁₀ in PM₁₀ nonattainment areas if the EPA Regional Administrator or the director of the State air agency has made a finding that such precursor emissions from within the nonattainment area are a significant contributor to the PM₁₀ nonattainment problem and has so notified the MPO and DOT) and in NO_x emissions in an NO₂ nonattainment area. The analysis must be performed for each of the analysis years according to the requirements of 310 CMR 60.03(26). The analysis must address the periods between the analysis years and the periods between 1990, the first milestone year (if any), and the first of the analysis years. Emissions in milestone years which are between the analysis years may be determined by interpolation.
4. Demonstrate that the regional PM₁₀ emissions and PM₁₀ precursor emissions, where applicable, (for PM₁₀ nonattainment areas) and NO_x emissions (for NO₂ nonattainment areas) predicted in the 'Action' scenario are less than the emissions predicted from the 'Baseline' scenario in each analysis year, and that this can reasonably be expected to be true in the periods between the first milestone year (if any) and the analysis years.

(c) Demonstrate that when the projects in the transportation plan and all other regionally significant projects expected in the nonattainment area are implemented, the transportation system's total highway and transit emissions of PM₁₀ in a PM₁₀ nonattainment area (and transportation-related precursors of PM₁₀ in PM₁₀ nonattainment areas if the EPA Regional Administrator or the director of the Air Division of the Department has made a finding that such precursor emissions from within the nonattainment area are a significant contributor to the PM₁₀ nonattainment problem and has so notified the MPO and DOT) and of NO_x in an NO₂ nonattainment area will not be greater than baseline levels, by performing a regional emissions analysis as follows:

1. Determine the baseline regional emissions of PM₁₀ and PM₁₀ precursors, where applicable (for PM₁₀ nonattainment areas) and NO_x (for NO₂ nonattainment areas) from highway and transit sources. Baseline emissions are those estimated to have occurred during calendar year 1990, unless the SIP revision required by § 51.396 of the federal conformity rule defines the baseline emissions for a PM₁₀ area to be those occurring in a different calendar year for which a baseline emissions inventory was developed for the purpose of developing a control strategy implementation plan.

60.03: continued

2. Estimate the emissions of the applicable pollutant(s) from the entire transportation system, including projects in the transportation plan and TIP and all other regionally significant projects in the nonattainment area, according to the requirements of 310 CMR 60.03(26). Emissions shall be estimated for analysis years which are no more than ten years apart. The first analysis year shall be no later than 1996 (for NO₂ areas) or four years and six months following the date of designation (for PM₁₀ areas). The second analysis year shall be either the attainment year for the area, or if the attainment year is the same as the first analysis year or earlier, the second analysis year shall be at least five years beyond the first analysis year. The last year of the transportation plan's forecast period shall also be an analysis year.
 3. Demonstrate that for each analysis year the emissions estimated in 310 CMR 60.03(34)(c)2. are no greater than baseline emissions of PM₁₀ and PM₁₀ precursors, where applicable (for PM₁₀ nonattainment areas) or NO_x (for NO₂ nonattainment areas) from highway and transit sources.
- (35) Reductions in PM₁₀ and NO₂ areas in the interim and transitional periods (TIP).
- (a) A TIP shall contribute to emission reductions or shall not increase emissions in PM₁₀ and NO₂ nonattainment areas. This criterion applies only during the interim and transitional periods. It applies to the net effect on emissions of all projects contained in a new or revised TIP. This criterion may be satisfied if the requirements of either 310 CMR 60.03(35)(b) or (c) are met.
 - (b) Demonstrate that implementation of the plan and TIP and all other regionally significant projects expected in the nonattainment area will contribute to reductions in emissions of PM₁₀ in a PM₁₀ nonattainment area (and transportation-related precursors of PM₁₀ in PM₁₀ nonattainment areas if the EPA Regional Administrator or the director of the State air agency has made a finding that such precursor emissions from within the nonattainment area are a significant contributor to the PM₁₀ nonattainment problem and has so notified the MPO and DOT) and of NO_x in an NO₂ nonattainment area, by performing a regional emissions analysis as follows:
 1. Determine the analysis years for which emissions are to be estimated, according to the requirements of 310 CMR 60.03(34)(b)1.
 2. Define for each of the analysis years the "Baseline" scenario, as defined in 310 CMR 60.03(22)(c), and the "Action" scenario, as defined in 310 CMR 60.03(22)(d).
 3. Estimate the emissions predicted to result in each analysis year from travel on the transportation systems defined by the "Baseline" and "Action" scenarios as required by 310 CMR 60.03(34)(b)3., and make the demonstration required by 310 CMR 60.03(34)(b)4.
 - (c) Demonstrate that when the projects in the transportation plan and TIP and all other regionally significant projects expected in the area are implemented, the transportation system's total highway and transit emissions of PM₁₀ in a PM₁₀ nonattainment area (and transportation-related precursors of PM₁₀ in PM₁₀ nonattainment areas if the EPA Regional Administrator or the director of the State air agency has made a finding that such precursor emissions from within the nonattainment area are a significant contributor to the PM₁₀ nonattainment problem and has so notified the MPO and DOT) and of NO_x in an NO₂ nonattainment area will not be greater than baseline levels, by performing a regional emissions analysis as required by 310 CMR 60.03(34)(c)1. through 3.

60.03: continued

(36) Reductions in PM₁₀ and NO₂ areas in the interim and transitional periods (project not from a plan and TIP). A transportation project which is not from a conforming transportation plan and TIP shall contribute to emission reductions or shall not increase emissions in PM₁₀ and NO₂ nonattainment areas. This criterion applies during the interim and transitional periods only. This criterion is met if a regional emissions analysis is performed which meets the requirements of 310 CMR 60.03(34) and which includes the transportation plan and project in the 'Action' scenario. If the project which is not from a conforming transportation plan and TIP is a modification of a project currently in the transportation plan or TIP, and 310 CMR 60.03(34)(b) is used to demonstrate satisfaction of this criterion, the 'Baseline' scenario shall include the project with its original design concept and scope, and the 'Action' scenario must include the project with its new design concept and scope.

60.04: MB City of Cambridge Vehicle Trip Reduction Program

(1) Purpose. 310 CMR 60.04 authorizes the City of Cambridge to implement a vehicle trip reduction program to achieve a combination of reductions in vehicle trips, vehicle miles travelled and vehicle emissions so as to allow for the addition of commercial parking spaces and the added vehicle trips they generate with no net negative impact on air quality. 310 CMR 60.04 authorizes the City of Cambridge to implement the vehicle trip reduction program as a replacement and substitution to the Cambridge Parking Freeze.

(2) Definitions.

Automobile Efficiency Rate means the figure calculated by dividing the number of employees who report to a worksite within the City of Cambridge between 6:00 A.M. and 10:00 A.M. inclusive (Monday through Friday to achieve a five consecutive weekday average) by the number of vehicles used by those employees to reach the worksite during those hours. Bicycles, public transit vehicles, and approved Clean-Fuel vehicles shall be excluded from the vehicles counted. Motorcycles and light trucks shall be included in the vehicles counted.

Cambridge Parking Freeze means the regulation for a commercial parking freeze in the City of Cambridge at 40 CFR section 52.1128 and 52.1135, as modified by *South Terminal Corp. v. EPA*, 502 F.2d 646, 671-672 (1st Cir. 1974) and the 1978 and 1983 Transportation Elements of the SIP, which limited commercial parking spaces in the City to a total of 13,452 spaces.

Caravan means Caravan for Commuters Inc., a private, non-profit commuter services company which develops and markets commuter transportation services.

Carpool means a vehicle carrying two to seven passengers.

City means the City of Cambridge, Massachusetts.

Clean fuel means any fuel or power source used in a vehicle that complies with the applicable standards for clean fueled vehicles contained in §§ 241-245 of the Clean Air Act, 42 U.S.C. §§ 7581-7595.

Clean fueled vehicle means a vehicle in a class or category of vehicles which has been certified to meet the applicable clean-fuel vehicle standards as defined by and pursuant to the federal Clean Air Act Amendments of 1990.

Commercial parking space means a parking space available for use by the general public at any time for a fee and shall not include:

- (a) parking spaces which are owned or operated by a commercial entity whose primary business is other than the operation of parking facilities, for the exclusive use of its lessees, employees, patrons, customers, clients, patients, guests or residents and not available for use by the general public;
- (b) parking spaces restricted for the use of the residents of a specific residential building or group of buildings;
- (c) spaces located on public streets; or

60.04: continued

(d) spaces located at a park-and-ride facility operated in conjunction with the Massachusetts Bay Transportation Authority.

Department means the Department of Environmental Protection.

EPA means the United States Environmental Protection Agency.

Flex Time means a wide range of flexible scheduling procedures that allows employees to set their own start times at their place of employment with the purpose of avoiding peak commute periods.

Four-day Workweek means a provision which allows employees to work the number of hours normally worked in a five-day period in a four-day period.

Monitoring and Demonstration Plan means the monitoring and demonstration plan developed by the City and approved by DEP on July 17, 1996 for use by the City in connection with 310 CMR 60.04 and as it may be amended by the City in consultation with DEP.

MBTA means the Massachusetts Bay Transportation Authority.

Oversight Committee means a panel jointly appointed by the Department and the City.

Preferential Parking means parking spaces reserved for motor vehicles such as carpools, vanpools, ULEVs and ZEVs which produce lower emissions than a single occupant vehicle. Preferential parking may be provided in more convenient locations to destinations as an incentive to utilize lower emitting modes of travel.

SIP is the portion (or portions) of the state implementation plan, or most recent revision thereof, approved under § 110 of the Clean Air Act, or promulgated under § 110(c), or promulgated under § 301(d) and which implements the relevant requirements of the Clean Air Act.

Telecommuting means working at home or at a satellite facility which substantially reduces the VMT which would occur by working at the primary employment location.

ULEV means an ultra low emitting vehicle as defined at 310 CMR 7.40.

Vanpool means a vehicle carrying eight or more passengers.

VMT means vehicle miles travelled.

Vehicle trip reduction programs are programs designed to reduce VMT or vehicle trips by influencing travel behavior and demand or by reducing air emissions from mobile sources by utilizing clean fuels.

ZEV means a zero emitting passenger car or light duty truck which produces zero emissions under any and all possible operations.

(3) Applicability. 310 CMR 60.04 is applicable within the geographic boundaries of the City of Cambridge.

(4) Terms of the Vehicle Trip Reduction Program.

(a) The City shall implement a vehicle trip reduction program that offsets VMT associated with the issuance of new commercial parking space permits in Cambridge in excess of the number allowed by the Cambridge Parking Freeze (13,452 spaces), to maintain a level of air emissions less than or equal to those estimated to occur absent replacement and substitution of the Cambridge Parking Freeze.

(b) As of the date of approval by EPA of 310 CMR 60.04 as an amendment to the Massachusetts SIP, the City may issue new parking permits for commercial parking spaces in excess of the number allowed by the Cambridge Parking Freeze provided:

60.04: continued

1. the City is implementing vehicle trip reduction measures to offset the air emissions associated with such new commercial parking spaces in excess of the number allowed by the Cambridge Parking Freeze; and
 2. either a report has been submitted by the City and has been approved by the Department pursuant to 310 CMR 60.04(12) or else the City has submitted a certification that fewer than 13,452 commercial parking spaces exist in the City.
- (c) Prior to EPA approval of 310 CMR 60.04 as an amendment to the Massachusetts SIP, the City shall not issue more than 81 new commercial parking space permits unless the permits are issued to replace other commercial parking spaces that have been permanently taken out of service as commercial parking spaces after July 17, 1996.
- (d) Prior to issuing parking permits for commercial parking spaces pursuant to 310 CMR 60.04(4)(c), the City shall notify the Department and EPA.
- (5) Vehicle Trip Reduction Program.
- (a) The City's vehicle trip reduction program may include, but shall not be limited to, the measures described in 310 CMR 60.04.
- (b) Municipal Employee Trip Reduction Measure.
1. The City may implement a municipal employee trip reduction measure applicable to municipal departments and employees in the City. The measure may include some or all of the following requirements:
 - a. the provision of incentives, assistance and information on alternative modes of travel to the single occupant vehicle to all municipal employers and employees;
 - b. preferential parking for carpools, vanpools, ULEVS, and ZEVs;
 - c. the provision of an employee shuttle service;
 - d. financial subsidies and incentives for use of public transit;
 - e. alternative work schedules including the provision of flex-time, telecommuting and/or four day workweek to employees; and
 - f. restrictions on or reduction of employee parking spaces.
 2. If the City chooses this option, it shall monitor the effectiveness of the municipal vehicle trip reduction measure by tracking some or all of the following:
 - a. improvements to the automobile efficiency rate for municipal employees;
 - b. the number of transit pass sales sold through payroll deduction;
 - c. ridership levels of employee shuttle services;
 - d. the number of preferential parking spaces for employees;
 - e. the number of users of Caravan for Commuters, Inc. ridematching services; and
 - f. the number of bicycles, ULEVS, ZEV fleet vehicles used or operated by municipal employees.
- (c) Increase of the Municipal Parking Rates.
1. The City may permanently increase parking fees for daily parking at City-owned, off-street parking facilities.
 2. If the City chooses this option, it shall monitor and track the extent and amount of rate increases for each municipal parking facility.
- (d) Bicycle and Pedestrian Mobility Measure.
1. The City may design, fund, and implement programs to improve bicycle and pedestrian mobility. The bicycle and pedestrian mobility measure may include some or all of the following components:
 - a. the designation of a city bicycle and/or pedestrian coordinator;
 - b. the development of a master plan and improvements to the street network for bicycle and pedestrian access;
 - c. installation of bicycle racks and storage facilities;
 - d. the provision of bicycles for use by City police, Traffic and Parking Department personnel and other municipal employees; and
 - e. the addition of exclusive bicycle lanes on major streets.
 2. If the City chooses this option, it shall monitor the effectiveness of the bicycle and pedestrian mobility measure by tracking some or all of the following:
 - a. the amount of linear feet of exclusive bicycle lanes;
 - b. the number of bicycle parking facilities;
 - c. the number of City-owned bicycles available for use by municipal employees; and
 - d. the maintenance of infrastructure improvements.

60.04: continued

- (e) **Transportation Demand Management for Expansions and New Development.**
1. The City may develop and implement an ongoing transportation demand management measure which may be applicable to new and expanded municipal facilities of 25,000 square feet or more and to those private development projects of 75,000 square feet or more that are subject to special permits. The transportation demand management measure may require some or all of the following:
 - a. designating a transportation management coordinator responsible for distributing information and coordinating traffic management programs within the new development;
 - b. discouraging or restricting use of parking spaces by single-occupant vehicles;
 - c. funding local or area-wide shuttle services to public transit stations and/or shopping centers;
 - d. encouragement of flextime for employees of all tenants;
 - e. promotion of the use of public transportation by providing transit information and participation in the MBTA commuter pass program;
 - f. operation of a computer-based ridesharing information bank or coordination of ridesharing promotional programs with any existing commuter mobility program;
 - g. preferential parking;
 - h. establishing reduced parking fees or providing subsidies for carpool and vanpool parking;
 - i. encouragement of local employment opportunities by tenants of the new development; and
 - j. providing safe, convenient, sheltered bicycle storage facilities and/or shower facilities for bicycle commuters.
 2. If the City chooses this option, it shall monitor the effectiveness of the transportation demand management measure by tracking some or all of the following for each such new or expanded municipal development:
 - a. the number of users of Caravan for Commuters, Inc. services;
 - b. the number of transit pass sales through payroll deduction;
 - c. the number of riders on employee shuttles; and
 - d. the number of carpool/vanpool/ULEV/ZEV parking spaces and bicycle facilities.
 3. If the City chooses this option, it shall monitor the effectiveness of the transportation demand management measure by tracking the following for each such new or expanded private development:

transportation demand management requirements under a special permit from the Planning Board which may include but need not be limited to some or all of the following.

 - a. the number of users of Caravan for Commuters, Inc. services;
 - b. the number of transit pass sales through payroll deduction;
 - c. the number of riders on employee shuttles; and
 - d. the number of carpool/vanpool/ULEV/ZEV parking spaces and bicycle facilities.
- (6) **Feasibility Studies.** Within three years of December 26, 1997, the City shall complete the following studies:
- (a) **Promotion of Clean Fuels and Low/Zero Emission Vehicles.**
 1. The City shall complete a study and recommend ways to promote and provide incentives for the use of clean fuels and low/zero emission vehicles within the City. Such incentives may include, at a minimum, special permits or preferential parking for residents and others with ULEVs or ZEVS, and conversion of vehicle fleets to clean fuels.
 2. The City may implement the outcome of the study.
 3. If the City chooses this option, it shall monitor the effectiveness of implementing clean fuel and low/zero emission vehicle strategies by tracking the following:
 - a. number of ULEV, ZEV fleet vehicles within City;
 - b. number of refueling stations for alternative fuel vehicles;
 - c. number of City-regulated preferential parking spaces for ULEV/ZEV.
 - (b) **Taxi Cab Improvements.**
 1. The City shall complete a study and make recommendations on methods to make taxi cabs more accessible for use by multiple passengers with different destinations.

60.04: continued

2. The City may study the role of taxi cabs in a para-transit system for the City.
3. The City may study incentives for conversion of taxi fleets to clean fuels and/or zero emission vehicles.
4. The City may implement the outcome of the study.
5. If the City chooses this option, it shall monitor the effectiveness of implementing taxi cab improvements by tracking the following:
 - a. the extent taxi cabs play in the paratransit system;
 - b. ridership levels;
 - c. the number of vouchers issued;
 - d. the number of fleet/vehicle conversions.

(c) Zoning.

1. The City of Cambridge shall complete a study and recommend revisions to the Cambridge Zoning Ordinance to promote reductions of VMT and traffic congestion and to increase commuting alternatives to the single-occupant vehicle. The City shall consider: densities to achieve the goal of reduced VMT; eliminating the exclusion of parking in the calculation of gross floor area; reducing the minimum and maximum parking requirements; including special provisions for carpools and vanpools; and encouraging mixed-use developments.

(7) Travel Demand Management. The City shall work and coordinate with the Commonwealth and the Department to explore additional ways to manage travel demand and demand for parking in the City and ways in which it can facilitate the transfer of parking space permits and/or parking spaces in the City.

(8) City Enforcement Programs.

- (a) The City shall inspect periodically non-residential parking facilities to ensure that they are operating pursuant to and in compliance with appropriate permits and approvals and that non-commercial spaces are being used solely for non-commercial purposes and are not available as commercial parking spaces. The City shall take enforcement action against violators. The City shall forward copies of all inspection reports to the Department.
- (b) The City may focus on enforcement of statutory and regulatory prohibitions against idling by buses, trucks, taxis and automobiles in accordance with the requirements set forth in 310 CMR 7.11(1)(b), Air Pollution Control Regulations, U Transportation Media.

(9) Coordination Activities.Improved Coordination with the MBTA.

- (a) The City may work with the MBTA to improve the accessibility of public transit and to explore the development of a local para-transit system in the City.
- (b) The City may identify barriers to use of the MBTA by residents and commuters.
- (c) The City may conduct public forums throughout the city to assess transit needs and to inform residents and commuters of transit options.
- (d) If the City chooses this option, it shall monitor the effectiveness of improved coordination with the MBTA by documenting the following:
 1. City efforts to improve routing of buses to reduce number of connections and changes
 2. the number of bicycle parking facilities at or near subway and bus transit nodes
 3. the number of locations and volume of distribution of MBTA routes and schedule information
 4. improved multi-modal linkages between MBTA stations and bike and pedestrian facilities

(10) Monitoring and Demonstration Plan.

- (a) The City shall implement the Monitoring and Demonstration Plan.
- (b) The City shall continuously monitor the number of commercial parking spaces within the City and the effectiveness of the vehicle trip reduction program implemented in the City in achieving a combination of reductions in VMT, vehicle trips and vehicle air emissions to confirm that the requirement of 310 CMR 60.04(4)(a) is being met.

60.04: continued

(c) If the number of commercial parking spaces in the City exceeds 13,452 spaces and the Monitoring and Demonstration Plan does not demonstrate that the requirements of 310 CMR 60.04(4)(a) have been met, the City shall be prohibited from issuing any commercial parking space permits.

(11) Recordkeeping and Reporting.

(a) Beginning one year after EPA approves 310 CMR 60.04 as a SIP amendment and as a replacement of 40 C.F.R. §§ 52.1128, 52.1135 and every year for three years, and every other year thereafter, the City shall complete a report on the vehicle trip reduction programs and strategies in place in the City. This report shall include the status and progress of the programs and studies required by 310 CMR 60.04. Said report shall include:

1. a description of each vehicle trip reduction measure and its implementation status;
2. an inventory of commercial parking spaces permitted by the City pursuant to 310 CMR 60.04;
3. a compilation of supporting data collected pursuant to 310 CMR 60.04(10) or other supporting data, if available; and
4. a certification by the City that the vehicle trip reduction measures are being implemented in a manner consistent with the assumptions in the Report to determine emissions associated with new parking permits for commercial parking spaces pursuant to 310 CMR 60.04(4)(a) in excess of the number allowed by the Cambridge Parking Freeze.

(b) The City shall submit copies of the status report to the Department, EPA Region I and the chairman of the Boston Metropolitan Planning Organization.

(c) The City shall maintain records that document the assumptions used in the Report to determine emissions reductions from the City's Vehicle Trip Reduction Program and to demonstrate compliance with 310 CMR 60.04(4)(a).

(12) Monitoring and Demonstration Report Review.

(a) For those years in which a report is required to demonstrate that the City is offsetting air emissions associated with that number of commercial parking spaces permitted in the City in excess of 13,452, the City shall submit the Monitoring and Demonstration Report to the Department. Within 45 days of receipt of the Report, the Department shall either:

1. render a determination of its adequacy or inadequacy; or
2. submit the report to the Oversight Committee for review and comment.

(b) The Oversight Committee is authorized to review the effectiveness of the vehicle trip reduction program at offsetting air emissions and VMT associated with new commercial parking spaces permitted in excess of the number allowed by the Cambridge Parking Freeze, recommend ways to improve the effectiveness of the program and advise the Department whether the City has met its obligations under 310 CMR 60.04(4)(a). The Oversight Committee shall submit its advice to the Department within 60 days of receipt of a Monitoring and Demonstration Report.

(c) If the Oversight Committee, based on its review of the Monitoring and Demonstration Report, advises the Department that the City has met its obligations under 310 CMR 60.04(4)(a), the Report shall be approved by the Department within 30 days unless the Department finds, based on additional information, that 310 CMR 60.04(4)(a) has not been met.

(d) If the Oversight Committee, based on its review of the Monitoring and Demonstration Report, advises the Department that the City has failed to meet its obligations, the Department shall hold a public hearing within 45 days of receipt of the Oversight Committee's advice. Within 60 days after the public hearing, the Department will issue a finding of adequacy or inadequacy, depending on the results of the review and public comment.

(e) If the Report is found inadequate pursuant to 310 CMR 60.04(12), and notwithstanding a request for an adjudicatory hearing, the City shall resolve the inadequacies to the satisfaction of the Department prior to issuing any new commercial parking space permits for spaces in excess of 13,452. If the City and the Department are unable to resolve their differences within 60 days, the City may request an adjudicatory hearing on the Department's determination pursuant to M.G.L c. 21A and c. 30A.

60.04: continued

(f) The City has the option to submit a Monitoring and Demonstration Report to the Department in years when such a report is not otherwise required. The City shall submit a Monitoring and Demonstration Report to the Department and the Oversight Committee at such time when there are 13,377 commercial parking spaces permitted in the City in order to identify how the air emissions associated with new commercial parking spaces in excess of 13,452 will be offset.

(13) Enforcement. The Department may enforce 310 CMR 60.04 under applicable law.

(14) Responsibilities Under the Clean Air Act.

(a) Programs included in the Massachusetts SIP or regulations thereunder may not be included in the Cambridge Vehicle Trip Reduction Program for the purposes of 310 CMR 60.04 except to the extent the City's implementation of or contribution to such program or regulation achieves results in excess of the goals established by the SIP for such program or regulation.

(b) The failure of the City of Cambridge to comply with the requirements of 310 CMR 60.04 may be the cause for the Department to make a finding of non-conformity under section 176(c) of the Clean Air Act, 42 U.S.C. 7506(c) and the state and federal Transportation Conformity regulations, 310 CMR 60.03 and 40 CFR Part 51, Subpart T, respectively.

60.05: Global Warming Solutions Act Requirements for Transportation

(1) Purpose Scope and Authority. 310 CMR 60.05 is promulgated pursuant to M.G.L. c. 21N, § 3(d) and is also promulgated pursuant to M.G.L. c. 21A, §§ 2, 8 and 16, and M.G.L. c. 111, §§ 2C and 142A through 142M, to prevent and abate conditions of air pollution from the greenhouse gas emissions from the mobile sources specified in 310 CMR 60.05. The purpose of 310 CMR 60.05 is to assist the Commonwealth in achieving the GHG emissions reduction goals adopted pursuant to M.G.L. c. 21N, § (3)(b) and to establish an annually declining aggregate GHG emissions limit pursuant to M.G.L. c. 21N, § 3(d), by:

(a) Requiring MassDOT to demonstrate its aggregate MassDOT GHG emissions reduction limits as established in 310 CMR 60.05(6) are achieved;

(b) Requiring the MPOs to evaluate and report the aggregate transportation GHG emissions impacts of Regional Transportation Plans (RTPs), and Transportation Improvement Programs (TIPs);

(c) Requiring the MPOs, in consultation with MassDOT, to develop and utilize procedures to prioritize and select projects in RTPs and TIPs based on factors that include aggregate transportation GHG emissions impacts; and

(d) Requiring MassDOT to evaluate and report the aggregate transportation GHG emissions impacts of State Transportation Improvement Programs (STIPs) and state-funded projects that are not included in STIPs.

(2) Definitions.

Aggregate Transportation GHG Emissions means total GHG emissions estimated by MassDOT, in collaboration with the Department, from the multimodal surface transportation system and its facilities including the highway and transit networks.

Aggregate MassDOT GHG Emissions means total GHG emissions estimated by MassDOT as occurring from the combustion of fuels in mobile equipment owned by MassDOT and the MBTA and of heating fuels at MassDOT and MBTA facilities.

Appropriate Planning Assumptions means the data, models, and expectations about future year conditions that serve as inputs to forecasting models used for estimating future year GHG emissions. This shall include best assumptions about future land use, transportation system condition and operations, and travel costs.

Build Condition means transportation facilities and projects that have a reasonable expectation of being open and operating by the end of applicable milestone and horizon years (*e.g.*, 2020, 2030, 2035, and 2040, as appropriate).

60.05: continued

Consultation means one party confers with another identified party, provides all appropriate information to that party needed for meaningful input, and, prior to taking any action, considers the views of that party and responds to those views in a timely, substantive written manner prior to any final decision on such action. Such views and written response shall be made part of the record of any decision or action.

Department means the Massachusetts Department of Environmental Protection.

EOEEA means the Massachusetts Executive Office of Energy and Environmental Affairs.

Greenhouse Gas (GHG) Emissions means, for the purposes of 310 CMR 60.05, carbon dioxide (CO₂).

Horizon Year means a year for which the transportation plan describes the envisioned transportation system.

MassDOT means the Massachusetts Department of Transportation.

Metropolitan Planning Organizations (MPOs) means the Massachusetts organizations designated as being responsible, together with the Commonwealth, for conducting the continuing, cooperative, and comprehensive planning process under 23 U.S.C. 134 and 49 U.S.C. §§ 5301 through 5340. It is the forum for cooperative transportation decision-making. For the purposes of 310 CMR 60.05, Regional Planning Agencies (RPA) in the Commonwealth of Massachusetts which have not been formally designated as MPOs under 23 U.S.C. 134 and 49 U.S.C. §§ 5301 through 5340 shall be subject to the same requirements as MPOs under 310 CMR 60.05.

No-build Condition means existing transportation facilities plus those projects that are under construction, have been advertised, or have been included in the first year of the RTPs, TIPs or STIPs.

Regional Planning Agencies (RPA) means one of the 13 Massachusetts commissions, councils, or councils of government authorized to be formed under M.G.L. c. 40B.

Regional Transit Authority (RTA) means one of the 16 Massachusetts regional transit authorities including the Massachusetts Bay Transportation Authority (MBTA).

Regional Transportation Plan (RTP) means the official intermodal metropolitan transportation plan that is developed through the metropolitan planning process for the metropolitan planning area, developed pursuant to 23 CFR Part 450.

Statewide Transportation Improvement Program (STIP) means the compilation of the 13 regional TIPs prepared annually by MassDOT and includes a listing of priority transportation projects (highway and transit) listed by funding category and fiscal year.

Transportation GHG Emissions Impact means an increase or decrease of GHG emissions from the combustion of fuels in vehicles traveling on roadways in Massachusetts.

Transportation Improvement Program (TIP) means a staged, multiyear, intermodal program of transportation projects covering a metropolitan planning area which is consistent with the regional transportation plan, and developed pursuant to 23 CFR Part 450.

(3) Applicability.

(a) General. The provisions of 310 CMR 60.05 shall apply to MassDOT, MPOs, RTAs, the Department and EOEEA.

(4) Effective Dates.

(a) MassDOT and the MPOs shall apply the requirements of 310 CMR 60.05(5) to RTPs, TIPs, and STIPs effective October 1, 2015, with the start of federal fiscal year 2016. In keeping with this effective date, the GHG emission analysis shall be included in the RTPs, TIPs, and STIPs that are due on September 30, 2015, and in each subsequent version of these documents.

60.05: continued

(b) 310 CMR 60.05(6) and (7) shall apply to MassDOT beginning in calendar year 2018.

(5) General Requirements for Transportation Planning and Investment.

(a) The MPOs shall:

1. Evaluate and report the aggregate transportation GHG emissions impacts of RTPs and TIPs.
2. In consultation with MassDOT, develop and utilize procedures to prioritize and select projects in RTPs and TIPs based on factors that include aggregate transportation GHG emissions impacts.
3. Quantify net transportation GHG emissions impacts resulting from the projects in RTPs and TIPs and certify in a statement included with RTPs and TIPs pursuant to 23 CFR Part 450 that the MPO has made efforts to minimize aggregate transportation GHG emissions impacts.
4. Determine in consultation with the RPA that the appropriate planning assumptions used for transportation GHG emissions modeling are consistent with local land use policies, or that local authorities have made documented and credible commitments to establishing such consistency.

(b) MassDOT shall evaluate and report the transportation GHG emissions impacts of STIPs and state-funded projects that are not included in STIPs.

(c) Prior to adoption and approval of RTPs and TIPs by MPOs and STIPs by MassDOT, MassDOT shall:

1. Determine that the MPOs have adopted and implemented procedures to prioritize and select projects in the RTPs and TIPs based on factors that include aggregate transportation GHG emissions impacts.
2. Calculate the net GHG transportation emission reductions achieved through implementation of the projects and programs included in RTPs, TIPs, STIPs, and state-funded projects that are not included in STIPs.
3. Determine in consultation with the RPAs that the appropriate planning assumptions used for transportation GHG emissions modeling are consistent with existing local land use policies, or that local authorities have made documented and credible commitments to establishing such consistency.

(d) MassDOT shall certify that the requirements of 310 CMR 60.05(5)(a) through (c) have been met in a statement included with the endorsed RTPs, TIPs, and STIPs pursuant to 23 CFR Part 450.

(6) Requirements for Aggregate MassDOT GHG Emissions.

(a) MassDOT shall:

1. Quantify aggregate MassDOT GHG emissions annually to demonstrate whether the aggregate emissions limits in Table 310 CMR 60.05(6) have been achieved.
2. Report to the Department, by March 1, 2019, March 1, 2020 and March 1, 2021, aggregate MassDOT GHG emissions for the prior calendar year, in an electronic format specified by the Department.
3. The March 1st report shall address any exceedance of the limits in 310 CMR 60.05(6): *Table*, in consultation with the Department, through supplemental measures proposed in the March 1st report, including an estimate of the emission reductions expected from each supplemental measure and the implementation status and schedule of each supplemental measure listed in a March 1st report, until the supplemental measure is complete.

310 CMR 60.05(6): Table

Maximum Annual Aggregate MassDOT GHG Emissions	
Calendar Year	Maximum Allowable Aggregate MassDOT GHG Emissions (million metric tons of CO ₂)
2018	0.303
2019	0.298
2020	0.293

60.05: continued

(b) Supplemental measures taken by MassDOT may include, but are not limited to, the following:

1. Decrease vehicle miles travelled within the MBTA and MassDOT fleet;
2. Promote Transportation Demand Management;
3. Increase plug-in and plug-in hybrid electric vehicle use within the MBTA and MassDOT fleet;
4. Promote plug-in and plug-in hybrid electric vehicle use by motorists;
5. Increase energy efficiency of MBTA and MassDOT facilities; and
6. Increase the use of renewable energy at MBTA and MassDOT facilities.

(7) General Requirements for Determining Aggregate Transportation GHG Emissions in the Transportation Planning Process.

(a) MassDOT shall:

1. Quantify aggregate transportation GHG emissions annually to demonstrate whether the aggregate emissions targets in 310 CMR 60.05(7): *Table* have been achieved.
2. Report to the Department, by July 1, 2019, July 1, 2020 and July 1, 2021, aggregate transportation GHG emissions for the prior calendar year, in an electronic format specified by the Department.

310 CMR 60.05(7): Table

Maximum Annual Aggregate Transportation GHG Emissions	
Calendar Year	Maximum Allowable Aggregate Transportation GHG Emissions (million metric tons of CO ₂)
2018	24.582
2019	24.122
2020	23.682

(8) Interagency Consultation.

(a) Agency Responsibilities.

1. MassDOT.

- a. Coordinates overall consultation process for evaluation of aggregate transportation GHG emissions impacts of RTPs, TIPs, and STIPs;
- b. Provides guidance and assistance to MPOs in assessing aggregate transportation GHG emissions impacts of RTPs, TIPs, and STIPs and projects included in the plans, as appropriate, including guidance on modeling and aggregate transportation GHG emissions impact calculation methods and prioritizing and selecting projects based on factors that include transportation GHG emissions impacts;
- c. Reviews MPO RTPs and TIPs, and aggregate transportation GHG emission analysis for acceptability and content and coordinates submittal to the Department within 30 days of endorsement for the Department's review; and
- d. At the request of the Department, models and projects aggregate transportation GHG emissions using appropriate planning assumptions for the horizon years modeled.

2. Metropolitan Planning Organizations (MPOs).

- a. Develop RTPs and TIPs;
- b. Ensure that RPAs are using appropriate planning assumptions;
- c. Perform regional aggregate transportation GHG emissions impact analysis of RTPs and TIPs;
- d. Calculate aggregate transportation GHG emissions impacts for RTPs and TIPs; and
- e. Develop public consultation procedures for aggregate transportation GHG emissions impact reporting and related GWSA requirement consistent with current and approved regional public participation plans.

3. RTAs.

- a. Conduct comprehensive service reviews (CSRs);
- b. Identify service enhancements to increase passenger ridership;

60.05: continued

- c. Identify vehicle technology and operational improvements that can reduce aggregate transportation GHG emissions; and
 - d. Work within the MPO process to prioritize and fund GHG reduction projects and investments.
4. Department of Environmental Protection.
 - a. Provides MassDOT and the MPOs with mobile source inputs for emissions analysis of RTPs, TIPs, STIPs, and projects included in these plans;
 - b. Reviews of RTPs, TIPs, STIPs, and projects; and
 - c. Provides comments to MassDOT and MPO's on aggregate transportation GHG emissions reduction projects and projections, including supplemental projects.
 5. Executive Office of Energy and Environmental Affairs (EOEEA).
 - a. Provides MassDOT with user access to software tracking tools and training, and support as needed for MassDOT users; and
 - b. Provides comments to the Department and MassDOT on progress, including deficiencies and areas of concern regarding aggregate transportation GHG emission reductions.
- (b) Agency Consultation.
1. Prior to such time that aggregate transportation GHG emission impact analysis of RTPs, TIPs, STIPs and projects included in these plans is performed, or at the request of an involved agency, MassDOT shall convene a consultation meeting(s) or conduct similar electronic correspondence with representatives from the MPOs, RTAs, RPAs, EOEEA, and the Department. Prior to convening any consultation meeting(s), MassDOT shall circulate a meeting agenda to the involved agencies. The specific purposes of the state agency consultation meeting(s) and/or correspondence are to:
 - a. Determine appropriate emissions analysis models and/or other analysis techniques, including consulting on model development and assessing project design factors for modeling;
 - b. Select inputs to the most recent EPA-approved or similar emissions factor model;
 - c. Identify and confirm regionally significant projects to be included in the regional and/or statewide emissions analysis;
 - d. Identify projects which have changed in design and scope from the RTP or TIP;
 - e. Identify exempt projects;
 - f. Identify exempt projects and categories of exempt projects which should be treated as nonexempt because they may have adverse air quality impacts and determine appropriate air quality analysis methodologies for analyzing such projects;
 - g. Identify RTP, TIP, and STIP revisions which add or delete exempt projects; and
 - h. Identify appropriate planning assumptions relevant to aggregate transportation GHG emission estimation procedures and calculations.
 2. MassDOT shall document the outcome(s) of the consultation meeting(s) and shall circulate said documentation to the MPOs, RTAs, EOEEA, and the Department.
- (c) Public Consultation Procedures. Prior to making final endorsements on the RTPs, TIPs, STIPs, and projects included in these plans, MassDOT and the MPOs shall include the aggregate transportation GHG emission impact assessment in RTPs, TIPs, and STIPs and provide an opportunity for public review and comment on the RTPs, TIPs, and STIPs.
- (9) Enforcement. The Department shall enforce the requirements of 310 CMR 60.05 in accordance with the applicable federal and Massachusetts law including, but not limited to, M.G.L. c. 21A, § 16; c. 111, § 2C; c. 111, §§ 142A through 142M; c. 21N, § 7(d), and 310 CMR 5.00: *Administrative Penalty*.

60.06: CO₂ Emission Limits for State Fleet Passenger Vehicles

(1) Purpose, Scope and Authority. The purpose of 310 CMR 60.06 is to assist the Commonwealth in achieving the greenhouse gas emissions reduction goals adopted pursuant to M.G.L. c. 21N, § (3)(b) by reducing carbon dioxide (CO₂) emissions from certain vehicles owned or leased by Commonwealth of Massachusetts Executive Offices through the imposition of declining annual aggregate emission limits. 310 CMR 60.06 is promulgated pursuant to M.G.L. c. 21N, § 3(d) and is also promulgated pursuant to M.G.L. c. 21A, §§ 2, 8 and 16, and M.G.L. c. 111, §§ 2C and 142A through 142M, to prevent and abate conditions of air pollution from the CO₂ emissions from the mobile sources specified in 310 CMR 60.06. The CO₂ emissions limits set forth in 310 CMR 60.06(6) are applicable for the years 2021 through 2025 and thereafter beginning January 1, 2021.

60.06: continued

(2) Definitions. The terms used in 310 CMR 60.06 are defined in 310 CMR 60.06 and in 310 CMR 60.00. Where a term is defined in 310 CMR 60.06 and in other sections of 310 CMR 60.00, the definition in 310 CMR 60.06 shall apply.

Department means the Massachusetts Department of Environmental Protection.

Emergency Vehicle means any publicly owned or leased vehicle operated by a sworn officer in performance of their duties, any authorized emergency vehicle used for fighting fires, any publicly owned or leased authorized emergency vehicle used by an emergency medical technician or paramedic, or used for towing or servicing other vehicles, or repairing damaged lighting or electrical equipment, or any ambulance used by a private entity under contract with a public agency.

Executive Office means the Executive Office of Administration and Finance (A&F), the Executive Office of Education (EOE), the Executive Office of Energy and Environmental Affairs (EEA), the Executive Office of Health and Human Services (EOHHS), the Executive Office of Housing and Economic Development (EOHED), the Executive Office of Labor and Workforce Development (EOLWD), the Executive Office of Public Safety and Security (EOPSS), and the Massachusetts Department of Transportation (MassDOT), including the agencies, boards, bureaus, commissions, committees, councils, departments, divisions, groups, guards, homes, laboratories, libraries, offices, police, programs, systems, trusts, universities and other entities within each Executive Office, and entities whose governing members or board include(s) the Secretary of an Executive Office pursuant to appointment by the Governor, or to the requirements of a Massachusetts General or Session Law.

Passenger Vehicle means any motor vehicle with a gross vehicle weight rating of less than 10,000 pounds designed primarily for transportation of persons and having a design capacity of 12 persons or less and that has an Environmental Protection Agency fuel economy sticker pursuant to 40 CFR Part 600 Fuel Economy and Greenhouse Gas Exhaust Emissions of Motor Vehicles. Passenger vehicle does not include transit vehicles or vehicles primarily designed to transport property or with special features enabling off-road operation and use, including but not limited to, pickup trucks, cargo vans, emergency vehicles, test vehicles, non-road vehicles.

Test Vehicle means an experimental or prototype motor vehicle which appears to have very low emission characteristics or a used motor vehicle within which an experimental motor vehicle pollution control device is installed, and which has also received a test vehicle or fleet permit from the California Air Resources Board pursuant to Manufacturers Advisory Correspondence No. 83-01.

Transit Vehicle means any vehicle used to transport paying customers.

(3) Applicability. 310 CMR 60.06 is applicable to Executive Offices, except that an Executive Office is not subject to annual CO₂ emission limits unless it owns or leases 30 or more passenger vehicles, as determined by the Department in its sole discretion.

(4) General Requirements.

(a) For calendar year 2018 and for every calendar year thereafter, each Executive Office shall meet its passenger vehicle CO₂ emission limit specified in 310 CMR 60.06(6).

(b) By November 1, 2017, each Executive Office shall provide the Department with the information specified in 310 CMR 60.06(8) for the time period from January 1, 2016 through December 31, 2016 for each of its vehicles that is not a passenger vehicle.

(c) By March 1, 2018, each Executive Office shall provide the Department with the information specified in 310 CMR 60.06(8) for the time period from January 1, 2017 through December 31, 2017 for each of its vehicles that is not a passenger vehicle.

(d) By March 1, 2019 and by March 1st of each year thereafter, each Executive Office shall submit a report to the Department for the previous calendar year on its passenger vehicles as specified in 310 CMR 60.06(7).

(e) The Department may specify the format and process by which any submission required pursuant to 310 CMR 60.06 shall occur, including electronic submission requirements.

60.06: continued

(5) Calculation of CO₂ Emissions. Each Executive Office shall calculate the CO₂ emissions for passenger vehicles by using the applicable equation:

(a) for gasoline fueled vehicles:

metric tons CO₂ emitted/year = gallons of gasoline used * 19.8416 pounds of CO₂/gallon of gasoline/2000 pounds/short ton / 1.10231 short tons/metric ton

(b) for diesel fueled vehicles:

metric tons CO₂ emitted/year = gallons of diesel used * 22.38 pounds of CO₂/gallon of diesel/2000 pounds/short ton / 1.10231 short tons/metric ton

(c) for natural gas fueled vehicles:

metric tons CO₂ emitted/year = thousand cubic feet of natural gas used * 121.25 pounds of CO₂/thousand cubic feet of natural gas/2000 pounds/short ton / 1.10231 short tons/metric ton

(6) Annual CO₂ Emission Limits.

(a) Individual Executive Office Limits. For each calendar year specified in 310 CMR 60.06(6): *Tables 1* through *5*, each Executive Office shall ensure the annual CO₂ emissions from passenger vehicles, as calculated pursuant to 310 CMR 60.06(5), shall not exceed the following:

Table 1 - Maximum Annual CO ₂ Emissions - Executive Office of Education (EOE)	
Calendar Year	Maximum Allowable CO ₂ Emissions (metric tons)
2018	589
2019	564
2020	539
2021	509
2022	490
2023	461
2024	437
2025, and each calendar year thereafter	401

Table 2 - Maximum Annual CO ₂ Emissions - Executive Office of Energy and Environmental Affairs (EEA)	
Calendar Year	Maximum Allowable CO ₂ Emissions (metric tons)
2018	568
2019	558
2020	548
2021	545
2022	539
2023	537
2024	471
2025, and each calendar year thereafter	445

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

60.06: continued

Table 3 - Maximum Annual CO ₂ Emissions - Executive Office of Health and Human Services (EOHHS)	
Calendar Year	Maximum Allowable CO ₂ Emissions (metric tons)
2018	1,443
2019	1,435
2020	1,427
2021	1,407
2022	1,403
2023	1,399
2024	1,259
2025, and each calendar year thereafter	1,081

Table 4 - Maximum Annual CO ₂ Emissions - Executive Office of Public Safety and Security (EOPSS)	
Calendar Year	Maximum Allowable CO ₂ Emissions (metric tons)
2018	1,795
2019	1,657
2020	1,518
2021	1,499
2022	1,486
2023	1,479
2024	1,334
2025, and each calendar year thereafter	1,319

Table 5 - Maximum Annual CO ₂ Emissions - Massachusetts Department of Transportation (MassDOT)	
Calendar Year	Maximum Allowable CO ₂ Emissions (metric tons)
2018	3,853
2019	3,827
2020	3,800
2021	3,739
2022	3,682
2023	3,092
2024	2,646
2025, and each calendar year thereafter	2,421

(b) Aggregate Limit. For each calendar year specified in 310 CMR 60.06(6): *Table 6*, the annual CO₂ emissions from passenger vehicles owned or leased by all Executive Offices named in 310 CMR 60.06(6): *Tables 1* through *5* shall not exceed the following:

60.06: continued

Table 6 - Annual Aggregate CO ₂ Emissions from passenger vehicles owned or leased by Executive Offices named in 310 CMR 60.06(6): <i>Tables 1 through 5</i>	
Calendar Year	Maximum Allowable CO ₂ Emissions (metric tons)
2018	8,249
2019	8,040
2020	7,832
2021	7,699
2022	7,600
2023	6,968
2024	6,147
2025, and each calendar year thereafter	5,668

(c) CO₂ Set-aside and Petition Process for Modifying CO₂ Emission Limit.

1. The Department has set-aside the quantities of CO₂ in 310 CMR 60.06(6)(c): *Table 7* each calendar year for Executive Offices that petition to modify their limits in 310 CMR 60.06(6)(a) based on one of the reasons in 310 CMR 60.06(6)(c)3.

Table 7 - Set-aside of CO ₂ and Summary of Maximum Annual Aggregate CO ₂ Emissions Limit		
Calendar Year	Set-aside of CO ₂ (metric tons)	Maximum Annual Aggregate CO ₂ Emissions Limit (metric tons)
2018	31,734	39,983
2019	31,734	39,775
2020	31,734	39,566
2021	31,734	39,433
2022	31,734	39,334
2023	31,734	38,702
2024	31,734	37,882
2025, and each calendar year thereafter	31,734	37,402

2. Upon written petition from an Executive Office, the Department may modify the CO₂ emission limits and allocate additional CO₂ in excess of the limits in 310 CMR 60.06(6)(a) provided that the set-aside amount of CO₂ in each calendar year in 310 CMR 60.06(6): *Table 7* is not exceeded.

3. The basis for the petition shall be one or more of the following:

- a. The Executive Office did not provide the Department with complete information about the inventory of its passenger vehicles prior to August 11, 2017;
- b. The Executive Office believes that the Department made a mathematical error in its calculation of the CO₂ emission limit(s);
- c. The Executive Office is required to increase its passenger vehicle fleet due to unforeseen circumstances or new legislative or regulatory requirements; and/or
- d. The Executive Office increases its passenger vehicle fleet to 30 or more passenger vehicles thereby becoming subject to the CO₂ emission limits in 310 CMR 60.06(6)(a) and (b).

60.06: continued

4. Requirements for the Petition.
 - a. The Executive Office shall submit the petition to the Department no later than 60 days after the end of the calendar year in which the Executive Office seeks to have additional CO₂ allocated.
 - b. If the basis for the petition is 310 CMR 60.06(6)(c)3.a., the Executive Office shall provide all the information in 310 CMR 60.06(7)(b).
 - c. If the basis for the petition is 310 CMR 60.06(6)(c)3.b., the Executive Office shall provide a detailed explanation of the alleged mathematical error and any supporting documentation.
 - d. If the basis for the petition is 310 CMR 60.06(6)(c)3.c., the Executive Office shall describe the event leading to the need to expand the passenger vehicle fleet for the Executive Office and also provide all the information in 310 CMR 60.06(7)(b).
 - e. The petition shall be signed and certified in accordance with the requirements at 310 CMR 60.06(7)(b)8.
5. In its sole discretion, the Department will approve or deny the petition in writing within 60 days of receipt of the petition. During the 60 day review period, the Department may request additional information from the Executive Office. Depending on when the Department receives the information, and the volume of the information, the Department may extend the 60 day review period.
 - a. If the Department approves the petition, calculates a modified or new limit, and/or allocates additional CO₂, the modified CO₂ emission limit(s) in the approval letter shall be enforceable in *lieu* of the CO₂ emission limit in 310 CMR 60.06(6)(a).
 - b. If the petition is approved, the Department will calculate the metric tons of CO₂ emissions remaining in the set-aside for the applicable calendar year and publish that figure on its website.
- (d) Petition Process for Executive Offices with less than 30 Passenger Vehicles.
 1. If an Executive Office decreases its passenger vehicle fleet to less than 30 passenger vehicles for one or more years, it may petition the Department to be excluded from CO₂ emission limits on its passenger vehicles.
 2. Requirements for the petition.
 - a. The Executive Office shall submit the petition to the Department no later than 60 days after the end of the calendar year in which the Executive Office seeks to be excluded from the CO₂ emission limits.
 - b. The Executive Office shall provide all the information in 310 CMR 60.06(7)(b).
 - c. The petition shall be signed and certified in accordance with the requirements at 310 CMR 60.06(7)(b)8.
 3. In its sole discretion, the Department will approve or deny the petition in writing within 60 days of receipt of the petition. During the 60 day review period, the Department may request additional information from the Executive Office. Depending on when the Department receives the information, and the volume of the information, the Department may extend the 60 day review period.
 - a. If the Department approves the petition, the Executive Office shall not have a CO₂ emission limit(s) unless and until the Executive Office increases its passenger vehicle fleet to 30 or more passenger vehicles.
 - b. If the petition is approved, the Department will calculate the metric tons of CO₂ emissions remaining in the set-aside for the applicable calendar year and publish that figure on its website.
- (7) Annual Passenger Vehicle Reporting Requirements.
 - (a) By March 1, 2019 and by March 1st of each year thereafter, each Executive Office shall submit a report to the Department for the previous calendar year.
 - (b) The annual report shall be submitted electronically in a format specified by the Department, and shall include all of the following information as well as any additional information specified in the form provided by the Department for reporting:
 1. The Executive Office name, physical address, and mailing address;
 2. The location of records and documents;
 3. The name and contact information including e-mail address and telephone number of the Climate Change Coordinator or authorized Executive Office official submitting the report, and the person primarily responsible for preparing the report;

60.06: continued

4. The calendar year for which the information is submitted;
5. For each passenger vehicle owned or leased:
 - a. vehicle identification number (VIN);
 - b. vehicle make;
 - c. vehicle model;
 - d. vehicle model year; and
 - e. entity within the Executive Office that owns or leases the vehicle;
6. The total gallons of gasoline and diesel, cubic feet of hydrogen and natural gas and megawatt hours of electricity used by the passenger vehicles owned or leased by the Executive Office;
7. Metric tons of CO₂ emissions from passenger vehicles, by fuel, as calculated using the equations specified in 310 CMR 60.06(5); and
8. The signature of the Climate Change Coordinator or authorized Executive Office official, and the following certification statement: "I certify that I have personally examined the foregoing and am familiar with the information contained in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including possible fines and imprisonment."

(8) Non-passenger Vehicle Reporting Requirements.

- (a) By the deadlines in 310 CMR 60.06(4)(b) and (c), each Executive Office shall also submit reports to the Department with information about non-passenger vehicles owned or leased by that Executive Office.
- (b) The reports shall be submitted electronically in a format specified by the Department, and shall include all of the following information as well as any additional information specified in the form provided by the Department for reporting:
 1. The Executive Office name, physical address, and mailing address;
 2. The location of records and documents;
 3. The name and contact information including e-mail address and telephone number of the Climate Change Coordinator or authorized Executive Office official submitting the report, and the person primarily responsible for preparing the report;
 4. The calendar year for which the information is submitted;
 5. For each vehicle owned or leased that is not a passenger vehicle, and that has an odometer:
 - a. vehicle identification number (VIN);
 - b. vehicle make;
 - c. vehicle model;
 - d. vehicle model year;
 - e. gross vehicle weight rating (GVWR);
 - f. entity within the Executive Office that owns or leases the vehicle;
 - g. VMT;
 - h. primary type of fuel used;
 - i. gallons of gasoline or diesel, or cubic feet of hydrogen or natural gas or megawatt hours of electricity used as primary fuel;
 - j. secondary type of fuel used, if applicable;
 - k. gallons of gasoline or diesel, or cubic feet of hydrogen or natural gas or megawatt hours of electricity used as secondary fuel;
 - l. a description of what the vehicle is used for (for example, snow plow, street sweeper, bus, emergency response, off-road use); and
 6. The signature of the Climate Change Coordinator or authorized Executive Office official, and the following certification statement: "I certify that I have personally examined the report and am familiar with the information contained in that report and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including possible fines and imprisonment."

60.06: continued

(9) Monitoring and Recordkeeping Requirements.

(a) Each Executive Office shall collect, record and maintain information sufficient to demonstrate compliance with 310 CMR 60.06.

(b) Each Executive Office shall retain for five years documentation sufficient to demonstrate compliance with 310 CMR 60.06 and shall provide such documentation to the Department upon request. The documentation shall be submitted in the format and within the time limit requested by the Department.

(10) Compliance Verification. The Department may verify compliance with 310 CMR 60.06 by conducting inspections, requesting information and records and requiring the collection of information; provided that 310 CMR 60.06(10) does not limit the authority of the Department as otherwise provided by law or in an authorization, determination, modification, permit, or other approval, or by the terms of any order or other enforcement document.

(a) Access to Information. Where necessary to ascertain compliance with 310 CMR 60.06, including actual or potential CO₂ emissions, the Department may request of an Executive Office information or records. The Executive Office shall, within a reasonable time, furnish the requested information or records and shall permit Department personnel or authorized representatives to have access to and to take images of such records.

(b) Requirement to Collect Information. When the Department has reason to believe that an Executive Office has exceeded its CO₂ emissions limit or violated any other condition in 310 CMR 60.06, the Department may require the Executive Office to submit the necessary information or records to determine compliance. In doing so, the Department may require an Executive Office to:

1. Perform audits on CO₂ emissions records using standard procedures and methods;
2. Quantify CO₂ emissions in accordance with the procedures and methods as the Department may prescribe;
3. Make periodic reports to the Department, as necessary, to assure continuous compliance with 310 CMR 60.06; and
4. Maintain other records and provide any other information as the Department might reasonably require.

(11) Enforcement. The Department shall enforce the requirements of 310 CMR 60.06 in accordance with applicable federal and Massachusetts law, including but not limited to M.G.L. c. 21A, § 16; 310 CMR 5.00: *Administrative Penalty*; M.G.L. c. 111, §§ 2C, 142A through 142M; and c. 21N § 7(d).

REGULATORY AUTHORITY

310 CMR 60.00: M.G.L. c. 111, §§ 2C and 142A through M; M.G.L. c. 21N; M.G.L. c. 21A, §§ 2, 8 and 16.

(PAGES 2375 THROUGH 2400 ARE RESERVED FOR FUTURE USE.)

310 CMR 70.00: ENVIRONMENTAL RESULTS PROGRAM CERTIFICATION

Section

- 70.01: Purpose and Authority
- 70.02: Definitions
- 70.03: Compliance Certification Requirements
- 70.04: Violations

70.01: Purpose and Authority

(1) The purpose of 310 CMR 70.00 is to provide for the protection of public health, safety, welfare and the environment by requiring Environmental Results Program (ERP) facilities or units to submit a performance based compliance certification to the Department.

(2) 310 CMR 70.00 is promulgated pursuant to the authority of M.G.L. c. 21, §§ 26 through 53 (the Massachusetts Clean Waters Act), M.G.L. c. 21A, §§ 2, 13 and 16, M.G.L. c. 21C (the Hazardous Waste Management Act), M.G.L. c. 21H, §§ 6A through 6N (the Mercury Management Act), M.G.L. c. 21O, § 4 (The Operation and Removal of Underground Storage Tanks), M.G.L. c. 111, §§ 142A through 142M (the Massachusetts Clean Air Act) and M.G.L. c. 111 § 150A (the Solid Waste Management Act).

70.02: Definitions

The definitions found in 310 CMR 70.02 are for use only in the compliance certification requirements contained in 310 CMR 70.00 and are not intended to replace the definitions of those terms in the underlying standards.

Certification means the certification form as prescribed by the Department pursuant to 310 CMR 70.03(2), which includes the certification statement requirements pursuant to 310 CMR 70.03(2).

Department means the Massachusetts Department of Environmental Protection.

Environmental Results Program (ERP) Facility or Unit means one of the following:

- (a) a dry cleaner subject to 310 CMR 7.26(10) through (16);
- (b) a photo processor subject to 310 CMR 71.00: *Industrial Wastewater Regulations for Photo Processors*;
- (c) a printer as defined in 310 CMR 7.26(22): Printer;
- (d) a boiler subject to 310 CMR 7.26(30) through (37);
- (e) an engine or combustion turbine subject to 310 CMR 7.26(40) through (44);
- (f) a dental facility subject to 310 CMR 73.00: *Amalgam Wastewater and Recycling Regulations for Dental Facilities*;
- (g) an industrial wastewater holding tank subject to 314 CMR 18.00: *Industrial Wastewater Holding Tank and Container Construction, Operation, and Record Keeping Requirements*.
- (h) a scrap recycling facility, vehicle recycler or vehicle manufacturer subject to 310 CMR 74.00: *Removal and Recycling of Mercury-added Components in Vehicles*;
- (i) a manufacturer of a mercury-added product subject to 310 CMR 75.00: *Collection and Recycling, Labeling, and Sales Ban of Mercury-added Products*;
- (j) a manufacturer of mercury-added lamps subject to 310 CMR 75.00: *Collection and Recycling, Labeling, and Sales Ban of Mercury-added Products*; or
- (k) an underground storage tank system subject to 310 CMR 80.00: *Underground Storage Tank (UST) Operator Training*.

ERP Sector means all ERP facilities or units of one type, with the exception of printers where the certification requirements for very small printers differ from those of other printers as defined in 310 CMR 7.26(22): *Definitions*.

Operator means the person responsible for the over-all operation of an ERP facility or unit.

70.02: continued

Owner means any person who has legal or equitable ownership, alone or with others, of an ERP facility or unit, including, but not limited to, any agent, executor, administrator, trustee, lessee, or guardian of the estate for the holder of legal title.

Person means any individual, partnership, corporation, syndicate, company, firm, association, authority, department, bureau, trust or group including, but not limited to, a city, town, county, the Commonwealth and its agencies, and the federal government.

Responsible Official is one of the following:

- (a) For a corporation: a president, secretary, treasurer, or a vice-president of the corporation in charge of a principal business function who has been duly authorized pursuant to a corporate vote, or a representative of the corporation who has been duly authorized pursuant to a corporate vote provided the representative is responsible for the overall operation of the facility or unit;
- (b) For a partnership: a general partner with the authority to bind the partnership or the proprietor, respectively;
- (c) For a sole proprietorship; the sole proprietor;
- (d) For a municipality, state, federal, or other public agency including any legislatively created authority, board, commission, district, *etc.*: either a principal executive officer or ranking elected official who is empowered to enter into contracts on behalf of the municipality or public agency.

Standards means those requirements listed in the certification form referred to in 310 CMR 70.03(2), including but not limited to 310 CMR 7.00: *Air Pollution Control*, 30.00: *Hazardous Waste*, 71.00: *Industrial Wastewater Regulations for Photo Processors*, 72.00: *Industrial Wastewater Standard for Dry Cleaners*, 73.00: *Amalgam Wastewater and Recycling Regulations for Dental Facilities*, 74.00: *Removal and Recycling of Mercury-added Components in Vehicles*, 75.00: *Collection, Recycling, Labeling, and Sales Ban of Mercury-added Products*, 314 CMR 3.00: *Surface Water Discharge Permit Program*, 5.00: *Ground Water Discharge Permit Program*, or 12.00: *Operation and Maintenance and Pretreatment Standards for Wastewater Treatment Works and Indirect Dischargers*, requirements contained in NESHAP's (40 CFR Part 61 Subparts, and Part 63) or NSPS's (40 CFR Part 60 Subparts) that have been delegated to Massachusetts, and the terms and conditions of any permits issued pursuant to any of those regulations.

70.03: Compliance Certification Requirements

(1) Schedule for Submission of Compliance Certification.

- (a) The owner or operator of each ERP facility or unit shall submit a certification in accordance with 310 CMR 70.03(2) and thereafter shall submit, as applicable, a periodic compliance certification in accordance with the schedule set forth herein for the specific type of ERP facility or unit.
- (b) The owner or operator of each ERP facility or unit, except underground storage tank systems subject to 310 CMR 80.00: *Underground Storage Tank (UST) Operator Training*, shall submit a compliance certification in accordance with 310 CMR 70.03(1) and (2) within 60 days of:
 - 1. the commencement of operation of a new ERP facility or unit; except for boiler(s) subject to 310 CMR 7.26(30): *U Boilers - Applicability* that must submit a certification in accordance with the schedule in 310 CMR 7.26(32): *Certification*;
 - 2. the recommencement of operation of an ERP facility or unit for which no certification was submitted during the year prior to recommencement; except for boiler(s) subject to 310 CMR 7.26(30): *U Boilers - Applicability* that must submit a certification in accordance with the schedule in 310 CMR 7.02(3)(m): *Reactivating an Inactive Emission Unit*; or
 - 3. acquiring an ERP facility or unit unless exempted from this requirement pursuant to 314 CMR 18.10(3).

70.03: continued

- (c) If a periodic compliance certification is required, then the owner or operator of the ERP facility or unit shall submit the compliance certification by the end of each certification period unless a statement of non-applicability is submitted to the Department on a form prescribed by the Department.
- (d) Notwithstanding 310 CMR 70.03(1)(a) and (b), a photo processor holding a permit from the Massachusetts Water Resources Authority pursuant to 360 CMR 10.000: *Sewer Use* is deemed to hold the equivalent of an ERP certification and is not required to file a one-time compliance certification pursuant to 310 CMR 70.00 and 71.00: *Industrial Wastewater Regulations for Photo Processors*, but such a photo processor is required to pay an annual compliance fee to the Department pursuant to 310 CMR 4.00: *Timely Action Schedule and Fee Provisions*.
- (e) A photo processor located in the service area of the Massachusetts Water Resources Authority and which hauls or ships photo processing waste off-site is required to file one-time compliance certification pursuant to 310 CMR 70.00 and 71.00: *Industrial Wastewater Regulations for Photo Processors*.
- (f) Owners or operators of the following types of ERP facilities or units shall submit a periodic compliance certification to the Department by September 15th of each year except as provided in 310 CMR 70.03(h):
1. dry cleaners subject to 310 CMR 7.26(10) through (16); and
 2. printers, with the exception of very small printers, subject to 310 CMR 7.26(20) through (29).
- (g) The owner or operator of the following types of ERP facilities or units shall submit a periodic or one-time compliance certification in accordance with the following schedules:
1. The owner or operator of a facility with boilers subject to 310 CMR 7.26(30): *U Boilers - Applicability* shall submit a one-time certification in accordance with the schedule set forth in 310 CMR 7.26(32): *Certification*.
 2. The owner or operator of an industrial wastewater holding tank shall submit to the Department a one-time certification in accordance with the schedule and conditions set forth in 314 CMR 18.10: *Certification*.
 3. The owner or operator of a photo processor subject to 310 CMR 71.00: *Industrial Wastewater Regulations for Photo Processors* shall submit a one-time certification in accordance with 310 CMR 70.03(1)(b).
 4. The owner or operator of a very small printer as defined in 310 CMR 7.26(22) shall submit a one-time certification in accordance with 310 CMR 70.03(1)(b).
 5. The owner or operator of a dental facility subject to 310 CMR 73.00: *Amalgam Wastewater and Recycling Regulations for Dental Facilities* shall submit a certification in accordance with the schedule and conditions referenced in 310 CMR 73.07: *Compliance Certification Requirements for Dental Facilities*.
 6. An owner or operator of an engine or combustion turbine subject to 310 CMR 7.26(40) through (44) shall submit a certification in accordance with the schedule and conditions set forth in 310 CMR 7.26: *Industry Performance Standards*.
 7. Scrap recycling facilities, vehicle recyclers and vehicle manufacturers subject to 310 CMR 74.00: *Removal and Recycling of Mercury-added Components in Vehicles* shall submit certification forms in compliance with the applicable schedules and conditions referenced in 310 CMR 74.09: *Submittal of Compliance Certifications and Reports to the Department*.
 8. Manufacturers of mercury-added products and lamps subject to 310 CMR 75.00: *Collection, Recycling, Labeling, and Sales Ban of Mercury-added Products*, shall submit certification forms in compliance with the applicable schedules and conditions referenced in 310 CMR 75.04: *Plans for Collecting and Recycling Mercury-added Products*.

70.03: continued

9. An Owner or Operator of an underground storage tank system subject to 310 CMR 80.00: *Underground Storage Tank (UST) Operator Training* shall submit a certification in accordance with the schedule and conditions set forth in 310 CMR 80.34: *Requirements for Compliance Certification*.

(h) The Department may determine a schedule, less frequently than the schedule in 310 CMR 70.03(1)(f), for submission of periodic compliance certifications, based on the following criteria:

1. the size, composition and activities of the ERP sector;
2. the quantity and types of (toxic) materials used and potential wastes, emissions and discharges of the ERP sector;
3. the degree of compliance with established regulatory requirements by the ERP sector;
4. the degree of control over the environmental and public health aspects of activities by the ERP sector; and
5. any other relevant information regarding the environmental consequences of the periodic compliance certifications and return to compliance response rates and results within the ERP sector.

The Department will notify the public and affected businesses by publishing a notice in the *Massachusetts Environmental Policy Act Monitor* and may also notify an ERP sector through industry trade associations, the Department's website and other appropriate cost effective methods of changes in the ERP sector's certification schedule.

(2) Certification Statement. The Responsible Official for each ERP facility or unit shall submit a compliance certification. Each compliance certification shall be on a form prescribed by the Department and shall address compliance with standards to which the ERP facility or unit is subject. The certification form may include specialized forms for specific categories of ERP facilities or units, and any owner/operator required to submit a certification pursuant to 310 CMR 70.03 shall submit all applicable forms. The compliance certification shall:

- (a) state whether the ERP facility or unit is in compliance with the applicable standards as listed on the certification form;
- (b) identify any violations that occurred and the date of such violations within the certification period prior to the due date of the certification statement including, but not limited to, any notifications required pursuant to M.G.L. c. 21E, § 7 and 310 CMR 40.0300: *Notification of Releases and Threats of Release of Oil and Hazardous Materials; Identification and Listing of Oil and Hazardous Materials* (releases and threats of release of oil and/or hazardous material), and any reporting of violations required pursuant to 310 CMR 7.02(6): *Aggregated Emissions* (air pollution control equipment failures), 314 CMR 12.03(8) (emergency bypasses to sewer treatment works), 310 CMR 30.520: *Basis for Tier Classification* (hazardous waste contingency plans) and the terms and conditions of any permits issued by the Department; and
- (c) state what the owner/operator will do to return to compliance and the date by which compliance will be achieved; and
- (d) include the following statement: "I, [name of responsible official], attest under the pains and penalties of perjury:
 1. that I have personally examined and am familiar with the information contained in this submittal, including any and all documents accompanying this certification statement;
 2. that, based on my inquiry of those individuals responsible for obtaining the information, the information contained in this submittal is to the best of my knowledge, true, accurate, and complete;
 3. that systems to maintain compliance are in place at the facility or unit and will be maintained even if processes or operating procedures are changed; and
 4. that I am fully authorized to make this attestation on behalf of this facility or unit. I am aware that there are significant penalties, including, but not limited to possible fines and imprisonment, for submitting false, inaccurate, or incomplete information."
- (e) provide any other information pertaining to the facility which the Department requires.

70.04: Violations

- (1) It shall be a violation of 310 CMR 70.00 for any person to:
 - (a) fail to submit a timely certification pursuant to 310 CMR 70.03;
 - (b) make any false, inaccurate, incomplete, or misleading statements in any certification required pursuant to 310 CMR 70.03;
 - (c) make any false, inaccurate, incomplete or misleading statements in any record, report, plan, file, log, or register which that person is required to keep pursuant to the applicable standards;
 - (d) hold themselves out as a responsible official in violation of the requirements contained in 310 CMR 70.03;
 - (e) fail to comply with the applicable standards; or
 - (f) violate any other provision of 310 CMR 70.00.

- (2) The Department reserves the right to exercise the full extent of its legal authority, pursuant to M.G.L. c. 21, §§ 26 through 53 (Massachusetts Clean Waters Act), M.G.L. c. 21A, §§ 2, 8, 13 and 16, M.G.L. c. 21C (Hazardous Waste Management Act), M.G.L. c. 21H, §§ 6A through 6N (the Mercury Management Act), M.G.L. c. 21H, § 8, M.G.L. c. 21O, § 4 (The Operation and Removal of Underground Storage Tanks), M.G.L. c. 111, §§ 142A through 142M (Massachusetts Clean Air Act), and M.G.L. c. 111, § 150A (Solid Waste Management Act), in order to obtain full compliance with all requirements applicable to ERP facilities and units, including but not limited to, criminal prosecution, fines, civil and administrative penalties, and orders.

REGULATORY AUTHORITY

310 CMR 70.00: M.G.L. c. 21, §§ 26 through 53; c. 21A, §§ 2, 13 and 16; c. 21C, c. 21H, §§ 6A through 6N (the Mercury Management Act), c. 21O § 4, and c. 111, §§ 142A through 142M and 150A.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

310 CMR 71.00: INDUSTRIAL WASTEWATER REGULATIONS FOR PHOTO PROCESSORS AND PRINTERS

Section

- 71.01: Purpose and Authority
- 71.02: Definitions
- 71.03: Applicability
- 71.04: Performance Standard for Photo Processors and Printers with Equivalent POTW Permits
- 71.05: Performance Standard for Photo Processors and Printers Without Equivalent POTW Permits That Discharge or Ship Industrial Wastewater to a POTW
- 71.06: Supplemental Requirements for Photo Processors and Printers
- 71.07: Compliance Certification for Photo Processors and Printers

71.01: Purpose and Authority

(1) The purpose of 310 CMR 71.00 is to provide for the protection of public health, safety, welfare and the environment by establishing performance standards for photo processors and printers and requiring a performance-based facility-wide compliance certification in accordance with 310 CMR 70.00: *Environmental Results Program Certification*.

(2) 310 CMR 71.00 is promulgated pursuant to the authority of M.G.L. c. 21, §§ 26 through 53 and M.G.L. c. 21C.

71.02: Definitions

Cartridge Unit means any variety of hollow canisters containing steel wool or fiberglass fibers impregnated with iron filings which are used for silver recovery. These units use metallic replacement to recover silver. They are sometimes called "chemical recovery cartridges", "metallic recovery cartridges" or "canisters".

Class A Recycling Permit means a permit issued pursuant to 310 CMR 30.221: *General Provisions*.

Container means any portable device in which an industrial wastewater is stored, transported, treated, disposed of, or otherwise handled.

Equivalent POTW Permit means a permit issued by a Publicly Owned Treatment Works (POTW) containing an effluent limit of no more than 2 mg/l for total silver (*i.e.*, two parts per million).

Industrial Wastewater means wastewater resulting from any process of industry, trade or business, regardless of volume or pollutant content. Wastewater which contains only sewage, non-contact cooling water, compressor or air conditioner condensate, including wastewaters from restaurants and school/industry cafeterias is not considered industrial wastewater.

Photo Processor means a facility, as defined in 310 CMR 71.00, that performs the chemical process by which photographic film is treated after photographic exposure to produce a negative or positive image (*e.g.*, processing color prints or slides, or black and white prints or slides). Photo processor does not include a facility that only conducts digital processing of color prints or slides, or black and white prints, or slides.

Photo Processing means the chemical process by which photographic film is treated after photographic exposure to produce a negative or positive image (*e.g.*, color or black and white film, prints, or slides). Photo processing does not include a the digital processing of color or black and white prints, or slides.

Printer means the owner or operator of a facility subject to 310 CMR 7.26(20) through (29) pursuant to 310 CMR 7.26(21): *Applicability*.

71.02: continued

Publicly Owned Treatment Works or POTW means any device or system used in the storage, treatment, recycling, and reclamation of municipal sewage or industrial wastes of a liquid nature which is owned by a public entity. A POTW includes any sewers, pipes, or other conveyances only if they convey wastewater to a POTW providing treatment.

Silver Recovery Unit or System, or Silver Recovery Unit or Unit means equipment or a process that removes silver from solutions such as fixers, bleach fixers, washless stabilizers, and low flow washes.

Small Scale Precipitation Unit means an enclosed pre-assembled unit which uses chemicals to cause the silver to settle to the bottom of the container. The water is then separated from the silver on the bottom and is discharged. The resultant sludge is sent off-site for refining.

Tank means a stationary device used to store or contain an accumulation of industrial wastewater and which is constructed of non-earthen materials (*e.g.*, concrete, steel or plastic) which provide structural support.

71.03: Applicability

(1) Unless exempt pursuant to 310 CMR 71.03(2), the following photo processors are subject to 310 CMR 71.00:

- (a) photo processors that perform photo processing in a commercial space; or
- (b) photo processors that use automated photo processing equipment.

(2) The following photo processors are exempt from 310 CMR 71.00:

- (a) photo processors that discharge or generate industrial wastewater from photo processing and industrial wastewater from other industrial processes;
- (b) photo processors that process motion picture film;
- (c) photo processing performed in a dental or other medical offices;
- (d) photo processors described in 310 CMR 71.07(1) that are not required to submit a compliance certification. Such exemption shall expire at the earlier of an election by an otherwise exempted photo processor to certify in accordance with 310 CMR 71.00, or at the expiration of any permit, described in 310 CMR 71.07(1), held by that otherwise exempted photo processor.
- (e) photo processing performed in a residence; and
- (f) photo processors using only hand tray processing.

(3) 310 CMR 71.00 applies to printers subject to 310 CMR 7.26(20) through (29).

71.04: Performance Standard for Photo Processors and Printers with Equivalent POTW Permits

Each photo processor with an equivalent POTW permit shall comply with that equivalent POTW permit and the applicable requirements of 310 CMR 71.05(2) through (4) and 71.06.

71.05: Performance Standard for Photo Processors and Printers Without Equivalent POTW Permits That Discharge or Ship Industrial Wastewater to a POTW

Except as set forth in 310 CMR 71.05(6), each photo processor and each printer without an equivalent POTW permit that discharges or ships industrial wastewater to a POTW shall comply with the applicable requirements of 310 CMR 71.06 and the following:

(1) Discharge Limit. Each photo processor and each printer shall not discharge or ship industrial wastewater to a POTW unless the wastewater from photo processing contains no more than 2 mg/l (*i.e.*, two parts per million) of silver, measured in accordance with 310 CMR 71.05(3). In addition, by one year from May 1, 1998 no printer shall discharge or ship to a POTW wastewater containing dischromate (chromic acid) resulting from film processor cleaning operations.

71.05: continued

- (2) Operation and Maintenance. Each photo processor and each printer shall maintain a silver recovery unit in accordance with the manufacturer's or vendor's instructions to meet the 2 mg/l silver limit or limit set forth in the equivalent POTW permit, whichever is stricter.
- (3) Sampling and Analysis. Each photo processor and each printer shall sample its wastewater and shall analyze the sample for silver content.
- (a) Frequency. Sampling and analysis shall occur as frequently as necessary to demonstrate that the discharge complies with 310 CMR 71.05(1) and 71.06(2), and at least monthly, unless the Department approves a different frequency, or unless a different frequency is set in accordance with a process reviewed and approved by the Department.
- (b) Methodology. The sample shall be representative of wastewater composition during the selected day, and shall be taken after the photo finishing process (*i.e.*, after combination with other wastestreams from photo processing) but prior to dilution with other wastewater. The sample shall be analyzed by a state-certified laboratory, a photographic equipment manufacturer, or a photochemical manufacturer provided that the lab uses methods prescribed in *Standard Methods for the Examination of Water and Wastewater*, issued by the American Health Association, American Waterworks Association, and the Water Pollution Federation, 1992 edition.
- (4) Recordkeeping and Reporting. Each photo processor shall keep the following records in 310 CMR 71.05(4)(a) through (f) and each printer shall keep the following records in 310 CMR 71.05(4)(a) through (f) on-site for at least three years.
- (a) sampling dates and results conducted in accordance with 310 CMR 71.05(3);
- (b) for silver recovery systems with cartridge units, date(s) of silver recovery cartridge installation and replacement;
- (c) for silver recovery systems without cartridge units, date(s) that the silver recovery unit is cleaned or serviced;
- (d) total amount of wastewater discharged in the past 12 months; and
- (e) total amount of wastewater passing through the silver recovery system in the past 12 months; and
- (f) MSDSs or other records demonstrating that film processor cleaners do not contain any chromium compounds.
- (5) Compliance with Board of Certified Operators of Wastewater Treatment Facilities Requirements. Each photo processor and each printer using a silver recovery system shall comply with 257 CMR 2.00: *Certification of Operators of Wastewater Treatment Facilities*, if applicable.
- (6) Printers with DEP Sewer Connection Permits. Each printer without an equivalent POTW permit that has a sewer connection permit issued by the Department pursuant to 314 CMR 7.00: *Sewer System Extension and Connection Permit Program* shall comply with either 310 CMR 71.05(1) through (4) or with the terms and conditions of that permit.

71.06: Supplemental Requirements for Photo Processors and Printers

- (1) Photo processors and printers shall not discharge industrial wastewater to the ground without a groundwater permit pursuant to 314 CMR 5.00: *Ground Water Discharge Permit Program*, and shall not discharge industrial wastewater to surface water without a permit pursuant to 314 CMR 3.00: *Surface Water Discharge Permit Program*. Discharge of industrial wastewater to a septic or on site disposal system is prohibited.
- (2) Photo processors and printers subject to 310 CMR 71.00 that use silver recovery systems with cartridges or non-cartridges shall comply with the general and specific prohibitions listed in 310 CMR 71.06(2)(a) and (b):
- (a) General Prohibitions. No person shall discharge or cause to be discharged to a POTW any substances, materials or wastewaters that can harm the sewers, wastewater treatment process, or equipment; have an adverse impact on the receiving waters or can otherwise endanger life, limb, public property or constitute a nuisance. In addition, no person shall discharge hazardous waste or allow the discharge of hazardous waste through any sewer connection.

71.06: continued

In determining the acceptability of these wastewaters, consideration shall be given to such factors as the quantities of such wastewaters in relation to flows and velocities in the sewers, materials or construction of sewers, nature of the wastewater treatment process, capacity of the wastewater treatment process, degree of treatability of such wastewaters in the wastewater treatment plant, and other pertinent factors. Pollutants introduced into POTWs by a non-domestic source shall not pass through the POTW or interfere with the operation or performance of the works. These general prohibitions and the specific prohibitions listed in 310 CMR 71.06(2)(b) apply to all non-domestic sources introducing pollutants into a POTW whether or not the source is subject to other pretreatment standards or any other Federal, State or local pretreatment requirements.

(b) Specific Prohibitions. In addition, the following pollutants shall not be introduced into a POTW:

1. Pollutants which create a fire or explosion hazard in the POTW;
2. Pollutants which cause corrosive structural damage to the POTW, but in no case discharges with pH lower than 5.5 or more than 10.0, unless the works is specifically designed to accommodate such discharges;
3. Solid or viscous pollutants in amounts which will cause obstruction to the flow in the POTW resulting in interference;
4. Any pollutant, including oxygen demanding pollutants discharged in a flow rate and/or pollutant concentration which will cause interference with the POTW;
5. Heat in amounts which will inhibit biological activity in the POTW resulting in interference, but in no case heat in such quantities that the temperature at the POTW treatment plant exceeds 40°C (104°F) unless the Division, upon request of the POTW, approves alternate temperature limits.

(3) Photo processors and printers generating hazardous waste shall comply with all applicable requirements in 310 CMR 30.000: *Hazardous Waste* including requirements for using holding tanks for hazardous waste. These holding tank requirements include:

- (a) maintain tanks and containers holding hazardous waste to be recycled on site in accordance with 310 CMR 30.205(19): *Storage and Accumulation in Tanks and Containers*;
- (b) maintain tanks and containers holding hazardous waste to be shipped off site in accordance with 310 CMR 30.340: *Large Quantity Generators*, 30.351: *Small Quantity Generators*, or 30.353: *Very Small Quantity Generators*, as applicable;
- (c) maintain records in accordance with 310 CMR 30.310: *The Manifest*, 30.331: *Recordkeeping*, and 30.353(9), as applicable, in order to demonstrate that all hazardous waste is shipped off-site to a facility authorized to receive it pursuant to 310 CMR 30.305: *Destination of Hazardous Waste or Regulated Recyclable Material Sent Off-site* or 30.353(8).

(4) Photo processors and printers using silver recovery systems which are not directly piped to the photo processing wastestream shall:

- (a) comply with any existing Class A recycling permit for the unit;
- (b) maintain tanks and containers holding hazardous industrial wastewater in accordance with 310 CMR 30.205(19): *Storage and Accumulation in Tanks and Containers*;
- (c) record amount of industrial wastewater passing through their silver recovery unit and keep the records on-site for at least three years; and
- (d) manage any hazardous waste byproducts either as a regulated recyclable material in accordance with 310 CMR 30.200: *Provisions for Recyclable Materials and for Waste Oil* or as a hazardous waste in accordance with 310 CMR 30.000 *Hazardous Waste*.

(5) Photo processors and printers using tanks or containers to store non-hazardous industrial wastewater shall:

- (a) use tanks which
 1. have a containment structure with 110% capacity of the total volume of all above-ground tanks;
 2. have a bell and light alarm in a conspicuous location if they are remotely/ automatically filled tanks. The alarm must activate when the level of wastewater reaches 75% capacity of the tank and the alarm signal must be transmitted to a staffed location. Manually filled tanks must be provided with visual or sight glass type of level measurement;

71.06: continued

3. are located to provide year round access for emptying;
 4. have odor control as necessary;
 5. are made of, or lined with, materials which will not react with, and otherwise be compatible with, the industrial wastewater to be stored; and
 6. are located in a secured storage area which is free of cracks and gaps that is sufficiently impervious to contain leaks and spills, and,
 7. have a label indicating contents are non-hazardous.
- (b) use containers which
1. satisfy requirements set by the Department of Transportation for transportation of waste off-site,
 2. have a label indicating contents are non-hazardous, and,
 3. are located in a secured storage area which is free of cracks and gaps that is sufficiently impervious to contain leaks and spills.
- (c) maintain records sufficient to demonstrate that all industrial wastewater is shipped off-site to the POTW, including, but not limited to, transporter name and address, dates of shipment, amount shipped, and destination. These records shall be kept on-site for at least three years.
- (d) implement the following operating procedures and work practices:
1. spill control measures when filling, emptying or transporting containers
 2. report to the local Board of Health within 24 hours any occurrence of spills released to the environment.

71.07: Compliance Certification for Photo Processors and Printers

(1) Beginning on September 15, 2006, and thereafter as prescribed in accordance with 310 CMR 70.03(1): *Schedule for Submission of Compliance Certification*, photo processors shall submit to the Department, a compliance certification on a form supplied by the Department in accordance with 310 CMR 70.00: *Environmental Results Program Certification*, except that photo processors discharging to a POTW holding any sewer connection permit issued pursuant to 314 CMR 7.00: *Sewer System Extension and Connection Permit Program* or holding a permit issued by the Massachusetts Water Resources Authority pursuant to 360 CMR 10.000: *Sewer Use* that do not haul or ship photo processing waste off-site are not required to submit a certification.

(2) Beginning on September 15, 2006, and as prescribed in accordance with 310 CMR 70.03(1): *Schedule for Submission of Compliance Certification*, thereafter, printers shall submit to the Department a compliance certification in accordance with 310 CMR 70.00: *Environmental Results Program Certification*.

REGULATORY AUTHORITY

310 CMR 71.00: M.G.L. c. 21, § 26 through 53; c. 21C.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

310 CMR 72.00: INDUSTRIAL WASTEWATER STANDARD FOR DRY CLEANERS

Section

72.01: Purpose and Authority

72.02: Definitions

72.03: Applicability

72.04: Performance Standard for Dry Cleaners

72.05 : Compliance Certification for Dry Cleaners

72.01: Purpose and Authority

(1) The purpose of 310 CMR 72.00 is to provide for the protection of public health, safety, welfare and the environment by establishing industrial wastewater performance standards for dry cleaners and requiring a performance-based facility-wide compliance certification in accordance with 310 CMR 70.00.

(2) 310 CMR 72.00 is promulgated pursuant to the authority of M.G.L. c. 21, § 26 through 53, M.G.L. c. 21C and M.G.L. c. 111, §§ 142A through 142J.

72.02: Definitions

POTW Permit means a permit issued by a Publicly Owned Treatment Works (POTW).

Industrial Wastewater means wastewater resulting from any process of industry, trade or business, regardless of volume or pollutant content. Wastewater which contains only sanitary waste, and/or non-contact cooling water, compressor or air conditioner condensate is not considered industrial wastewater for purposes of determining applicability of the regulations at 310 CMR 72.00.

Publicly Owned Treatment Works or POTW means any device or system used in the treatment (including recycling and reclamation) of sewage or industrial wastewater which is owned by a public entity. A POTW includes any sewers, pipes, or other conveyances only if they convey wastewater to a POTW providing treatment.

Separator water means the wastewater phase produced by a water separator, such as a refrigerated condenser, carbon adsorber, still or muck cooker, used for the recovery of perchloroethylene vapors from dry cleaning equipment at a dry cleaning facility subject to 310 CMR 7.26. The following terms shall have the same meaning as set forth in 310 CMR 7.26(11): "water separator", "refrigerated condenser", "carbon adsorber", "still", and "muck cooker".

72.03: Applicability

(1) 310 CMR 72.00 applies to dry cleaners that are subject to 310 CMR 7.26.

(2) 310 CMR 72.00 does not apply to dry cleaners that are also industrial laundries described by SIC codes 7213 and 7218.

72.04: Performance Standard for Dry Cleaners

(1) No dry cleaner shall discharge industrial wastewater to the ground, septic system, or other on-site disposal system without a groundwater discharge permit pursuant to 314 CMR 5.00, or to surface water without a permit pursuant to 314 CMR 3.00.

(2) Each dry cleaner with a POTW permit shall comply with the terms and conditions of that permit.

(3) Each dry cleaner shall comply with the general and specific prohibitions listed below:

(a) General Prohibitions. No person shall discharge or cause to be discharged to a POTW any substances, materials or wastewaters that can harm the sewers, wastewater treatment process, or equipment; have an adverse impact on the receiving waters or can otherwise endanger life, limb, public property or constitute a nuisance.

72.04: continued

In determining the acceptability of these wastewaters, consideration shall be given to such factors as the quantities of such wastewaters in relation to flows and velocities in the sewers, materials or construction of sewers, nature of the wastewater treatment process, capacity of the wastewater treatment process, degree of treatability of such wastewaters in the wastewater treatment plant, and other pertinent factors. Pollutants introduced into POTWs by a non domestic source shall not pass through the POTW or interfere with the operation or performance of the works. These general prohibitions and the specific prohibitions listed in the 310 CMR 72.04(3)(b) apply to all non-domestic sources introducing pollutants into a POTW whether or not the source is subject to other pretreatment standards or any other Federal, State or local pretreatment requirements.

(b) Specific Prohibitions. In addition, the following pollutants shall not be introduced into a POTW:

1. Pollutants which create a fire or explosion hazard in the POTW;
 2. Pollutants which cause corrosive structural damage to the POTW, but in no case discharges with pH lower than 5.5 or more than 9.5, unless the works is specifically designed to accommodate such discharges;
 3. Solid or viscous pollutants in amounts which will cause obstruction to the flow in the POTW resulting in interference;
 4. Any pollutant, including oxygen demanding pollutants discharged in a flow rate and/or pollutant concentration which will cause interference with the POTW;
 5. Heat in amounts which will inhibit biological activity in the POTW resulting in interference, but in no case heat in such quantities that the temperature at the POTW treatment plant exceeds 40°C (104°F) unless the Division, upon request of the POTW, approves alternate temperature limits.
 6. Wastewater containing perchloroethylene, except that separator water may be discharged.
- (4) Each dry cleaner that treats industrial wastewater shall comply with 314 CMR 12.03(3) and 12.04(2).
- (5) Dry cleaners using tanks or containers to store industrial wastewater shall:
- (a) use tanks which:
 1. have a containment structure with 110% capacity of the total volume of all above-ground tanks;
 2. have a bell and light alarm in a conspicuous location if they are remotely/ automatically filled tanks. The alarm must activate when the level of wastewater reaches 75% capacity of the tank and the alarm signal must be transmitted to a staffed location. Manually filled tanks must be provided with visual or sight glass type of level measurement;
 3. are located to provide year round access for emptying;
 4. have odor control as necessary;
 5. are made of, or lined with, materials which will not react with, and otherwise be compatible with the, industrial wastewater to be stored; and,
 6. are located in a secured storage area which is free of cracks and gaps that is sufficiently impervious to contain leaks and spills.
 - (b) use containers which:
 1. satisfy requirements set by the Department of Transportation for transportation of waste off-site, and
 2. are located in a secured storage area which is free of cracks and gaps that is sufficiently impervious to contain leaks and spills.
 - (c) maintain records sufficient to demonstrate that all industrial wastewater is shipped off-site to the POTW, including, but not limited to, transporter name and address, dates of shipment, amount shipped, and destination. These records shall be kept on-site for at least three years.
 - (d) implement the following operating procedures and work practices:
 1. spill control measures when filling, emptying or transporting containers
 2. report to the local Board of Health within 24 hours any occurrence of spills released to the environment

72.04: continued

(6) Wastewater containing perchloroethylene shall not be evaporated, except that separator water may be evaporated.

72.05: Compliance Certification for Dry Cleaners

Beginning on September 15, 1998, and annually thereafter, dry cleaners shall submit to the Department a compliance certification in accordance with 310 CMR 70.00. Effective June 27, 2003, all dry cleaners required to certify pursuant to 310 CMR 72.00 shall submit to the Department an initial certification and thereafter file an annual compliance certification by September 15th of each year.

REGULATORY AUTHORITY

310 CMR 72.00: M.G.L. c. 21, § 26 through 53; c. 21C; c. 111, §§ 142A through 142J.

310 CMR 73.00: AMALGAM WASTEWATER AND RECYCLING REGULATIONS FOR DENTAL FACILITIES

Section

- 73.01: Purpose
- 73.02: Definitions
- 73.03: Applicability
- 73.04: Amalgam Separator Requirements
- 73.05: Operational Standards
- 73.06: Recordkeeping
- 73.07: Compliance Certification Requirements for Dental Facilities

73.01: Purpose

The purpose of 310 CMR 73.00 is to protect public health, safety, welfare and the environment. 310 CMR 73.00 establishes wastewater treatment, operational standards, and amalgam recycling requirements to reduce the amount of mercury discharged from dental facilities, and require a performance-based compliance certification from the owners of dental practices in compliance with 310 CMR 70.00: *Environmental Results Program Certification*.

73.02: Definitions

Amalgam. An alloy containing mercury and other metals used to restore the dentition.

Amalgam Separator. An item of dental equipment designed to remove amalgam particles from the wastewater passing through the vacuum system, or any vacuum line filters and screens and/or chair-side traps of a Dental Facility prior to its discharge.

Amalgam Waste. Any waste containing mercury amalgam or otherwise associated with preparation or use of amalgam including, but not limited to, amalgam collected by chair-side traps, screens, filters, vacuum system filters, amalgam separators or other devices; waste elemental mercury; and waste amalgam capsules.

Approved Amalgam Separator. An amalgam separator that has been demonstrated by the manufacturer to achieve a 98% or greater amalgam removal efficiency. Such removal efficiency shall be determined on the basis of test data generated by a professional laboratory that is qualified to perform the following analytical methods:

- (a) ISO protocol 11143, using average test results under empty and simulated full conditions; or
- (b) an equivalent method that meets Department-approved quality assurance and quality control criteria.

Separators installed under the Department's voluntary Dental Amalgam/Mercury Recycling Certification program, described at 310 CMR 73.03(2)(a) and (b), that have been demonstrated to achieve 95% or greater removal efficiency may be used as long as the separator is properly maintained and continues to achieve a 95% or greater removal efficiency. However, any replacement for such amalgam separators must achieve a 98% or greater amalgam removal efficiency.

Dental Facility or Facility. Any institution, clinic, office or location where dentistry is practiced, as defined in M.G.L. c. 112, § 50.

Department. The Massachusetts Department of Environmental Protection.

ISO. The International Organization for Standardization.

Operational Standards. Specified business, operational, maintenance and other procedures listed at 310 CMR 73.05 that limit the amount of mercury released to the environment through wastewater and solid waste.

73.02: continued

Owner of a Dental Facility. Any person who owns, leases, maintains, or operates a Dental Facility in any office or other room or rooms where dentistry is practiced, as defined in M.G.L. c. 112, § 50, or who directly or indirectly is manager, proprietor, or conductor of the same.

Publicly Owned Treatment Works (POTW). Any device or system used in the treatment (including recycling and reclamation) of municipal sewage or industrial wastes of a liquid nature which is owned by a public entity. A POTW includes any sewers, pipes, or other conveyances only if it conveys wastewater to a POTW providing treatment.

Reclaimed. Processing to recover a usable product or regeneration, but does not include burning (e.g., for energy recovery) or use constituting disposal.

73.03: Applicability

- (1) 310 CMR 73.00 is applicable to every Dental Facility, except any of the following:
 - (a) A Dental Facility that does not generate or discharge wastewater from amalgam-related processes;
 - (b) A Dental Facility that does not place amalgam and does not remove amalgam, except in limited emergency or unplanned, unanticipated circumstances; and
 - (c) A Dental Facility that certifies to a POTW on an annual or biennial basis pursuant to the receiving POTW's regulations, and 40 CFR 441: *Dental Office Point Source Category*.
- (2) Each Dental Facility that is subject to 310 CMR 73.00 must comply in accordance with the following schedule:
 - (a) A Dental Facility certified by an owner of a Facility under the Department's voluntary Dental Amalgam/Mercury Recycling Certification program that it installed an approved amalgam separator by February 28, 2005, and maintains compliance with all other requirements of that program, is subject to 310 CMR 73.00 effective February 1, 2010.
 - (b) A Dental Facility certified by an owner of a Facility under the Department's voluntary Dental Amalgam/Mercury Recycling Certification program that it installed an approved amalgam separator between March 1, 2005 - January 31, 2006, and maintains compliance with all other requirements of that program, is subject to 310 CMR 73.00 effective February 1, 2007.
 - (c) A Dental Facility in operation as of April 24, 2006 and that did not participate in the Department's voluntary Dental Amalgam/Mercury Recycling Certification program shall comply with all requirements of 310 CMR 73.00 no later than June 23, 2006.
 - (d) A new or expanded Dental Facility shall install an approved amalgam separator before commencing operation and shall comply with all other requirements of 310 CMR 73.00 in accordance with 310 CMR 70.03(4).
 1. A new Dental Facility is one that commences operations after April 24, 2006.
 2. An expanded Dental Facility is one whose maximum amalgam wastewater flow rate exceeds the capacity of the existing certified amalgam separator due to facility expansion.
- (3) Compliance with 310 CMR 73.00 does not release the owner of a Dental Facility from the need to comply with other applicable state, federal and local requirements.
- (4) Certification Form. Each compliance certification required pursuant to 310 CMR 70.03 shall be on a form prescribed by the Department and shall address compliance with the standards established by 310 CMR 70.00 and 73.00. The certification form may also address compliance with other applicable standards promulgated by the Department.

73.04: Amalgam Separator Requirements

- (1) Each Dental Facility subject to 310 CMR 73.00 shall:
 - (a) install an approved amalgam separator(s) which meets the requirements of 310 CMR 73.04;
 - (b) ensure that all wastewater that contains amalgam waste from the Dental Facility including, but not limited to, wastewater from chairs and cuspidors, passes through an approved amalgam separator before being discharged;

73.04: continued

- (c) ensure that the installed amalgam separator(s) is properly sized to accommodate maximum amalgam wastewater flow rates at the facility;
- (d) ensure that any amalgam separator is installed, operated and maintained according to the instructions of the manufacturer of the unit;
- (e) for each new or expanded Dental Facility that opens after April 24, 2006, ensure that the amalgam separator is installed prior to commencing operations; and
- (f) provide to the Department upon request test data generated by the professional laboratory that documents the amalgam separator's removal efficiency.

73.05: Operational Standards

- (1) Each Dental Facility subject to 310 CMR 73.00 shall:
 - (a) ensure that no amalgam waste is disposed of with solid waste or medical waste;
 - (b) safely store all amalgam waste generated at the Dental Facility in containers that are sealed and structurally sound;
 - (c) use only biodegradable disinfectants and cleaning agents that are non-corrosive (pH range between 6.5 - 8.0) and non-oxidizing (no bleach) in the facility's vacuum lines and all other drains connected to its amalgam separator. The disinfectants and cleaning agents shall also be compatible with the unit(s) in use, and shall be used only in accordance with the unit manufacturer's instructions;
 - (d) ensure amalgam separator system clean-outs are conducted in accordance with the manufacturer's recommended frequency. The frequency may depend upon the volume of wastewater discharged, and may be as often as daily, weekly, or monthly;
 - (e) transfer all amalgam waste to a permitted hazardous waste recycling facility, licensed hazardous waste facility, a facility that consolidates shipments of amalgam waste before being shipped off-site for reclamation, or, if shipped out of state, a facility that is authorized to reclaim mercury from amalgam waste. Shipments of amalgam waste to facilities described in 310 CMR 73.05(1)(d) shall be transported by either a common carrier or a licensed hazardous waste transporter, and accompanied by information identifying the shipment as amalgam waste containing mercury; and
 - (f) retain documentation, such as a certificate of recycling, a hazardous waste manifest, bill of lading or contractual agreement, showing that the amalgam waste has been recycled by being reclaimed and the name and address of the facility at which the amalgam waste is ultimately recycled.

73.06: Recordkeeping

- (1) Each Dental Facility shall keep records on-site that demonstrate compliance with manufacturers' recommended maintenance and servicing of installed amalgam separators, that the amalgam waste has been recycled pursuant to 310 CMR 73.05(1)(e), and the supporting information upon which the Dental Facility relied to file the certification required by 310 CMR 73.07.
- (2) Records referenced in 310 CMR 73.06(1) shall be retained for five years.

73.07: Compliance Certification Requirements for Dental Facilities

- (1) Certification Form. Within 60 days of a Dental Facility becoming subject to the requirements of 310 CMR 73.00, pursuant to the schedule described at 310 CMR 73.03(2), an owner of a Dental Facility shall submit to the Department a compliance certification. The certification shall address compliance with all applicable standards on a form prescribed by the Department that shall include at least the following information:
 - (a) The type of amalgam separator installed, including manufacturer and model.
 - (b) Date upon which the amalgam separator became operational, and for a new or expanded Dental Facility, the date the facility became operational.
 - (c) Identification of the requirements of 310 CMR 73.04 for amalgam separators and certification as to whether or not the system meets all such requirements.
 - (d) Certification of compliance with the operational standards of 310 CMR 73.05.
 - (e) Certification that documentation and records are being maintained as stipulated in 310 CMR 73.06.

73.07: continued

(f) Certification that at least one staff member is familiar with procedures to follow in order to ensure compliance with the amalgam separator requirements and operational standards described at 310 CMR 73.04 and 73.05, and that all other staff that handle amalgam waste are informed of these procedures.

(g) Certification that Dental Facility that owns or operates industrial wastewater holding tanks is in compliance with 314 CMR 18.00: *Industrial Wastewater Holding Tank and Container Construction, Operation, and Recordkeeping Requirements*.

(h) Any other information pertaining to the Dental Facility which the Department requires.

(2) Within 60 days of a new owner taking ownership of a Dental Facility subject to the requirements of 310 CMR 73.00, the new owner shall notify MassDEP of the change in ownership on a form specified by the Department.

(3) Beginning in calendar year 2016, each owner of a Dental Facility subject to 310 CMR 73.07 shall recertify every two years in every even numbered year, after the initial certification, that the dental practice continues to be in compliance with all requirements listed in 310 CMR 73.04 through 73.07. All such recertifications shall be submitted by March 31st of the year in which the recertification is due.

REGULATORY AUTHORITY

310 CMR 73.00: M.G.L. c. 21, §§ 26 through 53; M.G.L. c. 21C, §§ 4 and 6; M.G.L. c. 111, § 150A; and M.G.L. c. 21A, §§ 2 and 8.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

310 CMR 74.00: REMOVAL AND RECYCLING OF MERCURY-ADDED COMPONENTS IN VEHICLES

Section

- 74.01: Purpose and Authority
- 74.02: Definitions
- 74.03: Applicability
- 74.04: Requirements for the Removal of Mercury-added Components Before Crushing
- 74.05: Prohibition on the Sale of Mercury-added Switches in Vehicles
- 74.06: Plans for Proper Removal, Recovery, and Recycling of Mercury-added Switches from End-of-life Vehicles
- 74.07: Measuring Recycling of Mercury-added Vehicle Switches
- 74.08: Recordkeeping
- 74.09: Submittal of Compliance Certifications and Reports to the Department

74.01: Purpose and Authority

The purpose of 310 CMR 74.00 is to protect public health, safety, welfare and the environment by implementing the Mercury Management Act (St. 2006, c. 190). 310 CMR 74.00 prohibit the sale of mercury-added vehicle switches, establishes requirements for the removal of mercury-added vehicle switches and other components that contain mercury before a vehicle is crushed or shredded and requires a performance-based compliance certification in compliance with 310 CMR 70.00.

310 CMR 74.00 is promulgated pursuant to the authority of M.G.L. c. 21C, §§ 4 and 6, and M.G.L. c. 21H, §§ 6C and 6N.

74.02: Definitions

The definitions found in 310 CMR 74.02 apply and are limited to 310 CMR 74.00.

Automobile Dealer or Vehicle Dealer means any person who, in the ordinary course of his business, is engaged in the business of selling motor vehicles to consumers or other end users pursuant to a franchise agreement and who is required to obtain a Class 1 or Class 2 license pursuant to the provisions of M.G.L. c. 140, §§ 58 and 59.

Automobile Manufacturer or Vehicle Manufacturer means any person, firm, association, partnership, corporation, governmental entity, organization, combination or joint venture which is last in the production or assembly process of a new vehicle that uses mercury-added components, or in the case of an imported vehicle, the importer or domestic distributor of the vehicle; however, if a company from whom an importer or domestic distributor purchases the merchandise has a U.S. presence or assets, that company shall be considered to be the manufacturer and the distributor as defined in M.G.L. c. 93B shall not be considered to be the manufacturer.

Department means the Massachusetts Department of Environmental Protection.

End-of-life Vehicle means any vehicle, which is sold, given, or otherwise conveyed to a vehicle recycler or scrap recycling facility for the purpose of dismantling, recycling or disposal.

Mercury-added Component means a component that contains mercury, including but not limited to a mercury-added vehicle switch, mercury high intensity discharge (HID) headlamp, or fluorescent lamps.

Mercury-added Vehicle Switch means a mercury-added component installed in a motor vehicle that opens or closes an electrical circuit or gas valve, including, but not limited to, those used in light switches and antilock braking systems.

Motor Vehicle (See "Vehicle").

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

74.02: continued

Person means any natural or corporate person, whether public or private, including corporations, societies, associations and partnerships and bodies politic and corporate, public agencies, authorities, departments, offices and political subdivisions of the Commonwealth of Massachusetts.

Scrap Recycling Facility means a facility, location, device or unit, including, but not limited to, scrap recyclers and vehicle shredders, where machinery and equipment are used for processing and manufacturing scrap metal into prepared grades and whose principal product is scrap iron, scrap steel or nonferrous metallic scrap for sale for remelting purposes.

Vehicle or Motor Vehicle means a vehicle propelled by an internal combustion engine or an electric motor, such as an automobile, van, truck, motorized construction equipment, motorized recreational vehicle, motorcycle or forklift.

Vehicle in Commerce means any vehicle offered for sale by a vehicle dealer, or duly registered in Massachusetts or in the United States to be operated on public roads and highways.

Vehicle Recycler means any individual or entity engaged in the business of acquiring, dismantling, crushing (including partial crushing) or destroying six or more vehicles in a calendar year for the primary purpose of reselling their parts. For the purposes of 310 CMR 74.00, an individual or entity owning or operating a mobile or stationary crushing unit is considered a vehicle recycler.

74.03: Applicability

(1) 310 CMR 74.00 is applicable to automobile dealers, automobile manufacturers, scrap recycling facilities that accept end-of-life vehicles, and vehicle recyclers.

(2) Compliance with 310 CMR 74.00 does not release an automobile dealer, automobile manufacturer, scrap recycling facility, or vehicle recycler from the need to comply with other applicable state, federal and local requirements.

(3) Certification Form. Each certification required by 310 CMR 70.03 shall be on a form prescribed by the Department and shall address compliance with the standards established by 310 CMR 70.00 and 74.00. The certification form may also address compliance with other applicable standards promulgated by the Department.

74.04: Requirements for the Removal of Mercury-added Components Before Crushing

(1) No person shall crush, cause to be crushed or otherwise arrange for an end-of-life vehicle to be crushed without first having removed any mercury-added components, including but not limited to, mercury-added vehicle switches.

(2) 310 CMR 74.04(1) shall not apply to:

- (a) mercury-added components made inaccessible due to significant damage to the vehicle in the area surrounding the component's location, or
- (b) mercury-added lamps used to backlight the vehicle's dashboard and other electronic devices (due to the inaccessibility of these lamps and the resulting potential for mercury to be released to the environment if a lamp is broken while it is being removed).

(3) A vehicle recycler shall, before delivering or selling vehicle bodies to scrap recycling facilities, certify in writing to the scrap recycling facility, in a form approved by the department, that all mercury-added vehicle switches have been removed from the vehicle bodies in the shipment.

(a) Such certification shall be provided on a bill of lading, on stickers affixed to the vehicle bodies, or in another manner approved by the Department.

(b) Certifications provided on a bill of lading shall contain:

- 1. A statement that: "I certify that mercury-added switches have been removed from the vehicles in this shipment in compliance with 310 CMR 74.04."; and

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

74.04: continued

2. The signature of the corporate official making the certification (which may be pre-printed or signed for each bill of lading) and the typed or printed name of such corporate official and his or her title.
- (c) Certification provided on stickers affixed to the vehicle bodies shall contain:
1. A statement that: "Mercury-added switches have been removed from this vehicle in compliance with 310 CMR 74.04."; and
 2. The signature of the corporate official making the certification (which may be pre-printed or signed in "permanent" ink) and the typed or printed name of such corporate official and his or her title.
- (d) Written certification may be provided in another manner, if a proposal is submitted to the Department and approved prior to use.
- (4) A scrap recycling facility may agree to accept an end-of-life vehicle containing mercury-added components that has not been flattened, crushed or baled provided that the scrap recycling facility removes the mercury added components.
- (5) Any person removing a mercury-added component from a vehicle shall manage the component in accordance with the provisions of 310 CMR 30.000, either as a hazardous waste or a universal waste, except for mercury-added components that are not switches (e.g. high intensity discharge (HID) lamps) and that are still in commerce.

74.05: Prohibition on the Sale of Mercury-added Switches in Vehicles

- (1) No person shall sell, offer to sell or distribute a vehicle manufactured on or after January 1, 2007, containing mercury-added vehicle switches;
- (2) No person shall sell or offer to sell or distribute a mercury-added vehicle switch for new installation in a vehicle;
- (3) If a mercury-added switch in a vehicle in commerce requires replacement, it shall be replaced with a non-mercury alternative, if such an alternative is commercially available. If the mercury-added vehicle switch requiring replacement is a component of an anti-lock braking system or an airbag, replacement with a non-mercury alternative shall not be required. The commercial availability of a non-mercury vehicle switch for a particular vehicle may be determined by consulting information published (electronically on internet web pages and on paper) by the Department, vehicle manufacturers and/or their trade associations, and the automotive industry trade press.

74.06: Plans for Proper Removal, Recovery, and Recycling of Mercury-added Switches from End-of-life Vehicles

- (1) No later than April 30, 2008, every vehicle manufacturer shall, individually or as a group, or through a trade association, develop, file with the department, and commence implementing the plan required by M.G.L. c. 21H, § 6C(f) and (g) for the removal, recycling, transportation, storage, and containment of mercury-added switches from end-of-life vehicles in accordance with the regulations at 310 CMR 30.000 as either a hazardous waste or universal waste. Such plans shall, to the extent practicable, use the existing end-of-life vehicle recycling infrastructure, and shall:
 - (a) include a method for collecting and transporting switches after they are removed from vehicles;
 - (b) identify or establish and use facilities where switches may be received and accepted;
 - (c) ensure that the mercury from all recovered switches is recycled in accordance with 310 CMR 30.000;
 - (d) provide information, training, technical assistance to vehicle recyclers, scrap recyclers and all other persons involved in removing mercury-added vehicle switches from motor vehicles;
 - (e) include a program which is designed to achieve a mercury-added vehicle switch capture rate of at least 90%, based on the capture rate described in 310 CMR 74.07;

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

74.06: continued

- (f) describe the financing system through which the total cost of removal, collection, record keeping and recovery of mercury-added vehicle switches shall be borne by the vehicle manufacturer. Such financing system shall include, but not be limited to, a payment of \$ 3 for every mercury-added vehicle switch removed by a vehicle recycler or scrap recycling facility; and
 - (g) describe any reasons for not using the existing end-of-life vehicle recycling infrastructure.
- (2) The plan described in 310 CMR 74.06(1) shall not be required from:
- (a) a vehicle manufacturer that is participating in a plan being implemented in accordance with the requirements of M.G.L. c. 21 H, § 6C(n), where such plan is demonstrated to achieve a capture rate that complies with the requirements of 310 CMR 74.07. In the event that a plan fails to achieve the specified capture rate in any year, as determined by the Department, the vehicle manufacturer shall submit to the Department within 30 days of such determination a plan that meets the requirements of 310 CMR 74.06(1); or
 - (b) a vehicle manufacturer that never installed mercury-added vehicle switches in its vehicles. To qualify for this exemption, such manufacturer shall submit a one-time certification of non-applicability in compliance with the requirements of 310 CMR 74.09(1)(c) to the Department by April 30, 2008.
- (3) Nothing in 310 CMR 74.06 shall prohibit a vehicle manufacturer from substituting a new plan in accordance with, and subject to, the requirements of 310 CMR 74.06(4).
- (4) If a vehicle manufacturer's plan under 310 CMR 74.06(1) has been in effect for at least one year, the manufacturer may submit an alternate plan to the Department for approval. The alternate plan shall meet the following criteria:
- (a) The alternate plan has been in effect for at least one year in another state and can be implemented statewide;
 - (b) The alternate plan has achieved at least a 90% capture rate in that state; and
 - (c) The alternate plan, to the extent practicable, uses the existing end-of-life vehicle recycling infrastructure in Massachusetts.
- (5) When considering whether to approve an alternate plan pursuant to 310 CMR 74.06(4), the Department shall take into consideration the environmental impact in Massachusetts and the economic impact on Massachusetts businesses. To do so, the Department shall seek public comment on any plan submitted pursuant to 310 CMR 74.06(4).
- (a) The Department shall publish a legal notice in Massachusetts newspapers of general circulation which includes a summary of the plan and contact information on how and where to submit comments;
 - (b) The Department shall notify Massachusetts vehicle recyclers and scrap recycling facilities in writing of the plan and public comment opportunity;
 - (c) The public comment period shall be no less than 21 calendar days.
- (6) Approval of the alternate plan pursuant to 310 CMR 74.06(4) by the Department shall release the vehicle manufacturer from the obligations of its original plan, pursuant to 310 CMR 74.06(1), starting on the effective date of the alternate plan. Upon receipt of approval of an alternate plan, the vehicle manufacturer must notify all vehicle recyclers and scrap recycling facilities of the approval, the plan's provisions and its effective date.
- (7) An alternate plan may include an agreement between automobile manufacturers and automobile dealers to remove switches before the vehicle reaches its end-of-life.

74.07: Measuring Recycling of Mercury-added Vehicle Switches

- (1) The success of any plan designed to remove, collect, and recover mercury-added switches from end-of-life vehicles that is implemented in compliance with M.G.L. c. 21H, § 6C shall be measured by a capture rate that compares the actual number of mercury vehicle switches recovered and transported to authorized recycling facilities in each calendar year to the total number of mercury-added vehicle switches estimated to be available for removal from end-of-life vehicles in Massachusetts in that calendar year.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

74.07: continued

(2) The vehicle manufacturer shall calculate the capture rate for each calendar year in which a plan established pursuant to 310 CMR 74.06 is implemented, and shall report that rate to the Department in compliance with the requirements of 310 CMR 74.09(1)(b).

(3) Determining Compliance with the 2007 Target Capture Rate for Alternative Plans Submitted Pursuant to M.G.L. c. 21H, § 6C(n):

(a) For calendar year 2007, the target capture rate shall be 50% of 92,500 mercury-added vehicle switches estimated to be available for collection (or 46,250 switches).

(b) Plans that achieve the target capture rate of 50% by December 31, 2007, as determined by the Department, shall be deemed to be in compliance. Plans that do not achieve this target capture rate by December 31, 2007 shall be deemed to be not in compliance, and their proponents shall comply with the provisions of 310 CMR 74.06 as applicable.

(4) Determining Compliance with the Target Capture Rate for all Plans in 2008 and Subsequent Years.

(a) For calendar years 2008 through 2017, the target capture rate shall be 90% of the mercury switches estimated to be available for recovery in each calendar year, as described in 310 CMR 74.07(4)(b): Table 1.

(b) Programs that achieve a capture rate of 90% by December 31st of each calendar year, as determined by the Department, shall be deemed to be in compliance. Programs that do not achieve the 90% capture rate by December 31st of each calendar year shall be deemed to be not in compliance, and their proponents shall comply with the provisions of 310 CMR 74.06 as applicable.

Table 1: Estimate of Number of Mercury-added Vehicle Switches Available for Capture in Massachusetts by Year

Year	Estimate of the Number of switches Available	Number of switches needed to meet 90% capture rate
2008	74,000	66,600
2009	71,000	63,900
2010	67,000	60,300
2011	63,000	56,700
2012	59,000	53,100
2013	54,000	48,600
2014	50,000	45,000
2015	45,000	40,500
2016	41,000	36,900
2017	36,000	32,400

74.08: Recordkeeping

Parties subject to 310 CMR 74.00 shall keep records on-site for five years that demonstrate compliance with 310 CMR 74.00, and the supporting information that the facility relied upon to file the certification(s) required by 310 CMR 74.00, and may be required to submit said records upon request of the Department.

74.09: Submittal of Compliance Certifications and Reports to the Department

(1) The following certifications shall be submitted to the Department pursuant to 310 CMR 70.03(1)(8)9.:

(a) Scrap recycling facilities and vehicle recyclers subject to 310 CMR 74.00 shall submit to the Department a compliance certification by March 1st of each year. The certification shall be on a form prescribed by the Department, and shall address compliance with the requirements of 310 CMR 74.00 during the previous calendar year (ending December 31st). The certification shall contain the following information, at a minimum:

1. Certification that all mercury-added components required to be removed pursuant to 310 CMR 74.00 were removed from vehicles during the calendar year covered and will continue to be removed during the coming year;

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

74.09: continued

2. Certification that removed mercury-added components have been managed in accordance with the requirements of 310 CMR 74.00;

3. The number of mercury switches removed and shipped off-site for recycling.

(b) (for vehicle recyclers) Certification that the vehicle recycler has provided the certification required by 310 CMR 74.04(3) to the scrap recycling facility(ies) to which it shipped vehicle bodies during the period covered by the certification.

(2) No later than March 1, 2008, and March 1st of each subsequent year, each automobile manufacturer shall certify to the Department, in writing on a form prescribed by the Department, that it is implementing the collection and recycling plan in accordance with 310 CMR 74.06. Such certification shall meet the requirements of 310 CMR 70.03, and shall include but not be limited to the following:

(a) the number of mercury-added vehicle switches collected and recycled during the previous calendar year;

(b) the actual capture rate achieved during the calendar year covered by the certification, pursuant to 310 CMR 74.07(2); and

(c) where and how the switches were stored, recycled or otherwise disposed of.

(3) By April 30, 2008, any vehicle manufacturer that never installed mercury-added vehicle switches shall submit a non applicability certification to the Department, pursuant to 310 CMR 74.06(2)(b), on a form prescribed by the Department.

REGULATORY AUTHORITY

310 CMR 74.00: M.G.L. c. 21C, §§ 4 and 6 and c. 21H, §§ 6C and 6N.

310 CMR 75.00: COLLECTION, RECYCLING, LABELING AND SALES BAN OF MERCURY-ADDED PRODUCTS

Section

- 75.01: Purpose
- 75.02: Definitions
- 75.03: Applicability
- 75.04: Plans for Collecting and Recycling Mercury-added Products
- 75.05: Mercury-added Lamps
- 75.06: Ban on Sales and Distribution of Mercury-added Products
- 75.07: Exemptions from the Sales and Distribution Ban
- 75.08: Labeling of Mercury-added Products and Notification to Purchasers

75.01: Purpose

(1) The purpose of 310 CMR 75.00 is to protect public health, safety, welfare and the environment by implementing the Mercury Management Act (St. 2006, c. 190). 310 CMR 75.00 prohibits the sale or distribution of mercury-added products in Massachusetts unless the manufacturer of the product creates, files with the Department, and implements a convenient and accessible collection plan for mercury-added products at the end-of-life, including a system for the direct return of the mercury-added product to the manufacturer or a collection and recycling plan, in accordance with M.G.L. c. 21C and 310 CMR 30.000: *Hazardous Waste*, using new or existing collection systems. 310 CMR 75.00 establishes performance standards and other requirements for collection and recycling plans, and requires a performance-based compliance certification in accordance with 310 CMR 70.00: *Environmental Results Program Certification*. In addition, 310 CMR 75.00 allows manufacturers of mercury-added lamps to satisfy the collection plan requirements *via* payment of an annual registration fee to the Department to be deposited into a Commonwealth expendable trust. 310 CMR 75.00 also applies to bans on the sale or distribution of mercury-added products and the process for obtaining an exemption to such bans. They also apply to the labeling of mercury-added products.

75.02: Definitions

The definitions found in 310 CMR 75.02 apply to, and are limited to, 310 CMR 75.00.

Department means the Department of Environmental Protection.

Distributor means any person who imports, consigns, or offers for sale, sells, barter or otherwise supplies mercury-added products in the commonwealth.

IMERC means the Interstate Mercury Education and Reduction Clearinghouse, a regional, multi-state clearinghouse established to coordinate the administration of state laws on mercury-added products.

Irremovable means not intended by the manufacturer to be replaceable by the product user or consumer (*e.g.*, an irremovable component is one for which the manufacturer does not sell replacement component).

Manufacturer means any person, firm, association, partnership, corporation, governmental entity, organization, combination or joint venture which produces a product containing mercury or an importer or domestic distributor of a product containing mercury produced in a foreign country. In the case of a mercury-added multi-component product where the only mercury is contained in a mercury-added component manufactured by a different manufacturer which is intended to be readily removable and replaceable by the consumer or user, the manufacturer is the manufacturer who produced the mercury-added component. If the product or component is produced in a foreign country, the manufacturer is the importer or domestic distributor. However, if a company from whom an importer purchases the merchandise has a United States presence or assets, that company shall be considered to be the manufacturer. 310 CMR 75.02: Manufacturer shall not apply to a “distributor” of motor vehicles as defined in M.G.L. c. 93B, § 1.

75.02: continued

Massachusetts *Environmental Monitor* means a twice monthly publication of the Executive Office of Energy and Environmental Affairs that provides information on projects under review by the Massachusetts Environmental Policy Act (MEPA) office, recent MEPA decisions of the Secretary of Environmental Affairs, and public notices from environmental agencies.

Mercury-added Component means a component that contains mercury.

Mercury-added Formulated Product means a chemical product to which mercury has been added, intentionally or unintentionally, including, but not limited to, laboratory chemicals, cleaning products, cosmetics, pharmaceuticals and coating materials that are sold as consistent mixtures of chemicals.

Mercury-added Lamp means an electric lamp to which the manufacturer intentionally introduces mercury for the operation of the lamp, including, but not limited to, fluorescents, compact fluorescents, black lights, high intensity discharge lamps, ultraviolet lamps and neon lamps.

Mercury-added Product means a product to which the manufacturer intentionally introduces mercury, including, but not limited to, electric lamps, thermostats, automotive devices, electric switches, medical or scientific instruments, electric relays or other electrical devices, but not including products made with coal ash or other products that are incorporated into equipment used to manufacture semiconductor devices, elemental mercury in pre-capsulated form that is sold, distributed or provided to a dental practitioner for use in compliance with the department's regulations concerning amalgam wastewater and recycling for dental facilities, or mercury-added formulated products. 310 CMR 75.02: Mercury-added Product includes mercury-added components that are incorporated into larger products.

Mercury Relay means a mercury-added product that opens or closes electrical contacts to affect the operation of other devices in the same or another electrical circuit.

Mercury Switch means a mercury-added product that opens or closes an electrical circuit or gas valve.

Mercury-added Thermostat means a product or device that uses a mercury switch to sense and control room temperature through communication with heating, ventilation or air conditioning equipment, including thermostats used to sense and control room temperature in residential, commercial, industrial and other buildings, but shall not include a thermostat used to sense and control temperature as part of a manufacturing process.

Person means any natural or corporate person, whether public or private, including corporations, societies, associations and partnerships and bodies politic and corporate, public agencies, authorities, departments, offices and political subdivisions of the Commonwealth.

Qualified Mercury-added Lamp Recycler means a person who engages in the manual or mechanical separation of spent household mercury-added lamps to recover components and mercury contained therein, and meets the requirements of the Commonwealth of Massachusetts for handling, transporting and disposal of mercury-added lamps.

75.03: Applicability

- (1) 310 CMR 75.00 applies to any person who manufactures, sells, offers for sale or distributes mercury-added products in Massachusetts.
- (2) The following products are exempt from the requirements of 310 CMR 75.04:
 - (a) motor vehicles and mercury-added components in motor vehicles;
 - (b) refurbished medical equipment;
 - (c) mercury-added button cell batteries;
 - (d) products where the only mercury contained in the product is in one or more removable mercury-added button cell batteries;

75.03: continued

- (e) products where the only mercury contained in the product is contained in one or more mercury-added lamps;
- (f) mercury-added formulated products intended to be totally consumed in use, such as reagents, cosmetics, cleaning products, pharmaceuticals and other laboratory chemicals;
- (g) Products made with coal ash;
- (h) Products that are incorporated into equipment used to manufacture semi-conductor devices;
- (i) elemental mercury in pre-capsulated form that is sold, distributed or provided to a dental practitioner for use in compliance with the department's regulations concerning amalgam wastewater and recycling for dental facilities; or
- (j) mercury-added thermostats subject to the requirements of 310 CMR 77.00: *Collection and Recycling of Mercury-added Thermostats*.

(3) After December 28, 2007, once a mercury-added product is no longer sold, offered for sale, or distributed in Massachusetts, the product's manufacturer will no longer be subject to the requirements of 310 CMR 75.04.

(4) Compliance with 310 CMR 75.00 does not release manufacturers, distributors, wholesalers, or retailers from the need to comply with other applicable state, federal and local requirements.

(5) The Department shall deem a manufacturer of mercury-added lamps to have satisfied the requirements of 310 CMR 75.04 if such manufacturer who sells mercury-added lamps in the Commonwealth individually pays, until June 30, 2024, an annual registration fee in accordance with the requirements of 310 CMR 4.03(2): *Table 4.03* and with the requirements of 310 CMR 75.05. Manufacturers shall make such payments to the Department to be deposited into an expendable trust fund established in accordance with M.G.L. c. 6A, § 6. If a manufacturer fails to comply with these provisions, such manufacturer shall comply with the full terms and conditions of 310 CMR 75.04.

75.04: Plans for Collecting and Recycling Mercury-added Products

(1) No later than March 3, 2008, every manufacturer of a mercury-added product subject to 310 CMR 75.00 whose products are sold, offered for sale, or distributed in Massachusetts shall develop and file with the Department a plan for collection, storage (including containment of mercury-added products and/or components), transportation, and recycling of end-of-life mercury-added products in accordance with 310 CMR 30.000. Such plans shall provide methods of collection and recycling that are convenient and accessible to product purchasers and users.

(2) No person shall sell, offer for sale or distribute a mercury-added product to which 310 CMR 75.00 applies after March 3, 2008, unless its manufacturer files with the Department a plan as specified in 310 CMR 75.04 for collecting its mercury-added product(s) at the end of the product's useful life and recycling its mercury content, and commences implementation of such plan.

(3) Every manufacturer of mercury-added products sold or distributed in Massachusetts shall be financially responsible for developing and implementing a plan that meets the requirements of 310 CMR 75.04.

(4) Where a mercury-added component is part of another product, the collection system shall provide for collection of the mercury-added component or collection of both the mercury-added component and the product containing it.

(5) Plans for collection and recycling of mercury-added products may be submitted by a trade association or industry group on behalf of a specific group of manufacturers.

(6) Plans for collection and recycling of mercury-added products shall include, at a minimum, the following information:

- (a) Applicant's name, telephone number, North American Industry Classification System, and web address. If a trade association is submitting a plan on behalf of a group of manufacturers, include trade association name, telephone number and web address, and list of participating manufacturers' names with respective contact information.

75.04: continued

- (b) Applicant's address, including the mailing address.
- (c) The address, telephone number, and e-mail address of a contact person for the applicant.
- (d) A description of how to advise purchasers of the mercury-added product(s) about the collection and recycling program, including the purpose of the collection and recycling program, and how they may participate. The description must identify the parties who will be responsible for implementing the purchaser education plan, and the date on which it will commence implementation. Such description shall also include, but shall not be limited to, notification to all persons who sell, distribute, or offer the mercury-added product(s) for sale in Massachusetts that the product(s) cannot be sold unless they are covered by the manufacturer's collection and recycling plan. Such notification shall be repeated on a specified basis that shall be no less frequent than annually.
- (e) Location of all mercury-added components in each product covered by the Plan, and directions for removing them to aid collection (if appropriate).
- (f) If applicable, documentation regarding the intention of the applicant to phase-out use of mercury in the product or the sale of the mercury-added product in Massachusetts, and the schedule for the phase-out.
- (g) Identification of currently available collection and recycling methods for the mercury-added product(s) and information about the extent to which the mercury-added product(s) is currently collected and recycled at the end of its useful life.
- (h) Description of the system that will be employed for collection, storage, transportation, and recycling of the mercury-added product(s), including provision for managing collected mercury-added products in accordance with 310 CMR 30.000: Hazardous Waste. Such system shall be convenient and accessible for the product user. It may employ:
 - 1. the direct return of an end-of-life product or component to the manufacturer, or its agents;
 - 2. a drop off program where a receiving facility is no farther than a 30 minute driving distance for any Massachusetts generator of the end-of-life mercury-added product; or
 - 3. another system that is as convenient to the product user as the original product purchase.
- (i) Schedule for implementing the plan, including the date on which collection will commence. Collection shall commence no later than 45 days after submittal of the plan to the Department.
- (j) Documentation of the commitment of all necessary parties to perform as intended in the planned collection and recycling program.
- (k) Documentation demonstrating how the manufacturer will finance the proposed collection and recycling program. The cost of the program shall not be borne by state or local government. Financing may include the recovery of a product that has an economic value to processors, such as silver oxide batteries.
- (l) The targeted recycling rate for the collection and recycling of mercury-added product(s), or components covered in the Plan, a description of the performance measures to be used to demonstrate that the collection and recycling program is meeting the target recycling rate and the recordkeeping protocol that will be implemented to demonstrate compliance with the Plan.
 - 1. Such target recycling rate shall be expressed as a percentage, where the numerator is the number of mercury-added product(s) (or mercury-added components) expected to be collected in Massachusetts and recycled in each year of the Plan's operation, and the denominator is an estimate of the number of mercury-added products (or mercury-added components) expected to be available for collection in Massachusetts and recycling each year. The estimated number of products expected to be available for collection in any year shall be based on a rolling average life expectancy of the product (assuming normal use by the user) and sales data, and other indications of the number of products that are likely to be retired (or reach the end of their useful life) in each year.
 - 2. For plans submitted by an individual manufacturer, the target recycling rate shall be based on that manufacturer's Massachusetts sales data and average product life expectancy. For plans submitted by a trade association or industry group on behalf of a group of manufacturers, the target recycling rate shall be based on the group's Massachusetts sales data and average product life expectancy.

75.04: continued

3. The target recycling rate shall not be less than the rates established in 310 CMR 75.04(6)(1)3.: *Table 1*:

TABLE 1

Target Recycling Rates for Mercury-added Products Generated in Massachusetts	
Calendar Year	Target Recycling Rate
2008	30%
2009	40%
2010	50%
2011	75%
Each subsequent year	75%

4. The target recycling rate for mercury-added products first sold, offered for sale or distributed after March 3, 2008 shall be 75%, to be achieved by the end of the first full year of the product's sale or distribution in Massachusetts.

(m) Description of additional or alternative actions that will be implemented to improve the collection and recycling program and its operation in the event that the target recycling rate is not met; and

(n) Other special conditions or information related to the affected mercury-added product(s), such as special handling that will be required by product users to participate in the collection and recycling program.

(7) Submittal of Plans to the Department.

(a) Plans shall be filed with the Department in accordance with the schedule established in 310 CMR 75.04(1).

(b) Such plans shall be accompanied by the certification required by 310 CMR 75.04(9) and shall comply with the requirements of 310 CMR 70.03: *Compliance Certification Requirements*.

(8) Recordkeeping Requirements.

(a) Manufacturers subject to 310 CMR 75.00 shall keep records on-site that demonstrate compliance with 310 CMR 75.04, and the supporting information that the manufacturer relied upon to file the plan required by 310 CMR 75.04, and may be required to submit said records upon request of the Department.

(b) Records shall be maintained for at least five years.

(9) Annual Compliance Certification.

(a) Manufacturers subject to 310 CMR 75.04 shall submit a compliance certification annually to the Department. Such certification shall address compliance with the requirements of 310 CMR 75.04 on a form prescribed by the Department that shall include at least the following information:

1. The type and number of each mercury-added product collected in Massachusetts and recycled;
2. The estimated number of each mercury-added product expected to be available for collection in Massachusetts for recycling in the year covered by the certification, which shall be based on a rolling average life expectancy of the product (assuming normal use by the user);
3. The number of mercury-added products the manufacturer sold, offered for sale or distribution in Massachusetts in the year covered by the certification;
4. Calculation of the actual recycling rate;
5. Certification that documentation and records are being maintained as required by 310 CMR 75.04(8);
6. Certification that the plan will continue to be implemented (identifying any changes needed to address operating issues or to ensure that the target capture rate is met) during the coming year; and
7. The certification required by 310 CMR 70.03: *Compliance Certification Requirements*.

75.04: continued

(b) Compliance certifications shall be submitted to the Department by March 31st of each year. The first compliance certification shall cover the period from the commencement of plan implementation through the first full calendar year of implementation.

(c) Information included in a compliance certification may be submitted to the Department with a claim of confidentiality, including a claim that the information is confidential business information, pursuant to 310 CMR 3.00: *Access to and Confidentiality of Department Records and Files* and/or the state public records act. A completed confidentiality form available from the Department shall be submitted along with the compliance certification wherein the rationale for the confidentiality claim, based on the criteria set out at 310 CMR 3.23: *Criteria for Determining a Trade Secret*, is described. When confidentiality is requested, the Department will follow standard confidentiality procedures laid out in 310 CMR 3.00. Information included in a compliance certification claimed to be confidential, as well as any documents the Department creates using that information (such as fee invoices), will be separated from the Department's public files and held as confidential until a public records request is made to see that information, whereupon the Department will make a final confidentiality determination pursuant to 310 CMR 3.00

75.05: Mercury-added Lamps

(1) A manufacturer of mercury-added lamps shall satisfy the requirements of 310 CMR 75.04 if, such manufacturer who sells mercury-added lamps in the Commonwealth of Massachusetts individually pays, until June 30, 2024, an annual registration fee in accordance with the requirements of 310 CMR 4.03(2): *Table 4.03* and with the requirements of 310 CMR 75.05. Manufacturers shall make such payments to the Department to be deposited into an expendable trust fund established in accordance with M.G.L. c. 6A, § 6. Such fund shall be maintained for the purpose of Department and municipal administration, access, communication, enforcement, and education costs for proper mercury-added lamp recycling or disposal.

(2) Manufacturers of mercury added lamps that either fail to pay an annual registration fee in accordance with 310 CMR 4.03(2): *Table 4.03* and 310 CMR 75.05, or fail to submit and implement a collection and recycling plan and the annual compliance certifications pursuant to 310 CMR 75.04, shall not sell, offer to sell, or distribute mercury-added lamps in Massachusetts.

(3) Manufacturers of mercury-added lamps that do not submit a collection and recycling plan or the annual compliance certification pursuant to 310 CMR 75.04 shall comply with 310 CMR 75.05(3)(a) or (b).

(a) Manufacturers that sold, offered for sale or distributed mercury-added lamps in Massachusetts in the prior calendar year shall submit to the Department:

1. on or before 30 days after April 5, 2019 and on or before March 1st of every year thereafter, through 2024, an annual registration on a form prescribed by the Department. Such registration shall include the total number of mercury-added lamps sold by that manufacturer in Massachusetts in the previous calendar year, and the certification required by 310 CMR 75.05(8). This annual registration will also serve as a basis for an invoice for an annual registration fee based on mercury-added lamp sales in Massachusetts in the prior calendar year and established in accordance with 310 CMR 4.03(2): *Table 4.03*. Mercury-added lamp manufacturers choosing to calculate Massachusetts sales on the basis of population shall use the most recently published population estimates published by the United States Census Bureau; and
2. on or before the invoice payment due date of each year, the annual registration fee established in accordance with 310 CMR 4.03(2): *Table 4.03*.

(b) Manufacturers that did not sell, offer for sale, or distribute mercury-added lamps in Massachusetts in the prior calendar year shall submit a non-applicability notification to the Department on or before 30 days after April 5, 2019 and on or before March 1st of every year thereafter, through 2024.

1. Such notification shall be on a form prescribed by the Department and shall include the certification required by 310 CMR 75.05(8).
2. In calendar year 2019 such notification is only required from manufacturers that had submitted a mercury-added lamp compliance certification in 2014. Thereafter, through 2024, the non-applicability notification is only required from mercury-added lamp manufacturers that were required to submit an annual registration in the prior year.

75.05: continued

- (4) Each manufacturer of mercury-added lamps shall notify the Department when there has been a change in ownership. Such notification shall be submitted to the Department no later than 30 days following the change in ownership and shall include the date of the change in ownership.
- (5) Manufacturers of mercury-added lamps shall individually or collectively provide mercury-added lamp retailers with a printed copy of the following notice free of charge upon request. The notice shall be in 24-point type or larger and shall state the following: "Fluorescent bulbs save energy and reduce environmental pollution. Note: Fluorescent bulbs contain a small amount of mercury and must be properly recycled at the end of their use. Contact your municipality or www.lamprecycle.org for bulb recycling options."
- (6) Qualified mercury-added lamp recyclers shall:
- (a) Upon collection of mercury-added lamps from within Massachusetts, provide a mercury-lamp recycling certificate to each person delivering mercury-added lamps from within Massachusetts to the facility. The certificate shall be on a form prescribed by the Department.
 - (b) Submit to the Department an annual report containing information regarding the recycling of mercury-added lamps by persons in the Commonwealth of Massachusetts on a form prescribed by the Department, including but not limited to:
 1. The number of mercury-added lamp recycling certificates issued during the previous year;
 2. The number of intact mercury-added lamps collected from within Massachusetts during the previous year; and
 - a. The number disposed;
 - b. The number from which the facility separated and recovered the components and mercury contained therein;
 - c. The amount of mercury disposed; and
 - d. The amount of mercury made available for reuse.
 3. An estimate of the number of broken mercury-added lamps collected from within Massachusetts during the previous year and;
 4. The name and address of the facility where the mercury-added lamps were recycled.
- (7) Each person delivering mercury-added lamps from Massachusetts to a qualified mercury-added lamp recycler shall retain all mercury-lamp recycling certificates for a minimum of three years and provide access to such certificates upon request by the Department.
- (8) The annual registration required by 310 CMR 75.05(3)(a), the non-applicability notification described in 310 CMR 75.05(3)(b), and the annual report required by 310 CMR 75.05(6)(b) shall include the following certification: "I, [name of Responsible Official, as defined in 310 CMR 70.02: *Environmental Results Program Certification*], attest under the pains and penalties of perjury:
- (a) that I have personally examined and am familiar with the information contained in this submittal, including any and all documents accompanying this certification statement;
 - (b) that, based on my inquiry of those individuals responsible for obtaining the information, the information contained in this submittal is to the best of my knowledge, true, accurate, and complete; and
 - (c) that I am fully authorized to make this attestation on behalf of this facility or unit. I am aware that there are significant penalties, including, but not limited to possible fines and imprisonment, for submitting false, inaccurate, or incomplete information."

75.06: Ban on Sales and Distribution of Mercury-added Products

- (1) No person shall sell, offer to sell, or distribute in Massachusetts the following mercury-added products on or after May 1, 2008:
- (a) thermostats;
 - (b) barometers;
 - (c) flow meters;
 - (d) hydrometers;
 - (e) hygrometers or psychrometers;

75.06: continued

- (f) manometers;
- (g) pyrometers;
- (h) sphygmomanometers;
- (i) basal thermometers; or
- (j) esophageal dilators, bourgie tubes or gastrointestinal tubes.

(2) The ban on sale or distribution established in 310 CMR 75.06(1) shall not apply to thermometers if they are determined to be medically necessary by a licensed physician or are ordered by prescription.

(3) No person shall sell, offer to sell, or distribute in Massachusetts a mercury switch or mercury relay, individually or as a product component, on or after May 1, 2009. 310 CMR 75.06(3) shall not apply if:

- (a) The mercury switch or mercury relay is a component in a larger product in use before May 1, 2009 and the Department determines that there is no mercury-free alternative available for the component, and:
 - 1. the larger product is used in manufacturing (equipment or machinery at a fixed location that is used in making a product from raw materials, *e.g.*, a papermaking machine); or
 - 2. the switch or relay is integrated and not physically separate from other components of the larger product (*i.e.*, embedded in the larger product such that the larger product would have to be replaced to accommodate a non-mercury replacement switch or relay); or
- (b) A mercury switch or a mercury relay is integrated as a component of a larger product that has been refurbished for resale and which was originally manufactured before October 26, 2006.

75.07: Exemptions from the Sales and Distribution Ban

(1) The manufacturer, importer, or distributor of a mercury switch, relay, instrument or device subject to the sales prohibitions in 310 CMR 75.06 may apply to the Department for an exemption from the prohibition on sale or distribution.

(2) The Department may grant an exemption, with or without conditions, upon determining that the conditions described in 310 CMR 75.07(2)(a) through (d) all apply, or that the condition described in 310 CMR 75.07(2)(e) applies:

- (a) Use of the mercury-added product is beneficial to the environment, or protective of public health or public safety, based on consideration of:
 - 1. The amount of mercury expected to be placed in commerce annually if the exemption is granted;
 - 2. The likelihood that the mercury in the product will be released to the environment, or that users of the product will be exposed to the mercury;
 - 3. The steps that will be taken through product design and other methods to ensure that mercury is not released during use and disposal of the product; and
 - 4. The nature of the claimed benefit, and whether it differs in kind or degree from the environment, public health and public safety benefits afforded by available non-mercury alternatives.
- (b) There is no technically feasible non-mercury alternative available, based on consideration of:
 - 1. A description of past, current and planned efforts to identify or develop non-mercury alternatives;
 - 2. The individuals, companies and resources consulted during the search for non-mercury alternatives;
 - 3. A description of all potential non-mercury alternatives that have been identified and considered; and
 - 4. The specific basis (*e.g.*, electrical performance, size, power consumption, product life) for concluding that each potential alternative was not technically feasible for the intended use.

75.07: continued

- (c) There is no comparable non-mercury alternative available at a reasonable cost, based on consideration of:
 - 1. The purchase price differential between the mercury-added product and any available non-mercury alternatives; and
 - 2. Costs other than purchase price associated with the substitution of a non-mercury alternative, if applicable.
- (d) An effective system for the collection, transportation and processing of the mercury-added product at the end of life, pursuant to 310 CMR 75.04, has been implemented at the time that the exemption application is submitted.
- (e) The use of the product is a federal requirement, as evidenced by
 - 1. a statute or regulation;
 - 2. a contract specification; or
 - 3. another documented federal requirement.

(3) Contents of Applications for Exemption from Sales and Distribution Ban.

- (a) An application for an exemption based on the conditions in 310 CMR 75.07(2)(a) through (d) shall contain the following information, as applicable:
 - 1. Applicant's name, mailing address, telephone number, North American Industry Classification System, e-mail address, web address and relationship to the product manufacturer;
 - 2. The name, mailing address, telephone number, and e-mail address of a contact person for the applicant;
 - 3. Product manufacturer's name, mailing address, telephone number, North American Industry Classification System, e-mail address and web address (if different from applicant);
 - 4. The name, mailing address, telephone number, and e-mail address of a contact person for the product manufacturer;
 - 5. A description of the mercury-added product for which an exemption is requested, including the specific uses of the product and an explanation of the amount and purpose of the mercury in the product;
 - 6. An explanation of the environmental, public health or public safety benefits that the mercury-added product offers in comparison with available non-mercury alternatives;
 - 7. The amount of mercury expected to be placed in commerce annually if the exemption is granted;
 - 8. The likelihood that the mercury in the product will be released to the environment, or that users of the product will be exposed to the mercury;
 - 9. The steps that will be taken through product design and other methods to ensure that mercury is not released during use and disposal of the product;
 - 10. A description of past, current and planned efforts to identify or develop non-mercury alternatives;
 - 11. A list of the individuals, companies and resources consulted during the search for non-mercury alternatives;
 - 12. A description of all potential non-mercury alternatives that have been identified and considered;
 - 13. The specific basis (*e.g.*, electrical performance, size, power consumption, product life) for concluding that each potential alternative was not technically feasible for the intended use;
 - 14. The purchase price differential between the mercury-added product and any available non-mercury alternatives;
 - 15. Costs other than purchase price associated with the substitution of a non-mercury alternative, if applicable; and
 - 16. A short description of the collection and recycling system that has been implemented for end-of-life mercury-added products pursuant to the requirements of 310 CMR 75.04.

(4) Submission of Applications for Exemption from Sales and Distribution Ban.

- (a) Applications for exemptions from the sales and distribution ban shall be submitted to the Department or IMERC on a form prescribed by IMERC that shall include the information described in 310 CMR 75.07(3).

75.07: continued

(b) Such application shall be accompanied by a statement prescribed by 310 CMR 70.03(2)(d), to certify the accuracy of the information in the application.

(c) Manufacturers may request that the Department keep the information described in 310 CMR 75.07(3) confidential, in accordance with the requirements and procedures established in 310 CMR 3.00: *Access to and Confidentiality of Department Records and Files*.

(d) An exemption application filed with IMERC that complies with the requirements of 310 CMR 75.07(2) and (3) or requirements established by other IMERC states shall be deemed to have been submitted to the Department.

(5) The Applicant Applying Directly to the Department or IMERC Shall Publish a Legal Notice in a Massachusetts Newspaper of General Circulation and the Massachusetts Environmental Monitor.

(a) The legal notice shall include:

1. A summary of the application for exemption;
2. A statement that comments can be sent to the Mercury Program Manager at the Massachusetts Department of Environmental Protection up to 21 days after the date that the legal notice is published, and instructions for sending comments including the appropriate mailing address; and
3. Instructions for obtaining a complete copy of the application for exemption.

(b) Within five days following the publication of the legal notice, the applicant shall send a tear sheet of the legal notice to the Mercury Program Manager at the Massachusetts Department of Environmental Protection.

(6) Decisions on Applications for Exemption from Sales and Distribution Ban.

(a) The Department shall determine whether the application is complete based on the information required in 310 CMR 75.07, and may request additional information.

(b) The Department shall consult with the Massachusetts Department of Public Health in reviewing applications for exemptions that pertain to mercury-added products used in medical settings and other items that may affect public health.

(c) The Department shall consult with other states that regulate mercury-added products that are affected by the sales ban to ensure consistency in decisions among states to the extent practicable.

(d) Exemptions shall be valid for a period of time not to exceed three years from the date of approval. An exemption may be renewed at the discretion of the Department, based on an application that meets the requirements of 310 CMR 75.07, submitted no later than six months prior to the end of the previously approved exemption period.

(e) Exemptions that have been approved by IMERC states prior to August 21, 2009 shall be deemed to be approved by the Department for the duration that the exemption has been granted.

(7) An application for an exemption based on 310 CMR 75.07(2)(e) shall contain the following information:

(a) All information required in 310 CMR 75.07(3)(a)1. through 5.;

(b) A copy of the relevant federal statute, regulation, contract specification, or other federal requirement, and contact information for the federal agency (including a staff contact) that established the requirement; and

(c) A statement prescribed by 310 CMR 70.03(2)(d).

(d) An applicant requesting an exemption under 310 CMR 75.07(2)(e) is not required to publish a legal notice as per 310 CMR 75.07(5).

(e) If the Department determines that the product is not eligible for an exemption from the sales and distribution ban under 310 CMR 75.07(2)(e), the manufacturer shall either comply with the sales and distribution ban or apply for an exemption in accordance with 310 CMR 75.07(3).

75.08: Labeling of Mercury-added Products and Notification to Purchasers

(1) General Labeling Requirements. On or after May 1, 2008, no person shall sell, offer to sell, or distribute a mercury-added product in Massachusetts unless the manufacturer:

75.08: continued

- (a) Submits to the Department a labeling plan for such product that meets the requirements of 310 CMR 75.08(3) and (4) and implements the labeling plan in accordance with the requirements of 310 CMR 75.08(3) and (4); or
- (b) Labels such product in compliance with a labeling plan approved by another state that is a member of IMERC, pursuant to 310 CMR 75.08(5).

(2) The following mercury-added products are exempt from the requirements of 310 CMR 75.08:

- (a) Refurbished medical equipment;
- (b) Mercury-added products whose only mercury component is a removable mercury-added lamp;
- (c) Mercury-added products whose only mercury component is a button cell battery.

(3) Labeling Standards for Labeling Plans Submitted to the Department. Prior to sale or distribution of a mercury-added product, the manufacturer of the product shall affix or cause to be affixed a label that conforms to the following requirements:

(a) Label Content. Product labels, and package labels if required, shall clearly inform the prospective purchasers and product users, using words or symbols, that the product contains mercury and shall clearly specify that the mercury-added product be reused, recycled or properly disposed of as hazardous waste at the end of the product's useful life.

(b) Product Label Standards.

1. The label must be affixed to the product so that the label is clearly visible (*e.g.*, on an outer surface of the product) and legible. A label printed using ten-point font or larger is presumed to be legible.
2. Labels affixed to products must be printed, mounted, molded, engraved or otherwise affixed using materials that are sufficiently durable to remain legible under the conditions of the product's intended use for the useful life of the product.

(c) Product Label Location.

1. Labels shall be placed on mercury-added products so they can be seen by prospective purchasers and product users, and in conformance with the labeling plan described in 310 CMR 75.08(4).
2. Manufacturers of products that contain, as their only mercury-added component, one or more irremovable mercury-added lamps that are used for backlighting shall meet the requirements of 310 CMR 75.08(3)(b) and (c) by placing the label on the product or in its "care and use" manual (if such a manual is provided to purchasers).
3. Manufacturers of button cell batteries are not required to place a label on the product but shall place a label on the product packaging in accordance with 310 CMR 75.08(3)(d)3.
4. Mercury-added products that are components of larger products shall be labeled as required by 310 CMR 75.08(3)(a) and (b). In addition:
 - a. If the mercury-added component label is not clearly visible to prospective purchasers and product users, then the product shall be labeled. Such label shall identify the component in sufficient detail so that it can be readily located for removal and proper end-of-life management.
 - b. Supplemental information about the location of the mercury-added component and instructions on its removal and proper end-of-life management may be provided in the care and use manual, if the product has one.
 - c. Each new motor vehicle sold on or after May 1, 2008 shall contain a label listing the mercury-added product(s) that may be components in the vehicle. The label shall be affixed in a visible location on the doorpost of the driver's compartment (and not on the door itself) unless, in accordance with 310 CMR 75.08(5), a different location has been proposed by the manufacturer and accepted by another state that is a member of IMERC.

(d) Product Package Label.

1. In addition to the label on the product required by 310 CMR 75.08(3)(b) and (c), the packaging for a mercury-added product shall be labeled, except when the product label can easily be viewed through the packaging, in order to inform prospective purchasers and product users, prior to purchase, that the product contains mercury and will need to be managed properly at the end of its useful life.

75.08: continued

2. Packaging of mercury-added components offered for sale or distribution as replacement parts shall be labeled in accordance with 310 CMR 75.08(3)(a).
 3. Labels affixed to packaging of mercury-added products must be printed, mounted, molded, engraved or otherwise affixed using materials that are sufficiently durable to remain legible under the conditions of the packaging's intended use for the expected life of the packaging. A label printed using ten-point font or larger is presumed to be legible.
 4. If a manufacturer purchases a mercury-added product from another manufacturer and repackages the product, the manufacturer repackaging the product shall label the package in accordance with 310 CMR 75.08(3)(a).
- (e) Where labels on the product or product packaging are not clearly visible and legible to prospective purchasers and product users prior to purchase, (*e.g.*, in catalog sales transactions that occur over the internet, telephone or postal service), the manufacturer or retailer shall:
1. Clearly inform the purchaser that the product contains mercury and shall clearly specify that the mercury-added product be reused, recycled or properly disposed of as hazardous waste at the end of the product's useful life.
 2. Such notice shall be provided as part of the product's description either in the catalog or on the website used to place the online order.
- (4) Labeling Plans. Manufacturers of mercury-added products for which an IMERC state has not approved a labeling plan, or who are revising a labeling plan previously filed with the Department, shall submit a labeling plan to the Department that includes, at a minimum, the following information:
- (a) Applicant's name, mailing address, telephone number, North American Industry Classification System, e-mail address, and web address.
 - (b) The name, mailing address, telephone number, and e-mail address of a contact person for the applicant.
 - (c) A detailed description of:
 1. the products covered by the plan, label size, font size, label material, wording, location, and attachment method for each product and for the product packaging in accordance with 310 CMR 75.08(3);
 2. how prospective purchasers and product users shall be notified that the product contains mercury, and that the product must be reused, recycled or properly disposed of as hazardous waste at the end of the product's useful life in accordance with 310 CMR 75.08(3); and
 3. the certification required by 310 CMR 70.03: *Compliance Certification Requirements*.
- (5) Consistency with Other States. The manufacturer of a mercury-added product may satisfy the requirements of 310 CMR 75.08 by labeling all units of the product sold or distributed in Massachusetts and by effectively implementing in Massachusetts a labeling plan that has been approved by and implemented in another state that is a member of IMERC. In order for the Department to determine whether a product labeling plan approved by another state is being effectively implemented in Massachusetts, the manufacturer shall provide the following, upon the Department's request:
- (a) A copy of the label as it appears on products and product packaging sold in Massachusetts;
 - (b) A copy of the application or labeling plan approved by another state that is a member of IMERC; and
 - (c) A copy of the letter approving the use of the label in another state that is a member of IMERC.
- (6) Notification to Purchasers of Mercury-added Lamps.
- (a) In addition to the requirements of 310 CMR 75.08 for labeling mercury-added products, any person who sells mercury-added lamps, either directly or through a service contract, to the owner or manager of an industrial, commercial or office building, or to any person who replaces or removes from service outdoor lamps that contain mercury, or to an agent or contractor of such parties, shall clearly inform the purchaser in writing on the invoice or in a separate document that:

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

75.08: continued

1. the lamps contain mercury;
 2. mercury is a hazardous substance that is regulated by federal and state law; and
 3. end-of-life lamps must be managed in accordance with 310 CMR 76.05.
- (b) Recordkeeping Requirements.
1. A person subject to 310 CMR 75.08(6)(a) shall keep records on-site that demonstrate compliance with 310 CMR 75.08(6).
 2. Records shall be maintained for at least three years.
- (c) Retail establishments that incidentally sell mercury-added lamps (*i.e.*, fewer than 50 lamps per transaction) to the purchasers specified in 310 CMR 75.08(6)(a) are exempt from 310 CMR 75.08(6).

REGULATORY AUTHORITY

310 CMR 75.00: M.G.L. c. 21C, §§ 4 and 6, c. 21H, §§ 6D, 6E, 6F, 6J, 6K and 6N.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

310 CMR 76.00: DISPOSAL PROHIBITION OF MERCURY-ADDED PRODUCTS IN SOLID WASTE

Section

- 76.01: Purpose and Authority
- 76.02: Definitions
- 76.03: Applicability
- 76.04: Disposal Requirements
- 76.05: Management of End-of-Life Mercury-Added Products

76.01: Purpose and Authority

(1) The purpose of 310 CMR 76.00 is to protect public health, safety, welfare and the environment by implementing the Mercury Management Act (Chapter 190 of the Acts of 2006). These regulations prohibit the disposal of mercury-added products in any manner other than by recycling, disposing as hazardous waste in accordance with M.G.L. c. 21C and 310 CMR 30.000, or using an alternative method approved by the Department.

(2) 310 CMR 76.00 is promulgated pursuant to the authority of M.G.L. c. 21C, §§ 4 and 6, M.G.L. c. 21H, §§ 6I, 6L and 6N.

76.02: Definitions

The definitions found in 310 CMR 76.02 apply to, and are limited to, 310 CMR 76.00.

End of Life Mercury-added Product means any mercury-added product that is no longer being used for its intended purpose and meets the definition of solid waste or hazardous waste.

Hazardous Waste means Hazardous Waste, as defined in 310 CMR 30.010.

Mercury-added Component means a component that contains mercury.

Mercury-added Formulated Product means a chemical product to which mercury has been added, intentionally or unintentionally, including, but not limited to, laboratory chemicals, cleaning products, cosmetics, pharmaceuticals and coating materials that are sold as consistent mixtures of chemicals.

Mercury-added Product means a product to which the manufacturer intentionally introduces mercury, including, but not limited to, electric lamps, thermostats, automotive devices, electric switches, medical or scientific instruments, electric relays or other electrical devices, but not including products made with coal ash or other products that are incorporated into equipment used to manufacture semiconductor devices, elemental mercury in pre-capsulated form that is sold, distributed or provided to a dental practitioner for use in compliance with the department's regulations concerning amalgam wastewater and recycling for dental facilities, or mercury-added formulated products. This term includes mercury-added components that are incorporated into larger products.

Person means any natural or corporate person, whether public or private, including corporations, societies, associations and partnerships and bodies politic and corporate, public agencies, authorities, departments, offices and political subdivisions of the Commonwealth.

Reclaimed or Reclamation means processing to recover a usable product, but does not include burning (e.g., for energy recovery) or use constituting disposal.

Scrap Recycling Facility means a facility, location, device or unit where machinery and equipment are used for processing and manufacturing scrap metal into prepared grades and whose principal product is scrap iron, scrap steel or nonferrous metallic scrap for sale for remelting purposes.

Solid Waste means Solid Waste as defined in 310 CMR 16.02 and 310 CMR 19.006.

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

76.02: continued

Solid Waste Collector means any person who collects solid waste from residential, business, commercial, industrial or other establishments.

76.03: Applicability

(1) 310 CMR 76.00 applies, on or after May 1, 2008, to any person who generates (including the original consumer), collects or processes a mercury-added product for disposal and to any solid waste collector in Massachusetts.

(2) Compliance with 310 CMR 76.00 does not release any person from the need to comply with other applicable federal, state and local requirements.

76.04 Disposal Requirements

(1) No person, household, school, healthcare facility, state or municipal government or business (including solid waste landfills, municipal waste combustors, and solid waste handling facilities) shall knowingly dispose of a mercury-added product in any manner other than by recycling, disposing as hazardous waste or using an alternate method approved by the Department.

(2) Alternative methods of disposal for mercury-added products and mercury-added components.

(a) Alternative methods of disposal for categories or types of mercury-added products and mercury-added components.

1. The department in its sole discretion may approve alternative methods of disposal for categories or types of mercury-added products and components. Such approvals may be made in response to requests in writing that describe:

- a. why an alternative to mercury reclamation or disposal as hazardous waste is necessary;
- b. the alternative method proposed;
- c. the environmental impacts of the proposed method; and
- d. a description of the measures that will be implemented to minimize exposure of people and the environment to mercury.

2. In approving an alternative method of disposal, the department will consider the following:

- a. the ability to reclaim the mercury from the product or component in a cost efficient manner;
- b. the ability to safely contain and transport the product or component; and
- c. the existence of a manufacturer's plan for collecting the product or component, in accordance with 310 CMR 75.04, and reclaiming its mercury content or otherwise preventing the mercury from entering the waste stream.

3. List of Approved Alternative Methods of Disposal for Categories of Mercury-added Products and Mercury-added Components. Accidentally broken mercury lamps that are excluded from the hazardous waste regulations pursuant to 310 CMR 30.104(2)(g) [household waste exclusion] may be disposed of as solid waste.

(b) Alternative methods of disposal for individual mercury-added products and mercury-added components on a case-by-case basis.

1. The Department may also issue approvals of alternative methods for disposal of individual mercury-added products or mercury-added components on a case-by-case basis, in response to requests submitted in writing. Any such requests shall include at a minimum:

- a. why an alternative to mercury reclamation or disposal as hazardous waste is necessary;
- b. the alternative method proposed;
- c. an implementation schedule;
- d. the environmental impacts of the proposed method; and
- e. a description of the measures that will be implemented to minimize exposure of people and the environment to mercury.

2. The person requesting an alternative method for disposal of individual mercury-added products or mercury-added components shall publish a legal notice in a Massachusetts newspaper of general circulation and the Massachusetts Environmental Monitor. The legal notice shall include:

310 CMR: DEPARTMENT OF ENVIRONMENTAL PROTECTION

76.04: continued

- a. A summary of the request;
- b. A statement that comments can be sent to the Mercury Program Manager at the Massachusetts Department of Environmental Protection up to 21 days after the date that the legal notice is published, and instructions for sending comments including the appropriate mailing address; and
- c. Instructions for obtaining a complete copy of the written request for an alternative method of disposal.

3. Within five days following the publication of the legal notice, the applicant shall send a tear sheet of the legal notice to the Mercury Program Manager at the Massachusetts Department of Environmental Protection.

(3) A solid waste collector shall refuse to collect the contents of a solid waste container that the solid waste collector knows or reasonably should know contains one or more mercury-added products unless such solid waste is collected for the purpose of being reused, reclaimed or properly disposed of as hazardous waste or otherwise managed to ensure that the mercury does not become mixed with other solid waste or wastewater.

(4) Mercury from mercury-added products shall not knowingly be discharged into water, wastewater treatment or wastewater disposal systems unless it is done in compliance with applicable federal, state and local requirements.

76.05: Management of End-of-Life Mercury-Added Products

(1) End of life mercury-added products that are hazardous waste pursuant to 310 CMR 30.000 shall be handled in accordance with 310 CMR 30.000.

(a) End of life mercury-added products that are universal wastes pursuant to 310 CMR 30.1000 may be handled in accordance with 310 CMR 30.1000.

(b) Mercury-added components that are removed from larger products and that are classified as universal waste may be handled in accordance with 310 CMR 30.1000.

(2) End of life mercury-added products that are not hazardous waste shall be managed in accordance with an alternative method approved by the Department pursuant to 310 CMR 76.04(2) or in accordance with the following requirements:

(a) separated from solid waste;

(b) handled and stored in a manner that minimizes breakage, prevents an unpermitted discharge of mercury to air, land, water or other natural resources of Massachusetts and results in no public nuisance;

(c) transported by either a licensed hazardous waste transporter or by common carrier with a bill of lading; and

(d) transferred to a permitted hazardous waste recycling facility, licensed hazardous waste facility, a facility that consolidates shipments of mercury-added products or mercury-added components before being shipped off-site for reclamation, or if shipped out of state, a facility that is authorized to reclaim mercury from mercury-added products.

(3) No person shall knowingly send a multi-component product that contains mercury to a scrap recycling facility or a facility for further processing or recycling without first removing and managing, or arranging for the removal and appropriate management, of the mercury-added product or products prior to crushing, unless such facility agrees, in writing, to be responsible for removing such product or products and recycling them or disposing of them as hazardous waste.

REGULATORY AUTHORITY

310 CMR 76.00: M.G.L. c.21C, §§ 4 and 6 and c.21H, §§ 6I and 6L.

310 CMR 77.00: COLLECTION AND RECYCLING OF MERCURY-ADDED THERMOSTATS

Section

- 77.01: Purpose
- 77.02: Definitions
- 77.03: Applicability
- 77.04: Collection of Mercury-added Thermostats
- 77.05: Management of Mercury-added Thermostats

77.01: Purpose

The purpose of 310 CMR 77.00 is to protect public health, safety, welfare and the environment by implementing M.G.L. c. 21H, § 6J½ and St. 2014, c. 196, § 5. 310 CMR 77.00 requires manufacturers that distributed, offered for final sale, or sold at final sale mercury-added thermostats, to establish a system to collect, transport, and properly manage out-of-service mercury-added thermostats, including recycling of such thermostats, in accordance with M.G.L. c. 21C and 310 CMR 30.000: *Hazardous Waste*. 310 CMR 77.00 establishes requirements for collection and proper management of mercury-added thermostats.

77.02: Definitions

The definitions found in 310 CMR 77.02 apply to, and are limited to, 310 CMR 77.00.

Collection Site means a location for the collection of out-of-service mercury-added thermostats which is either part of a manufacturer sponsored collection program established pursuant to 310 CMR 77.04 or a location where mercury-added thermostats are collected and managed in accordance with applicable federal and state laws governing hazardous waste and universal waste, including 310 CMR 30.000: *Hazardous Waste*.

Contractor means a person engaged in the business of installation, service or removal of heating, ventilation, and air conditioning components.

Department means the Massachusetts Department of Environmental Protection.

Local Governmental Authority means a household hazardous waste facility, a solid waste management agency, an environmental management agency, or a department of public health.

Manufacturer means an organization or entity that sells or sold a mercury-added thermostat under a brand or label it owns or is or was licensed to use a brand or label for a mercury-added thermostat produced by other suppliers.

Mercury-added Thermostat means a product or device that uses a mercury switch to sense and control room temperature through communication with heating ventilation, or air conditioning equipment, including thermostats used to sense and control room temperature in residential, commercial, industrial, or other buildings, but excluding thermostats used to sense and control temperature as part of a manufacturing process.

Person means an individual, trust, firm, joint stock company, corporation, including a government corporation, partnership, association, the federal government or any agency or subdivision thereof, a state, municipality, commission, political subdivision of a state or any interstate body.

Properly Manage Out-of-service Mercury-added Thermostats means to recycle or manage as a hazardous waste or universal waste in compliance with 310 CMR 30.000: *Hazardous Waste*.

Qualified Contractor means a person engaged in the business of installation, service, or removal of heating, ventilation, and air conditioning components who employs seven or more service technicians or installers or who is located in an area outside an urban area, as defined by the United States Bureau of Census.

77.02: continued

Solid Waste Facility means a site or works, and other appurtenances thereto, which is, has been, or will be used for the handling, storage, transfer, processing, treatment or disposal of solid waste, as defined in 310 CMR 19.006: *Definitions*, including all land, structures and improvements which are directly related to solid waste activities.

Thermostat Retailer means a person that sells thermostats of any kind directly to homeowners, other non-professionals, or contractors through any selling or distribution mechanism, including, but not limited to, sales using the internet or catalogs.

Thermostat Wholesaler means a person engaged in the distribution and wholesale sale of thermostats and other heating, ventilation, and air conditioning components to contractors who install heating, ventilation, and air conditioning components.

77.03: Applicability

- (1) 310 CMR 77.00 applies to:
 - (a) Manufacturers that distributed, offered for final sale, or sold at final sale any mercury-added thermostat within the Commonwealth of Massachusetts;
 - (b) Thermostat wholesalers;
 - (c) Thermostat retailers;
 - (d) Contractors;
 - (e) Qualified contractors;
 - (f) Solid waste haulers;
 - (g) Operators of solid waste facilities; and
 - (h) Any person who generates (including the original consumer), who generates, collects, processes, or manages a mercury-added thermostat for disposal in Massachusetts.
- (2) Compliance with 310 CMR 77.00 does not release manufacturers, wholesalers, retailers, contractors, qualified contractors, solid waste haulers, operators of solid waste facilities or other persons from the need to comply with other applicable state, federal and local requirements.

77.04: Collection of Mercury-added Thermostats

- (1) Manufacturers that distributed, offered for final sale, or sold at final sale, any mercury-added thermostat within the Commonwealth shall, individually or collectively:
 - (a) Establish a system to collect, transport, and properly manage out-of-service mercury-added thermostats, including recycling, from all collection sites established pursuant to 310 CMR 77.04. Mercury-added thermostat manufacturers shall not charge a fee or other charge for this service, except a one-time program administration fee not to exceed \$25 per collection container provided pursuant to 310 CMR 77.04(1)(b).
 - (b) Make collection containers available to thermostat wholesalers, thermostat retailers, qualified contractors, and local government authorities within the Commonwealth that request them. Such containers shall be accompanied by information on proper management of mercury-added thermostats as a hazardous waste or universal waste, in accordance with Department regulations at 310 CMR 30.000: *Hazardous Waste*.
 - (c) Submit an annual report to the Department by March 1st of every year of the program, on a form prescribed by the Department, that shall include at a minimum:
 1. The number of mercury-added thermostats collected by the manufacturer(s) in the previous calendar year;
 - a. The number disposed; and
 - b. The number from which the facility separated and recovered the components and mercury contained therein.
 2. The estimated total amount of mercury contained in the thermostat components collected and recycled by the manufacturer(s) in the previous calendar year;
 3. An evaluation of the effectiveness of the manufacturer(s)' collection program including, but not limited to, an estimate of how many out-of-service mercury-added thermometers have yet to be collected;

77.04: continued

4. An accounting of the administrative costs of administering the collection and recycling program; and
 5. A list of all locations where collection containers were provided by the manufacturer(s), including locations that received collection containers during the calendar year. The list shall contain information including, but not limited to:
 - a. Location address;
 - b. The date each location received its mercury-added thermostat collection container; and
 - c. The number of mercury-added thermostats collected from each location.
 6. A description of the education and outreach efforts conducted pursuant to 310 CMR 77.04(1)(d).
- (d) Conduct education and outreach to:
1. Promote the availability of collection containers to:
 - a. Thermostat wholesalers;
 - b. Thermostat retailers;
 - c. Qualified contractors; and
 - d. Units of local government in the Commonwealth.
 2. Promote the importance of proper mercury-added thermostat management, mercury-added thermostat collection opportunities, and the availability of the manufacturer sponsored collection program to:
 - a. Contractors;
 - b. Homeowners; and
 - c. Persons.
 3. Provide signage to participating collection sites that can be prominently displayed to promote the collection and recycling of out-of-service mercury-added thermostats.
 4. Provide written materials or templates of written materials for reproduction by thermostat wholesalers and thermostat retailers to provide to customers at the time of purchase or delivery of thermostats. These materials shall include, but not be limited to, the following information:
 - a. The importance of properly managing out-of-service mercury-added thermostats; and
 - b. Mercury-added thermostat collection opportunities.
- (2) Thermostat wholesalers shall:
- (a) Not offer for final sale, sell at final sale, or distribute any thermostat of a manufacturer that is not in compliance with 310 CMR 77.00.
 - (b) Not offer for final sale, sell at final sale, or distribute any thermostat unless that thermostat wholesaler acts as a collection site for mercury-added thermostats.
 1. To qualify as a collection site, the thermostat wholesaler shall either:
 - a. Collect and manage mercury-added thermostats in accordance with applicable federal and state laws governing hazardous waste and universal waste, including 310 CMR 30.000: *Hazardous Waste*; or
 - b. Participate as a collection site in a manufacturer sponsored collection program established pursuant to 310 CMR 77.04.
 2. All collection sites shall provide visible signage identifying the location as a mercury-added thermostat collection site.
- (3) Thermostat retailers shall:
- (a) Not offer for final sale, sell at final sale, or distribute any thermostat of a manufacturer that is not in compliance with 310 CMR 77.00.
 - (b) Provide visible signage identifying the location as a mercury-added thermostat collection site, if acting as a collection site.
 1. To qualify as a collection site, the thermostat retailer shall either:
 - a. Collect and manage mercury-added thermostats in accordance with applicable federal and state laws governing hazardous waste and universal waste, including 310 CMR 30.000: *Hazardous Waste*; or
 - b. Participate as a collection site in a manufacturer sponsored collection program established pursuant to 310 CMR 77.04.

77.04: continued

(4) Qualified contractors acting as collection sites shall provide visible signage identifying the location as a mercury-added thermostat collection site. To qualify as a collection site, qualified contractors shall either:

- (a) Collect and manage mercury-added thermostats in accordance with applicable federal and state laws governing hazardous waste and universal waste, including 310 CMR 30.000: *Hazardous Waste*; or
- (b) Participate as a collection site in a manufacturer sponsored collection program established pursuant to 310 CMR 77.04.

77.05: Management of Mercury-added Thermostats

(1) Except as otherwise provided in 310 CMR 77.05, all persons shall dispose of mercury-added thermostats by recycling or by disposing as hazardous waste or universal waste in compliance with 310 CMR 30.000: *Hazardous Waste*.

(2) Contractors who remove mercury-added thermostats from buildings shall deliver such thermostats to a collection site established by mercury-added thermostat manufacturers pursuant to 310 CMR 77.04.

(3) Persons who demolish buildings shall remove all mercury-added thermostats prior to building demolition and either:

- (a) Deliver such thermostats to collection sites established by mercury-added thermostat manufacturers pursuant to 310 CMR 77.04; or
- (b) Collect and manage mercury-added thermostats in accordance with applicable federal and state laws governing hazardous waste and universal waste, including 310 CMR 30.000: *Hazardous Waste*.

(4) Persons who remove mercury-added thermostats from a location that is participating in an energy efficiency or weatherization program supported or administered in whole or part by a department, agency, authority, or political subdivision of the Commonwealth or conducted as a result of any statutory requirement, including, but not limited to, demand-side management or least-cost procurement, shall deliver such thermostats to a collection site established by mercury-added thermostat manufacturers pursuant to 310 CMR 77.04.

(5) No municipal or private solid waste haulers or operators of solid waste disposal facilities shall knowingly dispose, or allow to be disposed, a mercury-added thermostat as solid waste, as defined in 310 CMR 19.006: *Definitions*, unless the mercury has been first removed by recycling or disposed as hazardous waste in accordance with 310 CMR 30.000: *Hazardous Waste*.

(6) Solid waste facility operators may knowingly accept or collect mercury-added thermostats for proper disposal, only if:

- (a) The device is segregated from solid waste and stored in an identified recycling container; and
 1. the facility participates in a mercury-added thermostat manufacturer's collection program as a collection site; or
 2. the facility has established a site to collect, manage, and dispose of mercury-added thermostats as hazardous waste or universal waste in accordance with all applicable federal and state laws and regulations, including 310 CMR 30.000: *Hazardous Waste*.
- (b) Solid waste facility operators will not be found in violation of 310 CMR 77.05, if they:
 1. Make a good faith and consistent effort, as determined by the Department, to comply with 310 CMR 77.05(6);
 2. Post, in a conspicuous location at the facility, a sign stating that mercury-added thermostats are not accepted at this facility; and
 3. Notify, in writing, any person authorized to deposit solid waste at that facility that mercury-added thermostats are not accepted at this facility.

REGULATORY AUTHORITY

310 CMR 77.00: M.G.L. c. 21C, §§ 4 and 6, c. 21H, § 6J½ and 6N; and St. 2014, c. 196, § 5.

310 CMR 80.00: UNDERGROUND STORAGE TANK (UST) SYSTEMS

Section

GENERAL PROVISIONS

- 80.01: Authority
- 80.02: Purpose
- 80.03: Definitions
- 80.04: Applicability
- 80.05: Rules of Construction
- 80.06: Computation of Time
- 80.07: Accurate and Timely Submittals to the Department and Recordkeeping
- 80.08: Accurate and Complete Recordkeeping
- 80.09: Accurate Monitoring
- 80.10: Duty to Provide Information
- 80.11: Submittals to the Department
- 80.12: Presumption of Irreparable Harm
- 80.13: Department Access to UST Facilities and Records

DESIGN, CONSTRUCTION AND INSTALLATION REQUIREMENTS

- 80.14: General Requirements
- 80.15: General Prohibitions
- 80.16: Installation Requirements
- 80.17: Specifications for Tanks
- 80.18: Specifications for Regulated Substance Piping
- 80.19: Leak Detection
- 80.20: Requirements for Turbine, Intermediate and Dispenser Sumps
- 80.21: Requirements for Spill Buckets and Overfill Prevention Equipment
- 80.22: Requirements for Corrosion Protection

GENERAL OPERATING REQUIREMENTS

- 80.23: Requirements for Registration and Reporting
- 80.24: General Requirements
- 80.25: Requirements for an UST System or an UST Component Emergency Response
- 80.26: Requirements for Leak Detection Systems
- 80.27: Requirements for Turbine, Intermediate and Dispenser Sumps
- 80.28: Requirements for Spill Buckets and Overfill Prevention Equipment
- 80.29: Requirements for Corrosion Protection
- 80.30: Requirements for Compatibility
- 80.31: Requirements for Inventory Monitoring
- 80.32: Requirements for Tank and Pipe/Line Tightness Testing
- 80.33: Requirements for Repairs and Replacements
- 80.34: Requirements for Compliance Certification
- 80.35: Requirements for Periodic Inspections
- 80.36: Requirements for Recordkeeping

OPERATOR TRAINING

- 80.37: Class A, B and C Operator Requirements and Certifications

LEAKAGE AND RELEASE: RESPONSE, REPORTING AND REMEDIATION

- 80.38: Response to a Release
- 80.39: Response to Leakage
- 80.40: Reportable Releases

CHANGE-IN-PRODUCT, OUT OF SERVICE SYSTEMS AND CLOSURE

- 80.41: Requirements for Change-in-product
- 80.42: Requirements for Taking an UST System Temporarily Out-of-service
- 80.43: Requirements for Removal and Permanent Closure In-place
- 80.44: Requirements for a Tank within a Tank
- 80.45: UST Systems Temporarily Out-of-service for over Five Years
- 80.46: Requirements for Previously Closed-in-place UST Systems
- 80.47: Standards for Cleaning and Closure

Section: continued

DELIVERY PROHIBITION

80.48: Delivery Prohibition

THIRD-PARTY INSPECTIONS

80.49: Third-party Inspections

ENFORCEMENT AND APPEALS

80.50: Enforcement and Appeals

FINANCIAL RESPONSIBILITY

80.51: Definitions

80.52: Requirements for Amount and Scope of Financial Responsibility

80.53: Allowable Mechanisms and Combinations of Mechanisms

80.54: Requirements for Financial Responsibility Mechanisms

80.55: Requirements for a Standby Trust

80.56: Substitution of Financial Assurance Mechanisms by Owner or Operator

80.57: Cancellation or Nonrenewal by a Provider of Financial Assurance

80.58: Requirements for Reporting by Owner or Operator

80.59: Requirements for Recordkeeping

80.60: Requirements for Drawing on Financial Assurance Mechanisms

80.61: Release from Financial Responsibility Requirements

80.62: Bankruptcy or Other Incapacity of Owner or Operator or Provider of Financial Assurance

80.63: Requirements for Replenishment of Local Government Guarantees, Letters of Credit, or Surety Bonds

REQUIREMENTS FOR AIRPORT HYDRANT FUEL DISTRIBUTION SYSTEMS

80.64: Requirements for Airport Hydrant Fuel Distribution Systems

GENERAL PROVISIONS

80.01: Authority

310 CMR 80.00 is promulgated by the Commissioner of the Department of Environmental Protection pursuant to the authority granted by M.G.L. c. 21O, § 5, M.G.L. c. 21C, M.G.L. c. 21E, § 6 and M.G.L. c. 21A, § 16.

80.02: Purpose

310 CMR 80.00 is intended to protect public health, safety and the environment by regulating the design, installation, testing, maintenance, operation, inspection and closure of underground storage tank (UST) systems and to prevent releases from UST systems.

80.03: Definitions

For the purposes of 310 CMR 80.00, the following terms shall have the following meanings:

Abandoned means an UST system that is not in operation for a continuous period of at least one year and is not temporarily out-of-service in accordance with 310 CMR 80.42 and is not in full compliance with the applicable requirements of 310 CMR 80.00.

Airport Hydrant Fuel Distribution System (also called airport hydrant system) means an UST system which supplies fuel to aircraft and operates under high pressure with large diameter piping that typically terminates into one or more hydrants (fill stands). The airport hydrant system begins where fuel enters one or more tanks from an external source such as a pipeline, barge, rail car, or other fuel carrier.

80.03: continued

Automatic Line Leak Detector means a mechanical or electronic device, but not a sump sensor, designed to detect regulated substance or pressure losses in a pressurized product line of a pressurized pumping system and that automatically restricts or shuts off flow in a pressurized piping system. All automatic line leak detectors shall be able to detect a leak of three gallons per hour at one pound per square inch line pressure within one hour with a 95% probability of detection and a 5% probability of false alarm. At UST facilities that are staffed 24 hours per day, seven days per week, 365 days per year, an automatic line leak detector may be a continuous alarm that alerts staff when there is regulated substance or pressure loss in a pressurized product line of a pressurized pumping system.

Business Day means a day of the week that the Department is open for business.

Cathodic Protection or Cathodic Protection System means a technique which inhibits the corrosion of a UST system either through sacrificial or galvanic anode or impressed current.

Cathodic Protection Tester means a person who is certified as follows:

- (a) Certified at least at level CP1 - Cathodic Protection Tester by NACE: The Corrosion Society; or
- (b) Certified as a Cathodic Protection Tester by the Steel Tank Institute (STI); or
- (c) Certified in the UST Cathodic Protection category by the International Code Council (ICC).

CERCLA means the Comprehensive Environmental Response Compensation and Liability Act of 1980, 42 U.S.C. § 9601 *et seq.*

Certified UST System Tightness Tester means a person certified by the manufacturer of the testing equipment to test UST systems using only the testing equipment on which they are certified.

Change-in-product means changing the type of product in a UST system from a regulated substance to another regulated substance or to a non-regulated substance. Changing from one grade of gasoline to a different grade of gasoline is not a change-in-product.

Commissioner means Commissioner of the Department of Environmental Protection.

Commonwealth means the Commonwealth of Massachusetts.

Compatible means that two or more substances maintain their respective physical and chemical properties upon contact with one another under conditions encountered within or around an underground storage tank system for the design life of that system.

Consumptive Use means storing fuel oil exclusively for area heating and/or the heating of domestic water on the premises where stored. Waste oil used for heating is not considered consumptive use.

Continuous Monitoring means the use of a device capable of automatic, uninterrupted and unattended surveillance.

Corrosion Expert means a person who is accredited or certified as being qualified by NACE International as a Cathodic Protection Specialist or Corrosion Specialist. The corrosion expert shall follow applicable NACE International criteria.

Corrosion Protection means the use of a technology, material, or method of construction to prevent any metallic component of a UST system from corroding (*e.g.*, cathodic protection or the use of fiberglass-reinforced plastic or other polymer resins when constructing tanks or piping).

Department means Massachusetts Department of Environmental Protection.

80.03: continued

Dispenser Sump means an impermeable, liquid-tight basin installed beneath a regulated substance dispenser to contain leakage of regulated substance from the dispenser connections and piping.

Double-walled means a container or pipe with two complete shells which provide primary and secondary containment. The container shall have a continuous interstitial space between the primary and secondary shell.

Emergency Spill or Overflow Containment UST System means a tank used solely to contain accidental spills of a regulated substance which are unanticipated and unpredictable.

Emergency Engine means any stationary internal combustion engine which operates as an emergency or standby mechanical or electrical power source. A load shaving unit, peaking power production unit or a standby engine in an energy assistance program is not an emergency or standby engine under Emergency Engine.

Empty or Emptied means when all regulated substance has been removed from a tank using commonly employed practices so that no more than 2.5 centimeters (one inch) of residue, or 0.3% by weight of the total capacity of the tank, remains in the tank.

European Suction System means an underground suction piping system which is sloped back to the tank and is equipped with only one check valve that is installed immediately below the pump so that the contents of the piping will drain back into the tank if there is a breach in the piping and the suction is released.

Farm means an operation engaged in Agriculture or Farming as defined in M.G.L. c. 128, § 1A.

Field-constructed Tank means an underground tank primarily fabricated and/or constructed on-site.

Flow-through Process Tank means a tank that forms an integral part of a production process through which there is a steady, variable, recurring, or intermittent flow of materials during the operations of the process. Flow-through process tanks do not include tanks used for the storage of materials prior to their introduction into the production process or for the storage of finished products or by-products from the production process.

Fuel Oil means any hydrocarbon oil as specified by the *American Society of Testing and Materials (ASTM) Standard D396 90, Specification for Fuel Oil*.

Hazardous Substances means regulated substances as defined in § 101(14) of CERCLA and 40 CFR Part 302. (Hazardous Substances does not include any substance regulated as a hazardous waste under Subtitle C of RCRA and 40 CFR Part 261).

Hydraulic Lift Tank means a tank holding hydraulic fluid for a closed-loop mechanical system that uses compressed air or hydraulic fluid to operate lifts, elevators, and other similar devices or equipment.

Intermediate Sump means an impermeable, liquid-tight basin, installed below grade to allow access to fittings and regulated substance piping or that is used to allow piping declines to tanks or to provide access at key points in the piping system. Intermediate Sumps shall be designed to contain leakage of regulated substance and fluids and prevent a release into the environment. Intermediate Sumps do not include sumps that have only a single-walled siphon bars with no connections within the sump or only contain a European suction system, or sumps that do not contain any regulated substance piping connections.

Interstitial Monitoring means the continuous surveillance of the space between the walls of a double-walled tank or double-walled piping.

Interstitial Space means the space between the primary and secondary barriers of a secondarily contained system (*e.g.*, the space between the two walls of a double-wall tank).

80.03: continued

Leakage means the escape of regulated substance from a UST system into a UST component not intended to store regulated substance including, but not limited to, interstitial spaces, a turbine sump, intermediate and dispenser sumps and containment areas.

Leak Detection means determining whether a release or leakage of a regulated substance has occurred from the UST system.

Lining or Lined means a liquid-tight non-corrodible material that is bonded firmly to the interior surface of a tank and that is compatible with any regulated substance stored in the tank.

Listed if referring to equipment or materials means a list published by a nationally recognized organization, including, but not limited to American Petroleum Institute (API), Steel Tank Institute (STI), Petroleum Engineering Institute (PEI), Underwriters Laboratories, Inc. and NACE: The Corrosion Society concerned with product evaluation, that maintains periodic inspection of production of listed equipment or materials and whose listing states either that equipment or materials meet appropriate standards or have been tested and found suitable for use in a specific manner.

Manufacturer's Specifications mean information provided or prescribed by the manufacturer of a UST system or UST component including, but not limited to, manuals, instructions, checklists, testing requirements and maintenance requirements.

Monitoring Device means an instrument that checks and keeps data and issues alerts and alarms.

NACE means NACE International, a globally recognized authority on corrosion control solutions.

Non-European Suction System means a piping system that conveys regulated substance under suction with a check valve in or at the top of the tank located so that the regulated substance stays in the line when the suction is released.

Operator means:

- (a) In the case of a UST system in use on November 8, 1984, or brought into use after that date, any person in control of, or having responsibility for, the daily operation of a UST system used for the storage, use, or dispensing of regulated substances; or
- (b) In the case of any UST system in use before November 8, 1984, but not in use at any time on or after that date, any person who owns the land on or in which such tank is or was located.

Owner means:

- (a) In the case of a UST system in use on November 8, 1984, or brought into use after that date, any person who owns a UST system used for the storage, use, or dispensing of regulated substances; or
- (b) In the case of any UST system in use before November 8, 1984, but not in use at any time on or after that date, any person who owned such tank immediately before the discontinuance of such use.

Person means any individual, trust, firm, joint stock company, corporation (including a government corporation), partnership, association, the United States Government, state, municipality, commission, political subdivision of a state, interstate body, consortium, joint venture or commercial entity.

Pipe, Piping or Line means the hollow cylinder or the tubular conduit that is constructed of non-earthen materials.

Pressurized Piping System means a pressurized line system in which regulated substances are supplied to a point away from the tank by means of a pumping unit.

P.S.I. means pounds per square inch.

80.03: continued

Prior to Commencing Operation means before the UST system or UST component is used for its intended purpose after installation or repair, or after being temporarily out-of-service.

RCRA means the Solid Waste Disposal Act, 42 U.S.C. § 6901 *et seq.*, as revised by the Resource Conservation and Recovery Act, Pub. L. 94-580, 90 Stat. 2795 (1976).

Red Tag means a tag, device or mechanism affixed on the UST systems' fill pipes by the Department that clearly identifies a tank as ineligible for regulated substance delivery.

Regulated Substance means:

- (a) Any substance defined in § 101(14) of CERCLA. Regulated substance also includes waste oil, but does not include any other substance regulated as a hazardous waste under M.G.L. c. 21C; and
- (b) Petroleum, including crude oil or any fraction thereof which is liquid at standard conditions of temperature and pressure (60°F and 14.7 p.s.i. absolute).

Regulated Substance Deliverer means any person who delivers or deposits regulated substance into a UST system. Regulated Substance Deliverer includes, but is not limited to, oil companies, jobbers, petroleum transportation companies, or other product delivery entities.

Regulated Substance Piping means piping that conveys regulated substance.

Release means any spilling, leaking, emitting, discharging, escaping, leaching, or disposing from a UST system or UST component into the ground water, surface water, surface soil or subsurface soil.

Repair means any modification to the UST system or a UST component that is not routine maintenance including, but not limited to, modifications to the UST system or a UST component that has failed to function properly or has caused a release or leakage, and that restores the UST system to proper operating condition.

Replace or Replacement means the removal of existing tank or piping or an existing UST component and installation of another tank, piping or UST component. If part of the piping is being replaced, "replace" or "replacement" means removal and installation of more than 50% of the piping connected to a single UST system.

Residential means buildings or dwellings used primarily for human habitation, but not industrial and commercial structures.

Routine Maintenance means the normal operational upkeep of an UST system or UST component.

Secondary Containment means a release prevention system for a tank and/or piping where the tank and/or piping have an inner and outer barrier with a space in-between these two barriers for monitoring. Lining a tank or piping shall not constitute secondary containment.

Septic Tank means a watertight receptacle to receive sewage from a building sewer which is designed and constructed to allow for the separation of scum and sludge and the partial digestion of organic matter before discharge of the liquid portion to a soil absorption system or other intermediate structure in the treatment sequence.

Shear, Crash or Impact Valve means a listed, rigidly-anchored valve incorporating a fusible link or other thermally actuated device designed to close automatically in the event of a severe impact or exposure to fire.

Siphon Line means regulated substance piping that connects two tanks and is used to draw regulated substance from one tank into the other to maintain equal levels of regulated substance in each tank.

80.03: continued

Spill Bucket means a containment device at the fill port used to catch, accumulate and prevent the release of regulated substance to the environment.

Statistical Inventory Reconciliation (SIR) means a process of evaluating the various sources of errors present in daily inventory records and capable of detecting a release or leakage from the UST system, including associated piping, of 0.20 gallons per hour with the probability of detection of 0.95 and probability of false alarm of 0.05 as determined by an independent testing laboratory using the U.S. Environmental Protection Agency's standardized test procedures at EPA 510-B-1-004, May 2019 or equivalent.

Storm Water or Wastewater Collection System means tank, piping, pumps, conduits, and any other equipment necessary to collect and transport the flow of surface water run-off resulting from precipitation, or domestic, commercial, or industrial wastewater to and from retention areas or any areas where treatment is designated to occur. The collection of storm water and wastewater does not include treatment except where incidental to conveyance.

Surface Impoundment means a natural topographic depression, man-made excavation, or diked area formed primarily of earthen materials (although it may be lined with man-made materials) that is not an injection well.

Tank means an underground structure that contains regulated substance. Tank shall not include any of the following:

- (a) Any septic tank;
- (b) Any pipeline facility, including gathering lines, which is regulated under:
 - 1. the Natural Gas Pipeline Safety Act of 1968;
 - 2. the Hazardous Liquid Pipeline Safety Act of 1979;
- (c) Any surface impoundment, pit, pond, or lagoon;
- (d) Any storm water or waste water collection system;
- (e) Any flow through process tank;
- (f) Any liquid trap or associated gathering lines directly related to oil or gas production and gathering operations; or
- (g) Any storage tank situated in an underground area, including without limitation, a basement, cellar, or mineworking drift, shaft or tunnel, if the storage tank is situated upon or above the surface of the floor, and all sides of the tank are accessible and visible.

Temporarily Out-of-service means the temporary closure of a UST system for not more than five years that occurs when the UST system has been prepared for temporary closure and is maintained during such temporary closure in accordance with 310 CMR 80.42(4) and the Owner informs the Department of the temporary closure in accordance with 310 CMR 80.42(2).

Third-party Inspector means an individual certified to conduct third-party inspections in accordance with 310 CMR 80.49(4).

Third-party Inspection Report means the report prepared by the Third-party Inspector after completion of the third-party inspection in accordance with 310 CMR 80.49(2).

Turbine Sump means an impermeable, liquid-tight basin that contains a submersible pump installed below grade to allow access to piping, pumps, fittings and valves or to collect leakage of regulated substance to prevent its introduction into the environment.

UST Component means equipment serving the tank and piping (UST system) including, but not limited to, pumps, sumps, electrical devices, consoles, cathodic protection system, leak detection system, spill prevention equipment and overfill prevention equipment.

Underground Storage Tank (UST) Facility or Facility means the property on which one or more UST systems, associated UST components, and related above-ground structures are located.

80.03: continued

Underground Storage Tank (UST) System means any one or combination of tanks including, without limitation, underground pipes connected thereto, and any containment system that is or was used to contain regulated substance, or is temporarily out-of-service, and the volume of which, including the volume of underground pipes connected thereto, is 10% or more beneath the surface of the ground. Underground Storage Tank (UST) System shall not include any of the following tanks or any pipes connected to any of the following:

- (a) Any septic tank;
- (b) Any pipeline facility, including gathering lines, which is regulated under 49 U.S.C. c. 601; or
- (c) Any surface impoundment, pit, pond, or lagoon; or
- (d) Any storm water or waste-water collection system; or
- (e) Any flow through process tank; or
- (f) Any liquid trap or associated gathering lines directly related to oil or gas production and gathering operations; or
- (g) Any storage tank situated in an underground area including, without limitation, a basement, cellar, or mineworking drift, shaft or tunnel, if the storage tank is situated upon or above the surface of the floor, and all sides of the tank are accessible and visible.

UST Facility Compliance Date means the triennial date by which an Owner or Operator shall ensure that a third-party inspection is completed and the third-party inspection report is submitted to the Department, as further defined in 310 CMR 80.49.

Waste Oil means used or unused waste oil (or any mixture thereof) that is not otherwise hazardous pursuant to 310 CMR 30.120 through 30.136, except that used waste oil with a flash point greater than or equal to 100°F and less than 140°F (solely through use) remains subject to regulation as used waste oil under 310 CMR 30.000: *Hazardous Waste*.

80.04: Applicability

- (1) The requirements of 310 CMR 80.00 shall apply to:
 - (a) Owners and Operators of UST systems, except as provided in 310 CMR 80.04(5) through (13);
 - (b) If the UST system has a crash, shear or impact valve, the regulations apply to Owners and Operators of the UST system below the crash, shear or impact valve, except as provided in 310 CMR 80.04(5) through (13);
 - (c) Class A, B and C operators;
 - (d) Third-party inspectors; and
 - (e) Any person required by 310 CMR 80.00 to certify compliance with 310 CMR 80.00.
- (2) Whenever any provision in 310 CMR 80.00 requires an action to be taken by an Owner or Operator, either may take the action, but both are responsible for ensuring that the proper action is taken, and both the Owner and Operator are jointly and severally liable.
- (3) Schedule of UST System and UST Component Upgrade Requirements. Owners and Operators of the following UST systems shall comply with the Schedule of Upgrades in Table A:
 - (a) Pressurized piping installed before May 28, 1999;
 - (b) UST systems using a submersible pump that do not have a turbine sump;
 - (c) UST systems used to supply regulated substance to emergency engines installed before January 2, 2015; and
 - (d) Airport hydrant systems.

80.04: continued

Table A: Schedule of Upgrades

Type of UST System	Section(s)	Effective Date
Pressurized piping installed before May 28, 1999	Leak Detection Requirements for Automatic Line Leak Detectors at 310 CMR 80.19(4)(b)2.	January 2, 2016
UST systems using a submersible pump that do not have a turbine sump	Requirement for Sumps at 310 CMR 80.20 and 80.27	January 1, 2019 or tank top upgrade, whichever is earlier.
UST systems used to supply fuel to emergency engines installed before January 2, 2015	Leak detection requirements at 310 CMR 80.26(3), (4), (5) or (6).	No later than October 13, 2022
Airport hydrant systems	310 CMR 80.64	See 310 CMR 80.64 for effective dates

(4) **Financial Responsibility.** The financial responsibility requirements at 310 CMR 80.51 through 80.63 shall apply to all Owners and Operators of UST systems except:

- (a) As provided in 310 CMR 80.04(5) through (12); and
- (b) State and Federal government entities whose debts and liabilities are the debts and liabilities of a state or the United States government.

Owners and Operators shall have the burden of proof to demonstrate that they are not subject to 310 CMR 80.51 through 80.63.

(5) Owners and Operators of the following UST systems are exempt from all requirements of 310 CMR 80.00:

- (a) UST systems holding hazardous wastes listed or identified under Subtitle C of RCRA, M.G.L. c. 21C or 310 CMR 30.000: *Hazardous Waste*, except UST systems holding waste oil.
- (b) Equipment or machinery that contains regulated substances for operational purposes including, but not limited to, hydraulic lift tanks and electrical equipment tanks.
- (c) UST systems that contain a *de minimis* concentration of regulated substance which means a concentration of regulated substance not exceeding the GW1 groundwater reportable concentrations in the Massachusetts Oil and Hazardous Materials List at 310 CMR 40.1600: *Massachusetts Oil and Hazardous Material List*. If a regulated substance is not listed at 310 CMR 40.1600: *Massachusetts Oil and Hazardous Material List*, the Owner and Operator shall demonstrate *de minimis* by demonstrating that the regulated substance does not display characteristics of ignitability, corrosivity, flammability and/or toxicity in order to be subject to this exemption. The Owner and Operator shall keep records of said demonstration in accordance with 310 CMR 80.36 until the Owner and Operator no longer claim the exemption.
- (d) UST systems with a capacity of 110 gallons or less.
- (e) UST systems that are part of a storm water or wastewater treatment facility regulated under § 402 or 307(b) of the Federal Clean Water Act or the State Clean Water Act at M.G.L. c. 21, §§ 26 through 53 including, but not limited, to industrial wastewater holding tanks and oil water separators.

(6) Owners and Operators of the following UST systems shall be subject only to the requirements at 310 CMR 80.04(7):

- (a) UST systems containing radioactive material that are regulated under the Atomic Energy Act of 1954, 42 U.S.C. § 2011 *et al.*
- (b) UST systems that are part of an emergency generator system at a nuclear power generation facility licensed by the Nuclear Regulatory Commission and subject to Nuclear Regulatory Commission requirements regarding design and quality criteria including, but not limited to, 10 CFR Part § 50,
- (c) UST systems containing low level radioactive waste or its mixture with hazardous waste regulated by the Nuclear Regulatory Commission and the Department of Public Health.

80.04: continued

(d) UST systems that are part of a storm water or wastewater treatment system not regulated under the Federal Clean Water Act § 402 or § 307(b) or the State Clean Water Act at M.G.L. c. 21, §§ 26 through 53.

(7) Owners and Operators of UST systems at 310 CMR 80.04(6) shall comply with the following requirements:

- (a) Prevent releases due to corrosion or structural failure;
- (b) Be cathodically protected against corrosion in accordance with 310 CMR 80.22 and 80.29, be constructed of non-corrodible material, be steel clad with a non-corrodible material, or be designed in a manner to prevent the release or threatened release of any stored regulated substance; and
- (c) Be constructed or lined with material that is compatible with the stored regulated substance.

(8) Owners and Operators of UST systems with consumptive use tanks having a capacity of 1100 gallons or less shall be subject only to the following requirements:

- (a) Tank Specifications at 310 CMR 80.17(3), if installed on or after March 21, 2008; and
- (b) Response to a Release requirements at 310 CMR 80.38.

(9) Owners and Operators of UST systems with consumptive use tanks having a capacity of more than 1100 gallons installed on and after January 1, 1989 are subject only to the following requirements:

- (a) Installation Requirements at 310 CMR 80.16, except 310 CMR 80.16(8);
- (b) Tank Specifications at 310 CMR 80.17(1);
- (c) Specifications for Regulated Substance Piping at 310 CMR 80.18;
- (d) Leak Detection Requirements at 310 CMR 80.19(3)(a) and 80.26;
- (e) Sump Requirements at 310 CMR 80.20 and 80.27;
- (f) Spill Bucket and Overfill Prevention Requirements at 310 CMR 80.21 and 80.28;
- (g) Corrosion Protection Requirements, if applicable, at 310 CMR 80.22 and 80.29;
- (h) General Requirements at 310 CMR 80.24, except 310 CMR 80.24(4)
- (i) Emergency Response Requirements at 310 CMR 80.25;
- (j) Compatibility Requirements at 310 CMR 80.30;
- (k) Repair and Replacement Requirements at 310 CMR 80.33;
- (l) Leakage and Release: Response, Reporting and Remediation requirements at 310 CMR 80.38 through 80.40; and
- (m) Closure Requirements at 310 CMR 80.41 through 80.47.

(10) Owners and Operators of UST systems with consumptive use tanks having a capacity of more than 1100 gallons installed before January 1, 1989 are subject only to the following requirements:

- (a) Specifications for Regulated Substance Piping at 310 CMR 80.18(1);
- (b) Sump Requirements at 310 CMR 80.20 and 80.27;
- (c) Spill Bucket and Overfill Prevention Requirements at 310 CMR 80.21 and 80.28;
- (d) General Requirements at 310 CMR 80.24, except 310 CMR 80.24(4);
- (e) Emergency Response Requirements at 310 CMR 80.25;
- (f) Compatibility Requirements at 310 CMR 80.30;
- (g) Repair and Replacement Requirements at 310 CMR 80.33;
- (h) Leakage and Release: Response, Reporting and Remediation requirements at 310 CMR 80.38 through 80.40; and
- (i) Closure Requirements at 310 CMR 80.41 through 80.47.

(11) Owners and Operators of farm or residential tanks having a capacity of 1100 gallons or less used exclusively for the storage of motor fuel are subject to only the following requirements:

- (a) Tank Specifications at 310 CMR 80.17(1); and
- (b) Response to a Release requirements at 310 CMR 80.38.

(12) Owners and Operators of UST systems used solely for emergency spill or overflow containment of a regulated substance are subject to only the following requirements:

- (a) Tank standards at 310 CMR 80.17(1);
- (b) Registration requirements at 310 CMR 80.23(1);

80.04: continued

- (c) Response to a Release requirements at 310 CMR 80.38; and
- (d) Remove all regulated substance within 72 hours of the introduction of a regulated substance.
- (e) If the substance contained in the emergency spill or overflow containment UST system is determined to be hazardous waste, the substance shall be subject to 310 CMR 30.000: *Hazardous Waste*.

(13) Owners and Operators of UST systems used to supply regulated substance to emergency engines are subject to all requirements of 310 CMR 80.00, except the Inventory Monitoring requirements at 310 CMR 80.31.

80.05: Rules of Construction

- (1) No provision of 310 CMR 80.00 shall be construed to limit the Department's authority to take or arrange for, or to require any person to perform, any response action authorized by M.G.L. c. 21C or 21E which the Department deems necessary to protect public health, safety or the environment.
- (2) The provisions of 310 CMR 80.00 are severable, and if any provision herein or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions hereof or applications thereof which can be given effect without the invalid provision or application.
- (3) No provision of 310 CMR 80.00 shall be construed to relieve any person of the necessity of complying with all applicable federal, state or local laws.

80.06: Computation of Time

Unless otherwise specifically provided by law, 310 CMR 80.00, or any determination issued pursuant to 310 CMR 80.00, any time period prescribed or referred to in 310 CMR 80.00, or in any determination issued pursuant to 310 CMR 80.00, shall begin with the first day following the act which initiates the running of the time period, and shall include every calendar day, including the last day of the time period so computed. If the last day is a Saturday, Sunday, legal holiday, or any other day in which the offices of the Department are closed, the deadline shall run until the end of the next business day. If the time period prescribed or referred to is less than seven days, only days when the offices of the Department are open shall be included in the computation. If the time period is prescribed in hours, the computation is the exact number of hours from the start of the deadline without regard to whether the Department is open, unless the deadline requires delivery of information or documentation to the Department, in which case it is on the next business day after the running of the deadline if that deadline runs on a day when the Department is closed.

80.07: Accurate and Timely Submittals to the Department and Recordkeeping

- (1) No person shall make any false, inaccurate, incomplete or misleading statement in any application, record, report, plan, log or statement which that person submits, or is required to submit, to the Department pursuant to M.G.L. c. 21O, 310 CMR 80.00, or any permit, order, certification or approval issued by the Department.
- (2) Any application, record, report, plan or statement which any person is required to submit to the Department shall be submitted within the time period presented in M.G.L. c. 21O, 310 CMR 80.00, or any order issued by the Department, unless otherwise specified by the Department.
- (3) No person shall make any false, inaccurate, incomplete or misleading statement in any application, record, report, plan, log or statement which that person keeps, or is required to keep, by the Department pursuant to M.G.L. c. 21O, 310 CMR 80.00, or by any permit, order, certification or approval issued by the Department.

80.08: Accurate and Complete Recordkeeping

Any recordkeeping which any person is required to perform shall be promptly, fully, and accurately performed and shall otherwise be in compliance with 310 CMR 80.00, and any permit, order, certification or approval issued by the Department.

80.09: Accurate Monitoring

No person shall falsify, tamper with, or render inaccurate any monitoring device or method which any person maintains, or which is required to be maintained pursuant to M.G.L. c. 210 or 310 CMR 80.00. Any monitoring which any person is required to perform shall be promptly, fully and accurately performed and shall otherwise be in compliance with M.G.L. c. 210, 310 CMR 80.00, or any permit, order, certification or approval issued by the Department.

80.10: Duty to Provide Information

For any of the purpose set forth in M.G.L. c. 210 or 310 CMR 80.00, any Owner or Operator of a UST system shall upon reasonable request of the Department furnish information relating to UST systems and UST components, conduct monitoring or testing, and permit the Department to have access to, and to copy all records relating to, such UST systems and UST components within the time specified in the Department's request.

80.11: Submittals to the Department

(1) Any person signing a document or form, required by 310 CMR 80.00 to be signed by the Owner or Operator, shall be signed by:

- (a) If a sole proprietorship, the sole proprietor;
- (b) If a partnership, a general partner with the authority to bind the partnership;
- (c) If a trust, a trustee or any other natural person authorized:
 1. to enter into contracts regarding the trust property;
 2. to bind the trust; or
 3. to encumber or dispose of the trust property;
- (d) If a limited liability company, a person authorized pursuant to M.G.L. c. 156C, § 24 and the limited liability company's operating agreement to bind the company and all the members;
- (e) If a corporation or a nonprofit corporation, a president, secretary, treasurer, or a vice-president of the corporation in charge of a principal business function who has been duly authorized to bind the corporation pursuant to a corporate vote, or an employee of the corporation who has been duly authorized to bind the corporation pursuant to a corporate vote;
- (f) If a municipality or other public agency, a principal executive officer or ranking elected official who is empowered to enter into contracts on behalf of the municipality or public agency.

(2) Unless otherwise required by law or 310 CMR 80.00, any person signing a document pursuant to 310 CMR 80.00, or when providing any other information ordered or requested by the Department in writing pursuant to 310 CMR 80.00, shall make the following certification:

"I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including possible fines and imprisonment."

80.12: Presumption of Irreparable Harm

Pursuant to M.G.L. c. 210, § 8, any violation of any provision of M.G.L. c. 210 or 310 CMR 80.00 or of any order, permit, or approval adopted or issued thereunder shall be presumed to constitute irreparable harm to public health, safety and welfare, and to the environment. Such presumption may be rebutted by the introduction of competent evidence.

80.13: Department Access to UST Facilities and Records

(1) Reasonable Access.

- (a) For purposes of implementing M.G.L. c. 210 and 310 CMR 80.00, personnel and/or representatives of the Department may, upon presentation of credentials, enter property containing or suspected of containing UST systems in order to:
 1. Inspect or obtain samples from any UST system;

80.13: continued

2. Conduct monitoring or testing of the tanks, associated equipment, contents of the tank or surrounding soils, air, surface water or ground water; and
 3. Have access to, and copy all records, relating to such tanks.
- (b) Said inspections shall be conducted during normal business hours or at other reasonable times, with or without prior notice, except that personnel or authorized representatives of the Department may enter a UST facility, at any time, if emergency conditions require immediate entry or to protect public health, safety or the environment.
- (c) For announced inspections, the Department will notify the UST facility no less than 48 hours before the announced inspection.
- (2) Duty to Comply.
- (a) The Owner and Operator shall cooperate and assist Department personnel or authorized representative and in no way restrict, impede, or delay an inspection or any request for information by personnel or authorized representatives of the Department where such inspection or request is made pursuant to a reasonable request in accordance with 310 CMR 80.13(1), or in accordance with the conditions of any authorization, determination, modification, permit, or other approval, or pursuant to the terms of any order or other enforcement document, or as otherwise authorized by law.
- (b) For announced inspections, the Owner or Operator shall provide the necessary personnel in order to provide access to UST records, systems and facilities including, but not limited to, the following:
1. Regulated substance fill port/spill bucket;
 2. Automatic tank gauge port and console;
 3. Turbine and intermediate sumps;
 4. Underground piping/other access ports;
 5. Dispenser cabinet/dispenser sump;
 6. Audible and visual alarm equipment;
 7. Overfill prevention equipment; and
 8. Any other component of the UST System if the Department informs the Owner or Operator it needs access to the component at the time the inspection is announced, and excludes any UST system or UST component that would only be visible for inspection if they were excavated.
- (3) Warrants. If the Department is denied full and complete access to the UST facility or requested information, or if after reasonable efforts, the Department cannot locate the Owner or Operator, the Department may seek, from a court, judge, justice or magistrate, a warrant authorizing personnel or authorized representatives of the Department to conduct a reasonable search of the UST facility or property. 310 CMR 80.13 shall not preclude the Department from gaining access through other legal means, including, but not limited to, a court order or injunctive relief.

DESIGN, CONSTRUCTION AND INSTALLATION REQUIREMENTS

80.14: General Requirements

Owners and Operators shall comply with all general and specific design, construction and installation requirements in 310 CMR 80.14 through 80.22, as applicable.

80.15: General Prohibitions

- (1) All single-walled steel tanks in-service and temporarily out-of-service shall be permanently closed and removed from the ground or permanently closed in-place in compliance with 310 CMR 80.43 by August 7, 2017, except for the following tanks:
- (a) Consumptive use tanks; and
 - (b) Tanks that were relined prior to August 8, 2007 in accordance with API 1631, 1983 Edition and the Owner or Operator has the following:
 1. A permit and approval that was issued by the Head of the Fire Department for such relining; and
 2. A current, legally valid warranty for said relining.

80.16: Installation Requirements

(1) No UST system shall be installed except by a person who has been certified to install that type of UST system in writing by the UST system manufacturer. The installation shall include, but shall not be limited to, compliance with the manufacturer's specifications and all items on the manufacturer's checklist(s).

(a) The installer shall certify that the UST system was installed in accordance with the manufacturer's specifications and that the installer complied with all items on the manufacturer's installation checklist(s).

(b) The Owner or Operator shall maintain a copy of the certifications in 310 CMR 80.16(1) and 80.16(1)(a), manufacturer's specifications and completed checklist(s) in accordance with 310 CMR 80.36.

(c) The Owner shall submit the installer certification(s) from the manufacturer(s) and the installer's certification in 310 CMR 80.16(1)(a), in accordance with 310 CMR 80.23(1)(b).

(d) A new double-walled tank may be installed inside an existing tank, if the new double-walled tank meets the requirements of 310 CMR 80.17 and does not rely on the existing tank to provide structural integrity or as a tank wall and:

1. Prior to installing the new double-walled tank, the Owner or Operator shall have all the solid and liquid material removed from the existing UST system, in accordance with 310 CMR 80.47, have the existing UST system rendered inert and shall secure all openings. The Owner or Operator shall manage all solid and liquid material removed from the UST system in accordance with all applicable federal, state and local laws and regulations.

2. Conduct an assessment in accordance with 310 CMR 80.43(4) before the new double-walled tank is installed. If the assessment finds contamination requiring notification pursuant to 310 CMR 40.0000, *Massachusetts Contingency Plan*, the installation of the new tank shall not commence until the Owner or Operator has complied with the notification requirements contained in 310 CMR 40.0300: *Notification of Releases and Threats of Release of Oil and Hazardous Materials; Identification and Listing of Oil and Hazardous Materials*, as applicable, and any required response actions under 310 CMR 40.0000.

3. Notify the Department that a new double-walled tank is being installed inside an existing tank, in a format specified by the Department, within 30 days of the new tank being installed. A copy of the assessment in 310 CMR 80.43(4) shall be submitted with said form.

(2) The installation of all UST systems, including anchoring of the tank, shall be carried out in accordance with the manufacturer's specifications, listed engineering practices, and the provisions of 310 CMR 80.14 through 80.22. In lieu of the requirements at 310 CMR 80.16(9) through (16), Owners and Operators may use military construction criteria, such as Unified Facilities Criteria (UFC) 3-460-01, Petroleum Fuel Facilities, when designing, constructing, and installing UST systems with field-constructed tanks over 50,000 gallons capacity.

(3) Any damage to the exterior of a tank or its coating shall be repaired before the tank is covered.

(4) The Tank and Piping Shall Pass the following Tests Prior to Burial.

(a) The tank and the interstitial space shall be tested by air pressure not less than three pounds and not more than five pounds per square inch. If the interstitial space contains liquid, testing shall comply with the manufacturer's specifications.

(b) The piping shall be hydrostatically tested (or by air pressure) to 150% of the maximum anticipated pressure of the piping system, but not less than 50 pounds per square inch gauge of the highest point of the piping system.

(c) The Owner shall provide the test results to the professional engineer conducting the inspection in accordance with 310 CMR 80.16(6).

(5) After installation, backfilling and surfacing to grade, the tank and piping shall pass a tightness test in accordance with 310 CMR 80.32.

80.16: continued

(6) All UST systems shall be inspected by the person who prepares the drawings or as-built plans in accordance with 310 CMR 80.16(7), or their designated representative, prior to being backfilled, to ensure the UST system is installed in accordance with 310 CMR 80.14 through 80.22. If the person who prepares the drawing or as-built plans, or their designated representative, determines the UST system is not installed in accordance with 310 CMR 80.14 through 80.22, the UST system shall not be backfilled until the Owner or Operator of the UST system complies with all requirements at 310 CMR 80.14 through 80.22.

(7) The Owner or Operator shall maintain a scaled drawing or a set of as-built plans prepared by the installer who installed the UST system or a registered professional engineer until the UST system is removed or permanently closed in accordance with 310 CMR 80.43(2) or (3) and shall submit a copy of the as-built plans to the Department in accordance with 310 CMR 80.23(1). The scaled drawing or as-built plans shall include, but not be limited to:

(a) A locus plan or location map showing the location of the UST facility and the global positioning system (GPS) coordinates of the UST system(s). The plan or map shall include, but not be limited to, the location of any public well, private well, if readily ascertainable, and any body of surface water within 500 feet of the UST facility. All drinking water wells shall be clearly marked on the plan or map.

(b) A site plan of the UST facility including, but not limited to, the location of each UST system and all buildings.

(c) UST system details including, but not limited to, a list of UST components (including manufacturer and model number), schematics of the tanks, piping, and turbine, intermediate and dispenser sumps, elevations of each tank and related piping below the final surface grade and a materials list.

(d) A signed statement by the licensed professional engineer who signed and sealed the as-built plans that the UST system was installed in accordance with 310 CMR 80.00, the manufacturer's specifications and the manufacturer's checklist.

(8) The Owner shall submit a registration to the Department within 30 days of the initial introduction of regulated substance into an UST system on a form specified by the Department, in accordance with 310 CMR 80.23(1), except Owners of UST systems used solely for emergency spill or overflow containment shall submit a registration to the Department within 30 days of installation.

(9) If the manufacturer's specifications do not specify the type of backfill material, the Owner or Operator shall comply with one of the following:

(a) API Recommended Practice 1615, 6th Edition, April 2011, *Installation of Underground Petroleum Storage Systems*; or

(b) PEI Recommended Practice 100-17, 2017, *Recommended Practices for Installation of Underground Liquid Storage Systems*.

(10) At any fueling facilities where tanks are at an elevation which produces a gravity head on the dispensing unit, the tank outlet shall be equipped with a device, such as a solenoid valve, positioned adjacent to, and downstream from, the outlet of the tank that is installed and adjusted so that liquid cannot flow by gravity from the tank in case of piping or hose failure when the dispenser is not in use.

(11) Underground piping and underground vent lines shall be installed in a trench. If the manufacturer's specifications specify a different standard for installing piping and vent lines, the Owner and Operator may comply with the manufacturer's specification in lieu of 310 CMR 80.16(11). The Owner or Operator shall keep records of the standard in accordance with 310 CMR 80.36.

(12) A minimum six-inch-deep bed of well-compacted noncorrosive material such as clean washed sand or gravel shall be placed in a trench before the piping is installed, unless otherwise directed by the manufacturer's specifications. All trenches shall be wide and deep enough to permit at least six inches of noncorrosive backfill material surrounding all lines, unless otherwise directed by the manufacturer's specifications. The owner or Operator shall keep records of the Manufacturer's specification in accordance with 310 CMR 80.36.

80.16: continued

(13) All piping shall lead from the tops of tanks, and the tops of all tanks shall be below the level of the lowest horizontal pipe used in the connection therein, except where the design specifically prevents a possible siphoning condition.

(14) All pipes used for the conveyance of flammable liquid shall decline to tanks without traps or pockets, and shall be protected against damage. Intermediate sumps installed to allow piping to decline to tanks shall not be considered a trap or pocket provided the intermediate sump is monitored for leakage and is accessible for repairs and inspections. Piping drops from submerged pumps to allow piping decline to the tank shall not be considered a trap. Siphon lines shall be exempt from 310 CMR 80.16(14).

(15) A double elbow swing joint or flexible connector listed for underground applications shall be installed at all locations where piping changes direction from horizontal to vertical or from vertical to horizontal. If the manufacturer's specifications specify a different standard, the Owner and Operator may comply with the manufacturer's specification in *lieu* of 310 CMR 80.16(15). The Owner or Operator shall keep records of the standard in accordance with 310 CMR 80.36.

(16) Pressurized systems shall be designed or equipped so that no part of the system will be subjected to pressures above its allowable working pressure in accordance with the manufacturer's specifications.

(17) A permanent dewatering well for the purpose of dewatering the tank grave in order to conduct repairs of the UST system may be installed if the well is seated in the tank grave and the well seals are designed and constructed to prevent migration of fluids from the ground surface into the borehole.

(a) The following seals are all required and shall be designed and constructed as follows:

1. Annular Seals.

a. Annular seals shall be placed in the annular space between the well casing and the borehole wall and above the divider seal.

b. Annular seals shall consist of a low permeability material that will serve to inhibit the vertical movement of fluids within the annular space.

c. An annular seal shall be composed of one or a combination of the following sealants: neat cement, bentonite/cement slurries, or equivalent sealing agents.

2. Divider Seals.

a. Divider seals shall consist of a layer of bentonite slurry or pellets designed to prevent the annular seal materials from plugging up the screened area of the well.

b. Divider seals shall be placed above the material surrounding the well screen and below the annular seal.

3. Surface (Apron) Seal.

a. A surface seal around the top of the well is required even if the annular seal is carried to the surface.

b. A surface seal shall be concrete.

c. A surface seal shall be shaped so that surface water flows away from the well casing.

d. Based on site conditions, the surface seal shall extend, at a minimum, to the bottom of the tank pad, and in no event less than one foot below grade to prevent frost-heaving of the apron.

(b) Dewatering wells and seals shall be maintained so as to prevent storm water and/or regulated substances from entering the subsurface as long as the dewatering well is in place.

(18) The Owner or Operator shall keep a copy of the installer's certifications, manufacturer's specifications and completed checklist(s), records of all testing results and inspections conducted during the installation and the accurate drawing or as-built plans in accordance with 310 CMR 80.36.

80.17: Specifications for Tanks

- (1) Tanks, except consumptive use tanks having a capacity of 1100 gallons or less, that are installed on and after January 1, 1989 shall be one of the following:
 - (a) Listed double-walled cathodically protected metal tanks;
 - (b) Listed double-walled fiberglass reinforced plastic tanks;
 - (c) Listed double-walled composite tanks;
 - (d) Listed double-walled jacketed steel tanks; or
 - (e) Listed tanks that are no less protective of human health and the environment than 310 CMR 80.17(1)(a) through (d), if the following requirements are met:
 1. The Owner shall submit an application to the Department for approval demonstrating that the tank is equal to or more protective of human health and the environment than 310 CMR 80.17(1)(a) through (d). This demonstration shall include, but is not limited to, technical information that the tank is noncorrosive or corrosion resistant, and meets or exceeds the performance standards in 310 CMR 80.17(1)(a) through (d).
 2. The Department, at its sole discretion, shall determine whether the Owner has made the demonstration required in 310 CMR 80.17(1)(e)1.
 3. The Owner shall not install the tank unless and until it receives written approval from the Department.
 - (f) Listed "tank-within-a-tank" systems that are double-walled and do not rely on the existing tank to provide structural integrity or as a tank wall.
- (2) Tanks that are installed or that become subject to 310 CMR 80.00, on and after January 1, 1989 shall be equipped with a metallic or nonmetallic striker plate attached to the bottom of the tank at each opening. Such striker plate shall be at least 12" x 12" in area and at least ¼" thick.
- (3) Consumptive use tanks having a capacity of 1100 gallons or less that are installed on and after March 21, 2008 shall be one of the following:
 - (a) Listed double-walled fiberglass reinforced plastic using materials compatible with fuel oil and equipped with continuous interstitial monitoring.
 - (b) Listed double-walled metal tank with cathodic protection or bonded fiberglass coating and equipped with continuous interstitial monitoring.

80.18: Specifications for Regulated Substance Piping

- (1) UST systems that contain regulated substance piping shall be installed with one of, or a combination of, the following piping systems:
 - (a) Pressurized piping system;
 - (b) European suction system; or
 - (c) Non-European suction system.
- (2) In addition to complying with 310 CMR 80.18(1), regulated substance piping installed in UST systems between January 1, 1989 and January 2, 2015, shall meet the following requirements:
 - (a) Regulated substance piping shall be constructed of:
 1. A non-corrodible material; or
 2. Cathodically protected metal, including copper if the copper is adequately protected against physical damage and is secondarily contained.
 - (b) Regulated substance piping, except European suction systems and siphon lines between tanks, shall be installed with secondary containment which may include, but is not limited to, impervious liners if installed prior to January 2, 2015 or double-walled piping.
- (3) All regulated substance piping installed after January 2, 2015 shall be:
 - (a) double-walled, except European suction systems and siphon lines between tanks;
 - (b) product compatible; and
 - (c) constructed of:
 1. a non-corrodible material; or
 2. cathodically protected metal, including copper if the copper is adequately protected against physical damage and is secondarily contained.

80.19: Leak Detection

- (1) Owners and Operators shall equip UST systems with leak detection equipment.
- (2) The Owner or Operator shall install, calibrate, operate and maintain all leak detection equipment in accordance with 310 CMR 80.19 and 80.26, and the manufacturer's specifications.
- (3) Requirements for Tanks.
 - (a) Tanks (except tanks used to supply regulated substance to emergency engines) installed on or after January 1, 1989, and tanks used to supply regulated substance to emergency engines installed on or after January 2, 2015, shall be equipped with a system that continuously monitors interstitial space.
 1. The interstitial monitors shall be installed and operated in accordance with the manufacturers' specifications.
 2. The system shall comply with 310 CMR 80.26(3).
 3. The interstitial monitoring shall detect leakage through the inner wall of any tank.
 4. For UST systems using continuous vacuum, pressure, or hydrostatic methods (including brine systems) of interstitial monitoring, the method shall be capable of detecting a breach in the inner and outer walls of the tank.
 - (b) Tanks, except tanks used to supply regulated substance to emergency engines, installed before January 1, 1989, shall be equipped with at least one of the leak detection methods listed 310 CMR 80.19(3)(b)1. through 4. No later than October 13, 2022, tanks used to supply regulated substance to emergency engines that were installed before January 2, 2015, shall be equipped with at least one of the leak detection methods listed at 310 CMR 80.19(3)(b)1. through 4.
 1. A system that continuously monitors interstitial space.
 - a. The sensors shall be installed in accordance with the manufacturers' specifications.
 - b. The system shall comply with 310 CMR 80.26(3).
 - c. The interstitial monitoring shall detect leakage through the inner wall of any tank.
 2. An in-tank monitoring system that is used to test the tank at least once a month over the continuous period of time prescribed by the manufacturer's specifications to determine if there is a release or leakage. If the manufacturer's specifications do not prescribe a continuous period of time, the continuous period of time shall be six hours. The system shall be capable of detecting a release or leakage of 0.20 gallons per hour with the probability of detection of 0.95 and a probability of false alarm of 0.05 as determined by an independent testing laboratory using the U.S. Environmental Protection Agency Standard Test Procedures for Evaluating Leak Detection Methods (EPA-510-B-19-002, May 2019) or other equivalent test procedures and complies with 310 CMR 80.26(4).
 3. A continuous in-tank monitoring system installed and operated in accordance with the manufacturers' specifications that is capable of detecting a release or leakage of 0.20 gallons per hour with the probability of detection of 0.95 and a probability of false alarm of 0.05 as determined by an independent testing laboratory using the U.S. Environmental Protection Agency Standard Test Procedures for Evaluating Leak Detection Methods (EPA-510-B-19-002, May 2019) or other equivalent test procedures and complies with 310 CMR 80.26(5).
 4. An in-tank monitoring system installed, operated and maintained by a qualified person with inventory data analysis conducted by a trained statistical inventory reconciliation (SIR) vendor. The SIR testing or monitoring methods shall meet the following requirements:
 - a. Report a quantitative result with a calculated leak rate;
 - b. Be capable of detecting a release or leakage of 0.20 gallons per hour with the probability of detection of 0.95 and a probability of false alarm of 0.05 as determined by an independent testing laboratory using the U.S. Environmental Protection Agency Standard Test Procedures for Evaluating Leak Detection Methods (EPA/530/UST-90/006 510-B-19-002, May 2019) or other equivalent test procedures;
 - c. Use a threshold that does not exceed ½ the minimum detectible leak rate; and

80.19: continued

- d. Comply with U.S. Environmental Protection Agency Standard Test Procedures for Evaluating Leak Detection Methods (EPA 510-B-19-004, May 2019) or other equivalent test procedures and with 310 CMR 80.26(6).
- (c) Until October 13, 2022, tanks used to supply fuel to emergency engines installed before January 2, 2015 shall comply with at least one of the following leak detection methods:
1. Leak detection requirements at 310 CMR 80.19(3)(b)1., 2. 3. or 4.;
 2. If the tank has a capacity of 1000 gallons or less, weekly tank gauging in accordance with 310 CMR 80.26(7); or
 3. If the tank has a capacity of more than 1000 gallons, monthly tank gauging in accordance with 310 CMR 80.26(8), and conduct an annual tightness test in accordance with 310 CMR 80.32.
- (d) Owners and Operators of field-constructed tanks with a capacity greater than 50,000 gallons capacity may use one of the following methods of leak detection for each tank to satisfy the requirements of 310 CMR 80.19(1):
1. Conduct an annual bulk tank tightness test that can detect a release or leakage at 0.5 gallon per hour;
 2. Use an in-tank monitor to perform leak detection at least every 30 days that can detect a release or leakage of less than or equal to one gallon per hour. This method shall be combined with a bulk tank tightness test that can detect a release or leakage of 0.2 gallon per hour and be performed at least every three years; or
 3. Use an in-tank monitor to perform leak detection at least every 30 days that can detect a release or leakage of less than or equal to two gallons per hour. This method shall be combined with a bulk tank tightness test that can detect a release or leakage of 0.2 gallon per hour and be performed at least every two years.
 4. Perform inventory control (conducted in accordance with Department of Defense Directive 4140.25; ATA Airport Fuel Facility Operations and Maintenance Guidance Manual; or equivalent procedures) at least every 30 days that can detect a release or leakage equal to or less than 0.5% of flow-through; and perform a tank tightness test that can detect a release or leakage of 0.5 gallon per hour at least every two years.
 5. Maintain records of the testing conducted according to 310 CMR 80.19(3)(d) in accordance with 310 CMR 80.36.
- (4) Requirements for Piping.
- (a) UST systems installed on or after May 28, 1999 shall have the following requirements for regulated substance piping, except European suction systems and single-walled siphon lines between tanks:
1. All regulated substance piping shall have a system that continuously monitors interstitial space as follows:
 - a. Sensors shall be installed in the sump in accordance with the manufacturers' specification. If there is no manufacturer's specification, the sensors shall be placed at the lowest point in the sump.
 - b. The system shall comply with 310 CMR 80.26(3).
 - c. The system shall detect regulated substance in a sump that leaked through the inner wall in any portion of the piping that routinely contains regulated substance.
 2. In addition to complying with 310 CMR 80.19(4)(a)1., pressurized piping systems shall be equipped with an automatic line leak detector that accurately detects a release or leakage of three gallons per hour at ten p.s.i. in line pressure within one hour with the probability of detection of 0.95 and probability of false alarm of 0.05. At UST facilities that are staffed 24 hours per day, seven days per week, 365 days per year, an automatic line leak detector may also be a continuous alarm that alerts staff when there is regulated substance or pressure loss in a pressurized product line of a pressurized pumping system.
 3. European suction systems and siphon lines between tanks are not required to have leak detection.
- (b) UST Systems installed between January 1, 1989 and May 28, 1999 shall have the following requirements for regulated substance piping, except European suction systems and single-walled siphon lines between tanks:
1. Owners or Operators of all regulated substance piping shall implement one of the following methods of leak detection:

80.19: continued

- a. A system that continuously monitors interstitial space in accordance with 310 CMR 80.19(4)(a)1.; or
 - b. Quarterly visual inspections of secondary containment ports and conduct of an annual tightness test of the product piping line in accordance with 310 CMR 80.32; or
 - c. An in-tank monitoring system that is maintained by a qualified person with inventory data analysis conducted by a qualified statistical inventory reconciliation (SIR) vendor. The SIR testing or monitoring methods shall:
 - i. Report a quantitative result with a calculated leak rate;
 - ii. Be capable of detecting a release or leakage of 0.20 gallons per hour with the probability of detection of 0.95 and a probability of false alarm of 0.05 as determined by an independent testing laboratory using the U.S. Environmental Protection Agency Standard Test Procedures for Evaluating Leak Detection Methods (EPA 510-B-19-0002, May 2019) or other equivalent test procedures;
 - iii. Use a threshold that does not exceed $\frac{1}{2}$ the minimum detectible leak rate; and
 - iv. Comply with U.S. Environmental Protection Agency Standard Test Procedures for Evaluating Leak Detection Methods (EPA 510-B-19-004, May 2019) or other equivalent test procedures and with 310 CMR 80.26(6).
2. In addition to complying with 310 CMR 80.19(4)(b)1., pressurized piping systems shall be equipped with an automatic line leak detector that accurately detects a release or leakage of three gallons per hour at ten p.s.i. in line pressure within one hour with the probability of detection of 0.95 and probability of false alarm of 0.05. At UST facilities that are staffed 24 hours per day, seven days per week, 365 days per year, an automatic line leak detector may also be a continuous alarm that alerts staff when there is regulated substance or pressure loss in a pressurized product line of a pressurized pumping system.
3. European suction systems are not required to have leak detection.
- (c) UST Systems installed before January 1, 1989 shall have the following requirements for regulated substance piping, except European suction systems and single-walled siphon lines between tanks:
1. Owners or Operators of all regulated substance piping shall implement one of the following methods of leak detection:
 - a. A system that continuously monitors interstitial space in accordance with 310 CMR 80.19(4)(a)1.; or
 - b. Quarterly visual inspections of secondary containment ports and conduct an annual tightness test of the product piping line in accordance with 310 CMR 80.32; or
 - c. An in-tank monitoring system that is maintained by a qualified person with inventory data analysis conducted by a trained statistical inventory reconciliation (SIR) vendor. The SIR testing or monitoring methods shall:
 - i. Report a quantitative result with a calculated leak rate;
 - ii. Be capable of detecting a release or leakage of 0.20 gallons per hour with the probability of detection of 0.95 and a probability of false alarm of 0.05 as determined by an independent testing laboratory using the U.S. Environmental Protection Agency Standard Test Procedures for Evaluating Leak Detection Methods (EPA 510-B-19-002, May 2019) or other equivalent test procedures;
 - iii. Use a threshold that does not exceed $\frac{1}{2}$ the minimum detectible leak rate; and
 - iv. Comply with U.S. Environmental Protection Agency Standard Test Procedures for Evaluating Leak Detection Methods (EPA 510-B-19-004, May 2019) or other equivalent test procedures and with 310 CMR 80.26(6).
 - d. For single-walled pressurized piping systems and single-walled gravity piping systems, conduct an annual tightness test in accordance with 310 CMR 80.32; or
 - e. For Non-European suction systems that do not have secondary containment, conduct an annual tightness test in accordance with 310 CMR 80.32.

80.19: continued

2. In addition to complying with 310 CMR 80.19(4)(c)1., pressurized piping systems shall be equipped with an automatic line leak detector that accurately detects a release or leakage of three gallons per hour at ten p.s.i. in line pressure within one hour with the probability of detection of 0.95 and probability of false alarm of 0.05. At UST facilities that are staffed 24 hours per day, seven days per week, 365 days per year, an automatic line leak detector may also be a continuous alarm that alerts staff when there is regulated substance or pressure loss in a pressurized product line of a pressurized pumping system.
3. European suction systems are not required to have leak detection.

80.20: Requirements for Turbine, Intermediate and Dispenser Sumps

(1) Dispenser Sumps.

- (a) Regulated substance dispensers installed, repaired or replaced on or after October 1, 2021 shall be equipped with a dispenser sump that shall be continuously monitored for liquids utilizing a dispenser sump sensor(s). 310 CMR 80.20(1)(a) shall not apply in situations where only the product dispenser is repaired or replaced due to damage or malfunction, but shall apply to any replacement of both the product dispenser and dispenser components attaching the dispenser to the UST piping system at the dispenser.
- (b) Regulated substance dispensers installed, repaired or replaced on or after March 21, 2008 and before October 1, 2021 shall be equipped with a dispenser sump that shall be continuously monitored for liquids utilizing a dispenser sump sensor(s). 310 CMR 80.20(1)(b) shall not apply in situations where only the product dispenser is repaired or replaced due to damage or malfunction, but shall apply to any replacement of both the product dispenser and the piping used to connect the product dispenser to the tank.

(2) Tanks utilizing a submersible pump, when the pump was installed on or after March 21, 2008, shall be equipped with a turbine sump. All turbine sumps, including intermediate sumps, shall be continuously monitored for liquids utilizing a sump sensor(s).

(3) All turbine sumps, intermediate sumps and dispenser sumps installed on or after March 21, 2008, except sumps that only contain a single-walled siphon line with no connections within the sump or only contain a European suction system or sumps that do not contain any regulated substance piping connections, shall be continuously monitored for liquids utilizing a sump sensor(s).

(4) Tanks using a submersible pump that do not have a turbine sump, shall be upgraded with a turbine sump by January 1, 2019 or when the tank top is upgraded, whichever is earlier, or that tank shall be removed or permanently closed in-place in accordance with 310 CMR 80.43(2) or (3).

(5) Turbine, intermediate and dispenser sumps, except sumps listed at 310 CMR 80.27(8), shall pass an integrity test at installation to ensure the sump is liquid tight by using a vacuum or hydrostatic test in accordance with PEI RPI 1200-19. The owner or Operator shall keep records of this test in accordance with 310 CMR 80.36.

(6) Turbine sump manhole covers installed on and after the January 2, 2015 shall be designed and installed with a final grade that channels storm water away from the turbine sump cover and turbine sump manhole covers installed on and after October 1, 2021 shall also be installed so that the paved surface is crowned as to protect the sump and equipment within from damage due to traffic.

(7) Turbine, intermediate and dispenser sumps shall be constructed so that they are accessible for repairs and inspections.

80.21: Requirements for Spill Buckets and Overfill Prevention Equipment

- (1) All fill ports used to introduce regulated substance to a UST system shall be equipped with a spill bucket.

80.21: continued

(a) Spill buckets, including replacement spill buckets, installed on or after January 2, 2015 shall have a minimum capacity of five gallons, unless it is not physically possible to replace a three-gallon spill bucket with a five-gallon spill bucket. "Not physically possible" means that the area where the three-gallon spill bucket is installed cannot be made to accommodate a five-gallon spill bucket by any physical means including, but not limited to, digging or jack hammering.

1. If it is not physically possible to replace a three-gallon spill bucket with a five-gallon spill bucket, the Owner or Operator shall certify to the Department that it is not physically possible in a letter signed in accordance with 310 CMR 80.11.

2. If it is not physically possible to replace a three-gallon spill bucket with a five-gallon spill bucket, the Owner or Operator shall install a spill bucket no smaller than three gallons.

(b) Spill buckets installed before January 2, 2015 shall have a minimum capacity of three gallons.

(c) All spill buckets shall pass an integrity test at installation to ensure the spill bucket is liquid tight by using a vacuum or hydrostatic test in accordance with PEI RPI 1200-19. The Owner or Operator shall keep records of this test in accordance with 310 CMR 80.36.

(d) Spill bucket covers installed on and after October 1, 2021 shall be designed and installed with a final grade that channels storm water away from the spill bucket and the paved surface is crowned as to protect the spill bucket and fill port from damage due to traffic.

(2) UST systems shall have an overfill prevention device that is designed to allow a tank tightness test and installed in accordance with the manufacturer's specifications.

(a) On or after January 2, 2015, new or replacement ball float valves are prohibited from being used as the primary overfill prevention device. Owners and Operators may continue to use ball float valves as a secondary overfill prevention device, unless the ball float valve interferes with the operation of the primary overfill prevention device. Ball float valves installed prior to January 2, 2015 may be used as the primary overfill prevention device until the ball float valve is replaced.

(b) All UST systems shall be equipped with one of the following:

1. An automatic shut off device that shall automatically and completely shut off flow into the tank when the tank is no more than 95% full.

2. A device which shall sufficiently alert the operator and regulated substance deliverer when the tank is at a maximum of 90% full by triggering a high-level alarm.

a. All high level alarms installed on and after January 2, 2015 shall be visible and audible to the regulated substance deliverer.

b. All high-level alarms shall be clearly labeled as a tank overfill alarm.

3. A ball float valve which shall alert the regulated substance deliverer by restricting the flow into the tank 30 minutes prior to overfilling, in accordance with 310 CMR 80.21(2)(a).

80.22: Requirements for Corrosion Protection

(1) All UST systems shall be protected from corrosion.

(2) Metal components of a UST system and UST components, excluding manhole covers, that are subject to corrosion and are in contact with the ground shall have continuous cathodic protection.

Riser and fill pipes may be coated, taped or clad with noncorrosive materials, such as fiberglass to comply with 310 CMR 80.22(2).

(3) If a tank or regulated substance piping is manufactured with cathodic protection, it shall comply with a listed standard.

(4) A field constructed cathodic protection system shall be designed by a corrosion expert.

(a) The cathodic protection system design plans, applications, surveys, drawings, test data and results, shall be reviewed and approved by a corrosion expert and bear the full name, signature, address, certification number and seal of the corrosion expert.

80.22: continued

(b) The installation and repair of any cathodic protection system shall be completed under the direction of a corrosion expert. Cathodic protection systems shall be designed and installed in accordance with a listed standard and the manufacturer's specifications.

(c) For field-constructed cathodic protection systems installed on and after January 2, 2015, the Owner or Operator shall have as-built, scaled plans of the field-constructed cathodic protection system. Said plans shall be reviewed and approved by a corrosion expert and shall bear the full name, signature, address, certification number and seal of the corrosion expert and shall be retained in accordance with 310 CMR 80.36.

(5) Within six months of installation, a cathodic protection system shall be tested by a cathodic protection tester in accordance with the following standards to determine that the UST system or UST component is protected against corrosion.

(a) NACE Standard Test Method: NACE Standard TM0101-2012, *Measurement Techniques Related to Criteria for Cathodic Protection on Underground or Submerged Metallic Tank Systems*"; or

(b) NACE Standard Test Method: NACE Standard TM0497-2012, *Measurement Techniques Related to Criteria for Cathodic Protection on Underground or Submerged Metallic Piping Systems*".

(6) The cathodic protection system shall pass the applicable test(s) at 310 CMR 80.22(5). The Owner or Operator shall keep a record of the passed test(s) in accordance with 310 CMR 80.36. If the cathodic protection system does not pass the test, the Owner or Operator shall comply with 310 CMR 80.29(5).

GENERAL OPERATING REQUIREMENTS

80.23: Requirements for Registration and Reporting

(1) Owners shall sign and submit to the Department, in a format specified by the Department, a registration for UST systems and UST facilities within 30 days of receiving regulated substance into the UST system, except Owners of UST systems used solely for emergency spill or overflow containment shall submit a registration to the Department within 30 days of installation or for existing emergency spill or overflow tanks on or before October 1, 2022. The Owner shall retain a copy of the current registration in accordance with 310 CMR 80.36 until the UST system is removed or permanently closed in-place in accordance with 310 CMR 80.43(2) or (3).

(a) The registration shall include, but not be limited to, the following categories of information:

1. Identity of and contact information for the Owner, Operator and Contact Person(s) including, but not limited to, name, title, address, telephone numbers and email address;
2. Description of the UST system(s) including, but not limited to, the location, date of installation, size, uses of the UST system(s) and type of facility;
3. Description of UST components including, but not limited to, leak detection, corrosion prevention, spill bucket and overflow prevention;
4. Description of the financial responsibility mechanism(s) including, but not limited to, the type, amount, expiration date and issuer; and
5. Description of the UST records received from the previous Owner(s) and Operator(s).

(b) The Owner shall submit with the registration for the installation of a new or replacement UST system, the following, in a format specified by the Department:

1. A copy of the certification from the UST system installer that:
 - a. He or she was certified by the manufacturer of the UST system that was installed;
 - b. The UST system was installed in accordance with the manufacturer's specifications; and
 - c. The installer complied with all items on the manufacturer's installation checklist(s).
2. A copy of the as-built plans pursuant to 310 CMR 80.16(7).

(c) Owners, or Operators if authorized by the Owner, shall update the registration if any information on the registration changes, and submit it to the Department within 30 days of the change.

80.23: continued

- (2) Owners, or Operators if authorized by the Owner, shall submit to the Department, in a format specified by the Department, notifications of the following including, but not limited to:
 - (a) A change in the product in accordance with 310 CMR 80.41:
 1. Prior to the change, if the change is from a regulated substance to a non-regulated substance.
 2. Within 30 days of the change, if the change is from a regulated substance to another regulated substance, except as provided in 310 CMR 80.23(2)(a)3.
 3. At least 30 days prior to the change if the change is from a regulated substance to a regulated substance containing greater than 10% ethanol or greater than 20% biodiesel, in accordance with 310 CMR 80.30(3).
 - (b) Any UST system taken temporarily out-of-service, in accordance with 310 CMR 80.42, within 30 days of the change in status.
 - (c) Any temporarily out-of-service UST system brought back into service in accordance with 310 CMR 80.42, within 30 days after being brought back into service.
 - (d) Any UST system removed, within 30 days of removal, in accordance with 310 CMR 80.43(2).
 - (e) UST systems closed-in-place within 30 days of UST system being filled in accordance with 310 CMR 80.43(3)(c).
 - (f) UST systems closed because a new tank is installed inside an existing tank, in accordance with 310 CMR 80.44.
- (3) The Owner or Operator shall submit to the Department, in a format specified by the Department, information including, but not limited to:
 - (a) Third-party inspection reports in accordance with 310 CMR 80.49(2).
 - (b) Assessment reports in accordance with 310 CMR 80.41(4)(b) and 80.43(3) and (4).
 - (c) Source and cause of reportable releases in accordance with 310 CMR 80.40.
 - (d) Compliance Certification in accordance with 310 CMR 80.34.
- (4) Upon the sale of a UST system or UST facility, the Owner shall transfer installer certifications, as-built plans of UST systems, cathodic protection systems plans and specifications, and manufacturer's specifications, if they were required to be kept by the Owner, to the new Owner.
- (5) A UST facility Owner, on or before the sale or transfer of a UST facility, shall provide the Department with the following information, in a format specified by the Department:
 - (a) Facility identification number;
 - (b) New Owner entity name and address; and
 - (c) New Owner entity contact's name, phone number and email address.

80.24: General Requirements

- (1) Owners and Operators shall comply with all general and specific operating requirements in 310 CMR 80.23 through 80.36, as applicable.
- (2) The Owner or Operator shall activate and keep in working condition all electrical equipment, components and alarms for UST systems and UST components.
- (3) The Owner or Operator shall respond to every UST system alarm that may indicate the presence of leakage or a release, and document the response to each of those alarms in a report or log which shall include the date, the cause and any corrective action taken. The Owner or Operator shall keep records of such alarms in accordance with 310 CMR 80.36.
- (4) The Owner or Operator shall ensure that fill pipe covers of tanks are painted and maintained in accordance API Recommended Practice 1637, 4th Edition, 2020, *Using the API Color-Symbol System to Identify Equipment, Vehicles, and Transfer Points for Petroleum Fuels and Related Products at Dispensing and Storage Facilities and Distribution Terminals*, if applicable.

80.24: continued

(5) When all regulated substance is removed from a UST system, the Owner or Operator shall take the UST system temporarily out-of-service in accordance with 310 CMR 80.42 or remove or permanently close in-place the UST system in accordance with 310 CMR 80.43. When any regulated substance remains in a UST system, unless the concentration of regulated substance in the UST system meets the *de minimis* standard in 310 80.04(5)(c), the UST system shall comply with all applicable requirements of 310 CMR 80.00.

(6) After January 2, 2015, an Owner or Operator shall not line or reline any tank to extend the operating life of the UST system.

(a) Tanks that were internally lined on or before January 2, 2015 shall be internally inspected on or before 12 months after the October 1, 2021 and every five years thereafter, in accordance with a code of practice developed by a nationally recognized association to determine whether the tank is structurally sound and the lining still performing in accordance with the original design specifications.

(b) If the lining is determined to be no longer performing in accordance with original design specifications and cannot be repaired in accordance with a code of practice developed by a nationally recognized association or independent testing laboratory or the tank is found to not be structurally sound, the tank shall be immediately taken temporarily out-of-service in accordance with 310 CMR 80.42 and removed or permanently closed in-place in accordance with 310 CMR 80.43 within 90 days of the determination.

80.25: Requirements for a UST System or UST Component Emergency Response

(1) The Owner or Operator shall post a sign at the UST facility indicating what steps to follow in the event of a UST system or UST component emergency including, but not limited to, the name and phone number of the person or persons to contact in the event of an emergency.

(a) The sign shall be written in large print so that employees can clearly see it from at least ten feet away, in languages that are commonly spoken at the UST facility and be prominently displayed at various locations.

(b) The emergency signage shall be updated when any information on the sign changes.

(2) The Owner or Operator shall develop, and update when necessary, a written procedure for how UST facility employees and contractors should respond in the event of a UST system or UST component emergency. The Owner or Operator shall keep the most recent copy of the written procedure in accordance with 310 CMR 80.36.

(a) The procedure shall include, but not be limited to, how to access the emergency shut-off for the tanks, how to locate the communication device and how to respond to alarms that indicate leakage or a release.

(b) The Owner or Operator shall inform all Class A, B and C operators where the procedure is located and train Class A, B and C operators on the emergency procedures.

80.26: Requirements for Leak Detection Systems

(1) The Owner or Operator shall equip UST systems with a leak detection system for tanks and piping in accordance with manufacturer's specifications and 310 CMR 80.19.

(2) The Owner or Operator shall operate and maintain leak detection systems at all times and in accordance with manufacturer's specifications and 310 CMR 80.26, as applicable. As applicable, the Owner or Operator shall inspect and test leak detection systems annually, as follows:

(a) For in-tank monitors and other controllers:

1. Test alarms;
2. Verify system configuration; and
3. Test battery backup.

(b) For probes and sensors:

1. Inspect for residual buildup and remove buildup as necessary;
2. Ensure floats move freely;
3. Ensure shaft is not damaged;

80.26: continued

4. Ensure cables are free of kinks or breaks; and
 5. Test alarm operability and communication with controller.
- (c) For automatic line leak detector: test operation to meet criteria in 310 CMR 80.19(4)(a)2., 310 CMR 80.80.19(4)(b)2., and 310 CMR 80.19(4)(c)2., by simulating a leak.
- (d) For vacuum pumps and pressure gauges: ensure proper communication with sensors and controller.
- (e) Repair and replace leak detection systems and components, as necessary.
- (f) Keep records of inspection results, repairs and replacements in accordance with 310 CMR 80.36.
- (3) Requirements for UST systems that continuously monitor interstitial space in a double-walled tank and/or double-walled piping as its primary leak detection system are as follows:
- (a) Sensors shall continuously monitor interstitial space and be maintained in good working order and shall be operated to perform their original design function in accordance with the manufacturer's specifications.
 - (b) Interstitial space shall be free of solid material, water and regulated substance. Water in 310 CMR 80.26(3)(b) does not include brine or condensation that occurs in a properly operating UST system.
 - (c) If a release or leakage is indicated by alarm or otherwise, the Owner or Operator shall immediately commence an investigation to determine whether there may be a release or leakage. The Owner or Operator shall conclude the investigation within 72 hours of the indication of release or leakage.
 - (d) If the Owner or Operator is unable to determine that there is not a release or leakage within 72 hours of the indication of release or leakage, he or she shall conduct a tightness test of the suspected tank or piping in accordance with 310 CMR 80.32 within 72 hours after the conclusion of the investigation.
 1. If the tank or piping fails a tightness test pursuant to 310 CMR 80.32, the Owner or Operator shall comply the requirements at with 310 CMR 80.32(3), as applicable.
 2. If the tank and the piping pass a tightness test pursuant to 310 CMR 80.32, the tank and the piping are considered tight, and the requirements for tightness testing are satisfied.
 3. If the investigation or the tightness test indicates leakage, the Owner or Operator shall comply with 310 CMR 80.39.
 - (e) The Owner or Operator shall keep records of all investigations and monthly liquid status reports in hard copy if electronically (but not electronically in the leak detection system), in accordance with 310 CMR 80.36.
- (4) Requirements for those UST systems that use an in-tank monitoring system as its primary leak detection system are as follows:
- (a) At least once each calendar month, the Owner or Operator shall conduct a test using the in-tank monitor over a continuous period of time as prescribed by the manufacturer's specifications, during which no regulated substance shall be delivered to or taken from the tank, in order to determine whether there is a release or leakage of regulated substance. If the manufacturer's specifications do not prescribe a continuous period of time, the continuous period of time shall be six hours. A loss of 0.20 gallons per hour or more over the testing period with the probability of detection of 0.95 and a probability of false alarm of 0.05 shall indicate a release or leakage.
 - (b) If at the end of the calendar month, the tank has not passed a test in accordance with 310 CMR 80.26(4)(a), the Owner or Operator shall conduct a tightness test of the suspected tank and piping in accordance with 310 CMR 80.32 within 72 hours of the end of the calendar month.
 1. If the tank or piping fails a tightness test pursuant to 310 CMR 80.32, the Owner or Operator shall comply with 310 CMR 80.32(3), as applicable.
 2. If the tank and the piping pass a tightness test pursuant to 310 CMR 80.32, the tank and the piping are considered tight, and the requirements for tightness testing are satisfied.
 - (c) The Owner or Operator shall keep records of all investigations and passing monthly tests in hard copy or electronically (but not electronically in the leak detection system), in accordance with 310 CMR 80.36.

80.26: continued

- (5) Requirements for those UST systems that use a continuous in-tank detection system as its primary leak detection system are as follows:
- (a) Throughout each calendar month, the Owner or Operator shall ensure that the continuous in-tank monitoring system is operating in accordance with the manufacturer's specifications.
 - (b) A loss of 0.20 gallons per hour with the probability of detection of 0.95 and a probability of false alarm of 0.05 shall indicate a release or leakage.
 - (c) If at the end of the calendar month, the continuous in-tank monitoring system indicates a release or leakage in accordance with 310 CMR 80.26(5)(b), the Owner or Operator shall conduct a tightness test of the suspected tank or piping pursuant to 310 CMR 80.32 within 72 hours of the end of the calendar month.
 - 1. If the tank or piping fails a tightness test pursuant to 310 CMR 80.32, the Owner or Operator shall comply with 310 CMR 80.32(3), as applicable.
 - 2. If the tank and the piping pass a tightness test pursuant to 310 CMR 80.32, the tank and the piping are considered tight, and the requirements for tightness testing are satisfied.
 - (d) If the continuous in-tank monitoring system does not produce sufficient data to obtain a conclusive result, the Owner or Operator shall within 24 hours of the end of the calendar month take the tank out of service to allow the continuous in-tank monitoring system the minimum sufficient quality test time in accordance with the manufacturer's specification.
 - (e) If after complying with 310 CMR 80.26(5)(d), the Owner or Operator is still unable to obtain a passing result, the Owner or Operator shall comply with 310 CMR 80.26(5)(c) within 96 hours of the end of the calendar month.
 - (f) The Owner or Operator shall keep records of all investigations and passing monthly tests in hard copy or electronically (but not electronically in the leak detection system), in accordance with 310 CMR 80.36.
- (6) Requirements for an in-tank monitoring system that uses statistical inventory reconciliation (SIR) as its primary leak detection system are as follows:
- (a) The Owner or Operator shall have an inventory analyses conducted by a qualified SIR vendor who analyzes inventory, delivery, and dispensing data collected over a calendar month to determine whether or not the UST system has a release or leakage.
 - (b) The Owner or Operator shall have equipment and procedures in place to assure that the data provided to the SIR vendor is accurate.
 - (c) If the SIR analysis is conclusive and identifies a release or leakage, the Owner or Operator shall conduct a tightness test of the suspected tank or piping pursuant to 310 CMR 80.32 within 72 hours of obtaining knowledge of the suspected release or leakage.
 - 1. If the tank or piping fails a tightness test pursuant to 310 CMR 80.32, the Owner or Operator shall comply with 310 CMR 80.32(3), as applicable.
 - 2. If the tank and the piping pass a tightness test pursuant to 310 CMR 80.32, the tank and the piping are considered tight, and the requirements for tightness testing are satisfied.
 - (d) If the SIR analysis is inconclusive, the Owner or Operator shall immediately, upon obtaining knowledge of the inconclusive result, commence an investigation to determine whether there is a release or leakage. the Owner or Operator shall conclude the investigation within 72 hours upon obtaining knowledge of the inconclusive result. If the Owner or Operator is unable to determine that there is not a release or leakage within 72 hours upon obtaining knowledge of the inconclusive result, he or she shall conduct a tightness test pursuant to 310 CMR 80.32 within 72 hours of the conclusion of the investigation.
 - 1. If the tank or piping fails a tightness test pursuant to 310 CMR 80.32, the Owner or Operator shall comply with 310 CMR 80.32(3), as applicable.
 - 2. If the tank and the piping pass a tightness test pursuant to 310 CMR 80.32, the tank and the piping are considered tight, and the requirements for tightness testing are satisfied.
 - (e) If the SIR analysis is conclusive and does not identify a release or leakage of regulated substance, the tank is considered tight.

80.26: continued

(f) The Owner or Operator shall keep records of all investigations and SIR analyses in accordance with 310 CMR 80.36.

(7) Until October 13, 2022, UST systems having a capacity of 1000 gallons or less, installed before January 2, 2015, that supply regulated substance to emergency engines may conduct weekly tank gauging as its primary leak detection system are as follows:

- (a) Manual tank gauging shall be conducted every seven days.
- (b) Manual tank gauging shall be conducted as follows:
 1. Tank liquid level measurements shall be taken and recorded, including date and time of measurements, at the beginning and ending of a period of at least 36 hours during which no liquid is added to or removed from the tank;
 2. Level measurements shall be based on an average of two consecutive stick readings at the beginning and the ending of the period;
 3. The equipment used shall be capable of measuring the level of regulated substance over the full range of the tank's height to the nearest 1/8 of an inch;
 4. A release or leakage shall be suspected if the variation between beginning and ending measurements exceeds the weekly or monthly standard in 310 CMR 80.26(7)(b)4.:

Table D:

Table D

Nominal Tank Capacity	Weekly Standard (One Test)	Monthly Standard (Average of Four Tests)
500 gallons or less	10 gallons	5 gallons
501 through 1,000 gallons	13 gallons	7 gallons

(c) In the event of a suspected release or leakage, the Owner or Operator shall comply with 310 CMR 80.31(1)(e),(f) and (g).

(d) The Owner or Operator shall keep records of the results of weekly tank gauging in accordance with 310 CMR 80.36.

(8) Until October 13, 2022, UST systems having a capacity of more than 1000 gallons, installed before January 2, 2015 that supply regulated substance to emergency engines may conduct monthly tank gauging as its primary leak detection system are as follows: (These UST systems shall also conduct an annual tightness test in accordance with 310 CMR 80.32).

- (a) Manual tank gauging shall be conducted every 30 days.
- (b) Manual tank gauging shall be performed as follows:
 1. Tank liquid level measurements shall be taken and recorded, including date and time of measurements, at the beginning and ending of a period of at least 36 hours during which no liquid is added to or removed from the tank;
 2. Level measurements shall be based on an average of two consecutive stick readings at the beginning and the ending of the period;
 3. The equipment used shall be capable of measuring the level of regulated substance over the full range of the tank's height to the nearest 1/8 of an inch;
 4. A release or leakage shall be suspected if the variation between beginning and ending measurements exceeds the monthly standard in 310 CMR 80.26(8)(b)4.:

Table E

Nominal Tank Capacity	Monthly Standard
More than 1000 gallons	7 gallons plus 2 gallons for every additional 1000 gallons capacity

(c) In the event of a suspected release or leakage, the Owner or Operator shall comply with 310 CMR 80.31(1)(e), (f) and (g).

(d) The Owner or Operator shall keep records of the results of weekly tank gauging in accordance with 310 CMR 80.36.

80.26: continued

(9) For piping installed before May 28, 1999, the Owner or Operator may conduct quarterly visual inspections of secondary containment ports and conduct an annual tightness test of the piping in accordance with 310 CMR 80.32. The Owner or Operator shall keep records of the visual inspections and the tightness tests in accordance with 310 CMR 80.36.

(10) Options for Owners and Operators of regulated substance piping installed before January 1, 1989:

(a) Non-European suction piping, if it does not have secondary containment and continuous monitoring of interstitial space, shall comply with 310 CMR 80.49(4)(c)1.c. or e. The Owner and Operator shall maintain records of the tightness testing in accordance with 310 CMR 80.36.

(b) Single-walled pressurized piping systems and single-walled gravity piping systems shall comply with 310 CMR 80.19(4)(c)1.b., c. or d. The Owner and Operator shall maintain records of the tightness testing in accordance with 310 CMR 80.36.

(11) If the Owner or Operator cannot demonstrate that its European suction piping is sloped back to the tank and that its one check valve is located directly under the dispenser to the satisfaction of the Department including, but not limited to, an accurate drawing, as-built plans or installation records, it shall comply with the standards for non-European piping at 310 CMR 80.19(4)(a)1. 310 CMR 80.19(4)(b)1.(c)1., as applicable.

(12) The Owner or Operator shall test those components of the leak detection system that are repaired or replaced, prior to returning the leak detection system to service, to determine that they are operational. The Owner or Operator shall keep records of such tests in accordance with 310 CMR 80.36.

(13) All leak detection records required in 310 CMR 80.26(1) through (12) shall be kept in accordance with 310 CMR 80.36.

80.27: Requirements for Turbine, Intermediate and Dispenser Sumps

(1) Owners and Operators shall operate and maintain turbine, intermediate and dispenser sumps in accordance with 310 CMR 80.27.

(2) Turbine, intermediate and dispenser sumps shall be clean and free of solid and liquid material at all times.

(a) If a sensor or visual observation indicates that there is liquid in the sump, the liquid shall be removed immediately.

(b) If the liquid is a regulated substance, the Owner or Operator shall investigate the source of the regulated substance, shall investigate the path of entry to the sump, and shall make any necessary repairs in accordance with 310 CMR 80.33.

(c) The solid and liquid material that collects in a sump shall be removed, managed and disposed of in accordance with applicable local, state and federal laws and regulations.

(3) All sump sensors shall be placed in accordance with the manufacturer's specifications, or, if no such specifications exist, the sensors shall be placed at the lowest possible location in the sump, where it can feasibly be installed.

(4) All manhole covers shall prevent water infiltration to the sump. All sump covers shall be free of cracks and holes.

(5) All tanks using a submersible pump that do not have a turbine sump shall be inspected every 30 days.

(a) The Owner or Operator shall visually inspect the area around the submersible pump as follows:

1. Visually inspect the submersible pump for release of regulated substance(s); and
2. Visually inspect the submersible pump and other components for signs of corrosion, breakage and wear.

80.27: continued

- (b) The Owner or Operator shall repair or replace components as necessary in accordance with 310 CMR 80.33; and
 - (c) The Owner or Operator shall keep records of this inspection and any repairs or replacements to demonstrate compliance with 310 CMR 80.27(5) in accordance with 310 CMR 80.36.
- (6) The Owner or Operator shall inspect turbine, intermediate and dispenser sumps, except sumps that only contain a single-walled siphon line with no connections within the sump or sumps that only contain a European suction system or sumps that do not contain any regulated substance piping connections, in accordance with the following and in accordance with 310 CMR 80.35(3) or (4), as applicable:
- (a) Single-walled and double-walled sumps without continuous monitoring sensors in the sump shall be inspected every 90 days.
 - (b) Single-walled and double-walled sumps with correctly installed and operating continuous monitoring sensors in the sump shall be inspected annually.
- (7) The Owner or Operator shall conduct an integrity test of turbine, intermediate and dispenser sumps, except sumps listed in 310 CMR 80.27(8), on or before January 2, 2017, on or before October 13, 2021, and once every three years thereafter as follows:
- (a) Sumps with properly operating and installed sensors that are not used for interstitial monitoring of piping may be tested hydrostatically to the level that will activate the sensors. The sump passes the integrity test if the sensors are activated when they come in contact with the liquid.
 - (b) Dispenser sumps with properly operating and installed sensors used for interstitial monitoring of piping and that shuts off the dispenser when activated may be tested hydrostatically to the level that will activate the sensor, if the UST facility is always staffed when the pumps are operational. The sump passes the integrity test if the sensors are activated when they come in contact with the liquid and shut off the dispenser.
 - (c) Turbine sumps with properly operating and installed sensors that are used for interstitial monitoring of piping and that shuts off the submersible pump when activated may be tested hydrostatically to the level that will activate the sensor. The sump passes the integrity test if the sensors are activated when they come in contact with the liquid and shut off the submersible pump.
 - (d) Sumps that do not meet the requirements of 310 CMR 80.27(7)(a), (b) or (c) or do not have a sensor shall be integrity tested by vacuum or hydrostatic testing in accordance with PEI RP1200-19.
- (8) The following sumps are not subject to the testing requirements in 310 CMR 80.27(7), 80.27(9) or 80.20(54):
- (a) Sumps that only contain a single-walled siphon line with no connections within the sump or sumps that do not contain any regulated substance piping connections;
 - (b) Sumps that only contain a European suction system; and
 - (c) Double-walled sumps, if the integrity of both walls is monitored every 90 days or annually, as applicable under 310 CMR 80.27(6), by checking vacuum, pressure or liquid interstitial integrity indicators.
 - 1. A sensor in a dry interstice does not meet the requirements of monitoring the integrity of both walls.
 - 2. In order to claim the exemption from testing, the Owner or Operator shall keep documentation showing that the sump is double-walled and that the integrity of both walls is monitored every 90 days or annually, as applicable under 310 CMR 80.27(6), in accordance with 310 CMR 80.36.
- (9) If the sump fails a test, the Owner or Operator shall investigate the failure and shall make any necessary repairs in accordance with 310 CMR 80.33.
- (a) The Owner or Operator shall keep records of the test and any repairs to demonstrate compliance with 310 CMR 80.27(7) and 310 CMR 80.33 including, but not limited to, the date of the test and the results, in accordance with 310 CMR 80.36.

8.27: continued

(b) Turbine, intermediate and dispenser sumps that are repaired, except sumps listed in 310 CMR 80.27(8), shall pass an integrity test in accordance with 310 CMR 80.27(7) prior to commencing operation. The Owner or Operator shall keep records of such tests in accordance with 310 CMR 80.36.

(c) Repairs which do not affect the integrity of a sump to retain liquid including, but not limited to, a sump lid and gasket, do not require an integrity test prior to commencing service.

80.28: Requirements for Spill Buckets and Overfill Prevention Equipment

(1) Owners and Operators shall at all times operate and maintain spill buckets and overfill prevention equipment in accordance with 310 CMR 80.21 and 80.28(2) and (3).

(2) Requirements for the proper operation and maintenance of spill buckets and covers are as follows:

(a) The Owner or Operator shall keep spill buckets clean and free of solid and liquid material.

(b) The Owner or Operator shall maintain the spill bucket and cover so that they are free of cracks and holes at all times.

(c) The Owner or Operator shall remove and manage any solid or liquid material that collects within a spill bucket in accordance with local, state and federal laws and regulations.

(d) The Owner or Operator shall maintain spill buckets in accordance with the manufacturer's specifications.

(e) The Owner or Operator shall inspect spill buckets no less frequently than once every 30 days in accordance with 310 CMR 80.35.

(f) The Owner or Operator shall test spill buckets in accordance with 310 CMR 80.28(2)(g) on or before January 2, 2017, on or before October 13, 2022 and once every three years thereafter.

1. Double-walled spill buckets, if the integrity of both walls is monitored every 30 days by checking vacuum, pressure or liquid interstitial integrity indicators are exempt from the testing requirement in 310 CMR 80.28(2)(f).

2. A sensor in a dry interstice does not meet the requirements of monitoring the integrity of both walls.

3. In order to claim the exemption from testing, the Owner or Operator shall keep documentation showing that the spill bucket is double-walled and that the integrity of both walls is monitored at least every 30 days, in accordance with 310 CMR 80.36.

(g) The Owner or Operator shall conduct an integrity test on spill buckets in accordance with the schedule at 310 CMR 80.28(2)(f) and after repairs, in accordance with the following requirements:

1. Spill buckets shall pass an integrity test to ensure the spill bucket is liquid tight by using vacuum or hydrostatic test in accordance with PEI RP1200-19.

2. If the spill bucket fails the test, the Owner or Operator shall repair or replace the spill bucket in accordance with 310 CMR 80.33. Prior to commencing operation, the repaired spill bucket shall be retested in accordance with 310 CMR 80.27(2)(g)1.

3. Repairs which do not affect the integrity of a spill bucket to retain liquid or disturb the seal between the spill bucket and the riser do not require an integrity test prior to commencing operation.

(h) The Owner or Operator shall repair or replace spill buckets as necessary in accordance with 310 CMR 80.33. Prior to commencing operation, the repaired spill bucket shall be retested in accordance with 310 CMR 80.27(2)(g)1.

(i) If a spill bucket is equipped with sensors, the sensors shall be placed in accordance with the manufacturer's specifications, or, if no such specifications exist, the sensors shall be placed at the lowest possible location in the spill bucket.

(j) The Owner or Operator shall keep the following spill bucket records in accordance with 310 CMR 80.36.

1. Records of spill bucket inspections to demonstrate compliance with 310 CMR 80.28(2)(e).

2. Records of spill bucket integrity tests to demonstrate compliance with 310 CMR 80.28(2)(f) and (g).

80.28: continued

(3) Requirements for proper operation and maintenance of overfill prevention equipment are as follows:

(a) The Owner or Operator shall inspect and test the overfill prevention equipment annually to ensure that it is operational and will activate at the correct level in accordance with 310 CMR 80.21(2)(b).

1. Inspection and testing shall be conducted in accordance with requirements in the manufacturer's specifications, if the manufacturer has developed requirements for inspection and testing; or

2. Inspection and testing shall be conducted in accordance with a code of practice developed by a nationally recognized association or independent testing laboratory.

(b) The Owner or Operator shall repair or replace components as necessary in accordance with 310 CMR 80.33. Prior to commencing operation, the overflow prevention equipment shall be tested to ensure that it will activate at the correct level in accordance with 310 CMR 80.21(2)(b).

(c) The Owner or Operator shall keep records of the following in accordance with 310 CMR 80.36:

1. Records of inspection and testing, in accordance with the manufacturer's specifications including, but not limited to, a copy of the manufacturer's specifications to demonstrate compliance with 310 CMR 80.28(3)(a)1.; or

2. Records of inspection and testing including, but not limited to the code of practice developed by a nationally recognized association or independent testing laboratory to demonstrate compliance with 310 CMR 80.28(3)(a)2.

(4) The Owner or Operator shall ensure that the volume available in the tank is greater than the volume of regulated substance to be transferred to the tank before the regulated substance transfer is made and that the transfer operation is monitored constantly to prevent overfilling and spilling.

80.29: Requirements for Corrosion Protection

(1) Owners and Operators shall operate and maintain corrosion protection in accordance with 310 CMR 80.22 and 80.29.

(2) Sacrificial or galvanic anode cathodic protection systems shall be tested by a cathodic protection tester at the following recurring frequency and in accordance with the NACE standards at 310 CMR 80.29(3):

(a) If test results indicate a negative voltage of at least -0.90 volts or if the system passes the 100-mV cathodic polarization test as indicated in the NACE Standards at 310 CMR 80.29(3)(a) or (b), the system shall be tested at three-year intervals thereafter.

(b) If test results indicate a negative voltage of between -0.85 and -0.90 the system shall be tested annually thereafter.

(c) If test results indicate a negative voltage of less than -0.85 or if the system fails the 100-mV cathodic polarization test as indicated in the NACE Standard at 310 CMR 80.29(3)(a) or (b), the system shall be deemed inadequate and the Owner and Operator shall comply with 310 CMR 80.29(5).

(3) Sacrificial or galvanic anode cathodic protection systems shall be tested by a cathodic protection tester at the recurring frequency in 310 CMR 80.29(2) and in accordance with the following standards:

(a) NACE Standard Test Method: NACE Standard TM0101-2012, *Measurement Techniques Related to Criteria for Cathodic Protection on Underground or Submerged Metallic Tank Systems*; or

(b) NACE Standard Test Method: NACE Standard TM0497-2012, *Measurement Techniques Related to Criteria for Cathodic Protection on Underground or Submerged Metallic Piping Systems*.

(4) Impressed current cathodic protection systems shall be tested every 12 months by a cathodic protection tester to determine whether the UST system is protected against corrosion.

80.29: continued

- (a) In addition to the annual testing, impressed current systems shall be inspected every 60 days by the Owner or Operator in accordance with the manufacturer's specifications or the NACE publications listed at 310 CMR 80.29(3)(a) or (b) to ensure the equipment is operating as designed.
- (b) Acceptable system operating voltage and amperage ranges as determined by the corrosion expert shall be affixed to each rectifier.
 - 1. System voltage and amperage readings shall be recorded every 60 days.
 - 2. If the system voltage and amperage readings are outside the range determined to be acceptable by the cathodic protection tester, it is considered a failed test and the Owner or Operator shall comply with 310 CMR 80.29(5).
- (c) Systems installed without voltage and/or amperage meters shall be retrofitted with meters upon the first annual test of the system after January 2, 2015.

(5) The Owner or Operator shall determine the cause of the failed cathodic protection test by retaining a corrosion expert within ten business days of obtaining knowledge of the failed test. If within ten business days of the failed test, the cathodic protection tester can make repairs, re-test and the result is a passing test, the Owner or Operator is not required to retain a corrosion expert.

- (a) If necessary, the Owner or Operator shall repair or replace the cathodic protection system within 120 days of the date of the failed test.
- (b) The Owner or Operator shall document the results of the corrosion expert's determination including, but not limited to, the date of the investigation and the results.
- (c) If repairs to the cathodic protection system are not completed within 120 days of the date of the failed test, the Owner or Operator shall either take the UST system temporarily out-of-service in accordance 310 CMR 80.42, or remove or permanently close in-place the UST system in accordance with 310 CMR 80.43.

(6) All cathodic protection systems shall be tested by a cathodic protection tester for proper operation within 60 days following a repair to the cathodic protection system or an excavation at the UST system.

(7) The Owner or Operator shall keep the following records in accordance with 310 CMR 80.36:

- (a) Documentation of corrosion experts determination in 310 CMR 80.29(5)(b);
- (b) Records of testing of cathodic protection system(s); and
- (c) Repairs of the cathodic protection system.

80.30: Requirements for Compatibility

(1) The Owner and Operator shall not introduce, or allow to be introduced, any regulated substance into a UST system that is not compatible with the UST system.

(2) The Owner or Operator shall ensure that all UST systems are compatible with the environment in which they are installed including, but not limited to, soil and groundwater.

(3) The Owner or Operator storing regulated substance containing greater than 10% ethanol or greater than 20% biofuel shall demonstrate compatibility of the tank, piping, sumps, pumping equipment, leak detection equipment, spill buckets and overfill prevention equipment with the regulated substance by complying with one of the following options:

- (a) Certification or listing of UST system and UST components listed in 310 CMR 80.30(3) by a nationally recognized, independent testing laboratory for use with the regulated substance stored; or
- (b) Manufacturer's approval, in writing, indicating an affirmative statement of compatibility, specifying the range of biofuel blends are compatible with the UST system and UST components.

(4) The Owner or Operator shall keep records of regulated substance compatibility as required by 310 CMR 80.30(3) and in accordance with 310 CMR 80.36.

80.31: Requirements for Inventory Monitoring(1) Daily Inventory Monitoring.

- (a) The Owner or Operator of a tank that is not single-walled and does not have continuous monitoring in accordance with 310 CMR 80.19(3)(b)3. shall conduct inventory monitoring for abnormal regulated substance loss.
- (b) The Owner or Operator of UST systems with tanks having a capacity of 111 to 1000 gallons may use manual tank gauging in accordance with 310 CMR 80.31(2) in order to satisfy the requirements of 310 CMR 80.31(1)(a).
- (c) Inventory monitoring for abnormal regulated substance loss shall be performed as follows:
1. Take daily measurements and reconcile inventory data daily and monthly;
 2. Measure the liquid in the tank using:
 - a. A gauge stick or tape with water sensitive paste which shall be capable of measuring liquid in the tank to the nearest $\frac{1}{8}$ of an inch; or
 - b. An automatic tank gauging device of equivalent or better measuring accuracy.
 3. At the close of each calendar month, determine, for that month and for each tank or combination of tanks, the number of days in which any amount of regulated substance was dispensed and the number of days in which a loss of regulated substance was recorded.
 4. Record all daily measurements and monthly reconciliation information.
- (d) An abnormal regulated substance loss from any tank or combination of tanks shall mean a loss not explainable by any spillage, temperature variations or other causes in excess of 1% of the volume plus 130 gallons of regulated substance dispensed over a period of a calendar month.
- (e) In the event of abnormal regulated substance loss, the Owner or Operator shall take the following steps within the 72 hours following the discovery of the abnormal regulated substance loss:
1. Check the inventory input and output records for mathematical error; and
 2. Check the inventory for an error in measurement.
- (f) If the abnormal regulated substance loss cannot be reconciled in accordance with 310 CMR 80.31(1)(e)1. or 2., the UST system shall be tested for tightness within 72 hours of the completion of 310 CMR 80.31(1)(e) in accordance with 310 CMR 80.32.
- (g) If the tank fails a tightness test pursuant to 310 CMR 80.32, the Owner or Operator shall comply with 310 CMR 80.32(3).
- (h) If the tank passes a tightness test pursuant to 310 CMR 80.32, the tank is considered tight, and the requirements for tightness testing in 310 CMR 80.32 are satisfied.

(2) Manual Tank Gauging for Small Tanks.

- (a) Owners and Operators may use weekly manual tank gauging on tanks that have a capacity of 1000 gallons or less, in accordance with 310 CMR 80.31(2)(b) and (c), to satisfy the inventory monitoring requirements in 310 CMR 80.31(1)(a).
- (b) Manual tank gauging shall be conducted every seven days as follows:
1. Tank liquid level measurements shall be taken and recorded, including date and time of measurements, at the beginning and ending of a period of at least 36 hours during which no liquid is added to or removed from the tank;
 2. Level measurements shall be based on an average of two consecutive stick readings at the beginning and the ending of the period;
 3. The equipment used shall be capable of measuring the level of regulated substance over the full range of the tank's height to the nearest $\frac{1}{8}$ of an inch;

80.31: continued

4. A release or leakage shall be suspected if the variation between beginning and ending measurements exceeds the weekly or monthly standard in 310 CMR 80.31(2)(b)4.:
Table F: **Table F**

Nominal Tank Capacity	Weekly Standard (One Test)	Monthly Standard (Average of Four Tests)
500 gallons or less	10 gallons	5 gallons
501 through 1,000 gallons	13 gallons	7 gallons

(c) In the event of a suspected release or leakage, the Owner and Operator shall comply with 310 CMR 80.31(1)(e) and (f).

(3) Abnormal Water Gain.

- (a) Owners and Operators that are subject to the requirements of 310 CMR 80.31 shall also take daily measurements to determine if there is abnormal water gain in the tank.
- (b) The measurement shall be taken using a method in 310 CMR 80.31(1)(c).
- (c) All measurements shall be recorded.
- (d) An abnormal gain of water inside the tank shall be a gain in the water level of more than one inch in a 24 hour period.
- (e) The Owner or Operator shall have the water removed from the tank and managed in accordance with applicable local, state and federal laws and regulations.
- (f) The Owner or Operator shall have the tank checked for water in accordance with 310 CMR 80.31(3)(b) through (d) within 24 hours of the removal of the water, during which time no regulated substance shall be added to the tank.
- (g) In the event of any abnormal water gain, the Owner or Operator shall:
 - 1. Within 72 hours of obtaining knowledge of the abnormal water gain, investigate the cause of the abnormal water gain and make repairs or replacements as necessary.
 - 2. If the Owner or Operator cannot determine the cause of the abnormal water gain, the UST system shall be tested for tightness in accordance with 310 CMR 80.32.
 - a. If the tank fails a tightness test pursuant to 310 CMR 80.32, the Owner or Operator shall comply with 310 CMR 80.32(3) as applicable.
 - b. If the tank passes a tightness test pursuant to 310 CMR 80.32, the tank is considered tight, and the requirements for tightness testing in 310 CMR 80.32 are satisfied.

(4) Records. The Owner or Operator shall maintain all records of inventory monitoring including, but not limited to, sales receipts, weekly and monthly measurements, and records of monitoring for abnormal water gain found at 310 CMR 80.31(3), in accordance with 310 CMR 80.36.

(5) Waste Oil Tanks. Waste oil tanks that are subject to 310 CMR 80.31 and are connected to oil burning equipment shall be exempt from 310 CMR 80.31 during periods when oil burning equipment is in use.

80.32: Requirements for Tank and Pipe/Line Tightness Testing

(1) Tank and piping/line tightness testing shall be capable of detecting a release or leakage of 0.1 gallon per hour, accounting for the effects of thermal expansion or contraction of regulated substance, vapor pockets, tank deformation, evaporation, condensation, and the location of the water table. The probability of detection shall be no less than 95% and the probability of a false alarm shall be no more than 5%.

(2) Owners or Operators of all UST systems shall meet the following tightness test and reporting requirements:

- (a) A tank or pipe/line tightness test shall be performed by a certified UST system tightness tester using the appropriate test for the particular tank or piping/line.

80.32: continued

- (b) When a tightness test is performed, the Owner or Operator shall compile a report or log that shall include, but not be limited to, the following:
1. Date the test was performed;
 2. Facility name and address;
 3. Facility Owner name and address;
 4. Identification of the tank or piping/line that was tested;
 5. Reason for the test including, but not limited to, the date when the Owner and Operator first discovered the need for the test;
 6. Type of tightness test equipment used for the test;
 7. Name of the certified UST system tightness tester, his/her certificate number and expiration date, and the name of any persons assisting in the test;
 8. Data sheets with test readings recorded;
 9. Calculations pertaining to the test method and test results;
 10. Location of monitoring or observation well, if used in test procedure;
 11. Description of method used to measure the water table, if required, and the result; and
 12. Signature of the certified UST system tightness tester attesting to the accuracy of the information of the test result in accordance with 310 CMR 80.11(2).
- (c) The report or log prepared pursuant to 310 CMR 80.32(2)(b) shall be kept in accordance with 310 CMR 80.36.

(3) Tightness Test Failures.

- (a) A tank or piping/line fails a tightness test when the test results indicate a release or leakage from the UST system that exceeds the detection standards at 310 CMR 80.32(1), as applicable.
- (b) If the tank or piping/line fails a tightness test, the certified UST system tightness tester shall immediately, but in no event later than 24 hours after obtaining knowledge of the failed test notify the Owner and Operator and the fire department in the city or town in which the UST system is located.
- (c) The Owner or Operator shall comply with 310 CMR 80.33, 80.38 and 80.39 and 310 CMR 40.0300: *Notification of Releases and Threats of Release of Oil and Hazardous Materials; Identification and Listing of Oil and Hazardous Materials*, as applicable.

80.33: Requirements for Repairs and Replacements

- (1) A tank that has released regulated substance shall immediately be emptied, but in no event shall be emptied later than 24 hours of obtaining knowledge of the release.
- (a) The tank shall be permanently closed in-place or removed in accordance with 310 CMR 80.43(2) or (3), unless the manufacturer of the tank repairs and re-certifies or re-warranties the tank, in writing, and the tank passes a tightness test in accordance with 310 CMR 80.32 prior to commencing operation.
 - (b) The Owner and Operator shall comply with 310 CMR 40.0000: *Massachusetts Contingency Plan*, if applicable.
- (2) A tank that has leakage of regulated substance shall be immediately emptied, but in no event shall be emptied later than 72 hours of obtaining knowledge of the leakage.
- (a) The tank shall be permanently closed in-place or removed in accordance with 310 CMR 80.43(2) or (3), unless the manufacturer of the tank repairs and re-certifies or re-warranties the tank, in writing, and the tank passes a tightness test in accordance with 310 CMR 80.32 prior to commencing operation.
 - (b) The Owner and Operator shall comply with 310 CMR 40.0000: *Massachusetts Contingency Plan*, if applicable.
- (3) Any piping or portion of piping that is the source of leakage or a release shall be immediately isolated and emptied of regulated substance. The piping shall remain empty until said piping or portion of piping is repaired or replaced or the UST system is permanently closed in-place or removed in accordance with 310 CMR 80.43(2) or (3).
- (a) Metal piping, portions of metal piping, and fittings that have had leakage or a release as a result of corrosion or other damage shall be replaced.

80.33: continued

(b) The Owner and Operator shall comply with 310 CMR 40.0000: *Massachusetts Contingency Plan*, if applicable.

(4) The Owner or Operator shall repair or replace UST systems and UST components within 30 days of the discovery of the need for repair or replacement, unless the UST system is taken temporarily out-of-service, removed or permanently closed in-place, in accordance with 310 CMR 80.42 or 80.43, within 30 days of the discovery of the need for the repair or replacement.

(a) If a longer timeframe for a repair is provided in a specific section of 310 CMR 80.00, the longer timeframe shall apply to that specific repair.

(b) The Owner or Operator shall document the discovery date of the need for repair or replacement. This documentation shall be retained in accordance with 310 CMR 80.36.

(c) If, due to circumstances beyond the Owner and Operator's control, the repair or replacement cannot be conducted within 30 days of the discovery of the need for said repair or replacement, the Owner or Operator shall notify the Department, in writing, within 30 days of the discovery of the need for a repair or replacement, information detailing the circumstances and a schedule for implementing the repairs or replacements.

(5) The Owner or Operator shall ensure that any repair of a UST system or UST component is performed by a qualified individual, in accordance with the manufacturer's specifications, 310 CMR 80.00 and applicable codes and standards.

(6) If a repair is made to the tank or the piping, the Owner or Operator shall ensure that the tank or piping is tightness tested in accordance with 310 CMR 80.32 within 30 days following the date of the completion of the repair.

(7) The Owner or Operator shall maintain records of every UST system or UST component repair, including, but not limited to, a description of the repair or replacement and the date of said repair, for the remaining operating life of the UST system in accordance with 310 CMR 80.36.

80.34: Requirements for Compliance Certification

(1) Certification Form. The Owner or Operator of a UST system shall submit, to the Department, a compliance certification in accordance with 310 CMR 70.00: *Environmental Results Program Certification*, no earlier than 16 months and no later than 18 months from the UST facility compliance date or the date of the most recent third-party inspection report submission, whichever is earlier. The compliance certification shall be submitted in a format specified by the Department. The Owner or Operator shall certify whether or not the Owner or Operator has complied with the following requirements:

(a) Financial responsibility obligations in accordance with 310 CMR 80.51 through 80.63;

(b) All testing requirements for leak detection, sumps, spill buckets, overfill prevention, and corrosion protection in accordance with 310 CMR 80.20 through 80.22 and 80.26 through 80.29;

(c) All registration, reporting and recordkeeping requirements in accordance with 310 CMR 80.23 and 80.36;

(d) Emergency procedure requirements in accordance with 310 CMR 80.25;

(e) That cathodic protection readings have been taken and recorded in accordance with 310 CMR 80.29(4)(b), as applicable;

(f) A demonstration that all Class A, B and C operators are certified in accordance with 310 CMR 80.37;

(g) For all sump, spill bucket and overfill prevention equipment inspections in accordance with 310 CMR 80.27 and 80.28;

(h) That all repairs and replacements have been completed in accordance with 310 CMR 80.33; and

(i) That the UST components and configuration of the UST system and UST components have not changed. If the UST system or UST component has changed, completion and submission of an amended registration form to the Department in accordance with 310 CMR 80.23(1).

80.34: continued

(2) Return to Compliance. At the time of submission, if the Owner or Operator is out of compliance with any of the requirements on the Certification Form, the Owner or Operator shall submit a Return to Compliance (RTC) Plan with the Certification Form that details what the Owner or Operator will do to return to compliance and the date by which compliance will be achieved. The RTC Plan shall include, but not be limited to, actions the Owner or Operator has taken or will take to come into compliance and remain in compliance with the requirements of 310 CMR 80.00.

(a) The deficiencies identified in the RTC plan shall be corrected within 30 days of the submittal of the Certification Form, unless the RTC plan documents a reasonable basis for why more time is needed to correct the deficiencies and provides an anticipated completion date.

(b) If the Department determines that the proposed completion date is not reasonable, the Department shall notify the Owner or Operator that deficiencies shall be corrected by a date earlier than the proposed date.

(c) The Owner or Operator shall notify the Department, in a format specified by the Department, when the deficiencies are corrected.

(3) Certification for Temporarily Out-of-service UST System. The Owner or Operator of a UST system that is temporarily out-of-service shall certify compliance with the requirements at 310 CMR 80.42(4).

(4) New or Newly Regulated UST Facility. If a UST facility is installed or becomes subject to 310 CMR 80.00 after January 2, 2015, the compliance certification statement is due to Department no earlier than 16 months and no later than 18 months after the date of registration in accordance with 310 CMR 80.23.

(5) Certification Statement. The Owner or Operator shall comply with the Certification Statement requirements at 310 CMR 70.03(2): *Certification Statement*, except that 310 CMR 70.03(2)(b) and (c) shall not apply.

80.35: Requirements for Periodic Inspections

(1) Owners and Operators are responsible for ensuring that periodic visual inspections meeting the requirements in 310 CMR 80.35(2) through (4) are conducted at all underground storage tank systems. The Owner, Operator or certified Class A or B operator, or an individual under the direction of the Owner, Operator, or certified Class A or B Operator shall conduct the periodic visual inspections.

(2) Every 30 Day

(a) Inspect leak detection equipment and records as follows:

1. Verifying leak detection equipment is currently on and is operating with no alarms or other unusual operating conditions present;
2. Verify all indications of leakage or releases were responded to in accordance with 310 CMR 80.26 including, but not limited to, printing a report from the electronic system if applicable; and
3. Verify leak detection records are complete, accurate and current.

(b) Inspect each spill bucket and cover as follows:

1. Visually inspect to determine if there is solid or liquid material in the spill buckets, and remove and manage solid and liquid material in accordance with applicable federal, state and local laws and regulations;
2. Visually inspect spill buckets and covers for signs of corrosion, deterioration, cracks and holes and repair and replace as necessary;
3. Verify that sensors are set in accordance with the manufacturer's specifications, if applicable, or, if no such specifications exist, the sensors shall be placed at the lowest possible location in the spill bucket;
4. Check for and remove obstructions in the fill pipes;
5. Check the fill pipe caps to verify they are securely on the fill pipes; and
6. For double-walled spill buckets with interstitial monitoring, check for leakage in the interstitial area.

80.35: continued

- (c) Verify that grade level fill covers are properly color-coded to correctly reflect the regulated substance in the UST system in accordance with 310 CMR 80.24(4).
- (3) Every 90 days inspect each turbine, intermediate and dispenser sump without continuous monitoring sensors, except sumps that only contain a single-walled siphon line with no connections within the sump and sumps that only contain European Suction Systems or sumps that do not contain any regulated substance piping connections, as follows:
 - (a) Visually inspect sumps, sump covers and manhole covers for damage, corrosion, breakage and wear, leaks to the containment areas and releases to the environment, and repair and replace as necessary;
 - (b) Remove solid and liquid material from the sumps in accordance with applicable federal, state and local laws and regulations; and
 - (c) For double-walled sumps, check for leakage in the interstitial area.
- (4) Annually
 - (a) Inspect each turbine, intermediate and dispenser sump with continuous monitoring sensors, except sumps that only contain a single-walled siphon line with no connections within the sump and sumps that only contain European Suction Systems or sumps that do not contain any regulated substance piping connections, as follows:
 - 1. Visually inspect sumps for damage, corrosion, breakage and wear, leaks to the containment areas and releases to the environment, and repair and replace as necessary;
 - 2. Remove solid and liquid material from the sumps in accordance with applicable federal, state and local laws and regulations;
 - 3. Verify that all sumps sensors are operating in accordance with the manufacturer's specifications and are placed in accordance with the manufacturer's specifications, or, if no such specifications exist, the sensors are placed at the lowest possible location in the sump; and
 - 4. For double-walled sumps, with interstitial monitoring check for leakage in the interstitial area.
 - (b) For hand held release detection equipment, check devices such as tank gauge sticks for operability and serviceability.
- (5) If the inspection indicates that any underground storage tank system components are not properly operating or are not being maintained in accordance with 310 CMR 80.00, manufacturer's specifications and applicable codes and standards, the Owner or Operator shall repair said component(s) in accordance with 310 CMR 80.33.
- (6) Every requirement under 310 CMR 80.35(2) through (4) shall be recorded on an inspection report or log that contains at a minimum the following information:
 - (a) A list of each area and UST component inspected;
 - (b) Whether the UST component is properly operating and being maintained; and
 - (c) Any repairs conducted on UST components designated as not operating or being maintained in accordance with 310 CMR 80.00, the manufacturer's specifications and all applicable codes and standards.
- (7) The results of each inspection shall be recorded and retained in accordance with 310 CMR 80.36.

80.36: Requirements for Recordkeeping

- (1) For a minimum of four years, the Owner or Operator shall maintain records in hard copy or electronically, and shall make them available to the Department as soon as possible following a request, but in no event more than seven business days after the request. The records shall include, but are not limited to:
 - (a) Results of all turbine, intermediate and dispenser sump integrity tests in accordance with 310 CMR 80.20(5), 80.28(7) and 80.27(9).
 - (b) Results of all spill bucket integrity tests in accordance with 310 CMR 80.21(1)(c) and 80.28(2).

80.36: continued

- (c) Results of all cathodic protection inspections and tests in accordance with 310 CMR 80.22(5) and 80.29(2), (4) and (6).
- (d) Records to demonstrate the Owner or Operator responded to alarms in accordance with 310 CMR 80.24(3).
- (e) Results of all leak detection inspections in accordance with 310 CMR 80.26(2), as applicable and tests in accordance with 310 CMR 80.26(12).
- (f) Leak detection monitoring records and investigations as required by 310 CMR 80.26(3)(e), (4)(c), (5)(f), (6)(f), (7)(d), (8)(d), (9) and (10), and 310 CMR 80.19(3)(d).
- (g) Results of inspections and testing of overfill prevention equipment in accordance with 310 CMR 80.28(3).
- (h) Records for all inventory monitoring for abnormal regulated substance loss and abnormal water gain in accordance with 310 CMR 80.31(4), if applicable.
- (i) Documentation of the date the need for the repair or replacement was discovered in accordance with 310 CMR 80.33(4)(b).
- (j) Records to demonstrate compliance with change-in-product requirements at 310 CMR 80.41(6).
- (k) Periodic inspection reports or logs in accordance with 310 CMR 80.35(6) and (7).

(2) The Owner or Operator shall maintain, in hard copy or electronically, the list of the current Class A, Class B and Class C operators of each UST system in accordance with 310 CMR 80.37(11) and records that demonstrate each designated Class A, Class B and Class C operator is certified in accordance with 310 CMR 80.37(7) through (9). The Owner or Operator shall make records available to the Department as soon as possible following a request, but in no event more than seven business days after the request.

(3) Until the UST system is removed or permanently closed in-place in accordance with 310 CMR 80.43(2) or (3), the Owner or Operator shall maintain the most current copy of the following records in hard copy or electronically, and shall make them available to the Department as soon as possible following a request, but in no event more than seven business days after the request.

- (a) A copy of the registration in accordance with 310 CMR 80.23(1).
- (b) A copy of the third-party inspection report pursuant to 310 CMR 80.49(2)(b)
- (c) Records that the Owner and Operator complied with temporary closure requirements in accordance with 310 CMR 80.42, if applicable.
- (d) Emergency procedures in accordance with 310 CMR 80.25.
- (e) Compatibility records in accordance with 310 CMR 80.30.

(4) For the life of a cathodic protection system, the Owner or Operator shall maintain an as built, scaled plan of the cathodic protection system and manufacturer's specifications in accordance with 310 CMR 80.22(4)(c), in hard copy or electronically, and shall make them available to the Department as soon as possible following a request, but in no event more than seven business days after the request.

(5) Until the UST system is removed or permanently closed in-place in accordance with 310 CMR 80.43(2) or (3), the Owner or Operator shall maintain the following records in hard copy or electronically, and shall make them available to the Department as soon as possible following a request, but in no event more than seven business days after the request:

- (a) Records of each equipment repair or replacement in accordance with 310 CMR 80.33.
- (b) A copy of installation information including, but not limited to, the installer's certification and completed checklist(s), and manufacturers' specifications; testing results; inspections; and a copy of the as-built plans of the UST facility in accordance with 310 CMR 80.16.

(6) An Owner or Operator shall maintain the most current financial assurance mechanism(s) used to demonstrate financial responsibility in accordance with 310 CMR 80.59 for a UST system until released from the requirements in accordance with 310 CMR 80.61. The Owner or Operator shall keep the documentation in hard copy or electronically. Upon request from the Department, the Owner or Operator shall make the documentation available to the Department as soon as possible, but in no event more than seven business days after receiving the request.

80.36: continued

(7) An Owner or Operator shall maintain documentation that a UST system holds a *de minimis* concentration of regulated substance, until the Owner and Operator no longer claim the exemption, in accordance with 310 CMR 80.04(5)(c). The Owner or Operator shall keep the documentation in hard copy or electronically. Upon request from the Department, the Owner or Operator shall make the documentation available to the Department as soon as possible, but in no event more than seven business days after receiving the request.

(8) The current Owner or Operator shall:

- (a) Maintain documentation that demonstrates compliance with closure requirements in accordance with 310 CMR 80.43 for at least four years after removal of an UST system or closure in-place of an UST system; or
- (b) Submit the documentation to the Department within 30 days of the UST system removal or closure-in-place.

(9) The Owner or Operator shall maintain documentation that a sump is double-walled and monitored in accordance with 310 CMR 80.27(6) as applicable, until the Owner and Operator no longer claims the exemption from testing, in accordance with 310 CMR 80.27(8)(c)2. The Owner or Operator shall keep the documentation in hard copy or electronically. Upon request from the Department, the Owner or Operator shall make the documentation available to the Department as soon as possible, but in no event more than seven business days after receiving the request.

(10) The Owner or Operator shall maintain documentation that a spill bucket is double-walled and is monitored in accordance with 310 CMR 80.28(2)(e), until the Owner and Operator no longer claim the exemption from testing, in accordance with 310 CMR 80.28(2)(f)3. The Owner or Operator shall keep the documentation in hard copy or electronically. Upon request from the Department, the Owner or Operator shall make the documentation available to the Department as soon as possible, but in no event more than seven business days after receiving the request.

(11) The Owner or Operator shall maintain tightness test results and reports, conducted in accordance with 310 CMR 80.32 until the next tightness test is conducted. The Owner or Operator shall keep the documentation in hard copy or electronically. Upon request from the Department, the Owner or Operator shall make the documentation available to the Department as soon as possible, but in no event more than seven business days after receiving the request.

OPERATOR TRAINING

80.37: Class A, B and C Operator Requirements and Certifications

(1) Effective August 8, 2012, every Owner and Operator shall ensure that at least one Class A, B and C operator certified in accordance with 310 CMR 80.37 is designated to each underground storage tank system.

- (a) An individual may be designated by an Owner and Operator as a Class A, Class B, or Class C operator or any combination of the three Classes.
- (b) An individual Class A, Class B, or Class C operator may be designated by an Owner and Operator for more than one UST system or UST facility.

(2) Except as provided in 310 CMR 80.37(2), the Owner or Operator shall ensure that a designated Class A, B or C operator is present when the UST system(s) is in operation. At unmanned UST systems including, but not limited to, emergency generators at telecommunication towers and card lock/card access facilities, there shall be Class A, B and C operators designated as responsible for operation and maintenance activities at such systems and responding to emergencies, and they shall be certified in accordance with 310 CMR 80.37(7) through (9), respectively.

(3) If a different Class A, B, or C operator needs to be designated for any reason including, but not limited, to resignation or termination, the Owner or Operator shall designate the appropriate Class A or B operator within 30 days of the position being vacated, or Class C operator within ten days of the position being vacated, and the Owner or Operator shall ensure that said Class A, B, or C operator is certified in accordance with 310 CMR 80.37(7), (8) or (9).

80.37: continued

(4) Class A Operator Requirements.

(a) A Class A operator shall have general knowledge and understanding of underground storage tank systems and applicable state regulatory requirements that apply to underground storage tank systems, including, but not limited to:

1. Tanks and piping;
2. Regulated substances stored;
3. Leak detection;
4. Spill prevention;
5. Overfill prevention;
6. Corrosion protection;
7. Emergency response procedures;
8. Product compatibility;
9. Financial responsibility documentation requirements;
10. Registration and other notification requirements;
11. Reporting and recordkeeping requirements;
12. UST testing requirements;
13. Temporary and permanent closure requirements; and
14. The Class B operator qualifications, training and examination requirements and Class C operator qualifications and training requirements.

(b) A Class A operator shall ensure that appropriate individuals:

1. Properly operate and maintain the underground storage tank system.
2. Maintain required records.
3. Are trained to operate and maintain the underground storage tank system and keep records.
4. Properly respond to alarms and emergencies caused by leaks or releases from underground storage tank systems.
5. Make financial responsibility documents available to the Department as required.

(5) Class B Operator Requirements.

(a) A Class B operator shall have in-depth knowledge and understanding of operation and maintenance requirements and applicable state regulatory requirements that apply to underground storage tank systems including, but not limited to:

1. Tanks and piping;
2. Regulated substance stored;
3. Leak detection;
4. Spill prevention;
5. Overfill prevention;
6. Corrosion protection;
7. Emergency response procedures;
8. Product compatibility;
9. Financial responsibility documentation requirements;
10. Registration and other notification requirements;
11. Reporting and recordkeeping requirements;
12. UST testing requirements;
13. Temporary and permanent closure requirements; and
14. The Class C operator qualification and training requirements.

(b) A Class B operator shall ensure implementation of the day-to-day aspects of operation and maintenance of, and recordkeeping for, underground storage tank systems and shall have general and site specific knowledge of the following:

1. Components of underground storage tank systems.
2. What material the underground storage tank system components are constructed of.
3. Methods of release detection and release prevention applied to the underground storage tank system.

(6) Class C Operator Requirements.

(a) A Class C operator shall have specific knowledge of the layout of the UST system(s), emergency procedures and how to respond to alarms.

(b) A Class C operator shall immediately and properly respond to alarms or other indications of emergencies in accordance with the emergency procedures.

80.37: continued

(c) A Class C operator shall be the Owner or Operator of the underground storage tank facility or an employee of the Owner or Operator, but not all employees of the Owner or Operator are necessarily Class C operators.

(7) Certification Requirements for Class A Operators.

(a) The Owner or Operator shall ensure that Class A operators are certified within 30 days after being designated by the Owner or Operator to assume responsibility for an underground storage tank system.

(b) Requirements to be certified as a Class A operator:

1. Obtain training in accordance with 310 CMR 80.37(7)(c) and (d) which may include on-the-job training; and
2. Take and pass an operator examination in accordance with 310 CMR 80.37(7)(e) through (g).

(c) The Owner or Operator shall ensure that Class A operators are trained on the type(s) of UST system(s) for which they are designated. Said training shall cover subject matters in 310 CMR 80.37(4) and shall include those systems for which the Class A operator is designated. Said training shall include, but not be limited to:

1. Types of tanks, piping, regulated substances stored, overfill prevention, leak detection and corrosion protection.
2. Operation and maintenance schedules and requirements.
3. Testing, reporting and recordkeeping requirements.
4. Financial responsibility requirements and the financial responsibility instruments that are in place for each UST system.
5. General emergency response procedures and requirements.

(d) The Owner or Operator shall document that Class A operators have received training that complies with 310 CMR 80.37(7)(b)1. and (c). The Owner or Operator shall keep the documentation, in hard copy or electronically, in accordance with 310 CMR 80.36. Upon request from the Department, the Owner or Operator shall make the documentation available to the requestor as soon as possible, but in no event more than seven business days after the request.

(e) Class A operators shall demonstrate knowledge of UST systems in general and all applicable state regulations by taking and passing an operator examination, as required by the Department.

(f) Upon passing the operator examination, the Class A operator shall receive a certificate indicating passage of the operator examination and the Owner or Operator shall keep a copy of the certificate, in hard copy or electronically, in accordance with 310 CMR 80.36. Upon request from the Department, the Owner or Operator shall make the documentation available to the requestor as soon as possible, but in no event more than seven business days after the request.

(g) Any individual who takes and fails any operator examination three times within six months of the first examination shall be prohibited from taking any operator examination for six months from the date of the third failure.

(h) A Class A operator with a current Class A certification from another state may be certified in Massachusetts as a Class A operator if the operator is trained in accordance with 310 CMR 80.37(7)(c), and the Class A operator passes the Massachusetts-specific portion of the operator examination.

(8) Certification Requirements for Class B Operators.

(a) The Owner or Operator shall ensure that Class B operators are certified within 30 days after being designated by the Owner or Operator to assume operation and maintenance responsibilities of the underground storage tank system.

(b) Requirements to be certified as a Class B operator:

1. Obtain training in accordance with 310 CMR 80.37(8)(c) and (d) which may include on-the-job training; and
2. Take and pass an operator examination in accordance with 310 CMR 80.37(8)(e) through (g).

(c) The Owner or Operator shall ensure that Class B operators are trained on the specific UST system(s) for which they are designated. Said training shall cover subject matters in 310 CMR 80.37(5) and shall include those systems for which the Class B operator is designated. Said training shall include, but not be limited to:

80.37: continued

1. Types of tanks, piping, regulated substances stored, overfill prevention, leak detection and corrosion protection.
 2. Operation and maintenance of the underground storage tank system.
 3. Testing, reporting and recordkeeping requirements.
 4. Financial responsibility documentation requirements.
 5. Emergency response procedures and requirements.
- (d) Owners or Operators shall document that Class B operators have received training that complies with 310 CMR 80.37(8)(b)1. and (c). The Owner and Operator shall keep the documentation, in hard copy or electronically, in accordance with 310 CMR 80.36. Upon request from the Department, the Owner or Operator shall make the documentation available to the requestor as soon as possible, but in no event more than seven business days after the request.
- (e) Class B operators shall demonstrate knowledge of UST systems in general and all applicable state regulations by taking and passing an operator examination, as required by the Department.
- (f) Upon passing the operator examination, the Class B operator shall receive a certificate indicating passage of the operator examination and the Owner or Operator shall keep a copy of the certificate, in hard copy or electronically, in accordance with 310 CMR 80.36. Upon request from the Department, the Owner or Operator shall make the documentation available to the requestor as soon as possible, but in no event more than seven business days after the request.
- (g) Any individual who takes and fails any operator examination three times within six months of the first examination shall be prohibited from taking any operator examination for six months from the date of the third failure.
- (h) A Class B operator with a current Class B certification from another state may be certified in Massachusetts as a Class B operator if the operator is trained in accordance with 310 CMR 80.37(8)(c), and the Class B operator passes the Massachusetts-specific portion of the operator examination.
- (9) Certification Requirements for Class C Operators.
- (a) A Class C operator shall be certified before being designated by the Owner and Operator.
- (b) In order to be certified as a Class C operator, the Owner or Operator shall document that an individual was trained by a Class A or B operator. The training shall be site specific and shall include, at a minimum, the actions to take in response to alarms or other indications of emergencies caused by leaks or releases from an underground storage tank system.
- (c) When the training is complete, the trainer and the Class C operator shall each sign and date the training log for the UST facility documenting that the training was completed in accordance 310 CMR 80.37(9)(b) and (c). The trainer shall also document the underlying reason for the re-training in accordance with 310 CMR 80.37(9)(d). The Owner or Operator shall maintain the log for at least two years after the Class C operator is no longer designated, in hard copy or electronically. Upon request from the Department, the Owner or Operator shall make the log available to the requestor as soon as possible, but in no event more than seven business days after the request.
- (d) The Owner or Operator shall ensure that the Class C operator is re-trained and shall document the re-training and the underlying reason for the re-training in accordance with 310 CMR 80.37(9)(c) when:
1. Emergency procedures change at a facility;
 2. The type or location of the leak detection alarm system changes; or
 3. The type or location of the emergency shut-off switch changes.
- (10) Temporary Transfers of Class C Operators. Prior to the Class C operator assuming designation at a UST facility to which the Class C operator is temporarily transferred, the Owner or Operator shall ensure that such Class C operator is trained on the site-specific emergency procedures of the UST facility in accordance with 310 CMR 80.37(9).

80.37: continued

(11) The Owner or Operator shall maintain a current list of the designated Class A, B and C operator(s) for each UST system or facility, in hard copy or electronically. Upon request from the Department, the Owner or Operator shall make the documentation available to the requestor as soon as possible, but in no event more than seven business days after the request. This list shall include, but not be limited to, the name of the operator, operator classification, operator certificate number, as applicable, the date of the operator's training and the date of designation.

(12) Without limitation, if the Department determines that a UST system is out of compliance with the applicable requirements of 310 CMR 80.00, the Department may require that the Owner or Operator provide re-training for one or more Class A, B or C operator(s) and/or require that one or more Class A or B operator(s) re-take and pass the operator examination.

LEAKAGE AND RELEASE: RESPONSE, REPORTING AND REMEDIATION

80.38: Response to a Release

(1) Nothing in 310 CMR 80.00 shall affect the Owner or Operator notification obligations under 310 CMR 40.0000: *Massachusetts Contingency Plan*.

(2) In the event of a release from a tank, the Owner or Operator shall empty the tank immediately, but in no event later than 24 hours of obtaining knowledge of the release and comply with 310 CMR 80.33, 80.42 or 80.43, as applicable.

(3) In the event of a release from piping, the Owner or Operator shall immediately empty and isolate the section of pipe determined to have had the release and comply with 310 CMR 80.33, 80.42 or 80.43, as applicable.

80.39 Response to Leakage

(1) In the event of leakage, whether determined by testing, visual inspection or otherwise, the following steps shall be taken:

(a) If testing, visual inspection or other information has confirmed that the source of the leakage is the piping, the Owner or Operator shall immediately:

1. Isolate and empty the section of the pipe determined to have leakage until the section is repaired or replaced; or
2. Take that UST system temporarily out-of-service in accordance with 310 CMR 80.42; or
3. Remove or permanently close in-place the UST system in accordance with 310 CMR 80.43.

(b) If testing has confirmed that the source of the leakage is a particular tank, the Owner or Operator shall immediately, but in no event later than 72 hours of obtaining the test results, empty the UST system; and:

1. Repair the tank in accordance with 310 CMR 80.33(2); or
2. Remove the tank in accordance with 310 CMR 80.43(2); or
3. Permanently close-in-place the tank in accordance with 310 CMR 80.43(3).

80.40: Reportable Releases

For each reportable release pursuant to 310 CMR 40.0000: *Massachusetts Contingency Plan*, the Owner or Operator shall provide the following information to the Department, in a format provided by the Department, in accordance with 310 CMR 80.23(3)(c):

- (a) The source of each reportable release from a UST system, *i.e.* the UST component or piece of equipment that failed, if known; and
- (b) The cause of each reportable release from a UST system, *i.e.* the reason for the failure, if known.

CHANGE-IN-PRODUCT, OUT-OF-SERVICE SYSTEMS AND CLOSURE

80.41: Requirements for Change-in-product

- (1) Owners and Operators shall comply with all requirements in 310 CMR 80.41.
- (2) A UST system once used for non-food grade regulated substances shall not be reused to store food products or drinking water.
- (3) The Owner shall notify the Department, in a format specified by the Department, of a change-in-product in accordance with 310 CMR 80.23(2)(a) and the following timeframes:
 - (a) If the change-in-product is from a regulated substance to a different regulated substance, within 30 days of executing the change; except if the different regulated substance contains greater than 10% ethanol or greater than 20% biofuel, then at least 30 days prior to executing the change, in accordance with 310 CMR 80.30(3).
 - (b) If the change-in-product is from a regulated substance to a non-regulated substance, prior to executing the change.
 - (c) If the change-in-product is from a non-regulated substance to a regulated substance, within 30 days of receiving regulated substance into the UST system, in accordance with 310 CMR 80.23(1).
- (4) If the change-in-product is from a regulated substance to a non-regulated substance:
 - (a) Before executing a change-in-product, the Owner or Operator shall remove all solid and liquid material in accordance with 310 CMR 80.47. The Owner or Operator shall manage the solid and liquid material removed from the UST system in accordance with all applicable federal, state and local laws and regulations.
 - (b) The UST system will no longer be subject to 310 CMR 80.00, except that the Owner and Operator shall continue to be responsible for remediating any releases of regulated substances that occurred. The Owner or Operator shall conduct an assessment in accordance with 310 CMR 80.43(4), after notifying the Department of the change-in-product, but before the change-in-product is executed.
 - (c) Records of the change-in-product shall be kept in accordance with 310 CMR 80.36.
- (5) If the change-in-product is from a regulated substance to another regulated substance, before executing the change-in-product, the Owner or Operator shall empty the tank. The Owner or Operator shall manage and dispose of the solid and liquid material removed from the UST system in accordance with all applicable federal, state and local laws and regulations.
- (6) Owners or Operators shall demonstrate compliance with the requirements for change-in-product by maintaining records/documentation, in accordance with 310 CMR 80.36.

80.42: Requirements for Taking a UST System Temporarily Out-of-service

- (1) Owners and Operators shall comply with all requirements in 310 CMR 80.42.
- (2) Within 30 days after a UST system is taken temporarily out-of-service, the Owner shall notify the Department in a format specified by the Department in accordance with 310 CMR 80.23(2)(b).
- (3) The Owner or Operator shall not take a UST system temporarily out-of-service for more than five years.
 - (a) If a temporarily out-of-service UST system is not put back into service at the end of five years, the Owner or Operator shall remove or permanently close in-place the UST system in accordance with 310 CMR 80.43, unless 310 CMR 80.45 applies.
 - (b) A single-walled steel tank that is temporarily out-of-service on August 7, 2017, shall comply with the requirements at 310 CMR 80.15.
- (4) When a UST system is taken temporarily out-of-service, the Owner or Operator shall comply only with the following requirements of 310 CMR 80.00 during the entire time period the UST system is temporarily out-of-service:

80.42: continued

(a) Remove all solid and liquid material from the UST system and have the UST system rendered inert in accordance with 310 CMR 80.47;

The Owner or Operator shall manage the solid and liquid material removed from the UST system in accordance with all applicable federal, state and local laws and regulations;

(b) Cap, lock and secure all fill lines and fill pipes against tampering;

(c) Keep the vent lines open and operable for the entire period that the UST system is temporarily out-of-service;

(d) Continue operation and maintenance of corrosion protection in accordance with 310 CMR 80.29, if applicable;

(e) Continue to comply with the third-party inspection requirements in accordance with 310 CMR 80.49;

(f) Comply with the Compliance Certification requirements for temporarily out-of-service UST systems in accordance with 310 CMR 80.34(3); and

(g) Maintain financial responsibility in accordance with 310 CMR 80.51 through 80.63.

(5) Prior to commencing operation, the Owner or Operator shall have the tank and piping tightness tested and shall ensure that the UST system components are calibrated and operating in accordance with the manufacturer's specifications.

(6) Within 30 days after returning the UST system to service, the Owner or Operator shall notify the Department in a format specified by the Department in accordance with 310 CMR 80.23(2)(c).

(7) Owners or Operators shall demonstrate compliance with the requirements of temporarily out-of-service by maintaining records/documentation in accordance with 310 CMR 80.36.

80.43: Requirements for Removal and Permanent Closure In-place

(1) Owners and Operators shall comply with the requirements in 310 CMR 80.43.

(2) Requirements for Removal of a UST System.

(a) Prior to removal of a UST system, the Owner or Operator shall have all the solid and liquid material removed from the UST system, in accordance with 310 CMR 80.47, have the UST system rendered inert and shall secure all openings. The Owner or Operator shall manage and dispose of all solid and liquid material removed from the UST system in accordance with all applicable federal, state and local laws and regulations.

(b) The Owner or Operator shall conduct an assessment in accordance with 310 CMR 80.43(4) within 24 hours after the UST system is removed, but prior to backfill of the excavation area.

(c) The Owner shall notify the Department, in a format specified by the Department, that the UST system was removed, within 90 days of removal in accordance with 310 CMR 80.23(2)(d). A copy of the assessment in 310 CMR 80.43(4) shall be submitted with said form.

(3) Requirements for Permanent Closure-in-place.

(a) No Owner or Operator shall permanently close a UST system in-place unless it is determined to be located under a building and cannot be removed from the ground without first removing the building, or is so located that it cannot be removed from the ground without endangering the structural integrity of another UST system, structure, underground piping or underground utilities.

1. Such a determination shall be made by a licensed professional civil or structural engineer, and shall be signed, sealed and submitted to the Department with supporting documentation prior to the UST system Owner or Operator commencing UST system closure activities. The determination shall include, at a minimum, sketches, photos, a scaled site plan, a scope of work for the environmental assessment to be conducted pursuant to 310 CMR 80.43(4), a detailed, written determination of why the UST system cannot be removed, and a schedule for completion.

80.43: continued

2. If the Department does not notify the Owner within 30 days, the Owner or Operator may proceed with the closure-in-place if it has complied with 310 CMR 80.43(3)(a)1.

3. The Owner or Operator shall have all solid and liquid material removed from the tank, in accordance with 310 CMR 80.47 and shall have the tank filled with clean sand, concrete slurry mix or another inert material if such other material is approved by the Department in writing prior to filling the tank. The Owner or Operator shall manage the solid and liquid material removed from the tank in accordance with all applicable federal, state and local laws and regulations.

(b) Before permanent closure-in-place commences, the Owner or Operator shall conduct an assessment in accordance with 310 CMR 80.43(4). If the assessment finds contamination requiring notification pursuant to 310 CMR 40.0000: *Massachusetts Contingency Plan*, the filling of the UST system for permanent closure-in-place shall not commence until the Owner or Operator has complied with the notification requirements contained in 310 CMR 40.0300: *Notification of Releases and Threats of Release of Oil and Hazardous Materials; Identification and Listing of Oil and Hazardous Materials*, as applicable, and any required response actions under 310 CMR 40.0000.

(c) The Owner shall notify the Department in accordance with 310 CMR 80.23(2)(e), in a format specified by the Department that the UST system was closed-in-place, within 90 days of the UST system being filled. A copy of the assessment in 310 CMR 80.43(4) shall be submitted with said form.

(4) Assessment.

(a) The Owner or Operator shall measure for the presence of a release of regulated substances where contamination is most likely to be present in the subsurface. To determine sampling location(s), sample types, field screening techniques and analytical methods, the Owner or Operator shall consider the regulated substance stored in the UST system and its characteristics; the type of backfill in the area; the depth to groundwater and direction of ground water flow, the distance to surface water bodies, and any other factors appropriate for identifying the presence of a release.

(b) A photo ionization detector (PID) or flame ionization detector (FID) shall be employed in the field to detect for the presence of a release, if the regulated substance can be detected by a PID or FID.

(c) If the Owner or Operator obtains knowledge of a release, the Owner or Operator shall comply with the notification requirements contained in 310 CMR 40.0300: *Notification of Releases and Threats of Release of Oil and Hazardous Materials; Identification and Listing of Oil and Hazardous Materials*, as applicable and any required response actions under 310 CMR 40.0000: *Massachusetts Contingency Plan*.

(5) The Department may require removal or permanent closure in-place of a UST system at any time that it determines the UST system is abandoned or poses a threat to public health, safety or the environment.

(6) Owners and Operators shall demonstrate compliance with the requirement for permanent closure by maintaining records/documentation in accordance with 310 CMR 80.36.

(7) The Owner or Operator may need to obtain a permit from the fire department in which the UST system is located for closure or relocation of a UST system pursuant to M.G.L. c. 210, § 1. It is the responsibility of the Owner or Operator to obtain any required permit(s).

80.44: Requirements for a Tank within a Tank

If a new tank is installed inside an existing tank, the Owner shall:

(1) Prior to installing the new tank, the Owner or Operator shall have all the solid and liquid material removed from the existing UST system, in accordance with 310 CMR 80.47, have the existing UST system rendered inert and shall secure all openings. The Owner or Operator shall manage and dispose of all solid and liquid material removed from the UST system in accordance with all applicable federal, state and local laws and regulations.

80.44: continued

- (2) Conduct an assessment in accordance with 310 CMR 80.43(4) before the new tank is installed. If the assessment finds contamination requiring notification pursuant to 310 CMR 40.0000: *Massachusetts Contingency Plan*, the installation of the new tank shall not commence until the Owner or Operator has complied with the notification requirements contained in 310 CMR 40.0300: *Notification of Releases and Threats of Release of Oil and Hazardous Materials; Identification and Listing of Oil and Hazardous Materials*, as applicable, and any required response actions under 310 CMR 40.0000.
- (3) Notify the Department that a new tank is being installed inside an existing tank, in a format specified by the Department, within 30 days of the new tank being installed. A copy of the assessment in 310 CMR 80.43(4) shall be submitted with said form.

80.45: UST Systems Temporarily Out-of-service for over Five Years

- (1) A new Owner that acquires a UST system that has been temporarily out-of-service for more than five years may bring the UST system back into service within 90 days after the acquisition is final, if the UST system and UST components comply with the most current tank, piping, leak detection, sump, spill bucket, overfill protection and corrosion protection standards in 310 CMR 80.00 and the Owner:
 - (a) Determines that the UST system and all UST components are operable;
 - (b) Passes a tightness test in accordance with 310 CMR 80.32;
 - (c) Has a third-party inspection performed in accordance with 310 CMR 80.49(7); and
 - (d) Performs any necessary repairs in accordance with 310 CMR 80.33.
- (2) After the Owner has completed the requirements in accordance with 310 CMR 80.45(1), the Owner shall notify the Department that the UST system meets the requirements of 310 CMR 80.45(1) when the Owner registers the UST system in accordance with 310 CMR 80.23(1).

80.46: Requirements for Previously Closed-in-place UST Systems

If, at the sole discretion of the Department, the Department determines that a tank or UST system permanently closed-in-place before December 22, 1988, may pose a current or potential threat to human health and the environment, the Owner or Operator of such a tank or UST system shall upon notice from the Department conduct a site assessment in accordance with 310 CMR 80.43(4).

80.47: Standards for Cleaning and Closure

- (1) The Owner or Operator shall follow the applicable cleaning and closure procedures to comply with 310 CMR 80.41(4)(a), 80.42(4)(a) and 80.43(2)(a) and (3)(a)3.:
 - (a) American Petroleum Institute (API) Recommended Practice 1604, 3rd Edition, March 1996 *Closure of Underground Petroleum Storage Tanks*, Sections 1, 3, and 4.1 through 4.5; and
 - (b) United States Environmental Protection Agency standards for RCRA hazardous debris found at 40 CFR 268.45.

DELIVERY PROHIBITION

80.48: Delivery Prohibition

- (1) The Department shall issue a delivery prohibition order to an Owner or Operator of a UST system after written notice to the Owner or Operator if one or more of the following conditions exist:
 - (a) Failure to install spill prevention equipment in accordance with 310 CMR 80.21(1);
 - (b) Failure to install overfill protection equipment in accordance with 310 CMR 80.21(2);
 - (c) Failure to install leak detection equipment in accordance with 310 CMR 80.19; or
 - (d) Failure to install corrosion protection equipment in accordance with 310 CMR 80.22.

80.48: continued

(2) Upon learning of any of the conditions in 310 CMR 80.48(1)(a) through (d), the Owner or Operator shall immediately, but in no event more than 24 hours after learning of the conditions in 310 CMR 80.48(1)(a) through (d), inform the Department of the violation.

(3) The Department may issue a delivery prohibition order to an Owner or Operator of a UST system after written notice to the Owner or Operator if one or more of the following conditions exist:

- (a) Spill prevention is not operating in accordance with 310 CMR 80.28(1) and (2);
- (b) Overfill protection is not operating in accordance with 310 CMR 80.28(1) and (3);
- (c) Leak detection equipment is not operating in accordance with 310 CMR 80.26;
- (d) Corrosion protection equipment is not operating in accordance with 310 CMR 80.29;
- (e) The Owner or Operator fail to demonstrate or maintain financial responsibility in accordance with 310 CMR 80.51 through 80.63; or
- (f) Any other violation of 310 CMR 80.00 that poses a significant threat to public health, safety or the environment, as determined by the Department at its sole discretion.

(4) After written notice to the Owner or Operator, the delivery prohibition shall become effective immediately when the Department serves a written delivery prohibition order in accordance with 310 CMR 80.50(3) prohibiting the delivery of product to the UST system(s). The delivery prohibition order shall be issued no sooner than 24 hours after written notice to the Owner or Operator.

(5) After the delivery prohibition order is served, the Department shall have the authority to lock the fill pipe and affix a red tag to the fill pipe of the UST system(s) that are subject to said order.

(6) No person shall deliver, cause to be delivered, accept for delivery or cause to be accepted for delivery any regulated substance to a UST system that is subject to a delivery prohibition order that has been served and has a red tag affixed to the fill pipe.

(7) No person shall remove, deface, alter or otherwise tamper with the lock or red tag affixed to a UST system or UST component, except in accordance with 310 CMR 80.48(10).

(8) Upon notification from the Owner or Operator that the violations identified in the delivery prohibition order have been corrected, the Department shall, confirm that the violations have been corrected.

(9) If the Department confirms that the violation(s) have been corrected, the Department shall terminate the delivery prohibition order in writing and remove the lock and red tag from the UST system.

(10) In the event that the Department does not inspect a UST system within 24 hours after receipt of the notification from the Owner or Operator that the violation(s) identified in the delivery prohibition order have been corrected, a third-party inspector may remove the 'red tag' after providing a certification to the Department, in a format specified by the Department, that the violation(s) has been corrected. Both the Owner or Operator and the third-party inspector shall sign the certification prior to submission to the Department.

(11) Notwithstanding a delivery prohibition order, the Department may authorize the delivery of product to a UST system that has received a delivery prohibition order in emergency situations, or for compliance testing purposes, as determined by the Department in its sole discretion.

(12) Any person subject to a delivery prohibition order shall have the right to an adjudicatory appeal in accordance with 310 CMR 80.50. An adjudicatory appeal shall not stay the effectiveness of a delivery prohibition order.

THIRD-PARTY INSPECTIONS

80.49: Third-party Inspections

(1) The third-party inspection program operates on a three year cycle that began on August 8, 2007. Every Owner and Operator was required to have every UST system inspected by a third-party inspector by August 8, 2010, and have every UST system inspected by a third-party inspector every three years thereafter.

(2) The Owner and Operator shall have all UST systems at each UST facility inspected by a third-party inspector and submit the third-party inspection report to the Department on or before the UST facility compliance date established in 310 CMR 80.49(2)(a) through (g).

(a) The date the third-party inspection was performed between August 8, 2007 and August 8, 2010 establishes the UST facility compliance date for the triennial third-party inspection, except as determined in 310 CMR 80.49(2)(e) and (g).

(b) The Owner or Operator shall submit a truthful, accurate and complete third-party inspection report that contains all the information required in 310 CMR 80.49(7) on or before the UST facility compliance date.

(c) The Owner or Operator shall submit the third-party inspection report to the Department no later than 60 days after the commencement of the third-party inspection in accordance with 310 CMR 80.49(7)(c)1., 2., or 3.

(d) A late submittal shall not alter the UST facility compliance date for future third-party submittals, unless the Department changes the UST facility compliance date in accordance with 310 CMR 80.49(2)(g).

(e) A submittal more than 30 days before the UST facility compliance date shall establish a new UST facility compliance date for future submittals, unless the Department changes the UST facility compliance date in accordance with 310 CMR 80.49(2)(g).

(f) If an Owner registers a new UST facility after January 2, 2015, the Department will assign the UST facility a UST facility compliance date. If an Owner or Operator installs a new or replacement UST system or tank at an existing UST facility, such installation shall not alter the UST facility compliance date.

(g) The Department may change the UST facility compliance date for any UST facility provided the Department gives the Owner and Operator 90 days prior written notice. The Department's decision to change the UST facility compliance date shall not be subject to M.G.L. c. 30A, or any other law governing adjudicatory proceedings.

(3) Third-party inspections shall only be performed by third-party inspectors certified in accordance with 310 CMR 80.49(4).

(4) Certification Requirements for a Third-party Inspector.

(a) Individuals who seek to become third-party inspectors and who meet the requirements of 310 CMR 80.49(4)(b) and (c) shall submit an application to the Department, in a format specified by the Department, for consideration.

1. If the Department determines the individual meets the certification requirements in 310 CMR 80.49(4)(b) and (c), the individual shall be issued a third-party inspector number and shall be certified as a third-party inspector.

a. All certifications shall be for a fixed term of three years from the date the Department issued the third-party inspector number and certification, unless suspended or revoked.

b. In order to renew a certification, the third-party inspector shall re-apply in a format specified by the Department at least 90 days before the certification expires.

i. To renew a certification, the third-party inspector shall demonstrate he or she is in compliance with the requirements at 310 CMR 80.49(4)(d).

ii. Any certification which is scheduled to expire shall be automatically extended if the third-party inspector files an application for renewal at least 90 days before the scheduled expiration date. This automatic extension shall remain in effect until:

(i) The Department issues a new certification to the third-party inspector; or

80.49: continued

- (ii) The Department denies the application for renewal and all opportunities for adjudicatory hearing in accordance with M.G.L. c. 30A, § 13, before the Department have been exhausted, in which case the extended certification shall be deemed expired; or
 - (iii) The Department suspends or revokes the extended certification and all opportunities for adjudicatory hearing, if any, in accordance with M.G.L. c. 30A, § 13, before the Department have been exhausted.
- 2. If the Department determines the individual does not meet the certification requirements in 310 CMR 80.49(4)(b) and (c), the individual's application shall be denied in writing.
 - a. Upon receiving a denial from the Department, the individual may submit a letter to the Department requesting that the Department reconsider its decision. Said letter shall be postmarked or delivered to the Department within 30 days of the date of the denial letter from the Department.
 - b. The Department shall respond to the individual in writing within 30 days of receiving the request for reconsideration.
 - c. If, upon reconsideration, the Department determines the individual does not meet the certification requirements, it shall notify the individual in writing and the individual may file an administrative appeal of the Department's decision in accordance with 310 CMR 80.50.
 - d. An individual may only file such a request for adjudicatory hearing in accordance with 310 CMR 80.50 if the individual timely requests reconsideration of the denial in accordance with 310 CMR 80.49(4)(a)2.a. and is denied after reconsideration.
- 3. Upon receipt of a third-party inspector number from the Department, the third-party inspector is certified and may conduct third-party inspections provided the third-party inspector meets the performance standards in accordance with 310 CMR 80.49(5).
- (b) In order to be certified as a third-party inspector, an individual shall:
 - 1. Take and pass Department required examination(s) that tests individuals on their knowledge of 310 CMR 80.00, and installation, operation and maintenance, and closure and temporary closure of UST systems and UST components, which may include a field component.
 - 2. Demonstrate experience by one of the following:
 - a. Possess at least three years of field experience in the areas of UST system installation and/or operation and maintenance:
 - b. Participate in at least ten inspections with a certified third-party inspector to obtain hands-on, practical experience with third-party inspections. Said inspections shall be conducted within the three years immediately prior to submitting an application in accordance with 310 CMR 80.49(4)(a); or
 - c. Hold a current UST third-party inspector certification from another state, and have performed a minimum of ten UST third-party inspections in that state within the past three years.
- (c) A third-party inspector who is registered with the Department under 527 CMR 9.00: *Tanks and Containers* as of January 2, 2015 and is not certified by January 1, 2018, does not have to meet the requirements of 310 CMR 80.49(4)(b)2. to become a certified third-party inspector, provided that:
 - 1. The third-party inspector has conducted at least ten third-party inspections since August 8, 2007; and
 - 2. On or before January 1, 2019, the third-party inspector takes and passes the Department required examination pursuant to 310 CMR 80.49(4)(b)1.
- (d) In order to maintain and renew certification, the third-party inspector shall:
 - 1. Complete annual training as required by the Department, which may include a field component.
 - 2. Complete at least six third-party inspections within the three-year certification period.
- (5) Performance Standards.
 - (a) A third-party inspector shall have the continuing duty to meet the following performance standards:
 - 1. Be a certified third-party inspector before conducting any third-party inspections.
 - 2. Not transfer or assign the certification to any other individual.

80.49: continued

3. Personally conduct and complete third-party inspections they sign and certify.
4. Conduct and complete third-party inspections in accordance with 310 CMR 80.49(7)(a).
5. Provide an accurate and complete third-party inspection report.
6. Not make any false, inaccurate or misleading statements in the third-party inspection report.
7. Provide any information regarding third-party inspections to the Department upon request, as soon as possible, but in no event more than seven business days following the request.
8. If a third-party inspector identifies one or more conditions in accordance with 310 CMR 80.48(1), at a UST system the third-party inspector shall:
 - a. Immediately, but in no event later than 24 hours after obtaining knowledge of the condition, advise the Owner or Operator of the one or more conditions described at 310 CMR 80.48(1) and the Owner or Operator's obligation to notify the Department of the condition(s) in accordance with 310 CMR 80.48(2); and
 - b. Notify the Department of the violation no later than 48 hours after informing the Owner or Operator, unless the third-party inspector receives written confirmation from the Owner or Operator that it notified the Department.

(6) Prohibitions. At the time of a third-party inspection and for the year immediately preceding the third-party inspection, a third-party inspector shall not be:

- (a) An Owner or Operator of the UST system the third-party inspector is inspecting;
- (b) The spouse, parent, child, brother or sister by blood, marriage or adoption of an Owner or Operator of the UST system who has performed work on the UST system, or the spouse, parent, child, brother or sister by blood, marriage or adoption of an employee or contractor of the Owner or Operator of the UST system who has performed work on the UST system that the third-party inspector is inspecting;
- (c) An employee of the Owner or Operator he or she is inspecting or an individual who has performed work at the UST facility he or she is inspecting, under contract or otherwise, other than a contractor who is the third-party inspector;
- (d) The designated Class A, B or C operator of the UST system the third-party inspector is inspecting; or
- (e) A person, or employee of a person, having any financial interest in or daily on-site responsibility for the UST system that the third-party inspector is inspecting.

(7) Inspection Requirements.

- (a) A third-party inspector shall conduct a third-party inspection in accordance with 310 CMR 80.49(7)(a) through observation during the inspection and a review of the records compiled and maintained since the most recent third-party inspection, and shall determine, at a minimum, the following for each UST system and UST components:
 1. Whether the Owner or Operator submitted required documentation to the Department in accordance with 310 CMR 80.23.
 2. Whether leak detection equipment has been installed, tested, maintained and is fully operational in accordance with 310 CMR 80.19 and 80.26 and the manufacturer's specifications.
 3. Whether corrosion protection, if applicable, has been installed, tested, maintained, and is fully operational in accordance with 310 CMR 80.22 and 80.29 and the manufacturer's specifications.
 4. Whether turbine, intermediate and dispenser sumps and sump sensors have been installed, inspected, tested and maintained in accordance with 310 CMR 80.20 and 80.27 and the manufacturer's specifications.
 5. Whether spill buckets have been installed, inspected, tested and maintained in accordance with 310 CMR 80.21(1) and 80.28(1) and (2) and the manufacturer's specifications.
 6. Whether overfill protection has been installed, inspected, tested, maintained, and is fully operational in accordance with 310 CMR 80.21(2) and 80.28(1) and (3) and the manufacturer's specifications.

80.49: continued

7. Whether inventory monitoring, if applicable, has been performed and recorded in accordance with 310 CMR 80.31.
 8. Whether tightness tests were conducted in accordance with 310 CMR 80.32.
 9. Whether the Compliance Certification has been completed and submitted to the Department in accordance with 310 CMR 80.34.
 10. Whether repairs and replacements have been conducted in accordance with 310 CMR 80.33.
 11. Whether periodic inspections have been conducted and recorded in accordance with 310 CMR 80.35.
 12. Whether the emergency response postings and written procedures are in compliance with 310 CMR 80.25.
 13. Whether alarms have been responded to and the responses documented in accordance with 310 CMR 80.24(3).
 14. Whether visual and/or olfactory observations indicate the presence of leakage or release related to the UST system or UST components.
 15. Whether UST systems that changed product in the UST system complied with 310 CMR 80.41.
 16. Whether financial responsibility is current, valid and documented in accordance with 310 CMR 80.51 through 80.63.
 17. Whether UST systems that are temporarily out-of-service are being maintained and documented in accordance with 310 CMR 80.42.
 18. Whether UST systems that were removed or permanently closed in-place were properly documented in accordance with 310 CMR 80.43.
 19. Whether documentation for Class A, B and C operators is current and maintained in accordance with 310 CMR 80.37.
 20. Whether required records are kept in accordance with 310 CMR 80.36.
- (b) The Owner or Operator shall provide the third-party inspector with all necessary records to complete the inspection in accordance with 310 CMR 80.49(7)(a).
- (c) A third-party inspector shall record the results of a third-party inspection on a third-party inspection report specified by the Department, shall sign and date such report in accordance with the certification at 310 CMR 80.49(7)(d), and shall provide the report to the Owner or Operator.
1. If the third-party inspection does not identify any deficiencies, the Owner or Operator shall sign and date the third-party inspection report in accordance with the certification at 310 CMR 80.49(7)(e), and shall submit the third-party inspection report to the Department on or before the UST facility compliance date in accordance with 310 CMR 80.49(7)(f).
 2. If the third-party inspection identifies deficiencies, the Owner or Operator shall correct any deficiencies, if possible, in accordance with 310 CMR 80.00, sign and date the third-party inspection report in accordance with the certification at 310 CMR 80.49(7)(e), and submit the report to the Department on or before the UST facility compliance date.
 - a. Before the third-party inspection report is submitted, the Owner or Operator shall have the third-party inspector determine whether each deficiency is corrected and the third-party inspector shall record their findings on the third-party inspection report.
 - b. A third-party inspector shall document the findings of the facility's re-inspection in the "Re-inspection" section of the third-party inspection report, sign and date the report in accordance with the certification at 310 CMR 80.49(7)(d), and provide the third-party inspection report to the Owner or Operator.
 - c. The Owner or Operator shall sign and date the third-party inspection report in accordance with the certification at 310 CMR 80.49(7)(e), and submit the third-party inspection report to the Department on or before the UST facility compliance date in accordance with 310 CMR 80.49(7)(f).
 3. In the event that the Owner or Operator is unable to correct the deficiencies identified in the third-party inspection by the UST facility compliance date, the Owner or Operator shall sign and date the third-party inspection report in accordance with the certification at 310 CMR 80.49(7)(e) and submit the third-party inspection report with a return to compliance (RTC) plan to the Department, in a format specified by the Department, on or before the UST facility compliance date in accordance with 310 CMR 80.49(7)(f).

80.49: continued

- a. The RTC plan shall:
 - i. Identify each deficiency that was not corrected;
 - ii. Detail what the Owner or Operator will do to correct each identified deficiency; and
 - iii. Include the following statement: "I, [name of Owner or Operator], attest under the penalties of law: 1. that I have personally examined and am familiar with the information contained in this return to compliance plan, including any and all documents accompanying this certification statement; 2. that, based on my inquiry of those individuals responsible for obtaining the information, the information contained in this submittal is to the best of my knowledge, true, accurate, and complete; and 3. that I am fully authorized to make this attestation on behalf of this UST system or facility. I am aware that there are significant penalties, including, but not limited to possible fines and imprisonment, for submitting false, inaccurate, or incomplete information."
 - b. The deficiencies identified in the RTC plan shall be corrected and the Owner or Operator shall submit a RTC completion report to the Department, in a format specified by the Department, within 30 days of the submittal of the third-party inspection report. If the RTC plan documents a reasonable basis for a proposed alternative completion due date by which the deficiencies will be corrected and the required RTC completion report submitted, the RTC completion report shall be submitted by this alternative completion due date.
 - c. If, upon review, the Department determines that the proposed alternative completion due date is not reasonable, the Department shall notify the Owner or Operator that deficiencies shall be corrected and the RTC completion report submitted to the Department by a date earlier than the proposed alternative date.
 - d. Before the RTC completion report is submitted, the Owner or Operator shall have a third-party inspector determine whether each deficiency is corrected and the third-party inspector shall record their findings on the RTC completion report.
 - e. The third-party inspector shall sign and date the RTC completion report in accordance with the certification at 310 CMR 80.49(7)(d), and provide the RTC completion report to the Owner or Operator.
 - f. The Owner or Operator shall sign and date the RTC completion report in accordance with the certification at 310 CMR 80.49(7)(e), and submit the RTC completion report to the Department on or before the RTC completion due date.
- (d) A third-party inspector who performs a third-party inspection shall sign and date the third-party inspection report with the following certification:
- "I attest under the penalties of law: (i) that I am a certified third-party inspector in compliance with 310 CMR 80.49(4); (ii) that I personally performed this inspection of the UST facility in accordance with the 310 CMR 80.49(7), and having fully completed this report, believe the contents of this report and all attachments to be true and accurate as of the time of the inspection; and (iii) that all the information provided to me by the Owner and Operator necessary to complete this report is, to the best of my knowledge, true, accurate, and complete. I am aware that there are significant penalties including, but not limited to, possible fines and imprisonment for submitting false, inaccurate, or incomplete information."
- (e) The Owner or Operator shall sign, date and submit a third-party inspection report to the Department with the following certification:
- "I attest under the penalties of law: (i) that I am the Owner or Operator of this UST facility; (ii) that I have personally read this inspection report and understand the contents, including all attachments, deficiencies and recommendations; (iii) that all the information provided by me to the third-party inspector is, to the best of my knowledge, true, accurate, and complete; (iv) that I have not altered, added or deleted any information in this inspection report; and (v) that I am fully authorized to make this attestation on behalf of this UST facility. I am aware that there are significant penalties including, but not limited to, possible fines and imprisonment for submitting false, inaccurate, or incomplete information."
- (f) The Owner or Operator shall ensure that the third-party inspection report is hand delivered, postmarked or submitted electronically to the Department by the UST facility compliance date set forth in 310 CMR 80.49(2).

80.49: continued

(g) The Owner and Operator shall not alter or delete any information in the third-party inspection report.

(8) Nothing contained in 310 CMR 80.49 shall be construed or interpreted to limit the authority of the Department to conduct inspections of UST systems or facilities or to take any enforcement or other actions with respect to such systems and facilities as is authorized by 310 CMR 80.00 or by any other statute, regulation or other legal authority.

(9) If the Department determines that a third-party inspector has not complied with any provision of 310 CMR 80.49, the Department may take enforcement against the third-party inspector in accordance with 310 CMR 80.50.

(10) The Department may deny, suspend or revoke the application or certification of any individual or third-party inspector if the Department determines that the individual or third-party inspector has not complied with any provision of 310 CMR 80.48(10) or 80.49. Such action by the Department shall be subject to opportunity for an adjudicatory hearing pursuant to 310 CMR 80.50(5). In an adjudicatory hearing held pursuant to 310 CMR 80.50, the only issue to be adjudicated is whether the Department's decision to deny, suspend or revoke the application or certification of an individual or third-party inspector was reasonable in light of the particular facts and circumstances available to the Department at the time of its decision.

(11) Any individual whose application is denied or any third-party inspector whose certification is revoked shall be barred from re-applying to become a third-party inspector for up to two years.

ENFORCEMENT AND APPEALS

80.50: Enforcement and Appeals

(1) General. Any failure to comply with M.G.L. c. 21O, 310 CMR 80.00, or the terms and conditions of any order, permit, authorization, determination, certification, prohibition or approval issued under 310 CMR 80.00 shall constitute a violation of M.G.L. c. 21O and 310 CMR 80.00. Nothing in 310 CMR 80.00, or in any order issued pursuant thereto, shall be construed to limit any right of the Department to take enforcement action pursuant to any other authority.

(2) Action by the Department. Whenever the Department has cause to believe that a violation has occurred, it may:

(a) Order the Owner and Operator of the UST system or facility, or any other person responsible for the violation, to cease immediately or at a specified date, all illegal activity and to comply with the provisions of M.G.L. c. 21O, 310 CMR 80.00, or any permit, authorization, determination, registration, certification or approval issued thereunder. Any person who or which is the subject of said order has the right to request an adjudicatory hearing in accordance with the terms of 310 CMR 80.50(5);

(b) Issue an order to the Owner and Operator of the UST system or facility, in accordance with 310 CMR 80.48. Any person who or which is the subject of said order has the right to request an adjudicatory hearing in accordance with the terms of 310 CMR 80.50(5);

(c) Issue a notice of noncompliance pursuant to M.G.L. c. 21A, § 16 and 310 CMR 5.00: *Administrative Penalty*, which is not subject to the right to request an adjudicatory hearing in accordance with the terms of 310 CMR 5.00: *Administrative Penalty*;

(d) Issue a penalty assessment notice pursuant to M.G.L. c. 21A, § 16 and 310 CMR 5.00: *Administrative Penalty*, which is subject to the right to request an adjudicatory hearing in accordance with the terms of 310 CMR 5.00: *Administrative Penalty*; or

(e) Take such other action provided by 310 CMR 80.00 or other applicable statutory or regulatory authority as the Department deems appropriate.

(3) Service of Administrative Orders. Service of an order issued in accordance with M.G.L. c. 21O or 310 CMR 80.00 by the Department shall be according to one of the following procedures except for processes, notices, and orders issued in the course of an adjudicatory hearing which are governed by the provisions of 310 CMR 1.00: *Adjudicatory Proceedings*:

80.50: continued

(a) Service of an order is complete when it is delivered in-hand by an employee or agent of the Department to the person to be served or to any officer, employee, or agent of that person. The fact and date of service is established by the return receipt or affidavit of the person making service.

(b) Service of an order when made by any form of mail requiring the return of a receipt signed by the person to be served is complete upon delivery to the person or to any officer, employee, or agent of that person. The fact and date of service is established by the returned receipt.

(c) The Department may make service of an order in an alternative manner, including any form of electronic mail, facsimile or other electronic communications, national overnight carrier, regular mail to the last known address, publication in a newspaper of general circulation, or other method of notification that is reasonably calculated to give notice of the order to the person to be served. The Department may use such alternative or substitute methods of service when the person to be served has declined to accept receipt by the other methods of service specified in 310 CMR 80.50(3)(a) and (b). The fact of service in such cases is established by such records as may be available. The date of service shall be the date on which the Department initiates electronic transmission, the date of publication, one day after the date of overnight mailing or three days after the date of regular mailing.

(4) Service of Other Enforcement Documents. Service of Notices of Noncompliance, Penalty Assessment Notices and any other enforcement document shall be in accordance with M.G.L. c. 21A, § 16 and 310 CMR 5.00: *Administrative Penalty*.

(5) Right to Adjudicatory Hearing.

(a) The following parties shall have the right to an adjudicatory hearing:

1. A person who is the subject of an order issued pursuant to 310 CMR 80.50(2)(a) or (b) has the right to request a hearing on the terms and issuance of such order.
2. An individual whose application to be certified as a third-party inspector is denied by the Department has the right to request a hearing on such denial in accordance with 310 CMR 80.49(4)(a)2.c. and d.
3. A third-party inspector whose certification is denied, suspended or revoked by the Department has the right to request a hearing on such denial, suspension or revocation in accordance with 310 CMR 80.49(10)..

(b) Any right to an adjudicatory hearing concerning assessment of a civil administrative penalty and the procedures for requesting such hearing shall be governed by the provisions of 310 CMR 5.00: *Administrative Penalty*.

(6) Waiver of Right to Adjudicatory Hearing.

(a) Any person who has the right to an adjudicatory hearing in accordance with 310 CMR 80.50(2), shall be deemed to have waived their right to an adjudicatory hearing, unless the person delivers to the Department a request for an adjudicatory hearing in writing within 21 days of the date of issuance in accordance with 310 CMR 80.50(6)(c) that complies with the requirements for content of filings set forth in 310 CMR 1.01(4): *Filings* and that is filed in accordance with the methods and procedures set forth in 310 CMR 1.01(3)(a): *Timely Filing*.

(b) The request for an adjudicatory hearing shall be submitted to the Department in the manner specified in the appealable document.

(c) The date of issuance of an order, denial, suspension or revocation shall be:

1. The date on which the Department hand delivers the document;
2. The date of receipt if the Department sends the document by certified mail;
3. Three days after the Department initiates transmission of the document by other methods of notification specified in 310 CMR 80.50(3); or
4. Three days after the Department publishes the document in a newspaper of general circulation.

FINANCIAL RESPONSIBILITY

80.51: Definitions

The following definitions shall apply only to 310 CMR 80.51 through 80.63. Note: The definitions in 310 CMR 80.51 are intended to assist in the understanding of 310 CMR 80.00 and are not intended either to limit the meaning of the terms in a way that conflict with standard insurance usage or to prevent the use of other standard insurance terms in place of defined terms.

Accidental Release means any sudden or nonsudden release of a regulated substance from a UST system that results in a need for corrective action and/or compensation for bodily injury or property damage neither expected nor intended by the tank Owner or Operator.

Bodily Injury means substantial impairment of the physical condition including, but not limited to, any burn, fracture of any bone, subdural hematoma, injury to any internal organ, or any injury which occurs as the result of repeated harm to any bodily function or organ, including human skin, however, Bodily Injury shall not include those liabilities which, consistent with standard insurance industry practices, are excluded from coverage in liability insurance policies for bodily injury.

Chief Financial Officer means, in the case of local government Owners and Operators, the individual with the overall authority and responsibility for the collection, disbursement, and use of funds by the local government.

Controlling Interest means direct ownership of at least 50% of the voting stock of an entity.

Financial Reporting Year means the latest consecutive 12-month period for which any of the following reports used to support a financial test is prepared:

- (a) a 10-K report submitted to the SEC;
- (b) an annual report of tangible net worth submitted to Dun and Bradstreet; or
- (c) annual reports submitted to the Energy Information Administration or the Rural Electrification Administration.

Financial Reporting Year may thus comprise a fiscal or a calendar year period.

General Purpose Local Government means a local government entity that does not perform a single function or limited range of functions. A General Purpose Local Government, includes, but is not limited to, municipalities, counties, townships, towns, villages and parishes.

Guarantor means any person, other than a person liable pursuant to M.G.L. c. 21E, § 5, who provides evidence of financial responsibility pursuant to M.G.L. c. 21O.

Legal Defense Cost means any expense that an Owner or Operator or provider of financial assurance incurs in defending against claims or actions brought:

- (a) By the Environmental Protection Agency (EPA) or the Commonwealth to require corrective action or to recover the costs of corrective action;
- (b) By or on behalf of a third party for bodily injury or property damage caused by an accidental release; or
- (c) By any person to enforce the terms of a financial assurance mechanism.

Local Government means:

- (a) Cities, municipalities and towns, separately chartered and operated special districts (including, but not limited to, local government public transit systems and redevelopment authorities), and independent school districts authorized as governmental bodies by state charter or constitution in the Commonwealth; and
- (b) Special districts and independent school districts established by cities, municipalities or towns, and other general purpose governments to provide essential services.

Occurrence means an event, including continuous or repeated exposure to conditions, which results in a release from a UST system.

80.51: continued

Property Damage means injury to real or personal property. Property Damage shall not include those liabilities which, consistent with standard insurance industry practices, are excluded from coverage in liability insurance policies for property damage. However, such exclusions for property damage shall not include corrective action associated with releases from tanks which are covered by the policy.

Provider of Financial Assurance means an entity that provides financial assurance to an Owner or Operator of a UST system through one of the mechanisms listed in 310 CMR 80.54(1) through (11), including a guarantor, local government guarantor, insurer, risk retention group, surety, issuer of a letter of credit, the Underground Storage Tank Petroleum Product Cleanup Fund, or the Commonwealth.

Substantial Business Relationship means the extent of a business relationship necessary under Massachusetts state law to make a guarantee contract issued incident to that relationship valid and enforceable. A guarantee contract is issued "incident to that relationship" if it arises from and depends on existing economic transactions between the guarantor and the Owner or Operator.

Substantial Governmental Relationship means the extent of a governmental relationship necessary under Massachusetts state law to make an added guarantee contract issued incident to that relationship valid and enforceable. A guarantee contract is issued "incident to that relationship" if it arises from a clear commonality of interest in the event of a UST release such as coterminous boundaries, overlapping constituencies, common ground-water aquifer, or other relationship other than monetary compensation that provides a motivation for the guarantor to provide a guarantee.

Termination means only those changes that could result in a gap in coverage such as where the insured has not obtained substitute coverage or has obtained substitute coverage with a different retroactive date than the retroactive date of the original policy.

80.52: Requirements for Amount and Scope of Financial Responsibility

(1) All Owners or Operators of UST systems shall maintain and demonstrate financial responsibility for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases from UST systems. Failure to maintain and/or demonstrate financial responsibility shall subject the Owner or Operator to enforcement including, but not limited to, delivery prohibition in accordance with 310 CMR 80.48.

(2) An Owner or Operator shall maintain and demonstrate financial responsibility in at least the following per-occurrence amounts:

- (a) For Owners and Operators of UST systems that handle an average of more than 10,000 gallons of regulated substance per month based on annual throughput for the previous calendar year: \$1 million.
- (b) For all other Owners and Operators of UST systems: \$500,000.

(3) An Owner or Operator of UST systems shall maintain and demonstrate financial responsibility for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of UST systems in at least the following annual aggregate amounts:

- (a) For Owners and Operators of 1 to 100 tanks, \$1 million; and
- (b) For Owners and Operators of 101 or more tanks, \$2 million.

(4) The amounts of assurance required under 310 CMR 80.52, excludes legal defense costs.

(5) If an Owner or Operator uses separate mechanisms or separate combinations of mechanisms to satisfy the financial responsibility requirements, the financial mechanisms in total shall be in the full amount specified in 310 CMR 80.52(2) and (3).

80.52: continued

(6) If an Owner or Operator uses separate mechanisms or separate combinations of mechanisms to demonstrate financial responsibility for different UST systems, the annual aggregate required shall be based on the number of tanks covered by each such separate mechanism or combination of mechanisms.

(7) An Owner or Operator shall review the amount of their annual aggregate coverage whenever additional tanks are acquired or installed. If the number of tanks for which assurance must be provided exceeds 100, the Owner or Operator shall demonstrate financial responsibility in the annual aggregate amount of at least \$2 million within 60 days of installing or acquiring the tank(s) that exceeds 100.

(8) The required per-occurrence and annual aggregate coverage amounts do not in any way limit the liability of the Owner and Operator.

80.53: Allowable Mechanisms and Combinations of Mechanisms

(1) An Owner or Operator, including a local government Owner or Operator, may use any one or combination of the mechanisms listed at 310 CMR 80.54(2) through (5) and (10) and (11) to demonstrate financial responsibility for one or more UST systems.

(2) In addition to the mechanisms listed at 310 CMR 80.54(2) through (5) and (10) and (11), an Owner or Operator that is not a local government Owner or Operator of a UST system that stores petroleum may use the mechanism listed at 310 CMR 80.54(1) to demonstrate financial responsibility for one or more UST systems.

(3) In addition to the mechanisms listed at 310 CMR 80.54(2) through (5) and (10) and (11), a local government Owner or Operator may use any one or combination of the mechanisms listed at 310 CMR 80.54(6) through (9) to demonstrate financial responsibility for one or more UST systems.

80.54: Requirements for Financial Responsibility Mechanisms

(1) Underground Storage Tank Petroleum Product Cleanup Fund. An Owner or Operator may satisfy the requirements of 310 CMR 80.52 by obtaining coverage from the Underground Storage Tank Petroleum Product Cleanup Fund at M.G.L. c. 21J, if the Owner or Operator complies with M.G.L. c. 21J and 503 CMR 2.00: *Underground Storage Tank Petroleum Product Cleanup Fund Regulations Implementing M.G.L. c. 21J.*

(2) Insurance and Risk Retention Group Coverage.

(a) An Owner or Operator may satisfy the requirements of 310 CMR 80.52 by obtaining liability insurance that conforms to the requirements of 310 CMR 80.54(2) from a qualified insurer or risk retention group. Such insurance may be in the form of a separate insurance policy or an endorsement to an existing insurance policy.

(b) Each insurance policy must be amended by an endorsement worded as specified in 310 CMR 80.54(2)(b)1., or evidenced by a certificate of insurance worded as specified in 310 CMR 80.54(2)(b)2., except that italicized instructions in brackets must be replaced with the relevant information and the brackets deleted:

1. Endorsement.

Name: [*name of each covered location*]

Address: [*address of each covered location*]

Policy Number: _____

Period of Coverage: [*current policy period*]

80.54: continued

Name of *[Insurer or Risk Retention Group]*:

Address of *[Insurer or Risk Retention Group]*:

Name of Insured: _____

Address of Insured: _____

Endorsement:

1. This endorsement certifies that the policy to which the endorsement is attached provides liability insurance covering the following tanks:

[List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the DEP tank number provided in the registration submitted in accordance with 310 CMR 80.23(1), and the name and address of the facility.]

For *[insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases"]* or "accidental releases"; in accordance with and subject to the limits of liability, exclusions, conditions, and other terms of the policy; *[if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location]* arising from operating the UST(s) identified above.

The limits of liability are *[insert the dollar amount of the "each occurrence" and "annual aggregate" limits of the Insurer's or Group's liability; if the amount of coverage is different for different types of coverage or for different USTs or locations, indicate the amount of coverage for each type of coverage and/or for each UST or location]*, exclusive of legal defense costs, which are subject to a separate limit under the policy. This coverage is provided under *[policy number]*. The effective date of said policy is *[date]*.

2. The insurance afforded with respect to such occurrences is subject to all of the terms and conditions of the policy; provided, however, that any provisions inconsistent with 310 CMR 80.54(2)(a)2.a. through e. are hereby amended to conform with 310 CMR 80.54(2)(a)2.a. through e.;

- a. Bankruptcy or insolvency of the insured shall not relieve the ["Insurer" or "Group"] of its obligations under the policy to which this endorsement is attached.
- b. The ["Insurer" or "Group"] is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged third-party, with a right of reimbursement by the insured for any such payment made by the ["Insurer" or "Group"]. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 310 CMR 80.54.
- c. The Owner and Operator agree to furnish to the Massachusetts Department of Environmental Protection (the Department) a signed duplicate original of the policy and all endorsements upon request.

80.54: continued

d. Cancellation or any other termination of the insurance by the ["Insurer" or "Group"], except for non-payment of premium or misrepresentation by the insured, shall be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured. Cancellation for non-payment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of ten days after a copy of such written notice is received by the insured.

[Insert for the following paragraph for claims-made policies]:

e. The insurance covers claims otherwise covered by the policy that are reported to the ["Insurer" or "Group"] within six months of the effective date of cancellation or non-renewal of the policy except where the new or renewed policy has the same retroactive date or a retroactive date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the policy retroactive date, if applicable, and prior to such policy renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 310 CMR 80.54(2)(b)1. and that the ["Insurer" or "Group"] is [choose applicable language "licensed to transact the business of insurance" or "eligible to provide insurance as an excess or surplus lines insurer in one or more states"].

80.54: continued

Address of Insured:

Certification:

1. [Name of Insurer or Risk Retention Group], [the "Insurer" or "Group"], as identified above, hereby certifies that it has issued liability insurance covering the following UST(s):

[List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the DEP tank number provided in the registration submitted in accordance with 310 CMR 80.23(1) and the name and address of the facility.]

For *[insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"]*; in accordance with and subject to the limits of liability, exclusions, conditions, and other terms of the policy; *[if coverage is different for different tanks or locations]*, indicate the type of coverage applicable to each tank or location] arising from operating the UST(s) identified above.

The limits of liability are *[insert the dollar amount of the "each occurrence" and "annual aggregate" limits of the Insurer's or Group's liability; if the amount of coverage is different for different types of coverage or for different USTs or locations, indicate the amount of coverage for each type of coverage and/or for each UST or location]*, exclusive of legal defense costs, which are subject to a separate limit under the policy. This coverage is provided under *[policy number]*. The effective date of said policy is *[date]*.

2. The ["Insurer" or "Group"] further certifies the following with respect to the insurance described in Paragraph one:

- a. Bankruptcy or insolvency of the insured shall not relieve the ["Insurer" or "Group"] of its obligations under the policy to which this certificate applies.
- b. The ["Insurer" or "Group"] is liable for the payment of amounts within any deductible applicable to the policy to the provider of corrective action or a damaged third-party, with a right of reimbursement by the insured for any such payment made by the ["Insurer" or "Group"]. This provision does not apply with respect to that amount of any deductible for which coverage is demonstrated under another mechanism or combination of mechanisms as specified in 310 CMR 80.54.
- c. The Owner and Operator agree to furnish to the Department a signed duplicate original of the policy and all endorsements upon request.
- d. Cancellation or any other termination of the insurance by the ["Insurer" or "Group"], except for non-payment of premium or misrepresentation by the insured, shall be effective only upon written notice and only after the expiration of 60 days after a copy of such written notice is received by the insured. Cancellation for non-payment of premium or misrepresentation by the insured will be effective only upon written notice and only after expiration of a minimum of ten days after a copy of such written notice is received by the insured.

[Insert the following paragraph for claims-made policies]:

80.54: continued

e. The insurance covers claims otherwise covered by the policy that are reported to the ["Insurer" or "Group"] within six months of the effective date of cancellation or non-renewal of the policy, except where the new or renewed policy has the same retroactive date or a retroactive date earlier than that of the prior policy, and which arise out of any covered occurrence that commenced after the policy retroactive date, if applicable, and prior to such policy renewal or termination date. Claims reported during such extended reporting period are subject to the terms, conditions, limits, including limits of liability, and exclusions of the policy.

I hereby certify that the wording of this instrument is identical to the wording in 310 CMR 80.54(2)(b)2. and that the ["Insurer" or "Group"] is [*choose applicable language* "licensed to transact the business of insurance ", or "eligible to provide insurance as an excess or surplus lines insurer, in the Commonwealth of Massachusetts"].

[*Signature of authorized representative of Insurer or Risk Retention Group*]

[*Type name*]

[*Title*], Authorized Representative of [*name of Insurer or Risk Retention Group*]

[*Address of Representative*]

(c) Each insurance policy shall be issued by an insurer or a risk retention group that, at a minimum, is licensed to transact the business of insurance or eligible to provide insurance as an excess or surplus lines insurer in the Commonwealth of Massachusetts.

(3) Surety Bond.

(a) An Owner or Operator may satisfy the requirements of 310 CMR 80.52 by obtaining a surety bond that conforms to the requirements of 310 CMR 80.54(3). The surety company issuing the bond shall be among those listed as acceptable sureties on federal bonds in the latest Circular 570 of the U.S. Department of the Treasury.

(b) The surety bond must be worded as follows, except that italicized instructions in brackets must be replaced with the relevant information and the brackets deleted:

Performance Bond.

Date bond executed: _____

Effective date: _____

Period of coverage: _____

Principal: [*legal name and business address of person obtaining the surety bond, i.e. Owner or Operator*]

Type of organization: [*insert "individual," or "joint venture," or "partnership," or "corporation" or "limited liability company" or limited liability partnership" or "trust"*]

State of incorporation (if applicable):

Surety(ies): [*name(s) and business address(es)*]

80.54: continued

Scope of Coverage: *[List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the DEP tank number provided in the registration submitted in accordance with 310 CMR 80.23(1), and the name and address of the facility. List the coverage guaranteed by the bond: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"]* arising from operating the tank".

Penal sums of bond:

Per occurrence \$ _____

Annual aggregate \$ _____

Surety's bond number: _____

Know All Persons by These Presents, that we, the Principal and Surety(ies), hereto are firmly bound to the Massachusetts Department of Environmental Protection (the Department), in the above penal sum for the payment of which we bind ourselves, our heirs, executors, administrators, successors, and assigns jointly and severally; provided that, where the Surety(ies) are corporations acting as co-sureties, we, the Sureties, bind ourselves in such sum "jointly and severally" only for the purpose of allowing a joint action or actions against any or all of us, and for all other purposes each Surety binds itself, jointly and severally with the Principal, for the payment of such sums only as is set forth opposite the name of such Surety, but if no limit of liability is indicated, the limit of liability shall be the full amount of the penal sum.

Whereas said Principal is required in accordance with 310 CMR 80.51 through 80.63, to provide financial assurance for *[insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location]* arising from operating the tanks identified above, and

Whereas said Principal shall establish a standby trust fund as is required when a surety bond is used to provide such financial assurance;

Now, therefore, the conditions of the obligation are such that if the Principal shall faithfully ["take corrective action, in accordance with M.G.L. c. 21E, 310 CMR 40.0000: *Massachusetts Contingency Plan*, other applicable laws and regulations and the Department's instructions for," and/or "compensate injured third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"] arising from operating the tank(s) identified above, or if the Principal shall provide alternate financial assurance in accordance with 310 CMR 80.57, and obtain the Department's written approval of such assurance within 120 days after receipt of the notice of termination by the Principal and the Department (if the dates of receipt are different, the later date shall control) from the Surety(ies), then this obligation shall be null and void; otherwise it is to remain in full force and effect. The Surety(ies) shall also become liable on this bond obligation when:

- (a) There is the commencement of a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code, naming the Principal as debtor; or
- (b) The Principal, if it has a legal existence, has failed to maintain said legal existence and no successor has assumed its legal obligations in accordance with 310 CMR 80.00.

Such obligation does not apply to any of the following:

- 1. Any obligation of *[insert "owner" or "operator"]* under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;
- 2. Bodily injury to an employee of *[insert "owner" or "operator"]* arising from, and in the course of, employment by *[insert "owner" or "operator"]*;

80.54: continued

3. Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
4. Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [*insert* "owner" or "operator"] that is not the direct result of a release from a petroleum UST; or
5. Bodily injury or property damage for which [*insert* "owner" or "operator"] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 310 CMR 80.52.

The Surety(ies) shall become liable on this bond obligation only when the Principal has failed to fulfill the conditions described above.

Upon notification by the Department that the Principal has failed to [*insert* "take corrective action, in accordance with M.G.L. c. 21E, 310 CMR 40.0000: *Massachusetts Contingency Plan*, other applicable laws and regulations and the Department's instructions," *and/or* "compensate injured third parties"] as guaranteed by this bond, the Surety(ies) shall either perform [*insert* "corrective action in accordance with M.G.L. c. 21E, 310 CMR 40.0000: *Massachusetts Contingency Plan*, other applicable laws and regulations and the Department's instructions," *and/or* "third-party liability compensation"] or place funds in an amount up to the annual aggregate penal sum into the standby trust fund as directed by the Department in accordance with 310 CMR 80.60.

Upon notification by the Department that the Principal has failed to provide alternate financial assurance as specified in 310 CMR 80.57 and has failed to obtain the Department's written approval of such assurance within 60 days after the date the notice of cancellation is received by both the Principal and the Department (if the dates of receipt are different, the later date shall control) from the Surety(ies), the Surety(ies) shall place the total penal sum of the bond guaranteed for the tanks into the standby trust fund as directed by the Department in accordance with 310 CMR 80.60.

The Surety(ies) hereby waive(s) notification of amendments to applicable laws, statutes, rules, and regulations and agrees that no such amendment shall in any way alleviate its (their) obligation on this bond.

The liability of the Surety(ies) shall not be discharged by any payment or succession of payments hereunder, unless and until such payment or payments shall amount in the annual aggregate to the penal sum shown on the face of the bond, but in no event shall the obligation of the Surety(ies) hereunder exceed the amount of said annual aggregate penal sum.

The Surety(ies) may cancel the bond by sending notice of cancellation by certified mail to the Principal, and to the Department at the addresses provided herein; provided, however, that cancellation shall not take effect until at least 120 days after the date of receipt of the notice of cancellation by both the Principal, and the Department as shown by the later return receipt.

The Principal may terminate this bond by sending written notice to the Surety(ies), provided, however, that no such notice shall become effective until the Surety(ies) receive(s) written authorization by the Department for termination of the bond.

In Witness Whereof, the Principal and Surety(ies) have executed this Bond [*insert if a corporation*: "and have affixed their seals on the date set forth above."]

The individuals whose signatures appear below hereby certify that they are authorized to execute this surety bond on behalf of the Principal and Surety(ies) and that the wording of this surety bond is identical to the wording specified in 310 CMR 80.54(3)(b) as in effect on the date this bond was executed.

(c) Under the terms of the bond, the surety will become liable on the bond obligation when the Owner or Operator fail to perform as guaranteed by the bond. In all cases, the surety's liability is limited to the per-occurrence and annual aggregate penal sums.

(d) The Owner or Operator who uses a surety bond to satisfy the requirements of 310 CMR 80.52 shall establish a standby trust fund in accordance with 310 CMR 80.55 when the surety bond is acquired. Under the terms of the bond, all amounts paid by the surety under the bond will be deposited directly into the standby trust fund in accordance with instructions from the Department in accordance with 310 CMR 80.60.

(4) Letter of Credit.

(a) An Owner or Operator may satisfy the requirements of 310 CMR 80.52 by obtaining an irrevocable standby letter of credit that conforms to the requirements 310 CMR 80.54(4). The institution issuing the letter of credit shall be an entity that has the authority to issue letters of credit and whose letter-of-credit operations are regulated and examined by The Massachusetts Commissioner of Banks, or the institution shall be a national bank (federally chartered).

(b) The letter of credit shall be worded as follows, except that instructions in brackets shall be replaced with the relevant information and the brackets deleted:

Irrevocable Standby Letter of Credit

[*Name and address of issuing institution*]

Commissioner

Massachusetts Department of Environmental Protection
One Winter Street
Boston, MA 02108
Attn: UST Program

80.54: continued

Dear Sir or Madam: We hereby establish our Irrevocable Standby Letter of Credit No. ____ in your favor, at the request and for the account of [owner name or operator name] of [address] up to the aggregate amount of [in words] U.S. dollars (\$[insert dollar amount]), available upon presentation by you or your designee, of (1) your or your designee's sight draft, bearing reference to this letter of credit, No. ____, and (2) your or your designee's signed statement reading as follows: "I certify that the amount of the draft is payable pursuant to regulations issued under authority of Massachusetts General Laws Chapter 210."

This letter of credit may be drawn on to cover the following conditions:

1. [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"] arising from operating the tank(s) identified below in the amount of [in words] \$[insert dollar amount] per occurrence and [in words] \$[insert dollar amount] annual aggregate:
[List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the DEP tank number provided in the registration submitted in accordance with 310 CMR 80.23(1), and the name and address of the facility.]; or
2. There is the commencement of a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code, naming the Principal as debtor; or
3. [owner name or operator name], if it has a legal existence, has failed to maintain said legal existence and no successor has assumed its legal obligations in accordance with 310 CMR 80.00.

The letter of credit may not be drawn on to cover any of the following:

- (a) Any obligation of [insert "owner" or "operator"] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;
- (b) Bodily injury to an employee of [insert "owner" or "operator"] arising from, and in the course of, employment by [insert "owner" or "operator"];
- (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
- (d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [insert "owner" or "operator"] that is not the direct result of a release from a petroleum UST; or
- (e) Bodily injury or property damage for which [insert "owner" or "operator"] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 310 CMR 80.52.

This letter of credit is effective as of [date] and shall expire on [date at least one year later], but such expiration date shall be automatically extended for a period of [at least one year] on [date] and on each successive expiration date, unless, at least 120 days before the current expiration date, we notify both you and [owner's name or operator's name] by certified mail that we have decided not to extend this letter of credit beyond the current expiration date. In the event you are so notified, any unused portion of the credit shall be available upon presentation of your or your designee's sight draft within 120 days after the receipt of notification by both you and [insert owner's name or operator's name], as shown on the later of the signed returned receipts.

Whenever this letter of credit is drawn on, under, and in compliance with the terms of this letter of credit, we shall duly honor such draft upon presentation to us, and we shall deposit the amount of the draft directly into the standby trust fund of [owner's name or operator's name] in accordance with you or your designee's instructions.

80.54: continued

We certify that the wording of this letter of credit is identical to the wording specified in 310 CMR 80.54(4)(b), as such regulations were constituted on the date shown immediately below.

[Signature(s) and title(s) of official(s) of issuing institution]

[Date]

This credit is subject to [insert "the most recent edition of the Uniform Customs and Practice for Documentary Credits, published and copyrighted by the International Chamber of Commerce," *or* "the Uniform Commercial Code"].

(c) An Owner or Operator who uses a letter of credit to satisfy the requirements of 310 CMR 80.52 shall also establish a standby trust fund in accordance with 310 CMR 80.55 when the letter of credit is acquired. Under the terms of the letter of credit, all amounts paid pursuant to a draft by the Department will be deposited by the issuing institution directly into the standby trust fund in accordance with instructions from the Department in accordance with 310 CMR 80.60.

(d) The letter of credit shall be irrevocable with a term specified by the issuing institution. The letter of credit shall provide that credit be automatically renewed for the same term as the original term, unless, at least 120 days before the current expiration date, the issuing institution notifies the Owner or Operator by certified mail of its decision not to renew the letter of credit. Under the terms of the letter of credit, the 120 days will begin on the date when the Owner or Operator receives the notice, as evidenced by the return receipt.

(5) Trust Fund.

(a) An Owner or Operator may satisfy the requirements of 310 CMR 80.52 by establishing a trust fund in accordance with the terms of 310 CMR 80.54(5) and 80.55. The trustee shall be a bank or other financial institution which has the authority to act as a trustee and whose trust operations are regulated and examined by the Massachusetts Commissioner of Banks, or the trustee shall be a national bank.

(b) The wording of the trust agreement shall be identical to the wording specified in 310 CMR 80.55(2), and the trust agreement shall be accompanied by a formal certification of acknowledgement identical to the wording specified in 310 CMR 80.55(3).

(c) The trust fund, when established, shall be funded for the full required amount of coverage, or funded for part of the required amount of coverage and used in combination with other mechanism(s) that provide the remaining required coverage.

(d) If the value of the trust fund is greater than the required amount of coverage, the Owner or Operator may submit a written request to the Department for release of the excess.

(e) If other financial assurance as specified in 310 CMR 80.54 is substituted for all or part of the trust fund, the Owner or Operator may submit a written request to the Department for release of the excess.

(f) Within 60 days after receiving a request from the Owner or Operator for release of funds as specified in 310 CMR 80.54(5)(d) or (e), the Department shall instruct the trustee to release to the Owner or Operator such funds as the Department specifies in writing.

(6) Local Government Bond Rating Test.

(a) A Local Government Owner or Operator may satisfy the requirements of 310 CMR 80.52 by meeting the Local Government Bond Rating Test in 310 CMR 80.54(6).

(b) A general purpose local government Owner or Operator and/or local government serving as a guarantor may have a current outstanding issue or issues of general obligation bonds of \$1 million or more, excluding refunded obligations, with a Moody's rating of Aaa, Aa, A, or Baa, or a Standard & Poor's rating of AAA, AA, A, or BBB. Where a local government has multiple outstanding issues, or where a local government's bonds are rated by both Moody's and Standard and Poor's, the lowest rating shall be used to determine eligibility. Bonds that are backed by credit enhancement other than municipal bond insurance may not be considered in determining the amount of applicable bonds outstanding.

80.54: continued

(c) A local government Owner or Operator or local government serving as a guarantor that is not a general-purpose local government and does not have the legal authority to issue general obligation bonds may have a current outstanding issue or issues of revenue bonds of \$1 million or more, excluding refunded issues, and by also having a Moody's rating of Aaa, Aa, A, or Baa, or a Standard & Poor's rating of AAA, AA, A, or BBB as the lowest rating for any rated revenue bond issued by the local government. Where bonds are rated by both Moody's and Standard & Poor's, the lower rating for each bond must be used to determine eligibility. Bonds that are backed by credit enhancement may not be considered in determining the amount of applicable bonds outstanding.

(d) The local government Owner or Operator and/or guarantor shall maintain a copy of its bond rating published within the last 12 months by Moody's or Standard & Poor's.

(e) To demonstrate that it meets the local government bond rating test, the chief financial officer of a general purpose local government Owner or Operator and/or guarantor shall sign a letter worded exactly as follows, except that the instructions in brackets are to be replaced by the relevant information and the brackets deleted:

Letter from Chief Financial Officer.

I am the chief financial officer of *[insert: name and address of local government owner or operator or guarantor]*. This letter is in support of the use of the bond rating test to demonstrate financial responsibility for *[insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage"]* caused by *[insert: "sudden accidental releases" and/or "nonsudden accidental releases"]* in the amount of at least *[insert: dollar amount]* per occurrence and *[insert: dollar amount]* annual aggregate arising from operating (an) UST(s).

UST systems at the following facilities are assured by this bond rating test: *[List for each facility: the name and address of the facility where tanks are assured by the bond rating test]*.

The details of the issue date, maturity, outstanding amount, bond rating, and bond rating agency of all outstanding bond issues that are being used by *[name of local government owner or operator, or guarantor]* to demonstrate financial responsibility are as follows: *[complete table]*

Issue Date	Maturity Date	Outstanding Amount	Bond Rating	Rating Agency
				<i>[insert: "Moody's" or "Standard & Poor's"]</i>

The total outstanding obligation of *[insert amount]*, excluding refunded bond issues, exceeds the minimum amount of \$1 million. All outstanding general obligation bonds issued by this government that have been rated by Moody's or Standard & Poor's are rated as at least investment grade (Moody's Baa or Standard & Poor's BBB) based on the most recent ratings published within the last 12 months. Neither rating service has provided notification within the last 12 months of downgrading of bond ratings below investment grade or of withdrawal of bond rating other than for repayment of outstanding bond issues.

I hereby certify that the wording of this letter is identical to the wording specified in 310 CMR 80.54(6)(e) as such regulations were constituted on the date shown immediately below.

(f) To demonstrate that it meets the local government bond rating test, the chief financial officer of local government Owner or Operator and/or guarantor other than a general purpose government shall sign a letter worded exactly as follows, except that the instructions in brackets are to be replaced by the relevant information and the brackets deleted:

Letter from Chief Financial Officer.

I am the chief financial officer of *[insert: name and address of local government owner or operator, or guarantor]*. This letter is in support of the use of the bond rating test to demonstrate financial responsibility for *[insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage"]* caused by *["sudden accidental releases" and/or "nonsudden accidental releases"]* in the amount of at least *[insert: dollar amount]* per occurrence and *[insert: dollar amount]* annual aggregate arising from operating (an) UST(s). This local government is not organized to provide general governmental services and does not have the legal authority under state law or constitutional provisions to issue general obligation debt.

UST systems at the following facilities are assured by this bond rating test: *[List for each facility: the name and address of the facility where tanks are assured by the bond rating test]*.

The details of the issue date, maturity, outstanding amount, bond rating, and bond rating agency of all outstanding revenue bond issues that are being used by *[name of local government owner or operator, or guarantor]* to demonstrate financial responsibility are as follows: *[complete table]*

Issue Date	Maturity Date	Outstanding Amount	Bond Rating	Rating Agency
				<i>[insert: "Moody's" or "Standard & Poor's"]</i>

The total outstanding obligation of *[insert amount]*, excluding refunded bond issues, exceeds the minimum amount of \$1 million. All outstanding revenue bonds issued by this government that have been rated by Moody's or Standard & Poor's are rated as at least investment grade (Moody's Baa or Standard & Poor's BBB) based on the most recent ratings published within the last 12 months. The revenue bonds listed are not backed by third-party credit enhancement or are insured by a municipal bond insurance company. Neither rating service has provided notification within the last 12 months of downgrading of bond ratings below investment grade or of withdrawal of bond rating other than for repayment of outstanding bond issues.

I hereby certify that the wording of this letter is identical to the wording specified in 310 CMR 80.54(6)(f) as such regulations were constituted on the date shown immediately below.

(g) The Department may require reports of financial condition at any time from the local government Owner or Operator, and/or local government guarantor. If the Department finds, on the basis of such reports or other information, that the local government Owner or Operator, and/or guarantor, no longer meets the local government bond rating test requirements of 310 CMR 80.54(6)(b) through (e), the local government Owner or Operator shall obtain alternative coverage within 30 days after notification of such a finding.

(h) If a local government Owner or Operator using the bond rating test to provide financial assurance finds that it no longer meets the bond rating test requirements, the local government Owner or Operator shall obtain alternative coverage within 150 days of the change in status.

80.54: continued

(7) Local Government Fund.

(a) A local government Owner or Operator may satisfy the requirements of 310 CMR 80.52 by establishing a dedicated fund account that conforms to the requirements of 310 CMR 80.54(7). Except as specified 310 CMR 80.54(7)(a)2., a dedicated fund may not be commingled with other funds or otherwise used in normal operations. A dedicated fund will be considered eligible if it meets one of the following requirements:

1. The fund is dedicated by state constitutional provision, or local government statute, charter, ordinance, or order to pay for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of UST systems and is funded for the full amount of coverage required under 310 CMR 80.52, or funded for part of the required amount of coverage and used in combination with other mechanism(s) that provide the remaining coverage; or
2. The fund is dedicated by state constitutional provision, or local government statute, charter, ordinance, or order as a contingency fund for general emergencies, including taking corrective action and compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of UST systems, and is funded for five times the full amount of coverage required under 310 CMR 80.52, or funded for five times a portion of the required amount of coverage and used in combination with other mechanism(s) that provide the remaining coverage. If at any time, other than during the pay-in-period defined in 310 CMR 80.54(7)(a)3. the fund is funded for less than five times the amount of coverage required under 310 CMR 80.52, the amount of financial responsibility demonstrated by the fund may not exceed one-fifth the amount in the fund; or
3. The fund is dedicated by state constitutional provision, or local government statute, charter, ordinance or order to pay for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of UST systems. A payment is made to the fund once every year for seven years until the fund is fully-funded. This seven-year period is hereafter referred to as the "pay-in-period". The amount of each payment must be determined by this formula:

$$\frac{TF-CF}{Y}$$

Where TF is the total required financial assurance for the Owner or Operator, CF is the current amount in the fund, and Y is the number of years remaining in the pay-in-period, and;

- a. The local government Owner or Operator has available bonding authority, approved through voter referendum (if such approval is necessary prior to the issuance of bonds), for an amount equal to the difference between the required amount of coverage and the amount held in the dedicated fund. This bonding authority shall be available for taking corrective action and for compensating third parties for bodily injury and property damage caused by accidental releases arising from the operation of petroleum USTs; or
 - b. The local government Owner or Operator has a letter signed by the appropriate state attorney general stating that the use of the bonding authority will not increase the local government's debt beyond the legal debt ceilings established by the relevant state laws. The letter shall also state that prior voter approval is not necessary before use of the bonding authority.
- (b) To demonstrate that it meets the requirements of the local government fund, the chief financial officer of the local government Owner or Operator and/or guarantor must sign a letter worded exactly as follows, except that the instructions in brackets are to be replaced by the relevant information and the brackets deleted:

80.54: continued

Letter from Chief Financial Officer.

I am the chief financial officer of [*insert: name and address of local government owner or operator, or guarantor*]. This letter is in support of the use of the local government fund mechanism to demonstrate financial responsibility for [*insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage"*] caused by [*insert: "sudden accidental releases" and/or "nonsudden accidental releases"*] in the amount of at least [*insert: dollar amount*] per occurrence and [*insert: dollar amount*] annual aggregate arising from operating (an) UST(s).

UST systems at the following facilities are assured by this local government fund mechanism: [*List for each facility: the name and address of the facility where tanks are assured by the local government fund*].

[*Insert: "The local government fund is funded for the full amount of coverage required under 310 CMR 80.52, or funded for part of the required amount of coverage and used in combination with other mechanism(s) that provide the remaining coverage" or "The local government fund is funded for ten times the full amount of coverage required under 310 CMR 80.52, or funded for part of the required amount of coverage and used in combination with other mechanisms(s) that provide the remaining coverage" or "A payment is made to the fund once every year for seven years until the fund is fully-funded and [*name of local government owner or operator*] has available bonding authority, approved through voter referendum, of an amount equal to the difference between the required amount of coverage and the amount held in the dedicated fund" or "A payment is made to the fund once every year for seven years until the fund is fully-funded and I have attached a letter signed by the State Attorney General stating that (1) the use of the bonding authority will not increase the local government's debt beyond the legal debt ceilings established by the relevant state laws and (2) that prior voter approval is not necessary before use of the bonding authority".*]

The details of the local government fund are as follows:

Amount in Fund (market value of fund at close of last fiscal year): _____

[*If fund balance is incrementally funded as specified in 310 CMR 80.54(7)(a)3., insert:*

“Amount added to fund in the most recently completed fiscal year: _____

Number of years remaining in the pay-in period: _____”]

A copy of the state constitutional provision, or local government statute, charter, ordinance or order dedicating the fund is attached.

I hereby certify that the wording of this letter is identical to the wording specified in 310 CMR 80.54(7)(b) as such regulations were constituted on the date shown immediately below.

(8) Local Government Financial Test.

(a) A Local Government Owner or Operator may satisfy the requirements of 310 CMR 80.52 by passing the financial test specified at 310 CMR 80.54(8). To be eligible to use the financial test, the local government Owner or Operator shall have the ability and authority to assess and levy taxes or to freely establish fees and charges. To pass the local government financial test, the Owner or Operator shall meet the criteria of 310 CMR 80.54(8)(b) and (c) based on year-end financial statements for the latest completed fiscal year.

(b) The local government Owner or Operator shall have the following information available, as shown in the year-end financial statements for the latest completed fiscal year:

1. Total Revenues: Consists of the sum of general fund operating and non-operating revenues including net local taxes, licenses and permits, fines and forfeitures, revenues from use of money and property, charges for services, investment earnings, sales (property, publications, *etc.*), intergovernmental revenues (restricted and unrestricted), and total revenues from all other governmental funds including enterprise, debt service, capital projects, and special revenues, but excluding revenues to funds held in a trust or agency capacity. For purposes of this test, the calculation of total revenues shall exclude all transfers between funds under the direct control of the local government using the financial test (interfund transfers), liquidation of investments, and issuance of debt.

2. Total Expenditures: Consists of the sum of general fund operating and non-operating expenditures including public safety, public utilities, transportation, public works, environmental protection, cultural and recreational, community development, revenue sharing, employee benefits and compensation, office management, planning and zoning, capital projects, interest payments on debt, payments for retirement of debt principal, and total expenditures from all other governmental funds including enterprise, debt service, capital projects, and special revenues. For purposes of this test, the calculation of total expenditures shall exclude all transfers between funds under the direct control of the local government using the financial test (interfund transfers).

3. Local Revenues: Consists of total revenues (as defined in 310 CMR 80.54(8)(b)1.) minus the sum of all transfers from other governmental entities, including all monies received from Federal, state, or local government sources.

4. Debt Service: Consists of the sum of all interest and principal payments on all long-term credit obligations and all interest-bearing short-term credit obligations. Includes interest and principal payments on general obligation bonds, revenue bonds, notes, mortgages, judgments, and interest bearing warrants. Excludes payments on non-interest-bearing short-term obligations, interfund obligations, amounts owed in a trust or agency capacity, and advances and contingent loans from other governments.

5. Total Funds: Consists of the sum of cash and investment securities from all funds, including general, enterprise, debt service, capital projects, and special revenue funds, but excluding employee retirement funds, at the end of the local government's financial reporting year. Includes Federal securities, Federal agency securities, state and local government securities, and other securities such as bonds, notes and mortgages. For purposes of this test, the calculation of total funds shall exclude agency funds, private trust funds, accounts receivable, value of real property, and other non-security assets.

6. Population consists of the number of people in the area served by the local government.

(c) The local government's year-end financial statements, if independently audited, cannot include an adverse auditor's opinion or a disclaimer of opinion. The local government cannot have outstanding issues of general obligation or revenue bonds that are rated as less than investment grade.

(d) The local government Owner or Operator shall have a letter signed by the chief financial officer worded as specified in 310 CMR 80.54(8)(e).

(e) To demonstrate that it meets the financial test under 310 CMR 80.54(8)(b), the chief financial officer of the local government Owner or Operator, shall sign, within 120 days of the close of each financial reporting year, as defined by the 12-month period for which financial statements used to support the financial test are prepared, a letter worded exactly as follows, except that the instructions in brackets are to be replaced by the relevant information and the brackets deleted:

80.54: continued

Letter from Chief Financial Officer.

I am the chief financial officer of [*insert: name and address of the owner or operator*]. This letter is in support of the use of the local government financial test to demonstrate financial responsibility for [*insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage"*] caused by [*insert: "sudden accidental releases" and/or "nonsudden accidental releases"*] in the amount of at least [*insert: dollar amount*] per occurrence and [*insert: dollar amount*] annual aggregate arising from operating (a) UST(s).

UST systems at the following facilities are assured by this financial test [*List for each facility: the name and address of the facility where tanks assured by this financial test are located. If separate mechanisms or combinations of mechanisms are being used to assure any of the tanks at this facility, list each tank assured by this financial test by the tank identification number provided in the registration submitted in accordance with 310 CMR 80.23(1).*]

This ["Owner" or "Operator"] has not received an adverse opinion, or a disclaimer of opinion from an independent auditor on its financial statements for the latest completed fiscal year. Any outstanding issues of general obligation or revenue bonds, if rated, have a Moody's rating of Aaa, Aa, A, or Baa or a Standard and Poor's rating of AAA, AA, A, or BBB; if rated by both firms, the bonds have a Moody's rating of Aaa, Aa, A, or Baa and a Standard and Poor's rating of AAA, AA, A, or BBB.

Worksheet for Municipal Financial Test

Part I: Basic Information

1. Total Revenues
 - a. Revenues (dollars) _____
Value of revenues excludes liquidation of investments and issuance of debt. Value includes all general fund operating and non-operating revenues, as well as all revenues from all other governmental funds including enterprise, debt service, capital projects, and special revenues, but excluding revenues to funds held in a trust or agency capacity.
 - b. Subtract interfund transfers (dollars) _____
 - c. Total Revenues (dollars) _____
2. Total Expenditures
 - a. Expenditures (dollars) _____
Value consists of the sum of general fund operating and non-operating expenditures including interest payments on debt, payments for retirement of debt principal, and total expenditures from all other governmental funds including enterprise, debt service, capital projects, and special revenues.
 - b. Subtract interfund transfers (dollars) _____
 - c. Total Expenditures (dollars) _____
3. Local Revenues
 - a. Total Revenues (from 1c) (dollars) _____
 - b. Subtract total intergovernmental transfers (dollars) _____
 - c. Local Revenues (dollars) _____
4. Debt Service
 - a. Interest and fiscal charges (dollars) _____
 - b. Add debt retirement (dollars) _____
 - c. Total Debt Service (dollars) _____
5. Total Funds (Dollars) _____
(Sum of amounts held as cash and investment securities from all funds, excluding amounts held for employee retirement funds, agency funds, and trust funds)
6. Population (Persons) _____

[Title]

(f) If a local government Owner or Operator using the test to provide financial assurance finds that it no longer meets the requirements of the financial test based on the year-end financial statements, the Owner or Operator shall obtain alternative coverage within 150 days of the end of the year for which financial statements have been prepared.

(g) The Department may require reports of financial condition at any time from the local government Owner or Operator. If the Department finds, on the basis of such reports or other information, that the local government Owner or Operator no longer meets the financial test requirements of 310 CMR 80.54(8)(b) and (c), the Owner or Operator shall obtain alternate coverage within 30 days after notification of such a finding.

(h) If the local government Owner or Operator fails to obtain alternate assurance within 150 days of finding that it no longer meets the requirements of the financial test based on the year-end financial statements or within 30 days of notification by the Department that it no longer meets the requirements of the financial test, the Owner or Operator shall notify the Department of such failure within ten days.

(9) Local Government Guarantee.

(a) A local government Owner or Operator may satisfy the requirements of 310 CMR 80.52 by obtaining a guarantee that conforms to the requirements 310 CMR 80.54(9). The guarantor must be either the state in which the local government Owner or Operator is located or a local government having a "substantial governmental relationship" with the Owner or Operator and issuing the guarantee as an act incident to that relationship. A local government acting as the guarantor shall:

1. Demonstrate that it meets the bond rating test requirement of 310 CMR 80.54(6) and deliver a copy of the chief financial officer's letter as contained in 310 CMR 80.54(6)(d) to the local government Owner or Operator; or
2. Demonstrate that it meets the local government fund requirements of 310 CMR 80.54(7)(a)1., 2. or 3. and deliver a copy of the chief financial officer's letter as contained in 310 CMR 80.54(7)(b) to the local government Owner or Operator; or
3. Demonstrate that it meets the worksheet test requirements of 310 CMR 80.54(8) and deliver a copy of the chief financial officer's letter as contained in 310 CMR 80.54(8)(e) to the local government Owner or Operator.

(b) If the local government guarantor is unable to demonstrate financial assurance under 310 CMR 80.54(6), 80.54(7)(a)1., 2. or 3., or 80.54(8), at the end of the financial reporting year, the guarantor shall send by certified mail, before cancellation or non-renewal of the guarantee, notice to the Owner or Operator and the Department. The guarantee will terminate no less than 120 days after the date the Owner or Operator and the Department receives the notification, as evidenced by the later return receipt. The Owner or Operator shall obtain alternative coverage as specified in 310 CMR 80.57.

80.54: continued

- (c) The guarantee agreement shall be worded as specified in 310 CMR 80.54(9)(d) or (e) depending on which of the following guarantee arrangements is selected.
1. If, in the default or incapacity of the Owner or Operator, the guarantor guarantees to fund a standby trust as directed by the Department, the guarantee shall be worded as specified in 310 CMR 80.54(9)(d).
 2. If, in the default or incapacity of the Owner or Operator, the guarantor guarantees to make payments as directed by the Department for taking corrective action or compensating third parties for bodily injury and property damage, the guarantee shall be worded as specified in 310 CMR 80.54(9)(e).
- (d) If the guarantor is a state, the local government guarantee with standby trust shall be worded exactly as follows, except that instructions in brackets are to be replaced with relevant information and the brackets deleted:

Local Government Guarantee with Standby Trust Made by a State

Guarantee made this *[date]* by *[name of state]*, herein referred to as guarantor, to the Massachusetts Department of Environmental Protection (the Department) and to any and all third parties, and obliges, on behalf of *[name of local government owner or operator]*.

Recitals

(1) Guarantor is a state.

(2) *[name of local government owner or operator]* ["owns" and/or "operates"]; the following UST system(s) covered by this guarantee: *[List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the DEP tank identification number provided in the registration submitted in accordance with 310 CMR 80.23(1), and the name and address of the facility.]* This guarantee satisfies 310 CMR 80.52 requirements for assuring funding for *[insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location]* arising from operating the above-identified UST(s) in the amount of *[insert dollar amount]* per occurrence and *[insert dollar amount]* annual aggregate.

(3) Guarantor guarantees to the Department and to any and all third parties that:

In the event that *[name of local government owner or operator]* fails to provide alternative coverage within 60 days after receipt of a notice of cancellation of this guarantee and the Department has determined or suspects that a release has occurred at a UST system covered by this guarantee, the guarantor, upon instructions from the Department shall fund a standby trust fund in accordance with the provisions of 310 CMR 80.60, in an amount not to exceed the coverage limits specified above.

In the event that the Department determines that *[name of local government owner or operator]* has failed to perform corrective action for releases arising out of the operation of the above-identified tank(s) in accordance with M.G.L. c. 21E, 310 CMR 40.0000: *Massachusetts Contingency Plan* and other applicable laws and regulations, the guarantor upon written instructions from the Department shall fund a standby trust fund in accordance with the provisions of, 310 CMR 80.60 in an amount not to exceed the coverage limits specified above.

If *[name of local government owner or operator]* fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by ["sudden" and/or "nonsudden"] accidental releases arising from the operation of the above-identified tank(s), or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the guarantor, upon written instructions from the Department, shall fund a standby trust in accordance with the provisions of 310 CMR 80.60 to satisfy such judgment(s), award(s), or settlement agreement(s) up to the limits of coverage specified above.

80.54: continued

- (4) Guarantor agrees to notify *[name of local government owner or operator]* and the Department by certified mail of a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code naming guarantor as debtor, within ten days after commencement of the proceeding.
- (5) Guarantor agrees to remain bound under this guarantee notwithstanding any modification or alteration of any obligation of *[name of local government owner or operator]* pursuant to 310 CMR 80.00.
- (6) Guarantor agrees to remain bound under this guarantee for so long as *[name of local government owner or operator]* shall comply with the applicable financial responsibility requirements of 310 CMR 80.51 through 80.63 for the above identified tank(s), except that guarantor may cancel this guarantee by sending notice by certified mail to *[name of local government owner or operator]* and the Department, such cancellation to become effective no earlier than 120 days after receipt of such notice by *[name of local government owner or operator]* and the Department, as evidenced by the later return receipt.
- (7) The guarantor's obligation does not apply to any of the following:
- (a) Any obligation of *[name of local government owner or operator]* under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;
 - (b) Bodily injury to an employee of *[name of local government owner or operator]* arising from, and in the course of, employment by *[name of local government owner or operator]*;
 - (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
 - (d) Property damage to any property owned, rented, loaded to, in the care, custody, or control of, or occupied by *[name of local government owner or operator]* that is not the direct result of a release from a UST system;
 - (e) Bodily damage or property damage for which *[name of local government owner or operator]* is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 310 CMR 80.52.
- (8) Guarantor expressly waives notice of acceptance of this guarantee by the Department, by any or all third parties, or by *[name of local government owner or operator]*,

I hereby certify that the wording of this guarantee is identical to the wording specified in 310 CMR 80.54(9)(d) as such regulations were constituted on the effective date shown immediately below.

Effective date: _____

[Name of guarantor]

[Authorized signature for guarantor]

[Name of person signing]

[Title of person signing]

[Signature of witness or notary]

- (e) If the guarantor is a local government, the local government guarantee with standby trust must be worded exactly as follows, except that instructions in brackets are to be replaced with relevant information and the brackets deleted:

80.54: continued

Local Government Guarantee with Standby Trust Made by a Local Government

Guarantee made this [date] by [name of guaranteeing entity], a local government organized under the laws of Massachusetts, herein referred to as guarantor, to the Massachusetts Department of Environmental Protection (the Department) and to any and all third parties, and obliges, on behalf of [name of local government owner or operator].

Recitals

(1) Guarantor meets or exceeds [select one: “the local government bond rating test requirements 310 CMR 80.54(6)”, or “the local government financial test requirements of 310 CMR 80.54(8)”, or the local government fund under 310 CMR 80.54(7)(a)1., 2. or 3].

(2) [name of local government owner or operator] [“owns” or “operates] the following UST system(s) covered by this guarantee: [List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the DEP tank identification number provided in the registration submitted in accordance with 310 CMR 80.23(1), and the name and address of the facility.] This guarantee satisfies 310 CMR 80.51 through 80.63 for assuring funding for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the above-identified UST(s) in the amount of [insert dollar amount] per occurrence and [insert dollar amount] annual aggregate.

(3) Incident to our substantial governmental relationship with [name of local government owner or operator], guarantor guarantees to the Department and to any and all third parties and obliges that:

In the event that [name of local government owner or operator] fails to provide alternative coverage within 60 days after receipt of a notice of cancellation of this guarantee and the Department has determined or suspects that a release has occurred at a UST covered by this guarantee, the guarantor, upon instructions from the Department shall fund a standby trust fund in accordance with the provisions of 310 CMR 80.60, in an amount not to exceed the coverage limits specified above.

In the event that the Department determines that [name of local government owner or operator] has failed to perform corrective action for releases arising out of the operation of the above-identified tank(s) in accordance with M.G.L. c. 21E, 310 CMR 40.0000: *Massachusetts Contingency Plan* and other applicable laws and regulations, the guarantor upon written instructions from the Department shall fund a standby trust fund in accordance with the provisions of 310 CMR 80.60, in an amount not to exceed the coverage limits specified above.

If [name of local government owner or operator] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by ["sudden" and/or "nonsudden"] accidental releases arising from the operation of the above-identified tank(s), or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the guarantor, upon written instructions from the Department, shall fund a standby trust in accordance with the provisions of 310 CMR 80.60 to satisfy such judgment(s), award(s), or settlement agreement(s) up to the limits of coverage specified above.

(4) Guarantor agrees that, if at the end of any fiscal year before cancellation of this guarantee, the guarantor fails to meet or exceed the requirements of the financial responsibility mechanism specified in paragraph (1), guarantor shall send within 120 days of such failure, by certified mail, notice to [name of local government owner or operator] and the Department, as evidenced by the return receipt.

80.54: continued

- (5) Guarantor agrees to notify *[name of local government owner or operator]* and the Department by certified mail of a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code naming guarantor as debtor, within ten days after commencement of the proceeding.
- (6) Guarantor agrees to remain bound under this guarantee notwithstanding any modification or alteration of any obligation of *[name of local government owner or operator]* pursuant to 310 CMR 80.00.
- (7) Guarantor agrees to remain bound under this guarantee for so long as *[name of local government owner or operator]* shall comply with the applicable financial responsibility requirements of 310 CMR 80.51 through 80.63 for the above identified tank(s), except that guarantor may cancel this guarantee by sending notice by certified mail to *[name of local government owner or operator]* and the Department, such cancellation to become effective no earlier than 120 days after receipt of such notice by *[name of local government owner or operator]*, as evidenced by the later return receipt.
- (8) The guarantor's obligation does not apply to any of the following:
- (a) Any obligation of *[name of local government owner or operator]* under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;
 - (b) Bodily injury to an employee of *[name of local government owner or operator]* arising from, and in the course of, employment by *[name of local government owner or operator]*;
 - (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
 - (d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by *[name of local government owner or operator]* that is not the direct result of a release from a UST system;
 - (e) Bodily damage or property damage for which *[name of local government owner or operator]* is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 310 CMR 80.52.
- (9) Guarantor expressly waives notice of acceptance of this guarantee by the Department, by any or all third parties, or by *[name of local government owner or operator]*.

I hereby certify that the wording of this guarantee is identical to the wording specified in 310 CMR 80.54(9)(e) as such regulations were constituted on the effective date shown immediately below.

- (f) If the guarantor is a state, the local government guarantee without standby trust must be worded exactly as follows, except that instructions in brackets are to be replaced with relevant information and the brackets deleted:

80.54: continued

Local Government Guarantee without Standby Trust Made by a State

Guarantee made this [date] by Massachusetts, herein referred to as guarantor, to the Massachusetts Department of Environmental Protection (the Department) and to any and all third parties, and obliges, on behalf of [*name of local government owner or operator*].

Recitals

(1) Guarantor is a state.

(2) [*name of local government owner or operator*] ["owns" or "operates" the following UST system(s) covered by this guarantee: [*List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the DEP tank identification number provided in the registration submitted in accordance with 310 CMR 80.23(1), and the name and address of the facility.*] This guarantee satisfies 310 CMR 80.52 requirements for assuring funding for [*insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location*] arising from operating the above-identified UST(s) in the amount of [*insert dollar amount*] per occurrence and [*insert dollar amount*] annual aggregate.

(3) Guarantor guarantees to the Department and to any and all third parties and obliges that:

In the event that [*name of local government owner or operator*] fails to provide alternative coverage within 60 days after receipt of a notice of cancellation of this guarantee and the Department has determined or suspects that a release has occurred at a UST system covered by this guarantee, the guarantor, upon written instructions from the Department shall make funds available to pay for corrective actions and compensate third parties for bodily injury and property damage in an amount not to exceed the coverage limits specified above.

In the event that the Department determines that [*name of local government owner or operator*] has failed to perform corrective action for releases arising out of the operation of the above-identified tank(s) in accordance with M.G.L. c. 21E, 310 CMR 40.0000: *Massachusetts Contingency Plan* and other applicable laws and regulations, the guarantor upon written instructions from the Department shall make funds available to pay for corrective actions in an amount not to exceed the coverage limits specified above.

If [*name of local government owner or operator*] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by ["sudden" and/or "nonsudden"] accidental releases arising from the operation of the above-identified tank(s), or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the guarantor, upon written instructions from the Department, shall make funds available to compensate third parties for bodily injury and property damage in an amount not to exceed the coverage limits specified above.

(4) Guarantor agrees to notify [*name of local government owner or operator*] and the Department by certified mail of a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code naming guarantor as debtor, within ten days after commencement of the proceeding.

(5) Guarantor agrees to remain bound under this guarantee notwithstanding any modification or alteration of any obligation of [*name of local government owner or operator*] pursuant to 310 CMR 80.00.

80.54: continued

(6) Guarantor agrees to remain bound under this guarantee for so long as *[name of local government owner or operator]* shall comply with the applicable financial responsibility requirements of 310 CMR 80.51 through 80.63 for the above identified tank(s), except that guarantor may cancel this guarantee by sending notice by certified mail to *[name of local government owner or operator]* and the Department, such cancellation to become effective no earlier than 120 days after receipt of such notice by *[name of local government owner or operator]* and the Department, as evidenced by the later return receipt. If notified of a probable release, the guarantor agrees to remain bound to the terms of this guarantee for all charges arising from the release, up to the coverage limits specified above, notwithstanding the cancellation of the guarantee with respect to future releases.

(7) The guarantor's obligation does not apply to any of the following:

- (a) Any obligation of *[name of local government owner or operator]* under a workers' compensation disability benefits, or unemployment compensation law or other similar law;
- (b) Bodily injury to an employee of *[name of local government owner or operator]* arising from, and in the course of, employment by *[name of local government owner or operator]*;
- (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
- (d) Property damage to any property owned, rented, loaded to, in the care, custody, or control of, or occupied by *[name of local government owner or operator]* that is not the direct result of a release from a UST system;
- (e) Bodily damage or property damage for which *[name of local government owner or operator]* is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 310 CMR 80.52.

(8) Guarantor expressly waives notice of acceptance of this guarantee by the Department, by any or all third parties, or by *[name of local government owner or operator]*.

I hereby certify that the wording of this guarantee is identical to the wording specified in 310 CMR 80.54(9)(f) as such regulations were constituted on the effective date shown immediately below.

Effective date: _____

[Title of person signing]

[Signature of witness or notary]

(g) If the guarantor is a local government, the local government guarantee without standby trust must be worded exactly as follows, except that instructions in brackets are to be replaced with relevant information and the brackets deleted:

Local Government Guarantee without Standby Trust Made by a Local Government

Guarantee made this *[date]* by *[name of guaranteeing entity]*, a local government organized under the laws of Massachusetts, herein referred to as guarantor, to the Massachusetts Department of Environmental Protection (the Department) and to any and all third parties, and obliges, on behalf of *[name of local government owner or operator]*.

80.54: continued

Recitals

(1) Guarantor meets or exceeds [*select one*: “the local government bond rating test requirements of 310 CMR 80.54(6)” or “the local government financial test requirements of 310 CMR 80.54(8)” or “the local government fund under 310 CMR 80.54(7)(a)1., 2. or 3.”]

(2) [*name of local government owner or operator*] [“owns” or “operates”] the following UST system(s) covered by this guarantee: [*List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the DEP tank identification number provided in the registration submitted in accordance with 310 CMR 80.23(1), and the name and address of the facility.*] This guarantee satisfies 310 CMR 80.51 through 80.63 for assuring funding for [*insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location*] arising from operating the above-identified UST(s) in the amount of [*insert: dollar amount*] per occurrence and [*insert dollar amount*] annual aggregate.

(3) Incident to our substantial governmental relationship with [*name of local government owner or operator*], guarantor guarantees to the Department and to any and all third parties and obliges that:

In the event that [*name of local government owner or operator*] fails to provide alternative coverage within 60 days after receipt of a notice of cancellation of this guarantee and the Department has determined or suspects that a release has occurred at a UST covered by this guarantee, the guarantor, upon written instructions from the Department shall make funds available to pay for corrective actions and compensate third parties for bodily injury and property damage in an amount not to exceed the coverage limits specified above.

In the event that the Department determines that [*name of local government owner or operator*] has failed to perform corrective action for releases arising out of the operation of the above-identified tank(s) in accordance with M.G.L. c. 21E, 310 CMR 40.0000: *Massachusetts Contingency Plan* and other applicable laws and regulations, the guarantor upon written instructions from the Department shall make funds available to pay for corrective actions in an amount not to exceed the coverage limits specified above.

If [*name of local government owner or operator*] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by [“sudden” and/or “nonsudden”] accidental releases arising from the operation of the above-identified tank(s), or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the guarantor, upon written instructions from the Department, shall make funds available to compensate third parties for bodily injury and property damage in an amount not to exceed the coverage limits specified above.

(4) Guarantor agrees that if at the end of any fiscal year before cancellation of this guarantee, the guarantor fails to meet or exceed the requirements of the financial responsibility mechanism specified in paragraph (1), guarantor shall send within 120 days of such failure, by certified mail, notice to [*name of local government owner or operator*] and the Department, as evidenced by the return receipt.

(5) Guarantor agrees to notify [*name of local government owner or operator*] and the Department by certified mail of a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code naming guarantor as debtor, within ten days after commencement of the proceeding.

80.54: continued

(6) Guarantor agrees to remain bound under this guarantee notwithstanding any modification or alteration of any obligation of [*name of local government owner or operator*] pursuant to 310 CMR 80.00.

(7) Guarantor agrees to remain bound under this guarantee for so long as [local government owner or operator] shall comply with the applicable financial responsibility requirements of 310 CMR 80.51 through 80.63 for the above identified tank(s), except that guarantor may cancel this guarantee by sending notice by certified mail to [owner or operator] and the Department, such cancellation to become effective no earlier than 120 days after receipt of such notice by [*name of local government owner or operator*], as evidenced by the later return receipt. If notified of a probable release, the guarantor agrees to remain bound to the terms of this guarantee for all charges arising from the release, up to the coverage limits specified above, notwithstanding the cancellation of the guarantee with respect to future releases.

(8) The guarantor's obligation does not apply to any of the following:

- (a) Any obligation of [*name of local government owner or operator*] under a workers' compensation disability benefits, or unemployment compensation law or other similar law;
- (b) Bodily injury to an employee of [*name of local government owner or operator*] arising from, and in the course of, employment by [*name of local government owner or operator*];
- (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
- (d) Property damage to any property owned, rented, loaded to, in the care, custody, or control of, or occupied by [*name of local government owner or operator*] that is not the direct result of a release from a UST system;
- (e) Bodily damage or property damage for which [*name of local government owner or operator*] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 310 CMR 80.52.

(9) Guarantor expressly waives notice of acceptance of this guarantee by the Department, by any or all third parties, or by [*name of local government owner or operator*],

I hereby certify that the wording of this guarantee is identical to the wording specified in 310 CMR 80.54(9)(g) as such regulations were constituted on the effective date shown immediately below.

(10) Financial Test of Self-insurance.

- (a) An Owner or Operator, and/or guarantor, may satisfy the requirements of 310 CMR 80.52 by passing a financial test as specified in 310 CMR 80.54(10). To pass the financial test of self-insurance, the Owner or Operator, and/or guarantor shall meet the criteria of 310 CMR 80.54(10)(b) or (c) based on independently audited year-end financial statements for the latest completed fiscal year.
- (b) The Owner or Operator, and/or guarantor shall meet all the following criteria:
 - 1. Have a tangible net worth of at least ten times:
 - a. The total of the applicable aggregate amount required by 310 CMR 80.52, based on the number of UST system tanks for which a financial test is used to demonstrate financial responsibility to the Department.

80.54: continued

- b. The sum of the corrective action cost estimates, the current closure and post-closure care cost estimates, and amount of liability coverage for which a financial test is used to demonstrate financial responsibility to the Department under 310 CMR 30.000: *Hazardous Waste*; and
 2. Have a tangible net worth of at least \$10 million.
 3. Have a letter signed by the chief financial officer worded as specified 310 CMR 80.54(10)(d).
 4. Comply with one of the following:
 - a. File financial statements annually with the U.S. Securities and Exchange Commission, the Energy Information Administration, or the Rural Electrification Administration; or
 - b. Report annually the firm's tangible net worth to Dun and Bradstreet, and have an assigned Dun and Bradstreet financial strength rating of 4A or 5A.
 5. The firm's year-end financial statements, which shall be independently audited, cannot include an adverse auditor's opinion, a disclaimer of opinion, or a "going concern" qualification.
- (c) The Owner or Operator, and/or guarantor shall meet the financial test requirements of 40 CFR 264.147(f)(1), substituting the appropriate amounts specified in 310 CMR 80.52(3)(a) and (b) for the "amount of liability coverage" each time specified in that section.
1. The fiscal year-end financial statements of the Owner or Operator, and/or guarantor, shall be examined by an independent certified public accountant and be accompanied by the accountant's report of the examination.
 2. The firm's year-end financial statements cannot include an adverse auditor's opinion, a disclaimer of opinion, or a "going concern" qualification.
 3. The Owner or Operator, and/or guarantor, shall have a letter signed by the chief financial officer, worded as specified in 310 CMR 80.54(10)(d).
 4. If the financial statements of the Owner or Operator, and/or guarantor, are not submitted annually to the U.S. Securities and Exchange Commission, the Energy Information Administration or the Rural Electrification Administration, the Owner or Operator, and/or guarantor, shall obtain a special report by an independent certified public accountant stating that:
 - a. He or she has compared the data that the letter from the chief financial officer specifies as having been derived from the latest year-end financial statements of the owner or operator, and/or guarantor, with the amounts in such financial statements; and
 - b. In connection with that comparison, no matters came to his attention which caused him to believe that the specified data should be adjusted.
- (d) To demonstrate that it meets the financial test under paragraph 310 CMR 80.54(10)(b) or (c), the chief financial officer of the Owner or Operator, or guarantor, shall sign, within 120 days of the close of each financial reporting year, as defined by the 12-month period for which financial statements used to support the financial test are prepared, a letter worded exactly as follows, except that the instructions in brackets are to be replaced by the relevant information and the brackets deleted:

LETTER FROM CHIEF FINANCIAL OFFICER

I am the chief financial officer of [*insert: name and address of the owner or operator, or guarantor*]. This letter is in support of the use of [*insert: "the financial test of self-insurance," and/or "guarantee"*] to demonstrate financial responsibility for [*insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage"*] caused by [*insert: "sudden accidental releases" and/or "nonsudden accidental releases"*] in the amount of at least [*insert dollar amount*] per occurrence and [*insert: dollar amount*] annual aggregate arising from operating (an) underground storage tank system(s).

80.54: continued

Underground storage tank systems at the following facilities are assured by this financial test by this ["owner or operator," and/or "guarantor"]: [*List for each facility: the name and address of the facility where tanks assured by this financial test are located, and whether tanks are assured by this financial test. If separate mechanisms or combinations of mechanisms are being used to assure any of the tanks at this facility, list each tank assured by this financial test by the tank identification number provided in the registration submitted pursuant to 310 CMR 80.23. The financial test of self-insurance cannot be combined with a corporate guarantee where the financial statements of the owner or operator and guarantor are consolidated*].

A ["financial test," and/or "guarantee"] is also used by this [insert: "owner or operator," or "guarantor"] to demonstrate evidence of financial responsibility in the following amounts under 40 CFR Parts 271 and 145.

<i>EPA Regulations</i>	<i>Amount</i>
Closure (§§ 264.143 and 265.143)	\$
Post-closure Care (§§ 264.145 and 265.145)	\$
Liability Coverage (§§ 264.147 and 265.147)	\$
Corrective Action (§ 264.101(b))	\$
Plugging and Abandonment (§ 144.63)	\$
Closure	\$
Post-closure Care	\$
Liability Coverage	\$
Corrective Action	\$
Plugging and Abandonment	\$
Total	\$

This [*insert: "owner or operator," or "guarantor"*] has not received an adverse opinion, a disclaimer of opinion, or a "going concern" qualification from an independent auditor on his financial statements for the latest completed fiscal year.

[*Fill in the information for Alternative I if the criteria of 310 CMR 80.54(10)(b) are being used to demonstrate compliance with the financial test requirements. Fill in the information for Alternative II if the criteria of 310 CMR 80.54(10)(c) are being used to demonstrate compliance with the financial test requirements.*]

[Name]

[Title]

[Date]

(e) If an Owner or Operator using the test to provide financial assurance finds that he or she no longer meets the requirements of the financial test based on the year-end financial statements, the Owner or Operator shall obtain alternative coverage within 150 days of the end of the year for which financial statements have been prepared.

(f) The Department may require reports of financial condition at any time from the Owner or Operator, and/or guarantor. If the Department, on the basis of such reports or other information, determines that the Owner or Operator, and/or guarantor, no longer meets the financial test requirements of 310 CMR 80.54(10)(b) or (c) and (d), the Owner or Operator shall obtain alternate coverage within 30 days after notification of such a finding.

(g) If the Owner or Operator fails to obtain alternate assurance within 150 days of finding that he or she no longer meets the requirements of the financial test based on the year-end financial statements, or within 30 days of notification by the Department that he or she no longer meets the requirements of the financial test, the Owner or Operator shall notify the Department of such failure within ten days.

(11) Guarantee.

(a) An Owner or Operator may meet the requirements of 310 CMR 80.52 by obtaining a guarantee that conforms to the requirements of 310 CMR 80.54(11).

1. The guarantor shall be:

a. A firm that:

i. possesses a controlling interest in the Owner or Operator;

ii. possesses a controlling interest in a firm described under 310 CMR 80.54(11)(a)1.a.i.; or

iii. is controlled through stock ownership by a common parent firm that possesses a controlling interest in the owner or operator; or

b. A firm engaged in a substantial business relationship with the Owner or Operator and issuing the guarantee as an act incident to that business relationship.

(b) Within 120 days of the close of each financial reporting year, the guarantor shall demonstrate that it meets the financial test criteria of 310 CMR 80.54(10) based on year-end financial statements for the latest completed financial reporting year by completing the letter from the chief financial officer described in 310 CMR 80.54(10)(d) and shall deliver the letter to the Owner or Operator. If the guarantor fails to meet the requirements of the financial test at the end of any financial reporting year, within 120 days of the end of that financial reporting year the guarantor shall send by certified mail, before cancellation or nonrenewal of the guarantee, notice to the Owner or Operator. If the Department notifies the guarantor that s/he no longer meets the requirements of the financial test of 310 CMR 80.54(10)(b) or (c) and (d), the guarantor shall notify the Owner or Operator within ten days of receiving such notification from the Department. In both cases, the guarantee will terminate no less than 120 days after the date the Owner or Operator receives the notification, as evidenced by the return receipt. The Owner or Operator shall obtain alternative coverage as specified in 310 CMR 80.57.

(c) The guarantee shall be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

80.54: continued

GUARANTEE

Guarantee made this [date] by [name of guaranteeing entity], a business entity organized under the laws of the state of [name of state], herein referred to as guarantor, to the Massachusetts Department of Environmental Protection and to any and all third parties, and obligees, on behalf of ["owner" or "operator"] of [business address].

Recitals.

(1) Guarantor meets or exceeds the financial test criteria of 310 CMR 80.54(10)(b) or (c) and (d) and agrees to comply with the requirements for guarantors as specified in 310 CMR 80.54(11)(b).

(2) ["Owner" or "operator"] owns or operates the following underground storage tank systems(s) covered by this guarantee: [List the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located. If more than one instrument is used to assure different tanks at any one facility, for each tank covered by this instrument, list the tank identification number provided in the registration submitted pursuant to 310 CMR 80.23, and the name and address of the facility.] [The guarantee cannot be combined with a financial test of self-insurance where the financial statements of the owner or operator and guarantor are consolidated.] This guarantee satisfies 310 CMR 80.51 through 80.63 requirements for assuring funding for [insert: "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"; if coverage is different for different tanks or locations, indicate the type of coverage applicable to each tank or location] arising from operating the above-identified underground storage tank systems(s) in the amount of [insert dollar amount] per occurrence and [insert dollar amount] annual aggregate.

(3) [Insert appropriate phrase: "On behalf of our subsidiary" (if guarantor is corporate parent of the owner or operator); or "On behalf of our affiliate" (if guarantor is a related firm of the owner or operator); or "Incident to our business relationship with" (if guarantor is providing the guarantee as an incident to a substantial business relationship with owner or operator)] ["owner" or "operator"], guarantor guarantees to the Massachusetts Department of Environmental Protection and to any and all third parties that:

In the event that ["owner" or "operator"] fails to provide alternative coverage within 60 days after receipt of a notice of cancellation of this guarantee and the Massachusetts Department of Environmental Protection has determined or suspects that a release has occurred at an underground storage tank system covered by this guarantee, the guarantor, upon instructions from the Massachusetts Department of Environmental Protection, shall fund a standby trust fund in accordance with the provisions of 310 CMR 80.60 in an amount not to exceed the coverage limits specified above.

In the event that the Massachusetts Department of Environmental Protection determines that ["owner" or "operator"] has failed to perform corrective action for releases arising out of the operation of the above-identified tank(s) in accordance with 310 CMR 40.0000: *Massachusetts Contingency Plan*, the guarantor upon written instructions from the Massachusetts Department of Environmental Protection shall fund a standby trust in accordance with the provisions of 310 CMR 80.60 in an amount not to exceed the coverage limits specified above.

If ["owner" or "operator"] fails to satisfy a judgment or award based on a determination of liability for bodily injury or property damage to third parties caused by ["sudden" and/or "nonsudden"] accidental releases arising from the operation of the above-identified tank(s), or fails to pay an amount agreed to in settlement of a claim arising from or alleged to arise from such injury or damage, the guarantor, upon written instructions from the Massachusetts Department of Environmental Protection, shall fund a standby trust in accordance with the provisions of 310 CMR 80.60 to satisfy such judgment(s), award(s), or settlement agreement(s) up to the limits of coverage specified above.

80.54: continued

- (4) Guarantor agrees that if, at the end of any fiscal year before cancellation of this guarantee, the guarantor fails to meet the financial test criteria of 310 CMR 80.54(10)(b) or (c) and (d), guarantor shall send within 120 days of such failure, by certified mail, notice to [“owner” or “operator”]. The guarantee will terminate 120 days from the date of receipt of the notice by [“owner” or “operator”], as evidenced by the return receipt.
- (5) Guarantor agrees to notify [“owner” or “operator”] by certified mail of a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code naming guarantor as debtor, within ten days after commencement of the proceeding.
- (6) Guarantor agrees to remain bound under this guarantee notwithstanding any modification or alteration of any obligation of [“owner” or “operator”] pursuant to 310 CMR 80.00.
- (7) Guarantor agrees to remain bound under this guarantee for so long as [“owner” or “operator”] must comply with the applicable financial responsibility requirements of 310 CMR 80.51 through 80.63 for the above-identified tank(s), except that guarantor may cancel this guarantee by sending notice by certified mail to [“owner” or “operator”], such cancellation to become effective no earlier than 120 days after receipt of such notice by [“owner” or “operator”], as evidenced by the return receipt.
- (8) The guarantor's obligation does not apply to any of the following:
- (a) Any obligation of [“owner” or “operator”] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;
 - (b) Bodily injury to an employee of [“owner” or “operator”] arising from, and in the course of, employment by [“owner” or “operator”];
 - (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
 - (d) Property damage to any property owned, rented, loaded to, in the care, custody, or control of, or occupied by [“owner” or “operator”] that is not the direct result of a release from an underground storage tank system;
 - (e) Bodily damage or property damage for which [“owner” or “operator”] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 310 CMR 80.52.
- (9) Guarantor expressly waives notice of acceptance of this guarantee by the Massachusetts Department of Environmental Protection, by any or all third parties, or by [“owner” or “operator”]. by signing the following certification.

I hereby certify that: (i) the wording of this guarantee is identical to the wording specified in 310 CMR 80.54(11)(c) as such regulations were constituted on the effective date shown immediately below; and (ii) I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including possible fines and imprisonment.

Effective date:

[Name of guarantor]

[Authorized signature for guarantor]

[Name of person signing]

[Title of person signing]

[Signature of witness or notary]

80.54: continued

(d) An Owner or Operator who uses a guarantee to satisfy the requirements of 310 CMR 80.52 shall establish a standby trust fund when the guarantee is obtained. Under the terms of the guarantee, all amounts paid by the guarantor under the guarantee will be deposited directly into the standby trust fund in accordance with instructions from the Department of Environmental Protection under 310 CMR 80.60. This standby trust fund must meet the requirements specified in 310 CMR 80.55.

80.55: Requirements for a Standby Trust

(1) Any Owner or Operator who establishes one or more of the financial assurance mechanisms at 310 CMR 80.54(3), (4), (9) or (11) shall establish a standby trust fund when the mechanism is acquired. The trustee of the standby trust fund shall be a bank or other financial institution which has the authority to act as a trustee and whose trust operations are regulated and examined by the Massachusetts Commissioner of Banks or the trustee shall be a national bank.

(2) A standby trust agreement, or trust agreement, shall be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Trust Agreement

This Trust Agreement, hereafter referred to as the "Agreement," is entered into as of [date] by and between [name of the owner or operator], a [name of State] [insert "corporation," "partnership," "association," "trust", "limited liability company", "limited liability partnership" or "individual"], hereafter referred to as the "Grantor," and [name of corporate trustee], [insert "Incorporated in the state of ___" or "a national bank"], hereafter referred to as the "Trustee".

Whereas, the Massachusetts Department of Environmental Protection, hereafter referred to as "the Department" an agency of the Commonwealth of Massachusetts, has established certain regulations applicable to the Grantor, requiring that the Grantor shall provide assurance that funds will be available when needed for corrective action and third-party compensation for bodily injury and property damage caused by sudden and nonsudden accidental releases arising from the operation of the UST system(s) identified in Schedule A. Schedule A shall list the number of tanks at each facility and the name(s) and address(es) of the facility(ies) where the tanks are located that are covered by the standby trust agreement.

Whereas, the Grantor has elected to establish [insert either "a "trust fund" or "standby trust fund"] to provide all or part of such financial assurance for the UST systems identified in Schedule A; and

Whereas, the Grantor, acting through its duly authorized officers, has selected the Trustee to be the trustee under this Agreement, and the Trustee is willing to act as trustee;

Now, therefore, the Grantor and the Trustee agree as follows:

Section 1. Definitions

As used in this Agreement:

- (a) The term "Grantor" means [name of owner or operator].
- (b) The term "Trustee" means [name of corporate trustee], [insert "incorporated in the State of _____" or "a national bank"], and any successor thereof.
- (c) The terms "Department" and "Beneficiary" mean the Massachusetts Department of Environmental Protection, an agency of the Commonwealth of Massachusetts, and any successor of said Department.

80.55: continued

Section 2. Identification of the Financial Assurance Mechanism

This Agreement pertains to the [*identify the financial assurance mechanism, either a guarantee, surety bond, or letter of credit, from which the standby trust fund is established to receive payments (This paragraph is only applicable to the standby trust agreement.)*].

Section 3. Establishment of Trust Fund

The Grantor and the Trustee hereby establish a trust fund, the "Fund," for the benefit of the Department. The Grantor and the Trustee intend that no third party have access to the Fund except as herein provided. The Fund is established [*insert either "initially as a standby to receive payments and shall not consist of any property" or "as a trust initially consisting of the property, which is acceptable to the Trustee, fully described in Schedule B".*] Payments made by the provider of financial assurance pursuant to the Department's instruction are transferred to the Trustee and are referred to as the Fund, together with all earnings and profits thereon, less any payments or distributions made by the Trustee pursuant to this Agreement. The Fund shall be held by the Trustee, IN TRUST, as hereinafter provided. The Trustee shall not be responsible nor shall it undertake any responsibility for the amount or adequacy of, nor any duty to collect from the Grantor, any payments necessary to discharge any liability of the Grantor established by the Department.

Section 4. Payment for "Corrective Action" and/or Third-party Liability Claims"

The Trustee shall make payments from the Fund as directed by the Department in writing. Said payments shall provide for the payment of the costs of [*insert "taking corrective action" and/or compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases"*] arising from operating the tanks covered by this Agreement for Corrective Action and/or Third-party Liability Claims. The Trustee shall reimburse from the Fund, the Grantor or other persons as specified in writing by the Department. Such reimbursement(s) shall be in the amount(s) as the Department directs in writing.

The Fund may not be drawn upon to cover any of the following:

- (a) Any obligation of [*name of owner or operator*] under a workers' compensation, disability benefits, or unemployment compensation law or other similar law;
- (b) Bodily injury to an employee of [*name of owner or operator*] arising from, and in the course of employment by [*name of owner or operator*];
- (c) Bodily injury or property damage arising from the ownership, maintenance, use, or entrustment to others of any aircraft, motor vehicle, or watercraft;
- (d) Property damage to any property owned, rented, loaned to, in the care, custody, or control of, or occupied by [*name of owner or operator*] that is not the direct result of a release from a UST system;
- (e) Bodily injury or property damage for which [*name of owner or operator*] is obligated to pay damages by reason of the assumption of liability in a contract or agreement other than a contract or agreement entered into to meet the requirements of 310 CMR 80.52.

The Trustee shall reimburse the Grantor, or other persons as specified by the Department, from the Fund for corrective action expenditures and/or third-party liability claims in such amounts as the Department shall direct in writing. In addition, the Trustee shall refund to the Grantor such amounts as the Department specifies in writing. Upon refund, such funds shall no longer constitute part of the Fund as defined herein.

Section 5. Payments Comprising the Fund

Payments made to the Trustee for the Fund shall consist of cash and securities acceptable to the Trustee.

80.55: continued

Section 6. Trustee Management

The Trustee shall invest and reinvest the principal and income of the Fund and keep the Fund invested as a single fund, without distinction between principal and income, in accordance with general investment policies and guidelines which the Grantor may communicate in writing to the Trustee from time to time, subject, however, to the provisions of this Section. In investing, reinvesting, exchanging, selling, and managing the Fund, the Trustee shall discharge his duties with respect to the trust fund solely in the interest of the beneficiary and with the care, skill, prudence, and diligence under the circumstances then prevailing which persons of prudence, acting in a like capacity and familiar with such matters, would use in the conduct of an enterprise of a like character and with like aims; except that:

- (a) Securities or other obligations of the Grantor, any other Owner or Operator of the UST system(s) or any affiliates of the Grantor as defined in the Investment Company Act of 1940, as amended, 15 U.S.C. 80a-2(a), shall not be acquired or held, unless they are securities or other obligations of the Federal or State government;
- (b) The Trustee is authorized to invest the Fund in time or demand deposits of the Trustee, to the extent insured by an agency of the Federal or State government; and
- (c) The Trustee is authorized to hold cash awaiting investment or distribution uninvested for a reasonable time and without liability for the payment of interest thereon.

Section 7. Commingling and Investment

The Trustee is expressly authorized in its discretion:

- (a) To transfer from time to time any or all of the assets of the Fund to any common, commingled, or collective trust fund created by the Trustee in which the Fund is eligible to participate, subject to all of the provisions thereof, to be commingled with the assets of other trusts participating therein; and
- (b) To purchase shares in any investment company registered under the Investment Company Act of 1940, 15 U.S.C. 80a-1 *et seq.*, including one which may be created, managed, underwritten, or to which investment advice is rendered or the shares of which are sold by the Trustee. The Trustee may vote such shares in its discretion.

Section 8. Express Powers of Trustee

Without in any way limiting the powers and discretions conferred upon the Trustee by the other provisions of this Agreement or by law, the Trustee is expressly authorized and empowered:

- (a) To sell, exchange, convey, transfer, or otherwise dispose of any property held by it, by public or private sale. No person dealing with the Trustee shall be bound to see to the application of the purchase money or to inquire into the validity or expediency of any such sale or other disposition;
- (b) To make, execute, acknowledge, and deliver any and all documents of transfer and conveyance and any and all other instruments that may be necessary or appropriate to carry out the powers herein granted;
- (c) To register any securities held in the Fund in its own name or in the name of a nominee and to hold any security in bearer form or in book entry, or to combine certificates representing such securities with certificates of the same issue held by the Trustee in other fiduciary capacities, or to deposit or arrange for the deposit of such securities in a qualified central depository even though, when so deposited, such securities may be merged and held in bulk in the name of the nominee of such depository with other securities deposited therein by another person, or to deposit or arrange for the deposit of any securities issued by the United States Government, or any agency or instrumentality thereof, with a Federal Reserve bank, but the books and records of the Trustee shall at all times show that all such securities are part of the Fund;
- (d) To deposit any cash in the Fund in interest-bearing accounts maintained or savings certificates issued by the Trustee, in its separate corporate capacity, or in any other banking institution affiliated with the Trustee, to the extent insured by an agency of the Federal or State government; and

80.55: continued

- (e) To compromise or otherwise adjust all claims in favor of or against the Fund.

Section 9. Taxes and Expenses

All taxes of any kind that may be assessed or levied against or in respect of the Fund and all brokerage commissions incurred by the Fund shall be paid from the Fund. All other expenses incurred by the Trustee in connection with the administration of this Trust, including fees for legal services rendered to the Trustee, the compensation of the Trustee to the extent not paid directly by the Grantor, and all other proper charges and disbursements of the Trustee shall be paid from the Fund.

Section 10. Annual Valuation

The Trustee shall annually, at least 30 days prior to the anniversary date of establishment of the Fund, furnish to the Grantor and to the Department a statement confirming the value of the Trust. Any securities in the Fund shall be valued at market value as of no more than 60 days prior to the anniversary date of establishment of the Fund.

Section 11. Advice of Counsel

The Trustee may from time to time consult with counsel, who may be counsel to the Grantor, with respect to any question arising as to the interpretation of this Agreement or any action to be taken hereunder. The Trustee shall be fully protected, to the extent permitted by law, in acting upon the advice of counsel.

Section 12. Trustee Compensation

The Trustee shall be entitled to reasonable compensation for its services as agreed upon in writing from time to time with the Grantor.

Section 13. Successor Trustee

The Trustee may resign or the Grantor may replace the Trustee, but such resignation or replacement shall not be effective until the Grantor has appointed a successor trustee and this successor accepts the appointment. The successor trustee shall have the same powers and duties as those conferred upon the Trustee hereunder. Upon the successor trustee's acceptance of the appointment, the Trustee shall assign, transfer, and pay over to the successor trustee the funds and properties then constituting the Fund. If for any reason the Grantor cannot or does not act in the event of the resignation of the Trustee, the Trustee may apply to a court of competent jurisdiction for the appointment of a successor trustee or for instructions. The successor trustee shall specify the date on which it assumes administration of the trust in a writing sent to the Grantor, the present Trustee and the Department by certified mail ten days before such change becomes effective. Any expenses incurred by the Trustee as a result of any of the acts contemplated by this Section shall be paid as provided in Section 9.

Section 14. Instructions to the Trustee

All orders, requests, and instructions by the Grantor to the Trustee shall be in writing, signed by such persons as are designated in Schedule C or such other designees as the Grantor may designate by amendment to Schedule C. The Trustee shall be fully protected in acting without inquiry in accordance with the Grantor's orders, requests, and instructions. All orders, requests, and instructions by [the Department to the Trustee shall be in writing, signed by the Commissioner or his designee], and the Trustee shall act and shall be fully protected in acting in accordance with such orders, requests, and instructions. The Trustee shall have the right to assume, in the absence of written notice to the contrary, that no event constituting a change or a termination of the authority of any person to act on behalf of the Grantor or the Department hereunder has occurred. The Trustee shall have no duty to act in the absence of such orders, requests, and instructions from the Grantor and/or the Department, except as provided for herein.

80.55: continued

Section 15. Notice of Nonpayment

The Trustee shall notify the Grantor and the Department, by certified mail, within ten days following the expiration of the 30 day period after the anniversary of the establishment of the Trust, if no payment into the Fund is received from the Grantor during that period. After the pay-in period is completed, the Trustee shall not be required to send a notice of nonpayment.

Section 16. Amendment of Agreement

This Agreement may be amended by an instrument in writing executed by the Grantor, the Trustee and the Department, or by the Trustee and the Department if the Grantor ceases to exist.

Section 17. Irrevocability and Termination

Subject to the right of the parties to amend this Agreement as provided in Section 16, this Trust shall be irrevocable and shall continue until terminated at the written agreement of the Grantor, the Trustee and the Department or by the Trustee and the Department, if the Grantor ceases to exist. Upon termination of the Trust, all remaining trust property, less final trust administration expenses, shall be delivered to the Grantor.

Section 18. Immunity and Indemnification

The Trustee shall not incur personal liability of any nature in connection with any act or omission, made in good faith, in the administration of this Trust, or in carrying out any directions by the Grantor or by the Department issued in accordance with this Agreement. The Trustee shall be indemnified and saved harmless by the Grantor, from and against any personal liability to which the Trustee may be subjected by reason of any act or conduct in its official capacity, including all expenses reasonably incurred in its defense in the event the Grantor fails to provide such defense.

Section 19. Choice of Law

This Agreement shall be administered, construed, and enforced according to the laws of the Commonwealth of Massachusetts.

Section 20. Interpretation

As used in this Agreement, words in the singular include the plural and words in the plural include the singular. The descriptive headings for each section of this Agreement shall not affect the interpretation or the legal efficacy of this Agreement.

In Witness Whereof the parties have caused this Agreement to be executed by their respective ["officers" or "members" or "partners" or *applicable title*] duly authorized [*if a corporation* "and their corporate seals to be hereunto affixed and"] attested as of the date first above written. The parties below certify that the wording of this Agreement is identical to the wording specified in 310 CMR 80.55(2) as in effect on the date written above.

My Commission expires [Date]

(4) The Department will instruct the trustee to refund the balance of the standby trust fund to the provider of financial assurance if the Department determines that no additional corrective action costs or third-party liability claims will occur as a result of a release covered by the financial assurance mechanism for which the standby trust fund was established.

(5) An Owner or Operator may establish one trust fund as the depository mechanism for all funds assured in compliance with 310 CMR 80.51 through 80.63.

80.56: Substitution of Financial Assurance Mechanisms by Owner or Operator

(1) An Owner or Operator may substitute any alternate financial assurance mechanisms as allowed in 310 CMR 80.53, provided that at all times the Owner or Operator maintains an effective financial assurance mechanism or combination of mechanisms that satisfies the requirements of 310 CMR 80.52.

(2) After obtaining alternate financial assurance as specified 310 CMR 80.53, an Owner or Operator may cancel a financial assurance mechanism using applicable procedures.

80.57: Cancellation or Nonrenewal by a Provider of Financial Assurance

(1) Except as otherwise provided, a provider of financial assurance may cancel or not renew a financial assurance mechanism by sending a notice of termination by certified mail to the Owner or Operator. Upon receiving a notice of termination, the Owner or Operator shall notify the Department in writing, as soon as possible, but in no event later than seven business days after receiving the notice.

(a) Termination of a local government guarantee, a guarantee, a surety bond, or a letter of credit may not occur until 120 days after the date on which the Owner or Operator and the Department receives the notice of termination, as evidenced by the return receipt. If the dates of receipt are different, the later date shall control.

(b) Termination of insurance or risk retention coverage, except for non-payment or misrepresentation by the insured, may not occur until 60 days after the date on which the Owner or Operator receives the notice of termination, as evidenced by the return receipt. Termination for non-payment of premium or misrepresentation by the insured may not occur until a minimum of ten days after the date on which the Owner or Operator receives the notice of termination, as evidenced by the return receipt.

(2) If a provider of financial responsibility cancels or does not renew for reasons other than incapacity of the provider as specified in 310 CMR 80.62, the Owner or Operator shall obtain alternate coverage within 60 days after receipt of the notice of termination. If the Owner or Operator fails to obtain alternate coverage within 60 days after receipt of the notice of termination, the Owner or Operator shall provide written documentation to the Department of such failure and submit:

- (a) The name and address of the provider of financial assurance;
- (b) The name and address of the Trustee, if applicable;
- (c) The effective date of termination; and
- (d) A copy of the financial assurance mechanism that is being terminated.

(3) Nothing in 310 CMR 80.57 shall relieve Owners and Operators from their obligation to demonstrate and maintain financial assurance.

(4) Termination shall not relieve the Owner and Operator of any financial responsibility obligations under 310 CMR 80.51 through 80.63.

80.58: Requirements for Reporting by Owner or Operator

(1) Within 150 days of the close of the financial reporting year of the Owner or Operator, if such Owner or Operator is using 310 CMR 80.54(10)(b) to meet the requirements of 310 CMR 80.52, the Owner or Operator shall submit to the Department the following documents with an updated registration pursuant to 310 CMR 80.23(1)(b):

- (a) Letter from the chief financial officer in accordance with 310 CMR 80.54(10)(d); and
- (b) Year-end financial statements in accordance with 310 CMR 80.54(10)(b)5.

(2) Within 150 days of the close of the financial reporting year of the Owner or Operator, if such Owner or Operator is using 310 CMR 80.54(10)(c) to meet the requirements 310 CMR 80.52, the Owner or Operator shall submit to the Department the following documents, with an updated registration pursuant to 310 CMR 80.23(1)(b):

- (a) Letter from the chief financial officer in accordance with 310 CMR 80.54(10)(d);
- (b) Year-end financial statements in accordance with 310 CMR 80.54(10)(c)1.; and
- (c) A special report from an independent certified public accountant, if applicable in accordance with 310 CMR 80.54(10)(c)4.

(3) Within 150 days of the close of the financial reporting year of the Owner or Operator, if such Owner or Operator is using 310 CMR 80.54(11) to meet the requirements of 310 CMR 80.52, the Owner or Operator shall submit to the Department the following documents with an updated registration pursuant to 310 CMR 80.23(1)(b):

- (a) Letter from the chief financial officer in accordance with 310 CMR 80.54(11)(b); and
- (b) A copy of the fully executed guarantee, if the guarantee has been amended from the previous year;

80.58: continued

- (c) A copy of the stand-by trust in accordance with 310 CMR 80.58(1), if the stand-by trust has been amended from the previous year.
- (4) An Owner or Operator shall submit to the Department written documentation of its current financial assurance, if the Owner or Operator fails to obtain alternate coverage as required by 310 CMR 80.57, within 30 days after the Owner or Operator receives notice of the following from its financial assurance provider:
 - (a) Commencement of a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code, naming a provider of financial assurance as a debtor;
 - (b) Suspension or revocation of the authority of a provider of financial assurance to issue a financial assurance mechanism; or
 - (c) Other incapacity of a provider of financial assurance.
- (5) If the Owner or Operator fails to obtain alternate coverage within 60 days of cancellation of its financial assurance mechanism, the Owner or Operator shall submit information in accordance with 310 CMR 80.57(2).
- (6) The Department may require an Owner or Operator to submit evidence of financial assurance as described 310 CMR 80.59 or other information to determine compliance with 310 CMR 80.51 through 80.63 at any time.

80.59: Requirements for Recordkeeping

- (1) An Owner or Operator shall maintain documentation, in accordance with 310 CMR 80.59, of financial assurance mechanisms used to demonstrate financial responsibility for a UST system until released from the requirements in accordance with 310 CMR 80.61. The Owner or Operator shall keep the documentation in hard copy or electronically in accordance with 310 CMR 80.36. Upon request from the Department, the Owner or Operator shall make the documentation available to the Department as soon as possible, but in no event more than seven business days after receiving the request.
- (2) An Owner or Operator shall maintain the following documentation of financial responsibility:
 - (a) An Owner or Operator using the Underground Storage Tank Petroleum Cleanup Fund shall maintain a current certificate of compliance.
 - (b) An Owner or Operator using an insurance policy or risk retention group coverage shall maintain a copy of the signed insurance policy or risk retention group coverage policy, with the endorsement or certificate of insurance and any amendments thereto.
 - (c) An Owner or Operator using a surety bond with a standby trust shall maintain a copy of the surety bond and any amendments thereto, and a copy of the signed standby trust fund agreement and any amendments thereto.
 - (d) An Owner or Operator using a letter of credit with a standby trust shall maintain a copy of the letter of credit and any amendments thereto, and a copy of the signed standby trust fund agreement and any amendments thereto.
 - (e) An Owner or Operator using a trust fund shall maintain a copy of the trust fund and any amendment thereto.
 - (f) An Owner or Operator using the local government bond rating test shall maintain:
 - 1. A copy of its bond rating published within the last 12 months by Moody's or Standard & Poor's; and
 - 2. A copy of the letter signed by the chief financial officer in accordance with 310 CMR 80.54(6)(d) or (e).
 - (g) An Owner or Operator using a local government fund shall maintain:
 - 1. A copy of the state constitutional provision or local government statute, charter, ordinance, or order dedicating the fund; and
 - 2. A copy of the letter signed by the chief financial officer in accordance with 310 CMR 80.54(7)(d); and

80.59: continued

3. Year-end financial statements for the most recent completed financial reporting year showing the amount in the fund. If the fund is established using incremental funding backed by bonding authority, the financial statements must show the previous year's balance, the amount of funding during the year, and the closing balance in the fund; and
 4. If the fund is established using incremental funding backed by bonding authority, the Owner or Operator shall maintain documentation of the required bonding authority, including either the results of a voter referendum under 310 CMR 80.54(7)(c)1., or attestation by the State Attorney General as specified under 310 CMR 80.54(7)(c)2.
- (h) An Owner or Operator using the local government financial test shall maintain a copy of the chief financial officer's letter based on year-end financial statements for the most recent completed financial reporting year in accordance with 310 CMR 80.54(8)(c). Such evidence must be on file no later than 120 days after the close of the financial reporting year.
- (i) An Owner or Operator using the local government guarantee shall maintain:
1. A copy of the signed standby trust fund agreement and copies of any amendments thereto, if the local government guarantee is supported by a standby trust.
 2. A copy of the chief financial officer's letter based on year-end financial statements for the most recent completed financial reporting year in accordance with 310 CMR 80.54(8)(c), if the local government guarantee is supported by the local government financial test. Such evidence must be on file no later than 120 days after the close of the financial reporting year.
 3. A copy of the guarantor's bond rating published within the last 12 months by Moody's or Standard & Poor's, if the local government guarantee is supported by the bond rating test.
 4. A copy of the guarantor's year-end financial statements for the most recent completed financial reporting year showing the amount of the fund, if the local government guarantee is supported by the local government fund.
- (j) An Owner or Operator using a financial test shall maintain a copy of the chief financial officer's letter and year-end financial statements for the most recent completed financial reporting year on which the financial test is based. Such evidence shall be on file no later than 120 days after the close of the financial reporting year.
- (k) An Owner or Operator using a guarantee shall maintain:
1. A copy of the chief financial officer's letter based on year-end financial statements for the most recent completed financial reporting year. Such evidence shall be on file no later than 120 days after the close of the financial reporting year.
 2. A copy of the signed standby trust fund agreement and copies of any amendments thereto.

(3) An Owner or Operator using a financial assurance mechanism specified in 310 CMR 80.54(1) through (11) shall maintain an updated copy of a certification of financial responsibility worded as follows, except that italicized instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Certification of Financial Responsibility

["Owner" or "Operator"] hereby certifies that it is in compliance with the requirements 310 CMR 80.51 through 80.63.

The financial assurance mechanism(s) used to demonstrate financial responsibility under 310 CMR 80.51 through 80.63 is (are) as follows:

[For each mechanism, list the type of mechanism, name of issuer, mechanism number (if applicable), amount of coverage, effective period of coverage and whether the mechanism covers "taking corrective action" and/or "compensating third parties for bodily injury and property damage caused by" either "sudden accidental releases" or "nonsudden accidental releases" or "accidental releases".]

80.59: continued

[Signature of Owner or Operator]
[Name of Owner or Operator]
[Title]
[Date]
[Signature of witness or notary]
[Name of witness or notary]
[Date]

- (a) The Owner or Operator shall update this certification whenever the financial assurance mechanism(s) used to demonstrate financial responsibility change(s).

80.60: Requirements for Drawing on Financial Assurance Mechanisms

(1) Except as specified in 310 CMR 80.60(4), the Department shall direct the Trustee to require the guarantor, surety, or institution issuing a letter of credit to place the amount of funds stipulated by the Department, up to the limit of funds provided by the financial assurance mechanism, into the standby trust if:

- (a) The Owner or Operator fails to establish alternate financial assurance in accordance with 310 CMR 80.57 within 60 days after receiving notice of termination of the guarantee, surety bond, letter of credit, or, as applicable, other financial assurance mechanism; and
(b) The Department determines or suspects in its discretion that a release from a UST system covered by the mechanism has occurred and so notifies the Owner or Operator or the Owner or Operator has notified the Department of a release from a UST system covered by the mechanism; or
(c) The commencement of a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code, naming an Owner or Operator as debtor; or
(d) The Owner or Operator has a legal existence and has failed to maintain said legal existence and no successor has assumed its legal obligations in accordance with 310 CMR 80.00; or
(e) The conditions of 310 CMR 80.60(2)(a) or (2)(b)1. or 2. are satisfied.

(2) The Department may draw on a standby trust fund when:

- (a) The Department makes a determination in its discretion that a release has occurred and immediate or long-term corrective action for the release is needed, and the Owner or Operator has not conducted response action; or
(b) The Department has received either:
1. Certification from the Owner or Operator and the third-party liability claimant(s) and from attorneys representing the Owner or Operator and the third-party liability claimant(s) that a third-party liability claim should be paid. The certification shall be worded as follows, except that instructions in brackets are to be replaced with the relevant information and the brackets deleted:

Certification of Valid Claim

The undersigned, as principals and as legal representatives of [*insert: "owner" or "operator"*] and [*insert: name and address of third-party claimant*], hereby certify that the claim of bodily injury [and/or] property damage caused by an accidental release arising from operating [*"owner's" or "operator's"*] underground storage tank should be paid in the amount of \$[_____].

[Signatures]
Owner or Operator
Attorney for Owner or Operator
(Notary)
Date
[Signatures]
Claimant(s)
Attorney(s) for Claimant(s)
(Notary)
Date

80.60: continued

2. A valid final court order establishing a judgment against the Owner or Operator for bodily injury or property damage caused by an accidental release from a UST system covered by financial assurance under 310 CMR 80.51 through 80.63 and the Department determines that the Owner or Operator has not satisfied the judgment.

(3) If the Department determines that the amount of corrective action costs and third-party liability claims eligible for payment under 310 CMR 80.60(2) may exceed the balance of the standby trust fund and the obligation of the provider of financial assurance, the first priority for payment shall be corrective action costs necessary to protect human health and the environment. The Department shall pay third-party liability claims in the order in which the Department receives certifications under 310 CMR 80.60(2)(b)1., and valid court orders under 310 CMR 80.60(2)(b)2.

(4) If the guarantor is the state, the local government guarantee without standby trust, shall make payments as directed by the Department under the circumstances described in 310 CMR 80.60(1) through (3).

80.61: Release from Financial Responsibility Requirements

(1) The Owner and Operator are subject to the financial responsibility requirements in accordance with 310 CMR 80.51 through 80.63, unless and until the Owner or Operator complies with closure requirements at 310 CMR 80.43, in full.

(2) Upon the date of sale of a UST system or facility, the Owner and Operator shall no longer be required to maintain and demonstrate financial responsibility for the UST system or facility that was sold.

(3) Release from the financial responsibility requirements shall not relieve the Owner and Operator from obligations under M.G.L. c. 21O, M.G.L. c. 21E, 310 CMR 80.00, 310 CMR 40.0000: *Massachusetts Contingency Plan* and any other applicable laws and regulations pertaining to UST systems.

80.62: Bankruptcy or Other Incapacity of Owner or Operator or Provider of Financial Assurance

(1) Within ten days after commencement of a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code, naming an Owner or Operator as debtor, the Owner or Operator shall notify the Department by certified mail of such commencement and submit the appropriate forms listed in 310 CMR 80.59(2) documenting current financial responsibility.

(2) Within ten days after commencement of a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code, naming a local government Owner or Operator as debtor, the local government Owner or Operator shall notify the Department by certified mail of such commencement and submit the appropriate documentation listed in 310 CMR 80.59(2) documenting current financial responsibility.

(3) Within ten days after commencement of a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code, naming a guarantor providing a local government financial assurance as debtor, such guarantor shall notify the local government Owner or Operator by certified mail of such commencement as required under the terms of the guarantee specified in 310 CMR 80.54(9).

(4) Within ten days after commencement of a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code, naming a guarantor providing financial assurance as debtor, such guarantor shall notify the Owner or Operator by certified mail of such commencement as required under the terms of the guarantee specified in 310 CMR 80.54(11).

80.62: continued

(5) An Owner or Operator shall be deemed to be without the required financial assurance in the event of a bankruptcy or incapacity of its provider of financial assurance, or a suspension or revocation of the authority of the provider of financial assurance to issue an insurance policy, risk retention group coverage policy, surety bond, letter of credit, or suspension or revocation of the Underground Storage Tank Petroleum Product Cleanup Fund. The Owner or Operator shall obtain alternate financial assurance as specified in 310 CMR 80.57 within 30 days after receiving notice of such an event. If the Owner or Operator does not obtain alternate coverage within 30 days after such notification, the Owner or Operator shall notify the Department.

(6) Within 30 days after receipt of notification that the Underground Storage Tank Petroleum Product Cleanup Fund or other state assurance has become incapable of paying for assured corrective action or third-party compensation costs, the Owner or Operator shall obtain alternate financial assurance.

80.63: Requirements for Replenishment of Guarantees, Local Government Guarantees, Letters of Credit, or Surety Bonds

(1) If at any time after a standby trust is funded upon the instruction of the Department with funds drawn from a guarantee, local government guarantee with standby trust, letter of credit, or surety bond, and the amount in the standby trust is reduced below the full amount of coverage required, the Owner or Operator shall by the anniversary date of the financial mechanism from which the funds were drawn:

- (a) Replenish the value of financial assurance to equal the full amount of coverage required, or
- (b) Acquire another financial assurance mechanism for the amount by which funds in the standby trust have been reduced.

(2) For purposes of 310 CMR 80.63(2), the full amount of coverage required is the amount of coverage to be provided by 310 CMR 80.52. If a combination of mechanisms was used to provide the assurance funds which were drawn upon, replenishment shall occur by the earliest anniversary date among the mechanisms.

80.64 Requirements for Airport Hydrant Fuel Distribution Systems

(1) Owners and Operators of airport hydrant systems shall comply with the requirements of 310 CMR 80.00 as follows:

- (a) For airport hydrant systems installed on or before October 1, 2021 the requirements are effective according to the following schedule:

Requirements	Effective Dates
Spill bucket requirements, if applicable at 310 CMR 80.21 and 80.28; overfill prevention equipment requirements at 310 CMR 80.21 and 80.28; corrosion protection requirements at 310 CMR 80.22, 80.29 and 80.64(7); compatibility requirements at 310 CMR 80.30; walkthrough requirements at 310 CMR 80.35 and 80.64(8); and operator training at 310 CMR 80.37	No later than October 13, 2022
Recordkeeping requirements at 310 CMR 80.36 associated with regulatory requirements effective October 13, 2022	No later than October 13, 2022
Leak detection at 310 CMR 80.19, 80.26 and 80.64(9)	No later than October 13, 2022
Registration and reporting requirements at 310 CMR 80.23 (except as provided in 310 CMR 80.64(2); repair requirements at 310 CMR 80.33; Compliance Certification requirements at 310 CMR 80.34; release reporting, response, and investigation at 310 CMR 80.38 through 80.40; closure requirements at 310 CMR 80.41 through 80.47; financial responsibility at 310 CMR 80.51 through 80.63 except as provided in 310 CMR 80.64(3))	October 1, 2021
Recordkeeping requirements at 310 CMR 80.36 associated with the requirements effective October 1, 2021	October 1, 2021

80.64: continued

- (b) For airport hydrant systems installed after October 1, 2021, the requirements of 310 CMR 80.00 apply at installation.
- (2) Owners shall submit a registration to the Department on or before 30 days after October 1, 2021 in accordance with 310 CMR 80.23(1).
- (3) Owners and Operators of airport hydrant systems in use as of October 1, 2021, shall demonstrate financial responsibility in accordance with 310 CMR 80.51 through 80.63 at the time of submission of the registration.
- (4) Except as provided in 310 CMR 80.64 and except for the requirements in 310 CMR 80.31, Owners and Operators shall comply with all the applicable regulatory requirements of 310 CMR 80.00.
- (5) Installation. In lieu of the installation requirements at 310 CMR 80.16(9) through (16), Owners and Operators may use military construction criteria, such as Unified Facilities Criteria (UFC) 3-460-01, Petroleum Fuel Facilities, when designing, constructing, and installing airport hydrant systems.
- (6) Piping. As an exception to the double-walled piping requirement at 310 CMR 80.18(3)(a), Owners and Operators may use single walled piping when installing or replacing piping associated with airport hydrant systems.
- (7) Corrosion Protection.
 - (a) In addition to the corrosion protection requirements in 310 CMR 80.22 and 80.29, Owners and Operators shall assess metal tanks greater than ten years old without cathodic protection to ensure the tank is structurally sound and free of corrosion holes prior to adding cathodic protection. The assessment shall be by internal inspection.
 - (b) If the tank is not found to be structurally sound or free of corrosion holes, it shall be removed or closed in-place in accordance with 310 CMR 80.43.
- (8) Periodic Inspections. In addition to the periodic inspection requirements in 310 CMR 80.35, Owners and Operators shall inspect the following additional areas of airport hydrant systems at least once every 30 days if confined space entry according to the Occupational Safety and Health Administration (*see* 29 CFR part 1910) is not required or at least annually if confined space entry is required and keep documentation of the inspection according to 310 CMR 80.35(4).
 - (a) Hydrant Fuel Pits – Visually check for any damage; remove any liquid or debris; manage the solid and liquid material removed from the tank in accordance with all applicable federal, state and local laws and regulations.; and check for any leaks; and
 - (b) Hydrant Piping Vaults – Check for any hydrant piping leaks.
- (9) Leak Detection for Piping.
 - (a) Methods of leak detection for underground piping associated with airport hydrant systems shall follow either the requirements in 310 CMR 80.19 and 80.26 or use one or a combination of the following alternative methods of leak detection:
 - 1. Perform a semiannual or annual line tightness test at or above the piping operating pressure in accordance with the table below.

Maximum Leak Detection Rate per Test Section Volume		
Test Section Volume (Gallons)	Semiannual Test - Leak Detection Rate Not To Exceed (Gallons Per Hour)	Annual Test - Leak Detection Rate Not To Exceed (Gallons Per Hour)
< 50,000	1.0	0.5
≥ 50,000 to < 75,000	1.5	0.75
≥ 75,000 to < 100,000	2.0	1.0
≥ 100,000	3.0	1.5

80.64: continued

Piping segment volumes \geq 100,000 gallons not capable of meeting the maximum 3.0 gallon per hour leak rate for the semiannual test may be tested at a leak rate of up to 6.0 gallons per hour according to the following schedule:

Phase In For Piping Segments \geq 100,000 Gallons In Volume	
First test	No later than October 13, 2022, may use up to 6.0 gph leak rate
Second test	Between October 14, 2022 and October 13, 2027, may use up to 6.0 gph leak rate
Third test	Between October 14, 2027 and October 13, 2028, shall use 3.0 gph for leak rate
Subsequent tests	After October 14, 2028, begin using semiannual or annual line testing according to the Maximum Leak Detection Rate Per Test Section Volume Table C above

2. Perform inventory control (conducted in accordance with Department of Defense Directive 4140.25; ATA Airport Fuel Facility Operations and Maintenance Guidance Manual; or equivalent procedures) at least every 30 days that can detect a leak equal to or less than 0.5% of flow-through and perform a line tightness test (conducted in accordance with 310 CMR 80.65(3)(b)1. using the leak rates for the semiannual test) at least every two years.

(b) If a release or leakage is indicated by alarm other otherwise, the Owner or Operator shall immediately commence an investigation to determine whether there is a release or leakage.

1. The Owner or Operator shall conclude the investigation within 72 hours of the indication of release or leakage.

2. If the Owner or Operator is unable to determine that there is not a release or leakage, the Owner or Operator shall conduct a tightness test on the piping in accordance with 310 CMR 80.64(9)(a)1.

3. If the piping fails a tightness test pursuant to 310 CMR 80.32, the Owner or Operator shall comply with 310 CMR 40.0300: *Notification of Releases and Threats of Release of Oil and Hazardous Materials; Identification and Listing of Oil and Hazardous Materials*, as applicable.

4. If the piping passes a tightness test pursuant to 310 CMR 80.32, the piping is considered tight, and the requirements for tightness testing are satisfied.

5. If the investigation or the tightness test indicates a release or leakage, the Owner or Operator shall comply with 310 CMR 80.38 and 80.39.

(c) Owners and Operators shall maintain leak detection records in accordance with 310 CMR 80.36.

(10) Spill Buckets.

(a) If a delivery hose is used to fill the tank, then a spill bucket shall be installed in accordance with 310 CMR 80.21(1).

(b) If the tank is filled by a directly-connected pipeline, a spill bucket is not required to be installed.

REGULATORY AUTHORITY

310 CMR 80.00: M.G.L. c. 210, § 5, c. 21C, c. 21E, § 6 and c. 21A, § 16.
